0 [ms]	1000000 [ms]	0 [ms]

Description: Sets the monitoring time to limit the output for APC (Advanced Positioning Control).
This monitoring time is started after the selected limit value (p3778) has been exceeded. A corresponding fault is output if the limit value is not undershot before this time expires.

Dependency: Refer to: p3778
Refer to: F07425

p3784[0...n] BI: Sync-line-drive external increase voltage / Sync ext V incr

VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: Unsigned32 / Binary | **Dynamic index:** CDS, p0170 | **Func. diagram:** -
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 0

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to increase the voltage for external line-drive synchronization.
BI: p3784 = 1 signal:
The voltage is increased.

Note: Only SINAMICS GM150.

p3785[0...n] BI: Sync-line-drive external decrease voltage / Sync ext V decr

VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: Unsigned32 / Binary | **Dynamic index:** CDS, p0170 | **Func. diagram:** -
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 0

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to decrease the voltage for external line-drive synchronization.
BI: p3785 = 1 signal:
The voltage is lowered.

Note: Only SINAMICS GM150.

p3800[0...n] Sync-line-drive activation / Sync act

VECTOR	**Can be changed:** T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dynamic index:** DDS, p0180	**Func. diagram:** 7020
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	0

Description: Sets the activation for the line-drive synchronization.

Value:
0: Sync-line-drive de-activated
1: Sync-line-drive activated VSM-INT

Dependency: Refer to: p3801, p3802

Note: When the ground fault monitoring initiates a fault for overlapping synchronizing the threshold value p0287[1] for the Motor Module and the associated infeed must be appropriately increased (e.g. p0287[1] = 100 %).

For p3800 = 1, the following applies:

The INTERNAL voltage actual values are used for synchronization. The effects that a (sine-wave) filter - that is connected between the Motor Module and motor - has on the voltage actual values are taken into account (theoretically) by appropriately selecting p0230.

VSM: Voltage Sensing Module

p3801[0...n] Sync-line-drive, drive object number / Sync DO_No

VECTOR	**Can be changed:** T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dynamic index:** DDS, p0180	**Func. diagram:** 7020
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	1	62	1

Description: Sets the drive object number of the Voltage Sensing Module (VSM) used for the line-drive synchronization.

Dependency: Refer to: p3800, p3802

Notice: The current controller sampling time p0115[0] of the drive object with the VSM used for synchronization must be identical to the current controller sampling time of the drive of the drive used to perform line synchronization.

Note: VSM: Voltage Sensing Module

p3802[0...n] BI: Sync-line-drive enable / Sync enable

VECTOR	**Can be changed:** T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned32 / Binary	**Dynamic index:** CDS, p0170	**Func. diagram:** 7020
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source to switch in/switch out for the line-drive synchronization.

BI: p3802 = 1 signal:

The line-drive synchronization is switched in.

Dependency: Refer to: p3800, p3801

r3803.0 CO/BO: Sync-line-drive control word / Sync STW

VECTOR

Can be changed: -
Calculated: -
Access level: 2
Data type: Unsigned32
Dynamic index: -
Func. diagram: -
P-Group: Functions
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the control word for the line-drive synchronization.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Sync-line-drive selected	Yes	No	-

Note: Re bit 00:
For a 1 signal, p3800 > 0 is set.

r3804 CO: Sync-line-drive target frequency / Sync f_target

VECTOR

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32

Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-180.00 [°]	179.90 [°]	0.00 [°]

Description: Sets the phase setpoint for the line-drive synchronization.

p3811[0...n] Sync-line-drive frequency limiting / Sync f_lim

VECTOR

Can be changed: U, T
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: 7020
P-Group: Functions
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0.00 [Hz]	1.00 [Hz]	0.20 [Hz]

Description: Sets the frequency limiting of the phase controller output for the line-drive synchronization.

r3812 CO: Sync-line-drive correction frequency / Sync f_corr

VECTOR

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 7020
P-Group: Functions
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [Hz]	- [Hz]	- [Hz]

Description: Displays the correction frequency for the line-drive synchronization.

p3813[0...n] Sync-line-drive phase synchronism threshold value / Sync Ph_sync thrsh

VECTOR

Can be changed: U, T
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: 7020
P-Group: Functions
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
1.00 [°]	20.00 [°]	2.00 [°]

Description: Sets the threshold value of the phase synchronism for the line-drive synchronization.
A prerequisite for synchronism is achieved if the phase difference is lower than the threshold value.

Note: Synchronism is reached (r3819.2 = 1), if the AND logic operation of the results from the phase measurement (p3813) and voltage measurement (p3815) is fulfilled.

r3814 CO: Sync-line-drive voltage difference / Sync V_diff

VECTOR

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 7020
P-Group: Functions
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the voltage difference between the measured target voltage and output voltage of the gating unit of the closed-loop control for line-drive synchronization.

p3815[0...n] Sync-line-drive voltage difference threshold value / Sync V_diff thresh

VECTOR

Can be changed: U, T
Calculated: CALC_MOD_LIM_REF
Access level: 2
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: 7020
P-Group: Functions
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0.00 [%]	10.00 [%]	10.00 [%]

Description: Sets the threshold value of the voltage difference for the line-drive synchronization.

A prerequisite for synchronism is reached if the voltage difference is less than the threshold value.

Note: Synchronism is reached (r3819.2 = 1), if the AND logic operation of the results from the phase measurement (p3813) and voltage measurement (p3815) is fulfilled.

For voltage manipulated quantity margin (reserve) of the drive converter, the amplitude difference (r3814) between the setpoint and actual value is controlled (corrected) to zero.

r3819.0...7 CO/BO: Sync-line-drive status word / Sync ZSW

VECTOR

Can be changed: -
Calculated: -
Access level: 2
Data type: Unsigned32
Dynamic index: -
Func. diagram: 7020
P-Group: Functions
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the status word for the line-drive synchronization.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Sync-line-drive enabled	Yes	No	-
02	Sync-line-drive synchronism reached	Yes	No	-
03	Sync-line-drive synchronizing error	Yes	No	-
05	Sync-line-drive frequency measurement active	Yes	No	-
06	Sync-line-drive phase control active	Yes	No	-
07	Sync-line-drive without drive	Yes	No	-

p3820[0...n] Friction characteristic, value v0 / Friction v0

SERVO (Lin)

Can be changed: T
Calculated: CALC_MOD_LIM_REF

Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
0	1	0

Description: Setting to activate and de-activate the friction characteristic.

Value:
0: Friction characteristic de-activated
1: Friction characteristic activated

Dependency: Refer to: p1569, r3841, p3845

p3845 Friction characteristic record activation / Frict rec act

SERVO, VECTOR

Can be changed: T
Calculated: -
Access level: 2
Data type: Integer16
Dynamic index: -
Func. diagram: 7010
P-Group: Functions
Units group: -
Unit selection: -
Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
0	3	0

Description: Setting for the friction characteristic record.

After the next power-on command, the friction characteristic is automatically recorded.

Value:
0: Friction characteristic record de-activated
1: Friction char record activated for all directions
2: Friction char record activated for positive direction
3: Friction char record activated for negative direction

Dependency: When selecting the friction characteristic measurement, the drive data set changeover is suppressed.

For linear drives (refer to r0108 bit 12) it is not permissible to carry out the friction characteristic measurement for mechanical systems that limit travel.

Danger:

For drives with a mechanical system that limit the distance moved, it must be ensured that during recording, the friction characteristic is not reached. If this is not the case, then it is not permissible that the measurement is carried out.

Notice: In order to permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

Note: When the friction characteristic record is active, it is not possible to save the parameters (p0971, p0977).

When the friction characteristic record is active (p3845 > 0), it is not possible to change p3820 ... p3829, p3830 ... p3839 and p3842.

When recording the friction characteristic, in addition to the friction, the motor losses are also determined (e.g. iron losses, eddy current losses and re-magnetizing losses). A differentiation is not made between these individual loss components. We recommend that a motor temperature sensor is used because torque deviations can also be emulated/mapped on the characteristic due to the thermal influence.

p3846[0...n] Friction characteristic record ramp-up/ramp-down time / Frict rec t_RFG

SERVO, VECTOR (n/M)

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 7010
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: REL | | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	999999.000 [s]	10.000 [s]

Description: Sets the ramp-up/ramp-down time of the ramp-up/ramp-down function generator to automatically record the friction characteristic. The drive is accelerated from standstill (setpoint = 0) up to the maximum speed/velocity (p1082) in this time.

Dependency: Refer to: p3845

p3847[0...n] Friction characteristic record warm-up time / Frict rec t_warm

SERVO, VECTOR (n/M)

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 7010
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: REL | | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	3600.000 [s]	0.000 [s]

Description: Sets the warm-up time.

For an automatic trace (record) to start, the highest selected speed (p3829) is approached and this time is held. After this, the measurement is started with the highest speed.

Dependency: Refer to: p3829, p3845

p3860 Number of Braking Modules connected in parallel / BM qty par_cct

A_INF (Brk Mod ext), B_INF (Brk Mod ext), S_INF (Brk Mod ext)

Can be changed: C2(2) | **Calculated:** - | **Access level:** 3
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** 9951
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
1	8	1

Description: Sets the number of Braking Modules connected in parallel in a DC link.

Note: The parameter can only be written to if the infeed is in the commissioning mode (p0010 = 2).

r3861.0...7 BO: Braking Module inhibit/acknowledgement / BM inhib/ackn

A_INF (Brk Mod ext), B_INF (Brk Mod ext), S_INF (Brk Mod ext)

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 9951
P-Group: Commands | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Signal to energize terminal X21.1 "inhibit/acknowledgement" on the Braking Module.

This binector output is used as signal source to interconnect to a digital output.

For "booksize" formats the digital output must be connected to terminal X21.1 and for "chassis" formats the digital output must be connected to terminal X21.3 of the particular Braking Module.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Inhibit/acknowledge Braking Module 1	High	Low	-
01	Inhibit/acknowledge Braking Module 2	High	Low	-
02	Inhibit/acknowledge Braking Module 3	High	Low	-
03	Inhibit/acknowledge Braking Module 4	High	Low	-
04	Inhibit/acknowledge Braking Module 5	High	Low	-
05	Inhibit/acknowledge Braking Module 6	High	Low	-
06	Inhibit/acknowledge Braking Module 7	High	Low	-
07	Inhibit/acknowledge Braking Module 8	High	Low	-

Warning:

It must be carefully ensured that the binector outputs BO: p3861.n are correctly connected and also that the appropriate digital outputs are correctly connected up.

If the interconnections/connections are incorrect and if the Braking Module develops a fault condition, then the software could execute a different (incorrect) function via the binector outputs BO: p3861.n.

p3862 Braking Module DC link fast discharge delay time / BM DC-dischg t_del

A_INF (Brk Mod ext), B_INF (Brk Mod ext), S_INF (Brk Mod ext)

Can be changed: C1(3), T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 9951
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
500 [ms]	4294967295 [ms]	1000 [ms]

Description: Sets the delay time for switching in the DC link fast discharge.

Dependency: Refer to: p3863, r3864

Note: The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.

p3863 BI: Activating Braking Module DC link fast discharge / BM DC-dischg act

A_INF (Brk Mod ext), B_INF (Brk Mod ext), S_INF (Brk Mod ext)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** 9951
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to activate the DC link fast discharge.

The DC link fast discharge is started later with delay time (p3862) when the following conditions apply:

- BI: p3863 = 1 signal.
- an external line contactor is opened via r0863.1 "energize contactor".

The DC link fast discharge is interrupted when the following conditions apply:

- BI: p3863 = 0 signal.
- ON command for the infeed.

Recommend.: The DC link fast discharge should be activated if there is an external line contactor and is correctly interconnected (r0863.1, p0860). If the DC link fast discharge is not activated together with an external line contactor, then faults could occur when pre-charging (e.g. F30027).

Dependency: Refer to: r3864

Refer to: F30027

Note: The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.

r3864.0...7 BO: Braking Module DC link fast discharge / BM DC link dischg

A_INF (Brk Mod ext), B_INF (Brk Mod ext), S_INF (Brk Mod ext)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** 9951
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Signal to control (energize) terminal X21.2 "DC link fast discharge" on the Braking Module.

This binector output is used as signal source to interconnect to a digital output. The digital output must be connected to terminal X21.2 of the particular Braking Module.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Fast discharge Braking Module 1	High	Low	-
01	Fast discharge Braking Module 2	High	Low	-
02	Fast discharge Braking Module 3	High	Low	-
03	Fast discharge Braking Module 4	High	Low	-
04	Fast discharge Braking Module 5	High	Low	-
05	Fast discharge Braking Module 6	High	Low	-
06	Fast discharge Braking Module 7	High	Low	-
07	Fast discharge Braking Module 8	High	Low	-

Dependency: Refer to: p3863

Refer to: F30027

Warning: It must be carefully ensured that the binector outputs BO: p3864.n are correctly interconnected and also that the appropriate digital outputs are correctly connected up.

If the interconnection/connection is incorrect, in the case of an active DC link fast discharge, the software could execute another function (incorrect function) via binector outputs BO: p3864.n or could also permanently control the DC link fast discharge even if the line contactor is closed.

Note: The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.

p3865[0...7] BI: Braking Module pre-warning I*t shutdown / BM I*t shutdown

A_INF (Brk Mod ext), B_INF (Brk Mod ext), S_INF (Brk Mod ext)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 9951
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the signal "pre-alarm I*t shutdown (X21.3) of the Braking Module.

BI: p3865[0...7] = 0 signal --> no pre-alarm, I*t shutdown

BI: p3865[0...7] = 1 signal --> pre-alarm I*t shutdown (A06901)

Dependency: Refer to: A06901

Note: The pre-alarm I*t shutdown is only possible for "booksize" formats. This function is not supported for "chassis" formats.

p3866[0...7] BI: Braking Module fault / BM fault

A_INF (Brk Mod ext), B_INF (Brk Mod ext), S_INF (Brk Mod ext)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 9951
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the "fault" signal of the Braking Module (X21.4 for "booksize" formats and X21.3 for "chassis" formats).

BI: p3866[0...7] = 0 signal --> fault (A06900)
BI: p3866[0...7] = 1 signal --> No fault
For a 1 signal, an acknowledgement via BO: r3861 is automatically carried out at certain time intervals.

Dependency: Refer to: A06900

p3870 Long stator configuration / Long stator config

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the configuration when operating a long stator motor.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Activate long stator help functions	Active	Inactive	-
01	Suppress Gx_ZSW.14	Active	Inactive	-

Dependency: Refer to: p3871, p3872, p3873, p3874, r3875, p3876, p3878, p3879

Notice: The following restrictions apply to this function:
- it is not permissible to change over the drive data set.
- the encoder/drive may not be parked using a PROFIBUS telegram.
- a maximum of 4 drives may be connected to the Control Unit.
- it is not permissible to commutate with the zero mark (p0404).

Note: Re bit 00:
All of the help functions for long stator motors can be enabled/disabled using this bit.
Re bit 01:
When the bit is set, bit 14 (parking encoder active) is set to 0 in the encoder status word GX_ZSW independent of whether the encoder is parked or not.

p3871 BI: Set long stator signal source commutation angle (p3872) / Set S_src com_ang

SERVO

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to set the commutation angle from CI: p3872.

Dependency: Refer to: p3870, p3872, p3873, p3874, r3875, p3876, p3878, p3879

Danger: If an incorrect commutation angle is set, this can result in instability in the closed-loop control and in turn injure personnel or cause damage to the machine !

Note: Setting takes place for a 0/1 signal edge.

p3872 CI: Long stator signal source commutation angle / S_src com_angle

SERVO

Can be changed: T | **Calculated:** - | **Access level:** 3

p3900 Completion of quick commissioning / Compl quick_comm

A_INF, B_INF, S_INF

Can be changed: C2(1)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0	3	0

Description: Exits the quick commissioning (p0010 = 1) with automatic calculation of all of the parameters that depend on the entries made during the quick commissioning.

p3900 = 1 initially includes a parameter reset (factory setting, the same as p0970 = 1) for all parameters of the drive object; however, without overwriting the entries made during the quick commissioning. The interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700 are re-established and all of the dependent filter and closed-loop control parameters are calculated (corresponding to p0340 = 1).

p3900 = 2 includes the restoration of the interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700 and the calculations corresponding to p0340 = 1.

p3900 = 3 only includes the end of quick commissioning.

Value:
0: No quick parameterization
1: Quick parameterization after parameter reset
2: Quick param. (only) for controller par. and reset for BICO par
3: Completion of quick commissioning

Note: When the calculations have been completed, p3900 and p0010 are automatically reset to a value of 0.

p3900 Completion of quick commissioning / Compl quick_comm

SERVO, VECTOR

Can be changed: C2(1)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0	3	0

Description: Exits the quick commissioning (p0010 = 1) with automatic calculation of all of the parameters that depend on the entries made during the quick commissioning.

p3900 = 1 initially includes a parameter reset (factory setting, the same as p0970 = 1) for all parameters of the drive object; however, without overwriting the entries made during the quick commissioning.

The interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700, p1000 and p1500 are re-established and all of the dependent motor, open-loop and control-loop control parameters are calculated (corresponding to p0340 = 1).

p3900 = 2 includes the restoration of the interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700, p1000 and p1500 and the calculations corresponding to p0340 = 1.

p3900 = 3 only includes the calculations associated with the motor, open-loop and closed-loop control parameters corresponding to p0340 = 1.

Value:
0: No quick parameterization
1: Quick parameterization after parameter reset
2: Quick parameterization (only) for BICO and motor parameters
3: Quick parameterization (only) for motor parameters

Note: When the calculations have been completed, p3900 and p0010 are automatically reset to a value of 0.

When calculating motor, open-loop and closed-loop control parameters (such as for p0340 = 1) parameters associated with a selected Siemens list motor are not overwritten.

p3902[0...n] Power unit EEPROM Vdc calibration / PU EEPROM Vdc_cal

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: C1, C2(1), T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** PDS, p0120 | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	4294967295	0

Description: Calibration factor for the DC link voltage measurement.

Caution: Incorrect use of the calibration can have a negative impact on the closed-loop control. The parameter influences the upper and lower voltage detection.

Note: Parameter entries are directly saved in the DRIVE-CLiQ component involved. Only values from 100 ... 10000 are accepted. All other entries are not saved and are therefore also not displayed.

The parameter only has an effect for chassis power units.

Calculation rule: p3902_new = p3902_old * r0026 / Vdc_measured value

r3925[0...n] Identification final display / Ident final_disp

Description: Sets the mode to change over the master control / LOCAL mode.

Value:
0: Change master control for STW1.0 = 0
1: Change master control in operation

Danger: When changing the master control in operation, the drive can manifest undesirable behavior - e.g. it can accelerate up to another setpoint.

r3986 Parameter count / Parameter count

All objects

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the number of parameters for this drive unit.
The number comprises the device-specific and the drive-specific parameters.

Dependency: Refer to: r0980, r0981, r0989

r3988[0...1] Ramp-up state / Ramp-up state

CU_CX32, CU_I, CU_S

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	10800	-

Description: Displays the ramp-up state.

Value:
0: Not active
1: Fatal fault
10: Fault
20: Reset all parameters
30: Drive object modified
40: Download using commissioning software
90: Reset Control Unit and delete drive objects

100: Start initialization
101: Wait for topology input
110: Instantiate Control Unit basis
111: Insert drive object
112: Remove drive object
113: Change drive object number
114: Change component number
115: Parameter download using commissioning software
117: Remove component
150: Wait until actual topology determined
160: Evaluate topology
170: Instantiate Control Unit rest
180: Initialization YDB configuration information
200: First commissioning
210: Create drive packages
250: Wait for topology acknowledge
325: Wait for input of drive type
350: Determine drive type
360: Write into topology-dependent parameters
370: Wait until p0009 = 0 is set
380: Check topology
550: Call conversion functions for parameter
625: Wait non-cyclic starting DRIVE-CLiQ
650: Start cyclic operation
660: Evaluate drive commissioning status
670: Autom. FW update DRIVE-CLiQ components
680: Wait for CU-LINK slaves
690: Wait non-cyclic starting DRIVE-CLiQ
700: Save parameters
725: Wait until DRIVE-CLiQ cyclic
740: Check ability to operate
750: Interrupt enable
800: Initialization finished
10050: Wait for synchronization
10100: Wait for CU-LINK slaves
10150: Wait until actual topology determined
10200: Evaluate component status
10250: Call conversion functions for parameter
10300: Prepare cyclic operation
10350: Autom. FW update DRIVE-CLiQ components
10400: Wait for slave properties
10450: Check CX/NX status
10500: Wait until DRIVE-CLiQ cyclic
10550: Perform warm restart
10600: Evaluate encoder status
10800: Sub-boot complete

Index: [0] = System
[1] = Sub-boot

r3996 Parameter write inhibit status / Par_write inhib st

All objects

Can be changed: -	**Calculated:** -	**Access level:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the digital output DO 0 (X542.1, X542.2, X542.3) of Terminal Module 31 (TM31).
Digital output 0 of TM31 is a relay output.
If the signal at the binector input p4030 is low, then terminal COM 0 (X542.2) is connected to NC 0 (X542.1). This connection also matches the mechanical quiescent setting of the relay.
If the signal at the binector input p4030 is high, then terminal COM 0 (X542.2) is connected to NO 0 (X542.3).
Note: DO: Digital Output
NC: Normally Closed contact
NO: Normally Open contact

P-Group: Commands | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Sets the limit for the total output voltage of terminals X541.1, X541.2, X541.3 and X541.4 (DI/DO 8 ... 11) of Terminal Module 31 (TM31).

Value:
0: 0.1 A total current limit DI/DO 8 ... 11
1: 1.0 A total current limit DI/DO 8 ... 11

Dependency: Refer to: p4028

Warning: Since the sum of the output currents at terminals X541.1, X541.2, X541.3 and X541.4 is limited, an overcurrent or short circuit at one output terminal can cause a dip in the signal at the other terminals.

P-Group: Terminals **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	5	4

Description: Sets the type of analog inputs of Terminal Module 31 (TM31).
p4056[x] = 0, 4 correspond to a voltage input (r4052, p4057, p4059 are displayed in V).
p4056[x] = 2, 3, 5 correspond to a current input (r4052, p4057, p4059 are displayed in mA).
In addition, the associated switch S5 must be switched.

For a voltage input, S5.1 or S5.2 must be switched to setting V.

For a current input, S5.1 and S5.2 must be switched into setting I (load resistor = 250 Ohm is switched in).

Value:
0: Unipolar voltage input (0 V ... +10 V)
2: Unipolar current input (0 mA ... +20 mA)
3: Unipolar current input monitored (+4 mA ... +20 mA)
4: Bipolar voltage input (-10 V ... +10 V)
5: Bipolar current input (-20 mA ... +20 mA)

Index:
[0] = AI 0 (X521.1/X521.2, S5.0)
[1] = AI 1 (X521.3/X521.4, S5.1)

Warning:

The maximum voltage difference between the analog input terminals AI+, AI- and the ground of the TM31 (X520.6, X530.3) may not exceed 35 V.

For operation with the load resistor switched in, the voltage between the differential inputs AI+ and AI- may not exceed 15 V or the impressed current of 60 mA; if this is not carefully observed, the input will be damaged.

Notice:
For use as voltage input, switch S500 must be set to 0 for the input involved.

Switch S500 is located on the front panel of the TM31 above terminal block X521.

Note:
When changing p4056, the parameters of the normalization characteristic (p4057, p4058, p4059, p4060) are overwritten with the following default values:

For p4056 = 0, 4, p4057 is set to 0.0 V, p4058 to 0.0 %, p4059 to 10.0 V and p4060 to 100.0 %.

For p4056 = 2, 5, p4057 is set to 0.0 mA, p4058 to 0.0 %, p4059 to 20.0 mA and p4060 to 100.0 %.

For p4056 = 3, p4057 is set to 4.0 mA, p4058 to 0.0 %, p4059 to 20.0 mA and p4060 to 100.0 %.

Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-1000.00 [%]	1000.00 [%]	100.00 [%]

Description: Sets the normalization characteristic for the analog outputs of Terminal Module 31 (TM31).
The normalization characteristic for the analog outputs is defined using 2 points.
This parameter specifies the x coordinate (percentage) of the 2nd value pair of the characteristic.

Index: [0] = AO 0 (X522.1, X522.2, X522.3)
[1] = AO 1 (X522.4, X522.5, X522.6)

Dependency: Refer to: r4076, p4076

Notice: This parameter is automatically overwritten when the analog output type is changed (p4076).

Note: This parameter is overwritten if p4076 (type of analog output) is changed.
The parameters for the characteristic do not limit.

p4080[0...1] TB30 analog outputs, characteristic value y2 / TB30 AO char y2

Min	Max	Factory setting
-11.000 [V]	11.000 [V]	10.000 [V]

Description: Sets the normalization characteristic for the analog outputs of Terminal Board 30 (TB30).
The normalization characteristic for the analog outputs is defined using 2 points.
This parameter specifies the y coordinate (output voltage in V) of the 2nd value pair of the characteristic.

Index: [0] = AO 0 (X482.5/X482.6)
[1] = AO 1 (X482.7/X482.8)

Note: The parameters for the characteristic do not limit.

p4080[0...1] TM31 analog outputs, characteristic value y2 / TM31 AO char y2

TM31

Can be changed: U, T | **Calculated:** - | **Access level:** 2

P-Group: Terminals | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-20.000 [V]	20.000 [V]	10.000 [V]

Description: Sets the normalization characteristic for the analog outputs of Terminal Module 31 (TM31).
The normalization characteristic for the analog outputs is defined using 2 points.
This parameter specifies the y coordinate (output voltage in V or output current in mA) of the 2nd value pair of the characteristic.

Index: [0] = AO 0 (X522.1, X522.2, X522.3)
[1] = AO 1 (X522.4, X522.5, X522.6)

Dependency: The units of this parameter (V or mA) depend on the analog input type.
Refer to: r4076, p4076

Notice: This parameter is automatically overwritten when the analog output type is changed (p4076).

Note: This parameter is overwritten if p4076 (type of analog output) is changed.
The parameters for the characteristic do not limit.

p4082[0...1] BI: TB30 analog outputs invert signal source / TB30 AO inv S_src

TB30

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to invert the analog output signals of Terminal Module 31 (TM31).

Index: [0] = AO 0 (X522.1, X522.2, X522.3)
[1] = AO 1 (X522.4, X522.5, X522.6)

p4083[0...1] TB30 analog outputs, offset / TB30 AO offset

TB30

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 9106
P-Group: Terminals | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-10.000	10.000	0.000

Description: Sets the offset for the analog outputs of Terminal Board 30 (TB30).
The offset is added to the output signal after the normalization characteristic.

Index: [0] = AO 0 (X482.5/X482.6)
[1] = AO 1 (X482.7/X482.8)

p4083[0...1] TM31 analog outputs, offset / TM31 AO offset

TM31

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 9572
P-Group: Terminals | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-20.000	20.000	0.000

Description: Sets the offset for the analog outputs of Terminal Module 31 (TM31).
The offset is added to the output signal after the normalization characteristic.

Index: [0] = AO 0 (X522.1, X522.2, X522.3)
[1] = AO 1 (X522.4, X522.5, X522.6)

Dependency: The units of this parameter (V or mA) depend on the analog input type.
Refer to: r4076, p4076

Note: This means, for example, the offset of a downstream isolating amplifier can be compensated.

p4086 BI: TM15DI/DO signal source for terminal DI/DO 16 / TM15D S_srcDI/DO16

-20.000 [V]	20.000 [V]	0.000 [V]

Description: Sets the setpoint for the input value in simulation mode of the analog input of Terminal Module 41 (TM41).
Index: [0] = AI 0 (X523.1/X523.2)
Dependency: The simulation of the analog input is selected using p4097.
Refer to: p4097

Note: This parameter is not saved when data is backed-up (p0971, p0977).
AI: Analog Input

p4099[0...2] TB30 inputs/outputs, sampling time / TB30 I/O t_sample

TB30

Can be changed: C1(3) | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 9100, 9102, 9104, 9106
P-Group: Commands | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	5000.00 [µs]	[0] 4000.00 [µs]
		[1] 4000.00 [µs]
		[2] 4000.00 [µs]

Description: Sets the sampling time for the inputs and outputs of the Terminal Board 30 (TB30).

Index: [0] = Digital inputs/outputs (DI/DO)
[1] = Analog inputs (AI)
[2] = Analog outputs (AO)

Dependency: The parameter can only be modified for p0009 = 3, 29.
The sampling times can only be set as an integer multiple of the basic sampling time (r0110, r0111).
Refer to: p0009, r0110, r0111

Note: The modified sampling time is not effective until the drive unit is powered up again.
For clock cycle synchronous PROFIBUS operation, the TB30 hardware (e.g. A/D converter) is operated with the PROFIBUS clock cycle (r2064[1]). This clock cycle is also kept after the PROFIBUS connection has been exited up to the next time that the Control Unit is powered down. In this case, a faster sampling time than the PROFIBUS clock cycle is not practical in p4099[0...2].

p4099[0...2] TM31 inputs/outputs, sampling time / TM31 I/O t_sample

TM31

Can be changed: C1(3) | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 9550
P-Group: Commands | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	5000.00 [µs]	4000.00 [µs]

Description: Sets the sampling time for the inputs and outputs of Terminal Module 31 (TM31).

Index: [0] = Digital inputs/outputs (DI/DO)
[1] = Analog inputs (AI)
[2] = Analog outputs (AO)

Dependency: The parameter can only be modified for p0009 = 3, 29.
The sampling times can only be set as an integer multiple of the basic sampling time (r0110, r0111).
Refer to: p0009, r0110, r0111

Notice: The sampling times entered in index 0 (digital inputs/outputs) and index 2 (analog outputs) must always be greater than or equal to the sampling time in index 1 (analog inputs).

Note: - the modified sampling time is not effective until the drive unit is powered up again.
- parameter p4099[0] must never equal zero.

p4099[0...3] TM41 inputs/outputs, sampling time / TM41 I/O t_sample

TM41

Can be changed: C1(3) | **Calculated:** - | **Access level:** 3

Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 9660, 9661, 9662, 9663, 9674, 9676

P-Group: Commands | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	5000.00 [µs]	[0] 4000.00 [µs] [1] 4000.00 [µs] [2] 0.00 [µs] [3] 125.00 [µs]

Description: Sets the sampling time for the inputs and outputs of Terminal Module 41 (TM41).

Index:
[0] = Digital inputs/outputs (DI/DO)
[1] = Analog inputs (AI)
[2] = Not present
[3] = Incremental encoder emulation

Dependency: The parameter can only be modified for p0009 = 3, 29.
Refer to: p0009, r0110, r0111
Refer to: F35228

Note:
- the value of the sampling time of the incremental encoder emulation p4099[3] can be preset. The next time that the system boots, the validity of the value is checked. For an invalid value, fault F35228 is output and p4099[3] is automatically set to the correct value. The modified parameter must then be saved and POWER ON carried out. If necessary, the sampling time can be checked again, taking into account any other TM41s located on the same DRIVE-CLiQ line.
- the modified sampling time is not effective until the drive unit is powered up again.
- if there are several TM41s located on a DRIVE-CLiQ line, the same sampling time in p4099[3] must be set for all components.
- the sampling time of a TM41 in SINAMICS mode (p4400 = 1) must be the same as that of the emulated encoder.
- parameter p4099[0] must never equal zero.

p4099 TM17 inputs/outputs, sampling time / TM17 I/O t_sample

TM17

Can be changed: C1(3) | **Calculated:** - | **Access level:** 3

Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -

P-Group: Commands | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
31.25 [µs]	500.00 [µs]	125.00 [µs]

Description: The sampling time of the Terminal Module 17 (TM17) is determined by the DRIVE-CLiQ clock cycle of the line to which the component is attached. An entry is not possible using p4099. At power on, p4099 is correctly set to the resulting sampling time.

p4099 TM15 inputs/outputs, sampling time / TM15 I/O t_sample

TM15

Can be changed: C1(3) | **Calculated:** - | **Access level:** 3

Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
31.25 [µs]	500.00 [µs]	125.00 [µs]

Description: The sampling time of the Terminal Module 15 (TM15) is determined by the DRIVE-CLiQ clock cycle of the line to which the component is attached. An entry is not possible using p4099. At power on, p4099 is correctly set to the resulting sampling time.

p4099 TM15DI/DO inputs/outputs, sampling time / TM15D I/O t_sampl

TM15DI_DO

Can be changed: C1(3) | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 9400, 9401, 9402
P-Group: Commands | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	5000.00 [µs]	4000.00 [µs]

Description: Sets the sampling time for the inputs and outputs of Terminal Module 15 (TM15).
Dependency: The parameter can only be modified for p0009 = 3, 29.
Refer to: p0009, r0110, r0111
Note: - the modified sampling time is not effective until the drive unit is powered up again.
- parameter p4099(0) must never equal zero.

p4100 TM31 temperature evaluation, sensor type / TM31 temp sens_typ

TM31

Can be changed: T | **Calculated:** - | **Access level:** 1
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** 9576, 9577
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	2	0

Description: Sets the temperature evaluation of Terminal Module 31 (TM31).
This means that the temperature sensor type is selected and the evaluation is switched in.
Value: 0: Evaluation disabled
1: PTC thermistor
2: KTY84
Note: The temperature sensor is connected at terminals X522.7(+) and X522.8(-).

r4101 TM31 temperature evaluation, sensor resistance / TM31 temp R_sensor

TM31

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** 9576, 9577
P-Group: Terminals | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
- [Ohm]	- [Ohm]	- [Ohm]

Description: Displays the current resistance value of the temperature sensor connected at Terminal Module 31 (TM31).
Note: The temperature sensor is connected at terminals X522.7(+) and X522.8(-).
The maximum measurable resistance value is approx. 1700 Ohm.

p4102[0...1] TM31 temperature evaluation fault/alarm threshold / TM31 temp thresh

TM31

Can be changed: T | **Calculated:** - | **Access level:** 1
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** 9576
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-48 [°C]	251 [°C]	[0] 100 [°C] [1] 120 [°C]

Description: Sets the fault/alarm threshold for the temperature evaluation of Terminal Module 31 (TM31).
Temperature actual value > p4102[0] --> alarm A35211 is output.
Temperature actual value > p4102[1] --> fault F35207 is output.

Index: [0] = Alarm threshold
[1] = Fault threshold

Dependency: Refer to: r4104

Warning: Fault F35207 only causes the drive to be shut down if there is at least one BICO interconnection between the drive and TM31.

Note: The temperature sensor is connected at terminals X522.7(+) and X522.8(-).
A value > 250 °C deactivates the alarm or fault.

p4103 TM31 temperature evaluation timer / TM31 TempTimer

TM31

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 9576
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0.000 [ms]	600.000 [ms]	0.000 [ms]

Description: Sets the timer for the temperature evaluation of the Terminal Module 31 (TM31) for the fault threshold for the motor temperature monitoring.
This timer is started when the temperature alarm threshold (p4102[0]) is exceeded.
If the timer expires before the temperature in the meantime falls below the alarm threshold, the fault F35207 is output.
If the temperature fault threshold (p4102[1]) is prematurely exceeded before the timer has expired, then fault F35207 is immediately output.
As long as the temperature of the TM31 has still not exceeded the fault threshold and the alarm thresholds have again been undershot, the fault can be acknowledged.

Dependency: Refer to: r4104

Warning: Fault F35207 only causes the drive to be shut down if there is at least one BICO interconnection between the drive and TM31.

Note: With p4103 = 0 s, the timer is de-activated and only the fault threshold is effective.

r4104.0...1 BO: TM31 temperature evaluation, status / TM31 temp status

TM31

Can be changed: - | **Calculated:** - | **Access level:** 1
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** 1840, 9576
P-Group: Terminals | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the status for the temperature evaluation of Terminal Module 31 (TM31).
This displays as to whether the temperature actual value has exceeded the fault/alarm threshold.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Temperature alarm threshold exceeded	Yes	No	-
01	Temperature fault threshold exceeded	Yes	No	-

Dependency: Refer to: p4102

r4105 CO: TM31 temperature evaluation, actual value / TM31 temp actValue

TM31

Can be changed: - **Calculated:** - **Access level:** 1
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 1840, 9576
P-Group: Terminals **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [°C]	- [°C]	- [°C]

Description: Displays the actual temperature value of the temperature evaluation of Terminal Module 31 (TM31).

Dependency: For sensor type PTC (p4100 = 1), the following applies:
- below the nominal response temperature, r4105 = -50°C.
- above the nominal response temperature, r4105 = 250 °C.
For sensor type KTY84-130 (p4100 = 2), the following applies:
- the displayed value corresponds to the temperature actual value.
Refer to: p4100

Note: The temperature sensor is connected at terminals X522.7(+) and X522.8(-).
For an invalid temperature actual value, (e.g. a short-circuit at the sensor input), r4105 = -300 °C is displayed.

r4154 TM41 diagnostics speed setpoint non-filtered / n_set non-filt

TM41

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the unfiltered speed setpoint N_SETPT in revolutions per minute for diagnostic purposes.
In contrast to p1155, this value is updated in each DRIVE-CLiQ basic clock cycle and displayed with sign.

Dependency: Refer to: r4155

Note: This parameter has no function in the SINAMICS operating mode (p4400 = 1) of the TM41.

r4155 TM41 diagnostics speed setpoint / TM41 Diag n_set

TM41

Can be changed: - **Calculated:** - **Access level:** 3

Description: Is used to synchronize the timer of Terminal Module 17 (TM17) with the system time of the DP master.
Bit 12 ... 15:
After synchronization with the DP master, the module sends its sign-of-life in the form of a counter.
Bit 0:
This SYNC signal is set if the module has aligned its time to the system time of the DP master.
Bit 9:
This bit is set if a fault has occurred on the module (r0945).

p4400 TM41 incremental encoder emulation operating mode / Enc_emulat mode

TM41

Can be changed: U, T
Calculated: -
Access level: 3
Data type: Integer16
Dynamic index: -
Func. diagram: 9674, 9676
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0	1	0

Description: Sets the operating mode for the incremental encoder emulation.
0 -> Encoder emulation using the speed setpoint (p1155)
1 -> Encoder emulation using the encoder position actual value (p4420)

Value:
0: SIMOTION
1: SINAMICS

Note: A change only becomes effective after the next boot.

p4401 TM41 incremental encoder emulation mode / Enc_emulat mode

TM41

Can be changed: U, T
Calculated: -
Access level: 3
Data type: Unsigned16
Dynamic index: -
Func. diagram: 9674, 9676
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	0001 bin

Description: Sets the mode for the incremental encoder emulation.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Zero mark enable	Yes	No	9674

Note: When the TM41 is operated in the SINAMICS mode (p4400 = 1), the following applies:
A new zero mark search is initiated by switching in the zero mark at the TM41. The zero mark is output at the TM41 as soon as it was synchronized with the encoder interconnected at connector input p4420.

r4402.0...2 CO/BO: TM41 incremental encoder emulation, status / Enc_emulat status

Data type: Unsigned16
Dynamic index: -
Func. diagram: -
P-Group: Encoder
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	0001 bin

Description: Sets the mode for the incremental encoder emulation.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Pre-control	active	inactive	-
01	Pre-control with adaptation for TTL encoder	active	inactive	-

Danger:

The option "Pre-control with adaptation for TTL encoder (Bit1)" is only effective when the new TM41 module is used:

If there is a chance that a new TM41 module is replaced by an old one, this option (Bit1) should not be used so that normal behavior can be maintained.

Order no. for old module: 6SL3055-0AA00-3PA0

Order no. for new module: 6SL3055-0AA00-3PA1

Note: When the TM41 is operated in the SINAMICS mode (p4400 = 1), the following applies:

A new zero mark search is initiated by switching in the zero mark at the TM41. The zero mark is output at the TM41 as soon as it was synchronized with the encoder interconnected at connector input p4420.

p4420 CI: TM41 incremental encoder emulation position actual value / Enc_emul s_act

TM41	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Integer32	**Dynamic index:** -	**Func. diagram:** 9676
	P-Group: Setpoints	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source for the incremental encoder emulation position actual value.

Recommend.: The following BICO interconnection should be preferably set:
CI: p4420 = r0479

Dependency: Refer to: p4400, r4403

Notice: General conditions for incremental encoder emulation can be found in the following literature:
SINAMICS S120 Function Manual Drive Functions

Note: Prerequisites for the signal source:
For the incremental encoder emulation, an encoder is required that supplies precisely one zero mark per revolution.
The following BICO interconnection should be preferably set: CI: p4420 = r0479.
An encoder actual value (r0479) can only be interconnected once on a TM41.
The zero mark of the incremental encoder is output at the encoder interface after successful internal, automatic synchronization.
If an absolute encoder is connected to the TM41, then a zero mark is always output at the zero revolution at the encoder interface of the TM41. The same behavior applies even if no encoder parameter is interconnected.
This parameter has no function in the SIMOTION operating mode (p4400 = 0) of the TM41.

p4421 TM41 incremental encoder emulation deadtime compensation / Enc_emul t_dead

TM41	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 9676
	P-Group: Setpoints	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-10.00	10.00	0.00

Description: This factor defines the multiplier in which the encoder position setpoint of the incremental encoder emulation is shifted depending on the velocity.

Dependency: For p4421 = 0, the deadtime compensation for the position actual value is switched out.
For p4421 <> 0, the deadtime compensation is taken into account as follows:
New actual value = actual value via CI: p4420 + delta s * p4421
delta s: Position change per sampling time (4099[3]), internally smoothed
Refer to: p4400

Note: This parameter has no function in the SIMOTION operating mode (p4400 = 0) of the TM41.

p4422 TM41 position actual value inversion / TM41 s_act inv

TM41	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** 9676
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	0

Description: Setting to invert the position actual value for Terminal Module 41 (TM41).
0 -> Position actual value (CI: p4420) is evaluated as normal.
1 -> Position actual value (CI: p4420) is processed inverted.

Dependency: Refer to: p4420

p4423 TM41 standstill adaptation / TM41 stand adapt.

TM41

Can be changed: C2(4) | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** 9676
P-Group: Encoder | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	2000	40

Description: This parameter is only relevant if the option
"Pre-control with adaptation for TTL encoder (Bit1)" has been selected in P4404.
P4423 is used to specify the number of clock cycles (one clock cycle = P4099[3]), which is used for encoder stand-still detection. Once this time has elapsed, any potential deviation is compensated when adaptation is active. The parameter is only required for TTL encoders.
Parameter value = 0: adaptation inactive
Parameter value > 0: adaptation active

Dependency: Refer to: r4403, p4404, p4420

Danger: Note the effectiveness of this parameter in conjunction with P4404:

The option "Pre-control with adaptation for TTL encoder (Bit1)" is only effective when the new TM41 module is used:
If there is a chance that a new TM41 module is replaced by an old one, this option (Bit1) should not be used so that normal behavior can be maintained.
Order no. for old module: 6SL3055-0AA00-3PA0
Order no. for new module: 6SL3055-0AA00-3PA1

Note: The parameter value must be assigned a value of 4 or more to ensure that the system functions properly.

p4426 Incremental encoder emulation, pulses for zero mark / Enc_emul pulses ZM

TM41

Can be changed: C2(4) | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 9674
P-Group: Encoder | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	8192	0

Description: Sets pulse number to output the zero mark for the incremental encoder simulation/emulation.
Example:
p0408 = 2048 (encoder pulses)
p4426 = 512 (pulses for the zero mark)
--> Position direction: The zero mark is output after 512 pulses.
--> Negative direction: The zero mark is output after 1536 pulses.

Dependency: Refer to: p0408

Note: The pulses for the zero mark (p4426) must be less than the encoder pulse number (p0408).
For p4400 = 1, this parameter has not effect.

p4600[0...n] Motor temperature sensor 1 sensor type / Temp_sens 1 type

SERVO, VECTOR

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** EDS | **Func. diagram:** 8016
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	32	0

Description: Sets the sensor type of the first temperature sensor for the motor temperature monitoring.

Value:
0: No sensor
10: PTC fault
11: PTC alarm

12: PTC alarm & timer
20: KTY84
30: Bimetallic NC contact fault
31: Bimetallic NC contact alarm
32: Bimetallic NC contact alarm & timer

Dependency: Refer to: r0458, p0600, p0601

Note: This parameter is effective only when p0601 = 10.
PTC thermistor: Tripping resistance = 1650 Ohm
Information on using temperature sensors is provided in the following literature:
- hardware description of the appropriate components
- SINAMICS S120 Commissioning Manual

p4601[0...n] Motor temperature sensor 2 sensor type / Temp_sens 2 type

SERVO, VECTOR

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** EDS | **Func. diagram:** 8016
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	32	0

Description: Sets the sensor type of the second temperature sensor for the motor temperature monitoring.

Value:
0: No sensor
10: PTC fault
11: PTC alarm
12: PTC alarm & timer
20: KTY84
30: Bimetallic NC contact fault
31: Bimetallic NC contact alarm
32: Bimetallic NC contact alarm & timer

Dependency: Refer to: r0458, p0600, p0601

Note: This parameter is effective only when p0601 = 10.
PTC thermistor: Tripping resistance = 1650 Ohm
Information on using temperature sensors is provided in the following literature:
- hardware description of the appropriate components
- SINAMICS S120 Commissioning Manual

p4602[0...n] Motor temperature sensor 3 sensor type / Temp_sens 3 type

SERVO, VECTOR

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** EDS | **Func. diagram:** 8016
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	32	0

Description: Sets the sensor type of the third temperature sensor for the motor temperature monitoring.

Value:
0: No sensor
10: PTC fault
11: PTC alarm
12: PTC alarm & timer
20: KTY84
30: Bimetallic NC contact fault
31: Bimetallic NC contact alarm
32: Bimetallic NC contact alarm & timer

Dependency: Refer to: r0458, p0600, p0601

Note: This parameter is effective only when p0601 = 10.
PTC thermistor: Tripping resistance = 1650 Ohm
Information on using temperature sensors is provided in the following literature:
- hardware description of the appropriate components
- SINAMICS S120 Commissioning Manual

p4603[0...n] Motor temperature sensor 4 sensor type / Temp_sens 4 type

SERVO, VECTOR

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** EDS | **Func. diagram:** 8016
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	32	0

Description: Sets the sensor type of the fourth temperature sensor for the motor temperature monitoring.

Value:
0: No sensor
10: PTC fault
11: PTC alarm
12: PTC alarm & timer
20: KTY84
30: Bimetallic NC contact fault
31: Bimetallic NC contact alarm
32: Bimetallic NC contact alarm & timer

Dependency: Refer to: r0458, p0600, p0601

Note: This parameter is effective only when p0601 = 10.
PTC thermistor: Tripping resistance = 1650 Ohm
Information on using temperature sensors is provided in the following literature:
- hardware description of the appropriate components
- SINAMICS S120 Commissioning Manual

r4620[0...3] Motor temperature measured / Mot_temp meas

SERVO, VECTOR

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Displays, signals | **Units group:** 21_1 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
- [°C]	- [°C]	- [°C]

Description: Displays the actual temperature in the motor measured through temperature channels 1 ... 4.

Index:
[0] = Temperature channel 1
[1] = Temperature channel 2
[2] = Temperature channel 3
[3] = Temperature channel 4

Note: An invalid temperature is displayed using the value -200°C.

p4680[0...n] Zero mark monitoring tolerance permissible / ZM_monit tol perm

SERVO, VECTOR

Can be changed: C2(4) | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** EDS | **Func. diagram:** -
P-Group: Encoder | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1000	4

Description: Sets the permissible tolerance in encoder pulses for the zero mark monitoring.

Note: The zero mark monitoring is activated using p0437.1 = 1.

p4681[0...n] Zero mark monitoring, tolerance window limit 1 positive / ZM tol lim 1 pos

SERVO, VECTOR

Can be changed: C2(4) **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** EDS **Func. diagram:** -
P-Group: Encoder **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	1000	2

Description: Sets the positive tolerance window in encoder pulses for limit 1 for the zero mark monitoring.
Dependency: Refer to: p0437, p4680, p4682, p4683, p4684
Note: The zero mark monitoring is activated using p0437.2 = 1.

p4682[0...n] Zero mark monitoring, tolerance window limit 1 negative / ZM tol lim 1 neg

SERVO, VECTOR

Can be changed: C2(4) **Calculated:** - **Access level:** 3
Data type: Integer32 **Dynamic index:** EDS **Func. diagram:** -
P-Group: Encoder **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-1001	0	-1001

Description: Sets the negative tolerance window in encoder pulses for limit 1 for the zero mark monitoring.
Dependency: Refer to: p4681
Note: The zero mark monitoring is activated using p0437.2 = 1.
For a set value = -1001, the negated value of p4681 is effective.

p4683[0...n] Zero mark monitoring, tolerance window limit 2 positive / ZM tol lim 2 pos

SERVO, VECTOR

Can be changed: C2(4) **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** EDS **Func. diagram:** -
P-Group: Encoder **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	100000	0

Description: Sets the positive tolerance window in encoder pulses for limit 2 for the zero mark monitoring.
Dependency: Refer to: p0437, p4680, p4681, p4682, p4684
Note: The zero mark monitoring is activated using p0437.2 = 1.

p4684[0...n] Zero mark monitoring, tolerance window limit 2 negative / ZM tol lim 2 neg

SERVO, VECTOR

Can be changed: C2(4) **Calculated:** - **Access level:** 3
Data type: Integer32 **Dynamic index:** EDS **Func. diagram:** -
P-Group: Encoder **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-100001	0	-100001

Description: Sets the negative tolerance window in encoder pulses for limit 2 for the zero mark monitoring.
Dependency: Refer to: p4683
Note: The zero mark monitoring is activated using p0437.2 = 1.
For a set value = -100001, the negated value of p4683 is effective.

p4685[0...n] Changeover, average value generation / Average value mode

SERVO, VECTOR

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** EDS	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	20	0

p4686[0...n] Zero mark minimum length / ZM min length

SERVO, VECTOR

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** EDS	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	10	0

Description: Sets the minimum length for the zero mark.
Dependency: Refer to: p0425
Note: The value for the minimum length of the zero mark must be set less than p0425.

r4688[0...2] Zero mark monitoring, differential pulse count / ZM diff_pulse qty

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the number of differential pulses for the zero mark monitoring that have accumulated.
Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3
Dependency: Refer to: p4681, p4682

r4689[0...2] CO: Squarewave encoder, diagnostics / Sq-wave enc diag

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the encoder status according to PROFIdrive for a squarewave encoder.
Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

p4690 SMI component number / SMI comp_no

CU_CX32, CU_I, CU_S

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	399	0

Description: Sets the component number for the Sensor Module Integrated (SMI) for which data should be saved or downloaded.

Dependency: Refer to: p4691, p4692

Note: SMI: SINAMICS Sensor Module Integrated

Only component numbers that correspond to a Sensor Module Integrated can be entered.

p4691 Save/download SMI data / Save/DL SMI data

CU_CX32, CU_I, CU_S

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	15	0

Description: Setting to save/download the data for the Sensor Module Integrated (SMI) specified in p4690.

Procedure:

p4690 = set component number

p4691 = 1, 2 set the required procedure (save/download)

p4691 = 0 --> automatically after the procedure has been successfully completed

p4691 = 11, 12, 13, 14, 15 --> error vales if the procedure was not able to be executed

Value:

0: Inactive
1: Save SMI data
2: Download SMI data
11: SMI data for the selected component not found on CF
12: Component with the selected component number not available.
13: CompactFlash card does not have sufficient memory space
14: Incorrect format of the saved data
15: Data not able to be downloaded into SMI

Dependency: Refer to: p4690, p4692

Note: SMI: SINAMICS Sensor Module Integrated

Help for error value = 11:

Save the data for the originally existing SMI on the CompactFlash card.

Help for error value = 12:

Set the correct component number.

Help for error value = 13:

Use a CompactFlash card with a larger memory.

Help for error value = 15:

Use an SMI card that is empty.

p4692 Save SMI data of all SMI / Save SMI data

CU_CX32, CU_I, CU_S

Can be changed: T | **Calculated:** - | **Access level:** 1
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Displays, signals | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	13	0

Description: Setting to save data of all existing Sensor Module Integrated (SMI) on the CompactFlash card.

Value:
0: Inactive
1: Save data from all SMI on CompactFlash card
13: CompactFlash card does not have sufficient memory space

Dependency: Refer to: p4690, p4691

Note: SMI: SINAMICS Sensor Module Integrated
p4692 is automatically set to 0 at the end of the data save procedure.
The procedure must be repeated if the data save operation was interrupted (e.g. if the power supply voltage failed).

p4700[0...1] Trace control / Trace control

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -

Min	Max	Factory setting
0	2	0

Value:
0: Stop measuring function
1: Start measuring function
2: Measuring function, check parameterization

r4705[0...1] Trace status / Trace status

CU_CX32, CU_I, CU_S

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 0

Min	Max	Factory setting
0	4	-

Description: Displays the current status of the trace.

Value:
0: Trace inactive
1: Trace is recording presamples
2: Trace is waiting for trigger event
3: Trace is recording
4: Recording (trace) ended

Index: [0] = Trace 0
[1] = Trace 1

r4706 Measuring function, status / Meas fct status

CU_CX32, CU_I, CU_S

Can be changed: -
Calculated: -
Access level: 3
Data type: Integer16
Dynamic index: -
Func. diagram: -
P-Group: Trace and function generator
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 0

Min	Max	Factory setting
0	5	-

Value:
0: Measurement function inactive
1: Measuring function, parameterization checked
2: Measuring function waits for stabilizing time
3: Measuring function recording (tracing)
4: Measuring function, trace ended with error
5: Measuring function, trace successfully completed

r4708[0...1] Trace memory space required / Trace mem required

CU_CX32, CU_I, CU_S

Can be changed: -
Calculated: -
Access level: 3
Data type: Unsigned32
Dynamic index: -
Func. diagram: -
P-Group: Trace and function generator
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 0

Min	Max	Factory setting
-	-	-

Description: Displays the required memory in bytes for the current parameterization.
Index: [0] = Trace 0
[1] = Trace 1
Dependency: Refer to: r4799

p4710[0...1] Trace trigger condition / Trace Trig_cond

CU_CX32, CU_I, CU_S

Can be changed: U, T
Calculated: -
Access level: 3
Data type: Integer16
Dynamic index: -
Func. diagram: -
P-Group: Trace and function generator
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 0

Min	Max	Factory setting
1	7	2

Description: Sets the trigger condition for the trace.
Value:
1: Immediate start
2: Positive edge
3: Negative edge
4: Entry to hysteresis band
5: Leaving hysteresis band
6: Trigger at bit mask
7: Start with function generator
Index: [0] = Trace 0
[1] = Trace 1

p4711[0...5] Trace trigger signal / Trace trig_signal

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 0

Min	Max	Factory setting
-	-	0

Description: Selects the trigger signal for the trace.

Index: [0] = Trace 0 parameter in BICO format
[1] = Trace 1 parameter in BICO format
[2] = Trace 0 PINx with DO Id and chart Id
[3] = Trace 0 PINx with block Id and PIN Id
[4] = Trace 1 PINy with DO Id and chart Id
[5] = Trace 1 PINy with block Id and PIN Id

Dependency: Only effective when p4710 does not equal 1.

Note: It only makes sense to trace the PINs using the commissioning software.
For index 2(4) and 3(5) equal to zero, index 0(1) can only be written and vice versa.
Re index 0 ... 1:
Here, the trigger signal for trace 0 or 1 is entered as parameter in the BICO format.
For trace with a physical address (p4789), the data type of the trigger signal is set here.
Re index 2 ... 3:
The triggering PIN for trace 0 is entered here.
Index 2 bit 31 ... 16: Number of the Drive Object (DO), bit 15 ... 0: Number of the chart
Index 3 bit 31 ... 16: Number of the block, bit 15 ... 0: Number of the PIN
Re index 4 ... 5:
The triggering PIN for trace 1 is entered here.
Index 4 bit 31 ... 16: Number of the Drive Object (DO), bit 15 ... 0: Number of the chart
Index 5 bit 31 ... 16: Number of the block, bit 15 ... 0: Number of the PIN

p4712[0...1] Trace trigger threshold / Trace trig_thresh

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 0

Min	Max	Factory setting
-340.28235E36	340.28235E36	0.00

Description: Sets the trigger threshold for the trace.

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Only effective when p4710 = 2, 3.

p4713[0...1] Trace tolerance band trigger threshold / Trace trig thresh

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 0

Min	Max	Factory setting
-340.28235E36	340.28235E36	0.00

Description: Sets the first trigger threshold for trigger via tolerance band.

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Only effective when p4710 = 4, 5.

p4714[0...1] Trace tolerance band trigger threshold / Trace trig thresh

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 0

Min	Max	Factory setting
-340.28235E36	340.28235E36	0.00

Description: Sets the second trigger threshold for trigger via tolerance band
Index: [0] = Trace 0
[1] = Trace 1
Dependency: Only effective when p4710 = 4, 5.

p4715[0...1] Trace bit mask trigger, bit mask / Trace trig mask

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 0

Min	Max	Factory setting
0	4294967295	0

Description: Sets the bit mask for the bit mask trigger.
Index: [0] = Trace 0
[1] = Trace 1
Dependency: Only effective when p4710 = 6.

p4716[0...1] Trace, bit mask trigger, trigger condition / Trace Trig_cond

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 0

Min	Max	Factory setting
0	4294967295	0

Description: Sets the trigger condition for bit mask trigger.
Index: [0] = Trace 0
[1] = Trace 1
Dependency: Only effective when p4710 = 6.

p4717 Measuring function, number of averaging operations / Meas fct avg qty

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** -

r4740[0...16383] Trace 0 trace buffer signal 0 floating point / Trace 0 rec sig 0

CU_CX32, CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 0

Min	Max	Factory setting
-	-	-

Description: Displays the trace buffer (record buffer) for trace 0 and signal 0.

The trace (record) buffer is sub-divided into memory banks, each containing 16384 values. Parameter p4795 can be used to toggle between the individual banks.

Example A:

The first 16384 values of signal 0, trace 0 are to be read out.

In this case, memory bank 0 is set with p4795 = 0. The first 16384 values can now be read out using r4740[0] to r4740[16383].

Example B:

The values 16385 to 32768 from signal 0, trace 0 are to be read out.

In this case, memory bank 1 is set with p4795 = 1. The values can now be read out in r4740[0] to r4740[16383].

Dependency: Refer to: p4795

	-	-	-

Description: Displays the trace buffer (record buffer) for trace 0 and signal 0 as integer number.
Note: For signals, data type I32 or U32, the trace buffer is assigned as follows:
r4760[0] = value 0
r4760[1] = value 1
...
r4760[8191] = value 8191
For signals, data type I16 or U16, the trace buffer is assigned as follows:
r4760[0] = value 0 (bit 31 ... 16) and value 1 (bit 15 ... 0)
r4760[1] = value 2 (bit 31 ... 16) and value 3 (bit 15 ... 0)
...
r4760[8191] = value 16382 (bit 31 ... 16) and value 16383 (bit 15 ... 0)
For signals, data type I8 or U8, the trace buffer is assigned as follows:
r4760[0] = value 0 (bit 31 ... 24) value 1 (bit 23 ... 16) value 2 (bit 15 ... 8) value 3 (bit 7 ... 0)
r4760[1] = value 4 (bit 31 ... 24) value 5 (bit 23 ... 16) value 6 (bit 15 ... 8) value 7 (bit 7 ... 0)
...
r4760[8191] = value 32764 (bit 31 ... 24) value 32765 (bit 23 ... 16) value 32766 (bit 15 ... 8) value 32767 (bit 7 ... 0)

r4761[0...16383] Trace 0 trace buffer signal 1 / Trace 0 trace sig1

[1] = Trace 1

p4795 Trace memory bank changeover / Trace mem changeov

CU_CX32, CU_I, CU_S

Can be changed: U, T
Calculated: -
Access level: 3
Data type: Unsigned32
Dynamic index: -
Func. diagram: -
P-Group: Trace and function generator
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 0

Min	Max	Factory setting
0	500	0

Description: Changes over the memory bank to read out the contents of the trace buffer.
Dependency: Refer to: r4740, r4741, r4742, r4743, r4750, r4751, r4752, r4753

r4799 Trace memory location free / Trace mem free

CU_CX32, CU_I, CU_S

Can be changed: -
Calculated: -
Access level: 3
Data type: Unsigned32
Dynamic index: -
Func. diagram: -
P-Group: Trace and function generator
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 0

Min	Max	Factory setting
-	-	-

Description: Displays the free memory for the trace in bytes.
Dependency: Refer to: r4708

p4800 Function generator control / FG control

CU_CX32, CU_I, CU_S

Can be changed: U, T
Calculated: -
Access level: 3
Data type: Integer16
Dynamic index: -
Func. diagram: -
P-Group: Trace and function generator
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0	3	0

Description: The function generator is started with p4800 = 1.
The signal is only generated for a 1 signal of binector input p4819.
Value:
0: Stop function generator
1: Start function generator
2: Check function generator parameterization
3: Start function generator without enable signals
Dependency: Refer to: p4819

r4805 Function generator status / FG status

CU_CX32, CU_I, CU_S

Can be changed: -
Calculated: -
Access level: 3
Data type: Integer16
Dynamic index: -
Func. diagram: -
P-Group: Trace and function generator
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0	6	-

Description: Displays the current status of the function generator.
Value:
0: Inactive
1: Generate accelerating ramp to offset
2: Generate parameterized signal shape
3: Generate braking ramp
4: Function generator stopped due to missing enable signals
5: Function generator waits for BI: p4819
6: Function generator parameterization has been checked
Dependency: Refer to: p4800, p4819

r4806.0 BO: Function generator status signal / FG status signal

CU_CX32, CU_I, CU_S

Can be changed: -
Calculated: -
Access level: 3
Data type: Unsigned32
Dynamic index: -
Func. diagram: -
P-Group: Trace and function generator
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the status of the function generator.
0 signal: Function generator inactive
1 signal: Function generator running

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Bit 0	On	Off	-

p4810 Function generator mode / FG operating mode

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	99	0

Description: Sets the operating mode of the function generator.

Value:
0: Connection at connector output r4818
1: Connection at current setpoint after filter and r4818
2: Connection as disturbing torque and r4818
3: Connection at speed setpoint after filter and r4818
4: Connection at current setpoint before filter and r4818
5: Connection at speed setpoint before filter and r4818
99: Connection at physical address and r4818

p4812 Function generator physical address / FG phys address

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	4294967295	0

Description: Sets the physical address where the function generator is to be connected.

Dependency: Only effective when p4810 = 99.

p4813 Function generator physical address reference value / FG phys addr ref

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1.00	1000000.00	1.00

Description: Sets the reference value for 100 % for referred inputs.

Dependency: Only effective when p4810 = 99.

p4815[0...2] Function generator drive number / FG drive number

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	65535	0

Description: Selects the required drive where the function generator is to be connected.

Index:
[0] = First drive for connection
[1] = Second drive for connection
[2] = Third drive for connection

Dependency: Only effective when p4810 = 1, 2, 3, 4 or 5.

Note: For the function generator, only type SERVO or VECTOR drives can be used.

r4818 CO: Function generator output signal / FG output signal

CU_CX32, CU_I, CU_S

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: Trace and function generator
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Displays the output signal for the function generator.
Dependency: Refer to: p4810
Note: The value is displayed independently of the function generator mode.
The signal is available as connector output for an ongoing interconnection.

p4819 BI: Function generator control / FG control

CU_CX32, CU_I, CU_S

Can be changed: U, T
Calculated: -
Access level: 3
Data type: Unsigned32 / Binary
Dynamic index: -
Func. diagram: -
P-Group: Trace and function generator
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source to control the function generator.
When the function generator is running, signal generation is stopped with a 0 signal from BI: p4819 and p4800 is set to 0.
Dependency: Refer to: p4800

p4820 Function generator signal shape / FG signal shape

CU_CX32, CU_I, CU_S

Can be changed: U, T
Calculated: -
Access level: 3
Data type: Integer16
Dynamic index: -
Func. diagram: -
P-Group: Trace and function generator
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
1	5	1

Description: Sets the signal to be generated for the function generator.
Value:
1: Square-wave
2: Staircase
3: Delta
4: Binary noise - PRBS (Pseudo Random Binary Signal)
5: Sine-wave

p4821 Function generator period / FG period duration

CU_CX32, CU_I, CU_S

Can be changed: U, T
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: Trace and function generator
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0.00 [ms]	60000.00 [ms]	1000.00 [ms]

Description: Sets the period of the signal to be generated for the function generator.
Dependency: Ineffective when p4820 = 4 (PRBS).

p4822 Function generator pulse width / FG pulse width

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	60000.00 [ms]	500.00 [ms]

Description: Sets the pulse width for the signal to be generated for the function generator.
Dependency: Only effective when p4820 = 1 (square-wave).

p4823 Function generator bandwidth / FG bandwith

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0025 [Hz]	16000.0000 [Hz]	4000.0000 [Hz]

Description: Sets the bandwidth for the signal to be generated for the function generator.
Dependency: Only effective when p4820 = 4 (PRBS).
Refer to: p4830
Refer to: A02041

p4824 Function generator amplitude / FG amplitude

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-1600.00 [%]	1600.00 [%]	5.00 [%]

Description: Sets the amplitude for the signal to be generated for the function generator.
Dependency: Units are dependent on p4810.
If p4810 = 1, 2, 4: The amplitude is referred to p2002 (reference current).
If p4810 = 3, 5: The amplitude is referred to p2000 (reference speed).

p4825 Function generator second amplitude / FG second ampl

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-1600.00 [%]	1600.00 [%]	7.00 [%]

Description: Sets the second amplitude for the signal to be generated for the function generator.
Dependency: Only effective for p4820 = 2 (staircase).
Units are dependent on p4810.
If p4810 = 1, 2, 4: The amplitude is referred to p2002 (reference current).
If p4810 = 3, 5: The amplitude is referred to p2000 (reference speed).

p4826 Function generator offset / FG offset

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-1600.00 [%]	1600.00 [%]	0.00 [%]

Description: Sets the offset (DC component) of the signal to be generated for the function generator.

Dependency: Units are dependent on p4810.
If p4810 = 1, 2, 4: The offset is referred to p2002 (reference current).
If p4810 = 3, 5: The offset is referred to p2000 (reference speed).
If p4810 = 2: In order to avoid the undesirable effects of play (backlash), the offset does not act on the current setpoint, but instead on the speed setpoint.

p4827 Function generator ramp-up time to offset / FG ramp-up offset

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	100000.00 [ms]	32.00 [ms]

Description: Sets the ramp-up time to the offset for the function generator.

p4828 Function generator lower limit / FG lower limit

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-10000.00 [%]	0.00 [%]	-100.00 [%]

Description: Sets the lower limit for the function generator.

Dependency: For p4810 = 2 the limit only applies to the current setpoint, but not the speed setpoint (offset).

p4829 Function generator upper limit / FG upper limit

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [%]	10000.00 [%]	100.00 [%]

Description: Sets the upper limit for the function generator.

Dependency: For p4810 = 2 the limit only applies to the current setpoint, but not the speed setpoint (offset).

p4830 Function generator time slice cycle / FG time slice

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0.03125 [ms]	2.00000 [ms]	0.12500 [ms]

Description: Sets the time slice cycle in which the function generator is called.

p4831 Function generator amplitude scaling / FG amplitude scal

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0.00000 [%]	200.00000 [%]	100.00000 [%]

Description: Sets the scaling for the amplitude of the signal waveforms for all output channels.
The value can be changed while the function generator is running.

p4832[0...2] Function generator amplitude scaling / FG amplitude scal

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-340.28235E36 [%]	340.28235E36 [%]	100.00000 [%]

Description: Sets the scaling for the amplitude of the signal waveforms separately for each output channel.
The value cannot be changed while the function generator is running.

Index: [0] = First drive for connection
[1] = Second drive for connection
[2] = Third drive for connection

p4833[0...2] Function generator offset scaling / FG offset scal

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-340.28235E36 [%]	340.28235E36 [%]	100.00000 [%]

Description: Sets the scaling for the offset of the signal waveforms separately for each output channel.
The value cannot be changed while the function generator is running.

Index: [0] = First drive for connection
[1] = Second drive for connection
[2] = Third drive for connection

r4899 Status word sequence control / ZSW seq_ctrl

TM41

Can be changed: -
Calculated: -
Access level: 2
Data type: Unsigned16
Dynamic index: -
Func. diagram: -
P-Group: Displays, signals
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the status word of the sequence control from Terminal Module 41 (TM41).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Ready for switching on	Yes	No	-
01	Ready for operation	Yes	No	-
02	Operation enabled	Yes	No	-
03	Fault present	Yes	No	-
04	Coast down active	No	Yes	-
05	Quick Stop active	No	Yes	-
06	Switching on inhibited	Yes	No	-
07	Alarm present	Yes	No	-
09	Control requested	Yes	No	-
14	Motor rotates forwards	Yes	No	-

r4950 OA application count / OA no.

All objects

Can be changed: -
Calculated: -
Access level: 4
Data type: Unsigned16
Dynamic index: -
Func. diagram: -
P-Group: OEM range
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 0

Min	Max	Factory setting
0	10	-

Description: Displays the number of OA applications installed on the memory card.
Dependency: Refer to: r4951, r4952, r4955, p4956, r4957, r4958, r4959, r4960
Note: OA: Open Architecture

r4951 OA application identifier, total length / OA ID length

All objects

Can be changed: -
Calculated: -
Access level: 4
Data type: Unsigned16
Dynamic index: -
Func. diagram: -
P-Group: OEM range
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 0

Min	Max	Factory setting
0	90	-

Description: Displays the total length of the identifiers of all of the OA applications installed on the memory card.
Dependency: Refer to: r4950, r4952, r4955, p4956, r4957, r4958, r4959, r4960
Note: The identifier of an OA application comprises a maximum of 8 characters plus separator.

r4952 OA application GUID, total length / OA GUID length

All objects

Can be changed: -
Calculated: -
Access level: 4
Data type: Unsigned16
Dynamic index: -
Func. diagram: -
P-Group: OEM range
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 0

Min	Max	Factory setting
0	180	-

Description: Displays the total length of the GUIDs of all of the OA applications installed on the memory card.
Dependency: Refer to: r4950, r4951, r4955, p4956, r4957, r4958, r4959, r4960

Note: The GUID of an OA application comprises 16 characters plus 1 character major information plus 1 character, minor information.
GUID: Globally Unique IDentifier

r4955[0...n] OA application identifier / OA ID

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned8	**Dynamic index:** r4951	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 0

Min	Max	Factory setting
-	-	-

Description: Displays the identifiers of OA applications installed on the memory card.
r4955[0...8]: Identifier of OA application 1
r4955[9...17]: Identifier of OA application 2, ...

Dependency: Refer to: r4950, r4951, r4952, p4956, r4957, r4958, r4959, r4960

Notice: If there is no OA application, then it is not possible to access an index.

p4956[0...n] OA application activation / OA act

All objects

Can be changed: C1, T	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dynamic index:** r4950	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 0

Min	Max	Factory setting
0	1	0

Description: Setting to activate the OA applications installed on the memory card.
r4956[0]: Activates OA application 1
r4956[1]: Activates OA application 2, ...

Value:
0: OA application inactive
1: OA application active

Dependency: Refer to: r4950, r4951, r4952, r4955, r4957, r4958, r4959, r4960

Notice: If there is no OA application, then it is not possible to access an index.

r4957[0...n] OA application version / OA version

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dynamic index:** r4950	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 0

Min	Max	Factory setting
-	-	-

Description: Displays the versions of the OA applications installed on the memory card.
r4957[0]: Version of OA application 1
r4957[1]: Version of OA application 2, ...

Dependency: Refer to: r4950, r4951, r4952, r4955, p4956, r4958, r4959, r4960

Notice: If there is no OA application, then it is not possible to access an index.

Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r4958[0...n] OA application interface version / OA int_version

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: Unsigned32	**Dynamic index:** r4950	**Func. diagram:** -
	P-Group: OEM range	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 0
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the interface version of the OA applications installed on the memory card.
r4958[0]: Interface version of OA application 1
r4958[1]: Interface version of OA application 2, ...

Dependency: Refer to: r4950, r4951, r4952, r4955, p4956, r4957, r4959, r4960

Notice: If there is no OA application, then it is not possible to access an index.

Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r4959[0...n] OA application GUID / OA GUID

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: Unsigned8	**Dynamic index:** r4952	**Func. diagram:** -
	P-Group: OEM range	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 0
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the GUIDs of OA applications installed on the memory card.
r4959[0...15]: GUID of OA application 1
r4960[16]: Major information of OA application 1
r4960[17]: Minor information of OA application 1
r4959[18...33]: GUID of OA application 2
r4960[34]: Major information of OA application 2
r4960[35]: Minor information of OA application 2, ...

Dependency: Refer to: r4950, r4951, r4952, r4955, p4956, r4957, r4958, r4960

Notice: If there is no OA application, then it is not possible to access an index.

r4960[0...n] OA application GUID drive object / OA GUID DO

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: Unsigned8	**Dynamic index:** r4952	**Func. diagram:** -
	P-Group: OEM range	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 0
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the GUIDs of this drive object of the OA applications installed on the memory card.
r4960[0...15]: GUID of this drive object of OA application 1
r4960[16]: Major information of this drive object of OA application 1
r4960[17]: Minor information of this drive object of OA application 1
r4960[18...33]: GUID of this drive object of OA application 2
r4960[34]: Major information of this drive object of OA application 2
r4960[35]: Minor information of this drive object of OA application 2, ...

Dependency: Refer to: r4950, r4951, r4952, r4955, p4956, r4957, r4958, r4959

Notice: If there is no OA application, then it is not possible to access an index.

p4961[0...n] OA application logbook module selection / OA logbook module

All objects

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dynamic index:** r4950	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 0

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Only for service purposes.

r4975 OA application invalid count / OA inv qty

CU_CX32, CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 0

Min	Max	Factory setting
0	10	-

Description: Displays the number of invalid OA applications installed on the memory card.
Dependency: Refer to: r4976, r4978, r4979
Note: OA: Open Architecture

r4976 OA application invalid identifier, total length / OA and ID length

CU_CX32, CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 0

Min	Max	Factory setting
0	90	-

Description: Displays the total length of the identifiers of all of the OA applications installed on the memory card.
Dependency: Refer to: r4975, r4978, r4979
Note: The identifier of an invalid OA application comprises a maximum of 8 characters plus separator.

r4978[0...n] OA application invalid identifier / OA inv ID

CU_CX32, CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned8	**Dynamic index:** r4976	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 0

Min	Max	Factory setting
-	-	-

Description: Displays the identifiers of invalid OA applications installed on the memory card.
r4978[0...8]: Identifier of invalid OA application 1
r4978[9...17]: Identifier of invalid OA application 2, ...
Dependency: Refer to: r4975, r4976, r4979
Notice: If there is no invalid OA application, then it is not possible to access an index.

r4979[0...n] OA application invalid fault code / OA inv fault code

CU_CX32, CU_I, CU_S

Can be changed: -
Calculated: -
Access level: 4
Data type: Unsigned32
Dynamic index: r4975
Func. diagram: -
P-Group: OEM range
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 0

Min	Max	Factory setting
-	-	-

Description: Displays the fault code of invalid OA applications installed on the memory card.
r4979[0]: Fault value of OA application 1
r4979[1]: Fault value of OA application 2, ...

Dependency: Refer to: r4975, r4976, r4978

Notice: If there is no invalid OA application, then it is not possible to access an index.

Note: The value in the fault code must be interpreted in binary form. The bits have the following meaning:
Bit 0: Incompatible OA interface version.
Bit 1: OA application could not be loaded.
Bit 2: Incorrect description files.
Bit 3: OA application does not define a CPU type.
Bit 4: OA application not intended for this device (incorrect CPU type).
Bit 5: OA application not intended for this device (incorrect type ID).
Bit 6: Incorrect description files (const/startup do not match).

r7000 Par_circuit No. of active power units / Qty active PU

A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: -
Calculated: -
Access level: 3
Data type: Unsigned16
Dynamic index: -
Func. diagram: -
P-Group: Modulation
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the active power units for a parallel circuit configuration.

Dependency: Refer to: p7001

p7001[0...n] Par_circuit power units enable / PU enable

A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: T
Calculated: -
Access level: 3
Data type: Integer16
Dynamic index: PDS, p0120
Func. diagram: -
P-Group: Modulation
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0	1	1

Description: Enables the power units in the parallel circuit configuration.

Value:
0: De-activated
1: Activated

Dependency: Refer to: r7000

Note: For motors with separate winding systems (p7003 = 1) it is not possible to inhibit an individual power unit.
p7001 is automatically reset if a power unit is de-activated via p0125 or p0895.

r7002[0...n] Par_circuit status power units / Status PU

A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** PDS, p0120	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	-

Description: Displays the status of the power units in the parallel circuit configuration.

Value:
0: Pulses inhibited
1: Pulses enabled

Dependency: Refer to: r7000, p7001

p7003 Par_circuit winding system / Winding system

VECTOR (Parallel)

Can be changed: C2(2)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Specifies the winding system for a parallel circuit configuration.

The following limitations/restrictions are obtained depending on the setting:

One winding system (p7003 = 0):

- the motor data identification routine (p1910) determines the stator resistance and the cable resistance. The cable resistance of an individual Motor Module is entered into p0352.
- the current symmetrizing is activated as standard after the motor data identification routine (p7035 = 1).
- individual Motor Modules can be activated and de-activated (p7001).
- the edge modulation is not possible (p1802).

Several separate winding systems or motors (p7003 = 1):

- the motor data identification routine (p1910) determines the total (overall) resistance. The cable resistance is not measured, but instead, entered as a component of the total resistance (refer to p0352).
- all Motor Modules are activated. It is not possible to de-activate a motor model.
- the edge modulation can be activated (p1802).

Value:
0: One winding system
1: Several separate winding systems or motors

Dependency: Refer to: p1802

p7010 Par_circuit current dissymmetry alarm threshold / i_dissym A thresh

A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
2 [%]	100 [%]	20 [%]

Description: Sets the alarm threshold to detect current dissymmetry in the parallel circuit configuration.

The deviation between the measured values and average value is evaluated. The specified value is referred to the rated power unit current (p7251[0]).

Dependency: Refer to: r7251
Refer to: A05052

p7011 Par_circuit DC link voltage dissymmetry alarm threshold / Vdc_dissym A thrsh

A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Modulation | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
2 [%]	100 [%]	10 [%]

Description: Sets the alarm threshold to detect dissymmetry of the DC link voltages in the parallel circuit configuration.
The deviation between the measured values and average value is evaluated. The specified value is referred to the rated link voltage.

Dependency: Refer to: A05053

r7020[0...n] CO: Par_circuit deviation current in phase U / Phase U curr dev

A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** PDS, p0120 | **Func. diagram:** -
P-Group: Displays, signals | **Units group:** 6_5 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
- [A]	- [A]	- [A]

Description: Displays the deviation between the measured current actual value of phase U and the average value as peak value.
The maximum deviation from the average value is displayed in r7025.

Dependency: Refer to: r7021, r7022, r7025

r7021[0...n] CO: Par_circuit deviation current in phase V / Phase V curr dev

A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** PDS, p0120 | **Func. diagram:** -
P-Group: Displays, signals | **Units group:** 6_5 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
- [A]	- [A]	- [A]

Description: Displays the deviation between the measured current actual value of phase V and the average value as peak value.
The maximum deviation from the average value is displayed in r7026.

Dependency: Refer to: r7020, r7022, r7026

r7022[0...n] CO: Par_circuit deviation current in phase W / Phase W curr dev

A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** PDS, p0120 | **Func. diagram:** -
P-Group: Displays, signals | **Units group:** 6_5 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
- [A]	- [A]	- [A]

Description: Displays the deviation between the measured current actual value of phase W and the average value as peak value.
The maximum deviation from the average value is displayed in r7027.

Dependency: Refer to: r7020, r7021, r7027

r7025 CO: Par_circuit max. deviation currents phase U / Phase U Max i_dev

A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 6_5	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
- [A]	- [A]	- [A]

Description: Displays the maximum absolute deviation of the measured current actual values of phase U from the average value as peak value.
The deviation of the individual currents from the average value is displayed in r7020.

Dependency: Refer to: r7020, r7026, r7027
Refer to: A05052

r7026 CO: Par_circuit max. deviation currents phase V / Phase V Max i_dev

A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 6_5	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
- [A]	- [A]	- [A]

Description: Displays the maximum absolute deviation of the measured current actual values of phase V from the average value as peak value.
The deviation of the individual currents from the average value is displayed in r7021.

Dependency: Refer to: r7021, r7025, r7027
Refer to: A05052

r7027 CO: Par_circuit max. deviation currents phase W / Phase W Max i_dev

A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 6_5	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
- [A]	- [A]	- [A]

Description: Displays the maximum absolute deviation of the measured current actual values of phase W from the average value as peak value.
The deviation of the individual currents from the average value is displayed in r7022.

Dependency: Refer to: r7022, r7025, r7026
Refer to: A05052

r7030[0...n] CO: Par_circuit DC link voltage deviation / Vdc deviation

A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
- [V]	- [V]	- [V]

Description: Displays the deviation of the measured DC link voltage from the average value.
The maximum deviation from the average value is displayed in r7031.

Dependency: Refer to: r7031

r7031 CO: Par_circuit DC link voltage maximum deviation / Vdc deviation max.

A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: Displays, signals
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [V]	- [V]	- [V]

Description: Displays the maximum absolute deviation of the measured DC link voltage from the average value.
The deviation of the individual voltages from the average value is displayed in r7030.

Dependency: Refer to: r7030
Refer to: A05053

p7035 Infeed par_circuit circulating current control operating mode / Circ_I mode

A_INF (Parallel), S_INF (Parallel)

Can be changed: U, T
Calculated: -
Access level: 3
Data type: Integer16
Dynamic index: -
Func. diagram: -
P-Group: Modulation
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0	1	1

Description: Sets the operating mode of the circulating current control.
The circulating current control ensures symmetrical distribution of the total currents to the individual converters.

Value:
0: Circulating current control de-activated
1: Circulating control control activated

p7035[0...n] Par_circuit circulating current control operating mode / Circ_I mode

VECTOR (Parallel)

Can be changed: U, T
Calculated: -
Access level: 3
Data type: Integer16
Dynamic index: DDS, p0180
Func. diagram: -
P-Group: Modulation
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0	1	1

Description: Sets the operating mode of the circulating current control.
The circulating current control ensures symmetrical distribution of the total currents to the individual converters.

Value:
0: Circulating current control de-activated
1: Circulating control control activated

p7036 Infeed par_cct circulating current controller proportional gain / Circ_I Kp

A_INF (Parallel), S_INF (Parallel)

Can be changed: U, T
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: Modulation
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0.00000 [%]	1000.00000 [%]	100.00000 [%]

Description: Sets the normalized proportional gain for the circulating current controller.

Note: A value of 100 % corresponds to the basic setting derived from loop control parameters (p3421, p3622).

p7036[0...n] Par_circuit circulating current control proportional gain / Circ_I Kp

VECTOR (Parallel)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Modulation | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00000 [Ohm]	20.00000 [Ohm]	0.00000 [Ohm]

Description: Sets the proportional gain for the circulating current controller.
The parameter is pre-set to the cable resistance.

p7037 Infeed par_cct circulating current control integral time / I_circ Tn

A_INF (Parallel), S_INF (Parallel)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Modulation | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	100000.0 [%]	100.0 [%]

Description: Sets the normalized integral time of the circulating current controller.
Note: A value of 100 % corresponds to the basic setting derived from the controller sampling time p0115[0].
The integral component of the controller is de-activated with p7037 = 0.

p7037[0...n] Par_circuit circulating current control integral time / I_circ Tn

VECTOR (Parallel)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Modulation | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
2.0	1000.0	4.0

Description: Sets the integral time of the circulating current controller.
The parameter is referred to the current controller sampling time (p0115[0]).
Dependency: Refer to: p0115

p7038 Infeed par_circuit circulating current control limit / I_circ limit

A_INF (Parallel), S_INF (Parallel)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Modulation | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1 [%]	100 [%]	100 [%]

Description: Sets the limit of the circulating current controller output values.
The parameter is, depending on the phase, referred to the valve lockout times (p1828, p1829, p1830).

p7038[0...n] Par_circuit circulating current control limit / I_circ limit

VECTOR (Parallel)

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Modulation | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1 [%]	100 [%]	50 [%]

Description: Sets the limit of the circulating current controller output values.
The parameter is, depending on the phase, referred to the valve lockout times (p1828, p1829, p1830).

p7040[0...n] Par_circuit correction valve lockout time phase U / Comp t_lockout U

A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** PDS, p0120 | **Func. diagram:** -
P-Group: Modulation | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	1000000.00 [µs]	0.00 [µs]

Description: For the particular Motor Module, the correction time must be added to the valve lockout time to be compensated for phase U (p1828).
The corrective value is used to compensate variations/spread in the valve lockout times of Motor Modules for a parallel circuit configuration.

Dependency: Refer to: p1828

p7042[0...n] Par_circuit correction valve lockout time phase V / Comp t_lockout V

A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** PDS, p0120 | **Func. diagram:** -
P-Group: Modulation | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	1000000.00 [µs]	0.00 [µs]

Description: For the particular Motor Module, the correction time must be added to the valve lockout time to be compensated for phase V (p1829).
The corrective value is used to compensate variations/spread in the valve lockout times of Motor Modules for a parallel circuit configuration.

Dependency: Refer to: p1829

p7044[0...n] Par_circuit correction valve lockout time phase W / Comp t_lockout W

A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** PDS, p0120 | **Func. diagram:** -
P-Group: Modulation | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	1000000.00 [µs]	0.00 [µs]

Description: For the particular Motor Module, the correction time must be added to the valve lockout time to be compensated for phase W (p1830).
The corrective value is used to compensate variations/spread in the valve lockout times of Motor Modules for a parallel circuit configuration.

Dependency: Refer to: p1830

r7050[0...n] Par_circuit circulating current phase U / Circ_I_phase U

A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** PDS, p0120 | **Func. diagram:** -
P-Group: Displays, signals | **Units group:** 6_5 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
- [A]	- [A]	- [A]

Description: Displays the circulating current of phase U as peak value.

r7051[0...n] Par_circuit circulating current phase V / Circ_I_phase V

A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** PDS, p0120 | **Func. diagram:** -
P-Group: Displays, signals | **Units group:** 6_5 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
- [A]	- [A]	- [A]

Description: Displays the circulating current of phase V as peak value.

r7052[0...n] Par_circuit circulating current phase W / Circ_I_phase W

A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** PDS, p0120 | **Func. diagram:** -
P-Group: Displays, signals | **Units group:** 6_5 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
- [A]	- [A]	- [A]

Description: Displays the circulating current of phase W as peak value.

r7100[0...99] Par_circuit ring buffer fault/alarm code / Fault/alarm code

A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Displays, signals | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Ring buffer for faults and alarms that have occurred from power units connected in parallel (Motor Module, Active Line Infeed, Voltage Sensing Module).
Displays the fault/alarm code.
Dependency: Refer to: r7101, r7102, r7103
Note: The last fault case that occurred is documented in index 0.
The parameter is reset to 0 at POWER ON.

r7101[0...99] Par_circuit ring buffer data set number / Ring buffer Ds_No

A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Ring buffer for faults and alarms that have occurred from power units connected in parallel (Motor Module, Active Line Infeed, Voltage Sensing Module).
p7101 < 100:
Displays the Power unit Data Set number (PDS).
p7101 >= 100:
Displays the Voltage Sensing Module Data Set number (VSMDS)

Dependency: Refer to: r7100, r7102, r7103

Note: The last fault case that occurred is documented in index 0.
The parameter is reset to 0 at POWER ON.

r7102[0...99] Par_circuit ring buffer fault/alarm received / F/A received

A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Ring buffer for faults and alarms that have occurred from power units connected in parallel (Motor Module, Active Line Infeed, Voltage Sensing Module).
Displays the relative system runtime when the fault or alarm occurred.

Dependency: Refer to: r7100, r7101, r7103

Note: The last fault case that occurred is documented in index 0.
The parameter is reset to 0 at POWER ON.

r7103[0...99] Par_circuit ring buffer fault/alarm gone / F/A gone

A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Ring buffer for faults and alarms that have occurred from power units connected in parallel (Motor Module, Active Line Infeed, Voltage Sensing Module).
Displays the relative system runtime when the fault or alarm was withdrawn.

Dependency: Refer to: r7100, r7101, r7102

Note: The last fault case that occurred is documented in index 0.
The parameter is reset to 0 at POWER ON.

r7200[0...n] Par_circuit power unit overload I2T / PU overload I2T

A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** PDS, p0120 **Func. diagram:** -
P-Group: Displays, signals **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Displays the overload of the particular power unit in a parallel circuit configuration calculated using the I2t function.
The maximum value of all power units is displayed in r0036.

r7201[0...n] Par_circuit power unit temperatures max. inverter / PU temp max inv

A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: - **Calculated:** - **Access level:** 3

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [V]	- [V]	- [V]

Description: Displays the current voltage, phase W.
The average value of all power units is displayed in r0089[2].

r7240[0...n] Par_circuit gating unit status word 1 / Gating unit ZSW1

VECTOR (Parallel)

Can be changed: - **Calculated:** - **Access level:** 4
Data type: Unsigned16 **Dynamic index:** PDS, p0120 **Func. diagram:** -
P-Group: Displays, signals **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays status word 1 of the power unit.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Fault time-critical	On	Off	-
01	Gating unit mode bit 0	On	Off	-
02	Pulse enable	On	Off	-
03	5 V upper circuit breaker	On	Off	-
04	5 V lower circuit breaker	On	Off	-
05	Gating unit mode bit 1	On	Off	-
06	Gating unit mode bit 2	On	Off	-
07	Brake state	On	Off	-
08	Brake diagnostics	On	Off	-
09	Armature short-circuit braking	Active	Not active	-
10	Gating unit state bit 0	On	Off	-
11	Gating unit state bit 1	On	Off	-
12	Gating unit state bit 2	On	Off	-
13	Alarm status bit 0	On	Off	-

14	Alarm status bit 1	On	Off	-
15	Diagnostics 24 V	On	Off	-

r7250[0...4] Par_circuit power unit rated power / PU P_rated

A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Can be changed: - **Calculated:** - **Access level:** 2
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Converter **Units group:** 14_6 **Unit selection:** p0100
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [kW]	- [kW]	- [kW]

Description: Displays the rated power of the individual power units connected in parallel for various load duty cycles.
The sum of the rated powers of all power units connected in parallel is displayed in r0206.

Index: [0] = Rating plate
[1] = Load duty cycle with low overload
[2] = Load duty cycle with high overload
[3] = S1 continuous duty cycle
[4] = S6 load duty cycle

Dependency: The value is displayed in [kW] or [hp].
Refer to: p0100, p0205

r7251[0...4] Par_circuit power unit rated current / PU PI_rated

A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the maximum output current of the individual power units connected in parallel.
The sum of the maximum currents of all power units connected in parallel is displayed in r0209.

Index: [0] = Rating plate
[1] = Load duty cycle with low overload
[2] = Load duty cycle with high overload
[3] = S1 continuous duty cycle
[4] = S6 load duty cycle

Dependency: Refer to: p0205

r7300[0...n] CO: Par_circuit VSM input line voltage u1 - u2 / VSM inp u1-u2

A_INF (Parallel), S_INF (Parallel)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [V]	- [V]	- [V]

Description: Displays the voltage between phases L1 and L2 of the particular Voltage Sensing Module (VSM) for a parallel circuit configuration.
The average value of all VSM is displayed in r3661.

Dependency: Refer to: p3660

Note: X521.1 or X522.1: Connection of L1
X521.2 or X522.2: Connection of L2

r7301[0...n] CO: Par_circuit VSM input line voltage u2 - u3 / VSM inp u2-u3

A_INF (Parallel), S_INF (Parallel)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [V]	- [V]	- [V]

Description: Displays the voltage between phases L2 and L3 of the particular Voltage Sensing Module (VSM) for a parallel circuit configuration.
The average value of all VSM is displayed in r3662.

Dependency: Refer to: p3660

Note: X521.2 or X522.2: Connection of L2
X521.3 or X522.3: Connection of L3

r7305[0...n] Par_circuit VSM temperature evaluation status / VSM temp status

A_INF (Parallel), S_INF (Parallel)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** -
P-Group: Terminals **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the status of the temperature evaluation of the particular Voltage Sensing Module (VSM) for a parallel circuit configuration.
This displays as to whether the temperature actual value has exceeded the fault/alarm threshold.
The overall status of the temperature evaluation of all VSM is displayed in r3664.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Temperature alarm threshold exceeded	Yes	No	-
01	Temperature fault threshold exceeded	Yes	No	-

Dependency: Refer to: p3665, r3666, p3667, p3668

r7306[0...n] CO: Par_circuit VSM temperature KTY / VSM temp KTY

A_INF (Parallel), S_INF (Parallel)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Closed-loop control **Units group:** 21_1 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [°C]	- [°C]	- [°C]

Description: Displays the temperature actual value of the KTY84 temperature sensor connected to the Voltage Sensing Module (VSM) for a parallel circuit configuration.
The maximum value of all VSM is displayed in r3666.
Prerequisite:
A KTY84 sensor is connected and p3665 is set to 2.

Dependency: Refer to: p3665

r7310[0...n] CO: Par_circuit VSM 10 V input CT1 actual value / VSM CT 1 I_act

A_INF (Parallel), S_INF (Parallel)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [A]	- [A]	- [A]

Description: Displays the current actual value from current transducer (CT) 1 at the 10 V input of the particular Voltage Sensing Module (VSM) for a parallel circuit configuration.
The average value of all VSM is displayed in r3671.

Dependency: Refer to: p3670

Note: The CT for phase 1 is connected at terminals X520.1 and X520.2 of the VSM.

r7311[0...n] CO: Par_circuit VSM 10 V input CT2 actual value / VSM CT 2 I_act

A_INF (Parallel), S_INF (Parallel)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [A]	- [A]	- [A]

Description: Displays the current actual value from current transducer (CT) 2 at the 10 V input of the particular Voltage Sensing Module (VSM) for a parallel circuit configuration.
The average value of all VSM is displayed in r3672.

Dependency: Refer to: p3670

Note: The CT for phase 2 is connected at terminals X520.3 and X520.4 of the VSM.

r7315[0...n] CO: Par_circuit VSM 10 V input 1 actual value / VSM inp 1 V_act

A_INF (Parallel), S_INF (Parallel)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [V]	- [V]	- [V]

Description: Displays the actual value of the voltage measured at the 10 V input 1 of the Voltage Sensing Modules (VSM).
The average value of all VSM is displayed in r3673.

Dependency: Refer to: p3670

Note: 10 V input 1: Terminals X520.1 and X520.2

r7316[0...n] CO: Par_circuit VSM 10 V input 2 actual value / VSM inp 2 V_act

A_INF (Parallel), S_INF (Parallel)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [V]	- [V]	- [V]

Description: Displays the actual value of the voltage measured at the 10 V input 2 of the Voltage Sensing Modules (VSM).
The average value of all VSM is displayed in r3674.

Dependency: Refer to: p3670

Note: 10 V input 2: Terminals X520.3 and X520.4

r7320[0...n] Par_circuit VSM line filter capacitance phase U / VSM filt C phase U

A_INF (Parallel), S_INF (Parallel)

Can be changed: - **Calculated:** - **Access level:** 4
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [µF]	- [µF]	- [µF]

Description: Displays the capacitance of the line filter, phase U of the particular Voltage Sensing Module (VSM).
The average value of all VSM is displayed in r3677[0].

Dependency: Refer to: p3676

Note: Prerequisites:
The monitoring of the filter capacitance is activated.

r7321[0...n] Par_circuit VSM line filter capacitance phase V / VSM filt C phase V

A_INF (Parallel), S_INF (Parallel)

Can be changed: - **Calculated:** - **Access level:** 4
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [µF]	- [µF]	- [µF]

Description: Displays the capacitance of the line filter, phase V of the particular Voltage Sensing Module (VSM).
The average value of all VSM is displayed in r3677[1].

Dependency: Refer to: p3676

Note: Prerequisites:
The monitoring of the filter capacitance is activated.

r7322[0...n] Par_circuit VSM line filter capacitance phase W / VSM filt C phase W

A_INF (Parallel), S_INF (Parallel)

Can be changed: - **Calculated:** - **Access level:** 4
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [µF]	- [µF]	- [µF]

Description: Displays the capacitance of the line filter, phase W of the particular Voltage Sensing Module (VSM).
The average value of all VSM is displayed in r3677[2].

Dependency: Refer to: p3676

Note: Prerequisites:
The monitoring of the filter capacitance is activated.

p7820 DRIVE-CLiQ component component number / DLQ comp_no

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	65535	0

Description: Sets the component number of the DRIVE-CLiQ component whose parameters are to be accessed.
Dependency: Refer to: p7821, p7822, r7823

p7821 DRIVE-CLiQ component parameter number / DLQ para_no

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	65535	0

Description: Sets the parameter number to access a parameter of a DRIVE-CLiQ component.
Dependency: Refer to: p7820, p7822, r7823

p7822 DRIVE-CLiQ component parameter index / DLQ para_index

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	65535	0

Description: Sets the parameter index to access a parameter of a DRIVE-CLiQ component.
Dependency: Refer to: p7820, p7821, r7823

r7823 DRIVE-CLiQ component read parameter value / Read DLQ value

CU_CX32, CU_I, CU_S

Can be changed: - | **Calculated:** - | **Access level:** 4
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the parameter value read from the DRIVE-CLiQ component.
Dependency: Refer to: p7820, p7821, p7822

r7825[0...1] DRIVE-CLiQ component version / DLQ version

CU_CX32, CU_I, CU_S

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the firmware versions of the DRIVE-CLiQ component selected using p7828[1].
Index: [0] = Reference firmware version
[1] = Actual firmware version

Dependency: Refer to: p7828

Note: Reference firmware version: Version on the CompactFlash card.
Current firmware version: Actual version of the DRIVE-CLiQ component.

p7826 Firmware update automatic / FW update auto

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	2	1

Description: Sets the behavior for the automatic firmware update of the DRIVE-CLiQ components.

Value:
0: De-activated
1: Upgrade and downgrade
2: Upgrade

Notice: If this parameter is changed, it only becomes effective the next time that the drive system boots.

Note: The firmware is automatically updated when the system boots. The boot can take several minutes.
After the update has been completed, it is necessary to carry out a new POWER ON (power-down/power-up) for the components involved.
The firmware update procedure is displayed as follows:
Control Unit (LED RDY):
Flashes yellow with 0.5 Hz --> firmware is being updated.
Flashing yellow with 2 Hz --> POWER ON is required for the components involved.
Components involved:
Flashing red/green with 0.5 Hz --> firmware is being updated.
Flashing red/green with 2 Hz --> POWER ON of the components is required.
Only components from firmware version 2.5 support the red/green flashing at 2 Hz.

r7827 Firmware update progress display / FW update progress

CU_CX32, CU_I, CU_S

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Displays the progress when updating the firmware of the DRIVE-CLiQ components.

p7828[0...1] Firmware download component number / FW download number

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	399	0

Description: Sets the component number for the required DRIVE-CLiQ component.
Index 0:
Component number of the DRIVE-CLiQ component for which a firmware download is to be made.
Index 1:
Component number of the DRIVE-CLiQ component to which the reference firmware version of the CompactFlash card saved in r7825 is to be displayed.

Index: [0] = Firmware download
[1] = Reference firmware version

Dependency: Refer to: p0121, p0141, p0151, p7829
Note: For p7828[0] = 399, the firmware for all of the existing components is downloaded.
The firmware download is started with p7829 = 1.

p7829 Activate firmware download / FW download act

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	999	0

Description: Activating the firmware download for the DRIVE-CLiQ components specified in p7828.
1: Activate download.
0: Download successfully completed.
1: Fault code
011: DRIVE-CLiQ component has detected a checksum error.
015: The selected DRIVE-CLiQ components did not accept the contents of the firmware file.
018: Firmware version is too old and is not accepted by the component.
019: Firmware version is not suitable for the hardware release of the component.
101: After several communication attempts, no response was received from the DRIVE-CLiQ component.
140: Firmware file for the DRIVE-CLiQ component not available on the CompactFlash card.
143: Component has not been changed over into the mode for a firmware download. It was not possible to delete the existing firmware.
144: When checking the firmware that was downloaded (checksum), the component detected a fault. It is possible that the file on the memory card is defective.
145: The component did not complete the check of the firmware that was downloaded (checksum) in the specified time.
156: Component with the specified component number is not available.
Additional values:
Only for internal Siemens troubleshooting.
Dependency: Refer to: p7828
Note: p7829 is automatically set to 0 after the firmware has been successfully downloaded.
The new firmware only becomes active at the next system run-up.

p7830 Diagnostics telegram selection / Diag telegram

SERVO, VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 4
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -

r7843[0...20] CompactFlash card serial number / CF serial number

CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned8	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the current serial number of the CompactFlash card.
The individual characters of the serial number are displayed in the ASCII code in the indices.

Dependency: Refer to: p9920, p9921

Notice: An ASCII table (excerpt) can be found, for example, in the following List Manual:

Note: Example for displaying a CompactFlash card serial number:
r7843[0] = 49 dec --> ASCII characters = "1" --> serial number, character 1
r7843[1] = 49 dec --> ASCII characters = "1" --> serial number, character 2
r7843[2] = 49 dec --> ASCII characters = "1" --> serial number, character 3
r7843[3] = 57 dec --> ASCII characters = "9" --> serial number, character 4
r7843[4] = 50 dec --> ASCII characters = "2" --> serial number, character 5
r7843[5] = 51 dec --> ASCII characters = "3" --> serial number, character 6
r7843[6] = 69 dec --> ASCII characters = "E" --> serial number, character 7
r7843[7] = 0 dec --> ASCII characters = " " --> serial number, character 8
...
r7843[19] = 0 dec --> ASCII characters = " " --> serial number, character 20
r7843[20] = 0 dec
CompactFlash card serial number = 111923E

r7844 CompactFlash card software version / CF SW version

CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the software version of the CompactFlash card.

Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r7850[0...15] Drive object operational/not operational / DO ready for oper

CU_CX32, CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-32786	32767	-

Description: Displays whether, for an activated drive object, all activated topology components are available or not (or whether these can be addressed).
0: Drive object not ready for operation
1: Drive object ready for operation

p7852 Number of indices for r7853 / Qty indices r7853

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1	200	1

Description: Displays the number of indices for r7853[0...n].
This corresponds to the number of DRIVE-CLiQ components that are in the target topology.

Dependency: Refer to: r7853

r7853[0...n] Component available/not available / Comp present

CU_CX32, CU_I, CU_S

Can be changed: - | **Calculated:** - | **Access level:** 4
Data type: Unsigned16 | **Dynamic index:** p7852 | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF hex	-

Description: Displays the component and whether this component is currently present.
High byte: Component number
Low byte: 0/1 (not available/available)

Dependency: Refer to: p7852

p7857 Sub-boot mode / Sub-boot mode

A_INF, B_INF, CU_LINK, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	1

Description: Sets the mode for the sub-boot.

Value:
0: Sub-boot manual
1: Sub-boot automatic

Note: For p7857 = 0 (manual sub-boot) the following applies:
The parameter should be set to 1 to start the sub-boot.

p7859[0...199] Component number global / Comp_nr global

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 0

Min	Max	Factory setting
-32786	32767	0

Description: Sets the global and unique component number in a drive system with several Control Units.
Each index of the parameter corresponds to a possible local component number on the corresponding Control Unit.

The indices are allocated to the global component numbers as follows:
p7859[0]: Not used
p7859[1]: Sets the global component number for the local component number 1
p7859[2]: Sets the global component number for the local component number 2
...
p7859[199]: Sets the global component number for the local component number 199

Notice: This parameter is preferably set via suitable commissioning software (e.g. UpdateAgent, STARTER, SCOUT).
Changing the parameter via the AOP (Advanced Operator Panel) or BOP (Basic Operator Panel) can destroy a valid unique setting.

r7867 Status/configuration changes global / Changes global

CU_CX32, CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays status and configuration changes of all of the drive objects in the complete unit.
When changing the status or the configuration of the Control Unit or a drive object, the value of this parameter is incremented.

Dependency: Refer to: r7868, r7869, r7870

r7868[0...16] Configuration changes drive object reference / Config_chng DO ref

CU_CX32, CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Reference to the drive objects whose configuration has changed.
Index 0:
When changing one of the following indices, then the value in this index is increased.
Index 1...n:
The drive object with object number in p0101[n-1] has changed its configuration.
Example:
r7868[3] was incremented since the last time it was read.
--> the configuration of the drive object with object number in p0101[2] was changed.

Index: [0] = Sum of the following indices
[1] = Object number in p0101[0]
[2] = Object number in p0101[1]
[3] = Object number in p0101[2]
[4] = Object number in p0101[3]
[5] = Object number in p0101[4]
[6] = Object number in p0101[5]
[7] = Object number in p0101[6]
[8] = Object number in p0101[7]
[9] = Object number in p0101[8]
[10] = Object number in p0101[9]
[11] = Object number in p0101[10]
[12] = Object number in p0101[11]
[13] = Object number in p0101[12]
[14] = Object number in p0101[13]
[15] = Object number in p0101[14]
[16] = Object number in p0101[15]

Dependency: Refer to: p0101, r7867, r7871

r7869[0...16] Status changes drive object reference / Status_chng DO ref

CU_CX32, CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Reference to the drive objects whose status has changed.
Index 0:
When changing one of the following indices, then the value in this index is increased.
Index 1...n:
The drive object with object number in p0101[n-1] has changed its status.
Example:
r7868[3] was incremented since the last time it was read.
--> the status of the drive object with object number in p0101[2] was changed.

Index: [0] = Sum of the following indices
[1] = Object number in p0101[0]
[2] = Object number in p0101[1]
[3] = Object number in p0101[2]
[4] = Object number in p0101[3]
[5] = Object number in p0101[4]
[6] = Object number in p0101[5]
[7] = Object number in p0101[6]
[8] = Object number in p0101[7]
[9] = Object number in p0101[8]
[10] = Object number in p0101[9]
[11] = Object number in p0101[10]
[12] = Object number in p0101[11]
[13] = Object number in p0101[12]
[14] = Object number in p0101[13]
[15] = Object number in p0101[14]
[16] = Object number in p0101[15]

Dependency: Refer to: p0101, r7867, r7872

r7870[0...7] Configuration changes global / Config_chng global

CU_CX32, CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the configuration changes of all of the drive objects in the complete unit.

Index: [0] = Sum of the following indices
[1] = r7871[0] of a drive object
[2] = p0101 or r0102
[3] = PROFIBUS configuration (p0978)
[4] = DRIVE-CLiQ actual topology (r9900 or r9901)
[5] = DRIVE-CLiQ target topology (r9902 or r9903)
[6] = DRIVE-CLiQ ports (p0109)
[7] = OA applications

Dependency: Refer to: r7867, r7871

Note: Index 0:
When changing one of the following indices, then the value in this index is incremented.
Index 1:
Drive object configuration. When changing r7871[0] on a drive object, the value in this index is incremented.

Index 2:
Drive object, configuration unit. When changing either p0101 or r0102, the value in this index is incremented.
Index 3:
PROFIBUS configuration unit. When changing p0978, the value in this index is incremented.
Index 4:
DRIVE-CLiQ actual topology. When changing either r9900 or r9901, the value in this index is incremented.
Index 5:
DRIVE-CLiQ target topology. When changing either p9902 or p9903, the value in this index is incremented.
Index 6:
DRIVE-CLiQ ports. When changing p0109, the value in this index is incremented.
Index 7:
OA applications. When changing OA applications, the value in this index is incremented.

r7871[0...9] Configuration changes drive object / Config_chng DO

CU_CX32, CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the configuration changes on the drive object.

Index:
[0] = Sum of the following indices
[1] = r0107 or r0108
[2] = Drive object name (p0199)
[3] = Structure-relevant parameters (e.g. p0180)
[4] = BICO interconnections
[5] = Activate/de-activate drive object
[6] = Data back-up required
[7] = Reserved
[8] = Reference or changeover parameters (e.g. p2000)
[9] = Parameter count through Drive Control Chart (DCC)

Dependency: Refer to: r7868, r7870

Note:
Index 0:
When changing one of the following indices, then the value in this index is incremented.
Index 1:
Drive object configuration. When changing p0010, p0107 or p0108, the value in this index is incremented.
Index 2:
Drive object name. When changing p0199, the value in this index is incremented.
Index 3:
Drive object structure. When changing a parameter that is relevant for the structure (e.g. number of data sets), the value in this index is incremented.
Index 4:
Drive object BICO interconnections. When changing r3977, the value in this index is incremented.
Index 6:
Drive object, data save.
0: There are not parameter changes to save.
1: There are parameter changes to save.
Index 8:
Drive object changeover of units. When changing reference or changeover parameters (e.g. p2000, p0304 ...), the value in this index is incremented.
Index 9:
Drive object parameter count. When changing the number of parameters by loading Drive Control Chart (DCC), the value in this index is incremented.

r7871[0...9] Configuration changes drive object / Config_chng DO

Drive object parameter count. When changing the number of parameters by loading Drive Control Chart (DCC), the value in this index is incremented.

Index 15:

SERVO/VECTOR configuration. When changing p0300, p0301 or p0400, the value in this index is incremented.

r7872[0...3] Status changes drive object / Status_chng DO

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status changes on the drive object.

Index 0:

When changing one of the following indices, then the value in this index is incremented.

Index 1:

Drive object faults. When changing r0944, the value in this index is incremented.

Index 2:

Drive object alarms. When changing r2121, the value in this index is incremented.

Index 3:

Drive object safety messages. When changing r9744, the value in this index is incremented.

Index: [0] = Sum of the following indices
[1] = Faults (r0944)
[2] = Alarms (r2121)
[3] = Safety messages (r9744)

Dependency: Refer to: r7869

p7900[0...15] Drive objects priority / DO priority

CU_CX32, CU_I, CU_S

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	0

Description: Sets the priority for processing the existing drive objects in the system.

The parameter enables a free sequence to be set for processing the drive objects. For this purpose all the drive object numbers existing in the system have to be written in the desired sequence into the corresponding indices of the parameter. After re-booting this sequence will be effective without a plausibility check.

With the factory setting the following priorities regarding processing are applicable:

- The drive objects are pre-sorted according to their type as follows: CONTROL UNIT, INFEED, SERVO, VECTOR, TM, HUB, CU LINK

- If they are of the same type, they are sorted in ascending order according to their drive object number, i.e. the lower the number, the higher the priority for processing.

Index: [0] = Drive object number Control Unit
[1] = Drive object number object 1
[2] = Drive object number object 2
[3] = Drive object number object 3
[4] = Drive object number object 4
[5] = Drive object number object 5
[6] = Drive object number object 6
[7] = Drive object number object 7

[8] = Drive object number object 8
[9] = Drive object number object 9
[10] = Drive object number object 10
[11] = Drive object number object 11
[12] = Drive object number object 12
[13] = Drive object number object 13
[14] = Drive object number object 14
[15] = Drive object number object 15

Notice: This parameter may only be used by qualified service personnel.

Note: If the same drive object numbers are used and if the existing drive object numbers in the system are entered incompletely, the content of this parameter is ignored entirely. The behavior as with factory setting will then become effective.

r7901[0...33] Time slice cycle times / Time slices t_cyc

CU_CX32, CU_I, CU_S

Can be changed: - **Calculated:** - **Access level:** 4
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [µs]	- [µs]	- [µs]

Description: Displays the current cycle times for all existing time slices.
For r7901[x] = 0, the following applies: The time slice is not active.

r7903 Hardware sampling times still assignable / HW T_samp free

CU_CX32, CU_I, CU_S

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: No. of HW sampling times that can still be assigned.

Note: These free hardware sampling times can be used, for example, by OA applications such as DCC or FBLOCKS.

p8500[0...7] BI: Data transfer 0 bitwise / Transfer 0 bit

CU_I, CU_S

Can be changed: U, T **Calculated:** - **Access level:** 2
Data type: Unsigned32 / Binary **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for bitwise data transfer.
These signals are available in BO: r8510.0 ... 7 for further interconnection.

Index: [0] = Send signal to BO: r8510.0
[1] = Send signal to BO: r8510.1

This signal value is interconnected and transferred to another Control Unit via CI: p8504.

Dependency: Refer to: p8504

r8515 CO: Data transfer 3 receive wordwise / Trans 3 recv word

CU_I, CU_S

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Displays the signals of the wordwise received data (process signal).
This signal value is interconnected and transferred via CI: p8505.

Dependency: Refer to: p8505

r8515 CO: Data transfer 3 receive wordwise / Trans 3 recv word

CU_CX32, CU_LINK

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 2211
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the signals of the wordwise received data (process signal).
This signal value is interconnected and transferred to another Control Unit via CI: p8505.

Dependency: Refer to: p8505

p8520[0...3] CU_LINK signal value scaling / Sig val scal

CU_CX32, CU_LINK

Can be changed: U, T
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 2211
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0.00010	10000.00000	1.00000

Description: Sets the scaling for signal value 0 ... 3 (process signals).

Index:
[0] = Signal value 0 (CI: p8502) scaling
[1] = Signal value 1 (CI: p8503) scaling
[2] = Signal value 2 (CI: p8504) scaling
[3] = Signal value 3 (CI: p8505) scaling

Dependency: Refer to: p8502, p8503, p8504, p8505

p8550 AOP LOCAL/REMOTE / AOP LOCAL/REMOTE

CU_CX32, CU_I, CU_S

Can be changed: U, T
Calculated: -
Access level: 4
Data type: Unsigned32
Dynamic index: -
Func. diagram: -
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	1001 bin

Description: Is used to save the current configuration of the Advanced Operator Panels (AOP).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	LOCAL save	Yes	No	-
01	Start in LOCAL	Yes	No	-
02	Change in oper.	Yes	No	-
03	OFF acts like OFF1	Yes	No	-
04	OFF acts like OFF2	Yes	No	-
05	OFF acts like OFF3	Yes	No	-

07	CW/CCW active	Yes	No	-

09	Save speed setpoint	Yes	No	-
14	Inhibit operation	Yes	No	-
15	Inhibit parameterization	Yes	No	-

r8570[0...39] Macro drive unit / Macro drv unit

CU_CX32, CU_I, CU_S

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 0

Min	Max	Factory setting
-	-	-

Description: Displays the ACX file saved in the appropriate directory of the CompactFlash card.
Dependency: Refer to: p0015
Note: For a value = 9999999, the following applies: The read operation is still running.

r8570[0...39] Macro drive object / Macro DO

A_INF, B_INF, S_INF, SERVO, TM15DI_DO, TM31, VECTOR

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 0

Min	Max	Factory setting
-	-	-

Description: Displays the ACX file saved in the appropriate directory of the CompactFlash card.
Dependency: Refer to: p0015
Note: For a value = 9999999, the following applies: The read operation is still running.

r8571[0...39] Macro Binector Input (BI) / Macro BI

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 0

Min	Max	Factory setting
-	-	-

Description: Displays the ACX file saved in the appropriate directory of the CompactFlash card.
Dependency: Refer to: p0700
Note: For a value = 9999999, the following applies: The read operation is still running.

r8572[0...39] Macro Connector Inputs (CI) for speed setpoints / Macro CI n_set

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 0

Min	Max	Factory setting
-	-	-

Description: Displays the ACX file saved in the appropriate directory of the CompactFlash card.
Dependency: Refer to: p1000
Note: For a value = 9999999, the following applies: The read operation is still running.

r8573[0...39] Macro Connector Inputs (CI) for torque setpoints / Macro CI M_set

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 0

Min	Max	Factory setting
-	-	-

Description: Displays the ACX file saved in the appropriate directory of the CompactFlash card.
Dependency: Refer to: p1500
Note: For a value = 9999999, the following applies: The read operation is still running.

r8585 Current macro actual / Current macro

A_INF, B_INF, CU_CX32, CU_I, CU_S, S_INF, SERVO, TM15DI_DO, TM31, VECTOR

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 0

Min	Max	Factory setting
-	-	-

Description: Indicates which macro is presently being run in the drive object.
Dependency: Refer to: p0015, p0700, p1000, p1500, r8570, r8571, r8572, r8573

r8600 CBC device type / Device type

CU_S (CAN)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** -
P-Group: Communications **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays all of the devices connected to the CAN bus after run-up.
r8600
= 00000000 hex: No drive recognized.
= FFFF0192 hex: Several drives - drive 1 is an Active Line Module, servo drive or vector drive
= FFFF0191 hex: Several drives - 1st drive us a Terminal Module
= 02010192 hex: 1 Vector drive
= 00020192 hex: 1 Servo drive
= 01000192 hex: 1 Active Line Module
= 00080191 hex: 1 Terminal Module
Note: Corresponds to the CANopen object 1000 hex.
For each detected drive, the device type is displayed in object 67FF hex + 800 hex * x (x: Drive number 0 ... 7).

r8601 CBC error register / Error register

CU_S (CAN)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned8 **Dynamic index:** - **Func. diagram:** -
P-Group: Communications **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the error register for CANopen.

Bit 0: Generic error
0 signal: No error present
1 signal: Generic error present
Bit 1 ... 3: Not supported (always a 0 signal)
Bit 4: Communications error
0 signal: There is no message in the range 8700 ... 8799
1 signal: There is at least one message (fault or alarm) in the range 8700 ... 8799
Bit 5 ... 6: Not supported (always a 0 signal)
Bit 7:; Fault outside the range 8700 ... 8799
0 signal: There is no fault outside the range 8700 ... 8799
1 signal: There is at least one fault outside the range 8700 ... 8799

Note: Corresponds to the CANopen object 1001 hex.

p8602 CBC SYNC object / SYNC object

CU_S (CAN)

Can be changed: C1(1), T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0080 hex

Description: Sets the SYNC object parameter for the following CANopen objects:
- 1005 hex: COB-ID

Note: SINAMICS operates as SYNC load.
COB-ID: CAN object identification

p8603 CBC COB ID Emergency Message / COB ID EMCY Msg

CU_S (CAN)

Can be changed: C1(1), T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Sets the COB ID of the emergency message (error telegram). It corresponds to the CANopen objects:
- 1014 hex: COB-ID

Note: If, when downloading, the pre-set value 0 is downloaded, then the CANopen pre-set value 80 hex + Node-ID is automatically set.
Online, the value 0 is rejected as, according to the CANopen Standard, COB ID 0 is not permitted here.
The changeover of the node ID using the hardware switch at the CU or per software has no effect on the COB-ID EMCY. The saved value remains effective.

p8604[0...1] CBC node guarding / Node guarding

CU_S (CAN)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0	65535	0

Description: Sets the node guarding parameter for the following CANopen objects:
- 100C hex: Guard Time
- 100D hex: Life Time Factor

The life time is derived by multiplying guard time by the life time factor.

Index: [0] = Time interval [ms] for new node guarding telegram
[1] = Factor for failure of the node guarding telegram
Dependency: Only adjustable if heartbeat time = 0 (heartbeat is disabled).
Refer to: p8606
Note: For p8604[0] = 0 and/or p8604[1] = 0, the node guarding protocol is not used.
Either node guarding or heartbeat can be used.

p8606 CBC producer heartbeat time / Prod Heartb Time

CU_S (CAN)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [ms]	65535 [ms]	0 [ms]

Description: Sets the time [ms] to cyclically send heartbeat telegrams.
The smallest cycle time is 100 ms.
When a 0 is written, then heartbeat telegrams are not sent.
Dependency: Only adjustable if guard time = 0 (node guarding disabled).
Refer to: p8604
Note: Corresponds to the CANopen object 1017 hex.
Either node guarding or heartbeat can be used.

r8607[0...3] CBC identity object / Identity object

CU_S (CAN)

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: General device information display.
Index: [0] = Vendor ID
[1] = Product code
[2] = Revision number
[3] = Serial number
Note: Corresponds to the CANopen object 1018 hex.

p8608 CBC clear bus off error / Clear bus off err

CU_S (CAN)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: For a bus off error, the CAN bus is restarted with p8608 = 1 after the cause of the error has been removed.
Value: 0: Inactive
1: Start CAN controller
Note: This parameter is automatically reset to 0 after start.

p8609[0...1] CBC error behavior / Error behavior

CU_S (CAN)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	2	1

Description: Sets the behavior of the CAN node referred to the communications error or equipment fault.

Value:
0: Pre-operational
1: No change
2: Stopped

Index:
[0] = Behavior for communication errors
[1] = Behavior for device faults

Note: Corresponds to the CANopen object 1029 hex.

r8610[0...1] CBC first server SDO / First server SDO

CU_S (CAN)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Communications	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the identifier (client/server and server/client) of the SDO channel.

Index:
[0] = Displays the COB ID from client to server
[1] = Displays the COB ID from server to client

Note: Corresponds to the CANopen object 1200 hex.
SDO: Service Data Object

p8611[0...82] CBC pre-defined error field / Pre_def err field

CU_S (CAN)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0000 hex	FFFF 1000 hex	0000 hex

Description: Displays the Pre-defined Error Field of the CAN node.
It includes the number of all errors that have occurred, the number of errors that have occurred for each drive and the errors according to their history.
The first 16 bits represent the CANopen error code and the second 16 bits the SINAMICS error code.
Index 1 has the same structure - however, the drive object ID is in the second 16 bits instead of the SINAMICS error code.
CANopen error code:
0000 hex: No error present
8110 hex: Alarm A08751 present
8120 hex: Alarm A08752 present
8130 hex: Alarm A08700(F) with alarm value = 2 present
1000 hex: Generic error 1 present (there is at least one fault outside the range 8700 ... 8799)
1001 hex: Generic error 2 present (there is at least one alarm in the range 8700 ... 8799 with the exception of A08751, A08752, A08700)

Index:
[0] = Number of all faults in the drive unit
[1] = Most recent drive number / fault number
[2] = Number of faults drive 1

[3] = Fault 1/ drive 1
[4] = Fault 2/ drive 1
[5] = Fault 3/ drive 1
[6] = Fault 4/ drive 1
[7] = Fault 5/ drive 1
[8] = Fault 6/ drive 1
[9] = Fault 7/ drive 1
[10] = Fault 8/ drive 1
[11] = Number of faults drive 2
[12] = Fault 1/ drive 2
[13] = Fault 2/ drive 2
[14] = Fault 3/ drive 2
[15] = Fault 4/ drive 2
[16] = Fault 5/ drive 2
[17] = Fault 6/ drive 2
[18] = Fault 7/ drive 2
[19] = Fault 8/ drive 2
[20] = Number of faults drive 3
[21] = Fault 1/ drive 3
[22] = Fault 2/ drive 3
[23] = Fault 3/ drive 3
[24] = Fault 4/ drive 3
[25] = Fault 5/ drive 3
[26] = Fault 6/ drive 3
[27] = Fault 7/ drive 3
[28] = Fault 8/ drive 3
[29] = Number of faults drive 4
[30] = Fault 1/ drive 4
[31] = Fault 2/ drive 4
[32] = Fault 3/ drive 4
[33] = Fault 4/ drive 4
[34] = Fault 5/ drive 4
[35] = Fault 6/ drive 4
[36] = Fault 7/ drive 4
[37] = Fault 8/ drive 4
[38] = Number of faults drive 5
[39] = Fault 1/ drive 5
[40] = Fault 2/ drive 5
[41] = Fault 3/ drive 5
[42] = Fault 4/ drive 5
[43] = Fault 5/ drive 5
[44] = Fault 6/ drive 5
[45] = Fault 7/ drive 5
[46] = Fault 8/ drive 5
[47] = Number of faults drive 6
[48] = Fault 1/ drive 6
[49] = Fault 2/ drive 6
[50] = Fault 3/ drive 6
[51] = Fault 4/ drive 6
[52] = Fault 5/ drive 6
[53] = Fault 6/ drive 6
[54] = Fault 7/ drive 6
[55] = Fault 8/ drive 6
[56] = Number of faults drive 7
[57] = Fault 1/ drive 7
[58] = Fault 2/ drive 7
[59] = Fault 3/ drive 7
[60] = Fault 4/ drive 7
[61] = Fault 5/ drive 7
[62] = Fault 6/ drive 7
[63] = Fault 7/ drive 7
[64] = Fault 8/ drive 7
[65] = Number of faults drive 8
[66] = Fault 1/ drive 8

[67] = Fault 2/ drive 8
[68] = Fault 3/ drive 8
[69] = Fault 4/ drive 8
[70] = Fault 5/ drive 8
[71] = Fault 6/ drive 8
[72] = Fault 7/ drive 8
[73] = Fault 8/ drive 8
[74] = Number of faults Control Unit
[75] = Fault 1/Control Unit
[76] = Fault 2/Control Unit
[77] = Fault 3/Control Unit
[78] = Fault 4/Control Unit
[79] = Fault 5/Control Unit
[80] = Fault 6/Control Unit
[81] = Fault 7/Control Unit
[82] = Fault 8/Control Unit

Note: Corresponds to the CANopen object 1003 hex.

p8620 CBC node ID / Node ID

CU_S (CAN)

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1	126	126

Description: Display or setting of the CANopen Node ID.
The Node ID can be set as follows:
1) Using the DIP switch on the Control Unit.
--> p8620 can then only be read and displays the selected Node ID.
--> A change only becomes effective after a POWER ON.
--> CANopen Node ID and PROFIBUS address are identical.
2) Using p8620
--> only if all of the DIP switches - from S1 to S7 - are either set to ON or OFF.
--> the Node ID is set as standard to 126.
--> A change only becomes effective after save and POWER ON.

Note: Every node ID change only becomes effective after a POWER ON.
The parameter value is not influenced by a factory setting.
It is only possible to independently set CANopen node ID and the PROFIBUS address using p0918 and p8620 (prerequisite: For DIP switches, all of the switches from S1 to S7 are either set to ON or OFF).

p8622 CBC baud rate / Baud rate

CU_S (CAN)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	7	6

Description: Setting the baud rate for the CAN bus.
The appropriate bit timings are selected that are defined in p8623 in the associated sub-index.
Example:
Baud rate = 20 kbit/s --> p8622 = 6 --> associated bit timing is in p8623[6].

Value:
0: 1 Mbit/s
1: 800 kbit/s
2: 500 kbit/s
3: 250 kbit/s

4: 125 kbit/s
5: 50 kbit/s
6: 20 kbit/s
7: 10 kbit/s

Dependency: Refer to: p8623

Note: The parameter value is not influenced by a factory setting.

p8623[0...7] CBC bit timing selection / Bit timing select

CU_S (CAN)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0000 hex	000F 7FFF hex	[0] 1405 hex
		[1] 1605 hex
		[2] 1C05 hex
		[3] 1C0B hex
		[4] 1C17 hex
		[5] 1C3B hex
		[6] 0002 1C15 hex
		[7] 0004 1C2B hex

Description: Sets the bit timing for the C_CAN controller to the associated and selected baud rate (p8622).
Bits are distributed to the following parameters of the C_CAN controller in p8623[0...7]:
Bit 0 ... 5: BRP (Baud Rate Prescaler)
Bit 6 ... 7: SJW (Synchronization Jump Width)
Bit 8 ... 11: TSEG1 (Time Segment 1, before the sampling point)
Bit 12 ... 14: TSEG2 (Time Segment 2, after the sampling point)
Bit 15: Reserved
Bit 16 ... 19: BRPE (Baud Rate Prescaler Extension)
Bit 20 ... 31: Reserved
Example:
Baud rate = 20 kbit/s --> p8622 = 6 --> associated bit timing is in p8623[6] --> 0001 2FB6

Recommend.: Use the factory settings when setting the bit timing.

Index:
[0] = 1 Mbit/s
[1] = 800 kbit/s
[2] = 500 kbit/s
[3] = 250 kbit/s
[4] = 125 kbit/s
[5] = 50 kbit/s
[6] = 20 kbit/s
[7] = 10 kbit/s

Dependency: Refer to: p8622

Note: The parameter value is not influenced by a factory setting.

p8630[0...2] CBC virtual objects / Virtual objects

CU_S (CAN)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0	65535	0

Description: Sets the drive object selection (index 0), the sub-index area (index 1) and the parameter area (index 2) when using virtual objects.
This means that it is possible to access all SINAMICS parameters via CAN.

Index 0 (drive object selection):
0: Not possible to access virtual CANopen objects
1: Device
2 ... 65535: Drive 1 ... 8
Index 1 (sub-index area):
0: 0 ... 255
1: 256 ... 511
2: 512 ... 767
3: 768 ... 1023
Index 2 (parameter area):
0: 1 ... 9999
1: 10000 ... 19999
2: 20000 ... 29999
3: 30000 ... 39999

Index: [0] = Drive object selection
[1] = Sub-index range
[2] = Parameter range

p8641 CBC abort connection option code / Abort con opt code

SERVO (CAN), VECTOR (CAN)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0	3	3

Description: Sets the drive behavior if a CAN communication error occurs.

Value:
0: No response
1: OFF1
2: OFF2
3: OFF3

Dependency: Refer to: F08700

r8680[0...36] CBC diagnostics hardware / Diagnostics HW

CU_S (CAN)

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the register of the CAN controller C_CAN:
Register, Message Interface Register and Message Handler Register - referred to the CAN protocol.

Index: [0] = Control register

Note: A description of the individual registers of the C_CAN controller can be taken from "C_CAN User's Manual".

p8684 CBC NMT state after booting / NMT state n boot

CU_S (CAN)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
4	127	127

Description: Sets the CANopen NMT state that is effective after booting.

Value:
4: Stopped
5: Operational
127: Pre-operational

Dependency: Refer to: p8685

Note: Booting in the NMT state pre-operational corresponds to the CANopen standard

p8685 CBC NMT states / NMT states

CU_S (CAN)

Can be changed: C1(1), U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	129	127

Description: Sets and displays the CANopen NMT state.

Value:
0: Initializing
4: Stopped
5: Operational
127: Pre-operational
128: Reset node
129: Reset Communication

Note: The value 0 (initialization) is only displayed and cannot be set.

p8700[0...1] CBC receive PDO 1 / Receive PDO 1

SERVO (CAN), VECTOR (CAN)

Can be changed: C1(3), T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 9204, 9206
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0000 hex	8000 06DF hex	[0] 8000 06DF hex [1] 00FE hex

Description: Sets the communication parameters for CANopen Receive Process Data Object 1 (RPDO 1).

Index: [0] = PDO COB-ID
[1] = PDO transmission type

Dependency: A valid COB-ID can only be set for the available (existing) channel.
Refer to: p8740, p8741

Note: Corresponds to the CANopen object 1400 hex + 40 hex * x (x: Drive number 0 ... 7).
Transmission types 0, 1, FE and FF can be set.
PDO: Process Data Object

p8701[0...1] CBC receive PDO 2 / Receive PDO 2

SERVO (CAN), VECTOR (CAN)

Can be changed: C1(3), T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 9204, 9206

Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0000 hex	8000 06DF hex	[0] 8000 06DF hex [1] 00FE hex

Description: Sets the communication parameters for CANopen Receive Process Data Object 2 (RPDO 2).

Index: [0] = PDO COB-ID
[1] = PDO transmission type

Dependency: A valid COB-ID can only be set for the available (existing) channel.
Refer to: p8740, p8741

Note: Corresponds to the CANopen object 1401 hex + 40 hex * x (x: Drive number 0 ... 7).
Transmission types 0, 1, FE and FF can be set.
PDO: Process Data Object

p8702[0...1] CBC receive PDO 3 / Receive PDO 3

SERVO (CAN), VECTOR (CAN)

Can be changed: C1(3), T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 9204, 9206
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0000 hex	8000 06DF hex	[0] 8000 06DF hex [1] 00FE hex

Description: Sets the communication parameters for CANopen Receive Process Data Object 3 (RPDO 3).

Index: [0] = PDO COB-ID
[1] = PDO transmission type

Dependency: A valid COB-ID can only be set for the available (existing) channel.
Refer to: p8740, p8741

Note: Corresponds to the CANopen object 1402 hex + 40 hex * x (x: Drive number 0 ... 7).
Transmission types 0, 1, FE and FF can be set.
PDO: Process Data Object

p8703[0...1] CBC receive PDO 4 / Receive PDO 4

SERVO (CAN), VECTOR (CAN)

Can be changed: C1(3), T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 9204, 9206

Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0000 hex	8000 06DF hex	[0] 8000 06DF hex [1] 00FE hex

Description: Sets the communication parameters for CANopen Receive Process Data Object 7 (RPDO 7).

Index: [0] = PDO COB-ID
[1] = PDO transmission type

Dependency: A valid COB-ID can only be set for the available (existing) channel.
Refer to: p8740, p8741

Note: Corresponds to the CANopen object 1406 hex + 40 hex * x (x: Drive number 0 ... 7).
Transmission types 0, 1, FE and FF can be set.
PDO: Process Data Object

p8707[0...1] CBC receive PDO 8 / Receive PDO 8

SERVO (CAN), VECTOR (CAN)

Can be changed: C1(3), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** 9204
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0000 hex	8000 06DF hex	[0] 8000 06DF hex [1] 00FE hex

Description: Sets the communication parameters for CANopen Receive Process Data Object 8 (RPDO 8).

Index: [0] = PDO COB-ID
[1] = PDO transmission type

Dependency: A valid COB-ID can only be set for the available (existing) channel.
Refer to: p8740, p8741

Note: Corresponds to the CANopen object 1407 hex + 40 hex * x (x: Drive number 0 ... 7).
Transmission types 0, 1, FE and FF can be set.
PDO: Process Data Object

p8710[0...3] CBC receive mapping for RPDO 1 / Mapping RPDO 1

SERVO (CAN), VECTOR (CAN)

Can be changed: C1(3), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** 9204, 9206
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Sets the mapping parameters for CANopen Receive Process Data Object 1 (RPDO 1).

Index: [0] = Mapped object 1
[1] = Mapped object 2
[2] = Mapped object 3
[3] = Mapped object 4

Note: Corresponds to the CANopen object 1600 hex + 40 hex * x (x: Drive number 0 ... 7).
Dummy mapping not supported.
The parameter can only be written online when the associated COB ID in p870x is set as invalid.

p8711[0...3] CBC receive mapping for RPDO 2 / Mapping RPDO 2

SERVO (CAN), VECTOR (CAN)

Can be changed: C1(3), T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 9204, 9206
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Sets the mapping parameters for CANopen Receive Process Data Object 2 (RPDO 2).

Index: [0] = Mapped object 1
[1] = Mapped object 2
[2] = Mapped object 3
[3] = Mapped object 4

Note: Corresponds to the CANopen object 1601 hex + 40 hex * x (x: Drive number 0 ... 7).
Dummy mapping not supported.
The parameter can only be written online when the associated COB ID in p870x is set as invalid.

p8712[0...3] CBC receive mapping for RPDO 3 / Mapping RPDO 3

SERVO (CAN), VECTOR (CAN)

Can be changed: C1(3), T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 9204, 9206
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Sets the mapping parameters for CANopen Receive Process Data Object 3 (RPDO 3).

Index: [0] = Mapped object 1
[1] = Mapped object 2
[2] = Mapped object 3
[3] = Mapped object 4

Note: Corresponds to the CANopen object 1602 hex + 40 hex * x (x: Drive number 0 ... 7).
Dummy mapping not supported.
The parameter can only be written online when the associated COB ID in p870x is set as invalid.

p8713[0...3] CBC receive mapping for RPDO 4 / Mapping RPDO 4

SERVO (CAN), VECTOR (CAN)

Can be changed: C1(3), T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 9204, 9206
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Sets the mapping parameters for CANopen Receive Process Data Object 4 (RPDO 4).

Index: [0] = Mapped object 1
[1] = Mapped object 2
[2] = Mapped object 3
[3] = Mapped object 4

Note: Corresponds to the CANopen object 1603 hex + 40 hex * x (x: Drive number 0 ... 7).
Dummy mapping not supported.
The parameter can only be written online when the associated COB ID in p870x is set as invalid.

p8714[0...3] CBC receive mapping for RPDO 5 / Mapping RPDO 5

SERVO (CAN), VECTOR (CAN)

Can be changed: C1(3), T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 9204
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Sets the mapping parameters for CANopen Receive Process Data Object 5 (RPDO 5).

Index: [0] = Mapped object 1
[1] = Mapped object 2
[2] = Mapped object 3
[3] = Mapped object 4

Note: Corresponds to the CANopen object 1604 hex + 40 hex * x (x: Drive number 0 ... 7).
Dummy mapping not supported.
The parameter can only be written online when the associated COB ID in p870x is set as invalid.

p8715[0...3] CBC receive mapping for RPDO 6 / Mapping RPDO 6

SERVO (CAN), VECTOR (CAN)

Can be changed: C1(3), T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 9204
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Sets the mapping parameters for CANopen Receive Process Data Object 6 (RPDO 6).

Index: [0] = Mapped object 1
[1] = Mapped object 2
[2] = Mapped object 3
[3] = Mapped object 4

Note: Corresponds to the CANopen object 1605 hex + 40 hex * x (x: Drive number 0 ... 7).
Dummy mapping not supported.
The parameter can only be written online when the associated COB ID in p870x is set as invalid.

p8716[0...3] CBC receive mapping for RPDO 7 / Mapping RPDO 7

SERVO (CAN), VECTOR (CAN)

Can be changed: C1(3), T | **Calculated:** - | **Access level:** 3

p8740[0...23] CBC channel assignment / Chann assign.

CU_S (CAN)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	8	0

Description: Sets the number of channels for receive PDOs and Transmit PDOs.
To define the number of channels of a drive, there are 3 indices (3 * n indices, n = 8).
Index 0: Number of channels for receive PDOs (1st drive)
Index 1: Number of channels for transmit PDOs (1st drive)
Index 2: Reserved
Correspondingly, indices 3 to 5 are valid for the 2nd drive, etc.

Index:
[0] = Number of channels for receive PDOs (drive 1)
[1] = Number of channels for transmit PDOs (drive 1)
[2] = Reserved
[3] = Number of channels for receive PDOs (drive 2)
[4] = Number of channels for transmit PDOs (drive 2)
[5] = Reserved
[6] = Number of channels for receive PDOs (drive 3)
[7] = Number of channels for transmit PDOs (drive 3)
[8] = Reserved
[9] = Number of channels for receive PDOs (drive 4)
[10] = Number of channels for transmit PDOs (drive 4)
[11] = Reserved
[12] = Number of channels for receive PDOs (drive 5)
[13] = Number of channels for transmit PDOs (drive 5)
[14] = Reserved
[15] = Number of channels for receive PDOs (drive 6)
[16] = Number of channels for transmit PDOs (drive 6)
[17] = Reserved
[18] = Number of channels for receive PDOs (drive 7)
[19] = Number of channels for transmit PDOs (drive 7)
[20] = Reserved
[21] = Number of channels for receive PDOs (drive 8)
[22] = Number of channels for transmit PDOs (drive 8)
[23] = Reserved

Dependency: Refer to: p8741

Note: Channel assignment not yet in effect. To acknowledge set p8741 = 1.

r8784 CO: CBC status word / Status word

SERVO (CAN), VECTOR (CAN)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** 8010
P-Group: Communications **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the CANopen status word.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Ready for switching on	Yes	No	-
01	Ready for operation	Yes	No	-
02	Operation enabled	Yes	No	-
03	Fault present	Yes	No	-
04	No coasting active	Yes	No	-
05	No Quick Stop active	Yes	No	-
06	Switching on inhibited active	Yes	No	-
07	Alarm present	Yes	No	-
08	Can be freely interconnected (BI: p8785)	High	Low	-
09	Control requested	Yes	No	-
10	Target reached	Yes	No	-
11	Torque limit reached	Yes	No	-
12	Velocity equal to zero	Yes	No	-

14	Can be freely interconnected (BI: p8786)	High	Low	-
15	Can be freely interconnected (BI: p8787)	High	Low	-

Note: Corresponds to the CANopen object 6041 hex + 800 hex * x (x: Drive number 0 ... 7).

Re bit 10:

When the ramp-function generator is activated, the interconnection from CI: p2151 = r1119 can be changed, so that to evaluate bit 10, the setpoint can be retrieved (taken) from in front of the ramp-function generator.

Re bit 10, 12:

When braking, the two bits must indicate the same state. This is the reason that the following parameters must be set the same:

p2161 (speed threshold value 3, for r2199.0) = p2163 (speed threshold value 4, for r2197.7)

p2150 (hysteresis speed 3, for r2199.0) = p2164 (hysteresis speed 4, for r2197.7)

p8785 BI: CBC status word bit 8 / Status word bit 8

Description: Binector input for CANopen status word bit 15.

Dependency: Refer to: r8784

p8790 CBC control word - auto interconnection / STW interconn auto

SERVO (CAN), VECTOR (CAN)

Can be changed: C1(3), T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Sets the automatic BICO interconnection of the CANopen control word.

Value:
0: No interconn
1: Interconnection

Dependency: Refer to: r8750, r8795, r8850

Note: The following BICO interconnections are automatically established if the CANopen control word is mapped at one of the locations x = 0 ... 3 in the receive process data buffer.
BI: p0840.0 = r889x.0
BI: p0844.0 = r889x.1
BI: p0848.0 = r889x.2
BI: p0852.0 = r889x.3
BI: p2103.0 = r889x.7
The write access is rejected if a CANopen control word is not mapped at one of these locations.
This also causes the project download of the commissioning software to be canceled.

Units group: -

Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Access to the CANopen object target torque using SDO transfer.
The value is displayed as per mille (1/1000) as standard.

Note: Corresponds to the CANopen object 6071 hex + 800 hex * x (x: Drive number 0 ... 7).
The displayed value is calculated as follows:
r8797 [per mille] = M_set [Nm] / p0333 [Nm] * 1000

p8798[0...1] CBC speed conversion factor / n_conv_factor

SERVO (CAN), VECTOR (CAN)

Can be changed: T
Data type: Unsigned32
P-Group: -
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
1	4294967295	1

Description: The factor converts the required velocity units into the internal velocity units (V/s).
With the factor setting, for CANopen, the velocity units are increments/second.
The parameter corresponds to the CANopen object 6094 hex.
The internal velocity is calculated as follows:
n_set_internal = object 6094.1 / object 6094.2 * 1/(p0408 * 2^p0418) * n_set_bus

Index: [0] = Counter
[1] = Denominator

p8835 CBE20 firmware selection / CBE20 FW sel

CU_S (PROFINET), CU_S

Can be changed: C1(1)
Data type: Integer16
P-Group: Communications
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
0	99	1

Description: Selects the firmware version for the PROFINET COMM BOARD CBE20.

Value:
0: PROFINET V2.1
1: PROFINET V2.2
2: PN gate
99: Customer-specific from the OEM directory

Note: A change only becomes effective after a POWER ON.

p8839[0...1] PZD interface hardware assignment / PZD IF HW assign

CU_S

Can be changed: C1(1)
Data type: Integer16
P-Group: Communications
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
0	99	99

Description: Assignment of the hardware for cyclic communications via PZD interface 1 and interface 2.

Value:
0: Inactive
1: Communication interface integrated in the Control Unit
2: Option module
99: Automatic

Index:
[0] = IF1
[1] = IF2

Note:
For value = 99 (automatic) the following applies:
- if neither a COMM BOARD nor CAN is inserted, then PROFIBUS communicates via IF1.
- if a CBE20 is inserted, then PROFINET communicates via IF1.
- CAN always communicates via IF2.

For a value not equal to 99 (automatic) the following applies:
- both indices must be set to a number not equal to 99 (automatic).

A new setting only becomes effective after POWER ON, reset or download.

p8899[0...1] CI: IF2 connector-binector converter signal source / Con/bin S_src

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Integer16 | **Dynamic index:** - | **Func. diagram:** 2485, 2491
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the connector-binector converter.
A PZD receive word can be selected as signal source. The signals are available to be serially passed-on (interconnection).

Dependency: Refer to: r8894, r8895

Note: From the signal source set via the connector input, the corresponding lower 16 bits are converted.
p8899[0...1] together with r8894.0...15 and r8895.0...15 forms two connector-binector converters:
Connector input p8899[0] to binector output in r8894.0...15
Connector input p8899[1] to binector output in r8895.0...15

p9300 SI Motion monitoring clock cycle (Motor Module) / SI Mtn clock MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
500.00 [µs]	25000.00 [µs]	12000.00 [µs]

Description: Sets the monitoring clock cycle for safe motion monitoring.

Dependency: Refer to: p0115, p9500
Refer to: F01652

Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.

Note: The monitoring clock cycle must be a multiple of the position controller clock cycle.

p9301 SI Motion enable safety functions (Motor Module) / SI Mtn enable MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the enable signals for the safe motion monitoring.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	SOS/SLS enable	Enable	Inhibit	-
03	Actual value synchronization enable	Enable	Inhibit	-
16	Enable NX Hys Fil	Enable	Inhibit	-

Dependency: Refer to: p9501
Refer to: F01682, F01683

Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.

Note: A change only becomes effective after a POWER ON.
SOS: Safe Operational Stop
SLS: Safely Limited Speed

p9302 SI Motion axis type (Motor Module) / SI Mtn AxisType MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Sets the axis type (linear axis or rotary axis/spindle).

Value:
0: Linear axis
1: Rot axis/spindle

Dependency: Refer to: p9502

Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.

Note: For the commissioning software, after changing over the axis type, the units dependent on the axis type are only updated after a project upload.
A change only becomes effective after a POWER ON.

p9311 SI Motion clock cycle actual value sensing (Motor Module) / SI Mtn clck act MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	25000.00 [µs]	0.00 [µs]

Description: Sets the clock cycle time of the actual value sensing for safe motion monitoring.
The slower clock cycle time reduces the maximum permissible velocity - however, it ensures a lower load of the Control Unit for the safe actual value sensing.
The maximum permissible velocity, which when exceeded can mean that errors occur in the safe actual value sensing, is displayed in parameter r9730.
For a default value of 0 ms, the actual value sensing of the isochronous PROFIBUS clock cycle is used as clock cycle time or 1 ms if isochronous operation is not being used.

Dependency: Refer to: p0115, p9300, p9511
Refer to: F01652

Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.

Note: The parameter is only active for drive-based motion monitoring functions (p9801, bit 2 = 1).
The monitoring clock cycle from p9300 must be an integer multiple of this parameter.
The clock cycle time of the actual value sensing must be an integer multiple of the current controller clock cycle and be at least a factor of 4 slower than the current control clock cycle.

p9315 SI Motion coarse position value configuration (MM) / SI Mtn s config MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the encoder configuration for the redundant coarse position value.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Incrementer	Yes	No	-
01	Encoder CRC least significant byte first	Yes	No	-

02	Redundant coarse position val. most significant bit left-aligned	Yes	No	-
16	DRIVE-CLiQ encoder	Yes	No	-

Dependency: Refer to: r0474, p9515

Note: A change only becomes effective after a POWER ON.

p9316 SI Motion encoder configuration, safety functions (Motor Module) / SI Mtn enc_cfg MM

SERVO, VECTOR

Can be changed: C2 **Calculated:** - **Access level:** 3

Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** -

P-Group: Safety Integrated **Units group:** - **Unit selection:** -

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the configuration for the encoder and position actual value.

The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Encoder rotating/linear	Linear	Rotating:	-
01	Position actual value, sign change	Yes	No	-

Dependency: Refer to: p0404, p0410, p9516

Note: A change only becomes effective after a POWER ON.

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0.00 [nm]	250000000.00 [nm]	10000.00 [nm]

Description: Sets the grid division for a linear encoder.

The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.

Dependency: Refer to: p0407, p9316

Note: A change only becomes effective after a POWER ON.

p9318 SI Motion encoder pulses per revolution (Motor Module) / SI Mtn p/rev MM

SERVO, VECTOR

Can be changed: C2 **Calculated:** - **Access level:** 3

Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** -

P-Group: Safety Integrated **Units group:** - **Unit selection:** -

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	100000	2048

Description: Sets the number of encoder pulses per revolution for rotary encoders.

The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.

Dependency: Refer to: p0408, p9316

Note: A change only becomes effective after a POWER ON.

p9319 SI Motion fine resolution G1_XIST1 (Motor Module) / SI Mtn G1_XIST1 MM

SERVO, VECTOR

Can be changed: C2	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
2	18	11

Description: Sets the fine resolution for G1_XIST1 in bits.
For safe functions that are not enabled (p9301 = 0), the following applies:
p9319 is automatically set the same as p0418 at run-up.
For safety functions that are enabled (p9301 > 0), the following applies:
p9319 is checked to see that it matches p0418.
The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.

Dependency: Refer to: p0418
Refer to: F01670, F01671

Note: A change only becomes effective after a POWER ON.
G1_XIST1: Encoder 1 position actual value 1 (PROFIdrive)

p9320 SI Motion spindle pitch (Motor Module) / SI Mtn sp_pitch MM

SERVO, VECTOR

Can be changed: C2	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.1000 [mm]	8388.0000 [mm]	10.0000 [mm]

Description: Sets the gear ratio between the encoder and load in mm/revolution for a linear axis with rotary encoder.
The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.

Dependency: Refer to: p9520

Notice: The fourth decimal point can be rounded-off depending on the size of the entered number (from three places before the decimal point).

Note: A change only becomes effective after a POWER ON.

p9321[0...7] SI Motion gearbox encoder/load denominator (Motor Module) / SI Mtn denom MM

SERVO, VECTOR

Can be changed: C2	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
1	2147000000	1

Description: Sets the denominator for the gearbox between the encoder and load.
The current gearbox stage is selected via safety-relevant inputs (SGE).
The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.

Index: [0] = Gearbox 1
[1] = Gearbox 2
[2] = Gearbox 3
[3] = Gearbox 4
[4] = Gearbox 5
[5] = Gearbox 6
[6] = Gearbox 7

[7] = Gearbox 8

Dependency: Refer to: p9322

Note: A change only becomes effective after a POWER ON.

p9322[0...7] SI Motion gearbox encoder/load numerator (Motor Module) / SI Mtn numer MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3

Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -

P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1	2147000000	1

Description: Sets the numerator for the gearbox between the encoder and load.

The current gearbox stage is selected via safety-relevant inputs (SGE).

The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.

Index:
[0] = Gearbox 1
[1] = Gearbox 2
[2] = Gearbox 3
[3] = Gearbox 4
[4] = Gearbox 5
[5] = Gearbox 6
[6] = Gearbox 7
[7] = Gearbox 8

Dependency: Refer to: p9321

Note: A change only becomes effective after a POWER ON.

p9323 SI Motion redundant coarse pos. value valid bits (MM) / Valid bits MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3

Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -

P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	16	9

Description: Sets the number of valid bits of the redundant coarse postion value.

The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.

Dependency: Refer to: r0470, p9523

Note: A change only becomes effective after a POWER ON.

p9324 SI Motion redundant coarse pos. value fine resolution bits (MM) / SI Mtn fine bit MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3

Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -

P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-16	16	-2

Description: Sets the number of valid bits for the fine resolution of the redundant coarse position value.

The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.

Dependency: Refer to: r0471, p9524

Note: A change only becomes effective after a POWER ON.

p9325 SI Motion redundant coarse pos. value relevant bits (MM) / Relevant bits MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	16	16

Description: Sets the number of relevant bits for the redundant coarse position value.
The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.

Dependency: Refer to: p0414, r0472, p9525

Note: A change only becomes effective after a POWER ON.

p9326 SI Motion encoder assignment (Motor Module) / SI Mtn encoder MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1	3	1

Description: Sets the number of the encoder that the Motor Module uses for safe motion monitoring functions.

Dependency: For the safe motion monitoring functions, the redundant safety position actual value sensing must be activated in the appropriate encoder data set (p0430.19 = 1).
Refer to: p0187, p0188, p0189, p0430, p9526

Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.

Note: For p9326 = 1 the following applies: Motor Module uses an encoder for closed-loop speed control, it involves a 1-encoder system.
A change only becomes effective after a POWER ON.

p9328[0...11] SI Motion Sensor Module Node Identifier (Motor Module) / SI Mtn SM Ident MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0000 hex	00FF hex	0000 hex

Description: Sets the node identifier of the Sensor Module that is used by the Motor Module for the motion monitoring functions.

Dependency: Refer to: r9881

Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.

p9329 SI Motion Gx_XIST1 safe most significant bit (MM) / Gx_XIST1 MSB MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	31	14

Description: Sets the bit number for the safe most significant bit (MSB) of the Gx_XIST1 coarse position.
The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.

Dependency: Refer to: p0415, r0475, p9529

Note: A change only becomes effective after a POWER ON.
MSB: Most Significant Bit

p9330 SI Motion standstill tolerance (Motor Module) / SI Mtn SOS Tol MM

SERVO (Safety rot), VECTOR (Safety rot)

Can be changed: C2	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [°]	100.000 [°]	1.000 [°]

Description: Sets the tolerance for the function "Safe Operating Stop" (SOS).
Dependency: Refer to: p9530
Refer to: C01707
Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.
Note: A change only becomes effective after a POWER ON.
SOS: Safe Operational Stop

p9330 SI Motion standstill tolerance (Motor Module) / SI Mtn SOS Tol MM

SERVO, VECTOR

Can be changed: C2	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [mm]	100.000 [mm]	1.000 [mm]

Description: Sets the tolerance for the function "Safe Operating Stop" (SOS).
Dependency: Refer to: p9530
Refer to: C01707
Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.
Note: A change only becomes effective after a POWER ON.
SOS: Safe Operational Stop

p9331[0...3] SI Motion SLS limit values (Motor Module) / SI Mtn SLS lim MM

SERVO (Safety rot), VECTOR (Safety rot)

Can be changed: C2	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rev/min]	1000000.00 [rev/min]	2000.00 [rev/min]

Description: Sets the limit values for the function "Safely-Limited Speed" (SLS).
Index: [0] = Limit value SLS1
[1] = Limit value SLS2
[2] = Limit value SLS3
[3] = Limit value SLP4
Dependency: Refer to: p9363, p9531
Refer to: C01714
Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.
Note: A change only becomes effective after a POWER ON.
SLS: Safely-Limited Speed

p9331[0...3] SI Motion SLS limit values (Motor Module) / SI Mtn SLS lim MM

SERVO, VECTOR

Can be changed: C2	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.00 [mm/min]	1000000.00 [mm/min]	2000.00 [mm/min]

Description: Sets the limit values for the function "Safely-Limited Speed" (SLS).

Index: [0] = Limit value SLS1
[1] = Limit value SLS2
[2] = Limit value SLS3
[3] = Limit value SLP4

Dependency: Refer to: p9363, p9531
Refer to: C01714

Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.

Note: A change only becomes effective after a POWER ON.
SLS: Safely-Limited Speed

p9342 SI Motion act val comparison tol (crosswise) (Motor Module) / SI Mtn act tol MM

SERVO (Safety rot), VECTOR (Safety rot)

Can be changed: C2	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.0010 [°]	360.0000 [°]	0.1000 [°]

Description: Sets the tolerance for the cross-check of the actual position between the two monitoring channels.

Dependency: Refer to: p9542
Refer to: C01711

Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.

Note: A change only becomes effective after a POWER ON.

p9342 SI Motion act val comparison tol (crosswise) (Motor Module) / SI Mtn act tol MM

SERVO, VECTOR

Can be changed: C2	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.0010 [mm]	360.0000 [mm]	0.1000 [mm]

Description: Sets the tolerance for the cross-check of the actual position between the two monitoring channels.

Dependency: Refer to: p9542
Refer to: C01711

Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.

Note: A change only becomes effective after a POWER ON.

p9345 SI Motion SSM filter time (Motor Module) / SI Mtn SSM filt MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	100000.00 [µs]	0.00 [µs]

Description: Sets the filter time for the SSM feedback signal to detect standstill.

Note: A change only becomes effective after a POWER ON.
The filter time is effective only if the function is enabled (p9300/p9500 Bit 16 = 1).
The parameter is included in the data cross-check of the two monitoring channels.
SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)

p9346 SI Motion SSM velocity limit (Motor Module) / SI Mtn SSM v_limMM

SERVO (Safety rot), VECTOR (Safety rot)

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [rev/min]	1000000.00 [rev/min]	20.00 [rev/min]

Description: Sets the velocity limit for the SSM feedback signal to detect standstill (n < nx).
When this limit value is undershot, the signal "SSM feedback signal active" is set.

Dependency: Refer to: p9546

Caution: The function "Safe Acceleration Monitor" (SBR) is switched out after the selected threshold value is undershot.

Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.

Note: A change only becomes effective after a POWER ON.
SBR: Safe Acceleration Monitor
SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)

p9346 SI Motion SSM velocity limit (Motor Module) / SI Mtn SSM v_limMM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [mm/min]	1000000.00 [mm/min]	20.00 [mm/min]

Description: Sets the velocity limit for the SSM feedback signal to detect standstill (n < nx).
When this limit value is undershot, the signal "SSM feedback signal active" is set.

Dependency: Refer to: p9546

Caution: The function "Safe Acceleration Monitor" (SBR) is switched out after the selected threshold value is undershot.

Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.

Note: A change only becomes effective after a POWER ON.
SBR: Safe Acceleration Monitor
SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)

p9347 SI Motion SSM velocity hysteresis (Motor Module) / SI Mtn SSM Hyst MM

SERVO (Safety rot), VECTOR (Safety rot)

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0010 [rev/min]	500.0000 [rev/min]	10.0000 [rev/min]

Description: Sets the velocity hysteresis for the SSM feedback signal to detect standstill (n < nx).
Dependency: Refer to: C01711
Note: A change only becomes effective after a POWER ON.
The velocity hysteresis is effective only if the function is enabled (p9300/p9500 Bit 16 = 1).
The parameter is included in the data cross-check of the two monitoring channels.
SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)

p9347 SI Motion SSM velocity hysteresis (Motor Module) / SI Mtn SSM Hyst MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0010 [mm/min]	500.0000 [mm/min]	10.0000 [mm/min]

Description: Sets the velocity hysteresis for the SSM feedback signal to detect standstill (n < nx).
Dependency: Refer to: C01711
Note: A change only becomes effective after a POWER ON.
The velocity hysteresis is effective only if the function is enabled (p9300/p9500 Bit 16 = 1).
The parameter is included in the data cross-check of the two monitoring channels.
SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)

p9348 SI Motion SBR actual velocity tolerance (Motor Module) / SI Mtn SBR Tol MM

SERVO (Safety rot), VECTOR (Safety rot)

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [rev/min]	120000.00 [rev/min]	300.00 [rev/min]

Description: Sets the velocity tolerance for the "Safe Acceleration Monitor".
Dependency: Refer to: p9548
Refer to: C01706
Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.
Note: A change only becomes effective after a POWER ON.
SBR: Safe Acceleration Monitor

p9348 SI Motion SBR actual velocity tolerance (Motor Module) / SI Mtn SBR Tol MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [mm/min]	120000.00 [mm/min]	300.00 [mm/min]

Description: Sets the velocity tolerance for the "Safe Acceleration Monitor".

Dependency: Refer to: p9548
Refer to: C01706
Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.
Note: A change only becomes effective after a POWER ON.
SBR: Safe Acceleration Monitor

p9349 SI Motion slip velocity tolerance (Motor Module) / SI Mtn slip MM

SERVO (Safety rot), VECTOR (Safety rot)

Can be changed: C2	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.00 [rev/min]	6000.00 [rev/min]	6.00 [rev/min]

Description: Sets the velocity tolerance that is used for a 2-encoder system in cross-check between the Control Unit and the Motor Module.
Dependency: Refer to: p9301, p9342, p9549
Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.
Note: If the "actual value synchronization" is not enabled (p9301.3 = 0), then the value parameterized in p9342 is used as tolerance in the data cross-check.
A change only becomes effective after a POWER ON.

p9349 SI Motion slip velocity tolerance (Motor Module) / SI Mtn slip MM

SERVO, VECTOR

Can be changed: C2	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.00 [mm/min]	6000.00 [mm/min]	6.00 [mm/min]

Description: Sets the velocity tolerance that is used for a 2-encoder system in cross-check between the Control Unit and the Motor Module.
Dependency: Refer to: p9301, p9342, p9549
Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.
Note: If the "actual value synchronization" is not enabled (p9301.3 = 0), then the value parameterized in p9342 is used as tolerance in the data cross-check.
A change only becomes effective after a POWER ON.

p9351 SI Motion SLS changeover delay time (Motor Module) / SI Mtn SLS t MM

SERVO, VECTOR

Can be changed: C2	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 2825
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	600000000.00 [µs]	100000.00 [µs]

Description: Sets the delay time for the SLS changeover or for the changeover from SLS to SOS for the function "Safely-Limited Speed" (SLS).
When transitioning from a higher to a lower safely-limited velocity/speed stage or to the safe operating stop (SOS), within this delay time, the "old" velocity stage remains active.
Even if SLS or SOS is activated from non safety-related operation, then this delay is still applied.
Dependency: Refer to: p9551
Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.
Note: A change only becomes effective after a POWER ON.
SLS: Safely Limited Speed
SOS: Safe Operating Stop

p9352 SI Motion transition time STOP C to SOS (Motor Module) / SI Mtn t C->SOS MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 2825
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	600000000.00 [µs]	100000.00 [µs]

Description: Sets the transition time from STOP C to "Safe Operating Stop" (SOS).
Dependency: Refer to: p9552
Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.
Note: A change only becomes effective after a POWER ON.
SOS: Safe Operational Stop

p9353 SI Motion transition time STOP D to SOS (Motor Module) / SI Mtn t D->SOS MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 2825
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	600000000.00 [µs]	100000.00 [µs]

Description: Sets the transition time from STOP D to "Safe Operating Stop" (SOS).
Dependency: Refer to: p9553
Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.
Note: A change only becomes effective after a POWER ON.
SOS: Safe Operating Stop

p9355 SI Motion transition time STOP F to STOP B (Motor Module) / SI Mtn t F->B MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 2825
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	600000000.00 [µs]	0.00 [µs]

Description: Sets the transition time from STOP F to STOP B.
Dependency: Refer to: C01711
Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.
Note: A change only becomes effective after a POWER ON.

p9356 SI Motion pulse suppression delay time (Motor Module) / SI Mtn IL t_del MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 2825
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	600000000.00 [µs]	100000.00 [µs]

Description: Sets the delay time for the safe pulse suppression after STOP B / SS1.
Dependency: Refer to: p9360, p9556
Refer to: C01701
Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.

Note: A change only becomes effective after a POWER ON.
SS1: Safe Stop 1

p9357 SI Motion pulse suppression test time (Motor Module) / SI Mtn IL t MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	10000000.00 [µs]	100000.00 [µs]

Description: Sets the time after which the pulses must have been suppressed when initiating the test stop.
Dependency: Refer to: p9557
Refer to: C01798
Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.
Note: A change only becomes effective after a POWER ON.

p9358 SI Motion acceptance test mode time limit (Motor Module) / SI Mtn acc t MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
5000000.00 [µs]	100000000.00 [µs]	40000000.00 [µs]

Description: Sets the maximum time for the acceptance test mode.
If the acceptance test mode takes longer than the selected time limit, then the mode is automatically terminated.
Dependency: Refer to: p9558
Refer to: C01799
Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.
Note: A change only becomes effective after a POWER ON.

p9360 SI Motion pulse suppression shutdown velocity (Motor Module) / SI Mtn IL v_shutMM

SERVO, SERVO (Lin), VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [mm/min]	6000.00 [mm/min]	0.00 [mm/min]

Description: Sets the shutdown velocity for pulse suppression.
Below this velocity "standstill" is assumed and for STOP B / SS1, the pulses are suppressed (by changing to STOP A).
Dependency: Refer to: p9356, p9560
Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.
Note: A change only becomes effective after a POWER ON.
SS1: Safe Stop 1

p9360 SI Motion pulse suppression shutdown speed (Motor Module) / SI Mtn IL n_shutMM

SERVO (Safety rot), VECTOR (Safety rot)

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [rev/min]	6000.00 [rev/min]	0.00 [rev/min]

Description: Sets the shutdown speed for the pulse suppression.
Below this speed "standstill" is assumed and for STOP B / SS1, the pulses are suppressed(by changing to STOP A).

Dependency: Refer to: p9356, p9560

Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.

Note: A change only becomes effective after a POWER ON.
SS1: Safe Stop 1

p9363[0...3] SI Motion SLS stop response (Motor Module) / SI Mtn SLS Stop MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	14	2

Description: Sets the stop response for the function "safely reduced speed" (SLS).
These settings apply to the individual limit values for SLS.

Value:
0: STOP A
1: STOP B
2: STOP C
3: STOP D
4: STOP E
10: STOP A with delayed pulse suppression when the bus fails
11: STOP B with delayed pulse suppression when the bus fails
12: STOP C with delayed pulse suppression when the bus fails
13: STOP D with delayed pulse suppression when the bus fails
14: STOP E with delayed pulse suppression when the bus fails

Index:
[0] = Limit value SLS1
[1] = Limit value SLS2
[2] = Limit value SLS3
[3] = Limit value SLP4

Dependency: Refer to: p9331, p9380, p9563

Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.
Values 10 to 14 are being prepared and are presently ineffective.

Note: A change only becomes effective after a POWER ON.
SLS: Safely-Limited Speed / SG: Safely reduced speed

p9370 SI Motion acceptance test mode (Motor Module) / SI Mtn acc_mod MM

SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0000 hex	00AC hex	0000 hex

Description: Setting to select and de-select the acceptance test mode.

Value: 0: [00 hex] De-select the acceptance test mode
172: [AC hex] Select the acceptance test mode

Dependency: Refer to: p9358, r9371
Refer to: C01799

r9371 SI Motion acceptance test status (Motor Module) / SI Mtn acc_stat MM

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Integer16 **Dynamic index:** - **Func. diagram:** -
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0000 hex	00AC hex	-

Description: Displays the status of the acceptance test mode.

Value: 0: [00 hex] Acc_mode inactive
12: [0C hex] Acc_mode not possible due to POWER ON fault
13: [0D hex] Acc_mode not possible due to incorrect ID in p9370
15: [0F hex] Acc_mode not possible due to expired Acc_timer
172: [AC hex] Acc_mode active

Dependency: Refer to: p9358, p9370
Refer to: C01799

p9380 SI Motion pulse suppression delay bus failure (Motor Module) / SI Mtn t to IL MM

SERVO, VECTOR

Can be changed: C2 **Calculated:** - **Access level:** 4
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	800000.00 [µs]	0.00 [µs]

Description: Sets the delay time after which the pulses are safely suppressed after a bus failure.

Dependency: Refer to: p9363

Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.
The parameter is being prepared and is presently ineffective.

Note: A change only becomes effective after a POWER ON.

r9390[0...3] SI Motion version safety motion monitoring (Motor Module) / SI Mtn Version MM

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** -
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the Safety Integrated version for the safety motion monitoring functions on the Motor Module.

Index: [0] = Safety Version (major release)
[1] = Safety Version (minor release)
[2] = Safety Version (baselevel or patch)
[3] = Safety Version (hotfix)

Dependency: Refer to: r9590, r9770, r9870, r9890

Note: Example:
r9390[0] = 2, r9390[1] = 60, r9390[2] = 1, r9390[3] = 0 --> SI Motion version V02.60.01.00

r9398[0...1] SI Motion actual checksum SI parameters (Motor Module) / SI Mtn act CRC MM

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the checksum for the checked Safety Integrated parameters of the motion monitoring function (actual checksum) on the Motor Module.

Index: [0] = Checksum over SI parameters for motion monitoring
[1] = Checksum over SI parameters with hardware reference

Dependency: Refer to: p9399

Note: SI: Safety Integrated

p9399[0...1] SI Motion reference checksum SI parameters (Motor Module) / SI Mtn ref CRC MM

SERVO, VECTOR

Can be changed: C2	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0000 hex	FFFF FFFF hex	0000 hex

Description: Sets the checksum for the checked Safety Integrated parameters of the motion monitoring functions (reference checksum) on the Motor Module.

Index: [0] = Checksum over SI parameters for motion monitoring
[1] = Checksum over SI parameters with hardware reference

Dependency: Refer to: r9398

Note: SI: Safety Integrated

r9406[0...19] PS file parameter number parameter not transferred / PS parameter No.

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the parameters that were not able to be transferred when reading the parameter back-up files (PS files) from the CompactFlash card.

r9406[0] = 0

--> All of the parameter values were able to be transferred error-free.

r9406[0...x] > 0

--> Displays the parameter number whose value was not able to be completely transferred or for an indexed parameter, for at least 1 index, was not able to be transferred. The first index that is not transferred is displayed in r9407.

Dependency: Refer to: r9407, r9408

Note: All indices from r9406 to r9408 designate the same parameter.

r9406[x] parameter number, parameter not accepted

r9407[x] parameter index, parameter not accepted

r9408[x] fault code, parameter not accepted

r9407[0...19] PS file parameter index parameter not transferred / PS parameter index

All objects

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the first index of the parameter that was not able to be transferred when reading the parameter back-up files (PS files) from the CompactFlash card.

If, from an indexed parameter, at least one index was not able to be transferred, then the parameter number is displayed in r9406[n] and the first index that was not transferred is displayed in r9407[n].

r9406[0] = 0

--> All of the parameter values were able to be transferred error-free.

r9406[n] > 0

--> Displays r9407[n] the first index of the parameter number r9406[n] that was not transferred.

Dependency: Refer to: r9406, r9408

Note: All indices from r9406 to r9408 designate the same parameter.

r9406[x] parameter number, parameter not accepted

r9407[x] parameter index, parameter not accepted

r9408[x] fault code, parameter not accepted

r9408[0...19] PS file fault code parameter not transferred / PS fault code

All objects

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Only for internal Siemens service purposes.

Dependency: Refer to: r9406, r9407

Note: All indices from r9406 to r9408 designate the same parameter.

r9406[x] parameter number, parameter not accepted

r9407[x] parameter index, parameter not accepted

r9408[x] fault code, parameter not accepted

r9409 Number of parameters to be saved / Qty par to save

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the number of modified parameters and those that have still not be saved for this drive object.

Dependency: Refer to: p0971, p0977

Note: The modified parameters that still need to be saved are internally listed in r9410 ... r9419.

r9450[0...29] Reference value change parameter with unsuccessful calculation / Ref_chg par n poss

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: - **Calculated:** - **Access level:** 2
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the parameters for which the re-calculation was unsuccesful after an internal system reference value change.

Dependency: Refer to: F07086

r9451[0...29] Units changeover adapted parameters / Unit_chngov par

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the parameters whose parameter would have to be changed during a units changeover.

Dependency: Refer to: F07088

r9481 Number of BICO interconnections / BICO count

A_INF, B_INF, CU_CX32, CU_I, CU_LINK, CU_S, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3

P-Group: Commands **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 0

Min	Max	Factory setting
-	-	-

Description: Displays the number of BICO interconnections (signal sinks) to other drive objects.
The selected BICO interconnections should be entered into r9482[0...59] and r9483[0...59].

Dependency: Refer to: r9482, r9483

r9482[0...59] BICO interconnections BI/CI parameters / BICO BI/CI par

A_INF, B_INF, CU_CX32, CU_I, CU_LINK, CU_S, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** -
P-Group: Commands **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 0

Min	Max	Factory setting
-	-	-

Description: Displays the signal sinkss (Binector/Connector Inputs, BI/CI parameters) to other drive objects.
The number of BICO interconnections to other drive objects is displayed in r9481.

Dependency: Refer to: r9481, r9483
Note: The list is sorted according to signal sources and is structured as follows:
r9842[0]: Interconnection 1 (signal sink, BICO coded), r9843[0]: Interconnection 1 (signal source, BICO coded)
r9842[1]: Interconnection 2 (signal sink, BICO coded), r9843[1]: Interconnection 2 (signal source, BICO coded)
...

r9483[0...59] BICO interconnections BO/CO parameters / BICO BO/CO par

A_INF, B_INF, CU_CX32, CU_I, CU_LINK, CU_S, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR

Can be changed: -
Data type: Unsigned32
P-Group: Commands

Min	Max	Factory setting
-	-	-

Description: Displays the signal sources (Binector/Connector Outputs, BO/CO parameters) to other drive objects.
The number of BICO interconnections to other drive objects is displayed in r9481.
Dependency: Refer to: r9481, r9482
Note: The list is sorted according to signal sources and is structured as follows:
r9842[0]: Interconnection 1 (signal sink, BICO coded), r9843[0]: Interconnection 1 (signal source, BICO coded)
r9842[1]: Interconnection 2 (signal sink, BICO coded), r9843[1]: Interconnection 2 (signal source, BICO coded)
...

p9484 BICO interconnections search signal source / BICO S_src srch

A_INF, B_INF, CU_CX32, CU_I, CU_LINK, CU_S, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR

Can be changed: T
Data type: Unsigned32
P-Group: -
Not for motor type: -
Calculated: -
Dynamic index: -
Units group: -
Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 0

Min	Max	Factory setting
0	4294967295	0

Description: Sets the signal source (BO/CO parameter, BICO coded) to search in the signal sinks.
The question is answered:
How often is a connection made to a signal source in the drive object and from which index are these interconnections saved (r9482[0...59], r9483[0...59])?
Dependency: Refer to: r9481, r9482, r9483, r9485, r9486

r9485 BICO interconnections signal source search count / BICO S_src srchQty

A_INF, B_INF, CU_CX32, CU_I, CU_LINK, CU_S, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3

P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 0

Min	Max	Factory setting
-	-	-

Description: Displays the first index of the signal source being searched for.
The signal source to be searched is set in p9484 (BICO-coded).
The search result is contained in r9482[0...59] and r9483[0...59] and is specified by the count (r9485) and the first index (r9486).

Dependency: Refer to: r9481, r9482, r9483, p9484, r9485

r9490 Number of BICO interconnections to other drives / Qty BICO to drive

All objects

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** -
P-Group: Commands **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the number of signal sources from this drive to other drives/drive objects (Binector Output/Connector Output, BO/CO).

Dependency: Refer to: r9491, r9492, p9493

r9491[0...9] BI/CI of BICO interconnections to other drives / BI/CI to drive

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the signal receiver list (Binector Input/Connector Input, BI/CI) for the first interconnections between this drive and other drives/drive objects.

Dependency: Refer to: r9490, r9492, p9493

Notice: A drive cannot be deleted if this list is not empty! Otherwise, another drive would continue to attempt to read a signal from a drive that no longer existed.

Note: All indices of r9491 to p9493 designate the same interconnection.

r9491[x] contains the signal receiver and r9492[x] the matching signal source; p9493[x] can be set to modify the interconnection.

r9492[0...9] BO/CO of BICO interconnections to other drives / BO/CO to drive

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Commands	**Units group:** -	**Unit selection:** -

Min	**Max**	**Factory setting**
-	-	-

Description: Displays the signal source list (Binector Output/Connector Output, BO/CO) for the first interconnections between this drive and other drives/drive objects.

Dependency: Refer to: r9490, r9491, p9493

Notice: A drive cannot be deleted if this list is not empty! Otherwise, another drive would continue to attempt to read a signal from a drive that no longer existed.

Note: All indices of r9491 to p9493 designate the same interconnection.

r9491[x] contains the signal receiver and r9492[x] the matching signal source; p9493[x] can be set to modify the interconnection.

p9493[0...9] Reset BICO interconnections to other drives / Reset BICO to drv

All objects

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0	15	15

Description: Setting to reset the BICO interconnections to other drives. Each interconnection can be individually reset.

Value:
0: Set connection to 0
1: Set connection to 1 (100 %)
2: Set connection to factory setting
15: Finished

Dependency: Refer to: r9490, r9491, r9492

Note: All indices of r9491 to p9493 designate the same interconnection.

r9491[x] contains the signal receiver and r9492[x] the matching signal source; p9493[x] can be set to modify the interconnection.

p9495 BICO behavior to de-activated drive objects / Behav to deact obj

A_INF, B_INF, CU_CX32, CU_I, CU_LINK, CU_S, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	2	0

Description: Setting for the behavior for BICO interconnections to other non-operational/de-activated drive objects.

If this drive object has BICO interconnections to other non-operational or de-activated drive objects as drain, then using these parameters, all of the associated BI/CI parameters of this drive object can be marked and then set to the factory setting or only marked.

Value:
0: Do not do anything
1: Mark connection
2: Mark connection and then set to the factory setting

Dependency: Refer to: p9496, p9497, p9498, p9499

Refer to: A01318, A01507

Note: The BI/CI parameters involved are listed in r9498[0...29] (drain).

The associated BO/CO parameters are listed in r9499[0...29] (source).

However, r9498 and r9499 are only then filled if p9495 is not equal to 0, otherwise they remain empty.

p9496 Restore BICO to the drive objects that are now activated / Rest BICO act obj

A_INF, B_INF, CU_CX32, CU_I, CU_LINK, CU_S, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	2	0

Description: If this drive object has BICO interconnections to other drive objects that are either not operational or have been de-activated, then using this parameter, all of the BI/CI parameters involved with this drive object can be re-established.

Value:
0: Do not do anything
1: Restore the connections from the list
2: Delete the connection from the list

Dependency: Refer to: p9495, p9497, p9498, p9499

Refer to: A01318, A01507

Note: The BI/CI parameters involved are listed in r9498[0...29] (drain).

The associated BO/CO parameters are listed in r9499[0...29] (source).

After setting p9496 to 1 or 2, r9498 and r9499 are reset, r9497 is set to 0 and p9496 itself is set to 0.

p9497 BICO number of interconnections to de-activated drive objects / Qty to deact obj

A_INF, B_INF, CU_CX32, CU_I, CU_LINK, CU_S, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 3

Description: List of the BO/CO parameters that represent a connection to non-operational/de-activated drive objects.

Dependency: Refer to: p9495, p9496, p9497, p9498
Refer to: A01318, A01507

Note: All indices from r9498 to r9499 designate the same BICO interconnection.
This signal sink is in r9498[x] and the associated signal source in r9499[x].

p9500 SI Motion monitoring clock cycle (Control Unit) / SI Mtn mon_clk_cyc

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.50 [ms]	25.00 [ms]	12.00 [ms]

Description: Sets the monitoring clock cycle for safe motion monitoring.

Dependency: Refer to: p0115
Refer to: F01652

Note: The monitoring clock cycle must be a multiple of the position controller clock cycle.

p9501 SI Motion enable safety functions (Control Unit) / SI Mtn enab fct

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the enable signals for the safe motion monitoring.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	SOS/SLS (SBH/SG) enable	Enable	Inhibit	-
01	SLP (SE) enable	Enable	Inhibit	-
02				-
03	Actual value synchronization enable	Enable	Inhibit	-
04	External ESR activation enable	Enable	Inhibit	-
05	Override SLS (SG) enable	Enable	Inhibit	-
06	External STOPs enable	Enable	Inhibit	-
07	Cam synchronization enable	Enable	Inhibit	-
08	SCA1+ (SN1+) enable	Enable	Inhibit	-
09	SCA1- (SN1-) enable	Enable	Inhibit	-
10	SCA2+ (SN2+) enable	Enable	Inhibit	-
11	SCA2- (SN2-) enable	Enable	Inhibit	-
12	SCA3+ (SN3+) enable	Enable	Inhibit	-
13	SCA3- (SN3-) enable	Enable	Inhibit	-
14	SCA4+ (SN4+) enable	Enable	Inhibit	-
15	SCA4- (SN4-) enable	Enable	Inhibit	-
16	Enable NX Hys Fil	Enable	Inhibit	-

Dependency: Refer to: F01682, F01683

Note: A change only becomes effective after a POWER ON.
Re bit 06:
For the motion monitoring functions integrated in the drive, the enable for the external stops is of no significance.
ESR: Extended Stopping and Retraction
SCA: Safe Cam / SN: Safe software cam
SLP: Safely-Limited Position / SE: Safe software limit switches
SLS: Safely-Limited Speed / SG: Safely reduced speed
SOS: Safe Operating Stop / SBH: Safe operating stop

p9502 SI Motion axis type (Control Unit) / SI Mtn axis type

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Sets the axis type (linear axis or rotary axis/spindle).

Value:
0: Linear axis
1: Rot axis/spindle

Note: For the commissioning software, after changing over the axis type, the units dependent on the axis type are only updated after a project upload.

A change only becomes effective after a POWER ON.

p9503 SI Motion SCA (SN) enable (Control Unit) / SI Mtn SCA enab

SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Setting to enable the function "Safe Cam" (SCA).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	SCA1 (SN1) enable	Enable	Inhibit	-
01	SCA2 (SN2) enable	Enable	Inhibit	-
02	SCA3 (SN3) enable	Enable	Inhibit	-
03	SCA4 (SN4) enab	Enable	Inhibit	-
04	SCA5 (SN5) enab	Enable	Inhibit	-

06	SCA7 (SN7) enable	Enable	Inhibit	-
07	SCA8 (SN8) enable	Enable	Inhibit	-
08	SCA9 (SN9) enable	Enable	Inhibit	-
09	SCA10 (SN10) enable	Enable	Inhibit	-
10	SCA11 (SN11) enable	Enable	Inhibit	-
11	SCA12 (SN12) enable	Enable	Inhibit	-
12	SCA13 (SN13) enable	Enable	Inhibit	-
13	SCA14 (SN14) enable	Enable	Inhibit	-
14	SCA15 (SN15) enable	Enable	Inhibit	-
15	SCA16 (SN16) enable	Enable	Inhibit	-
16	ESCA17 (SN17) enable	Enable	Inhibit	-
17	SCA18 (SN18) enable	Enable	Inhibit	-
18	SCA19 (SN19) enable	Enable	Inhibit	-
19	SCA20 (SN20) enable	Enable	Inhibit	-
20	SCA21 (SN21) enable	Enable	Inhibit	-
21	SCA22 (SN22) enable	Enable	Inhibit	-
22	SCA23 (SN23) enable	Enable	Inhibit	-
23	SCA24 (SN24) enable	Enable	Inhibit	-
24	SCA25 (SN25) enable	Enable	Inhibit	-
25	SCA26 (SN26) enable	Enable	Inhibit	-
26	SCA27 (SN27) enable	Enable	Inhibit	-
27	SCA28 (SN28) enable	Enable	Inhibit	-
28	SCA29 (SN29) enable	Enable	Inhibit	-
29	SCA30 (SN30) enable	Enable	Inhibit	-

Dependency: Refer to: p9501
Refer to: F01686

Note: The "Safe Cam" function (SCA) can either be enabled using p9501 or p9503.
A change only becomes effective after a POWER ON.
SCA: Safe Cam / SN: Safe software cam

p9505 SI Motion SCA (SN) modulo value (Control Unit) / SI Mtn SCA modulo

SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [°]	737280 [°]	0 [°]

Description: Sets the modulo range of the safe position actual value in degrees for the function "Safe Cam" (SCA) for rotary axes.
Dependency: Refer to: p9536, p9537
Note: A change only becomes effective after a POWER ON.
SCA: Safe Cam / SN: Safe software cam

p9510 SI Motion clock-cycle synchronous PROFIBUS master / SI Mtn sync master

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 4
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Setting for the clock-cycle synchronous PROFIBUS master.
The parameter must be set if the safety-relevant motion monitoring functions integrated in the drive are enabled and there is a clock-cycle synchronous PROFIBUS master.
This is, for example, the case when using the following controls:
- clock-cycle synchronous control for the motion control (e.g. SIMOTION).
- clock-cycle synchronous PROFIsafe master (e.g. SIMATIC S7-400F).

Value:
0: No clock-cycle synchronous PROFIBUS master
1: Clock-cycle synchronous PROFIBUS master present

Dependency: Refer to: C01711, A01796
Notice: As of firmware V2.6, the parameter has no effect.
Note: A change only becomes effective after a POWER ON.

p9511 SI Motion clock cycle actual value sensing (Control Unit) / SI Mtn clck act CU

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	25.00 [ms]	0.00 [ms]

Description: Sets the clock cycle time of the actual value sensing for safe motion monitoring.
The slower clock cycle time reduces the maximum permissible velocity - however, it ensures a lower load of the Control Unit for the safe actual value sensing.
The maximum permissible velocity, which when exceeded can mean that errors occur in the safe actual value sensing, is displayed in parameter r9730.
For a default value of 0 ms, the actual value sensing of the isochronous PROFIBUS clock cycle is used as clock cycle time or 1 ms if isochronous operation is not being used.
Dependency: Refer to: p0115
Refer to: F01652

Note: The parameter is only active for drive-based motion monitoring functions (p9601, bit 2 = 1).
The monitoring clock cycle from p9500 must be an integer multiple of this parameter.
The clock cycle time of the actual value sensing must be an integer multiple of the current controller clock cycle and be at least a factor of 4 slower than the current control clock cycle.
The clock cycle time of the actual value sensing should not be set greater than 8ms.

p9515 SI Motion coarse position value configuration (CU) / SI Mtn s config CU

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the encoder configuration for the redundant coarse position value.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Incrementer	Yes	No	-
01	Encoder CRC least significant byte first	Yes	No	-
02	Redundant coarse position val. most significant bit left-aligned	Yes	No	-
16	DRIVE-CLiQ encoder	Yes	No	-

Dependency: Refer to: r0474, p9315

Note: A change only becomes effective after a POWER ON.
For safe functions that are not enabled (p9501 = 0), the following applies:
- p9515 is automatically set the same as p0474 when the system boots.
For safety functions that are enabled (p9501 > 0), the following applies:
- p9515 is checked to see that it matches p0474.

p9516 SI Motion motor encoder config., safety-relevant functions (CU) / SI Mtn enc_config

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the configuration for the motor encoder and position actual value.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Motor encoder, rotating/linear	Linear	Rotating:	-
01	Position actual value, sign change	Yes	No	-

Dependency: Refer to: p0404, p0410
Refer to: F01671

Note: A change only becomes effective after a POWER ON.
For safe functions that are not enabled (p9501 = 0), the following applies:
- p9516.0 is automatically set when booting as for p0410.1. When booting, p9516.1 is automatically set as for p0404.0.
For safety functions that are enabled (p9501 > 0), the following applies:
- p9516.1 is checked to identify whether it coincides with p0404.0.

p9517 SI Motion linear scale grid division (Control Unit) / SI Mtn grid

SERVO, VECTOR	**Can be changed:** C2	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [nm]	250000000.00 [nm]	10000.00 [nm]

Description: Sets the grid division for a linear motor encoder.

Dependency: Refer to: p0407, p9516
Refer to: F01671

Note: A change only becomes effective after a POWER ON.
For safe functions that are not enabled (p9501 = 0), the following applies:
- p9517 is automatically set the same as p0407 when the system boots.
For safety functions that are enabled (p9501 > 0), the following applies:
- p9517 is checked to see that it matches p0407.

p9518 SI Motion encoder pulses per revolution (Control Unit) / SI Mtn pulses/rev

SERVO, VECTOR	**Can be changed:** C2	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	100000	2048

Description: Sets the number of encoder pulses per revolution for rotary motor encoders.

Dependency: Refer to: p0408, p9516
Refer to: F01671

Note: A change only becomes effective after a POWER ON.
For safe functions that are not enabled (p9501 = 0), the following applies:
- p9518 is automatically set the same as p0408 when the system boots.
For safety functions that are enabled (p9501 > 0), the following applies:
- p9518 is checked to see that it matches p0408.

p9519 SI Motion fine resolution G1_XIST1 (Control Unit) / SI Mtn G1_XIST1

SERVO, VECTOR	**Can be changed:** C2	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	2	18	11

Description: Sets the fine resolution for G1_XIST1 in bits.

Dependency: Refer to: p0418
Refer to: F01671

Note: A change only becomes effective after a POWER ON.
For safe functions that are not enabled (p9501 = 0), the following applies:
- p9519 is automatically set the same as p0418 at run-up.
For safety functions that are enabled (p9501 > 0), the following applies:
- p9519 is checked to see that it matches p0418.
G1_XIST1: Encoder 1 position actual value 1 (PROFIdrive)

p9520 SI Motion spindle pitch (Control Unit) / SI Mtn Sp_pitch

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.1000 [mm]	8388.0000 [mm]	10.0000 [mm]

Description: Sets the gear ratio between the encoder and load in mm/revolution for a linear axis with rotary encoder.

Notice: The fourth decimal point can be rounded-off depending on the size of the entered number (from three places before the decimal point).

Note: A change only becomes effective after a POWER ON.

p9521[0...7] SI Motion gearbox encoder/load denominator (Control Unit) / SI Mtn gear denom

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1	2147000000	1

Description: Sets the denominator for the gearbox between the encoder and load.
The current gearbox stage is selected via safety-relevant inputs (SGE).

Index:
[0] = Gearbox 1
[1] = Gearbox 2
[2] = Gearbox 3
[3] = Gearbox 4
[4] = Gearbox 5
[5] = Gearbox 6
[6] = Gearbox 7
[7] = Gearbox 8

Dependency: Refer to: p9522

Note: A change only becomes effective after a POWER ON.

p9522[0...7] SI Motion gearbox encoder/load numerator (Control Unit) / SI Mtn gear numer

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1	2147000000	1

Description: Sets the numerator for the gearbox between the encoder and load.
The current gearbox stage is selected via safety-relevant inputs (SGE).

Index:
[0] = Gearbox 1
[1] = Gearbox 2
[2] = Gearbox 3
[3] = Gearbox 4
[4] = Gearbox 5
[5] = Gearbox 6
[6] = Gearbox 7
[7] = Gearbox 8

Dependency: Refer to: p9521

Note: A change only becomes effective after a POWER ON.

p9523 SI Motion redundant coarse pos. value valid bits (CU) / Valid bits CU

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0	16	9

Description: Sets the number of valid bits of the redundant coarse postion value.
The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.

Dependency: Refer to: r0470, p9323

Note: A change only becomes effective after a POWER ON.
For safe functions that are not enabled (p9501 = 0), the following applies:
- p9523 is automatically set the same as r0470 when the system boots.
For safety functions that are enabled (p9501 > 0), the following applies:
- p9523 is checked to see that it matches r0470.

p9524 SI Motion Redundant coarse pos. value fine resolution bits (CU) / SI Mtn fine bit CU

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-16	16	-2

Description: Sets the number of valid bits for the fine resolution of the redundant coarse position value.
The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.

Dependency: Refer to: r0471, p9324

Note: A change only becomes effective after a POWER ON.
For safe functions that are not enabled (p9501 = 0), the following applies:
- p9524 is automatically set the same as r0471 when the system boots.
For safety functions that are enabled (p9501 > 0), the following applies:
- p9524 is checked to see that it matches r0471.

p9525 SI Motion redundant coarse pos. value relevant bits (CU) / Relevant bits CU

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0	16	16

Description: Sets the number of relevant bits for the redundant coarse position value.

Dependency: Refer to: p0414, r0472, p9325

Note: A change only becomes effective after a POWER ON.
For safe functions that are not enabled (p9501 = 0), the following applies:
- p9525 is automatically set the same as r0472 when the system boots.
For safety functions that are enabled (p9501 > 0), the following applies:
- p9525 is checked to ensure that it matches r0472.

p9526 SI Motion encoder assignment second channel / SI Mtn enc chan 2

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
1	3	1

Description: Sets the number of the encoder that the second channel (control, Motor Module) uses for safe motion monitoring functions.

Dependency: For the safe motion monitoring functions, the redundant safety position actual value sensing must be activated in the appropriate encoder data set (p0430.19 = 1).
Refer to: p0187, p0188, p0189, p0430

Note: For p9526 = 1, the encoder for the closed-loop speed control is used for the second channel of the motion monitoring functions (1-encoder system).
A change only becomes effective after a POWER ON.

p9529 SI Motion Gx_XIST1 Safe most significant bit (CU) / Gx_XIST1 MSB CU

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0	31	14

Description: Sets the bit number for the safe most significant bit (MSB) of the Gx_XIST1 coarse position.

Dependency: Refer to: p0415, r0475, p9329

Note: A change only becomes effective after a POWER ON.
For safe functions that are not enabled (p9501 = 0), the following applies:
- p9529 is automatically set the same as r0475 when the system boots.
For safety functions that are enabled (p9501 > 0), the following applies:
- p9529 is checked to see that it matches r0475.
MSB: Most Significant Bit

p9530 SI Motion standstill tolerance (Control Unit) / SI Mtn standst_tol

SERVO (Safety rot), VECTOR (Safety rot)

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0.000 [°]	100.000 [°]	1.000 [°]

Description: Sets the tolerance for the function "Safe Operating Stop" (SOS).

Dependency: Refer to: C01707

Note: A change only becomes effective after a POWER ON.
SOS: Safe Operating Stop / SBH: Safe operating stop

p9530 SI Motion standstill tolerance (Control Unit) / SI Mtn standst_tol

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.000 [mm]	100.000 [mm]	1.000 [mm]

Description: Sets the tolerance for the function "Safe Operating Stop" (SOS).
Dependency: Refer to: C01707
Note: A change only becomes effective after a POWER ON.
SOS: Safe Operating Stop / SBH: Safe operating stop

p9531[0...3] SI Motion SLS (SG) limit values (Control Unit) / SI Mtn SLS lim CU

SERVO (Safety rot), VECTOR (Safety rot)

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [rev/min]	1000000.00 [rev/min]	2000.00 [rev/min]

Description: Sets the limit values for the function "Safely-Limited Speed" (SLS).
Index: [0] = Limit value SLS1
[1] = Limit value SLS2
[2] = Limit value SLS3
[3] = Limit value SLP4

[12] = SLS (SG) override factor 12
[13] = SLS (SG) override factor 13
[14] = SLS (SG) override factor 14
[15] = SLS (SG) override factor 15

Dependency: Refer to: p9501, p9531

Note: The current override factor for SLS2 and SLS4 is selected using the safety-relevant inputs (SGE).
A change only becomes effective after a POWER ON.
SLS: Safely-Limited Speed / SG: Safely reduced speed

p9533 SI Motion SLS setpoint velocity limiting (Control Unit) / SI Mtn SLS set_lim

SERVO, VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000 [%]	100.000 [%]	80.000 [%]

Description: This is an evaluation factor to define the setpoint limit from the selected actual speed limit.
The active SLS limit value is evaluated with this factor and is made available as setpoint limit in r9733:
r9733 = p9533 * p9531[0...3]

Dependency: This parameter only has to be parameterized for the motion monitoring functions integrated in the drive (p9601.2 = 1)
Refer to: p9501, p9531, p9601

Note: The active actual speed limit is selected via safety-relevant inputs (SGE).
When selecting SOS or a STOP A ... D, setpoint 0 is specified in r9733.
A change only becomes effective after a POWER ON.
SLS: Safely-Limited Speed

Description: Assigns the individual cams to the maximum of 4 cam tracks and defines the numerical value for the SGA "cam range".
p9538[0...29] = CBA dec
C = Assignment of the cam to the cam track.
Valid values are 1, 2, 3, 4.
BA = Numerical value for the SGA "cam range".
If the position lies in the range of this cam, the value BA is signaled to the safety-relevant logic via the SGA "cam range" of the cam track set using C.
Valid values are 0 ... 14. Each numerical value may only be used once for each cam track.

Examples:

p9538[0] = 207

Cam 1 (index 0) is assigned cam track 2. If the position lies within the range of this cam, a value of 7 is entered in the SGA "cam range" of the second cam track.

p9538[5] = 100

Cam 6 (index 5) is assigned cam track 1. If the position lies within the range of this cam, a value of 0 is entered in the SGA "cam range" of the first cam track.

Min	Max	Factory setting
0.00 [rev/min]	1000000.00 [rev/min]	20.00 [rev/min]

Description: Sets the velocity limit for the SSM feedback signal to detect standstill (n < n_x).
When this limit value is undershot, the signal "SSM feedback signal active" (SGA n < n_x) is set.

Caution: The function "Safe Acceleration Monitor" (SBR) is switched out after the selected threshold value is undershot.

Note: A change only becomes effective after a POWER ON.
F-DO: Failsafe Digital Output / SGA: Safety-related output
SBR: Safe Acceleration Monitor
SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring) / SGA n < nx: Safety-related output n < nx

p9546 SI Motion SSM (SGA n < nx) velocity limit (CU) / SI Mtn SSM v_limCU

Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	10000.00 [ms]	100.00 [ms]

Description: Sets the time after which the pulses must have been suppressed when initiating the test stop.
Dependency: Refer to: C01798
Note: A change only becomes effective after a POWER ON.

p9558 SI Motion acceptance test mode time limit (Control Unit) / SI Mtn t_accept

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
5000.00 [ms]	100000.00 [ms]	40000.00 [ms]

Description: Sets the maximum time for the acceptance test mode.
If the acceptance test mode takes longer than the selected time limit, then the mode is automatically terminated.

Dependency: Refer to: C01799

Note: A change only becomes effective after a POWER ON.

p9559 SI Motion forced checking procedure timer (Control Unit) / SI Mtn dyn timer

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [h]	9000.00 [h]	8.00 [h]

Description: Sets the time to carry out the forced checking procedure and test the safety motion monitoring functions integrated in the drives.
Within the parameterized time, the safety functions must have been tested at least once including de-selecting the function "Safe Torque Off". The monitoring time is reset each time that the test is carried out.
The signal source to initiate the forced checking procedure is parameterized in p9705.

Dependency: Refer to: p9705
Refer to: C01798

Note: A change only becomes effective after a POWER ON.

p9560 SI Motion pulse suppression shutdown velocity (Control Unit) / SI Mtn IL v_shutd

SERVO (Lin)

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [mm/min]	6000.00 [mm/min]	0.00 [mm/min]

Description: Sets the shutdown velocity for pulse suppression.
Below this velocity "standstill" is assumed and for STOP B, the pulses are suppressed (by changing to STOP A).

Dependency: Refer to: p9556

Note: A change only becomes effective after a POWER ON.

p9560 SI Motion pulse suppression shutdown speed (Control Unit) / SI Mtn IL n_shutCU

SERVO (Safety rot), VECTOR (Safety rot)

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -

Min	Max	Factory setting
0.00 [rev/min]	6000.00 [rev/min]	0.00 [rev/min]

Description: Sets the shutdown speed for the pulse suppression.
Below this speed "standstill" is assumed and for STOP B, the pulses are suppressed (by changing to STOP A).

Dependency: Refer to: p9556

Note: A change only becomes effective after a POWER ON.

p9560 SI Motion pulse suppression shutdown velocity (Control Unit) / SI Mtn IL v_shutCU

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [mm/min]	6000.00 [mm/min]	0.00 [mm/min]

Description: Sets the shutdown velocity for pulse suppression.
Below this velocity "standstill" is assumed and for STOP B, the pulses are suppressed (by changing to STOP A).

Dependency: Refer to: p9556

Note: A change only becomes effective after a POWER ON.

p9561 SI Motion SLS (SG) stop response (Control Unit) / SI Mtn SLS resp

SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	14	5

Description: Sets the stop response for the function "Safely-Limited Speed" (SLS).
This setting applies for all SLS limit values.
An input value of less than 5 signifies personnel protection, from 10 and upwards, machine protection.

Value:
0: STOP A
1: STOP B
2: STOP C
3: STOP D
4: STOP E
5: Sets the stop response via p9563 (SLS-specific)
10: STOP A with delayed pulse suppression when the bus fails
11: STOP B with delayed pulse suppression when the bus fails
12: STOP C with delayed pulse suppression when the bus fails
13: STOP D with delayed pulse suppression when the bus fails
14: STOP E with delayed pulse suppression when the bus fails

Dependency: Refer to: p9531, p9563, p9580

Note: A change only becomes effective after a POWER ON.
SLS: Safely-Limited Speed / SG: Safely reduced speed

p9562 SI Motion SLP (SE) stop response (Control Unit) / SI Mtn SLP resp

SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
2	4	2

Description: Sets the stop response for the function "Safely-Limited Position" (SLP).

Value:
2: STOP C
3: STOP D
4: STOP E

Dependency: Refer to: p9534, p9535

Note: A change only becomes effective after a POWER ON.
SLP: Safely-Limited Position / SE: Safe software limit switches

p9563[0...3] SI Motion SLS (SG)-specific stop response (Control Unit) / SI Mtn SLS stop

SERVO, VECTOR	**Can be changed:** C2	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	14	2

Description: Sets the SLS-specific stop response for the function "Safely-Limited Speed" (SLS).
These settings apply to the individual limit values for SLS.

Value:
0: STOP A
1: STOP B
2: STOP C
3: STOP D
4: STOP E
10: STOP A with delayed pulse suppression when the bus fails
11: STOP B with delayed pulse suppression when the bus fails
12: STOP C with delayed pulse suppression when the bus fails
13: STOP D with delayed pulse suppression when the bus fails
14: STOP E with delayed pulse suppression when the bus fails

Index:
[0] = Limit value SLS1
[1] = Limit value SLS2
[2] = Limit value SLS3
[3] = Limit value SLP4

Dependency: Refer to: p9531, p9561, p9580

Notice: Values 10 to 14 are being prepared and are presently ineffective.

Note: A change only becomes effective after a POWER ON.
SLS: Safely-Limited Speed / SG: Safely reduced speed

p9570 SI Motion acceptance test mode (Control Unit) / SI Mtn Acc_mode

SERVO, VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3

	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0000 hex	00AC hex	0000 hex

Description: Setting to select and de-select the acceptance test mode.

Value:
0: [00 hex] De-select the acceptance test mode
172: [AC hex] Select the acceptance test mode

Dependency: Refer to: p9558, r9571
Refer to: C01799

r9571 SI Motion acceptance test status (Control Unit) / SI Mtn acc_status

SERVO, VECTOR	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0000 hex	00AC hex	-

Description: Displays the status of the acceptance test mode.

Value:
0: [00 hex] Acc_mode inactive
12: [0C hex] Acc_mode not possible due to POWER ON fault
13: [0D hex] Acc_mode not possible due to incorrect ID in p9570
15: [0F hex] Acc_mode not possible due to expired Acc_timer

172: [AC hex] Acc_mode active

Dependency: Refer to: p9558, p9570
Refer to: C01799

p9580 SI Motion pulse suppression delay time after bus failure (CU) / SI Mtn t to IL

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	800.00 [ms]	0.00 [ms]

Description: Sets the delay time after which the pulses are safely suppressed after a bus failure.
Dependency: Refer to: p9561, p9563
Note: A change only becomes effective after a POWER ON.

r9590[0...3] SI Motion version safety motion monitoring (Control Unit) / SI Mtn version

SERVO, VECTOR

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the Safety Integrated version for the safety motion monitoring functions on the Control Unit.
Index: [0] = Safety Version (major release)
[1] = Safety Version (minor release)
[2] = Safety Version (baselevel or patch)
[3] = Safety Version (hotfix)
Dependency: Refer to: r9770, r9870, r9890
Note: Example:
r9590[0] = 2, r9590[1] = 60, r9590[2] = 1, r9590[3] = 0 --> SI Motion version V02.60.01.00

p9601 SI enable, functions integrated in the drive (Control Unit) / SI enable fct CU

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the enable signals for safety functions on the Control Unit that are integrated in the drive.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	STO (SH) via terminals (Control Unit) enable	Enable	Inhibit	2810
02	Motion monitoring functions integr. in the drive (Control Unit)	Enable	Inhibit	-
03	PROFIsafe (Control Unit) enable	Enable	Inhibit	-

Dependency: Refer to: p9801
Note: For p9601.2 = 1 and p9601.3 = 0 the following apply:
It is assumed that the motion monitoring functions integrated in the drive are controlled via the Terminal Module 54F (TM54F).
CU: Control Unit
STO: Safe Torque Off / SH: Safe standstill
SI: Safety Integrated
SMM: Safe Motion Monitoring

p9602 SI enable Safe Brake Control (Control Unit) / SI enable SBC CU

SERVO, VECTOR	**Can be changed:** C2	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dynamic index:** -	**Func. diagram:** 2814
	P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	0

Description: Sets the enable signal for the function "Safe Brake Control" (SBC) on the Control Unit.

Value:
0: Inhibit SBC
1: SBC enable

Dependency: Refer to: p9802

Note: The "Safe Brake Control" function is not activated until at least one safety monitoring function has been enabled (i.e. p9501 not equal to 0 and/or p9601 not equal to 0).

The parameterization "no motor holding brake available" and "Safe Brake Control" enabled (p1215 = 0, p9602 = p9802 = 1) is not practical if there is no motor holding brake.

The parameterization "motor holding brake the same as sequence control, connection via BICO" and "Safe Brake Control" enabled (p1215 = 3, p9602 = 1, p9802 = 1) is not practical.

It is not permissible to parameterize "motor holding brake without feedback signals" and also enable "safe brake control" (p1278 = 1, p9602 = 1, p9802 = 1).

CU: Control Unit

SBC: Safe Brake Control

SI: Safety Integrated

p9610 SI PROFIsafe address (Control Unit) / SI PROFIsafe CU

SERVO, VECTOR	**Can be changed:** C2	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0000 hex	FFFE hex	0000 hex

Description: Sets the PROFIsafe address of the Control Unit.

Dependency: Refer to: p9810

p9620[0...7] BI: SI signal source for STO (SH)/SBC/SS1 (Control Unit) / SI S_srcSTO/SS1 CU

SERVO, VECTOR	**Can be changed:** C2	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 2810
	P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source for the following functions on the Control Unit:

STO: Safe Torque Off / SH: Safe standstill

SBC: Safe Brake Control

SS1: Safe Stop 1 (time monitored)

Dependency: Refer to: p9601

Note: The following signal sources are permitted:

- fixed zero (standard setting).
- digital inputs DI 0 to DI 7 on the Control Unit 320 (CU320).
- digital inputs DI 0 to DI 3 on the Controller Extensions (CX32, NX10, NX15).
- digital inputs DI 0 to DI 3 on the Control Unit 310 (CU310).

It is not permitted to establish an interconnection to a digital input in the simulation mode.
For a parallel circuit configuration of n power units, the following applies:
p9620[0] = Signal source for power unit 1
...
p9620[n-1] = Signal source for power unit n

p9650 SI SGE changeover tolerance time (Control Unit) / SI SGE_chg tol CU

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 2810
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	2000.00 [ms]	500.00 [ms]

Description: Sets the tolerance time to change over the safety-related inputs (SGE) on the Control Unit.
An SGE changeover is not simultaneously effective due to the different runtimes in the two monitoring channels. After an SGE changeover, dynamic data is not subject to a data cross-check during this tolerance time.

Dependency: Refer to: p9850

Note: For a data cross-check between p9650 and p9850, a difference of one Safety monitoring clock cycle is tolerated.
The parameterized time is internally rounded-off to an integer multiple of the monitoring clock cycle.
SGE: Safety-related input (e.g. STO terminals)

p9652 SI Safe Stop 1 delay time (Control Unit) / SI Stop 1 t_del CU

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [s]	300.00 [s]	0.00 [s]

Description: Sets the delay time of the pulse suppression for the function "Safe Stop 1" (SS1) on the Control Unit to brake along the OFF3 down ramp (p1135).

Dependency: Refer to: p1135, p9852

Note: For a data cross-check between p9652 and p9852, a difference of one Safety monitoring clock cycle is tolerated.
The parameterized time is internally rounded-off to an integer multiple of the monitoring clock cycle.
SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)

p9658 SI transition time STOP F to STOP A (Control Unit) / SI STOP F->A CU

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 2802
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	30000.00 [ms]	0.00 [ms]

Description: Sets the transition period from STOP F to STOP A on the Control Unit.

Dependency: Refer to: r9795, p9858
Refer to: F01611

Note: For a data cross-check between p9658 and p9858, a difference of one Safety monitoring clock cycle is tolerated.
The parameterized time is internally rounded-off to an integer multiple of the monitoring clock cycle.
STOP F: Defect in a monitoring channel (error in the data cross-check)
STOP A: Pulse suppression via the safety shutdown path

p9659 SI forced checking procedure timer / SI FrcdCkProcTimer

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 2810
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [h]	9000.00 [h]	8.00 [h]

Description: Sets the time to carry out the dynamic update and testing the safety shutdown paths (forced checking procedure).
Within the parameterized time, STO must have been de-selected at least once. The monitoring time is reset each time that STO is de-selected.

Dependency: Refer to: A01699

Note: STO: Safe Torque Off / SH: Safe standstill

p9700 SI Motion copy function / SI Mtn copy fct

SERVO, VECTOR

Can be changed: C2, U, T | **Calculated:** - | **Access level:** 3

Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0000 hex	0057 hex	0000 hex

Description: Setting to start the required copy function.
After starting, the appropriate parameters are copied from the Control Unit to the Motor Module.
After completing copying, parameters are automatically reset to 0.

Value:
0: [00 hex] Copy function ended
29: [1D hex] Start copy function node identifier
87: [57 hex] Start copy function SI parameters

Note: Re value = 57 hex:
The value can only be set if the safety commissioning mode is set and the Safety Integrated password was entered.
SI: Safety Integrated

p9701 Acknowledge SI Motion data / Ackn SI Mtn dat

SERVO, VECTOR

Can be changed: C2, U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0000 hex	00EC hex	0000 hex

Description: Setting to transfer the reference checksums from the associated actual checksums after changes (SI parameters, hardware).

After transferring the reference checksums, parameters are automatically reset to 0.

Value:
0: [00 hex] Data unchanged
172: [AC hex] Acknowledge data change complete
220: [DC hex] Acknowledge SI basic parameter change
236: [EC hex] Acknowledge hardware CRC

Dependency: Refer to: r9398, p9399, r9728, p9729, r9798, p9799, r9898, p9899

Note: Re value = AC and DC hex:

These values can only be set if the safety commissioning mode is set and the Safety Integrated password was entered.

SI: Safety Integrated

p9701 Acknowledge SI Motion data / Ackn SI Mtn dat

Description: Displays the current motor-side position actual value for the motion monitoring functions on the Control Unit.

r9713[0...3] SI Motion diagnostics position action value load side / SI Mtn s_act load

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** -
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the current load-side actual values of both monitoring channels and their difference.

Index: [0] = Load-side actual value on the Control Unit
[1] = Load-side actual value on the second channel
[2] = Load-side actual value difference Control Unit - second channel
[3] = Load-side max. actual value difference CU - 2nd channel

Dependency: Refer to: r9724

Note: Re r9713[0]:

The display of the load-side position actual value on the Control Unit is updated in the monitoring clock cycle.

Re r9713[1]:

The display of the load-side position actual value on the second channel is updated in the DCC clock cycle (r9724) and delayed by one DCC clock cycle.

Re r9713[2]:

The difference between the load-side position actual value on the Control Unit and load-side position actual value in the second channel is updated in the DCC clock cycle (r9724) and delayed by one DCC clock cycle.

Re r9713[3]:

The maximum difference between the load-side actual position value on the Control Unit and the load-side actual position value on the second channel

DCC: Data cross-check

Index:
[0] = Checksum over SI parameters for motion monitoring
[1] = Checksum over SI parameters for actual values
[2] = Checksum over SI parameters for HW

Dependency: Refer to: p9729
Refer to: F01680

p9729[0...2] SI Motion reference checksum, SI parameters / SI Mtn ref CRC

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Sets the checksum using the checksum-tested Safety Integrated parameters for motion monitoring functions (reference checksum).

Index:
[0] = Checksum over SI parameters for motion monitoring
[1] = Checksum over SI parameters for actual values
[2] = Checksum over SI parameters for HW

Dependency: Refer to: r9728
Refer to: F01680

r9730 SI Motion Safe maximum velocity / SI Mtn safe v_max

SERVO (Safety rot), VECTOR (Safety rot)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the safe maximum velocity (on the load side) that is permissible for the safe motion monitoring functions as a result of the actual value sensing.

Note: If the value displayed is exceeded, message C01711 is output indicating relevant subsequent faults.

r9730 SI Motion Safe maximum velocity / SI Mtn safe v_max

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [mm/min]	- [mm/min]	- [mm/min]

Description: Displays the safe maximum velocity (on the load side) that is permissible for the safe motion monitoring functions as a result of the actual value sensing.

Note: If the value displayed is exceeded, message C01711 is output indicating relevant subsequent faults.

r9731 SI Motion safe position accuracy / Safe Pos_accuracy

SERVO (Safety rot), VECTOR (Safety rot)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [°]	- [°]	- [°]

Description: Displays the safe position accuracy (on the load side) that can be achieved as a maximum for the safe motion monitoring functions as a result of the actual value sensing.

r9731 SI Motion safe position accuracy / Safe Pos_accuracy

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [mm]	- [mm]	- [mm]

Description: Displays the safe position accuracy (on the load side) that can be achieved as a maximum for the safe motion monitoring functions as a result of the actual value sensing.

r9733[0...1] CO: SI Motion effective setpoint speed limiting / SI Mtn setp limit

SERVO (Lin)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** 4_1	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
- [m/min]	- [m/min]	- [m/min]

Description: Displays the necessary setpoint speed limit as a result of the selected SI Motion monitoring functions.
Contrary to the parameterization of the SI limit values, this parameter specifies the motor-side limit value and not the load-side limit value.

Index: [0] = Setpoint limiting positive
[1] = Setpoint limiting negative

Dependency: r9733[0] = p9531[x] * p9533; x = selected SLS stage
r9733[1] = - p9531[x] * p9533; x = selected SLS stage
Refer to: p9531, p9533

Notice: If r9733[0] is interconnected to p1085, then r9733[1] must also be interconnected to p1088.
If only the absolute value of the setpoint velocity limiting is required, r9733[0] is sufficient.

Note: The units changeover between linear and rotary axis units is not realized via the safety changeover (p9502), but by the linear motor changeover.

r9733[0...1] CO: SI Motion effective setpoint speed limiting / SI Mtn setp limit

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the necessary setpoint speed limit as a result of the selected SI Motion monitoring functions.
Contrary to the parameterization of the SI limit values, this parameter specifies the motor-side limit value and not the load-side limit value.

Index: [0] = Setpoint limiting positive
[1] = Setpoint limiting negative

Dependency: r9733[0] = p9531[x] * p9533; x = selected SLS stage
r9733[1] = - p9531[x] * p9533; x = selected SLS stage
Refer to: p9531, p9533

Notice: If r9733[0] is interconnected to p1085, then r9733[1] must also be interconnected to p1088.
If only the absolute value of the setpoint velocity limiting is required, r9733[0] is sufficient.

Note: The units changeover between linear and rotary axis units is not realized via the safety changeover (p9502), but by the linear motor changeover.

r9735[0...1] SI Motion diagnostics result list 3 / SI Mtn res_list 3

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays result list 3, that for the data cross-check with the control, led to the fault.

Index: [0] = Result list, second channel
[1] = Result list, drive

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Actual value > upper limit, SN1+	Yes	No	-
	01	Actual value > lower limit, SN1+	Yes	No	-
	02	Actual value > upper limit, SN1-	Yes	No	-
	03	Actual value > lower limit, SN1-	Yes	No	-
	04	Actual value > upper limit, SN2+	Yes	No	-

r9744 SI message buffer changes, counter / SI msg_buffer chng

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** -
P-Group: Messages **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the changes of the safety message buffer. This counter is incremented every time that the safety message buffer changes.
Recommend.: This is used to check whether the safety message buffer has been read out consistently.
Dependency: Refer to: r9747, r9748, r9749, p9752, r9753, r9754, r9755, r9756

r9747[0...63] SI message code / SI msg_code

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** -
P-Group: Messages **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the numbers of safety messages that have occurred.
Dependency: Refer to: r9744, r9748, r9749, p9752, r9753, r9754, r9755, r9756
Note: The messages type "safety message" (Cxxxxx) are entered in the message fault buffer.
Message buffer structure (principle):
r9747[0], r9748[0], r9749[0], r9753[0], r9754[0], r9755[0], r9756[0] --> Current message case, safety message 1
...
r9747[7], r9748[7], r9749[7], r9753[7], r9754[7], r9755[7], r9756[7] --> Current message case, safety message 8
r9747[8], r9748[8], r9749[8], r9753[8], r9754[8], r9755[8], r9756[8] --> 1st acknowledged message case, safety message 1
...
r9747[15], r9748[15], r9749[15], r9753[15], r9754[15], r9755[15], r9756[15] --> 1st acknowledged message case, safety message 8
...
r9747[56], r9748[56], r9749[56], r9753[56], r9754[56], r9755[56], r9756[56] --> 7th acknowledged message case, safety message 1
...
r9747[63], r9748[63], r9749[63], r9753[63], r9754[63], r9755[63], r9756[63] --> 7th acknowledged message case, safety message 8

r9748[0...63] SI message time received in milliseconds / SI t_msg recv ms

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** -
P-Group: Messages **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [ms]	- [ms]	- [ms]

Description: Displays the relative system runtime in milliseconds when the safety message occurred.
Dependency: Refer to: r9744, r9747, r9749, p9752, r9753, r9754, r9755, r9756

r9749[0...63] SI message value / SI msg_value

SERVO, VECTOR

Can be changed: -
Data type: Integer32
P-Group: Messages
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the additional information about the safety message that occurred (as integer number).
Dependency: Refer to: r9744, r9747, r9748, p9752, r9753, r9754, r9755, r9756

p9752 SI message cases, counter / SI msg_cases count

SERVO, VECTOR

Can be changed: U, T
Data type: Unsigned16
P-Group: Messages
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
0	65535	0

Description: Number of safety messages that have occurred since the last reset.
Dependency: The safety message buffer is cleared by resetting the parameter to 0.
Refer to: r9744, r9747, r9748, r9749, r9753, r9754, r9755, r9756
Note: The parameter is reset to 0 at POWER ON.

r9753[0...63] SI message value for float values / SI msg_val float

SERVO, VECTOR

Can be changed: -
Data type: FloatingPoint32
P-Group: Messages
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays additional information about the safety message that has occurred for float values.
Dependency: Refer to: r9744, r9747, r9748, r9749, p9752, r9754, r9755, r9756

r9754[0...63] SI message time received in days / SI t_msg recv days

SERVO, VECTOR

Can be changed: -
Data type: Unsigned16
P-Group: Messages
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the relative system runtime in days when the safety message occurred.
Dependency: Refer to: r9744, r9747, r9748, r9749, p9752, r9753, r9755, r9756

r9755[0...63] SI message time removed in milliseconds / SI t_msg rem ms

SERVO, VECTOR

Can be changed: -
Data type: Unsigned32
P-Group: Messages
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
- [ms]	- [ms]	- [ms]

Description: Displays the relative system runtime in milliseconds when the safety message was removed.

Dependency: Refer to: r9744, r9747, r9748, r9749, p9752, r9753, r9754, r9756

r9756[0...63] SI message time removed in days / SI t_msg rem days

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** -
P-Group: Messages **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the relative system runtime in days when the safety message was removed.
Dependency: Refer to: r9744, r9747, r9748, r9749, p9752, r9753, r9754, r9755

p9761 SI password input / SI password inp

SERVO, VECTOR

Can be changed: C1, T **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** 2800
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Enters the Safety Integrated password.
Dependency: Refer to: F01659
Note: It is not permissible to change Safety Integrated parameter settings until the Safety Integrated password has been entered.

p9762 SI password new / SI password new

SERVO, VECTOR

Can be changed: C2 **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** 2800
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Enters a new Safety Integrated password.
Dependency: A change made to the Safety Integrated password must be acknowledged in the following parameter:
Refer to: p9763

p9763 SI password acknowledgement / SI ackn password

SERVO, VECTOR

Can be changed: C2 **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** 2800
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Acknowledges the new Safety Integrated password.
Dependency: Refer to: p9762
Note: The new password entered into p9762 must be re-entered in order to acknowledge.
p9762 = p9763 = 0 is automatically set after the new Safety Integrated password has been successfully acknowledged.

r9770[0...3] SI vers. safety fcts that run indep. in the drive (Control Unit) / SI version Drv CU

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** 2802
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the Safety Integrated version for the safety functions that run independently in the drive on the Control Unit.

Index:
[0] = Safety Version (major release)
[1] = Safety Version (minor release)
[2] = Safety Version (baselevel or patch)
[3] = Safety Version (hotfix)

Dependency: Refer to: r9870, r9890

Note: Example:
r9770[0] = 2, r9770[1] = 60, r9770[2] = 1, r9770[3] = 0 --> Safety version V02.60.01.00

r9771 SI common functions (Control Unit) / SI common fct CU

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** 2804
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the Safety Integrated monitoring functions supported on the Control Unit and Motor Module.
The Control Unit determines this display.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	STO supported via terminals	Yes	No	2804
01	SBC supported	Yes	No	2804
02	SI Motion supported	Yes	No	2804
03	SS1 supported	Yes	No	2804
04	PROFIsafe supported	Yes	No	-
05	Drive-based motion monitoring functions supported	Yes	No	-

Dependency: Refer to: r9871

Note:
CU: Control Unit
SBC: Safe Brake Control
SI: Safety Integrated
SS1: Safe Stop 1
STO: Safe Torque Off / SH: Safe standstill

r9772.0...19 CO/BO: SI status (Control Unit) / SI stat CU

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 2
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** 2804
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the Safety Integrated status on the Control Unit.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	STO selected on Control Unit	Yes	No	2810
01	STO active on Control Unit	Yes	No	2810

02	SS1 active on Control Unit	Yes	No	2810
04	SBC requested	Yes	No	2814
09	STOP A cannot be acknowledged, active	Yes	No	2802
10	STOP A active	Yes	No	2802
15	STOP F active	Yes	No	2802
16	STO cse: Safety comm. mode	Yes	No	-
17	STO cause: selection via terminal	Yes	No	-
18	STO cause selection via SMM	Yes	No	-
19	STO cause parking axis	Yes	No	-

Dependency: Refer to: r9872

Note: Re bit 00:

When STO is selected, the cause is displayed in bits 16 ... 19.

Re bit 18:

When the bit is set, STO is selected via PROFIsafe or Terminal Module 54F (TM54F).

SMM: Safe Motion Monitoring

r9773.0...31 CO/BO: SI status (Control Unit + Motor Module) / SI stat CU+MM

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 2

Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** 2804

P-Group: Safety Integrated **Units group:** - **Unit selection:** -

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the Safety Integrated status on the drive (Control Unit + Motor Module).

Recommend.: STO should be selected before swicthing off the Motor Module, to ensure that the safe status is displayed correctly in r9773 (e.g. "STO active in drive").

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	STO selected in drive	Yes	No	2804
01	STO active in drive	Yes	No	2804
02	SS1 active in drive	Yes	No	2804
04	SBC requested	Yes	No	2804
31	Shutdown paths must be tested	Yes	No	2810

Dependency: Refer to: r9772, r9872

Note: This status is formed from the AND operation of the relevant status of the two monitoring channels.

If communication between the Control Unit and the Motor Module is interrupted (e.g. by switching off the Motor Module), the status of the Motor Module is no longer updated in r9872. Therefore the result of ANDing cannot be updated.

r9774.0...31 CO/BO: SI status (group STO) / SI stat group STO

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 2

Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** 2804

P-Group: Safety Integrated **Units group:** - **Unit selection:** -

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the status for Safety Integrated of the group to which this drive belongs.

These signals are an AND logic operation of the individual status signals of the drives included in this group.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	STO selected in group	Yes	No	2804
01	STO active in group	Yes	No	2804
02	SS1 active in group	Yes	No	-
04	SBC requested in group	Yes	No	2804
31	Shutdown paths of the group must be tested	Yes	No	2804

Dependency: Refer to: p9620, r9773

Notice: If a drive belonging to a group is de-activated via p0105, then the signals in r9774 can no longer be correctly displayed (Remedy: Before de-activating, remove this drive from the group).

Note: A group is formed by appropriately grouping the terminals for the function "Safe Torque Off" (STO).
The status of a group of n drives is, for drives 1 to n - 1 displayed with a delay of one monitoring clock cycle; this is a system-related effect.

r9780 SI monitoring clock cycle (Control Unit) / SI monitor_clck CU

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 2802
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [ms]	- [ms]	- [ms]

Description: Displays the clock cycle time for the Safety Integrated Basic Functions on the Control Unit.

Dependency: Refer to: r9880

r9781[0...1] SI checksum to check changes (Control Unit) / SI checksum chg CU

CU_CX32, CU_I, CU_S

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** -
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Additional check sum that is formed to check changes (fingerprint for the safety logbook functionality) to safety parameters (that are relevant for checksums).

Index: [0] = Safety change tracking checksum functional
[1] = Safety change tracking checksum hardware dependent

Dependency: Refer to: p9601, p9729, p9799
Refer to: F01690

r9782[0...1] SI time stamp to check changes (Control Unit) / SI TimeStamp CU

CU_CX32, CU_I, CU_S

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [h]	- [h]	- [h]

Description: Time stamp for the checksum that is saved in parameters p9781[0] and p9781[1] to track changes (fingerprint for the safety logbook functionality) made to safety parameters.

Index: [0] = SI time stamp change tracking checksum functional
[1] = SI time stamp change tracking checksum hardware-dependent

Dependency: Refer to: p9601, p9729, p9799
Refer to: F01690

r9794[0...19] SI crosswise comparison list (Control Unit) / SI DCC_list CU

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** 2802
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the number of the data that are being presently compared crosswise on the Control Unit.

Example:
r9794[0] = 1 (monitoring clock cycle)
r9794[1] = 2 (enable safety-related functions)
r9794[2] = 3 (SGE changeover, tolerance time)
r9794[3] = 4 (transition time, STOP F to STOP A)
...
The list of crosswise compared data is obtained dependent on the particular application.

Dependency: Refer to: r9894
Note: The complete list of numbers for data cross-check is listed in Fault F01611.

r9795 SI diagnostics STOP F (Control Unit) / SI diag STOP F CU

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** 2802
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the number of the cross-checked data which has caused STOP F on the Control Unit.
Dependency: Refer to: r9895
Refer to: F01611
Note: The complete list of numbers for data cross-check is listed in Fault F01611.

r9798 SI actual checksum SI parameters (Control Unit) / SI act_checksum CU

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** 2800
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the checksum over the checked Safety Integrated parameters on the Control Unit (actual checksum).
Dependency: Refer to: p9799, r9898

p9799 SI reference checksum SI parameters (Control Unit) / SI set_checksum CU

SERVO, VECTOR

Can be changed: C2	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** 2800
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Sets the checksum for the checked Safety Integrated parameters on the Control Unit (reference checksum).
Dependency: Refer to: r9798, p9899

p9801 SI enable, functions integrated in the drive (Motor Module) / SI enable fct MM

SERVO, VECTOR

Can be changed: C2	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the enable signals for safety functions on the Motor Module that are integrated in the drive.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	STO (SH) via terminals (Motor Module) enable	Enable	Inhibit	2810
	02	Motion monitoring functions integr. in the drive (Motor Module)	Enable	Inhibit	-
	03	PROFIsafe (Motor Module) enable	Enable	Inhibit	-

Dependency: Refer to: p9601

Note: For p9801.2 = 1 and p9801.3 = 0 the following applies:

It is assumed that the motion monitoring functions integrated in the drive are controlled via the Terminal Module 54F (TM54F).

MM: Motor Module

SI: Safety Integrated

SMM: Safe Motion Monitoring

STO: Safe Torque Off / SH: Safe standstill

p9802 SI enable Safe Brake Control (Motor Module) / SI enable SBC MM

SERVO, VECTOR

Can be changed: C2 **Calculated:** - **Access level:** 3

Data type: Integer32 **Dynamic index:** - **Func. diagram:** 2814

P-Group: Safety Integrated **Units group:** - **Unit selection:** -

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Sets the enable signal for the "Safe Brake Control" function (SBC) on the Motor Module.

0: Inhibit SBC

1: Enable SBC

Dependency: Refer to: p9602

Note: The "Safe Brake Control" function is not activated until at least one safety monitoring function has been enabled (i.e. p9501 not equal to 0 and/or p9801 not equal to 0).

The parameterization "no motor holding brake available" and "Safe Brake Control" enabled (p1215 = 0, p9602 = p9802 = 1) is not practical if there is no motor holding brake.

The parameterization "motor holding brake the same as sequence control, connection via BICO" and "Safe Brake Control" enabled (p1215 = 3, p9602 = 1, p9802 = 1) is not practical.

It is not permissible to parameterize "motor holding brake without feedback signals" and also enable "safe brake control" (p1278 = 1, p9602 = 1, p9802 = 1).

MM: Motor Module

SBC: Safe Brake Control

SI: Safety Integrated

p9810 SI PROFIsafe address (Motor Module) / SI PROFIsafe MM

SERVO, VECTOR

Can be changed: C2 **Calculated:** - **Access level:** 3

Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** -

P-Group: Safety Integrated **Units group:** - **Unit selection:** -

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFE hex	0000 hex

Description: Sets the PROFIsafe address of the Motor Module.

p9850 SI SGE changeover tolerance time (Motor Module) / SI SGE_chg tol MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 2810
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	2000000.00 [µs]	500000.00 [µs]

Description: Sets the tolerance time to change over the safety-related inputs (SGE) on the Motor Module.
An SGE changeover is not simultaneously effective due to the different runtimes in the two monitoring channels. After an SGE changeover, dynamic data is not subject to a data cross-check during this tolerance time.

Dependency: Refer to: p9650

Note: For a data cross-check between p9650 and p9850, a difference of one Safety monitoring clock cycle is tolerated.
The parameterized time is internally rounded-off to an integer multiple of the monitoring clock cycle.
SGE: Safety-related input (e.g. STO terminals)

p9852 SI Safe Stop 1 delay time (Motor Module) / SI Stop 1 t_del MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	300000.00 [ms]	0.00 [ms]

Description: Sets the delay time of the pulse suppression for the function "Safe Stop 1" (SS1) on the Motor Module to brake along the OFF3 down ramp (p1135).

Dependency: Refer to: p1135, p9652

Note: For a data cross-check between p9652 and p9852, a difference of one Safety monitoring clock cycle is tolerated.
The parameterized time is internally rounded-off to an integer multiple of the monitoring clock cycle.
SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)

p9858 SI transition time STOP F to STOP A (Control Unit) / SI STOP F->A MM

SERVO, VECTOR

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 2802
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	30000000.00 [µs]	0.00 [µs]

Description: Sets the transition period from STOP F to STOP A on the Motor Module.

Dependency: Refer to: p9658, r9895
Refer to: F30611

Note: For a data cross-check between p9658 and p9858, a difference of one Safety monitoring clock cycle is tolerated.
The parameterized time is internally rounded-off to an integer multiple of the monitoring clock cycle.
STOP F: Defect in a monitoring channel (error in the data cross-check)
STOP A: Pulse suppression via the safety shutdown path

r9870[0...3] SI version safety functions integrated in drive (Motor Module) / SI version MM

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** 2802
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the Safety Integrated version for the safety functions integrated in the drive on the Motor Module.

Index:
[0] = Safety Version (major release)
[1] = Safety Version (minor release)
[2] = Safety Version (baselevel or patch)
[3] = Safety Version (hotfix)

Dependency: Refer to: r9770, r9890

Note: Example:
r9870[0] = 2, r9870[1] = 60, r9870[2] = 1, r9870[3] = 0 --> Safety version V02.60.01.00

r9871 SI common functions (Motor Module / SI general fct MM

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** 2804
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the Safety Integrated monitoring functions supported on the Control Unit and Motor Module.
The Motor Module determines this display.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	STO supported via terminals	Yes	No	2804
01	SBC supported	Yes	No	2804
02	SI Motion supported	Yes	No	2804
03	SS1 supported	Yes	No	2804
04	PROFIsafe supported	Yes	No	-
05	Drive-based motion monitoring functions supported	Yes	No	-

Dependency: Refer to: r9771

Note: MM: Motor Module
SBC: Safe Brake Control
SI: Safety Integrated
SS1: Safe Stop 1
STO: Safe Torque Off / SH: Safe standstill

r9872.0...18 CO/BO: SI status list (Motor Module) / SI status MM

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 2
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** 2804
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the Safety Integrated status on the Motor Module.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	STO on Motor Module selected	Yes	No	2810
01	STO on Motor Module active	Yes	No	2810
02	SS1 on Motor Module active	Yes	No	2810

04	SBC requested	Yes	No	2814
09	STOP A cannot be acknowledged, active	Yes	No	2802
10	STOP A active	Yes	No	2802
15	STOP F active	Yes	No	2802
16	STO cse: Safety comm. mode	Yes	No	-
17	STO cause: selection via terminal	Yes	No	-
18	STO cause selection via SMM	Yes	No	-

Dependency: Refer to: r9772

Notice: If communication between the Control Unit and the Motor Module is interrrupted (e.g. by switching off the Motor Module), the status of the Motor Module is no longer updated in r9872. The last transferred status of the Motor Module is displayed.

Note: Re bit 00:

When STO is selected, the cause is displayed in bits 16 ... 18.

Re bit 18:

When the bit is set, STO is selected via PROFIsafe or Terminal Module 54F (TM54F).

SMM: Safe Motion Monitoring

r9880 SI monitoring clock cycle (Motor Module) / SI monitor_clck MM

0000 hex	FFFF FFFF hex	0000 hex

Description: Sets the checksum for the checked Safety Integrated parameters on the Motor Module (reference checksum).

Dependency: Refer to: p9799, r9898

r9900 Actual topology number of indices / Act topo indices

CU_CX32, CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Topology	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the number of indices of the actual topology.
Dependency: Refer to: r9901
Note: Only for internal Siemens use.
The parameter is not displayed for the STARTER commissioning software.

r9901[0...n] Actual topology / Act topo

CU_CX32, CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dynamic index:** r9900	**Func. diagram:** -
P-Group: Topology	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the actual topology of the drive unit.
The actual topology is sub-divided into several sections. Each of the following data is saved under an index.
General data on the topology:
- version
- attribute to compare the actual topology and target topology
- number of components

Data on a component:
- type component of the node ID of the component
- number of DRIVE-CLiQ sockets in the Node Identifier
- manufacturer and version of the Node Identifier
- serial number of the Node Identifier (4 indices)
- index of the component
- order number (8 indices)
- attribute to compare the actual topology and target topology of the component
- communications address
- number of port types
- port type
- number of ports of the port type
- communications address of the associated/linked component
- number of the associated/linked port
- communications address of the associated/linked component
- number of the associated/linked port
- etc.

Data on the next component:
- etc.

Dependency: Refer to: r9900
Note: Only for internal Siemens use.
The parameter is not displayed for the STARTER commissioning software.

p9902 Target topology number of indices / TargetTopo indices

CU_CX32, CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Topology	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 0
Min	**Max**	**Factory setting**
1	65535	1

Description: Sets the number of target topology indices.

Dependency: Refer to: p9903

Note: Only for internal Siemens use.
The parameter is not displayed for the STARTER commissioning software.

p9903[0...n] Target topology / Target topology

CU_CX32, CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dynamic index:** p9902	**Func. diagram:** -
P-Group: Topology	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 0
Min	**Max**	**Factory setting**
0000 hex	FFFF hex	0000 hex

Description: Sets the target topology of the drive unit.
The target topology is sub-divided into several sections. Each of the following data is saved under an index.
General data on the topology:
- version
- attribute to compare the actual topology and target topology
- number of components

Data on a component:
- type component of the Node Identifier of the component
- number of DRIVE-CLiQ sockets in the Node Identifier
- manufacturer and version of the Node Identifier
- serial number of the Node Identifier (4 indices)
- index of the component
- order number (8 indices)
- attribute to compare the actual topology and target topology of the component
- component number
- number of port types
- port type
- number of ports of the port type
- component number of the associated/linked component
- number of the associated/linked port
- component number of the associated/linked component
- number of the associated/linked port
- etc.

Data on the next component:
- etc.

Dependency: Refer to: p9902

Note: The target topology can only be modified using the commissioning software.
Only for internal Siemens use.
The parameter is not displayed for the STARTER commissioning software.
Changes only become effective after acceptance using p9428 = 1, or for a status change from p9 = 101 to p9 = 0 or to p9 = 111.

p9904 Topology comparison, acknowledge differences / Topo_compare ackn

CU_CX32, CU_I, CU_S

Can be changed: C1(1)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Topology	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: If, when comparing the actual topology and target topology, only error has occurred, that can be acknowledged, then using this parameter, a new comparison can be started - acknowledging the error in the target topology.

Differences that can be acknowledged:

- topology comparison, component shifted
- topology comparison, serial number of a component has been detected to be different (byte 3 = 1)
- topology comparison shows one component that is connected differently

The following parameter values are available:

p9904 = 1 --> the procedure is started.

p9904 = 0 after starting --> the procedure has been successfully completed.

p9904 = 1 after starting --> the procedure has not been successfully completed.

The possible causes for an unsuccessful procedure are located in bytes 4, 3, 2.

Byte 2:

Number of structural differences.

Byte 3:

Number of differences that can be acknowledged (p9904).

Byte 4:

Number of differences. These differences can be resolved as follows:

- sets the topology comparison (p9906 or p9907/p9908).
- change over the actual topology.

The appropriate action should be selected corresponding to the message that is displayed/output.

Note: In order to permanently accept the acknowledgement of the fault that can be resolved, then it must be saved in a non-volatile fashion (p0977).

p9905 Device specialization / Specialization

CU_CX32, CU_I, CU_S

Can be changed: C1(1)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Topology	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	2	0

Description: With p9905 = 1, the serial numbers and the hardware versions of all of the components are transferred from the actual topology into the target topology and a new comparison is started..

For this device specialization, the components of the target topology may only differ from those of the actual topology by the serial numbers.

With p9905 = 2, the serial numbers, the hardware versions and the order numbers of all of the components are transferred from the actual topology into the target topology and a new comparison is started..

For this device specialization, the components of the target topology may only differ from those of the actual topology by the serial numbers and order numbers.

Note: p9905 is automatically set to 0 at the end of the operation.

In order to permanently accept the data, it is necessary to save in a non-volatile fashion (p0977).

p9906 Topology comparison, comparison stage of all components / Topo_cmpr tot comp

CU_CX32, CU_I, CU_S

Can be changed: C1(1) | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Topology | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	99	0

Description: Sets the type of comparison between the actual topology and target topology.
The comparison is started by setting the required value.

Value:
0: High: Compares the complete electronic rating plate
1: Average: Compares the component type and the Order number
2: Low: Compares the component type
3: Minimum: Compares the component class
99: Topology has different comparison stages

Note: The electronic rating plate comprises the following data:
- component type (e.g. "SMC20")
- Order No. (e.g. "6SL3055-0AA0-5BA0")
- manufacturer (e.g. SIEMENS)
- hardware version (e.g. "A")
- Serial No. (e.g. "T-P30050495")

When comparing the topology, the following data is compared in the target and actual topologies:
p9906 = 0: Component type, Order No., Hardware version, Manufacturer, Serial No.
p9906 = 1: Component type, Order No.
p9906 = 2: Component type
p9906 = 3: Component class (e.g. Sensor Module or Motor Module)

p9907 Topology comparison, comparison stage of the component number / Topo_cmpr comp_no

CU_CX32, CU_I, CU_S

Can be changed: C1(1) | **Calculated:** - | **Access level:** 3
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Topology | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	199	0

Description: Enters the number of the component where the setting of how the actual topology should be compared to the target topology should be changed.

Dependency: Refer to: p9908

p9908 Topology comparison, comparison stage of a component / Topo_cmpr 1 comp

CU_CX32, CU_I, CU_S

Can be changed: C1(1) | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Topology | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	99	0

Description: Sets the type of comparison of a component in the target topology with the actual topology.
The comparison is started by setting the required value.

Value:
0: High: Compares the complete electronic rating plate
1: Average: Compares the component type and the Order number
2: Low: Compares the component type
3: Minimum: Compares the component class
99: Topology has different comparison stages

Dependency: Refer to: p9907

Note: The electronic rating plate comprises the following data:
- component type (e.g. "SMC20")
- Order No. (e.g. "6SL3055-0AA0-5BA0")
- manufacturer (e.g. SIEMENS)
- hardware version (e.g. "A")
- Serial No. (e.g. "T-P30050495")

When comparing the topology, the following data is compared in the target and actual topologies:
p9908 = 0: Component type, Order No., Hardware version, Manufacturer, Serial No.
p9908 = 1: Component type, Order No.
p9908 = 2: Component type
p9908 = 3: Component class (e.g. Sensor Module or Motor Module)

p9909 Topology comparison, component replacement / Topo_cmpr replace

CU_CX32, CU_I, CU_S

Can be changed: C1(1)	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dynamic index:** -	**Func. diagram:** -
P-Group: Topology	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	1	1

Description: For p9909 = 1, the serial number and the hardware version of the new replaced component is automatically transferred from the actual topology into the target topology and then saved in a non-volatile fashion.
For the components that have been replaced, the electronic type plate must match as far as the following data is concerned:
- component type (e.g. "SMC20")
- Order No. (e.g. "6SL3055-0AA0-5BA0")

For p9909 = 0, serial numbers and hardware versions are not automatically transferred. In this case, the transfer must be made using p9904.

Dependency: Refer to: p9904, p9905

Note: The modified target topology is automatically saved in a non-volatile fashion when the drive object runs-up (e.g. after a POWER ON).
Special case for Control Unit and option slot modules:
When replacing these components, independent of p9909, the serial number and hardware version are automatically transferred and saved in a non-volatile fashion.

p9910 Transfer additional components into the target topology / Transfer comp

CU_CX32, CU_I, CU_S

Can be changed: C1(1)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Topology	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	6	0

Description: Transfer additional inserted DRIVE-CLiQ components into the target topology and add the appropriate drive objects to the project.

Value:
0: No selection
1: Drive object type SERVO
2: Drive object type VECTOR
3: SINAMICS GM (DFEMV & VECTORMV)
4: SINAMICS SM (AFEMV & VECTORMV)
5: SINAMICS GL (VECTORGL)
6: SINAMICS SL (VECTORSL)

p9911[0...3] Insert drive object / Drv_obj insert

CU_CX32, CU_I, CU_S

Can be changed: C1(1) | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 0

Min	Max	Factory setting
0	4294967295	0

Description: New drive objects can be created using this parameter.
Index 0:
The values 2 ... 62 are permissible.
Index 1:
Number of the drive object type (e.g. 11 for type SERVO).
Index 2:
Function modules defined for the drive object.
Index 3:
= 0: Ready.
= 1: Reset (only indices 0 ... 3).
= 2: Reset all (indices 0 ... 3 and flagged entries).
= 3: Check and flag for insertion.

Index: [0] = Drive object number
[1] = Drive object type
[2] = Drive object function module
[3] = Reset or check and flag for insertion

Note: Only for internal Siemens use.
The parameter is not displayed for the STARTER commissioning software.

p9912[0...1] Delete drive object / Drv_obj delete

CU_CX32, CU_I, CU_S

Can be changed: C1(3) | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 0

Min	Max	Factory setting
0	62	0

Description: Drive objects can be deleted using this parameter.
Index 0:
The values 2 ... 62 are permissible.
Index 1:
= 0: Ready.
= 1: Reset (only indices 0 and 1)
= 2: Reset all (indices 0 and 1 and flagged entries).
= 3: Check and flag for deletion.

Index: [0] = Drive object number
[1] = Reset or check and flag for deletion

Note: Only for internal Siemens use.
The parameter is not displayed for the STARTER commissioning software.

p9913[0...2] Change drive object number / Change drv_obj_no

CU_CX32, CU_I, CU_S

Can be changed: C1(4) | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 0

Min	Max	Factory setting
0	62	0

Description: Existing drive objects can be assigned new numbers using these parameters.
Index 0:
The values 2 ... 62 are permissible.
Index 1:
The values 2 ... 62 are permissible.
Index 2:
= 0: Ready.
= 1: Reset (only indices 0 ... 2).
= 2: Reset all (indices 0 ... 2 and flagged entries).
= 3: Check and flag for modification.

Index: [0] = Drive object number old
[1] = Drive object number new
[2] = Reset or check and flag for modification

Note: Only for internal Siemens use.
The parameter is not displayed for the STARTER commissioning software.

p9914[0...2] Change component number / Change comp_no

CU_CX32, CU_I, CU_S

Can be changed: C1 | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 0

Min	Max	Factory setting
0	199	0

Description: You can change the number of topology components using this parameter.
Index 0:
The values 2 ... 199 are permissible.
Index 1:
The values 2 ... 199 are permissible.
Index 2:
= 0: Ready.
= 1: Reset (only indices 0 ... 2).
= 2: Reset all (indices 0 ... 2 and flagged entries).
= 3: Check and flag for modification.

Index: [0] = Component number old
[1] = Component number new
[2] = Reset or check and flag for modification

Note: Only for internal Siemens use.
The parameter is not displayed for the STARTER commissioning software.

p9915 DRIVE-CLiQ data transfer error shutdown threshold master / DLQ fault master

CU_CX32, CU_I, CU_S

Can be changed: C1(1) | **Calculated:** - | **Access level:** 4
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Topology | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0000 hex	0007 07FF hex	0007 02FF hex

Description: Only for internal Siemens service purposes.

p9916 DRIVE-CLiQ data transfer error shutdown threshold slave / DLQ fault slave

CU_CX32, CU_I, CU_S

Can be changed: C1(1) | **Calculated:** - | **Access level:** 4
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Topology | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0000 hex	0007 07FF hex	0007 02FF hex

Description: Only for internal Siemens service purposes.

p9917[0...1] Delete component / Delete comp

CU_CX32, CU_I, CU_S

Can be changed: C1(30) | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 0

Min	Max	Factory setting
0	199	0

Description: Excessive components that have not been assigned can be removed from the component reference topology using this parameter.
Index 0:
The values 2 ... 199 are permissible.
Index 1:
= 0: Ready.
= 1: Reset (only indices 0 and 1)
= 2: Reset all (indices 0 and 1 and flagged entries).
= 3: Check and flag for deletion.

Index: [0] = Component number
[1] = Reset or check and flag for deletion

Note: Only for internal Siemens use.
The parameter is not displayed for the STARTER commissioning software.

p9920[0...19] Licensing, enter license key / Enter license key

CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Enters the license key for this drive unit.

Example of the license key:
EACZ-QBCA = 69 65 67 90 45 81 66 67 65 dec (ASCII characters)
Index 0 = license key character 1 (e.g. 69 dec)
Index 1 = license key character 2 (e.g. 65 dec)
...
Index 19 = license key character 20 (e.g. 0 dec)
With the STARTER commissioning software, ASCII characters are not entered coded, i.e. the characters of the license key can be entered as printed in the Certificate of License. In this case, STARTER codes the characters.

Dependency: Refer to: r7843, p9921
Refer to: A13000, A13001

Notice: An ASCII table (excerpt) can be found, for example, in the following List Manual:

Note: Onlyy the ASCII characters, contained in a license key can be entered.
When changing p9920[x] to the value 0, all of the following indices are also set to 0.
After entering the license key, the license key must be activated (p9921).
If the licensing is not adequate, then the following alarm is displayed together with LED:
- A13000 --> licensing not sufficient
- LED READY --> flashes green/red with 0.5 Hz

p9921 Licensing, activate license key / Act license key

CU_S

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Activates the entered license key.
The following is executed when activating the license key.
- the checksum of the entered license key is checked.
- the entered license key is saved in the a non-volatile fashion on the CompactFlash card.
- re-enter the license key.

Value: 0: Inactive
1: Activate start license key

Dependency: Refer to: p9920
Refer to: A13000, A13001

Note: Before activation, the license key entered using parameter p9920 is checked. If this check identifies an error, activation is rejected. In this case, writing a 1 to p9921 is rejected.
When the license key has been activated, p9921 is automatically set to 0.

r9925[0...99] Firmware file incorrect / FW file incorrect

CU_CX32, CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the directory and name of the file whose status as shipped from the factory was identified as impermissible.

Dependency: Refer to: r9926
Refer to: A01016

Note: The directory and name of the file is displayed in the ASCII code.

r9926 Firmware check status / Firmw check status

CU_CX32, CU_I, CU_S

Can be changed: -
Calculated: -
Access level: 2
Data type: Unsigned8
Dynamic index: -
Func. diagram: -
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the status when the firmware is checked on startup.
0: Firmware not yet checked.
1: Check running.
2: Check successfully completed.
3: Check indicates an error.

Dependency: Refer to: r9925
Refer to: A01016

p9930[0...8] System logbook activation / SYSLOG activation

CU_CX32, CU_I, CU_S

Can be changed: U, T
Calculated: -
Access level: 4
Data type: Unsigned8
Dynamic index: -
Func. diagram: -
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0	255	0

Description: Only for service purposes.

Index: [0] = System logbook stage (0: Not active)
[1] = COM2/COM1 (0: COM2, 1: COM1)
[2] = Activate file write (0: Not active)
[3] = Display time stamp (0: Not displayed)
[4] = Reserved
[5] = Reserved
[6] = Reserved
[7] = Reserved
[8] = System logbook file size (stages, each 10 kB)

Notice: Before powering down the Control Unit, ensure that the system logbook is switched out (p9930[0] = 0).

p9931[0...99] System logbook module selection / SYSLOG mod select.

CU_CX32, CU_I, CU_S

Can be changed: U, T
Calculated: -
Access level: 4
Data type: Unsigned32
Dynamic index: -
Func. diagram: -
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Only for service purposes.

p9932 Save system logbook EEPROM / SYSLOG EEPROM save

CU_CX32, CU_I, CU_S

Can be changed: U, T
Calculated: -
Access level: 4
Data type: Unsigned8
Dynamic index: -
Func. diagram: -
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0	255	0

Description: Only for service purposes.

r9935.0 BO: POWER ON delay signal / PO Ver_sig

CU_CX32, CU_I, CU_S

Can be changed: -
Calculated: -
Access level: 3
Data type: Unsigned8
Dynamic index: -
Func. diagram: -
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: After power-on, binector output r9935.0 is set with the start of the first sampling time and is again reset after approx. 100 ms.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	POWER ON delay signal	High	Low	-

p9941 Delete property for all components in the target topology / Delete data

CU_CX32, CU_I, CU_S

Can be changed: C1(1)
Calculated: -
Access level: 3
Data type: Unsigned32
Dynamic index: -
Func. diagram: -
P-Group: Topology
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 0

Min	Max	Factory setting
0	1	0

Description: The serial numbers for all components of the target topology are set to zero by writing the parameter to the value 1.
Through activation and deactivation this enables the actual topology components to be newly assigned to the target topology components.

Note: p9941 is automatically set to 0 at the end of the operation.
After p9 = 0 a warm restart is automatically triggered and a re-assignment takes place.

p9950 Runtime measurement control / Runtime_meas ctrl

CU_CX32, CU_I, CU_S

Can be changed: U, T
Calculated: -
Access level: 4
Data type: Integer16
Dynamic index: -
Func. diagram: -
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0	3	0

Description: Setting to control the runtime measurement.

Value:
0: Stop runtime measurement
1: Start runtime meas (internal)
2: Clear trace buffer (internal)
3: Activate calculation of remaining computing time

Dependency: Refer to: r9976

r9976[0...7] System load / Sys_load

CU_CX32, CU_I, CU_S

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Displays the system load.
The system load measurement is automatically started after run-up.
The individual values (computation load and cyclic load) are measured over short time slices and from the measurements, the maximum, the minimum and the average value are formed and displayed in the appropriate indices. Further, the degree of memory utilization of the data and program memory is displayed.

Index: [0] = Computing time load (min)
[1] = Computing time load (averaged)
[2] = Computing time load (max)
[3] = Computing time load cyclic (min)
[4] = Computing time load cyclic (avg)
[5] = Computing time load cyclic (max)
[6] = Data memory locked
[7] = Program memory locked

Dependency: Refer to: p9950
Refer to: A01053

r9999[0...99] Software error internal supplementary diagnostics / SW_err int diag

CU_CX32, CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Diagnostics parameter to display additional information for internal software errors.
Note: Only for internal Siemens troubleshooting.

p10000 SI sampling time / SI t_sample

TM54F_MA, TM54F_SL

Can be changed: C2	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
1.00 [ms]	25.00 [ms]	12.00 [ms]

Description: Sets the sampling time for the Terminal Module 54F (TM54F).

p10001 SI delay time for test stop at DO 0 ... 3 / SI t_delay DO

TM54F_MA, TM54F_SL

Can be changed: C2	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
2.00 [ms]	2000.00 [ms]	500.00 [ms]

Description: Sets the delay time for the test of the digital outputs 0 ... 3 (DO 0 ... 3).
Within this time, for a forced checking procedure of the digital outputs, the signal must have been detected via the corresponding digital input DI 20 ... 23.

Dependency: Refer to: p10003, p10007, p10041, p10046

p10002 SI discrepancy monitoring time / SI discrep t_monit

TM54F_MA, TM54F_SL

Can be changed: C2	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 2850, 2851
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
1.00 [ms]	2000.00 [ms]	500.00 [ms]

Description: Sets the monitoring time for the discrepancy for the digital inputs.
The signal states at the two associated digital inputs (F-DI) must assume the same state within this monitoring time.

Note: F-DI: Failsafe Digital Input

p10003 SI forced checking procedure timer / SI FrcdCkProcTimer

TM54F_MA

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 2848
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [h]	8760.00 [h]	8.00 [h]

Description: Sets the time to carry out the forced checking procedure (test stop).
Within the parameterized time, the digital inputs/outputs must must have been subject to a forced checking procedure at least once. The forced checking procedure is started with BI: p10007 = 0/1 signal.

Dependency: Refer to: p10001, p10007, p10046

r10004[0...1] SI actual checksum TM54F parameters / SI act CRC TM54F

TM54F_MA, TM54F_SL

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 2847
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the actual checksum of the checksum-checked parameters for the Terminal Module 54F (TM54F).

p10005[0...1] SI reference checksum TM54F parameters / SI ref CRC TM54F

TM54F_MA, TM54F_SL

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 2847
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Displays the reference checksum of the checksum-checked parameters for the Terminal Module 54F (TM54F).

p10006 SI acknowledgement internal event input terminal / SI ackn int event

TM54F_MA, TM54F_SL

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	255	0

Description: Select a safety-relevant digital input for the signal "acknowledge internal event" (internal fault).
The signal is transferred to the corresponding control signal of all drives. The falling edge at this input resets the status "internal event" in the drives.

Value:
0: Statically active
1: F-DI 0 (X521.2/3/6)
2: F-DI 1 (X521.4/5/7)
3: F-DI 2 (X522.1/2/7)
4: F-DI 3 (X522.3/4/8)
5: F-DI 4 (X522.5/6/9)
6: F-DI 5 (X531.2/3/6)
7: F-DI 6 (X531.4/5/7)
8: F-DI 7 (X532.1/2/7)
9: F-DI 8 (X532.3/4/8)
10: F-DI 9 (X532.5/6/9)
255: Statically inact

p10007 BI: SI input terminal forced checking procedure F-DO 0 ... 3 / SI DI fcp F-DO

TM54F_MA

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** 2848
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Selects an input terminal (input terminal of the Control Unit or a Terminal Module) to start the test stop.
The test stop is started with a 0/1 signal at the input terminal and is then only possible if the TM54F is not in the commissioning mode (p0010 = 0).

Dependency: Refer to: p10001, p10003, p10041, p10046

Notice: It is not permissible to use an input on the TM54F to start the test stop.

p10008 SI operating mode TM54F / SI op_mode TM54F

TM54F_MA, TM54F_SL

Can be changed: C2 | **Calculated:** - | **Access level:** 4
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	1

Description: Sets the operating mode for the Terminal Module 54F (TM54F).

Value:
0: Function interface
1: Control interface

Note: Parameter is being prepared - for this firmware version, the function interface is not supported.

p10010[0...5] SI drive object assignment / SI drv_obj assign

TM54F_MA, TM54F_SL

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** 2847, 2848
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	62	0

Description: Sets the drive object number for the drives that are available.

Index:
[0] = Drive 1
[1] = Drive 2
[2] = Drive 3
[3] = Drive 4
[4] = Drive 5
[5] = Drive 6

Notice: If, for a drive, safety with TM54F is activated (p9601 = 5), then its drive object number must be precisely entered into one index of p10010.

p10011[0...5] SI drive group assignment / SI drv_gr assign

TM54F_MA, TM54F_SL

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** 2848
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1	4	1

Description: Sets the drive group for the drives that are available.
A drive group is a combination of several drives with the same types of behavior.

Index: [0] = Drive 1
[1] = Drive 2
[2] = Drive 3
[3] = Drive 4
[4] = Drive 5
[5] = Drive 6

p10012[0...5] SI Motor Module Node Identifier Word 1 / SI MM Node ID 1

TM54F_MA, TM54F_SL

Can be changed: C2 | **Calculated:** - | **Access level:** 4
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Sets the current Node Identifier (word 1, bit 0 ... 31) for the Motor Modules.

Index: [0] = Drive 1
[1] = Drive 2
[2] = Drive 3
[3] = Drive 4
[4] = Drive 5
[5] = Drive 6

Dependency: Refer to: p10013, p10014

Note: The Node Identifier (96 bit) is represented in the following 3 parameters.
p10012[0] word 1 (bit 0 ... 31) for Motor Module 1
...
p10012[5] word 1 (bit 0 ... 31) for Motor Module 6
p10013[0] word 2 (bit 32 ... 63) for Motor Module 1
...
p10013[5] word 2 (bit 32 ... 63) for Motor Module 6
p10014[0] word 3 (bit 64 ... 95) for Motor Module 1
...
p10014[5] word 3 (bit 64 ... 95) for Motor Module 6

p10013[0...5] SI Motor Module Node Identifier Word 2 / SI MM Node ID 2

TM54F_MA, TM54F_SL

Can be changed: C2 | **Calculated:** - | **Access level:** 4
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Sets the current Node Identifier (word 2, bit 32 ... 63) for the Motor Modules.

Index: [0] = Drive 1
[1] = Drive 2
[2] = Drive 3
[3] = Drive 4
[4] = Drive 5
[5] = Drive 6

Dependency: Refer to: p10012, p10014

Note: The complete Node Identifier (96 bit) is represented in p10012, p10013 and p10014.

p10014[0...5] SI Motor Module Node Identifier Word 3 / SI MM Node ID 3

TM54F_MA, TM54F_SL

Can be changed: C2 | **Calculated:** - | **Access level:** 4
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Sets the current Node Identifier (word 3, bit 64 ... 95) for the Motor Modules.

Index:
[0] = Drive 1
[1] = Drive 2
[2] = Drive 3
[3] = Drive 4
[4] = Drive 5
[5] = Drive 6

Dependency: Refer to: p10012, p10013

Note: The complete Node Identifier (96 bit) is represented in p10012, p10013 and p10014.

p10020[0...3] SI special operating mode selection / SI spec op sel

TM54F_MA, TM54F_SL

Can be changed: C2 | **Calculated:** - | **Access level:** 4
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	3	1

Description: Sets the special operating mode for the operating mode "function interface".
0 = Inactive
1 = Safe Operating Stop with braking (SS2)
2 = Safe Operating Stop without braking (SOS)
3 = Safely reduced speed without standstill (SLS)
4 = Safely reduced speed with agreement (SS2 --> SLS)

Index:
[0] = Drive group 1
[1] = Drive group 2
[2] = Drive group 3
[3] = Drive group 4

Dependency: Refer to: p10008

Note: Parameter is being prepared - for this firmware version, the function interface is not supported.
SS2: Safe Stop 2
SOS: Safe Operating Stop
SLS: Safely-Limited Speed

p10021[0...3] SI Emergency Stop stop response / SI Emergency Stop

TM54F_MA, TM54F_SL

Can be changed: C2 | **Calculated:** - | **Access level:** 4
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	2	0

Description: Sets the stop response for the drive group for Emergency Stop.
The input terminal for Emergency Stop is set in p10038.
0 = Stop reaction STO
1 = Stop reaction SS1
2 = Stop reaction SS2

Index: [0] = Drive group 1
[1] = Drive group 2
[2] = Drive group 3
[3] = Drive group 4

Dependency: Refer to: p10008, p10038

Note: Parameter is being prepared - for this firmware version, the function interface is not supported.

p10022[0...3] SI STO input terminal / SI STO DI

TM54F_MA, TM54F_SL

Can be changed: C2	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	255	0

Description: Sets the input terminal for STO (operating mode "control interface").

Value:
0: Statically active
1: F-DI 0 (X521.2/3/6)
2: F-DI 1 (X521.4/5/7)
3: F-DI 2 (X522.1/2/7)

[3] = Drive group 4

Note: Parameter is being prepared - for this firmware version, the function interface is not supported.
Re value = 0:
No terminal assigned, no static agreement.
Re value = 255:
No terminal assigned, static agreement.

p10038[0...3] SI Emergency Stop input terminal / SI Emer Stop DI

TM54F_MA, TM54F_SL

Can be changed: C2	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	255	0

Description: Sets the input terminal for input "Emergency Stop" (operating mode "function interface").
The behavior of this input signal is set in p10021.

Value:
0: Statically active
1: F-DI 0 (X521.2/3/6)
2: F-DI 1 (X521.4/5/7)
3: F-DI 2 (X522.1/2/7)
4: F-DI 3 (X522.3/4/8)
5: F-DI 4 (X522.5/6/9)
6: F-DI 5 (X531.2/3/6)
7: F-DI 6 (X531.4/5/7)
8: F-DI 7 (X532.1/2/7)
9: F-DI 8 (X532.3/4/8)
10: F-DI 9 (X532.5/6/9)
255: Statically inact

Index: [0] = Drive group 1
[1] = Drive group 2
[2] = Drive group 3
[3] = Drive group 4

Dependency: Refer to: p10008, p10021

Note: Parameter is being prepared - for this firmware version, the function interface is not supported.
Re value = 0:
No terminal assigned, "Emergency Stop" statically active.
Re value = 255:
No terminal assigned, no "Emergency Stop" statically active.

p10039[0...3] SI Safe State signal selection / SI Safe State Sel

TM54F_MA, TM54F_SL

Can be changed: C2	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** 2856
P-Group: Safety Integrated	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0001 bin

Description: Sets the signals for the drive group specific signal "Safe State".
Bit 0 = Power_removed
Bit 1 = SS1_active
Bit 2 = SS2_active
Bit 3 = SOS_active
Bit 4 = SLS_active
Bit 5 = Reserved

Index: [0] = Drive group 1
[1] = Drive group 2
[2] = Drive group 3

[3] = Drive group 4

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Power_removed	Selected	Not selected	-
01	SS1_active	Selected	Not selected	-
02	SS2_active	Selected	Not selected	-
03	SOS_active	Selected	Not selected	-
04	SLS_active	Selected	Not selected	-

Note: Bit = 0 signal --> not selected

Bit = 1 signal --> selected

The selected signals (high-active) are OR'ed The result of the logic operation results in the status "Safe State".

Min	Max	Factory setting
-	-	-

Description: Displays the single-channel status of the safety digital inputs F-DI 0 .. 9 at Terminal Module 54F (TM54F).

If a safety function is assigned to an input (e.g. via p10022), then the following applies:

- logical "0": The safety function is selected
- logical "1": The safety function is canceled

The interrelationship between the logical level and the external voltage level at the input depends on the parameterization (refer to p10040) of the input as either NC or NO contact and is aligned to the use of a safety function:

With 24 V at the input, NC contacts have a logical "1" level, for 0 V at the input, a logical "0" level.

This means that an NC/NC contact parameterization of 0 V at both inputs of the F-DI selects the safety function, for 24 V at both inputs, deselects the safety function.

With 24 V at the input, NO contacts have a logical "0" level, for 0 V at the input, a logical "1" level.

This means that for an NC/NO contact parameterization, the level 0 V/24 V selects the safety function, the level 24 V/0 V deselects the safety function.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	F-DI 0	Logical 1	Logical 0	2850
01	F-DI 1	Logical 1	Logical 0	2850
02	F-DI 2	Logical 1	Logical 0	2850
03	F-DI 3	Logical 1	Logical 0	2850

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** -
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the status of the Terminal Module 54F (TM54F).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Test stop status	Active	Inactive	-

p10061 SI password input TM54F / SI password inp

TM54F_MA, TM54F_SL

Can be changed: T **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** 2847
P-Group: Safety Integrated **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Enters the Safety Integrated password for the Terminal Module 54F (TM54F).
This password is required to change the safety-relevant parameters.

p10062 SI password new TM54F / SI password new

TM54F_MA, TM54F_SL

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 2847
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Enters the new Safety Integrated password for the Terminal Module 54F (TM54F).
Dependency: A change made to the Safety Integrated password must be acknowledged in the following parameter:
Refer to: p10063

p10063 SI password acknowledgement TM54F / SI ackn password

TM54F_MA, TM54F_SL

Can be changed: C2 | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 2847
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Acknowledgement of the new Safety Integrated password for the Terminal Module 54F (TM54F).
Dependency: Refer to: p10062
Note: The new password entered into p10062 must be re-entered in order to acknowledge.
p10062 = p10063 = 0 is automatically set after the new Safety Integrated password has been successfully acknowledged.

r10090[0...3] SI TM54F version / SI TM54F version

TM54F_MA, TM54F_SL

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Safety Integrated | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the Safety Integrated version for the Terminal Module 54F (TM54F).
Index: [0] = Safety Version (major release)
[1] = Safety Version (minor release)
[2] = Safety Version (baselevel or patch)
[3] = Safety Version (hotfix)
Dependency: Refer to: r9390, r9590, r9770, r9870, r9890
Note: Example:
r10090[0] = 2, r10090[1] = 60, r10090[2] = 1, r10090[3] = 0 --> SI TM54F version V02.60.01.00

r61000[0...239] PROFINET Name of Station / PN Name of Station

CU_S (PROFINET), CU_S

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays PROFINET Name of Station.
Notice: An ASCII table (excerpt) can be found, for example, in the following List Manual:

r61001[0...3] PROFINET IP of Station / PN IP of Station

CU_S (PROFINET), CU_S	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned8	**Dynamic index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays PROFINET IP of Station.

1.3 Parameters for data sets

1.3.1 Parameters for Command Data Sets (CDS)

Note:

References: /FH1/ SINAMICS S120 Function Manual Drive Functions
Section "Data sets"

The following list contains the command-data-set-dependent parameters.

Product: SINAMICS S120/S150, Version: 2603400, Language: eng, Type: CDS

p0700[0...n] Macro Binector Input (BI) / Macro BI
p0820[0...n] BI: Drive Data Set selection DDS bit 0 / DDS select., bit 0
p0821[0...n] BI: Drive Data Set selection DDS bit 1 / DDS select., bit 1
p0822[0...n] BI: Drive Data Set selection DDS bit 2 / DDS select., bit 2
p0823[0...n] BI: Drive Data Set selection DDS bit 3 / DDS select., bit 3
p0824[0...n] BI: Drive Data Set selection DDS bit 4 / DDS select., bit 4
p0828[0...n] BI: Motor changeover, feedback signal / Mot_chng fdbk sig
p0840[0...n] BI: ON/OFF1 / ON/OFF1
p0844[0...n] BI: 1. OFF2 / 1. OFF2
p0845[0...n] BI: 2. OFF2 / 2. OFF2
p0848[0...n] BI: 1. OFF3 / 1. OFF3
p0849[0...n] BI: 2. OFF3 / 2. OFF3
p0852[0...n] BI: Operation enable / Operation enable
p0854[0...n] BI: Master control by PLC / Master ctrl by PLC
p0855[0...n] BI: Unconditionally release holding brake / Uncond open brake
p0856[0...n] BI: Velocity controller enable / v_ctrl enable
p0856[0...n] BI: Speed controller enable / n_ctrl enable
p0858[0...n] BI: Unconditionally close holding brake / Uncond close brake
p1000[0...n] Macro Connector Inputs (CI) for velocity setpoints / Macro CI v_set
p1000[0...n] Macro Connector Inputs (CI) for speed setpoints / Macro CI n_set
p1020[0...n] BI: Fixed velocity setpoint selection Bit 0 / v_set_fixed Bit 0
p1020[0...n] BI: Fixed speed setpoint selection Bit 0 / n_set_fixed Bit 0
p1021[0...n] BI: Fixed velocity setpoint selection Bit 1 / v_set_fixed Bit 1
p1021[0...n] BI: Fixed speed setpoint selection Bit 1 / n_set_fixed Bit 1
p1022[0...n] BI: Fixed velocity setpoint selection Bit 2 / v_set_fixed Bit 2
p1022[0...n] BI: Fixed speed setpoint selection Bit 2 / n_set_fixed Bit 2
p1023[0...n] BI: Fixed velocity setpoint selection Bit 3 / v_set_fixed Bit 3
p1023[0...n] BI: Fixed speed setpoint selection Bit 3 / n_set_fixed Bit 3
p1035[0...n] BI: Motorized potentiometer setpoint raise / Mop raise
p1036[0...n] BI: Motorized potentiometer lower setpoint / Mop lower
p1039[0...n] BI: Motorized potentiometer inversion / Mop inversion
p1041[0...n] BI: Motorized potentiometer manual/automatic / Mop manual/auto
p1042[0...n] CI: Motorized potentiometer automatic setpoint / Mop auto setpoint
p1043[0...n] BI: Motorized potentiometer accept setpoint / Mop accept set val
p1044[0...n] CI: Motorized potentiometer setting value / Mop set val
p1055[0...n] BI: Jog bit 0 / Jog bit 0
p1056[0...n] BI: Jog bit 1 / Jog bit 1
p1070[0...n] CI: Main setpoint / Main setpoint

p1071[0...n] CI: Main setpoint scaling / Main setp scal
p1075[0...n] CI: Supplementary setpoint / Suppl setpoint
p1076[0...n] CI: Supplementary setpoint scaling / Suppl setp scal
p1085[0...n] CI: Velocity limit positive direction / v_limit pos
p1085[0...n] CI: Speed limit in positive direction of rotation / n_limit pos
p1088[0...n] CI: Velocity limit negative direction / n_limit neg
p1088[0...n] CI: Speed limit negative direction of rotation / n_limit neg
p1110[0...n] BI: Inhibit negative direction / Inhib neg dir
p1111[0...n] BI: Inhibit positive direction / Inhib pos dir
p1113[0...n] BI: Setpoint inversion / Setp inv
p1122[0...n] BI: Bypass ramp-function generator / Bypass RFG
p1140[0...n] BI: Ramp-function generator enable / RFG enable
p1141[0...n] BI: Start ramp-function generator / Start RFG
p1142[0...n] BI: Velocity setpoint enable / v_set enable
p1142[0...n] BI: Speed setpoint enable / n_set enable
p1143[0...n] BI: Ramp-function generator, accept setting value / Accept RFG set val
p1144[0...n] CI: Ramp-function generator setting value / RFG setting value
p1155[0...n] CI: Velocity controller, velocity setpoint 1 / v_ctrl n_set 1
p1155[0...n] CI: Speed controller speed setpoint 1 / n_ctrl n_set 1
p1160[0...n] CI: Velocity controller, velocity setpoint 2 / v_ctrl n_set 2
p1160[0...n] CI: Speed controller speed setpoint 2 / n_ctrl n_set 2
p1230[0...n] BI: Armature short-circuit / DC brake activation / ASC act
p1235[0...n] BI: External armature short-circuit, contactor feedback signal / ASC ext feedback
p1330[0...n] CI: V/f control independent voltage setpoint / Vf V_set independ.
p1356[0...n] CI: V/f control, angular setpoint / Vf ang setpoint
p1430[0...n] CI: Velocity pre-control / v_prectrl
p1430[0...n] CI: Speed pre-control / n_prectrl
p1437[0...n] CI: Speed controller, reference model I component input / n_ctrRefMod I_comp
p1455[0...n] CI: Velocity controller, P gain adaptation signal / v_ctrl Adpt_sig Kp
p1455[0...n] CI: Speed controller P gain adaptation signal / n_ctrl Adpt_sig Kp
p1466[0...n] CI: Velocity controller P gain scaling / v_ctrl Kp scal
p1466[0...n] CI: Speed controller P-gain scaling / n_ctrl Kp scal
p1476[0...n] BI: Velocity controller hold integrator / v_ctrl integ stop
p1476[0...n] BI: Speed controller hold integrator / n_ctrl integ stop
p1477[0...n] BI: Velocity controller set integrator value / v_ctrl integ set
p1477[0...n] BI: Speed controller set integrator value / n_ctrl integ set
p1478[0...n] CI: Velocity controller integrator value / v_ctr integ_setVal
p1478[0...n] CI: Speed controller integrator setting value / n_ctr integ_setVal
p1479[0...n] CI: Speed controller integrator setting value scaling / n_ctrl I_val scal
p1486[0...n] CI: Droop compensation torque / Droop M_comp
p1492[0...n] BI: Droop feedback enable / Droop enable
p1495[0...n] CI: Acceleration pre-control / a_prectrl
p1497[0...n] CI: Motor weight scaling / Mot_weight scal
p1497[0...n] CI: Moment of inertia, scaling / M_mom inert scal
p1500[0...n] Macro Connector Inputs (CI) for force setpoints / Macro CI F_set
p1500[0...n] Macro Connector Inputs (CI) for torque setpoints / Macro CI M_set
p1501[0...n] BI: Change over velocity/force control / Changeov n/F_ctrl
p1501[0...n] BI: Change over between closed-loop speed/torque control / Changeov n/M_ctrl
p1503[0...n] CI: Torque setpoint / M_set
p1511[0...n] CI: Supplementary force 1 / F_suppl 1
p1511[0...n] CI: Supplementary torque 1 / M_suppl 1
p1512[0...n] CI: Supplementary force 1 scaling / F_suppl 1 scal
p1512[0...n] CI: Supplementary torque 1 scaling / M_suppl 1 scal

p1513[0...n] CI: Supplementary force 2 / F_suppl 2
p1513[0...n] CI: Supplementary torque 2 / M_suppl 2
p1522[0...n] CI: Force limit upper/motoring / F_max upper/mot
p1522[0...n] CI: Torque limit upper/motoring / M_max upper/mot
p1522[0...n] CI: Torque limit upper / M_max upper
p1523[0...n] CI: Force limit lower/regenerative / F_max lower/regen
p1523[0...n] CI: Torque limit lower/regenerative / M_max lower/regen
p1523[0...n] CI: Torque limit lower / M_max lower
p1528[0...n] CI: Force limit upper/motoring scaling / F_max up/mot scal
p1528[0...n] CI: Torque limit upper/motoring scaling / M_max up/mot scal
p1528[0...n] CI: Torque limit upper scaling / M_max upper scal
p1529[0...n] CI: Force limit lower/regenerative scaling / F_max low/gen scal
p1529[0...n] CI: Torque limit lower/regenerating scaling / M_max low/gen scal
p1529[0...n] CI: Torque limit lower scaling / M_max lower scal
p1540[0...n] CI: Torque limit speed controller upper scaling / M_max n-ctr upScal
p1541[0...n] CI: Torque limit. speed controller lower scaling / M_max nctr lowScal
p1542[0...n] CI: Travel to fixed stop force reduction / TfS F_red
p1542[0...n] CI: Travel to fixed stop torque reduction / TfS M_red
p1545[0...n] BI: Activates travel to a fixed stop / TfS activation
p1550[0...n] BI: Transfer current force as force offset / Accept act force
p1550[0...n] BI: Transfer current torque as torque offset / Accept act torque
p1551[0...n] BI: Force limit variable/fixed signal source / F_lim var/fixS_src
p1551[0...n] BI: Torque limit variable/fixed signal source / M_lim var/fixS_src
p1552[0...n] CI: Force limit upper scaling without offset / F_max up offs scal
p1552[0...n] CI: Torque limit upper scaling without offset / M_max up w/o offs
p1554[0...n] CI: Force limit lower scaling without offset / M_max low w/o offs
p1554[0...n] CI: Torque limit lower scaling without offset / M_max low w/o offs
p1555[0...n] CI: Power limit / P_max
p1569[0...n] CI: Supplementary force 3 / F_suppl 3
p1569[0...n] CI: Supplementary torque 3 / M_suppl 3
p1571[0...n] CI: Supplementary flux setpoint / Suppl flux setp
p1640[0...n] CI: Excitation current actual value / I_exc_act val
p2103[0...n] BI: 1. Acknowledge faults / 1. Acknowledge
p2104[0...n] BI: 2. Acknowledge faults / 2. Acknowledge
p2105[0...n] BI: 3. Acknowledge faults / 3. Acknowledge
p2106[0...n] BI: External fault 1 / External fault 1
p2107[0...n] BI: External fault 2 / External fault 2
p2108[0...n] BI: External fault 3 / External fault 3
p2112[0...n] BI: External alarm 1 / External alarm 1
p2116[0...n] BI: External alarm 2 / External alarm 2
p2117[0...n] BI: External alarm 3 / External alarm 3
p2144[0...n] BI: Motor stall monitoring enable (negated) / Mot stall enab neg
p2148[0...n] BI: Ramp-function generator active / HLG active
p2151[0...n] CI: Velocity setpoint for messages/signals / v_set for msg
p2151[0...n] CI: Speed setpoint for messages/signals / n_set for msg
p2154[0...n] CI: Velocity setpoint 2 / v_set 2
p2154[0...n] CI: Speed setpoint 2 / n_set 2
p2200[0...n] BI: Technology controller enable / Tec_ctrl enable
p2220[0...n] BI: Technology controller fixed value selection bit 0 / Tec_ctrl sel bit 0
p2221[0...n] BI: Technology controller fixed value selection bit 1 / Tec_ctrl sel bit 1
p2222[0...n] BI: Technology controller fixed value selection bit 2 / Tec_ctrl sel bit 2
p2223[0...n] BI: Technology controller fixed value selection bit 3 / Tec_ctrl sel bit 3
p2235[0...n] BI: Technology controller motorized potentiometer raise setpoint / Tec_ctrl mop raise

p2236[0...n] BI: Technology controller motorized potentiometer lower setpoint / Tec_ctrl mop lower
p2253[0...n] CI: Technology controller setpoint 1 / Tec_ctrl setp 1
p2254[0...n] CI: Technology controller setpoint 2 / Tec_ctrl setp 2
p2264[0...n] CI: Technology controller actual value / Tec_ctrl act val
p2289[0...n] CI: Technology controller pre-control signal / Tec_ctrl prectrl
p2296[0...n] CI: Technology controller output scaling / Tec_ctrl outp scal
p2297[0...n] CI: Technology controller maximum limiting / Tec_ctrl max_limit
p2298[0...n] CI: Technology controller minimum limiting / Tec_ctrl min_lim
p3111[0...n] BI: External fault 3, enable / Ext fault 3 enab
p3112[0...n] BI: External fault 3 enable negated / Ext flt 3 enab neg
p3750[0...n] CI: APC acceleration sensor input / APC accel input
p3784[0...n] BI: Sync-line-drive external increase voltage / Sync ext V incr
p3785[0...n] BI: Sync-line-drive external decrease voltage / Sync ext V decr
p3802[0...n] BI: Sync-line-drive enable / Sync enable

1.3.2 Parameters for Drive Data Sets (DDS)

Note:

References: /FH1/ SINAMICS S120 Function Manual Drive Functions
Section "Data sets"

The following list contains the drive-data-set-dependent parameters.

Product: SINAMICS S120/S150, Version: 2603400, Language: eng, Type: DDS
p0186[0...n] Motor Data Sets (MDS) number / MDS number
p0187[0...n] Encoder 1 encoder data set number / Enc 1 EDS number
p0188[0...n] Encoder 2 encoder data set number / Enc 2 EDS number
p0189[0...n] Encoder 3 encoder data set number / Enc 3 EDS number
p0340[0...n] Automatic calculation, motor/control parameters / Calc auto par
p0572[0...n] Activate inhibit list / Act inhib list
p0578[0...n] Calculate parameters that are dependent on the technology/units / Calc tec par
p0640[0...n] Current limit / Current limit
p0642[0...n] Encoderless operation current reduction / Encoderl op I_red
p1001[0...n] CO: Fixed velocity setpoint 1 / n_set_fixed 1
p1001[0...n] CO: Fixed speed setpoint 1 / n_set_fixed 1
p1002[0...n] CO: Fixed velocity setpoint 2 / n_set_fixed 2
p1002[0...n] CO: Fixed speed setpoint 2 / n_set_fixed 2
p1003[0...n] CO: Fixed velocity setpoint 3 / n_set_fixed 3
p1003[0...n] CO: Fixed speed setpoint 3 / n_set_fixed 3
p1004[0...n] CO: Fixed velocity setpoint 4 / n_set_fixed 4
p1004[0...n] CO: Fixed speed setpoint 4 / n_set_fixed 4
p1005[0...n] CO: Fixed velocity setpoint 5 / n_set_fixed 5
p1005[0...n] CO: Fixed speed setpoint 5 / n_set_fixed 5
p1006[0...n] CO: Fixed velocity setpoint 6 / n_set_fixed 6
p1006[0...n] CO: Fixed speed setpoint 6 / n_set_fixed 6
p1007[0...n] CO: Fixed velocity setpoint 7 / n_set_fixed 7
p1007[0...n] CO: Fixed speed setpoint 7 / n_set_fixed 7
p1008[0...n] CO: Fixed velocity setpoint 8 / n_set_fixed 8
p1008[0...n] CO: Fixed speed setpoint 8 / n_set_fixed 8
p1009[0...n] CO: Fixed velocity setpoint 9 / n_set_fixed 9

p1009[0...n] CO: Fixed speed setpoint 9 / n_set_fixed 9
p1010[0...n] CO: Fixed velocity setpoint 10 / n_set_fixed 10
p1010[0...n] CO: Fixed speed setpoint 10 / n_set_fixed 10
p1011[0...n] CO: Fixed velocity setpoint 11 / n_set_fixed 11
p1011[0...n] CO: Fixed speed setpoint 11 / n_set_fixed 11
p1012[0...n] CO: Fixed velocity setpoint 12 / n_set_fixed 12
p1012[0...n] CO: Fixed speed setpoint 12 / n_set_fixed 12
p1013[0...n] CO: Fixed velocity setpoint 13 / n_set_fixed 13
p1013[0...n] CO: Fixed speed setpoint 13 / n_set_fixed 13
p1014[0...n] CO: Fixed velocity setpoint 14 / n_set_fixed 14
p1014[0...n] CO: Fixed speed setpoint 14 / n_set_fixed 14
p1015[0...n] CO: Fixed velocity setpoint 15 / n_set_fixed 15
p1015[0...n] CO: Fixed speed setpoint 15 / n_set_fixed 15
p1030[0...n] Motorized potentiometer configuration / Mop configuration
p1037[0...n] Motorized potentiometer maximum velocity / Mop n_max
p1037[0...n] Motorized potentiometer maximum speed / Mop n_max
p1038[0...n] Motorized potentiometer minimum velocity / Mop n_min
p1038[0...n] Motorized potentiometer minimum speed / Mop n_min
p1040[0...n] Motorized potentiometer starting value / Mop start value
p1047[0...n] Motorized potentiometer ramp-up time / Mop ramp-up time
p1048[0...n] Motorized potentiometer ramp-down time / Mop ramp-down time
p1058[0...n] Jog 1 velocity setpoint / Jog 1 n_set
p1058[0...n] Jog 1 speed setpoint / Jog 1 n_set
p1059[0...n] Jog 2 velocity setpoint / Jog 2 n_set
p1059[0...n] Jog 2 speed setpoint / Jog 2 n_set
p1063[0...n] Velocity limit setpoint channel / v_limit setp
p1063[0...n] Speed limit setpoint channel / n_limit setp
p1080[0...n] Minimum velocity / Minimum speed
p1080[0...n] Minimum speed / Minimum speed
p1082[0...n] Maximum velocity / Maximum speed
p1082[0...n] Maximum speed / Maximum speed
p1083[0...n] CO: Velocity limit positive direction / v_limit pos
p1083[0...n] CO: Speed limit in positive direction of rotation / n_limit pos
p1086[0...n] CO: Velocity limit negative direction / v_limit neg
p1086[0...n] CO: Speed limit negative direction of rotation / n_limit neg
p1091[0...n] Skip velocity 1 / v_skip 1
p1091[0...n] Skip speed 1 / n_skip 1
p1092[0...n] Skip velocity 2 / v_skip 2
p1092[0...n] Skip speed 2 / n_skip 2
p1093[0...n] Skip velocity 3 / v_skip 3
p1093[0...n] Skip speed 3 / n_skip 3
p1094[0...n] Skip velocity 4 / v_skip 4
p1094[0...n] Skip speed 4 / n_skip 4
p1101[0...n] Skip velocity bandwidth / v_skip bandwidth
p1101[0...n] Skip speed bandwidth / n_skip bandwidth
p1120[0...n] Ramp-function generator ramp-up time / RFG ramp-up time
p1121[0...n] Ramp-function generator ramp-down time / RFG ramp-down time
p1130[0...n] Ramp-function generator initial rounding-off time / RFG t_start_round
p1131[0...n] Ramp-function generator final rounding-off time / RFG t_end_delay
p1134[0...n] Ramp-function generator rounding-off type / RFG round-off type
p1135[0...n] OFF3 ramp-down time / RFG OFF3 t_ramp-dn
p1136[0...n] OFF3 initial rounding-off time / RFGOFF3 t_strt_rnd
p1137[0...n] OFF3 final rounding-off time / RFG OFF3 t_end_del

p1145[0...n] Ramp-function generator tracking intensity. / RFG track intens
p1148[0...n] Ramp-function gen., tolerance for ramp-up and ramp-down active / RFG tol HL/RL act
p1151[0...n] Ramp-function generator configuration / RFG config
p1189[0...n] Velocity setpoint configuration / v_ctrl config
p1189[0...n] Speed setpoint configuration / n_ctrl config
p1192[0...n] DSC enc selection / DSC enc selection
p1193[0...n] DSC encoder adaptation factor / DSC encodAdaptFact
p1200[0...n] FlyRest oper mode / FlyRest op_mode
p1202[0...n] FlyRest srch curr / FlyRest srch curr
p1203[0...n] Flying restart search rate factor / FlyRst v_Srch Fact
p1240[0...n] Vdc controller or Vdc monitoring configuration / Vdc_ctrl config
p1243[0...n] Vdc_max controller dynamic factor / Vdc_max dyn_factor
p1244[0...n] DC link voltage threshold upper / Vdc upper thresh
p1245[0...n] Vdc_min controller switch-in level (kinetic buffering) / Vdc_min on_level
p1247[0...n] Vdc_min controller dynamic factor (kinetic buffering) / Vdc_min dyn_factor
p1248[0...n] DC link voltage threshold lower / Vdc lower thresh
p1249[0...n] Vdc_max controller speed threshold / Vdc_max n_thresh
p1250[0...n] Vdc controller proportional gain / Vdc_ctrl Kp
p1251[0...n] Vdc controller integral time / Vdc_ctrl Tn
p1252[0...n] Vdc controller rate time / Vdc_ctrl t_rate

p3831[0...n] Friction characteristic, value M1 / Friction M1
p3832[0...n] Friction characteristic, value F2 / Friction F2
p3832[0...n] Friction characteristic, value M2 / Friction M2
p3833[0...n] Friction characteristic, value F3 / Friction F3
p3833[0...n] Friction characteristic, value M3 / Friction M3
p3834[0...n] Friction characteristic, value F4 / Friction F4
p3834[0...n] Friction characteristic, value M4 / Friction M4
p3835[0...n] Friction characteristic, value F5 / Friction F5
p3835[0...n] Friction characteristic, value M5 / Friction M5
p3836[0...n] Friction characteristic, value F6 / Friction F6
p3836[0...n] Friction characteristic, value M6 / Friction M6
p3837[0...n] Friction characteristic, value F7 / Friction F7
p3837[0...n] Friction characteristic, value M7 / Friction M7
p3838[0...n] Friction characteristic, value F8 / Friction F8
p3838[0...n] Friction characteristic, value M8 / Friction M8
p3839[0...n] Friction characteristic, value F9 / Friction F9
p3839[0...n] Friction characteristic, value M9 / Friction M9
p3846[0...n] Friction characteristic record ramp-up/ramp-down time / Frict rec t_RFG

p3847[0...n] Friction characteristic record warm-up time / Frict rec t_warm
r3925[0...n] Identification final display / Ident final_disp
r3927[0...n] Motor data identification induction motor data determined / MotID ASM dat det
r3928[0...n] Motor data identification synchronous motor data determined / MotId PEM dat det
r3998[0...n] First drive commissioning / First drv_comm
p7035[0...n] Par_circuit circulating current control operating mode / Circ_I mode
p7036[0...n] Par_circuit circulating current control proportional gain / Circ_I Kp
p7037[0...n] Par_circuit circulating current control integral time / I_circ Tn
p7038[0...n] Par_circuit circulating current control limit / I_circ limit

1.3.3 Parameters for Encoder Data Sets (EDS)

Note:

References: /FH1/ SINAMICS S120 Function Manual Drive Functions
Section "Data sets"

The following list contains the encoder-data-set-dependent parameters.

Product: SINAMICS S120/S150, Version: 2603400, Language: eng, Type: EDS
p0141[0...n] Encoder interface (Sensor Module) component number / Enc_interf comp_no
p0142[0...n] Encoder component number / Encoder comp_no
p0144[0...n] Sensor Module detection via LED / SM detection LED
p0145[0...n] Activate/de-activate encoder interface / Enc_intf act/deact
r0146[0...n] Encoder interface active/inactive / Enc_intf act/inact
r0147[0...n] Sensor Module EPROM data version / SM EEPROM version
r0148[0...n] Sensor Module firmware version / SM FW version
p0400[0...n] Encoder type selection / Enc_typ sel
p0401[0...n] Encoder type, OEM selection / Enc type OEM sel
p0402[0...n] Gearbox type selection / Gearbox type sel
p0404[0...n] Encoder configuration effective / Enc_config eff
p0405[0...n] Square-wave encoder track A/B / Sq-wave enc A/B
p0407[0...n] Linear encoder grid division / Enc grid div
p0408[0...n] Rotary encoder pulse No. / Rot enc pulse No.
p0410[0...n] Encoder inversion actual value / Enc inv act value
p0411[0...n] Measuring gear, configuration / Meas gear config
p0412[0...n] Measuring gear, rotary absolute gearbox, revolutions, virtual / Abs rot rev
p0413[0...n] Measuring gear, position tracking tolerance window / Pos track window
p0414[0...n] Redundant coarse position value relevant bits (identified) / Relevant bits
p0415[0...n] Gx_XIST1 Coarse position safe most significant bit (identified) / Gx_XIST1 safe MSB
p0418[0...n] Fine resolution Gx_XIST1 (in bits) / Enc fine Gx_XIST1
p0419[0...n] Fine resolution absolute value Gx_XIST2 (in bits) / Enc fine Gx_XIST2
p0420[0...n] Encoder connection / Encoder connection
p0421[0...n] Absolute encoder rotary multiturn resolution / Enc abs multiturn
p0422[0...n] Absolute encoder linear measuring step resolution / Enc abs meas step
p0423[0...n] Absolute encoder rotary singleturn resolution / Enc abs singleturn
p0424[0...n] Encoder, linear zero mark distance / Enc lin ZM_dist
p0425[0...n] Encoder, rotary zero mark distance / Enc rot dist ZM
p0427[0...n] Encoder SSI baud rate / Enc SSI baud rate
p0428[0...n] Encoder SSI monoflop time / Enc SSI t_monoflop
p0429[0...n] Encoder SSI configuration / Enc SSI config

p0430[0...n] Sensor Module configuration / SM config
p0431[0...n] Angular commutation offset / Ang_com offset
p0432[0...n] Gearbox factor, encoder path / Grbx_fact enc_path
p0432[0...n] Gearbox factor, encoder revolutions / Grbx_fact enc_rev
p0433[0...n] Gearbox factor, motor/load path / Grbx_fact mot_path
p0433[0...n] Gearbox factor, motor/load revolutions / Grbx_fact mot_rev
p0434[0...n] Encoder SSI error bit / Enc SSI error bit
p0435[0...n] Encoder SSI alarm bit / Enc SSI alarm bit
p0436[0...n] Encoder SSI parity bit / Enc SSI parity bit
p0437[0...n] Sensor Module configuration extended / SM config ext
p0438[0...n] Squarewave encoder filter time / Enc t_filt
p0440[0...n] Copy encoder serial number / Copy enc ser_no
p0441[0...n] Encoder commissioning serial number part 1 / Enc comm ser_no 1
p0442[0...n] Encoder commissioning serial number part 2 / Enc comm ser_no 2
p0443[0...n] Encoder commissioning serial number part 3 / Enc comm ser_no 3
p0444[0...n] Encoder commissioning serial number part 4 / Enc comm ser_no 4
p0445[0...n] Encoder commissioning serial number part 5 / Enc comm ser_no 5
p0446[0...n] Encoder SSI number of bits before the absolute value / Enc SSI bit before
p0447[0...n] Encoder SSI number of bits absolute value / Enc SSI bit val
p0448[0...n] Encoder SSI number of bits after the absolute value / Enc SSI bit after
p0449[0...n] Encoder SSI number of bits, filler bits / Enc SSI fill bits
p0453[0...n] Rect. signal enc.:nom. meas. time of pulse enc. signal eval. / Enc t_MeasSign
p2507[0...n] LR absolute encoder adjustment status / Abs_enc_adj stat
p2525[0...n] CO: LR encoder adjustment, offset / Enc_adj offset
p4600[0...n] Motor temperature sensor 1 sensor type / Temp_sens 1 type
p4601[0...n] Motor temperature sensor 2 sensor type / Temp_sens 2 type
p4602[0...n] Motor temperature sensor 3 sensor type / Temp_sens 3 type
p4603[0...n] Motor temperature sensor 4 sensor type / Temp_sens 4 type
p4680[0...n] Zero mark monitoring tolerance permissible / ZM_monit tol perm
p4681[0...n] Zero mark monitoring, tolerance window limit 1 positive / ZM tol lim 1 pos
p4682[0...n] Zero mark monitoring, tolerance window limit 1 negative / ZM tol lim 1 neg
p4683[0...n] Zero mark monitoring, tolerance window limit 2 positive / ZM tol lim 2 pos
p4684[0...n] Zero mark monitoring, tolerance window limit 2 negative / ZM tol lim 2 neg
p4685[0...n] Changeover, average value generation / Average value mode
p4686[0...n] Zero mark minimum length / ZM min length

1.3.4 Parameters for Motor Data Sets (MDS)

Note:

References: /FH1/ SINAMICS S120 Function Manual Drive Functions
Section "Data sets"

The following list contains the motor-data-set-dependent parameters.

Product: SINAMICS S120/S150, Version: 2603400, Language: eng, Type: MDS

p0131[0...n] Motor component number / Mot comp_no
p0300[0...n] Motor type selection / Mot type sel
p0301[0...n] Motor code number selection / Mot code No. sel
r0302[0...n] Motor code number of motor with DRIVE-CLiQ / Motor code Mot DLQ
r0303[0...n] Motor status word from motor with DRIVE-CLiQ / Motor ZSW Drv-CliQ
p0304[0...n] Rated motor voltage / Mot V_rated
p0305[0...n] Rated motor current / Mot I_rated
p0306[0...n] Number of motors connected in parallel / Motor qty
p0307[0...n] Rated motor power / Mot P_rated
p0308[0...n] Rated motor power factor / Mot cos_phi_rated
p0309[0...n] Rated motor efficiency / Mot eta_rated
p0310[0...n] Rated motor frequency / Mot f_rated
p0311[0...n] Rated motor velocity / Mot v_rated
p0311[0...n] Rated motor speed / Mot n_rated
p0312[0...n] Rated motor force / Mot F_rated
p0312[0...n] Rated motor torque / Mot M_rated
r0313[0...n] Motor pole pair number, current (or calculated) / Mot PolePairNo cur
p0314[0...n] Motor pole pair number / Mot pole pair No.
p0315[0...n] Motor pole pair width / MotPolePair width
p0316[0...n] Motor force constant / Mot kT
p0316[0...n] Motor torque constant / Mot kT
p0317[0...n] Motor voltage constant / Mot kE
p0318[0...n] Motor stall current / Mot I_standstill
p0319[0...n] Motor stall force / Mot F_standstill
p0319[0...n] Motor stall torque / Mot M_standstill
p0320[0...n] Motor rated magnetizing current/short-circuit current / Mot I_mag_rated
p0322[0...n] Motor maximum velocity / Mot v_max
p0322[0...n] Maximum motor speed / Mot n_max
p0323[0...n] Maximum motor current / Mot I_max
p0325[0...n] Motor pole position identification current, 1st phase / Mot PolID I 1st ph
p0326[0...n] Motor stall force correction factor / Mot F_stall_corr
p0326[0...n] Motor stall torque correction factor / Mot M_stall_corr
p0327[0...n] Optimum motor load angle / Mot phi_load opt
p0328[0...n] Motor reluctance force constant / Mot kT_reluctance
p0328[0...n] Motor reluctance torque constant / Mot kT_reluctance
p0329[0...n] Motor pole position identification current / Mot PolID current
r0330[0...n] Rated motor slip / Mot slip_rated
r0331[0...n] Current motor magnetizing current/short-circuit current / Mot I_mag_rtd cur
r0332[0...n] Rated motor power factor / Mot cos_phi_rated
r0333[0...n] Rated motor force / Mot F_rated
r0334[0...n] Current motor force constant / Mot kT cur
r0334[0...n] Current motor-torque constant / Mot kT cur

p0335[0...n] Motor cooling type / Motor cooling type
r0336[0...n] Current rated motor frequency / Mot f_rated cur
r0337[0...n] Rated motor EMF / Mot EMF_rated
p0338[0...n] Motor limit current / Mot I_limit
r0339[0...n] Rated motor voltage / Mot V_rated
p0341[0...n] Motor weight / Mot weight
p0341[0...n] Motor moment of inertia / Mot M_mom of inert
p0342[0...n] Ratio between the total and motor force of inertia / Mot MomInert Ratio
p0342[0...n] Ratio between the total and motor moment of inertia / Mot MomInert Ratio
p0344[0...n] Motor weight (for the thermal motor model) / Mot weight th mod
r0345[0...n] Nominal motor starting time / Mot t_start_rated
p0346[0...n] Motor excitation build-up time / Mot t_excitation
p0347[0...n] Motor de-excitation time / Mot t_de-excitat.
p0348[0...n] Velocity at the start of field weakening Vdc = 600 V / Mot v_field weaken
p0348[0...n] Speed at the start of field weakening Vdc = 600 V / Mot n_field weaken
p0350[0...n] Motor stator resistance, cold / Mot R_stator cold
p0352[0...n] Cable resistance / Mot R_cable cold
p0353[0...n] Motor series inductance / Mot L_series
p0354[0...n] Motor rotor resistance cold / damping resistance d axis / Mot R_r cold / RDd
p0355[0...n] Motor damping resistance, q axis / Mot R_damp q
p0356[0...n] Motor stator leakage inductance / Mot L_stator leak.
p0357[0...n] Motor stator inductance, d axis / Mot L_stator d
p0358[0...n] Motor rotor leakage inductance / damping inductance, d axis / Mot L_r leak / LDd
p0359[0...n] Motor damping inductance, q axis / Mot L_damp q
p0360[0...n] Motor magnetizing inductance/magn. inductance, d axis saturated / Mot Lh/Lh d sat
p0361[0...n] Motor magnetizing inductance q axis, saturated / Mot L_magn q sat
p0362[0...n] Saturation characteristic flux 1 / Mot saturat.flux 1
p0363[0...n] Saturation characteristic flux 2 / Mot saturat.flux 2
p0364[0...n] Saturation characteristic flux 3 / Mot saturat.flux 3
p0365[0...n] Saturation characteristic flux 4 / Mot saturat.flux 4
p0366[0...n] Saturation characteristic I_mag 1 / Mot sat. I_mag 1
p0367[0...n] Saturation characteristic I_mag 2 / Mot sat. I_mag 2
p0368[0...n] Saturation characteristic I_mag 3 / Mot sat. I_mag 3
p0369[0...n] Saturation characteristic I_mag 4 / Mot sat. I_mag 4
r0370[0...n] Motor stator resistance, cold / Mot R_stator cold
r0372[0...n] Cable resistance / Mot R_cable
r0373[0...n] Motor rated stator resistance / Mot R_stator rated
r0374[0...n] Motor rotor resistance cold / damping resistance d axis / Mot R_r cold / RDd
r0375[0...n] Motor damping resistance, q axis / Mot R_damp q
r0376[0...n] Rated motor rotor resistance / Mot R_rotor rated
r0377[0...n] Motor leakage inductance, total / Mot L_leak total
r0378[0...n] Motor stator inductance, d axis / Mot L_stator_d
r0380[0...n] Motor damping inductance, d axis / Mot L_damping_d
r0381[0...n] Motor damping inductance, q axis / Mot L_damping_q
r0382[0...n] Motor magnetizing inductance transformed / Lh d axis saturated / Mot L_m tr/Lhd sat
r0383[0...n] Motor magnetizing inductance q axis, saturated / Mot L_magn q sat
r0384[0...n] Motor rotor time constant / damping time constant d axis / Mot T_rotor/T_Dd
r0385[0...n] Motor damping time constant, q axis / Mot T_Dq
r0386[0...n] Motor stator leakage time constant / Mot T_stator leak

1.3.5 Parameters for Power unit Data Sets (PDS)

Note:

References: /FH1/ SINAMICS S120 Function Manual Drive Functions
Section "Data sets"

The following list contains the parameters that are dependent on the Power unit Data Sets.

Product: SINAMICS S120/S150, Version: 2603400, Language: eng, Type: PDS
p0121[0...n] Power unit component number / PU comp_no
p0124[0...n] Power unit detection via LED / PU detection LED
p0125[0...n] Activate/de-activate power unit components / PU_comp act/de-act
r0126[0...n] Power unit components active/inactive / PU comp act/inact
r0127[0...n] Power unit version EPROM data / PU EPROM version
r0128[0...n] Power unit, firmware version / PU FW version
r0200[0...n] Power unit current code number / PU code no. act
p0201[0...n] Power unit code number / PU code no.
r0203[0...n] Current power unit type / PU current type
r0204[0...n] Power unit hardware properties / PU HW property
p0251[0...n] Operating hours counter power unit fan / PU fan t_oper
p0895[0...n] BI: Activate/de-activate power unit components / PU_comp act/de-act
p3469[0...n] Latch delay time correction, zero crossover detection / t_latch corr PLL
p3902[0...n] Power unit EEPROM Vdc calibration / PU EEPROM Vdc_cal
p7001[0...n] Par_circuit power units enable / PU enable
r7002[0...n] Par_circuit status power units / Status PU
r7020[0...n] CO: Par_circuit deviation current in phase U / Phase U curr dev
r7021[0...n] CO: Par_circuit deviation current in phase V / Phase V curr dev
r7022[0...n] CO: Par_circuit deviation current in phase W / Phase W curr dev

r7030[0...n]	CO: Par_circuit DC link voltage deviation / Vdc deviation
p7040[0...n]	Par_circuit correction valve lockout time phase U / Comp t_lockout U
p7042[0...n]	Par_circuit correction valve lockout time phase V / Comp t_lockout V
p7044[0...n]	Par_circuit correction valve lockout time phase W / Comp t_lockout W
r7050[0...n]	Par_circuit circulating current phase U / Circ_I_phase U
r7051[0...n]	Par_circuit circulating current phase V / Circ_I_phase V
r7052[0...n]	Par_circuit circulating current phase W / Circ_I_phase W
r7200[0...n]	Par_circuit power unit overload I2T / PU overload I2T
r7201[0...n]	Par_circuit power unit temperatures max. inverter / PU temp max inv
r7202[0...n]	Par_circuit power unit temperatures max. depletion layer / PU TempMaxDepLayer
r7203[0...n]	Par_circuit power unit temperatures max. rectifier / PU temp max rect
r7204[0...n]	Par_circuit power unit temperatures air intake / PU temp air intake
r7205[0...n]	Par_circuit power unit temperatures electronics / PU temp electr
r7206[0...n]	Par_circuit power unit temperatures inverter 1 / PU temp inv 1
r7207[0...n]	Par_circuit power unit temperatures inverter 2 / PU temp inv 2
r7208[0...n]	Par_circuit power unit temperatures inverter 3 / PU temp inv 3
r7209[0...n]	Par_circuit power unit temperatures inverter 4 / PU temp inv 4
r7210[0...n]	Par_circuit power unit temperatures inverter 5 / PU temp inv 5
r7211[0...n]	Par_circuit power unit temperatures inverter 6 / PU temp inv 6
r7212[0...n]	Par_circuit power unit temperatures inverter 1 / PU temp rect 1
r7213[0...n]	Par_circuit power unit temperatures inverter 2 / PU temp rect 2
r7214[0...n]	Par_circuit power unit temperatures depletion layer 1 / PU temp DepLayer 1
r7215[0...n]	Par_circuit power unit temperatures depletion layer 2 / PU temp DepLayer 2
r7216[0...n]	Par_circuit power unit temperatures depletion layer 3 / PU temp DepLayer 3
r7217[0...n]	Par_circuit power unit temperatures depletion layer 4 / PU temp DepLayer 4
r7218[0...n]	Par_circuit power unit temperatures depletion layer 5 / PU temp DepLayer 5
r7219[0...n]	Par_circuit power unit temperatures depletion layer 6 / PU temp DepLayer 6
r7220[0...n]	Infeed par_circuit absolute current value motoring permissible / INF I_abs mot perm
r7220[0...n]	CO: Par_circuit drive output current maximum / Drv I_outp max
r7221[0...n]	Infeed par_circuit absolute current regenerating permissible / INF I_absRegenPerm
r7222[0...n]	CO: Par_circuit absolute current actual value / I_act abs val
r7223[0...n]	CO: Par_circuit phase current actual value phase U / I_phase U act val
r7224[0...n]	CO: Par_circuit phase current actual value phase V / I_phase V act val
r7225[0...n]	CO: Par_circuit phase current actual value phase W / I_phase W act val
r7226[0...n]	CO: Par_circuit phase current actual value phase U offset / I_phase U offset
r7227[0...n]	CO: Par_circuit phase current actual value phase V offset / I_phase V offset
r7228[0...n]	CO: Par_circuit phase current actual value phase W offset / I_phase W offset
r7229[0...n]	CO: Par_circuit phase current actual value sum U, V, W / I_phase sum UVW
r7230[0...n]	CO: Par_circuit DC link voltage actual value / Vdc_act
r7231[0...n]	CO: Par_circuit phase voltage actual value phase U / V_phase U act val
r7232[0...n]	CO: Par_circuit phase voltage actual value phase V / V_phase V act val
r7233[0...n]	CO: Par_circuit phase voltage actual value phase W / V_phase W act val
r7240[0...n]	Par_circuit gating unit status word 1 / Gating unit ZSW1

Function diagrams

Content

2.1 Table of Contents

2.2 Explanations for the function diagrams

Function diagrams

Parameter

Symbol	Meaning
Parameter name [Unit] rxxxx [x...y]	Monitoring parameter (parameter may appear .
Parameter name [Unit] Index name rxxxx[x]	Monitoring parameter with index.
[aaaa.b] Parameter name from ... to [Unit] pxxxx[y...z] (Def)	Setting parameter (if the parameter appears a multiple number of times, then diagram references are specified).
[aaaa.b] Parameter name Index name from ... to [Unit] pxxxx[y] (Def)	Setting parameter with index (if the parameter appears a multiple number of times, then diagram references are specified).

Connectors

Symbol	Meaning
name pxxxx (xxxx)	Connector input CI.
name pxxxx[y] (xxxx [x])	Connector input CI with index [y]
name pxxxx[y...z] (xxxx [y])	Connector input CI with index range [y...z]
name [unit] rxxxx[y...z]	Connector output CO with [dimension unit] and index range [y...z].
name [unit] rxxxx[y]	Connector output CO [dimension unit] and with index [y]

Binectors

Symbol	Meaning
name pxxxx (Def)	Binektor input BI with factory setting (Def).
name pxxxx[y] (Def)	Binector input BI with index [y] and factory setting (Def).
name pxxxx[y...z] (Def)	Binector input BI with index range [y...z] and factory setting (Def).
name rxxxx	Binector output BO.
name rxxxx.y	Binector output BO with bit y.

Connectors/binectors

Symbol Parameter name	Meaning
rxxxx rxxxx	Connector/binector output CO/BO

Cross references between diagrams

Symbol	Meaning
Signal path	The function diagrams are sub-divided into signal paths 1...8 in order to facilitate orientation.
Text → [aaaa.b]	Text = Unique signal designation aaaa = Signal goes to target diagram aaa b = Signal goes to signal path b
[cccc.d] → Text	Text = Unique signal designation cccc = Signal comes from source diagram cccc d = Signal comes from signal path d

To "function diagram name" [aaaa.b] = for binectors.

Cross references for control bits

Symbol	Meaning
pxxxx [aaaa.b]	pxxxx= Original parameter of signal aaaa = Signal comes from source diagram aaaa b = Signal comes from signal path b

Data sets

Symbol	Meaning
pxxxx[C]	Parameter belongs to the Command Data Set (CDS).
pxxxx[D]	Parameter belongs to the Drive Data Set (DDS).
pxxxx[E]	Parameter belongs to the Encoder Data Set (EDS).
pxxxx[M]	Parameter belongs to the Motor Data Set (MDS).
pxxxx[P]	Parameter belongs to the Power unit Data Set (PDS).

Information on parameters, binectors, connectors

Symbol	Meaning
Parameter name	Parameter name (up to 18 characters)
[Unit]	[dimension unit]
rxxxx[y] or rxxxx[y...z] or rxxxx[y].ww or rxxxx.ww	"r" = monitoring parameter. These parameters are read-only "xxxx" stands for the parameter number "[y]" specifies the valid index, "[y...z]" specifies the applicable index range ".ww" specifies the bit number (e.g. 0...15).
pxxxx[y] or pxxxx[y...z] or pxxxx[y].ww or pxxxx.ww	"p" = setting parameter. These parameters can be changed. "xxxx" stands for the parameter number, "[y]" specifies the applicable index, "[y...z]" specifies the applicable index range ".ww" specifies the bit number (e.g. 0...15).
from ... to	Value range.
(xxxx[y].ww)	Parameter number (xxxx) with Index number [y] and bit number .ww.
(Def)	Factory setting.
(Def.w)	Factory setting with bit number as prefix.
[aaaa.b]	Diagram references for setting parameters that occur a multiple number of times. [Function diagram number, signal path]

Sampling times

Symbol	Meaning
pxxxx[Y] (ZZZ.ZZ µs)	Setting parameter with factory setting to select the time slice.
p0115[y] (Drive Object)	Time slice depending on the pre-setting p0112 of the drive object. "[y]" specifies the applicable index.
p0115[y] (Motor Modules)	Time slice depending on the rated pulse frequency of the motor module. "[y]" specifies the applicable index.
PROFIdrive sampling time	According to presetting in p2048.
CAN bus sampling time	Time slice 4000.00 µs.
Background Refer to [1020.7]	There is no fixed sampling time for this function. The processing takes place in background. The cycle time depends on the computational load of the control unit.
Not relevant Refer to [1020.7]	A static state is displayed here. The sampling time data is not relevant.

Figure 2-1 1020 – Explanation of the symbols (Part 1)

Pre-assigned binectors and connectors
Fixed percentage values

-10 000.00...10 000.00 [%] p2900[D] (0.00) → p2900[D] Fixed value 1

-10 000.00...10 000.00 [%] p2901[D] (0.00) → p2901[D] Fixed value 2

[8] = Fixed value -5 %
[9] = Fixed value -10 %
[10] = Fixed value -20 %
[11] = Fixed value -50 %
[12] = Fixed value -100 %
[13] = Fixed value -150 %
[14] = Fixed value -200 %

p2902[0...14] (0.00) → p2902[0...14]

Pre-assigned binectors and connectors
Fixed speed values

-210 000.000...210 000.000 [1/min] p1001[D] (0.000) → p1001[D] n_set_fixed 1

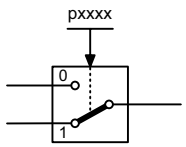
...

-210 000.000...210 000.000 [1/min] p1015[D] (0.000) → p1015[D] n_set_fixed 15

Pre-assigned binectors and connectors
Fixed torque values

-100 000.00...100 000.00 [Nm] p2930[D] (0.00) → p2930[D] Fixed value M [Nm]

Switch symbol



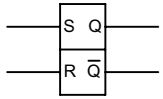
Simple changeover switch

The switch position is shown according to the factory setting
(in this case, switch position 1 in the default state on delivery).

Symbols for logic functions

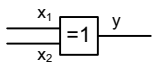
Logical inversion

AND element with logical inversion of an input signal



R/S flip-flop

S = setting input
R = reset input
Q = non-inverted output
$\overline{Q}$ = inverted output



Exclusiv-OR/XOR

y = 1 when $x_1 \neq x_2$ is.

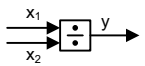
Symbols for computational and closed-loop control functions

Sign reversal

y = -x

Absolute value generator

y = |x|

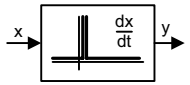


Divider

$y = \frac{x_1}{x_2}$

Comparator

Output y = a logical "1", if the analog signal x > 0, i.e. is positive.



Differentiator

$y = \frac{dx}{dt}$

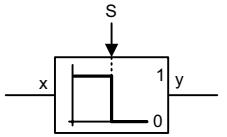
Symbol for monitoring

Axxxxx or Fxxxxx

Monitoring

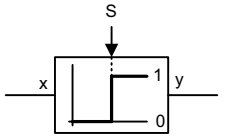
In the bottom right-hand corner of the diagram.

Symbols for computational and closed-loop control functions



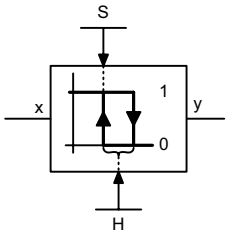
Threshold value switch 1/0

Outputs at y a logical "1" if x < S.



Threshold value switch 0/1

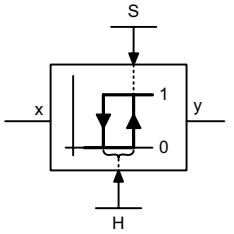
Outputs at y a logical "1" if x > S.



Threshold value 1/0 with hysteresis

Outputs a logical "1" at y if x < S.

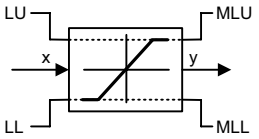
If x >= S + H then y returns to 0.



Threshold value 0/1 with hysteresis

Outputs a logical "1" at y if x > S.

If x <= S - H then y returns to 0.



Limiter

x is limited to the upper limit LU and the lower limit LL and output at y.
The digital signals MLU and MLL have the value "1", if the upper or lower limit is active.

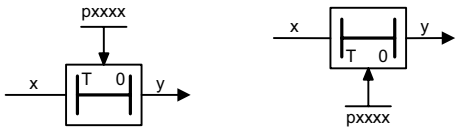
Sample & Hold element

Sample and hold element.
y = x if SET = 1
(not retentively saved at POWER OFF)

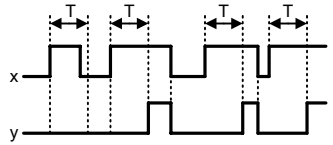
1	2	3	4	5	6	7	8
DO: All objects					fp_1021_51_eng.vsd	Function diagram	- 1021 -
Explanations for the function diagrams - Explanation of the symbols (Part 2)					01.07.08 V02.06.01	SINAMICS	

Figure 2-2 1021 – Explanation of the symbols (Part 2)

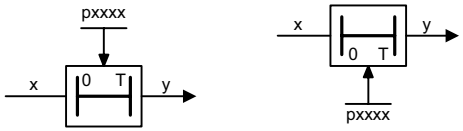
Switch-on delay



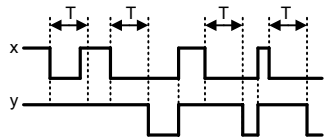
The digital signal x must have the value "1" without any interruption during the time T before output y changes to "1".



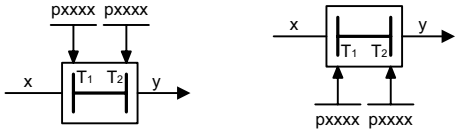
Switch-off delay



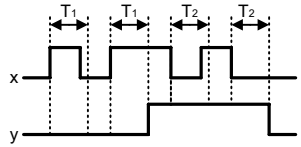
The digital signal x must have the value "0" without interruption during the time T before output y changes to "0".



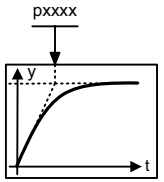
Delay (switch-on and switch-off)



The digital signal x must have the value "1" without interruption during time T_1 or must have the value "0" during time T_2 before output y changes its signal state.



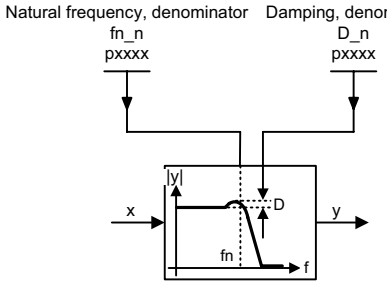
PT1 element



Delay element, first order.

pxxxx = time constant

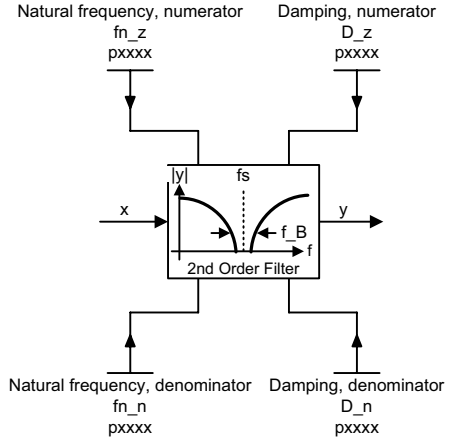
PT2 low pass



Transfer function

$$H(s) = \frac{1}{\left(\frac{s}{2\pi fn\_n}\right)^2 + \frac{2 \cdot D\_n}{2\pi fn\_n} \cdot s + 1}$$

2nd-order filter (bandstop/general filter)



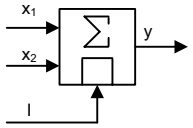
Used as bandstop filter

- center frequency fs: fn_z = fs, fn_n = fs
- bandwidth f_B: D_z = 0, $D\_n = \frac{f\_B}{2 \cdot fs}$

Transfer function when used as general filter

$$H(s) = \frac{\left(\frac{s}{2\pi fn\_z}\right)^2 + \frac{2 \cdot D\_z}{2\pi fn\_z} \cdot s + 1}{\left(\frac{s}{2\pi fn\_n}\right)^2 + \frac{2 \cdot D\_n}{2\pi fn\_n} \cdot s + 1}$$

Analog adder can be activated



The following applies to I = 1 signal: $y = x_1 + x_2$

The following applies to I = 0 signal: $y = x_1$

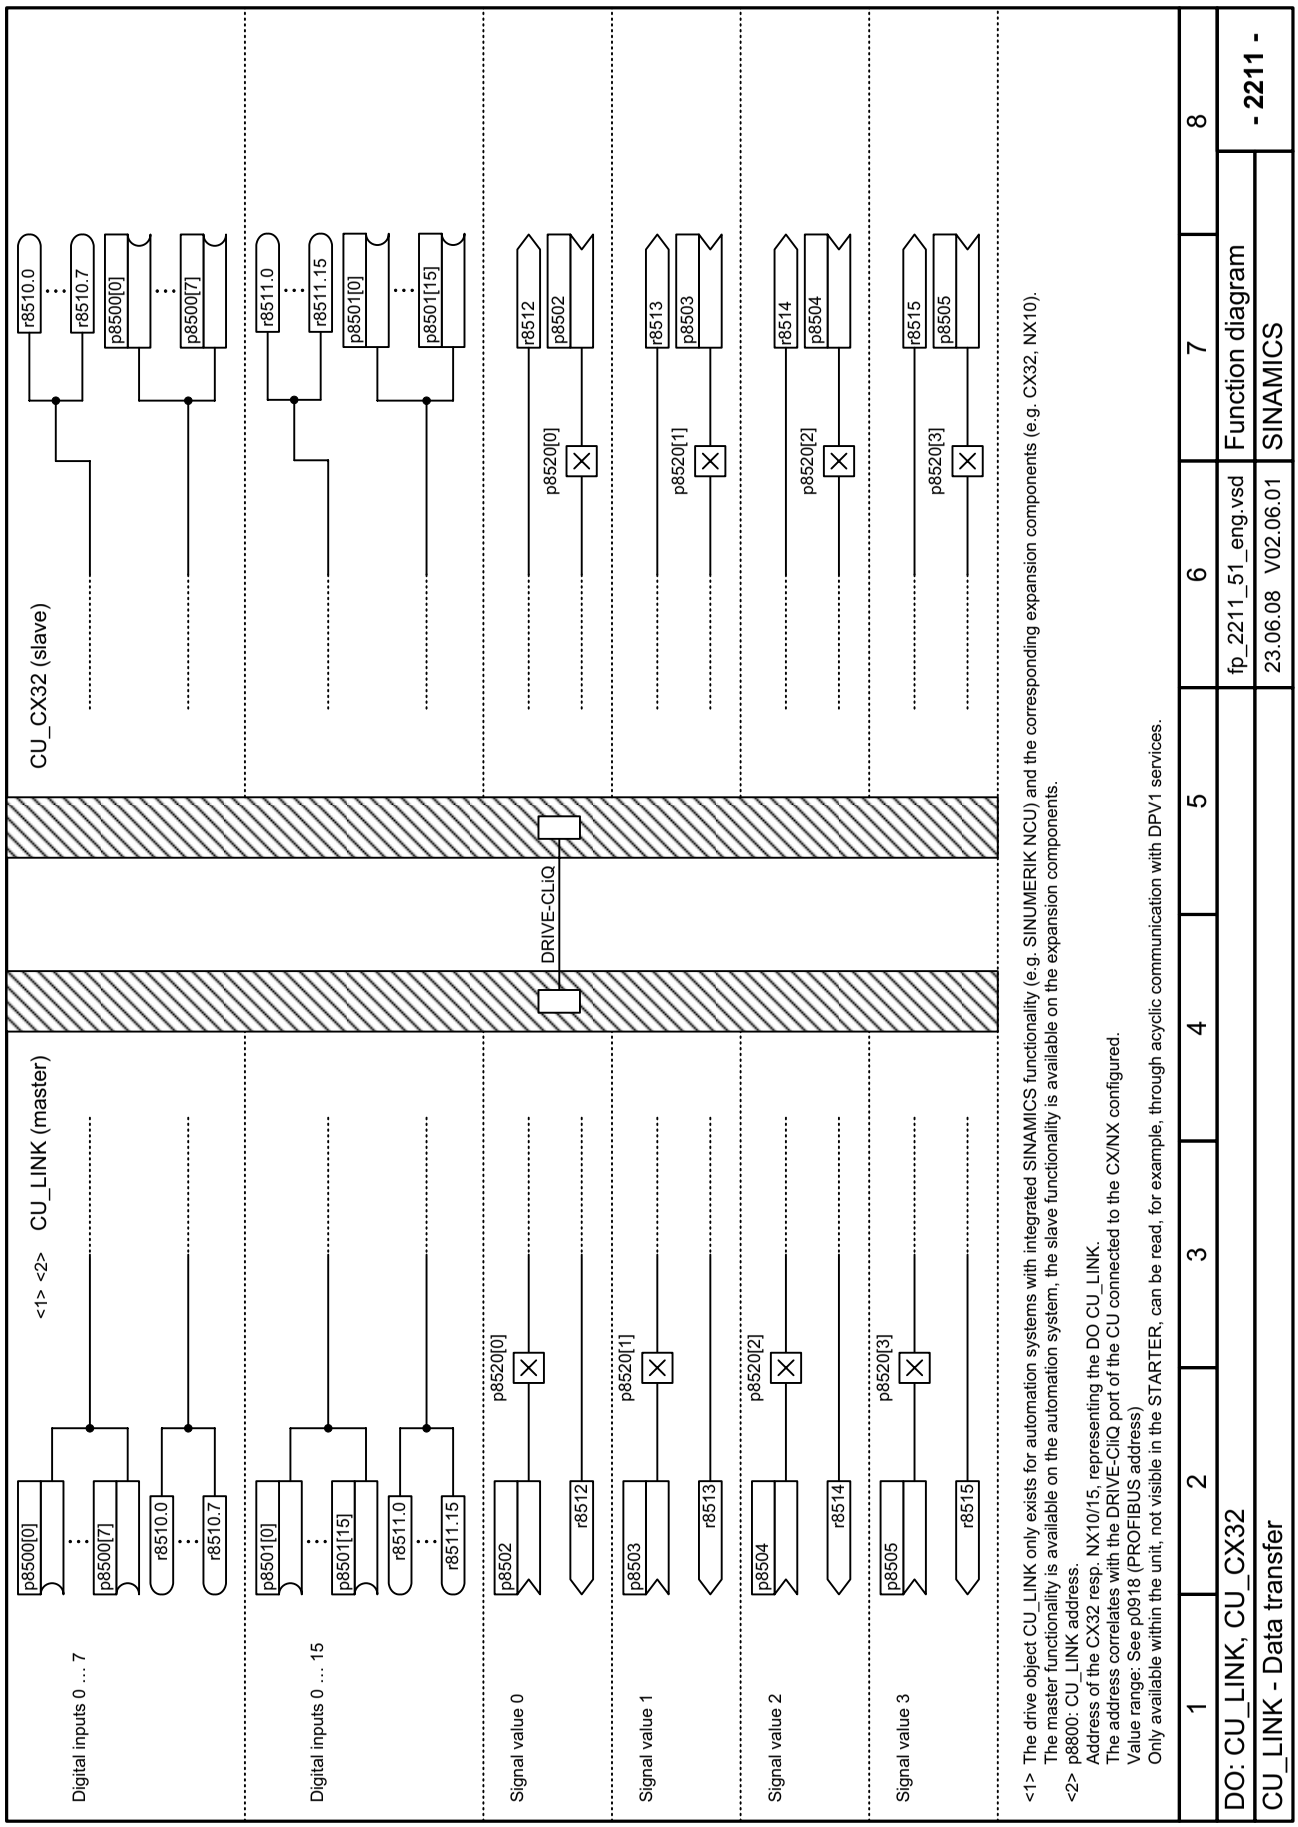
2.6 CU_LINK

Function diagrams



<1> The drive object CU_LINK only exists for automation systems with integrated SINAMICS functionality (e.g. SINUMERIK NCU) and the corresponding expansion components (e.g. CX32, NX10).
The master functionality is available on the automation system, the slave functionality is available on the expansion components.
<2> p8800: CU_LINK address.
Address of the CX32 resp. NX10/15, representing the DO CU_LINK.
The address correlates with the DRIVE-CliQ port of the CU connected to the CX/NX configured.
Value range: See p0918 (PROFIBUS address)
Only available within the unit, not visible in the STARTER, can be read, for example, through acyclic communication with DPV1 services.

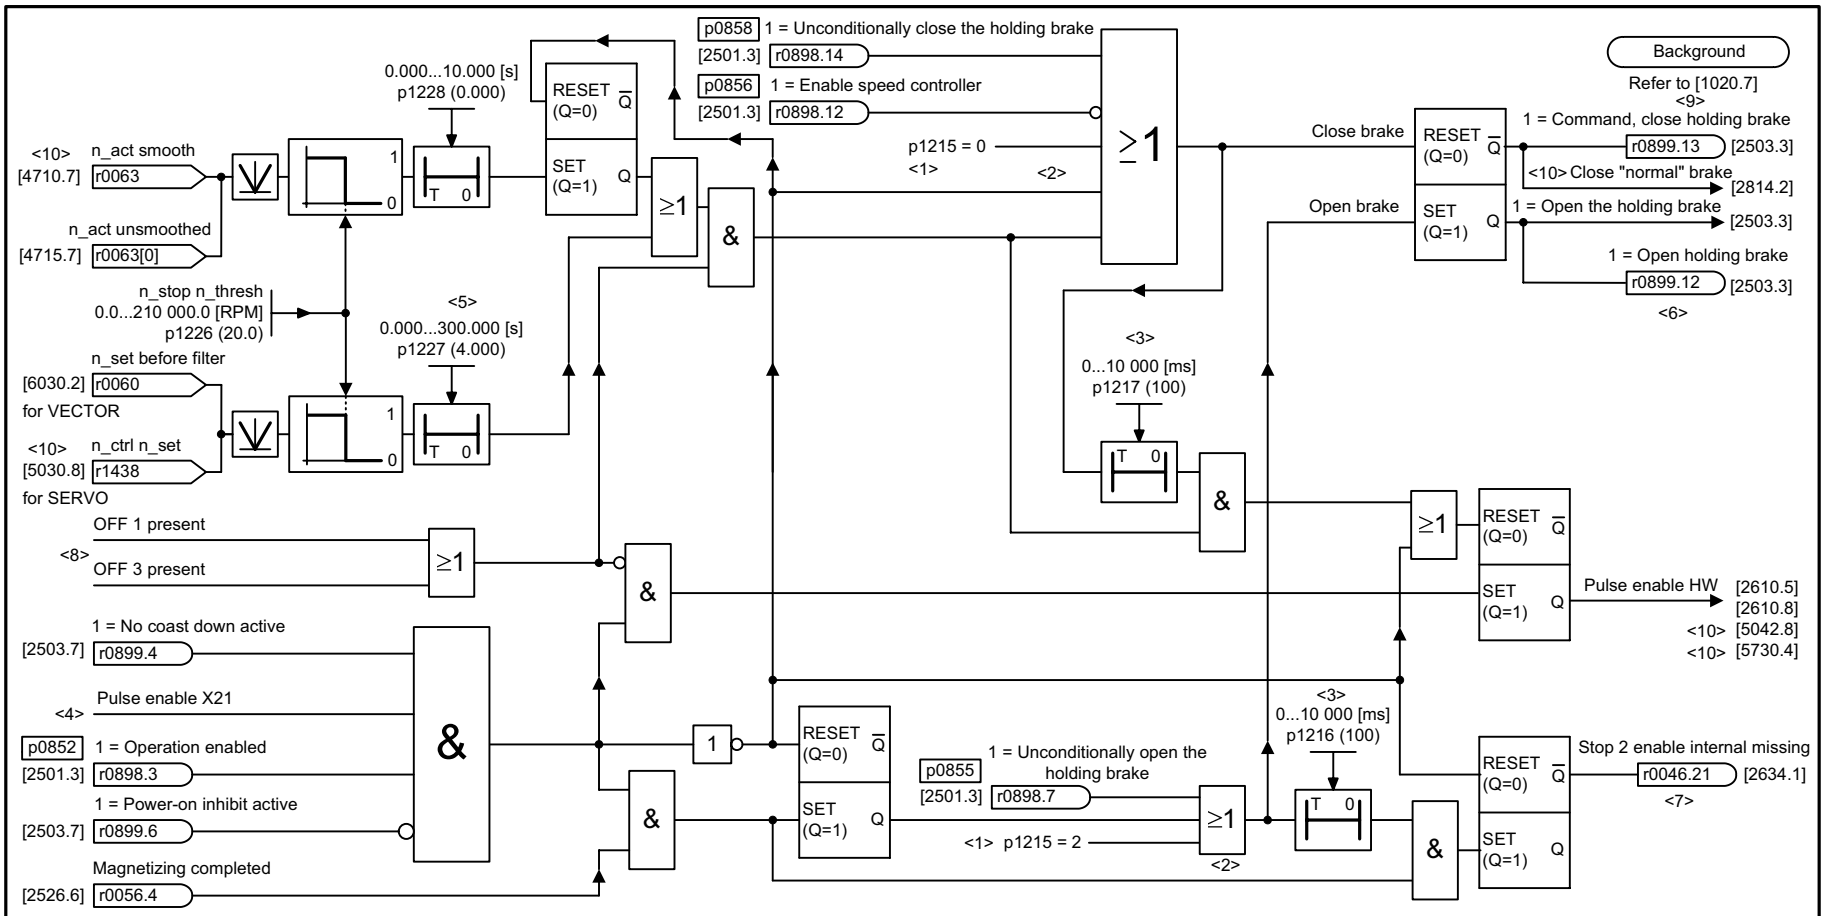
2.11 Braking control

Function diagrams

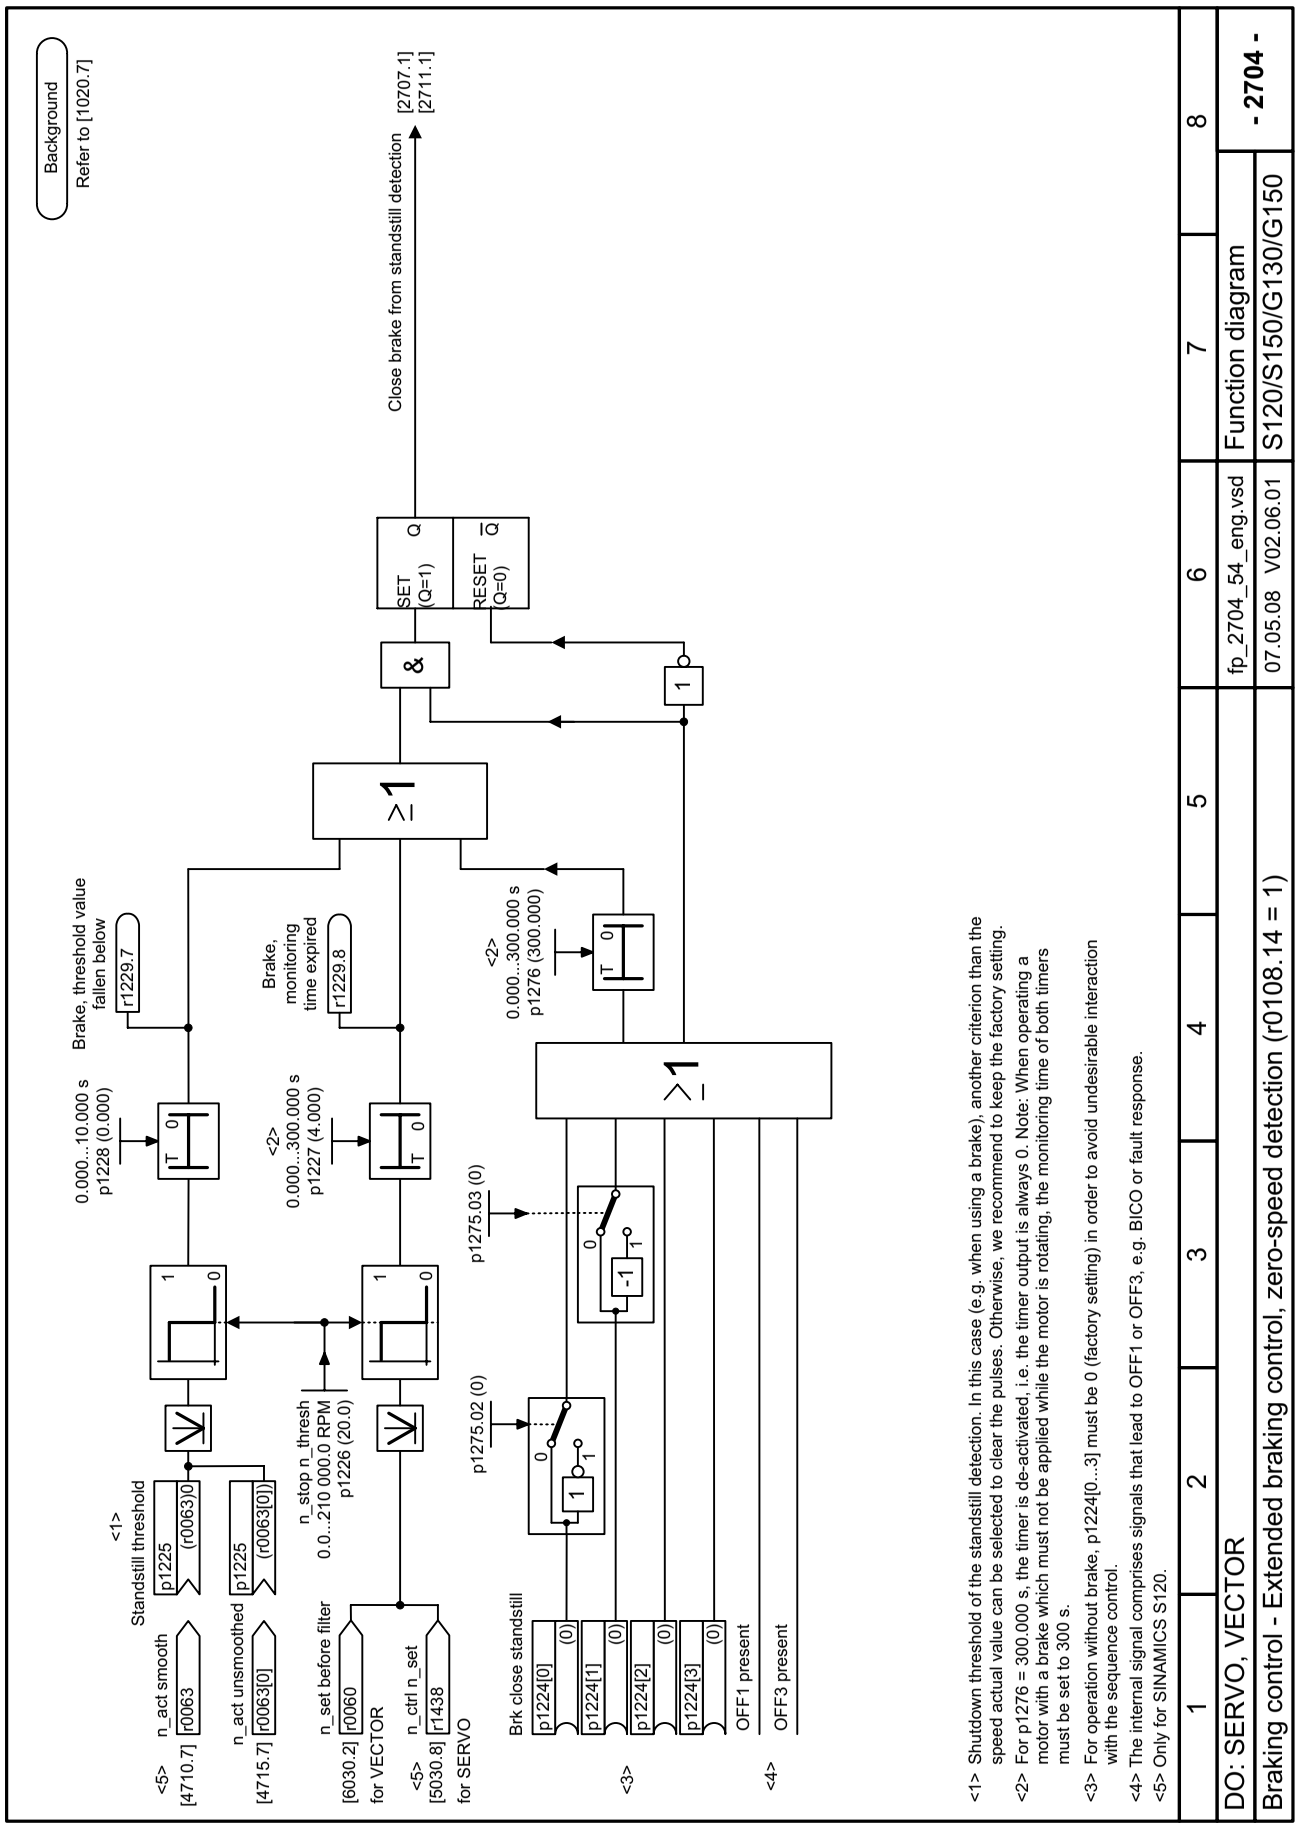


<1> Motor holding brake configuration (p1215)
0 = No motor holding brake being used.
1 = Motor holding brake acc. to sequence control.
2 = Motor holding brake always released.
3 = Motor holding brake like sequence control, connection via BICO.
<2> Priority assignment (high -> low): p1215, p0858, p0855, p0856, sequence control.
<3> If p1215 = 0, 2 -> t = 0 ms. <10>
<4> Only if Safety Integrated is active (Double Motor Module: X22, Chassis: X41).
<5> For p1227 = 300 s, the monitoring function is deactivated.
<6> If an external motor holding brake is used, p1215 should be set to 3 and r0899.12 should be interconnected as control signal.
<7> r0046.21 = 0, as long as r0046.0 = 1 (OFF1 enable missing or power-on inhibit).
r0046.21 = 1, if p0858 = 1 or p0856 = 0.
The signal generation is shown simplified.
<8> The internal signal includes signals that lead to OFF1 or OFF3 (e. g. BICO or fault response).
<9> If the brake is permanently applied or released (p0855, p0858 or p1215), the drive does not wait while the brake is released or applied.
<10> Only for SINAMICS S120.

Note: Braking signal diagnostic evaluation (p1278) only applies for SBC (Safe Brake Control) (controls the Safe Brake Relay). <10>

1	2	3	4	5	6	7	8
DO: SERVO, VECTOR					fp_2701_54_eng.vsd	Function diagram	- 2701 -
Braking control - Basic braking control (r0108.14 = 0)					07.05.08 V02.06.01	S120/S150/G130/G150	

Figure 2-105 2701 – Basic braking control (r0108.14 = 0)



<1> Shutdown threshold of the standstill detection. In this case (e.g. when using a brake), another criterion than the speed actual value can be selected to clear the pulses. Otherwise, we recommend to keep the factory setting.
<2> For p1276 = 300.000 s, the timer is de-activated, i.e. the timer output is always 0. Note: When operating a motor with a brake which must not be applied while the motor is rotating, the monitoring time of both timers must be set to 300 s.
<3> For operation without brake, p1224[0...3] must be 0 (factory setting) in order to avoid undesirable interaction with the sequence control.
<4> The internal signal comprises signals that lead to OFF1 or OFF3, e.g. BICO or fault response.
<5> Only for SINAMICS S120.

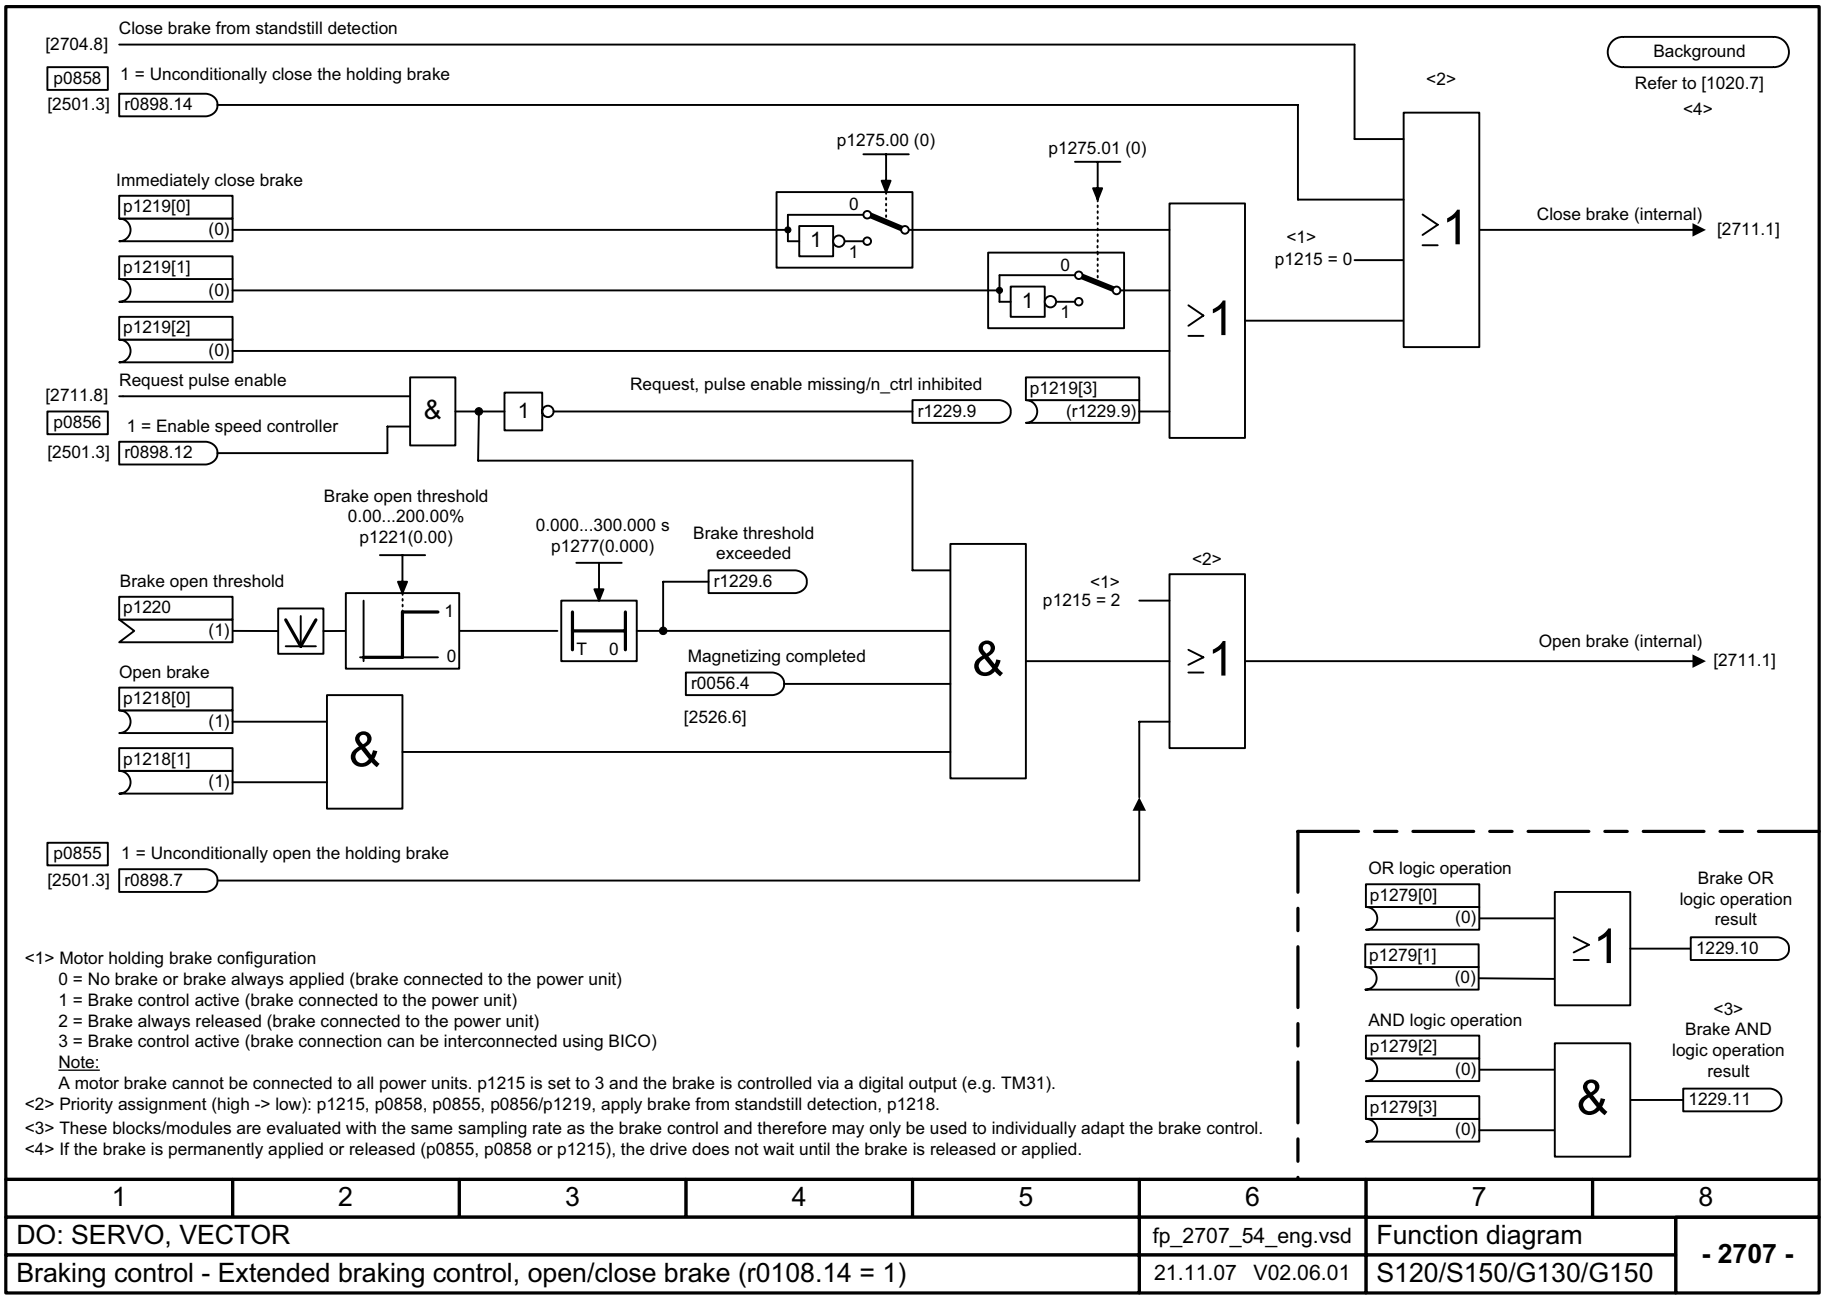
Braking control - Extended braking control, zero-speed detection (r0108.14 = 1)					07.05.08 V02.06.01	S120/S150/G130/G150	

Figure 2-106 2704 – Extended braking control, zero speed detection (r0108.14 = 1)



<1> Motor holding brake configuration
0 = No brake or brake always applied (brake connected to the power unit)
1 = Brake control active (brake connected to the power unit)
2 = Brake always released (brake connected to the power unit)
3 = Brake control active (brake connection can be interconnected using BICO)
Note:
A motor brake cannot be connected to all power units. p1215 is set to 3 and the brake is controlled via a digital output (e.g. TM31).
<2> Priority assignment (high -> low): p1215, p0858, p0855, p0856/p1219, apply brake from standstill detection, p1218.
<3> These blocks/modules are evaluated with the same sampling rate as the brake control and therefore may only be used to individually adapt the brake control.
<4> If the brake is permanently applied or released (p0855, p0858 or p1215), the drive does not wait until the brake is released or applied.

13	Reserved
14	Reserved
15	Reserved

<1> For p1145 > 0, ramp-function generator tracking is activated when the torque limiting responds. This means that the speed controller output only exceeds the torque limit by a deviation that can be set via p1145.

<2> For OFF1/OFF3, the ramp-function generator ramp is active. The ramp-function generator is set (SERVO: to the actual value, VECTOR: to the setpoint (r1170)) and stops the drive with the ramp-downtime (p1121 or p1135). STW1.4 (enable ramp-function generator) is effective while the drive is stopped via the ramp-function generator. Depending on the p1115, the basic ramp-function generator [3060] or the extended ramp-function generator [3070] is effective. When the function module "extended setpoint channel" (r0108.8 = 0) is not active for OFF1/OFF3, the down ramp of the basic ramp-function generator is effective (refer to n_set_4 on [3060.8]).

<3> The interpolator is only effective for clock-cycle synchronous PROFIBUS operation and sign-of-life received from the master (STW2.12 ... STW2.15).

<4> Behavior of the response ramp of the torque limiting:
p1145 = 0.0: No ramp-function generator tracking. The ramp-function generator ramp is no longer in the range of the speed actual value.
p1145 = 1.0: The ramp-function generator ramp remains as close as possible to the speed actual value.
p1145 > 1.0: The ramp-function generator ramp is steeper than for p1145 = 1.0 (higher "speed following error").

<5> For SERVO, the following applies: Only when the function module "extended setpoint channel" is activated (r0108.8 = 1).

<6> The value is displayed correctly only with r0899.2 = 1 (Operation enabled).

<7> Not at S150/G130/G150.

<101> To view the pre-assignment of the sampling times in p0115, refer to p0112.

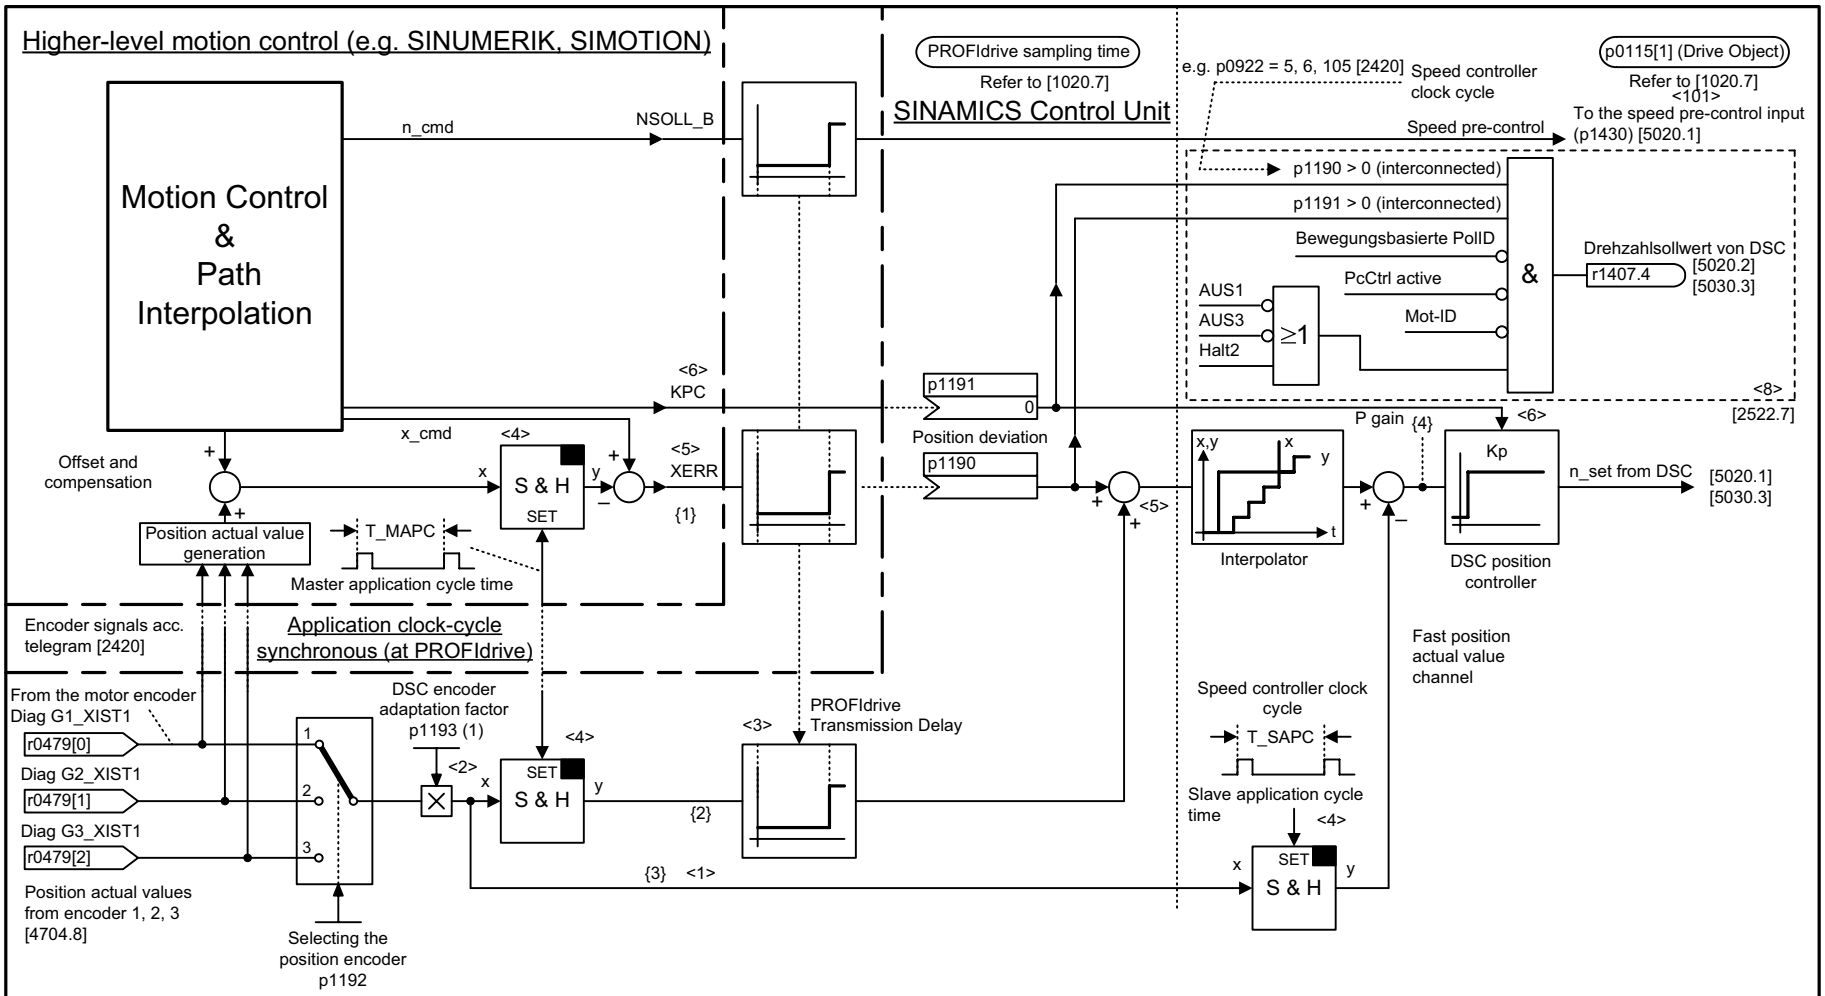
Setpoint channel - Ramp-function generator selection, status word, tracking					14.10.08 V02.06.01	SINAMICS	

Figure 2-132 3080 – Ramp-function generator selection, status word, tracking



<1> Principle of operation of Dynamic Servo Control (DSC): The feedback branch {2} completely compensates the feedback coupling branch {1} in respect of the position actual value sent from the drive. The fast actual value channel {3} allows for a high dynamic performance and high Kv factors.
<2> For the motor encoder (p1192 = 1) p1193 = 1 is effective.
When using encoder 2 or 3 (p1192 = 2, 3), p1193 corresponds to the "Increments per motor encoder revolution/increments of the encoder selected (2, 3) during one motor rotation" (considering gear ratios and also different encoder lines and fine resolutions).
<3> The deadtime for the PROFIdrive data transfer is set automatically.
<4> Sample & Hold element; refer to [1021].
<5> The position deviation must be referred to the increments of the motor including the fine resolution.
<6> Normalization of KPC: If signal {4} = 1 motor revolution and KPC = 1, then "n_set from DSC" = 0.001 motor revolutions/s.
<7> Clock-synchronous operation must be active for DSC.
<8> Only for SINAMICS S120.
<101> To view the pre-assignment of the sampling times in p0115, refer to p0112.

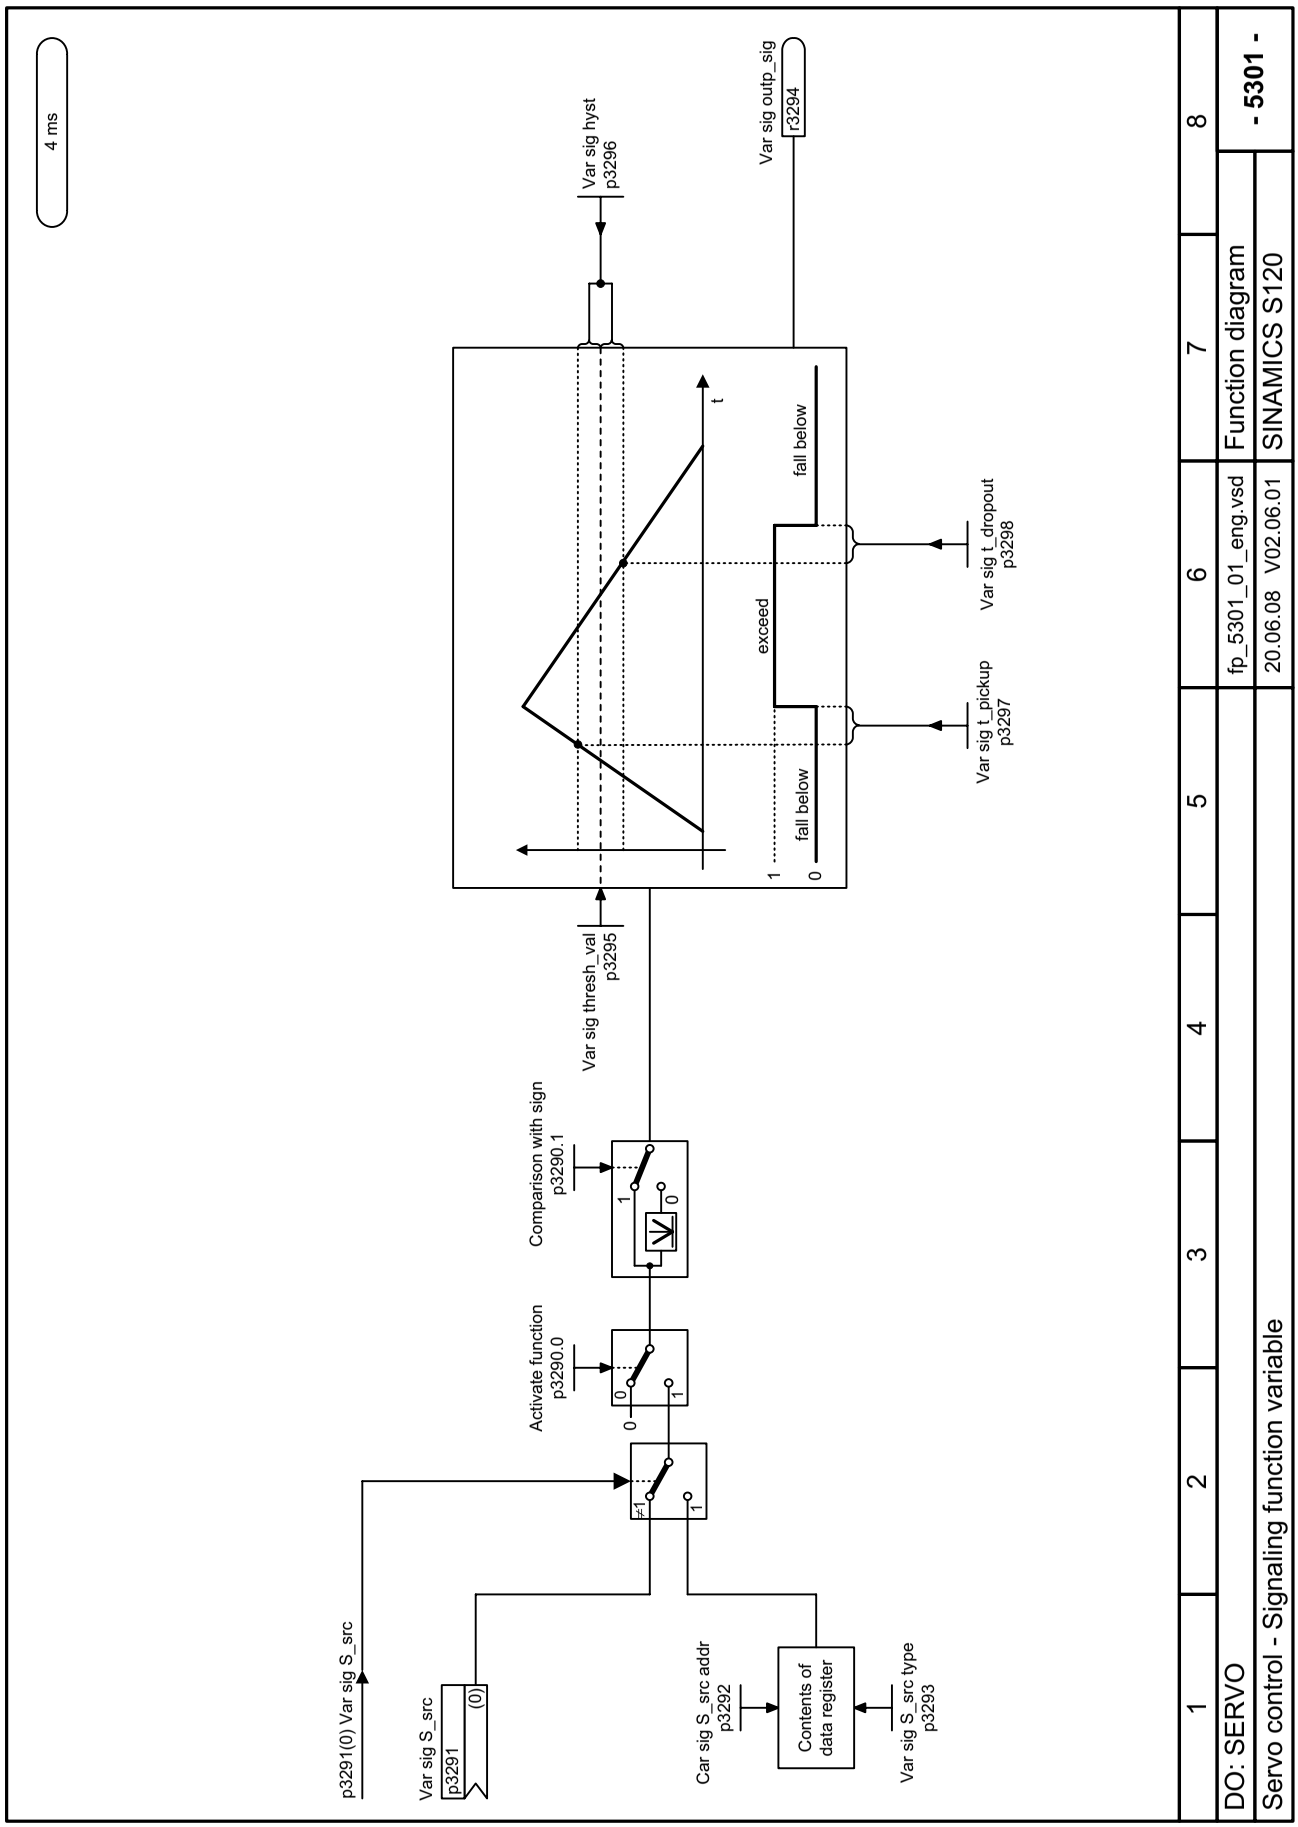

Figure 2-170 5301 – Variable signaling function

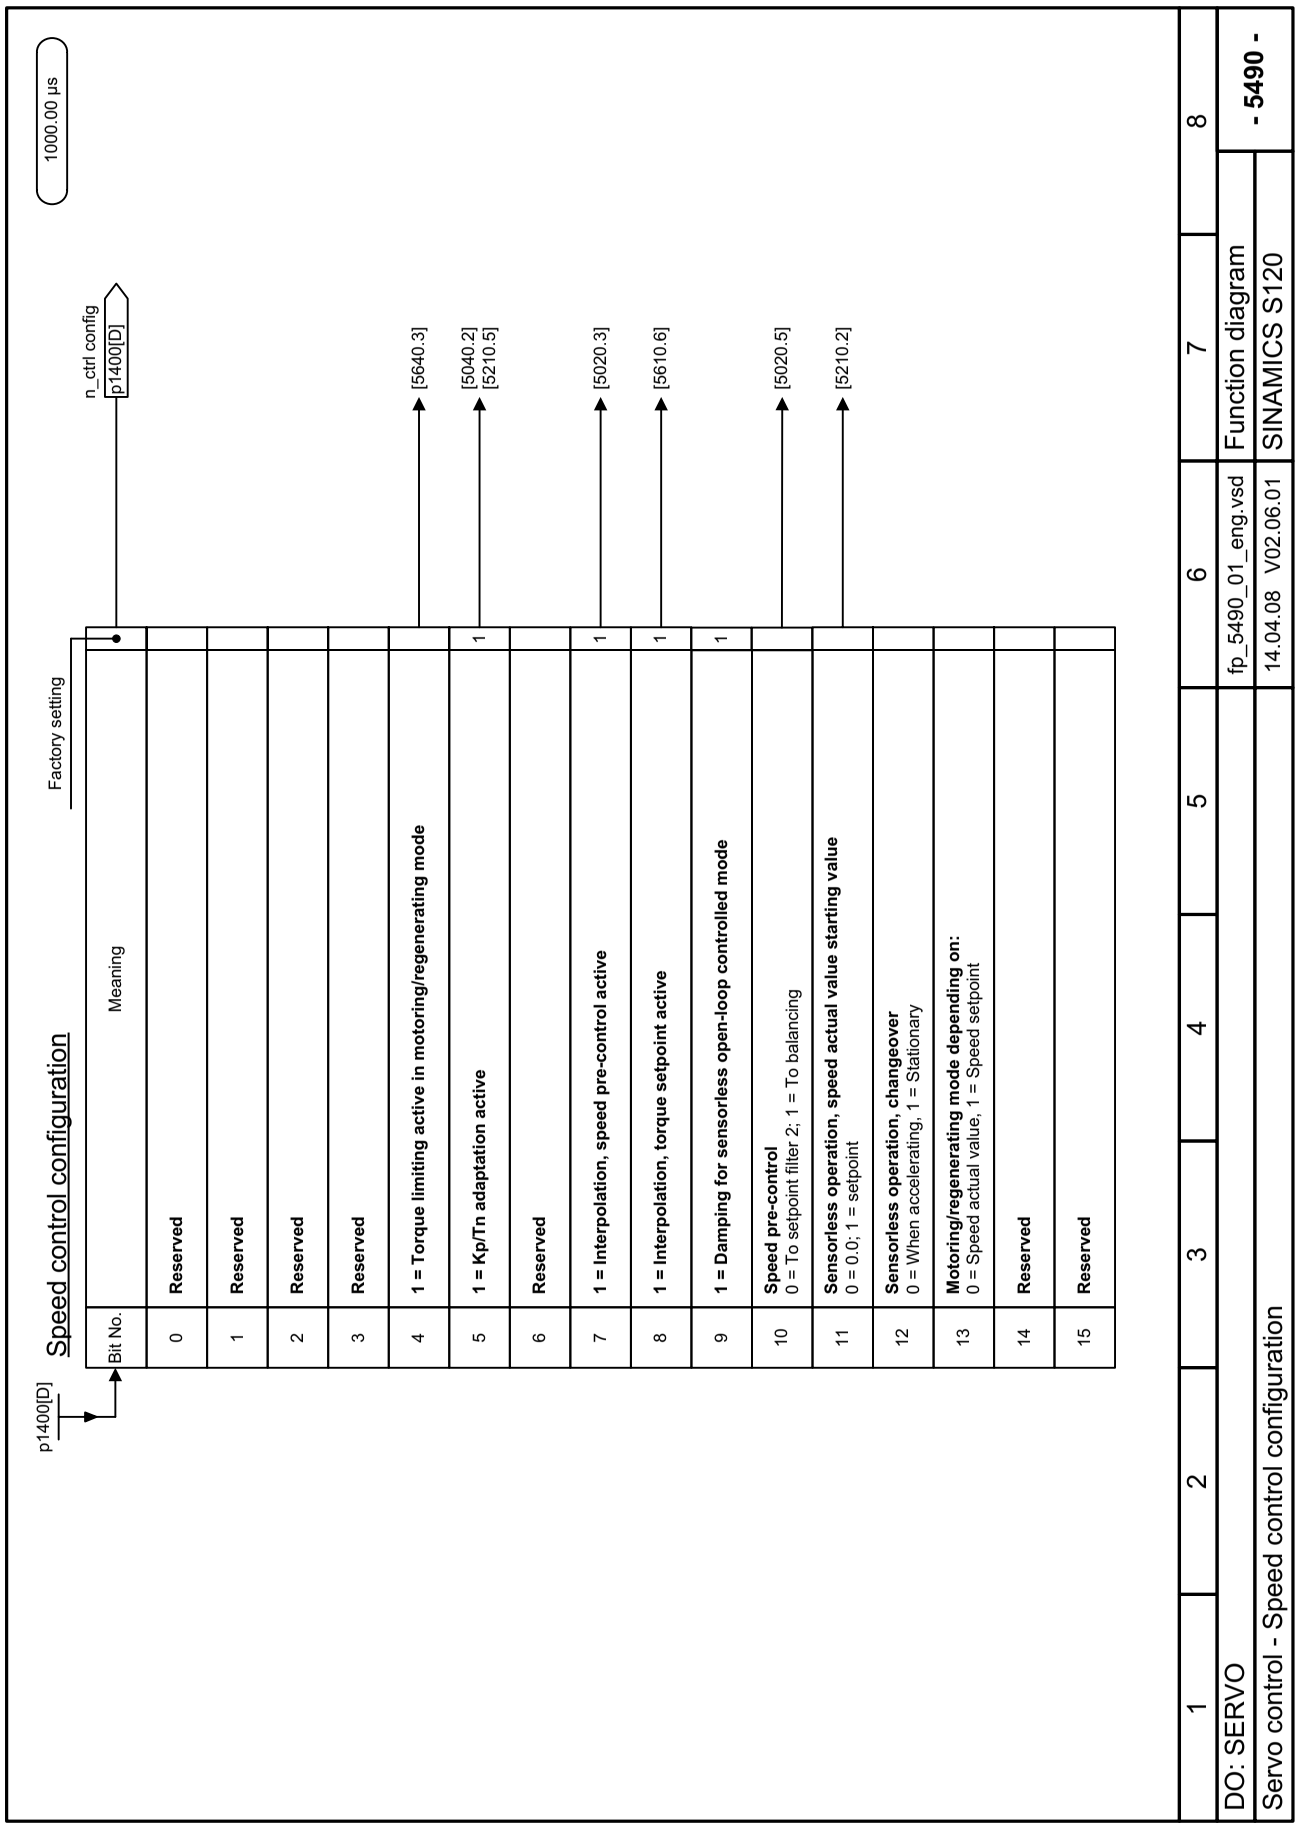

Figure 2-171 5490 – Speed control configuration

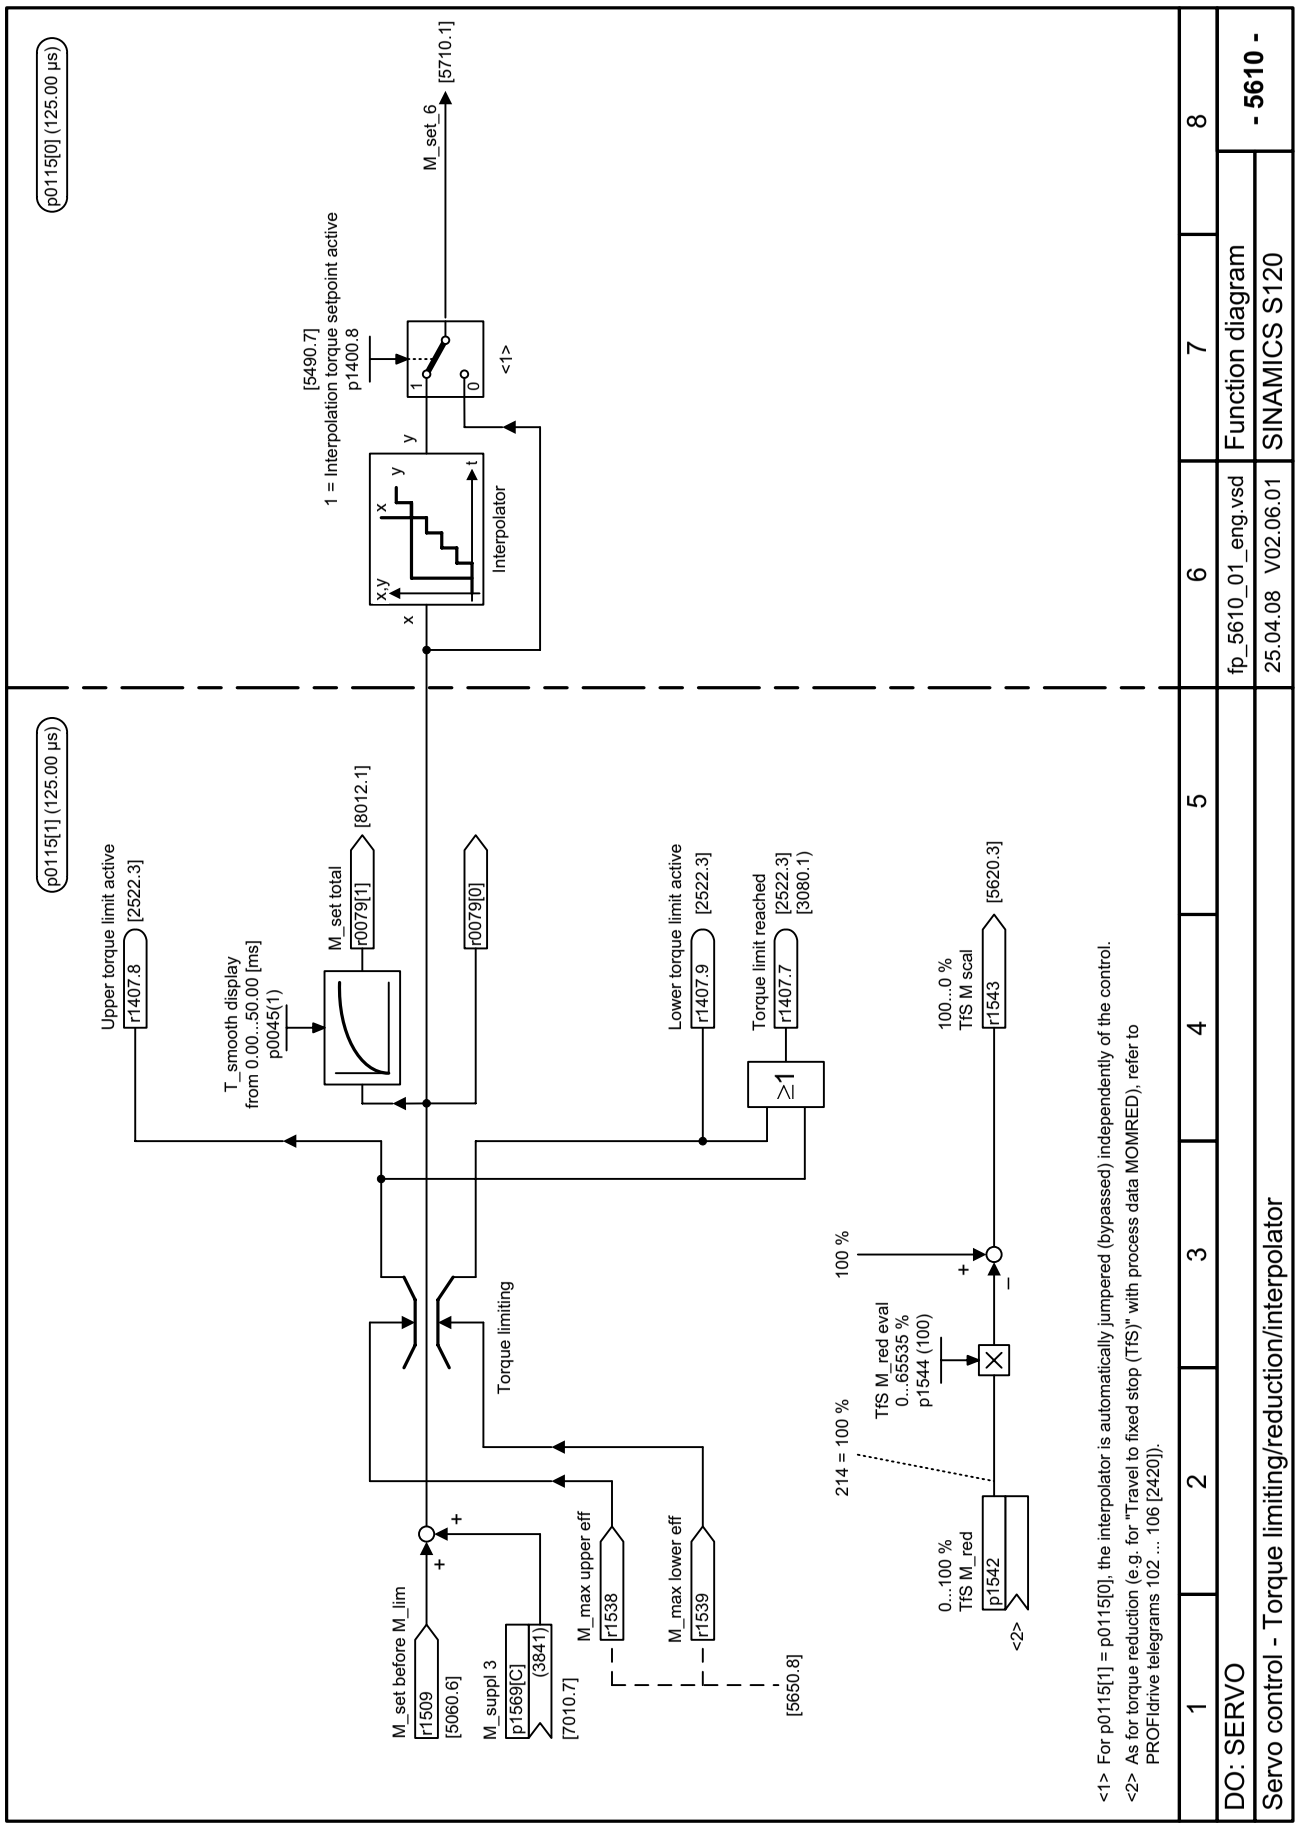

Figure 2-172 5610 – Torque limiting/reduction/interpolator

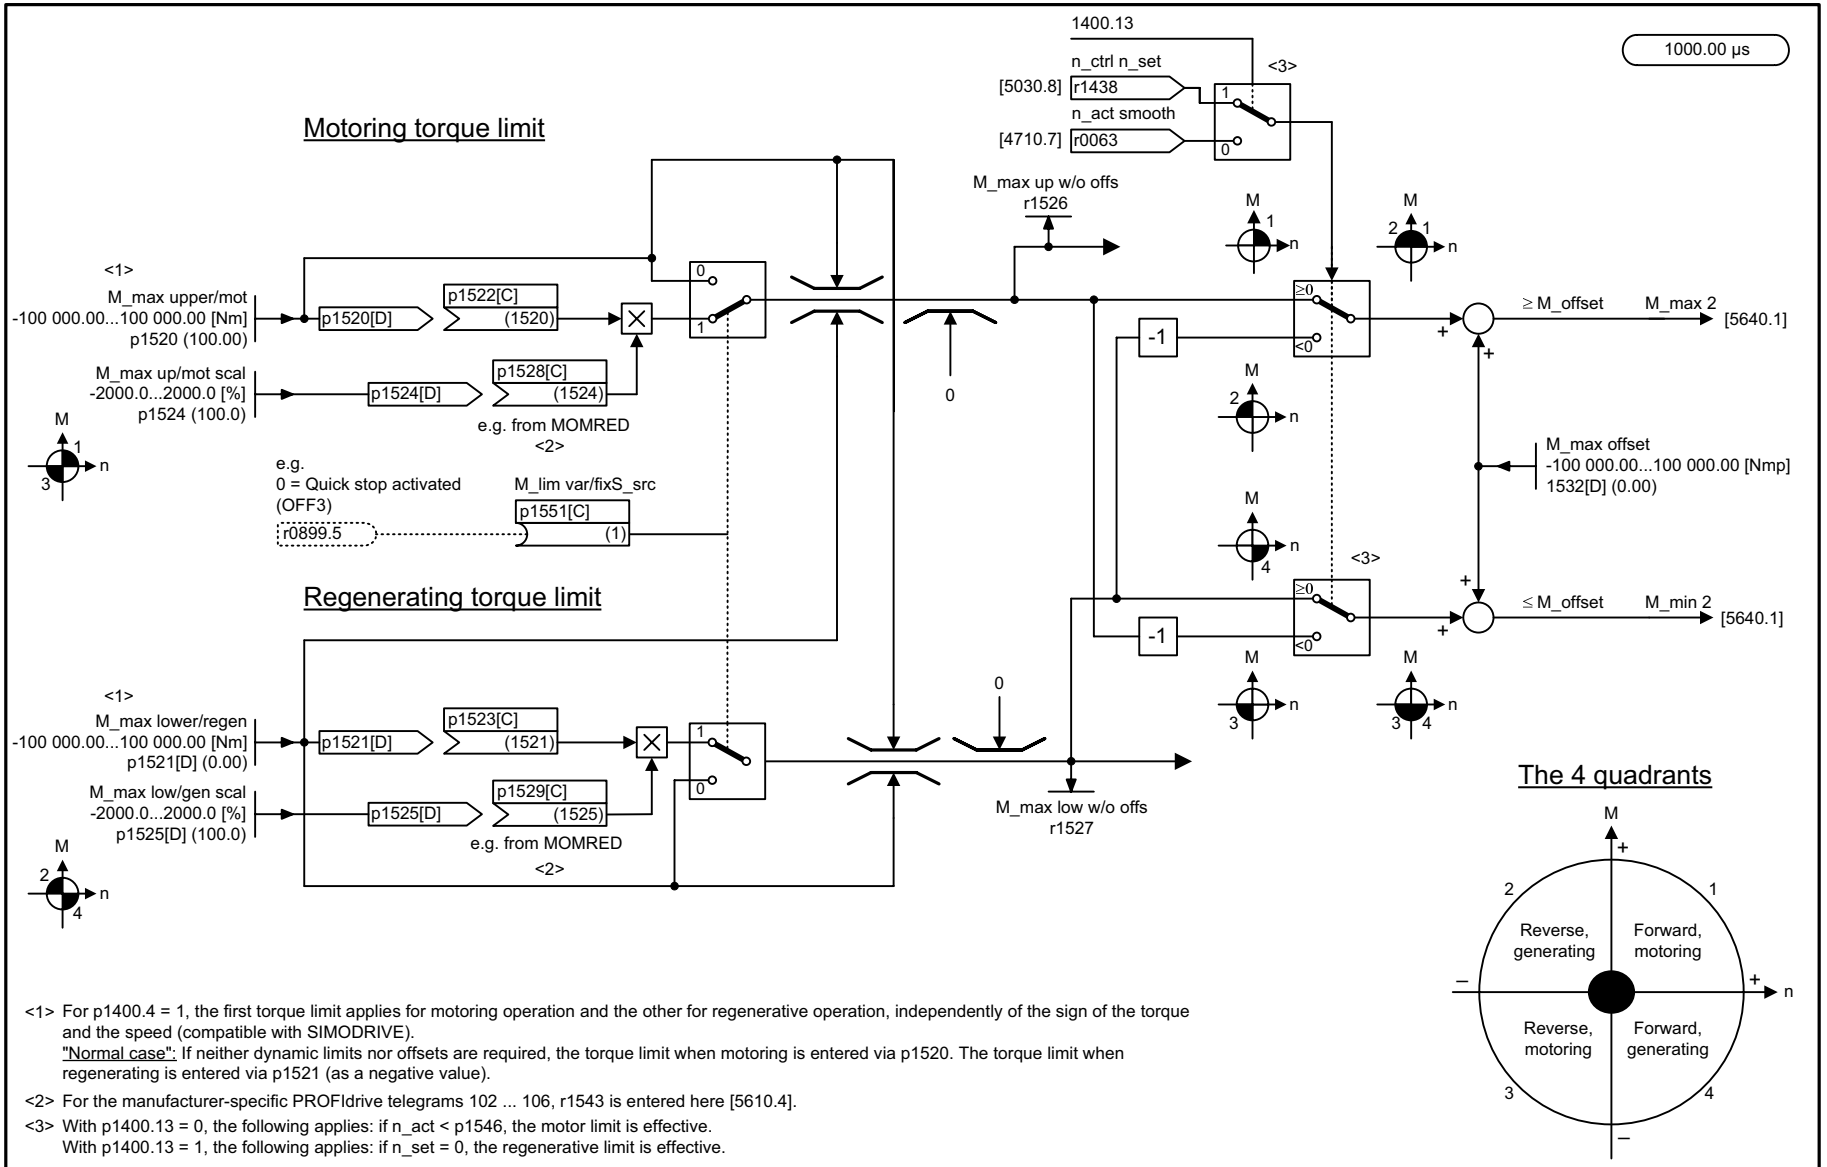


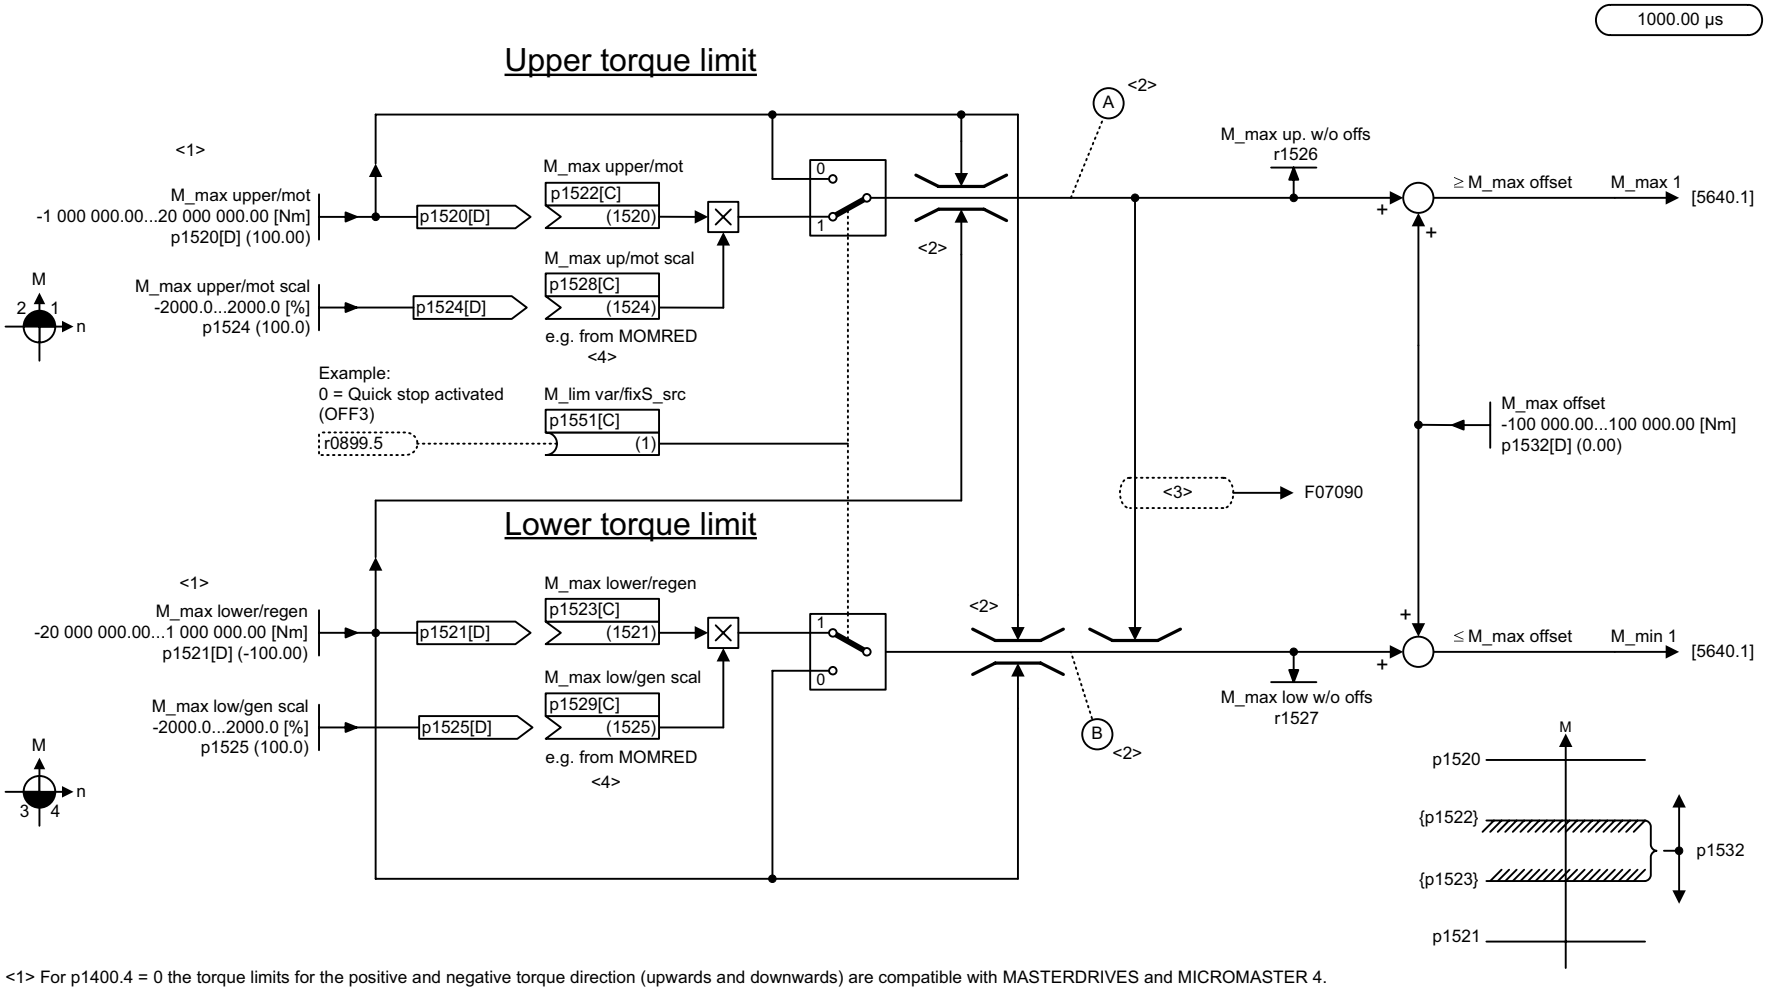
<1> For p1400.4 = 1, the first torque limit applies for motoring operation and the other for regenerative operation, independently of the sign of the torque and the speed (compatible with SIMODRIVE).
"Normal case": If neither dynamic limits nor offsets are required, the torque limit when motoring is entered via p1520. The torque limit when regenerating is entered via p1521 (as a negative value).

<2> For the manufacturer-specific PROFIdrive telegrams 102 ... 106, r1543 is entered here [5610.4].

<3> With p1400.13 = 0, the following applies: if n_act < p1546, the motor limit is effective.
With p1400.13 = 1, the following applies: if n_set = 0, the regenerative limit is effective.

1	2	3	4	5	6	7	8
DO: SERVO					fp_5620_01_eng.vsd	Function diagram	- 5620 -
Servo control - Motoring/regenerating torque limit					07.05.08 V02.06.01	SINAMICS S120	

Figure 2-173 5620 – Motor/generator torque limit



<1> For p1400.4 = 0 the torque limits for the positive and negative torque direction (upwards and downwards) are compatible with MASTERDRIVES and MICROMASTER 4.
"Normal case": If neither dynamic limits nor offsets are required, the upper torque limit is entered via p1520 and the lower via p1521 (as a negative value).

<2> Danger: Negative values at (A) or positive values at (B) represent a minimum torque for the other torque direction and can cause the motor to accelerate uncontrollably.

<3> The limiter ensure that the limits do not mutually "overtake" one another. With (A) < (B), Fault F07090 is initiated, which can also be disabled.

<4> For the manufacturer-specific PROFIdrive telegrams 102 ... 106, r1543 is switched in here [5610.4].

Function diagrams

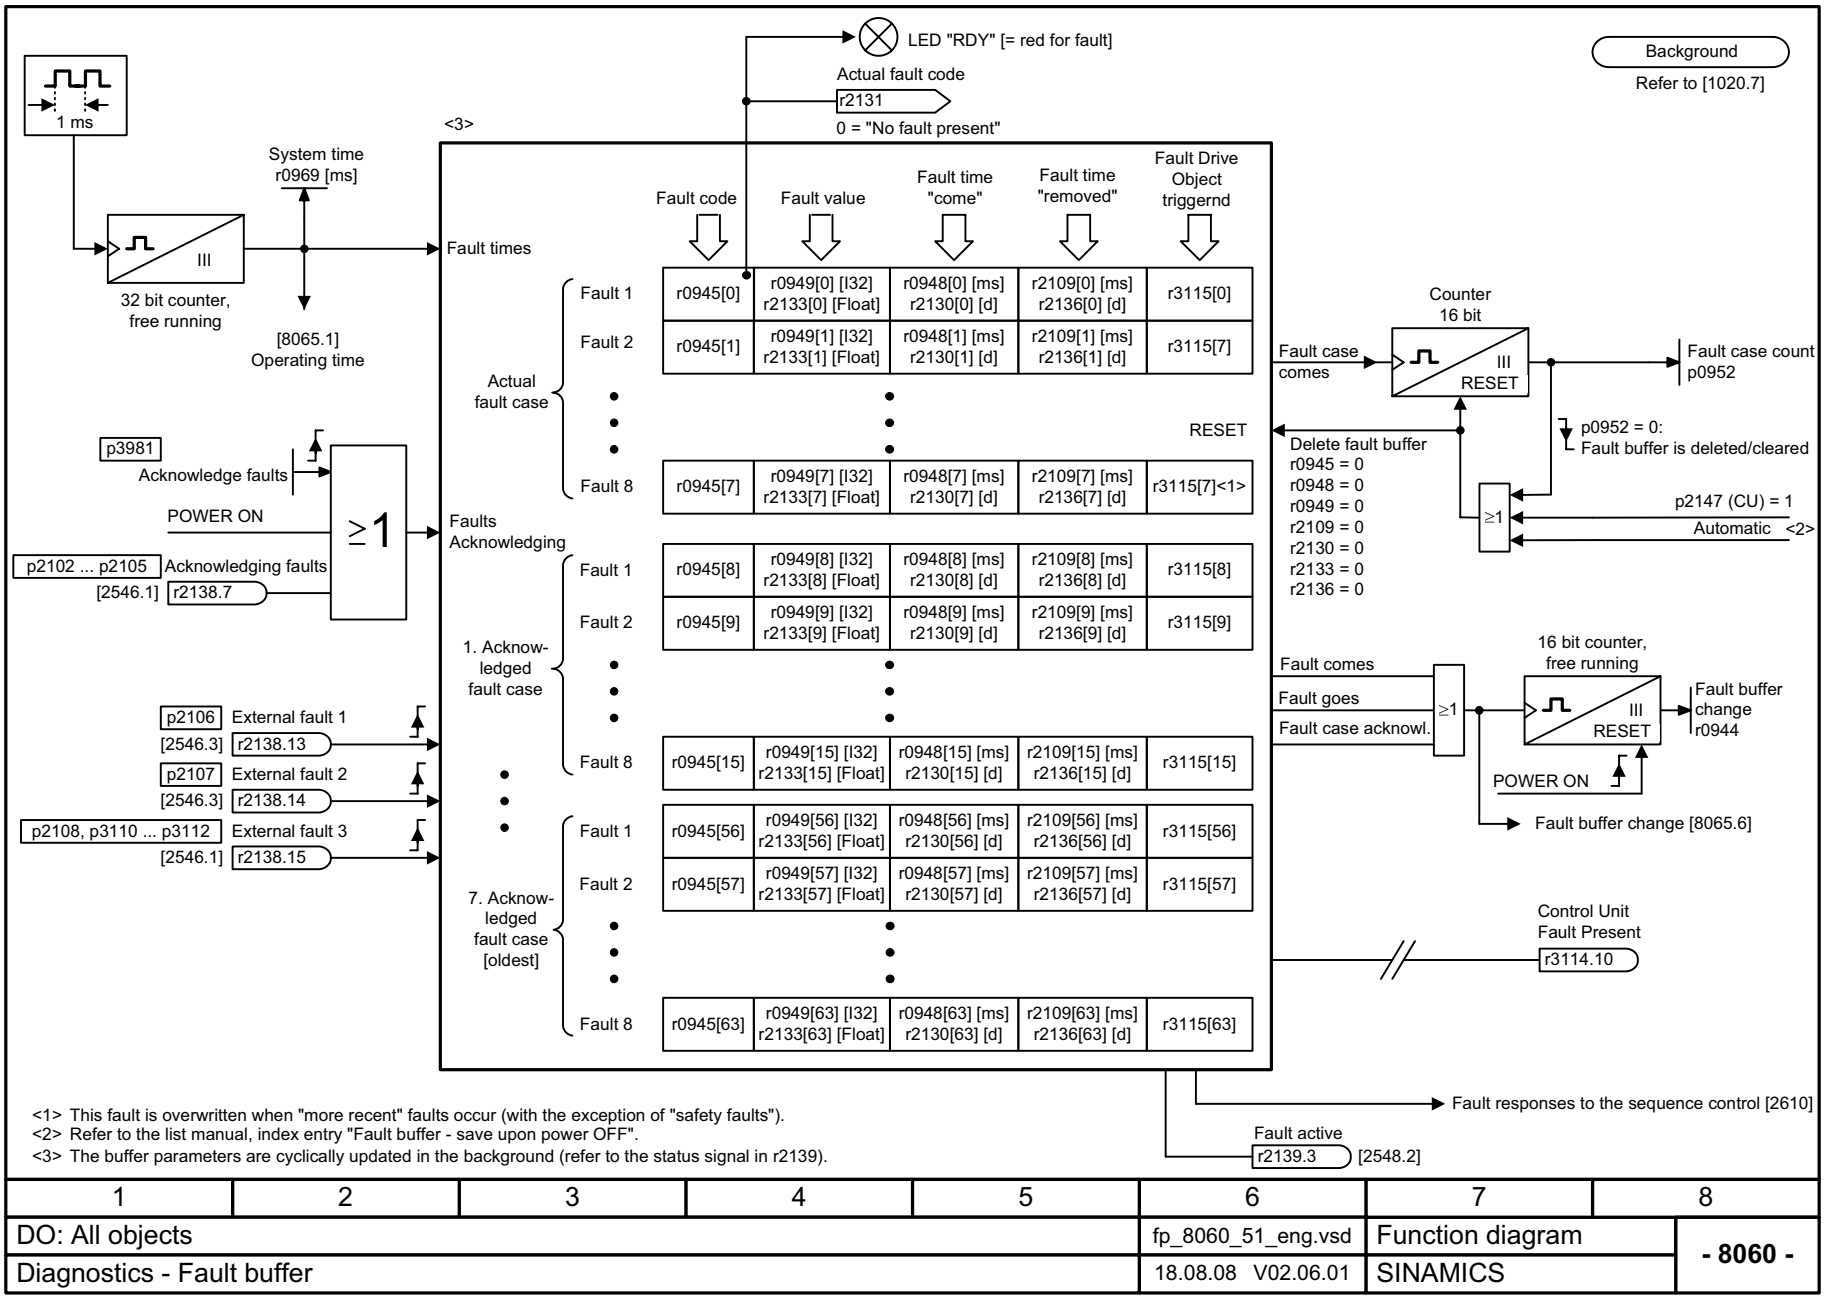

Figure 2-225 8060 – Fault buffer

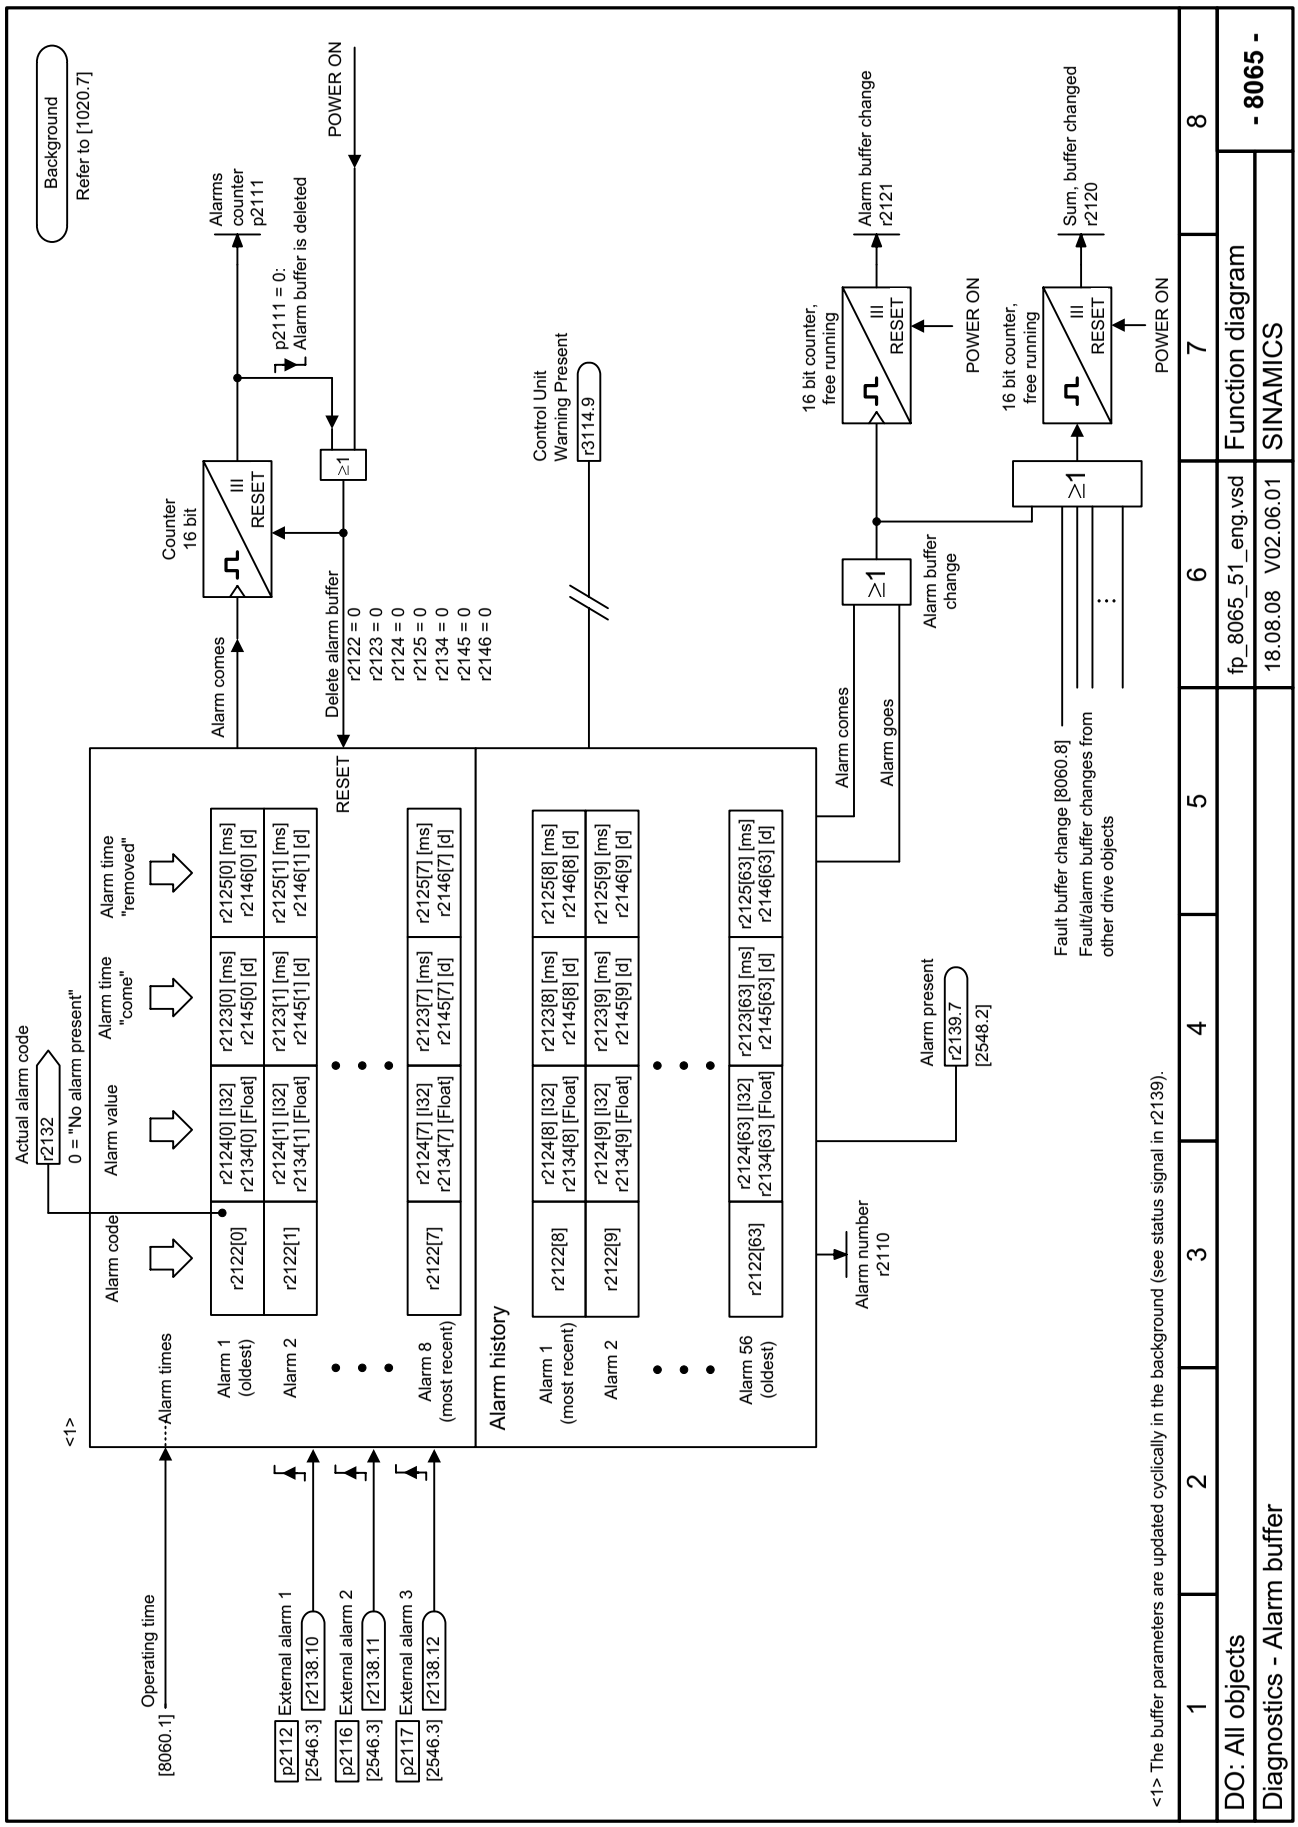

Figure 2-226 8065 – Alarm buffer

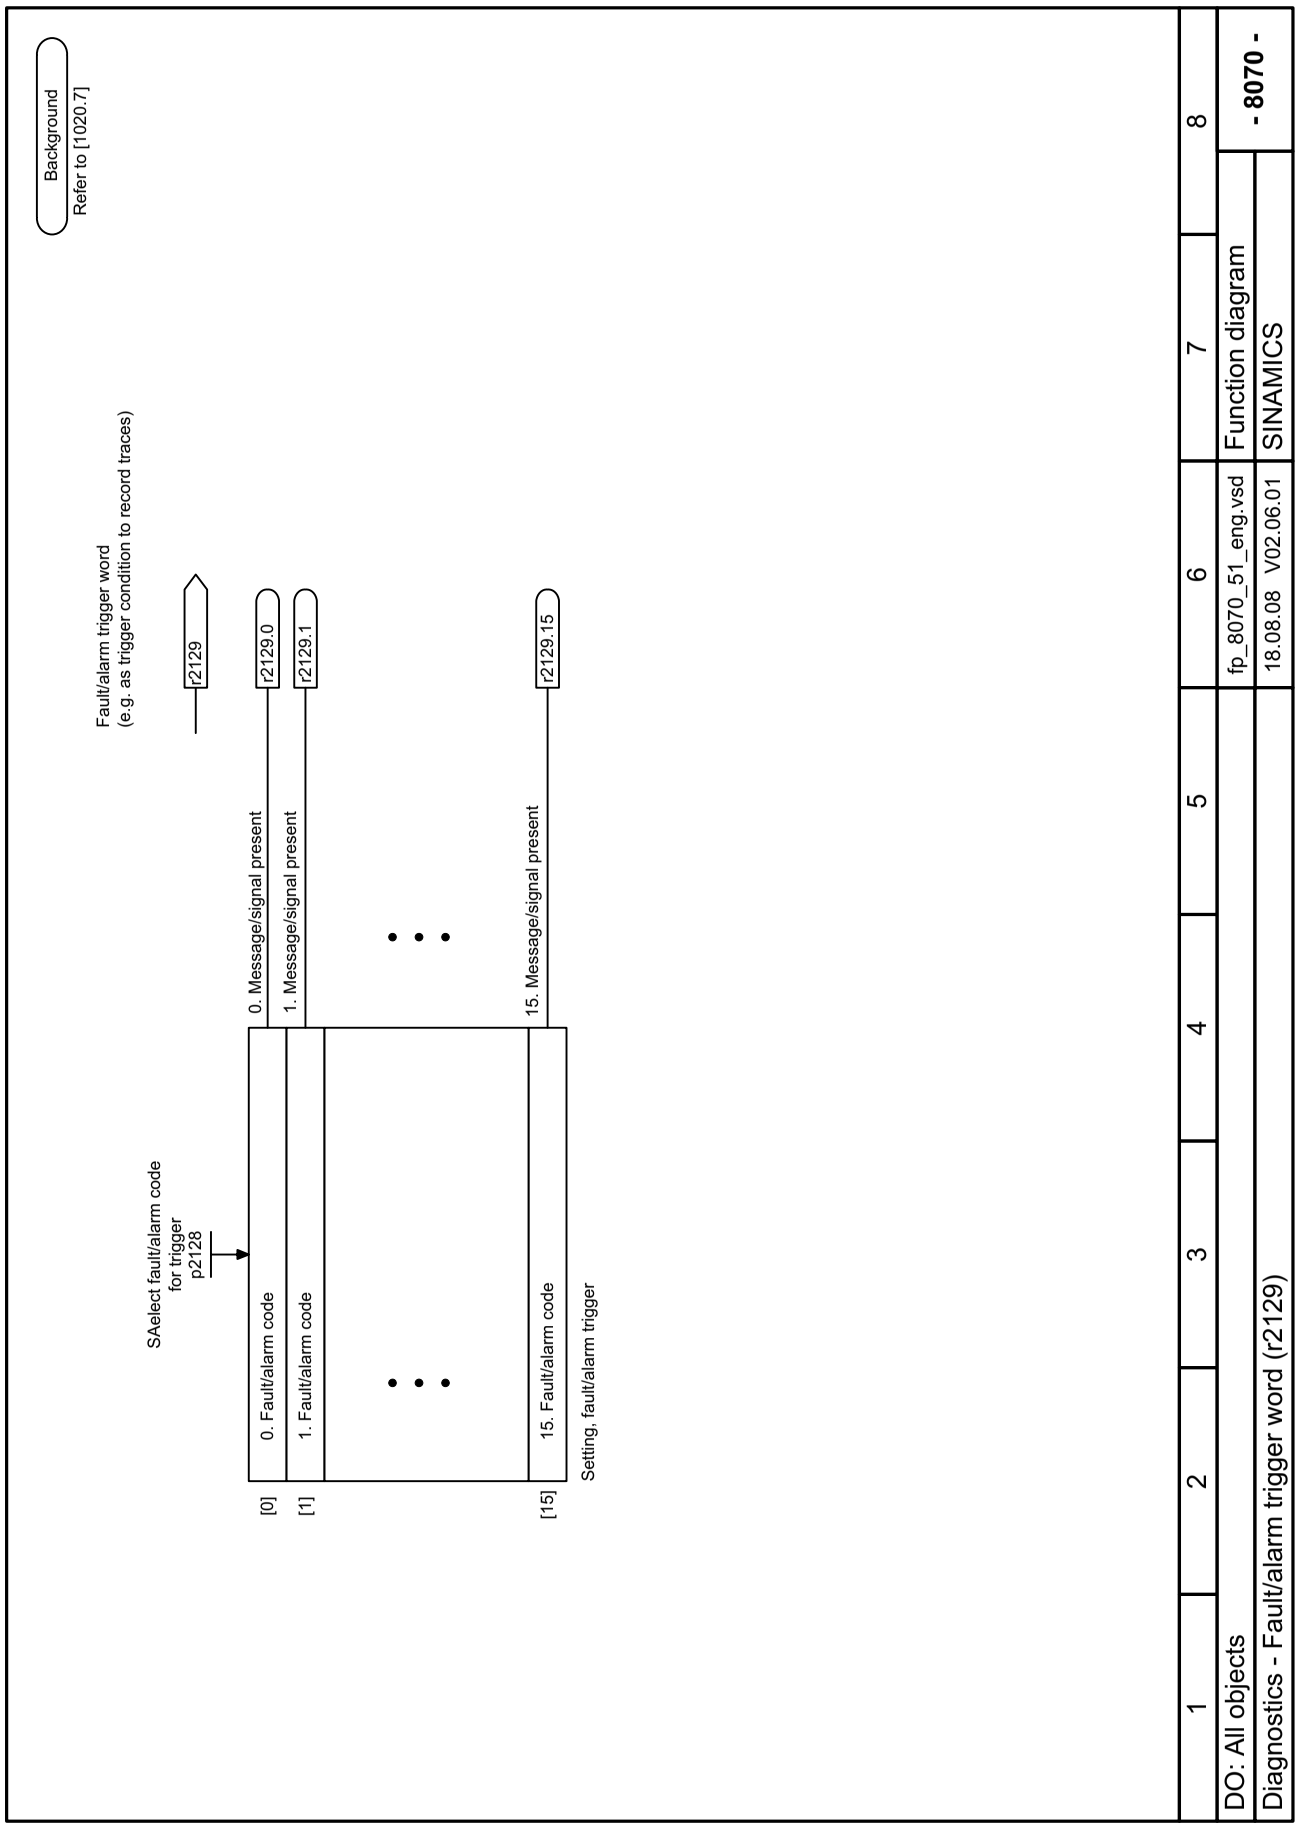

Figure 2-227 8070 – Fault/alarm trigger word (r2129)

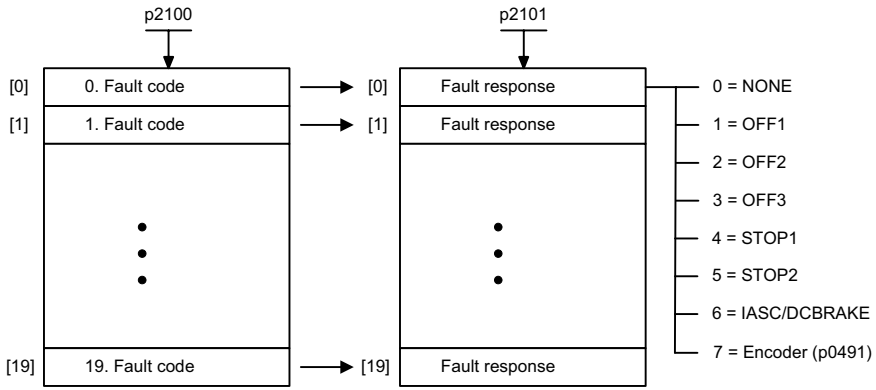
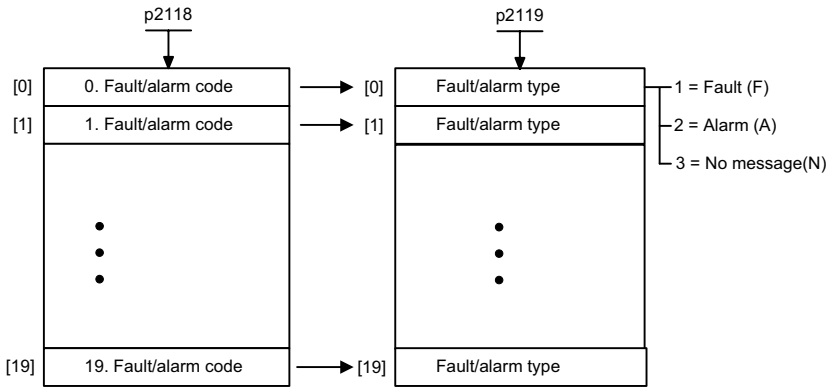
Background

Refer to [1020.7]

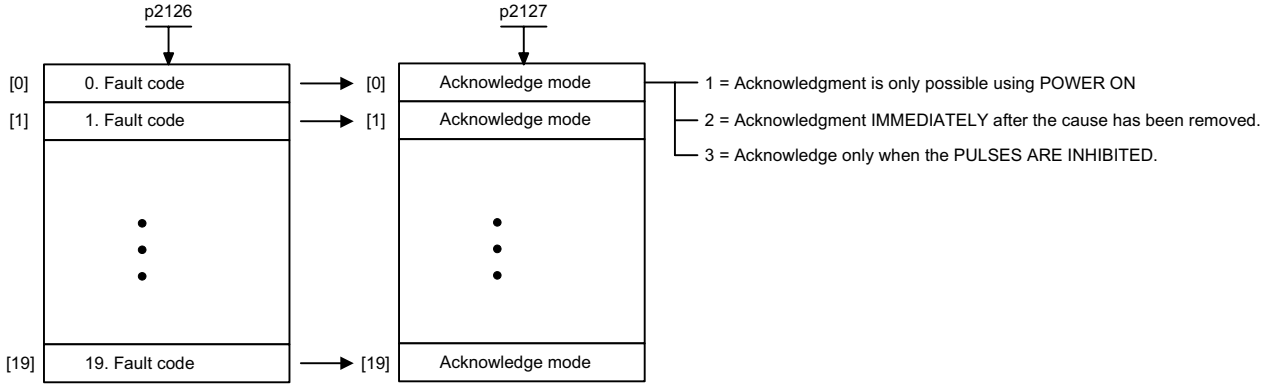
Changing the fault response for maximum 20 faults <1>



Changing the message type - fault <==> alarm for maximum 20 faults/alarms <1>



Changing the acknowledge mode for maximum 20 faults <1>



<1> The fault response, acknowledge mode and message type for all faults and alarms are set to meaningful default values in the factory setting.
Changes that may be required are only possible in specific value ranges specified by SIEMENS.
When the message type is changed, the supplementary information is tranferred from fault value r0949 to alarm value r2124 and vice versa.

Faults and alarms

3

Content

3.1 Overview of faults and alarms

3.1.1 General information about faults and alarms

Indicating faults and alarms

If a fault occurs, the drive indicates the fault and/or alarm.

The following methods for displaying faults and alarms are available:

- Display via the fault and alarm buffer with PROFIBUS.
- Display online via the commissioning software.

Differences between faults and alarms

The differences between faults and alarms are as follows:

Table 3-1 Differences between faults and alarms

Type	Description
Faults	What happens when a fault occurs? • The appropriate fault reaction is triggered. • Status signal ZSW1.3 is set. • The fault is entered in the fault buffer. How are faults eliminated? • Remove the original cause of the fault. • Acknowledge the fault.
Alarms	What happens when an alarm occurs? • Status signal ZSW1.7 is set. • The alarm is entered in the alarm buffer. How are alarms eliminated? • Alarms acknowledge themselves. If the cause of the alarm is no longer present, then they automatically reset themselves.

Fault reactions

The following fault reactions are defined:

Table 3-2 Fault reactions

List	PROFIdrive	Reaction	Description
NONE	-	None	No reaction when a fault occurs. **Note:** When the "Basic positioner" function module is activated (r0108.4 = 1) the following applies: When a fault occurs with fault reaction "NONE", an active traversing task is interrupted and a change is made into tracking mode until the fault has been rectified and acknowledged.
OFF1	ON/ OFF	Brake along the ramp generator deceleration ramp followed by pulse disable	**Closed-loop speed control (p1300 = 20, 21)** • n_set = 0 is input immediately to brake the drive along the deceleration ramp (p1121). • When zero speed is detected, the motor holding brake (if parameterized) is closed (p1215). The pulses are suppressed when the brake application time (p1217) expires. Zero speed is detected if the actual speed drops below the threshold in p1226 or if the monitoring time (p1227) started when speed setpoint <= speed threshold (p1226) has expired. **Closed-loop torque control (p1300 = 23)** • The following applies to closed-loop torque control mode: Reaction as for OFF2. • When changing over to closed-loop control using p1501, the following applies: There is no dedicated braking response. If the actual speed drops below the speed threshold (p1226), or the timer stage (p1227) has expired, the motor holding brake (if parameterized) is closed. The pulses are suppressed when the brake application time (p1217) expires.
OFF2	COAST STOP	Internal/external pulse disable	**Closed-loop speed and torque control** • Instantaneous pulse suppression, the drive "coasts" to a standstill. • The motor holding brake (if one is being used) is closed immediately. • Switching on inhibited is activated.

Table 3-2 Fault reactions, continued

List	PROFIdrive	Reaction	Description
OFF3	QUICK STOP	Brake along the OFF3 deceleration ramp followed by pulse disable	**Closed-loop speed control (p1300 = 20, 21)** • n_set = 0 is input immediately to brake the drive along the OFF3 deceleration ramp (p1135). • When zero speed is detected, the motor holding brake (if parameterized) is closed. The pulses are suppressed when the brake application time (p1217) expires. Zero speed is detected if the actual speed drops below the threshold in p1226 or if the monitoring time (p1227) started when speed setpoint <= speed threshold (p1226) has expired. • Switching on inhibited is activated. **Closed-loop torque control (p1300 = 23)** • Changeover to speed-controlled operation and other reactions as described for speed-controlled operation.
STOP1	-	-	In preparation
STOP2	-	n_set = 0	• n_set = 0 is input immediately to brake the drive along the OFF3 deceleration ramp (p1135). • The drive remains in closed-loop speed control mode.
IASC/ DCBRAKE	-	-	• In the case of a synchronous motor the following applies: When a fault occurs with this fault reaction, an internal armature short circuit is triggered. The conditions for p1231 = 4 must be observed. • In the case of an induction motor the following applies: When a fault occurs with this fault reaction, DC injection braking is triggered. The DC brake must have been put into operation (p1232, p1233, p1234).
ENCODER	-	Internal/external pulse disable (p0491)	The fault reaction ENCODER is applied as a function of the setting in p0491. Factory setting: p0491 = 0 --> Encoder fault causes OFF2 **Notice:** When changing p0491, it is imperative that the information in the description of this parameter is carefully observed.

Acknowledgement of faults

The list of faults and alarms specifies how to acknowledge each fault after the cause has been remedied.

Table 3-3 Acknowledgement of faults

Acknowledgment	Description
POWER ON	The fault is acknowledged by a POWER ON process (switch drive unit off and on again). **Note:** If this action has not eliminated the fault cause, the fault is displayed again immediately after power up.
IMMEDIATELY	Faults can be acknowledged at an individual drive object (Points 1 to 3) or at all drive objects (point 4) as follows: 1 Acknowledge by setting parameter: p3981 = 0 --> 1 2 Acknowledge via binector inputs: p2103 BI: 1. Acknowledge faults p2104 BI: 2. Acknowledge faults p2105 BI: 3. Acknowledge faults 3 Acknowledge using PROFIBUS control signal: STW1.7 = 0 --> 1 (edge) 4 Acknowledging all faults p2102 BI: Acknowledging all faults All of the faults at all of the drive objects of the drive system can be acknowledged using this binector input. **Note:** • These faults can also be acknowledged by a POWER ON operation. • If this action has not eliminated the fault cause, the fault is displayed again immediately after power up. • Safety Integrated faults The "Safe Stop" (SH) function must be deselected before these faults are acknowledged.
PULSE INHIBIT	The fault can only be acknowledged with a pulse inhibit (r0899.11 = 0). The same possibilities are available for acknowledging as described under acknowledge IMMEDIATELY.

Save fault buffer on POWER OFF

The contents of the fault buffer are saved to non-volatile storage when the Control Unit 320 (CU320) is powered down, i.e. the fault buffer history is still available when the unit is powered up again.

Note:

Preconditions:

- Firmware version 2.2 or higher.
- Control Unit 320 (CU320) with hardware version C or higher.
  The hardware version is shown on the rating plate or can be displayed online with the commissioning software (in Project Navigator under "Drive Unit" --> Configuration --> Version Overview).

If these conditions are not fulfilled, the contents of the fault buffer are deleted on every POWER ON.

The fault buffer of a drive object comprises the following parameters:

- r0945[0...63], r0947[0...63], r0948[0...63], r0949[0...63]
- r2109[0...63], r2130[0...63], r2133[0...63], r2136[0...63]

The fault buffer contents can be deleted manually as follows:

- Delete fault buffer for all drive objects:
  p2147 = 1 --> p2147 = 0 is automatically set after execution.
- Delete fault buffer for a specific drive object:
  p0952 = 0 --> The parameter belongs to the specified drive object.

The fault buffer contents are automatically deleted in response to the following events:

- Restore factory setting (p0009 = 30 and p0976 = 1).
- Download with modified structure (e.g. number of drive objects changed).
- Power-up after other parameter values have been loaded (e.g. p0976 = 10).
- Upgrade firmware to later version.

3.1.2 Explanation of the List of Faults and Alarms

The data in the following example has been chosen at random. A description can contain the information listed below. Some of the information is optional.

The list of faults and alarms (See Section 3.2) has the following layout:

- **Start of example** -

Axxxxx (F, N)	**Fault location (optional): Name**
Message value:	Component number: %1, cause: %2
Drive object:	List of objects.
Reaction:	NONE
Acknowledg-ment:	NONE
Cause:	Description of possible causes. Fault value (r0949, interpret format): or alarm value (r2124, interpret format): (optional) Information about fault or alarm values (optional).
Remedy:	Description of possible remedies.
Reaction to F:	A_INFEED: OFF2 (OFF1, NONE) SERVO: NONE (OFF1, OFF2, OFF3) VECTOR: NONE (OFF1, OFF2, OFF3)
Acknowledge-ment for F:	IMMEDIATELY (POWER ON)
Reaction to N:	NONE
Acknowledge-	

Axxxxx **Alarm xxxxx**
Axxxxx (F, N) **Alarm xxxxx (message type can be changed to F or N)**
Fxxxxx **Fault xxxxx**
Fxxxxx (A, N) **Fault xxxxx (report type can be changed to F or N)**
Nxxxxx **No message**
Nxxxxx (A) **No message (message type can be changed to A)**
Cxxxxx **Safety message (separate message buffer)**

A report comprises a letter followed by the relevant number.

The meaning of the letters is as follows:

- A means "Alarm"
- F means "Fault"
- N means "No Report" or "Internal Report"
- C means "Safety message"

The optional brackets indicate whether the type specified for this report can be changed and which report types can be adjusted via parameter (p2118, p2119).

Information about reaction and acknowledgement is specified independently for a report with adjustable report type (e.g. reaction to F, acknowledgement for F).

Note:

You can change the default properties of a fault or alarm by setting parameters.

References: /IH1/ SINAMICS S120 Commissioning Manual
Chapter "Diagnostics"

The list of faults and alarms (see Chapter 3.2) provide information referred to the properties of a message/report that have been set as standard. If the properties of a specific message/report are changed, then the appropriate information may have to be modified in this list.

Fault location (optional): Name

The fault location (optional), the name of the fault or alarm and the report number all serve to identify the report (e.g. with the commissioning software).

Message value:

The information provided under message value tells you about the composition of the fault/warning value.

Example:

Message value: Component number: %1, cause: %2

This fault value or warning value contains information about the component number and cause. The entries %1 and %2 are placeholders, which are filled appropriately in online operation with the commissioning software.

Drive object:

For each message (fault/alarm) it is specified in which drive object this message is present.

A message can belong to either one, several, or all drive objects.

Reaction: Default fault reaction (adjustable fault reaction)

Specifies the default reaction in the event of a fault.

The optional brackets indicate whether the default fault reactions can be changed and which fault reactions can be adjusted via parameters (p2100, p2101).

Note:

See Chapter 3.1.1

Acknowledgment: Default acknowledgement (adjustable acknowledgement)

Specifies the default method of fault acknowledgement after the cause has been eliminated.

The optional brackets indicate whether the default acknowledgement can be changed and which acknowledgement can be adjusted via parameter (p2126, p2127).

Note:

See Chapter 3.1.1

Cause:

Description of the possible causes of the fault/alarm A fault or alarm value is also specified as an option.

Fault value (r0949, format):

The fault value is entered in the fault buffer in r0949[0...63] and specifies additional, precise information about a fault.

Alarm value (r2124, format):

The alarm value specifies additional, precise information about an alarm.

The alarm value is entered in the alarm buffer in r2124[0...7] and specifies additional, precise information about an alarm.

Remedy:

Description of the potential methods for eliminating the cause of the active fault or alarm.

Alarm

In individual cases, the servicing and maintenance personnel are responsible for choosing a suitable method for eliminating the cause of faults.

3.1.3 Numerical ranges of faults and alarms

Note:

The following numerical ranges represent an overview for all faults and alarms in SINAMICS.

The faults and alarms for the product described in this List Manual are described in detail in Chapter 3.2.

Faults and alarms are organized into the following numerical ranges:

Table 3-4 Numerical ranges of faults and alarms

of	to	Range
1000	3999	Control Unit
4000	4999	Reserved
5000	5999	Power unit
6000	6899	Infeed
6900	6999	Braking Module
7000	7999	Drive
8000	8999	Option Board
9000	19999	Reserved
20000	29999	OEM
30000	30999	DRIVE-CLiQ component power unit
31000	31999	DRIVE-CLiQ component encoder 1
32000	32999	DRIVE-CLiQ component encoder 2 **Note:** Faults that occur are automatically output as alarm if the encoder is parameterized as direct measuring system and does not intervene in the motor control.
33000	33999	DRIVE-CLiQ component encoder 3 **Note:** Faults that occur are automatically output as alarm if the encoder is parameterized as direct measuring system and does not intervene in the motor control.
34000	34999	Voltage Sensing Module (VSM)
35000	35199	Terminal Module 54F (TM54F)
35200	35999	Terminal Module 31 (TM31)

Table 3-4 Numerical ranges of faults and alarms, continued

of	to	Range
40000	40999	Controller extension 32 (CX32)
41000	48999	Reserved
49000	49999	SINAMICS GM/SM/GL
50000	50499	Communication Board (COMM BOARD)
50500	59999	OEM Siemens
60000	65535	OEM external

3.2 List of faults and alarms

Product: SINAMICS S120/S150, Version: 2603400, Language: eng,
Objects: A_INF, B_INF, CU_CX32, CU_I, CU_LINK, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR

F01000 Internal software error

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: POWER ON
Cause: An internal software error has occurred.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.
Remedy: - carry out a POWER ON (power off/on) for all components.
- upgrade firmware to later version.
- contact the Hotline.
- replace the Control Unit.

F01001 Internal software error

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: POWER ON
Cause: An internal software error has occurred.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.
Remedy: - carry out a POWER ON (power off/on) for all components.
- upgrade firmware to later version.
- contact the Hotline.

F01002 Internal software error

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: POWER ON
Cause: An internal software error has occurred.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.
Remedy: - carry out a POWER ON (power off/on) for all components.
- upgrade firmware to later version.
- contact the Hotline.

F01003 Acknowledgement delay when accessing the memory

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: POWER ON
Cause: A memory area was accessed that does not return a "READY".
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.
Remedy: - carry out a POWER ON (power off/on) for all components.
- contact the Hotline.

N01004 (F, A) Internal software error

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: An internal software error has occurred.
Fault value (r0949, hexadecimal):
Only for internal Siemens troubleshooting.
Remedy: - read out diagnostics parameter (r9999).
- contact the Hotline.
See also: r9999 (Software error internal supplementary diagnostics)
Reaction upon F: OFF2
Acknowl. upon F: POWER ON
Reaction upon A: NONE
Acknowl. upon A: NONE

F01005 Firmware download for DRIVE-CLiQ component unsuccessful

Message value: Component number: %1, fault cause: %2
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: It was not possible to download the firmware to a DRIVE-CLiQ component.
Fault value (r0949, interpret hexadecimal):
yyxxxx hex: yy = component number, xxxx = fault cause
xxxx = 000B hex = 11 dec:
DRIVE-CLiQ component has detected a checksum error.
xxxx = 000F hex = 15 dec:
The selected DRIVE-CLiQ component did not accept the contents of the firmware file.
xxxx = 0012 hex = 18 dec:
Firmware version is too old and is not accepted by the component.
xxxx = 0013 hex = 19 dec:
Firmware version is not suitable for the hardware release of the component.
xxxx = 0065 hex = 101 dec:
After several communication attempts, no response from the DRIVE-CLiQ component.
xxxx = 008B hex = 139 dec:
Initially, a new boot loader is loaded (must be repeated after POWER ON).
xxxx = 008C hex = 140 dec:
Firmware file for the DRIVE-CLiQ component not available on the memory card.
xxxx = 008F hex = 143 dec:
Component has not changed to the mode for firmware download. It was not possible to delete the existing firmware.
xxxx = 0090 hex = 144 dec:
When checking the loaded firmware (checksum) the component identified an error. It is possible that the file on the memory card is defective.
xxxx = 0091 hex = 145 dec:
Checking the loaded firmware (checksum) was not completed by the component in the appropriate time.
xxxx = 009C hex = 156 dec:
Component with the specified component number is not available (p7828).
xxxx = Additional values:
Only for internal Siemens troubleshooting.
Remedy: - check the selected component number (p7828).
- check the DRIVE-CLiQ connection.
- save suitable firmware file for download in the directory /siemens/sinamics/code/sac/.
- after POWER ON has been carried out again for the DRIVE-CLiQ component, download the firmware again.
Depending on p7826, the firmware will be automatically downloaded.

A01006 Firmware update for DRIVE-CLiQ component required

Message value: Component number: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The firmware of a DRIVE-CLiQ component must be updated as there is no suitable firmware or firmware version in the component for operation with the Control Unit.
Alarm value (r2124, interpret decimal):
Component number of the DRIVE-CLiQ component.
Remedy: Firmware update using the commissioning software:
The firmware version of all of the components on the "Version overview" page can be read in the Project Navigator under "Configuration" of the associated drive unit and an appropriate firmware update can be carried out.
Firmware update via parameter:
- take the component number from the alarm value and enter into p7828.
- start the firmware download with p7829 = 1.

A01007 POWER ON for DRIVE-CLiQ component required

Message value: Component number: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: A DRIVE-CLiQ component must be powered up again (POWER ON) as, for example, the firmware was updated.
Alarm value (r2124, interpret decimal):
Component number of the DRIVE-CLiQ component.
Note:
For a component number = 1, a POWER ON of the Control Unit is required.
Remedy: Switch off the power supply of the specified DRIVE-CLiQ component and switch it on again.

A01009 (N) CU: Control module overtemperature

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The temperature (r0037[0]) of the control module (Control Unit) has exceeded the specified limit value.
Remedy: - check the air intake for the Control Unit.
- check the fan for the Control Unit (only for CU310).
Note:
The alarm automatically disappears after the limit value has been undershot.
Reaction upon N: NONE
Acknowl. upon N: NONE

F01010 Drive type unknown

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: An unknown drive type was found.
Fault value (r0949, interpret decimal):
Drive object number (refer to p0101, p0107).
Remedy: - carry out a POWER ON (power off/on) for all components.
- upgrade firmware to later version.
- contact the Hotline.

F01011 (N) Download interrupted

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The project download was interrupted.
- the project download was prematurely ended by the user or by the commissioning software (e.g. STARTER, SCOUT).
- the communication cable was interrupted (e.g. cable breakage, cable withdrawn).
Note:
The response to an interrupted download is the state "first commissioning".

Remedy:
- check the communication cable.
- download the project again.
- boot from previously saved files (power-down/power-up or p0976).

Reaction upon N: NONE

Acknowl. upon N: NONE

F01012 (N) Project conversion error

Message value: %1

Drive object: SERVO, VECTOR

Reaction: OFF2 (NONE)

Acknowledge: IMMEDIATELY

Cause: When converting the project of an older firmware version, an error occurred.
Fault value (r0949, interpret decimal):
Parameter number of the parameter causing the error.
For fault value = 600, the following applies:
The temperature evaluation is no longer assigned to the power unit but to the encoder evaluation.
Notice:
Monitoring of the motor temperature is no longer ensured.

Remedy: Check the parameter indicated in the fault value and correctly adjust it accordingly.
Re fault value = 600:
Parameter p0600 must be set to the values 1, 2 or 3 in accordance with the assignment of the internal encoder evaluation to the encoder interface.
Value 1 means: The internal encoder evaluation is assigned to the encoder interface 1 via p0187.
Value 2 means: The internal encoder evaluation is assigned to the encoder interface 2 via p0188.
Value 3 means: The internal encoder evaluation is assigned to the encoder interface 3 via p0189.
If necessary, the internal encoder evaluation must be assigned to an encoder interface via parameters p0187, p0188 or p0189 accordingly.
- If necessary, upgrade the firmware to a later version.

Reaction upon N: NONE

Acknowl. upon N: NONE

F01015 Internal software error

Message value: %1

Drive object: All objects

Reaction: OFF2

Acknowledge: POWER ON

Cause: An internal software error has occurred.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.

Remedy:
- carry out a POWER ON (power off/on) for all components.
- upgrade firmware to later version.
- contact the Hotline.

A01016 (F) Firmware changed

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: At least one firmware file in directory /SIEMENS/SINAMICS/ has been changed without authorization with respect to version shipped from factory. No changes are permitted in this directory.
Alarm value (r2124, interpret decimal):
0: Checksum of one file is incorrect.
1: File missing.
2: Too many files.
3: Incorrect firmware version.
4: Incorrect checksum of the back-up file.
See also: r9925 (Firmware file incorrect)
Remedy: For the non-volatile memory for the firmware (memory card, device memory), restore the version shipped from factory.
Note:
The file involved can be read out using parameter r9925.
See also: r9926 (Firmware check status)
Reaction upon F: OFF2
Acknowl. upon F: POWER ON

A01017 Component lists changed

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: On the memory card, one file in the directory /SIEMENS/SINAMICS/DATA or /ADDON/SINAMICS/DATA has been illegally changed with respect to that supplied from the factory. No changes are permitted in this directory.
Alarm value (r2124, interpret decimal):
The problem is indicated in the first digit of the alarm value:
1: File does not exist.
2: Firmware version of the file does not match the software version.
3: The file checksum is incorrect.
The second digit of the alarm value indicates in which directory the file is located:
0: Directory /SIEMENS/SINAMICS/DATA/
1: Directory /ADDON/SINAMICS/DATA/
The third digit of the alarm value indicates the file:
0: File MOTARM.ACX
1: File MOTSRM.ACX
2: File MOTSLM.ACX
3: File ENCDATA.ACX
4: File FILTDATA.ACX
5: File BRKDATA.ACX
Remedy: For the memory card file involved, restore the status originally supplied from the factory.

F01030 Sign-of-life failure for master control

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, VECTOR
Reaction: A_INFEED: OFF1 (NONE, OFF2)
SERVO: OFF3 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF2, STOP1, STOP2)
VECTOR: OFF3 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF2, STOP1, STOP2)
Acknowledge: IMMEDIATELY
Cause: For active PC master control, no sign-of-life was received within the monitoring time.
The master control was returned to the active BICO interconnection.
Remedy: Set the monitoring time higher at the PC or, if required, completely disable the monitoring function.
For the commissioning software, the monitoring time is set as follows:
<Drive> -> Commissioning -> Control panel -> Button "Fetch master control" -> A window is displayed to set the monitoring time in milliseconds.

Notice:
The monitoring time should be set as short as possible. A long monitoring time means a late response when the communication fails!

F01031 Sign-of-life failure for AOP OFF in REMOTE

Message value: -

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: A_INFEED: OFF1 (NONE, OFF2)
SERVO: OFF3 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF2, STOP1, STOP2)
VECTOR: OFF3 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF2, STOP1, STOP2)

Acknowledge: IMMEDIATELY

Cause: With the "OFF in REMOTE" mode active, no sign-of-life was received within 3 s.

Remedy: - check the data cable connection at the serial interface for the Control Unit (CU) and Advanced Operator Panel (AOP).
- check the data cable between the CU and AOP.

F01033 Units changeover: Reference parameter value invalid

Message value: Parameter: %1

Drive object: A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: When changing over the units to the referred representation type, it is not permissible for any of the required reference parameters to be equal to 0.0
Fault value (r0949, parameter):
Reference parameter whose value is 0.0.
See also: p0349 (System of units, motor equivalent circuit diagram data), p0505 (Selecting the system of units), p0595 (Selecting technological units)

Remedy: Set the value of the reference parameter to a number different than 0.0.
See also: p0304, p0305, p0310, p0596, p2000, p2001, p2002, p2003, r2004

F01034 Units changeover: Calculation parameter values after reference value change unsuccessful

Message value: Parameter: %1

Drive object: A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The change of a reference parameter meant that for an involved parameter the selected value was not able to be recalculated in the per unit representation. The change was rejected and the original parameter value restored.
Fault value (r0949, parameter):
Parameter whose value was not able to be re-calculated.
See also: p0304, p0305, p0310, p0596, p2000, p2001, p2002, p2003, r2004

Remedy: Select the value of the reference parameter such that the parameter involved can be calculated in the per unit representation.
See also: p0304, p0305, p0310, p0596, p2000, p2001, p2002, p2003, r2004

A01035 (F) ACX: Boot from the back-up parameter back-up files

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: When the Control Unit is booted, no complete data set was found from the parameter back-up files. The last time that the parameterization was saved, it was not completely carried out. Instead, a back-up data set or a back-up parameter back-up file is downloaded.
Alarm value (r2124, interpret hexadecimal):
Only for internal Siemens troubleshooting.

Remedy: If you have saved the project using the commissioning software, carry out a new download for your project. Save using the function "Copy RAM to ROM" or with p0977 = 1 so that all of the parameter files are again completely written to the memory card card.

Reaction upon F: A_INFEED: NONE (OFF2)
SERVO: NONE (OFF1, OFF2, OFF3)
VECTOR: NONE (OFF1, OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY

F01036 (A) ACX: Parameter back-up file missing

Message value: %1

Drive object: All objects

Reaction: A_INFEED: NONE (OFF2)
SERVO: NONE (OFF1, OFF2, OFF3)
VECTOR: NONE (OFF1, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: When downloading the device parameterization, a parameter back-up file associated with a drive object cannot be found. Neither a PSxxxyyy.ACX, a PSxxxyyy.NEW nor a PSxxxyyy.BAK parameter back-up file exists on the CompactFlash card for this drive object.
Fault value (r0949, interpret hexadecimal):
Byte 1: yyy in the file name PSxxxyyy.ACX
yyy = 000 --> consistency back-up file
yyy = 001 ... 062 --> drive object number
yyy = 099 --> PROFIBUS parameter back-up file
Byte 2, 3, 4:
Only for internal Siemens troubleshooting.

Remedy: If you have saved the project data using the commissioning software, carry out a new download for your project. Save using the function "Copy RAM to ROM" or with p0977 = 1 so that all of the parameter files are again completely written to the CompactFlash card.
If you have not saved the project data, then first commissioning of the system has to be carried out again.

Reaction upon A: NONE

Acknowl. upon A: NONE

F01037 (A) ACX: Re-naming the parameter back-up file unsuccessful

Message value: %1

Drive object: All objects

Reaction: A_INFEED: NONE (OFF2)
SERVO: NONE (OFF1, OFF2, OFF3)
VECTOR: NONE (OFF1, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: Re-naming after saving a parameter back-up file on the CompactFlash card or in the volatile memory was unsuccessful.
One of the parameter back-up files to be re-named had the "read only" attribute. The parameter back-up files are saved on the CompactFlash card in the directory \USER\SINAMICS\DATA.
It is possible that the CompactFlash card is defective.
Fault value (r0949, interpret hexadecimal):
Byte 1: yyy in the file names PSxxxyyy.* or CAxxxyyy.* or CCxxxyyy.*
yyy = 000 --> consistency back-up file
yyy = 099 --> PROFIBUS parameter back-up file PSxxx099.*
Byte 2: xxx in the file name PSxxxyyy.*
xxx = 000 --> data save started with p0977 = 1
xxx = 010 --> data save started with p0977 = 10
xxx = 011 --> data save started with p0977 = 11
xxx = 012 --> data save started with p0977 = 12
Byte 4, 3:
Only for internal Siemens troubleshooting.

Remedy: - check whether one of the files to be overwritten has the attribute "read only" and change this file attribute to "writable". Check all of the files (PSxxxyyy.*, CCxxxyyy.*, CAxxxyyy.*) that belong to drive yyy designated in the fault value.
- replace the CompactFlash card.

Reaction upon A: NONE

Acknowl. upon A: NONE

F01038 (A) ACX: Loading the parameter back-up file unsuccessful

Message value: %1

Drive object: All objects

Reaction: A_INFEED: NONE (OFF2)
SERVO: NONE (OFF1, OFF2, OFF3)
VECTOR: NONE (OFF1, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: An error occurred when loading PSxxxyyy.ACX or PTxxxyyy.ACX files from the CompactFlash card or from the volatile memory of the Control Unit.
Fault value (r0949, interpret hexadecimal):
Byte 1: yyy in the file name PSxxxyyy.ACX
yyy = 000 --> consistency back-up file
yyy = 001 ... 062 --> drive object number
yyy = 099 --> PROFIBUS parameter back-up file
Byte 4, 3, 2:
Only for internal Siemens troubleshooting.

Remedy: - If you have saved the project data using the commissioning software, carry out a new download for your project. Save using the function "Copy RAM to ROM" or with p0977 = 1 so that all of the parameter files are again completely written to the CompactFlash card.
- replace the CompactFlash card.

Reaction upon A: NONE

Acknowl. upon A: NONE

F01039 (A) ACX: Writing to the parameter back-up file was unsuccessful

Message value: %1

Drive object: All objects

Reaction: A_INFEED: NONE (OFF2)
SERVO: NONE (OFF1, OFF2, OFF3)
VECTOR: NONE (OFF1, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: Writing to at least one parameter back-up file PSxxxyyy.*** on the CompactFlash card was unsuccessful.
- on the CompactFlash card in the directory /USER/SINAMICS/DATA/ at least one parameter back-up file PSxxxyyy.*** has the "read only" file attribute and cannot be overwritten.
- there is not sufficient free memory space on the CompactFlash card.
- the CompactFlash card is defective and cannot be written to.
Fault value (r0949, interpret hexadecimal):
dcba hex
a = yyy in the file names PSxxxyyy.***
a = 000 --> consistency back-up file
a = 001 ... 062 --> drive object number
a = 099 --> PROFIBUS parameter back-up file
b = xxx in the file names PSxxxyyy.***
b = 000 --> data save started with p0977 = 1
b = 010 --> data save started with p0977 = 10
b = 011 --> data save started with p0977 = 11
b = 012 --> data save started with p0977 = 12
d, c:
Only for internal Siemens troubleshooting.

Remedy: - check the file attribute of the files (PSxxxyyy.***, CAxxxyyy.***, CCxxxyyy.***) and, if required, change from "read only" to "writeable".
- check the free memory space on the CompactFlash card. Approx. 40 kbyte of free memory space is required for every drive object in the system.
- replace the CompactFlash card.

Reaction upon A: NONE
Acknowl. upon A: NONE

F01040 Save parameter settings and carry out a POWER ON

Message value: -
Drive object: All objects
Reaction: OFF2
Acknowledge: POWER ON
Cause: A parameter was changed in the drive system which means that it is necessary to save the parameters and re-boot (e.g. p0110).
Remedy: - save the parameters (p0971/p0977).
- carry out a POWER ON (power off/on) for all components.

F01041 Parameter save necessary

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: Defective or missing files were detected on the memory card when booting.
Fault value (r0949, interpret decimal):
1: Source file cannot be opened.
2: Source file cannot be read.
3: Target directory cannot be set up.
4: Target file cannot be set up/opened.
5: Target file cannot be written to.
Additional values:
Only for internal Siemens troubleshooting.
Remedy: - save the parameters (p0977).
- download the project again to the drive unit.
- update the firmware
- if required, replace the Control Unit and/or memory card card.

F01042 Parameter error during project download

Message value: Parameter: %1, Index: %2, fault cause: %3
Drive object: All objects
Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: OFF2 (NONE, OFF1, OFF3)
VECTOR: OFF2 (NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY
Cause: An error was detected when downloading a project using the commissioning software (e.g. incorrect parameter value).
For the specified parameter, it was detected that dynamic limits were exceeded that may possibly depend on other parameters.
Fault value (r0949, interpret hexadecimal):
ccbbaaaa hex
aaaa = parameter
bb = index
cc = fault cause
0: Parameter number illegal.
1: Parameter value cannot be changed.
2: Lower or upper value limit exceeded.
3: Sub-index incorrect.
4: No array, no sub-index.
5: Data type incorrect.
6: Setting not permitted (only resetting).
7: Descriptive element cannot be changed.
9: Descriptive data not available.
11: No master control.
15: No text array available.

17: Task cannot be executed due to operating status.
20: Illegal value.
21: Response too long.
22: Parameter address illegal.
23: Format illegal.
24: Number of values not consistent.
25: Drive object does not exist.
101: Presently de-activated.
104: Illegal value.
107: Write access not permitted when controller enabled.
108: Unit unknown.
109: Write access only in the commissioning state, encoder (p0010 = 4).
110: Write access only in the commissioning state, motor (p0010 = 3).
111: Write access only in the commissioning state, power unit (p0010 = 2).
112: Write access only in the quick commissioning mode (p0010 = 1).
113: Write access only in the ready mode (p0010 = 0).
114: Write access only in the commissioning state, parameter reset (p0010 = 30).
115: Write access only in the Safety Integrated commissioning state (p0010 = 95).
116: Write access only in the commissioning state, technological application/units (p0010 = 5).
117: Write access only in the commissioning state (p0010 not equal to 0).
118: Write access only in the commissioning state, download (p0010 = 29).
119: Parameter may not be written in download.
120: Write access only in the commissioning state, drive basis configuration (device: p0009 = 3).
121: Write access only in the commissioning state, define drive type (device: p0009 = 2).
122: Write access only in the commissioning state, data set basis configuration (device: p0009 = 4).
123: Write access only in the commissioning state, device configuration (device: p0009 = 1).
124: Write access only in the commissioning state, device download (device: p0009 = 29).
125: Write access only in the commissioning state, device parameter reset (device: p0009 = 30).
126: Write access only in the commissioning state, device ready (device: p0009 = 0).
127: Write access only in the commissioning state, device (device: p0009 not equal to 0).
129: Parameter may not be written in download.
130: Transfer of the master control is inhibited via BI: p0806.
131: Required BICO interconnection not possible because BICO output does not supply floating value
132: Free BICO interconnection inhibited via p0922.
133: Access method not defined.
200: Below the valid values.
201: Above the valid values.
202: Cannot be accessed from the Basic Operator Panel (BOP).
203: Cannot be read from the Basic Operator Panel (BOP).
204: Write access not permitted.

Remedy: - enter the correct value in the specified parameter.
- identify the parameter that restricts the limits of the specified parameter.

F01043 Fatal error at project download

Message value: Fault cause: %1

Drive object: All objects

Reaction: A_INFEED: OFF2 (OFF1)
SERVO: OFF2 (OFF1, OFF3)
VECTOR: OFF2 (OFF1, OFF3)

Acknowledge: IMMEDIATELY

Cause: A fatal error was detected when downloading a project using the commissioning software.
Fault value (r0949, interpret decimal):
1: Device status cannot be changed to Device Download (drive object ON?).
2: Incorrect drive object number.
3: A drive object that has already been deleted is deleted again.
4: Deleting of a drive object that has already been registered for generation.
5: Deleting a drive object that does not exist.
6: Generating an undeleted drive object that already existed.
7: Regenerating a drive object already registered for generation.
8: Maximum number of drive objects that can be generated exceeded.
9: Error while generating a device drive object.
10: Error while generating target topology parameters (p9902 and p9903).

11: Error while generating a drive object (global component).
12: Error while generating a drive object (drive component).
13: Unknown drive object type.
14: Drive status cannot be changed to Ready (p0947 and p0949).
15: Drive status cannot be changed to Drive Download.
16: Device status cannot be changed to Ready.
17: It is not possible to download the topology. The component wiring should be checked, taking into account the various messages/signals.
18: A new download is only possible if the factory settings are restored for the drive unit.
19: The slot for the option module has been configured several times (e.g. CAN and COMM BOARD)
20: The configuration is inconsistent (e.g. CAN for Control Unit, however no CAN configured for drive objects A_INF, SERVO or VECTOR).

Remedy: - use the current version of the commissioning software.
- modify the offline project and carry out a new download (e.g. compare the number of drive objects, motor, encoder, power unit in the offline project and at the drive).
- change the drive state (is a drive rotating or is there a message/signal?).
- carefully note any other messages/signals and remove their cause.

F01044 CU CompactFlash: Descriptive data error

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: POWER ON
Cause: An error was detected when loading the descriptive data saved on the CompactFlash card.
Remedy: Replace the CompactFlash card.

A01045 CU CompactFlash: Configuring data invalid

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: An error was detected when evaluating the parameter files PSxxxyyy.ACX, PTxxxyyy.ACX, CAxxxyyy.ACX or CCxxxyyy.ACX saved on the CompactFlash card.
Alarm value (r2124, interpret hexadecimal):
Only for internal Siemens troubleshooting.
Remedy: Restore the factory setting using (p0976 = 1) and re-load the project to the drive unit. Operation without any restrictions is then possible.
After downloading the project, save the parameterization in STARTER using the function "Copy RAM to ROM" or with p0977 = 1. This means that the incorrect parameter files are overwritten on the CompactFlash card.

A01049 CU CompactFlash: It is not possible to write to file

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: It is not possible to write into a write-protected file (PSxxxxxx.acx). The write request was interrupted.
Alarm value (r2124, interpret decimal):
Drive object number.
Remedy: Check whether the "write protected" attribute has been set for the files on the CompactFlash card under .../USER/SINAMICS/DATA/... When required, remove write protection and save again (e.g. set p0971 to 1).

F01050 CompactFlash card and device not compatible

Message value: -

Drive object: All objects

Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: OFF2 (NONE, OFF1, OFF3)
VECTOR: OFF2 (NONE, OFF1, OFF3)

Acknowledge: IMMEDIATELY

Cause: The CompactFlash card and the device type do not match (e.g. a CompactFlash card for SINAMICS S is inserted in SINAMICS G).

Remedy: - insert the matching CompactFlash card
- use the matching Control Unit or power unit.

F01051 Drive object type is not available

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The drive object type in conjunction with the selected application-specific view is not available. The required descriptive file (PDxxxyyy.ACX) does not exist on the CompactFlash card.
Fault value (r0949, interpret decimal):
Index of p0103 and p0107.
See also: p0103, r0103, p0107, r0107

Remedy: - for this drive object type (p0107), select a valid application-specific view (p0103).
- save the required descriptive file (PDxxxyyy.ACX) on the CompactFlash card.
See also: p0103, r0103, p0107, r0107

A01052 CU: System overload calculated for the complete target topology

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: A system overload was calculated based on a complete active target topology.
Alarm value (r2124, interpret decimal):
2: Computing time load too high.
6: Cyclic computing time load too high.

Remedy: - reduce the sampling time.
- only use one data set (CDS, DDS).
- de-activate the function module.
- de-activate the drive object.
- remove the drive object from the target topology.
Note:
After executing the appropriate counter-measure, a new calculation must be initiated with p9974 = 1.

A01053 CU: System overload measured

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: A system overload was determined based on measured values.
Alarm value (r2124, interpret decimal):
2: Computing time load too high.
6: Cyclic computing time load too high.
See also: r9976 (System load)

Remedy: - reduce the sampling time.
- only use one data set (CDS, DDS).
- de-activate the function module.
- de-activate the drive object.
- remove the drive object from the target topology.

A01064 (F) CU: Internal error (CRC)

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: CRC error in the Control Unit program memory
Remedy: - carry out a POWER ON (power off/on) for all components.
- upgrade firmware to later version.
- contact the Hotline.

Reaction upon F: A_INFEED: NONE (OFF1, OFF2)
SERVO: NONE (OFF1, OFF2, OFF3, STOP2)
VECTOR: NONE (OFF1, OFF2, OFF3, STOP2)

Acknowl. upon F: IMMEDIATELY (POWER ON)

A01065 Drive: Fault on non-active encoder

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: One or several inactive encoders indicate an error.
Remedy: Remove the error for the inactive encoder.

A01099 Tolerance window of time synchronization exited

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The time master exited the selected tolerance window for time synchronization.
See also: p3109 (RTC real time synchronization, tolerance window)
Remedy: Select the re-synchronization interval so that the synchronization deviation between the time master and drive system lies within the tolerance window.
See also: r3108 (RTC last synchronization deviation)

A01100 CU: Memory card withdrawn

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The memory card (non-volatile memory) was withdrawn during operation.
Notice:
It is not permissible for the memory card to be withdrawn or inserted under voltage.
Remedy: - power down the drive system.
- re-insert the memory card that was withdrawn - this card must match the drive system.
- power up the drive system again.

F01105 (A) CU: Insufficient memory

Message value: %1
Drive object: All objects
Reaction: OFF1
Acknowledge: POWER ON
Cause: Too many functions have been configured on this Control Unit (e.g. too many drives, function modules, data sets, OA applications, blocks, etc).
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.

Remedy: - change the configuration on this Control Unit (e.g. fewer drives, function modules, data sets, OA applications, blocks, etc).
- use an additional Control Unit.

Reaction upon A: NONE

Acknowl. upon A: NONE

F01107 CU: Save to CompactFlash card unsuccessful

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: A data save to the CompactFlash card was not able to be successfully carried out.
- CompactFlash card is defective.
- CompactFlash card does not have sufficient memory space.
Fault value (r0949, interpret decimal):
1: The file on the RAM was not able to be opened.
2: The file on the RAM was not able to be read.
3: A new directory was not able to be created on the CompactFlash card.
4: A new file was not able to be created on the CompactFlash card.
5: A new file was not able to be written to the CompactFlash card.

Remedy: - try to save again.
- use another CompactFlash card.

F01110 CU: More than one SINAMICS G on one Control Unit

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: More than one SINAMICS G type power unit is being operated from the Control Unit.
Fault value (r0949, interpret decimal):
Number of the second drive with a SINAMICS G type power unit.

Remedy: Only one SINAMICS G drive type is permitted.

F01111 CU: impermissible mixed operation of drive units

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: Illegal operation of various drive units on one Control Unit:
- SINAMICS S together with SINAMICS G
- SINAMICS S together with SINAMICS S Value or Combi
Fault value (r0949, interpret decimal):
Number of the first drive object with a different power unit type.

Remedy: Only power units of one particular drive type may be operated with one Control Unit.

F01112 CU: Power unit not permissible

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The connected power unit cannot be used together with this Control Unit.
Fault value (r0949, interpret decimal):
1: Power unit is not supported (e.g. PM240).
2: DC/AC power unit connected to CU310 not permissible.

Remedy: Replace the power unit that is not permissible by a component that is permissible.

F01120 (A) Terminal initialization has failed

Message value: %1
Drive object: All objects
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: An internal software error has occurred when initializing the terminal functions on the CU3xx, the TB30 or the TM31.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.
Remedy: - carry out a POWER ON (power off/on) for all components.
- upgrade firmware to later version.
- contact the Hotline.
- replace the Control Unit.
Reaction upon A: NONE
Acknowl. upon A: NONE

F01122 (A) Frequency at the measuring probe input too high

Message value: %1
Drive object: All objects
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY
Cause: The frequency of the pulses at the measuring probe input is too high.
Fault value (r0949, interpret decimal):
1: DI/DO 9 (X122.8)
2: DI/DO 10 (X122.10)
4: DI/DO 11 (X122.11)
8: DI/DO 13 (X132.8)
16: DI/DO 14 (X132.10)
32: DI/DO 15 (X132.11)
1001: DI/DO 9 (X122.8), initialization error
1002: DI/DO 10 (X122.10), initialization error
1004: DI/DO 11 (X122.11), initialization error
1008: DI/DO 13 (X132.8), initialization error
1016: DI/DO 14 (X132.10), initialization error
1032: DI/DO 15 (X132.11), initialization error
Remedy: Reduce the frequency of the pulses at the measuring probe input.
Reaction upon A: NONE
Acknowl. upon A: NONE

F01150 CU: Number of instances of a drive object type exceeded

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The maximum permissible number of instances of a drive object type was exceeded.
Fault value (r0949, interpret decimal):
Byte 1: Drive object type (p0107).
Byte 2: Max. permissible number of instances for this drive object type.
Byte 3: Current number of instances for this drive object type.
Remedy: - power down the unit.
- suitably restrict the number of instances of a drive object type by reducing the number of inserted components.
- re-commission the unit.

F01200 CU: Time slice management internal software error

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: A time slice management error has occurred.
It is possible that the sampling times have been inadmissibly set.
Fault value (r0949, interpret hexadecimal):
998: Too many time slices occupied by OA (e.g. DCC)
999: Too many time slices occupied by the basic system
Too many different sampling times may have been set.
Further values for internal Siemens troubleshooting.
Remedy: - check the sampling time setting (p0112, p0115, p4099).
- contact the Hotline.

F01205 CU: Time slice overflow

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: POWER ON
Cause: Insufficient processing time is available for the existing topology.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.
Remedy: - reduce the number of drives.
- increase the sampling times.

F01210 CU: Basic clock cycle selection and DRIVE-CLiQ clock cycle do not match

Message value: Parameter: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The parameter to select the basic clock cycle does not match the drive topology. Drives connected to the same DRIVE-CLiQ port of the Control Unit have been assigned different basic clock cycles.
Fault value (r0949, interpret decimal):
The fault value specifies the parameter involved.
See also: r0111 (Basic sampling time selection)
Remedy: Only those drive objects may be connected to the same DRIVE-CLiQ socket of the Control Unit that should run with the same basic clock cycle.
For example, Active Line Modules and Motor Modules should be inserted at different DRIVE-CLiQ sockets as their basic clock cycles and current controller clock cycles are generally not identical..
See also: r0111 (Basic sampling time selection)

F01220 CU: Bas clk cyc too low

Message value: Parameter: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The parameter for the basic clock cycle is set too short for the number of connected drives.
Fault value (r0949, interpret decimal):
The fault value specifies the parameter involved.
See also: r0110 (Basic sampling times)
Remedy: - increase the basic clock cycle.
- reduce the number of connected drives and start to re-commission the unit.
See also: r0110 (Basic sampling times)

F01221 CU: Bas clk cyc too low

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The closed-loop control / monitoring cannot maintain the envisaged clock cycle.
The runtime of the closed-loop control/monitoring is too long for the particular clock cycle or the computing time remaining in the system is not sufficient for the closed-loop control/monitoring.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.
Remedy: Increase the basic clock cycle of DRIVE-CLiQ communication.
See also: p0112 (Sampling times pre-setting p0115)

A01223 CU: Sampling time inconsistent

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: When changing a sampling time (p0115[0], p0799 or p4099), inconsistency between the clock cycles has been identified.
Alarm value (r2124, interpret decimal):
1: Value, low minimum value.
2: Value, high maximum value.
3: Value not a multiple of 1.25 µs.
4: Value does not match clock-cycle synchronous PROFIBUS operation.
5: Value not a multiple of 125 µs.
6: Value not a multiple of 250 µs.
7: Value not a multiple of 375 µs.
8: Value not a multiple of 400 µs.
10: Special restriction of the drive object violated.
20: For a SERVO with a 62.5 µs sampling time, more than a maximum of two SERVO-type drive objects were detected on the DRIVE-CLiQ line (no other drive object is permitted on this line).
21: Value can be a multiple of the current controller sampling time of a servo or vector drive in the system (e.g. for TB30, the values of all of the indices should be taken into account).
30: Value less than 31.25 µs.
31: Value less than 62.5 µs.
32: Value less than 125 µs.
40: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 125 µs. Further, none of the nodes has a sampling time of less than 125 µs.
41: A chassis unit was identified on the DRIVE-CLiQ line as a node. Further, the highest common denominator of the sampling times of all of the nodes connected to the line is less than 250 µs.
42: An Active Line Module was identified on the DRIVE-CLiQ line as a node. Further, the highest common denominator of the sampling times of all of the nodes connected to the line is less than 125 µs.
43: A Voltage Sensing Module (VSM) was identified on the DRIVE-CLiQ line as a node. Further, the highest common denominator of the sampling times of all of the nodes connected to the line is not equal to the current controller sampling time of the drive object of the VSM.
44: The highest common denominator of the sampling times of all of the components connected to the DRIVE-CLiQ line is not the same for all components of this drive object (e.g. there are components on different DRIVE-CLiQ lines on which different highest common denominators are generated).
52: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 31.25 µs.
54: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 62.5 µs.
56: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 125 µs.
58: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 250 µs.
99: Inconsistency of cross drive objects detected.
116: Recommended clock cycle in r0116[0...1].

Note:
The topology rules should be noted when connecting up DRIVE-CLiQ.
The rules are, provided in the following document:
SINAMICS S120 Function Manual Drive Functions
The parameters of the sampling times can also be changed with automatic calculations.

Remedy: - check the DRIVE-CLiQ cables.
- set a valid sampling time.
See also: p0115, p0799, p4099

A01224 CU: Pulse frequency inconsistent

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: When changing the minimum pulse frequency (p0113) inconsistency between the pulse frequencies was identified.
Alarm value (r2124, interpret decimal):
1: Value, low minimum value.
2: Value, high maximum value.
3: Resulting sampling time is not a multiple of 1.25 µs.
4: Value does not match clock-cycle synchronous PROFIBUS operation.
10: Special restriction of the drive object violated.
99: Inconsistency of cross drive objects detected.
116: Recommended clock cycle in r0116[0...1].

Remedy: Set a valid pulse frequency.
See also: p0113 (Minimum pulse frequency, selection)

F01250 CU: CU-EEPROM incorrect read-only data

Message value: %1

Drive object: All objects

Reaction: NONE (OFF2)

Acknowledge: POWER ON

Cause: Error when reading the read-only data of the EEPROM in the Control Unit.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.

Remedy: - carry out a POWER ON.
- replace the Control Unit.

A01251 CU: CU-EEPROM incorrect read-write data

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: Error when reading the read-write data of the EEPROM in the Control Unit.
Alarm value (r2124, interpret decimal):
Only for internal Siemens troubleshooting.

Remedy: For alarm value r2124 < 256, the following applies:
- carry out a POWER ON.
- replace the Control Unit.
For alarm value r2124 >= 256, the following applies:
- for the drive object with this alarm, clear the fault memory (p0952 = 0).
- as an alternative, clear the fault memory of all drive objects (p2147 = 1).
- replace the Control Unit.

F01255 CU: Option Board EEPROM read-only data error

Message value: %1
Drive object: All objects
Reaction: NONE (OFF2)
Acknowledge: POWER ON
Cause: Error when reading the read-only data of the EEPROM in the Option Board.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
Remedy: - carry out a POWER ON.
- replace the Control Unit.

A01256 CU: Option Board EEPROM read-write data error

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: Error when reading the read-write data of the EEPROM in the Option Board.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
Remedy: - carry out a POWER ON.
- replace the Control Unit.

F01303 DRIVE-CLiQ component does not support the required function

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: A function requested by the Control Unit is not supported by a DRIVE-CLiQ component.
Fault value (r0949, interpret decimal):
1: The component does not support the de-activation.
101: The Motor Module does not support an internal armature short-circuit.
102: The Motor Module does not support the de-activation.
201: The Sensor Module does not support actual value inversion (p0410.0 = 1) when using a Hall sensor (p0404.6 = 1) for the commutation.
202: The Sensor Module does not support parking/unparking.
203: The Sensor Module does not support the de-activation.
204: The firmware of this Terminal Module 15 (TM15) does not support the application TM15DI/DO.
205: The Sensor Module does not support the selected temperature evaluation (r0458).
206: The firmware of this Terminal Modules TM41/TM31/TM15 refers to an old firmware version. It is urgently necessary to upgrade the firmware to ensure disturbance-free operation.
207: The power unit with this hardware version does not support operation with device supply voltages of less than 380 V.
Remedy: Upgrade the firmware of the DRIVE-CLiQ component involved.
Re fault value = 205:
Check parameter p0600 and p0601 and if required, adapt interpretation.
Re fault value = 207:
Replace the power unit or if required set the device supply voltage higher (p0210).

A01304 (F) Firmware version of DRIVE-CLiQ component is not up-to-date

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The memory card contains a more recent firmware version than the one in the connected DRIVE-CLiQ component.
Alarm value (r2124, interpret decimal):
Component number of the DRIVE-CLiQ component involved.
Remedy: Update the firmware (p7828, p7829 and commissioning software).

Reaction upon F: NONE
Acknowl. upon F: IMMEDIATELY

F01305 Topology: Component number missing

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The component number from the topology was not parameterized (p0121 (for power unit, refer to p0107), p0131 (for servo/vector drives, refer to p0107), p0141, p0151, p0161).
Fault value (r0949, interpret decimal):
The fault value includes the particular data set number.
The fault also occurs if speed encoders were configured (p0187 ... p0189), however, no component numbers exist for them.
In this case, the fault value includes the drive data set number plus 100 * encoder number (e.g. 3xx, if a component number was not entered into p0141 for the third encoder (p0189)).
See also: p0121, p0131, p0141, p0142, p0151, p0161, p0186, p0187, p0188, p0189
Remedy: Enter the missing component number or remove the component and restart commissioning.
See also: p0121, p0131, p0141, p0142, p0151, p0161, p0186, p0187, p0188, p0189

A01306 Firmware of the DRIVE-CLiQ component being updated

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: Firmware update is active for at least one DRIVE-CLiQ component.
Alarm value (r2124, interpret decimal):
Component number of the DRIVE-CLiQ component.
Remedy: None necessary.
This alarm automatically disappears after the firmware has been updated.

A01314 Topology: Component must not be present

Message value: Component number: %1, Component class: %2, Connection number: %3
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: For a component, "de-activate and not present" is set but this component is still in the topology.
Alarm value (r2124, interpret hexadecimal):
Byte 1: Component number
Byte 2: Component class of the component
Byte 3: Connection number
Note: Component class and connection number are described in F01375.
Remedy: - remove the corresponding component.
- change the setting "de-activate and not present".
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).
See also: p0105, p0125, p0145, p0155

A01315 Drive object not ready for operation

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: For the active drive object involved, at least one activated component is missing.
Note:
All other active and operational drive objects can be in the "RUN" state.

Remedy: The alarm automatically disappears again with the following actions:
- de-activate the drive object involved (p0105 = 0).
- de-activate the components involved (p0125 = 0, p0145 = 0, p0155 = 0, p0165 = 0).
- re-insert the components involved.

See also: p0105, p0125, p0145, p0155

A01316 Drive object inactive and again ready for operation

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: If, when inserting a component of the target topology, an inactive, non-operational drive object becomes operational again. The associated parameter of the component is, in this case, set to "activate" (p0125, p0145, p0155, p0165).
Note:
This is the only message that is displayed for a de-activated drive object.

Remedy: The alarm automatically disappears again with the following actions:
- activate the drive object involved (p0105 = 1).
- again withdraw the components involved.

See also: p0105 (Activate/de-activate drive object)

A01317 (N) De-activated component again present

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: If a component of the target topology for an active drive object is inserted and the associated parameter of the component is set to "de-activate" (p0125, p0145, p0155, p0165).
Note:
This is the only message that is displayed for a de-activated component.

Remedy: The alarm automatically disappears again with the following actions:
- activate the components involved (p0125 = 1, p0145 = 1, p0155 = 1, p0165 = 1).
- again withdraw the components involved.

See also: p0125 (Activate/de-activate power unit components), p0145, p0155 (Voltage Sensing Module, activate/de-activate)

Reaction upon N: NONE

Acknowl. upon N: NONE

A01318 BICO: De-activated interconnections present

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: This alarm is output:
If an inactive/non-operational drive object is again active/ready for operation
and
r9498[] or r9499[] are not empty
and
the connections listed in r9498[] and r9499 have actually been changed

Remedy: Clear alarm:
Set p9496 to 1 or 2
or
de-activate DO again

A01319 Inserted component not initialized

Message value: -
Drive object: A_INF, B_INF, CU_LINK, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The inserted component has still not been initiated, as the pulses are enabled.
Remedy: Pulse inhibit

A01320 Topology: Drive object number does not exist in configuration

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: A drive object number is missing in p0978
Alarm value (r2124, interpret decimal):
Index of p0101 under which the missing drive object number can be determined.
Remedy: Set p0009 to 1 and change p0978:
Rules:
- p0978 must include all of the drive object numbers (p0101).
- it is not permissible for a drive object number to be repeated.
- by entering a 0, the drive objects with PZD are separated from those without PZD.
- only 2 partial lists are permitted. After the second 0, all values must be 0.
- dummy drive object numbers (255) are only permitted in the first partial list.

A01321 Topology: Drive object number does not exist in configuration

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: p0978 contains a drive object number that does not exist.
Alarm value (r2124, interpret decimal):
Index of p0978 under which the drive object number can be determined.
Remedy: Set p0009 to 1 and change p0978:
Rules:
- p0978 must include all of the drive object numbers (p0101).
- it is not permissible for a drive object number to be repeated.
- by entering a 0, the drive objects with PZD are separated from those without PZD.
- only 2 partial lists are permitted. After the second 0, all values must be 0.
- dummy drive object numbers (255) are only permitted in the first partial list.

A01322 Topology: Drive object number present twice in configuration

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: A drive object number is present more than once in p0978.
Alarm value (r2124, interpret decimal):
Index of p0978 under which the involved drive object number is located.
Remedy: Set p0009 to 1 and change p0978:
Rules:
- p0978 must include all of the drive object numbers (p0101).
- it is not permissible for a drive object number to be repeated.
- by entering a 0, the drive objects with PZD are separated from those without PZD.
- only 2 partial lists are permitted. After the second 0, all values must be 0.
- dummy drive object numbers (255) are only permitted in the first partial list.

A01323 Topology: More than two partial lists created

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: Partial lists are available more than twice in p0978. After the second 0, all must be 0.
Alarm value (r2124, interpret decimal):
Index of p0978 under which the illegal value is located.

Remedy: Set p0009 to 1 and change p0978:
Rules:
- p0978 must include all of the drive object numbers (p0101).
- it is not permissible for a drive object number to be repeated.
- by entering a 0, the drive objects with PZD are separated from those without PZD.
- only 2 partial lists are permitted. After the second 0, all values must be 0.
- dummy drive object numbers (255) are only permitted in the first partial list.

A01324 Topology: Dummy drive object number incorrectly created

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: In p0978, dummy drive object numbers (255) are only permitted in the first partial list.
Alarm value (r2124, interpret decimal):
Index of p0978 under which the illegal value is located.

Remedy: Set p0009 to 1 and change p0978:
Rules:
- p0978 must include all of the drive object numbers (p0101).
- it is not permissible for a drive object number to be repeated.
- by entering a 0, the drive objects with PZD are separated from those without PZD.
- only 2 partial lists are permitted. After the second 0, all values must be 0.
- dummy drive object numbers (255) are only permitted in the first partial list.

A01330 Topology: Quick commissioning not possible

Message value: Fault cause: %1, supplementary information: %2, preliminary component number: %3

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: Unable to carry out a quick commissioning. The existing actual topology does not fulfill the requirements.
Alarm value (r2124, interpret hexadecimal):
ccccbbaa hex: cccc = preliminary component number, bb = supplementary information, aa = fault cause
aa = 01 hex = 1 dec:
On one component illegal connections were detected.
- bb = 01 hex = 1 dec: For a Motor Module, more than one motor with DRIVE-CLiQ was detected.
- bb = 02 hex = 2 dec: For a motor with DRIVE-CLiQ, the DRIVE-CLiQ cable is not connected to a Motor Module.

aa = 02 hex = 2 dec:
The topology contains too many components of a particular type.
- bb = 01 hex = 1 dec: There is more than one master Control Unit.
- bb = 02 hex = 2 dec: There is more than 1 infeed (8 for a parallel circuit configuration).
- bb = 03 hex = 3 dec: There are more than 10 Motor Modules (8 for a parallel circuit configuration).
- bb = 04 hex = 4 dec: There are more than 9 encoders.
- bb = 05 hex = 5 dec: There are more than 8 Terminal Modules.
- bb = 07 hex = 7 dec: Unknown component type
- bb = 08 hex = 8 dec: There are more than 6 drive slaves.
- bb = 09 hex = 9 dec: Connection of a drive slave not permitted.
- bb = 0a hex = 10 dec: There is no drive master.
- bb = 0b hex = 11 dec: There is more than one motor with DRIVE-CLiQ for a parallel circuit.
- cccc: Not used.

aa = 03 hex = 3 dec:
More than 16 components are connected at a DRIVE-CLiQ socket of the Control Unit.

- bb = 0, 1, 2, 3 means e.g. detected at the DRIVE-CLiQ socket X100, X101, X102, X103.
- cccc: Not used.
aa = 04 hex = 4 dec:
The number of components connected one after the other is greater than 125.
- bb: Not used.
- cccc = preliminary component number of the first component and component that resulted in the fault.
aa = 05 hex = 5 dec:
The component is not permissible for SERVO.
- bb = 01 hex = 1 dec: SINAMICS G available.
- bb = 02 hex = 2 dec: Chassis available.
- cccc = preliminary component number of the first component and component that resulted in the fault.
aa = 06 hex = 6 dec:
On one component illegal EEPROM data was detected. These must be corrected before the system continues to boot.
- bb = 01 hex = 1 dec: The Order No. [MLFB] of the power unit that was replaced includes a space retainer. The space retainer (*) must be replaced by a correct character.
- cccc = preliminary component number of the component with illegal EEPROM data.
aa = 07 hex = 7 dec:
The actual topology contains an illegal combination of components.
- bb = 01 hex = 1 dec: Active Line Module (ALM) and Basic Line Module (BLM).
- bb = 02 hex = 2 dec: Active Line Module (ALM) and Smart Line Module (SLM).
- bb = 03 hex = 3 dec: SIMOTION control (e.g. SIMOTION D445) and SINUMERIK component (e.g. NX15).
- bb = 04 hex = 4 dec: SINUMERIK control (e.g. SINUMERIK 730.net) and SIMOTION component (e.g. CX32).
- cccc: Not used.
Note:
Connection type and connection number are described in F01375.
See also: p0097 (Select drive object type), r0098 (Actual device topology), p0099 (Device target topology)

Remedy:
- adapt the output topology to the permissible requirements.
- carry out commissioning using the commissioning software.
- for motors with DRIVE-CLiQ, connect the power and DRIVE-CLiQ cable to the same Motor Module (Single Motor Module: DRIVE-CLiQ at X202, Double Motor Module: DRIVE-CLiQ from motor 1 (X1) to X202, from motor 2 (X2) to X203).
Re aa = 06 hex = 6 dec and bb = 01 hex = 1 dec:
Correct the order number when commissioning using the commissioning software.
See also: p0097 (Select drive object type), r0098 (Actual device topology), p0099 (Device target topology)

A01331 Topology: At least one component not assigned to a drive object

Message value: Component number: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause:
At least one component is not assigned to a drive object.
- when commissioning, a component was not able to be automatically assigned to a drive object.
- the parameters for the data sets are not correctly set.
Alarm value (r2124, interpret decimal):
Component number of the unassigned component.

Remedy:
This component is assigned to a drive object.
Check the parameters for the data sets.
Examples:
- power unit (p0121).
- motor (p0131, p0186).
- encoder interface (p0140, p0141, p0187 ... p0189).
- encoder (p0140, p0142, p0187 ... p0189).
- Terminal Module (p0151).
- option board (p0161).

F01340 Topology: Too many components on one line

Message value: Component number or connection number: %1, fault cause: %2

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: For the selected communications clock cycle, too many DRIVE-CLiQ components are connected to one line of the Control Unit.
Fault value (r0949, interpret hexadecimal):
xyy hex: x = fault cause, yy = component number or connection number.
1yy:
The communications clock cycle of the DRIVE-CLiQ connection on the CU is not sufficient for all read transfers.
2yy:
The communications clock cycle of the DRIVE-CLiQ connection on the CU is not sufficient for all write transfers.
3yy:
Cyclic communication is fully utilized.
4yy:
The DRIVE-CLiQ cycle starts before the earliest end of the application. An additional dead time must be added to the control. Sign-of-life errors can be expected.
5yy:
Internal buffer overflow for net data of a DRIVE-CLiQ connection.
6yy:
Internal buffer overflow for receive data of a DRIVE-CLiQ connection.
7yy:
Internal buffer overflow for send data of a DRIVE-CLiQ connection.

Remedy: Check the DRIVE-CLiQ connection:
Reduce the number of components on the DRIVE-CLiQ line involved and distribute these to other DRIVE-CLiQ connections of the Control Unit. This means that communication is uniformly distributed over several communication lines.
Re fault value = 1yy - 4yy in addition:
- increase the sampling times (p0112, p0115).

F01354 Topology: Actual topology indicates an illegal component

Message value: Fault cause: %1, component number: %2

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: The actual topology indicates at least one illegal component.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = cause.
xx = 1: Component at this Control Unit not permissible.
xx = 2: Component in combination with another component not permissible.
Note:
Pulse enable is prevented.

Remedy: Remove the illegal components and restart the system.

F01355 Topology: Actual topology changed

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The device target topology (p0099) does not correspond to the device actual topology (r0098).
The fault only occurs if the topology was commissioned using the automatic internal device mechanism and not using the commissioning software.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
See also: r0098 (Actual device topology), p0099 (Device target topology)

Remedy: One of the following counter-measures can be selected if no faults have occurred in the topology detection itself:
If commissioning was still not completed:
- carry out a self-commissioning routine (starting from p0009 = 1).
General: Set p0099 to r0098, set p0009 to 0; for existing Motor Modules, this results in servo drives being automatically generated (p0107).
Generating servo drives: Set p0097 to 1, set p0009 to 0.
Generating vector drives: Set p0097 to 2, set p0009 to 0.
Generating vector drives with parallel circuit: Set p0097 to 12, set p0009 to 0.
In order to set configurations in p0108, before setting p0009 to 0, it is possible to first set p0009 to 2 and modify p0108. The index corresponds to the drive object (p0107).
If commissioning was already completed:
- re-establish the original connections and re-connect power to the Control Unit.
- restore the factory setting for the complete equipment (all of the drives) and allow automatic self-commissioning again.
- change the device parameterization to match the connections (this is only possible using the commissioning software).
Notice:
Topology changes that result in this fault being generated cannot be accepted by the automatic function in the device, but must be transferred using the commissioning software and parameter download. The automatic function in the device only allows constant topology to be used. Otherwise, when the topology is changed, all of the previous parameter settings are lost and replaced by the factory setting.
See also: r0098 (Actual device topology)

F01360 Topology: Actual topology is illegal

Message value: Fault cause: %1, preliminary component number: %2

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The detected actual topology is not permissible.
Fault value (r0949, interpret hexadecimal):
ccccbbaa hex: cccc = preliminary component number, aa = fault cause
aa = 01 hex = 1 dec:
Too many components were detected at the Control Unit. The maximum permissible number of components is 199.
aa = 02 hex = 2 dec:
The component type of a component is not known.
aa = 03 hex = 3 dec:
The combination of ALM and BLM is not permitted.
aa = 04 hex = 4 dec:
The combination of ALM and SLM is not permitted.
aa = 05 hex = 5 dec:
The combination of BLM and SLM is not permitted.
aa = 06 hex = 6 dec:
A CX32 was not directly connected to a permitted Control Unit.
aa = 07 hex = 7 dec:
An NX10 or NX15 was not directly connected to a permitted Control Unit.
aa = 08 hex = 8 dec:
A component was connected to a Control Unit that is not permitted for this purpose.
aa = 0A hex = 10 dec:
Too many components of a certain type detected.
aa = 0B hex = 11 dec:
Too many components of a certain type detected at a single line.
Note:
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy: Re fault cause = 1:
Change the configuration. Connect less than 199 components to the Control Unit.
Re fault cause = 2:
Remove the component with unknown component type.
Re fault cause = 3, 4, 5:
Establish a valid combination.

Re fault cause = 6, 7:
Connect the expansion module directly to a permitted Control Unit.
Re fault cause = 8:
Remove component.
Re fault cause = 10, 11:
Reduce the number of components.

A01361 Topology: Actual topology contains SINUMERIK and SIMOTION components

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The detected actual topology contains SINUMERIK and SIMOTION components.
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
Fault value (r0949, interpret hexadecimal):
ddccbbaa hex: cc = fault cause, bb = component class of the actual topology, aa = component number of the component
cc = 01 hex = 1 dec:
An NX10 or NX15 was connected to a SIMOTION control.
cc = 02 hex = 2 dec:
A CX32 was connected to a SINUMERIK control.

Remedy: Re fault cause = 1:
Replace all NX10 or NX15 by a CX32.
Re fault cause = 2:
Replace all CX32 by an NX10 or NX15.

F01375 Topology: Actual topology, duplicate connection between two components

Message value: Preliminary component number: %1, component class: %2, connection number: %3

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: When detecting the actual topology, a ring-type connection was detected.
Fault value (r0949, interpret hexadecimal):
ccbbaaaa hex:
cc = connection number
bb = component class
aaaa = preliminary component number of a component included in the ring
Component class:
1: Control Unit
2: Motor Module
3: Line Module
4: Sensor Module (SM)
5: Voltage Sensing Module (VSM)
6: Terminal Module (TM)
7: DRIVE-CLiQ Hub Module
8: Controller Extension 32 (CX32, NX10, NX15)
49: DRIVE-CLiQ components (non-listed components)
50: Option slot (e.g. Terminal Board 30)
60: Encoder (e.g. EnDat)
70: Motor with DRIVE-CLiQ
Component type:
Precise designation within a component class (e.g. "SMC20").
Connection number:
Consecutive numbers, starting from zero, of the appropriate connection or slot (e.g. DRIVE-CLiQ connection X100 on the Control Unit has the connection number 0).

Remedy: Output the fault value and remove the specified connection.
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

F01380 Topology: Actual topology, defective EEPROM

Message value: Preliminary component number: %1

Drive object: All objects

Reaction: NONE

Acknowledge: POWER ON

Cause: When detecting the actual topology, a component with a defective EEPROM was detected.
Fault value (r0949, interpret hexadecimal):
bbbbaaaa hex:
aaaa = preliminary component number of the defective components

Remedy: Output the fault value and remove the defected component.

A01381 Topology: Comparison power unit shifted

Message value: Component number: %1, Component class: %2, Component (target): %3, Connection number: %4

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected a power unit in the actual topology that has been shifted with respect to the target topology.
Alarm value (r2124, interpret hexadecimal):
ddccbbaa hex:
dd = connection number
cc = component number
bb = component class
aa = component number of the component shifted in the target topology
Note:
The connection in the actual topology where the shifted component was detected is described in dd, cc and bb.
Component class and connection number are described in F01375.
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy: Adapting the topologies:
- undo the change to the actual topology by changing over the DRIVE-CLiQ cables.
- commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project.
- automatically remove the topology error (p9904).
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01382 Topology: Comparison Sensor Module shifted

Message value: Component number: %1, Component class: %2, Component (target): %3, Connection number: %4

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected a Sensor Module in the actual topology that has been shifted with respect to the target topology.
Alarm value (r2124, interpret hexadecimal):
ddccbbaa hex:
dd = connection number
cc = component number
bb = component class
aa = component number of the component shifted in the target topology
Note:
The connection in the actual topology where the shifted component was detected is described in dd, cc and bb.
Component class and connection number are described in F01375.
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy: Adapting the topologies:
- undo the change to the actual topology by changing over the DRIVE-CLiQ cables.
- commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project.
- automatically remove the topology error (p9904).
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01383 Topology: Comparison Terminal Module shifted

Message value: Component number: %1, Component class: %2, Component (target): %3, Connection number: %4

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected a Terminal Module in the actual topology that has been shifted with respect to the target topology.
Alarm value (r2124, interpret hexadecimal):
ddccbbaa hex:
dd = connection number
cc = component number
bb = component class
aa = component number of the component shifted in the target topology
Note:
The connection in the actual topology where the shifted component was detected is described in dd, cc and bb.
Component class and connection number are described in F01375.
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy: Adapting the topologies:
- undo the change to the actual topology by changing over the DRIVE-CLiQ cables.
- commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project.
- automatically remove the topology error (p9904).
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01384 Topology: Comparison DRIVE-CLiQ Hub Module shifted

Message value: Component number: %1, Component class: %2, Component (target): %3, Connection number: %4

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected a DRIVE-CLiQ Hub Module in the actual topology that has been shifted with respect to the target topology.
Alarm value (r2124, interpret hexadecimal):
ddccbbaa hex:
dd = connection number
cc = component number
bb = component class
aa = component number of the component shifted in the target topology
Note:
The connection in the actual topology where the shifted component was detected is described in dd, cc and bb.
Component class and connection number are described in F01375.
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy: Adapting the topologies:
- undo the change to the actual topology by changing over the DRIVE-CLiQ cables.
- commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project.
- automatically remove the topology error (p9904).
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01385 Topology: Comparison CX32 shifted

Message value: Component number: %1, Component class: %2, Component (target): %3, Connection number: %4

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected a controller extension 32 (CX32) in the actual topology that has been shifted with respect to the target topology.
Alarm value (r2124, interpret hexadecimal):
ddccbbaa hex:
dd = connection number
cc = component number
bb = component class
aa = component number of the component shifted in the target topology
Note:
The connection in the actual topology where the shifted component was detected is described in dd, cc and bb.
Component class and connection number are described in F01375.
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy: Adapting the topologies:
- undo the change to the actual topology by changing over the DRIVE-CLiQ cables.
- commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project.
- automatically remove the topology error (p9904).
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01386 Topology: Comparison DRIVE-CLiQ component shifted

Message value: Component number: %1, Component class: %2, Component (target): %3, Connection number: %4

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected a DRIVE-CLiQ component in the actual topology that has been shifted with respect to the target topology.
Alarm value (r2124, interpret hexadecimal):
ddccbbaa hex:
dd = connection number
cc = component number
bb = component class
aa = component number of the component shifted in the target topology
Note:
The connection in the actual topology where the shifted component was detected is described in dd, cc and bb.
Component class and connection number are described in F01375.
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy: Adapting the topologies:
- undo the change to the actual topology by changing over the DRIVE-CLiQ cables.
- commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project.
- automatically remove the topology error (p9904).
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01387 Topology: Comparison option slot component shifted

Message value: Component number: %1, Component class: %2, Component (target): %3, Connection number: %4

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected a option slot component in the actual topology that has been shifted with respect to the target topology.
Alarm value (r2124, interpret hexadecimal):
ddccbbaa hex:
dd = connection number
cc = component number
bb = component class
aa = component number of the component shifted in the target topology
Note:
The connection in the actual topology where the shifted component was detected is described in dd, cc and bb.
Component class and connection number are described in F01375.
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy: Adapting the topologies:
- undo the change to the actual topology by changing over the DRIVE-CLiQ cables.
- commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project.
- automatically remove the topology error (p9904).
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01388 Topology: Comparison EnDat encoder shifted

Message value: Component number: %1, Component class: %2, Component (target): %3, Connection number: %4

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected an EnDat encoder in the actual topology that has been shifted with respect to the target topology.
Alarm value (r2124, interpret hexadecimal):
ddccbbaa hex:
dd = connection number
cc = component number
bb = component class
aa = component number of the component shifted in the target topology
Note:
The connection in the actual topology where the shifted component was detected is described in dd, cc and bb.
Component class and connection number are described in F01375.
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy: Adapting the topologies:
- undo the change to the actual topology by changing over the DRIVE-CLiQ cables.
- commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project.
- automatically remove the topology error (p9904).
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01389 Topology: Comparison motor with DRIVE-CLiQ shifted

Message value: Component number: %1, Component class: %2, Component (target): %3, Connection number: %4

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected a motor with DRIVE-CLiQ in the actual topology that has been shifted with respect to the target topology.
Alarm value (r2124, interpret hexadecimal):
ddccbbaa hex:
dd = connection number
cc = component number
bb = component class
aa = component number of the component shifted in the target topology
Note:
The connection in the actual topology where the shifted component was detected is described in dd, cc and bb.
Component class and connection number are described in F01375.
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy: Adapting the topologies:
- undo the change to the actual topology by changing over the DRIVE-CLiQ cables.
- commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project.
- automatically remove the topology error (p9904).
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01416 Topology: Comparison additional component in actual topology

Message value: Component number: %1, Component class: %2, Connection number: %3

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has found a component in the actual topology which is not specified in the target topology.
The alarm value includes the component number and connection number of the component with which the additional component is connected.
Alarm value (r2124, interpret hexadecimal):
ddccbbaa hex:
cc = connection number
bb = component class of the additional component
aa = component number
Note:
- component class and connection number are described in F01375.
- components that are connected to this additional component are not operational.

Remedy: Adapting the topologies:
- remove the additional component in the actual topology.
- download the target topology that matches the actual topology (commissioning software).
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01420 Topology: Comparison a component is different

Message value: Component number: %1, component class target: %2, component class actual: %3, fault cause: %4

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected differences in the actual and target topologies in relation to one component.
There are differences in the electronic rating plate.

Alarm value (r2124, interpret hexadecimal):
ddccbbaa hex: aa = component number of the component, bb = component class of the target tolopology, cc = component class of the actual topology, dd = fault cause
dd = 01 hex = 1 dec:
Different component type.
dd = 02 hex = 2 dec:
Different Order No.
dd = 03 hex = 3 dec:
Different manufacturer.
dd = 04 hex = 4 dec:
Connection changed over for a multi-component slave (e.g. Double Motor Module) or defective EEPROM data in the electronic rating plate.
dd = 05 hex = 5 dec:
A CX32 was replaced by an NX10 or NX15.
dd = 06 hex = 6 dec:
An NX10 or NX15 was replaced by a CX32.
Note:
Component class and component type are described in F01375.
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy: Adapting the topologies:
- check the component soft-wired connections against the hardware configuration of the drive unit in the commissioning software and correct differences.
- parameterize the topology comparison of all components (p9906).
- parameterize the topology comparison of one components (p9907, p9908).
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01421 Topology: Comparison different components

Message value: Component number: %1, component class target: %2, component class actual: %3, fault cause: %4

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected differences in the actual and target topologies in relation to one component.
The component class, the component type or the number of connections differ.
Alarm value (r2124, interpret hexadecimal):
ddccbbaa hex: aa = component number of the component, bb = component class of the target tolopology, cc = component class of the actual topology, dd = fault cause
dd = 01 hex = 1 dec:
Different component class.
dd = 02 hex = 2 dec:
Different component type.
dd = 03 hex = 3 dec:
Different Order No.
dd = 04 hex = 4 dec:
Different number of connections.
Note:
Component class, component type and connection number are described in F01375.
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy: Check the component soft-wired connections against the hardware configuration of the drive unit in the commissioning software and correct differences.
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01425 Topology: Comparison serial number of a component is different

Message value: Component number: %1, Component class: %2, Differences: %3

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected differences in the actual and target topologies in relation to one component.
The serial number is different.
Alarm value (r2124, interpret hexadecimal):
ddccbbaa hex:
cc = number of differences
bb = component class
aa = component number of the component
Note:
The component class is described in F01375.
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy: Adapting the topologies:
- change over the actual topology to match the target topology.
- download the target topology that matches the actual topology (commissioning software).
Re byte cc:
cc = 1 --> can be acknowledged using p9904 or p9905.
cc > 1 --> can be acknowledged using p9905 and can be de-activated using p9906 or p9907/p9908.
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).
See also: p9904 (Topology comparison, acknowledge differences), p9905 (Device specialization), p9906 (Topology comparison, comparison stage of all components), p9907 (Topology comparison, comparison stage of the component number), p9908 (Topology comparison, comparison stage of a component)

A01428 Topo: Comparison connection of a component is different

Message value: Component number: %1, Component class: %2, Connection number1: %3, Connection number2: %4

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected differences in the actual and target topologies in relation to one component.
A component was connected to another connection.
The different connections of a component are described in the alarm value:
Alarm value (r2124, interpret hexadecimal):
ddccbbaa hex:
dd = connection number of the target topology
cc = connection number of the actual topology
bb = component class
aa = component number
Note:
Component class and connection number are described in F01375.
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy: Adapting the topologies:
- change over the actual topology to match the target topology.
- download the target topology that matches the actual topology (commissioning software).
- automatically remove the topology error (p9904).
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).
See also: p9904 (Topology comparison, acknowledge differences)

A01429 Topology: Comparison connection is different for more than one component

Message value: Component number: %1, Component class: %2, Connection number1: %3, Connection number2: %4

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: A topology comparison has found differences between the actual and target topology for several components. A component was connected to another connection.
The different connections of a component are described in the alarm value:
Alarm value (r2124, interpret hexadecimal):
ddccbbaa hex:
dd = connection number of the target topology
cc = connection number of the actual topology
bb = component class
aa = component number
Note:
Component class and connection number are described in F01375.
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy: Adapting the topologies:
- change over the actual topology to match the target topology.
- download the target topology that matches the actual topology (commissioning software).
Note:
In the software, a Double Motor Module behaves just like two separate DRIVE-CLiQ nodes. If a Double Motor Module is re-inserted, this can result in several differences in the actual topology.
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

F01451 Topology: Target topology is invalid

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: An error was detected in the target topology.
The target topology is invalid.
Fault value (r0949, interpret hexadecimal):
ccccbbaa hex: cccc = index error, bb = component number, aa = fault cause
aa = 1B hex = 27 dec: Error not specified.
aa = 1C hex = 28 dec: Value illegal.
aa = 1D hex = 29 dec: Incorrect ID.
aa = 1E hex = 30 dec: Incorrect ID length.
aa = 1F hex = 31 dec: Too few indices left.
aa = 20 hex = 32 dec: component not connected to Control Unit.

Remedy: Reload the target topology using the commissioning software.

F01470 Topology: Target topology ring-type connection

Message value: Component number: %1, Component class: %2, Connection number: %3

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: A ring-type connection was detected when writing to the target topology.
Fault value (r0949, interpret hexadecimal):
ddccbbaa hex:
cc = connection number
bb = component class
aa = component number of a component included in the ring
Note:
Component class and connection number are described in F01375.

Remedy: Read out the fault value and remove one of the specified connections.
Then download the target topology again using the commissioning software.
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

F01475 Topology: Target topology duplicate connection between two components

Message value: Component number: %1, Component class: %2, Connection number1: %3, Connection number2: %4

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: When writing the target topology, a duplicate connection between two components was detected.
Fault value (r0949, interpret hexadecimal):
ddccbbaa hex:
dd = connection number 2 of the duplicate connection
cc = connection number 1 of the duplicate connection
bb = component class
aa = component number of one of the components connected twice
Note:
Component class and connection number are described in F01375.

Remedy: Read out the fault value and remove one of the two specified connections.
Then download the target topology again using the commissioning software.
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01481 Topology: Comparison power unit missing in the actual topology

Message value: Component number: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected a power unit in the target topology that is not available in the actual topology.
Alarm value (r2124, interpret decimal):
Component number of the additional target components.

Remedy: - delete the drive belonging to the power unit in the commissioning software project and download the new configuration to the drive unit.
- check that the actual topology matches the target topology and if required, change over.
- check DRIVE-CLiQ cables for interruption and contact problems.
- check the 24 V supply voltage.
- check that the power unit is working properly.
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01482 Topology: Comparison Sensor Module missing in the actual topology

Message value: Component number: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected a Sensor Module in the target topology that is not available in the actual topology.
Alarm value (r2124, interpret decimal):
Component number of the additional target components.

Remedy: - re-configure the drive belonging to the Sensor Module in the commissioning software project (encoder configuration) and download the new configuration to the drive unit.
- delete the drive belonging to the Sensor Module in the commissioning software project and download the new configuration to the drive unit.
- check that the actual topology matches the target topology and if required, change over.
- check DRIVE-CLiQ cables for interruption and contact problems.
- check the 24 V supply voltage.
- check that the Sensor Module is working properly.
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01483 Topology: Comparison Terminal Module missing in the actual topology

Message value: Component number: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected a Terminal Module in the target topology that is not available in the actual topology.
Alarm value (r2124, interpret decimal):
Component number of the additional target components.

Remedy: - delete the Terminal Module in the commissioning software project and download the new configuration to the drive unit.
- check that the actual topology matches the target topology and if required, change over.
- check DRIVE-CLiQ cables for interruption and contact problems.
- check the 24 V supply voltage.
- check that the Terminal Module is working properly.
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01484 Topology: Comparison DRIVE-CLiQ Hub Module missing in the actual topology

Message value: Component number: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected a DRIVE-CLiQ Hub Module in the target topology that does not exist in the actual topology.
Alarm value (r2124, interpret decimal):
Component number of the additional target components.

Remedy: - delete the DRIVE-CLiQ Hub Module in the commissioning software project and download the new configuration to the drive unit.
- check that the actual topology matches the target topology and if required, change over.
- check DRIVE-CLiQ cables for interruption and contact problems.
- check the 24 V supply voltage.
- test the DRIVE-CLiQ Hub Module to ensure that it functions correctly.
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01485 Topology: Comparison CX32 missing in the actual topology

Message value: Component number: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected a controller extension 32 (CX32) in the target topology that is not available in the actual topology.
Alarm value (r2124, interpret decimal):
Component number of the additional target components.

Remedy: - delete the CX32 / NX in the commissioning software project and download the new configuration to the drive unit.
- check that the actual topology matches the target topology and if required, change over.
- check DRIVE-CLiQ cables for interruption and contact problems.
- check the 24 V supply voltage.
- check that CX32/NX functions correctly.
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01486 Topology: Comparison DRIVE-CLiQ components missing in the actual topology

Message value: Component number: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected a DRIVE-CLiQ component in the target topology that is not available in the actual topology.
Alarm value (r2124, interpret decimal):
Component number of the additional target components.

Remedy: - delete the drive belonging to this component in the commissioning software project and download the new configuration to the drive unit.
- re-configure the drive belonging to this component in the commissioning software project and download the new configuration to the drive unit.
- check that the actual topology matches the target topology and if required, change over.
- check DRIVE-CLiQ cables for interruption and contact problems.
- check the 24 V supply voltage.
- check that the component is working properly.
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01487 Topology: Comparison option slot components missing in the actual topology

Message value: Component number: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected an option slot module in the target topology that is not available in the actual topology.
Alarm value (r2124, interpret decimal):
Component number of the additional target components.

Remedy: - delete the option board in the commissioning software project and download the new configuration to the drive unit.
- re-configure the drive unit in the commissioning software project and download the new configuration to the drive unit.
- check that the actual topology matches the target topology and if required, change over.
- check that the option board is functioning correctly
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01488 Topology: Comparison EnDat encoder missing in the actual topology

Message value: Component number: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected an EnDat encoder in the target topology that is not available in the actual topology.
Alarm value (r2124, interpret decimal):
Component number of the additional target components.

Remedy: - re-configure the drive belonging to the encoder in the commissioning software project (encoder configuration) and download the new configuration to the drive unit.
- delete the drive belonging to the encoder in the commissioning software project and download the new configuration to the drive unit.
- check that the actual topology matches the target topology and if required, change over.
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01489 Topology: Comparison motor with DRIVE-CLiQ missing in the actual topology

Message value: Component number: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has detected a motor with DRIVE-CLiQ in the target topology that is not available in the actual topology.
Alarm value (r2124, interpret decimal):
Component number of the additional target components.

Remedy: - re-configure the drive belonging to this motor in the commissioning software project and download the new configuration to the drive unit.
- re-configure the drive belonging to this motor in the commissioning software project and download the new configuration to the drive unit.
- check that the actual topology matches the target topology and if required, change over.
- check DRIVE-CLiQ cables for interruption and contact problems.
- check that the motor is working properly.
Note:
Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

F01505 (A) BICO: Interconnection cannot be established

Message value: Parameter: %1

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: A PROFIdrive telegram has been set (p0922).
An interconnection contained in the telegram was not able to be established.
Fault value (r0949, interpret decimal):
Parameter receiver that should be changed.

Remedy: Establish another interconnection.

Reaction upon A: NONE

Acknowl. upon A: NONE

F01506 (A) BICO: No standard telegram

Message value: Parameter: %1

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The standard telegram in p0922 is not maintained and therefore p0922 is set to 999.
Fault value (r0949, interpret decimal):
BICO parameter for which the write attempt was unsuccessful.

Remedy: Again set the required standard telegram (p0922).

Reaction upon A: NONE

Acknowl. upon A: NONE

A01507 (F, N) BICO: Interconnections to inactive objects present

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: There are BICO interconnections as signal sink from a drive object that is either inactive/not operational.
The BI/CI parameters involved are listed in r9498.
The associated BO/CO parameters are listed in r9499.
The list of the BICO interconnections to other drive objects is displayed in r9491 and r9492 of the de-activated drive object.
Note:
r9498 and r9499 are only written to, if p9495 is not set to 0.
Alarm value (r2124, interpret decimal):
Number of BICO interconnections found to inactive drive objects.

Remedy: - set all open BICO interconnections centrally to the factory setting with p9495 = 2.
- make the non-operational drive object active/operational again (re-insert or activate components).

Reaction upon F: A_INFEED: OFF2 (NONE, OFF1)
SERVO: OFF2 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
VECTOR: OFF2 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)

Acknowl. upon F: IMMEDIATELY

Reaction upon N: NONE

Acknowl. upon N: NONE

A01508 BICO: Interconnections to inactive objects exceeded

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The maximum number of BICO interconnections (signal sinks) when de-activating a drive object was exceeded.
When de-activating a drive object, all BICO interconnections (signal sinks) are listed in the following parameters:
- r9498[0...29]: List of the BI/CI parameters involved.
- r9499[0...29]: List of the associated BO/CO parameters.

Remedy: The alarm automatically disappears as soon as no BICO interconnection (value = 0) is entered in r9498[29] and r9499[29].
Notice:
When re-activating the drive object, all BICO interconnections should be checked and if required, re-established.

F01510 BICO: Signal source is not float type

Message value: Parameter: %1

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The requested connector output does not have the correct data type. This interconnection is not established.
Fault value (r0949, interpret decimal):
Parameter number to which an interconnection should be made (connector output).

Remedy: Interconnect this connector input with a connector output having a float data type.

F01511 (A) BICO: Interconnection between different normalizations

Message value: Parameter: %1

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The requested interconnection was established. However, a conversion is made between the BICO output and BICO input using the reference values.
- the BICO output has different normalized units than the BICO input.
- message only for interconnections within a drive object.

Example:
The BICO output has, as normalized unit, voltage and the BICO input has current.
This means that the factor p2002 (contains the reference value for current) / p2001 (contains the reference value for voltage) is calculated between the BICO output and BICO input.
Fault value (r0949, interpret decimal):
Parameter number of the BICO input (signal sink).

Remedy: No correction needed.
Reaction upon A: NONE
Acknowl. upon A: NONE

F01512 BICO: No normalization available

Message value: %1
Drive object: All objects
Reaction: A_INFEED: OFF2 (OFF1)
SERVO: OFF2
VECTOR: OFF2
Acknowledge: POWER ON
Cause: An attempt was made to determine a conversion factor for a normalization that does not exist.
Fault value (r0949, interpret decimal):
Unit (e.g. corresponding to SPEED) for which an attempt was made to determine a factor.
Remedy: Apply normalization or check the transfer value.

F01513 (A) BICO: Spanning DO between different normalizations

Message value: Parameter: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The requested interconnection was established. However, a conversion is made between the BICO output and BICO input using the reference values.
An interconnection is made between different drive objects and the BICO output has different normalized units than the BICO input or the normalized units are the same but the reference values are different.
Example:
The BICO output has, as standard unit, voltage and the BICO input has current; both lie in different drive objects.
This means that the factor p2002 (contains the reference value for current) / p2001 (contains the reference value for voltage) is calculated between the BICO output and BICO input.
Fault value (r0949, interpret decimal):
Parameter number of the BICO input (signal sink).
Remedy: None necessary.
Reaction upon A: NONE
Acknowl. upon A: NONE

A01514 (F) BICO: Error when writing during a reconnect

Message value: Parameter: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: During a reconnect operation (e.g. while booting or downloading - but can also occur in normal operation) a parameter was not able to be written to.
Example:
When writing to a double word BICO input in the second index, the memory areas overlap (e.g. p8861). The parameter is then reset to the factory setting.
Alarm value (r2124, interpret decimal):
Parameter number of the BICO input (signal sink).
Remedy: None necessary.
Reaction upon F: NONE
Acknowl. upon F: IMMEDIATELY

F01515 (A) BICO: Writing to parameter not permitted as the master control is active

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: While changing the number of CDS or when copying from CDS, the master control was active.
Remedy: None necessary.
Reaction upon A: NONE
Acknowl. upon A: NONE

A01590 (F) Drive: Motor maintenance interval expired

Message value: Fault cause: %1 bin
Drive object: A_INF, B_INF, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The selected service/maintenance interval for this motor was reached.
Alarm value (r2124, interpret decimal):
Motor data set number.
See also: p0650 (Actual motor operating hours), p0651 (Motor operating hours maintenance interval)
Remedy: carry out service/maintenance and reset the service/maintenance interval (p0651).
Reaction upon F: NONE
Acknowl. upon F: IMMEDIATELY

F01600 SI CU: STOP A initiated

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The drive-based "Safety Integrated" function in the Control Unit (CU) has detected a fault and initiated a STOP A (pulse suppression via the safety shutdown path of the Control Unit).
- forced checking procedure of the safety shutdown path of the Control Unit unsuccessful.
- subsequent response to fault F01611 (defect in a monitoring channel).
Fault value (r0949, interpret decimal):
0: Stop request from the Motor Module.
1005: Pulses suppressed although STO not selected and there is no internal STOP A present.
1010: Pulses enabled although STO is selected or an internal STOP A is present.
1015: Feedback of the safe pulse suppression for Motor Modules connected in parallel are different.
9999: Subsequent response to fault F01611.
Remedy: - select Safe Torque Off and de-select again.
- replace the Motor Module involved.
Re fault value = 9999:
- carry out diagnostics for fault F01611.
Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated
STO: Safe Torque Off / SH: Safe standstill

F01611 SI CU: Defect in a monitoring channel

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The drive-based "Safety Integrated" function in the Control Unit (CU) has detected a fault in the data cross-check between the CU and Motor Module (MM) and initiated a STOP F.

As a result of this fault, after the parameterized transition has expired (p9658), fault F01600 (SI CU: STOP A initiated) is output.
Fault value (r0949, interpret decimal):
0: Stop request from the Motor Module.
1 to 999:
Number of the cross-checked data that resulted in this fault. This number is also displayed in r9795.
1: SI monitoring clock cycle (r9780, r9880).
2: SI enable safety functions (p9601, p9801). Crosswise data comparison is only carried out for the supported bits.
3: SI SGE changeover tolerance time (p9650, p9850).
4: SI transition period STOP F to STOP A (p9658, p9858).
5: SI enable Safe Brake Control (p9602, p9802).
6: SI Motion enable, safety-relevant functions (p9501, internal value).
7: SI pulse suppression delay time for Safe Stop 1 (p9652, p9852).
8: SI PROFIsafe address (p9610, p9810).
1000: Watchdog timer has expired. Within a period corresponding to approximately 5 * p9650, too many switching operations have occurred at terminal EP of the Motor Module, or STO (including subsequent responses) has been triggered too frequently via PROFIsafe/TM54F.
1001, 1002: Initialization error, change timer / check timer.
2000: Status of the STO selection on the Control Unit and Motor Module are different.
2001: Feedback signal for safe pulse suppression on the Control Unit and Motor Module are different.
2002: Status of the delay timer SS1 on the Control Unit and Motor Module are different.
2004: Status of the STO selection for modules connected in parallel are different.
2005: Feedback signal of the safe pulse suppression on the Control Unit and Motor Modules connected in parallel are different.

Remedy:

Re fault value = 1 to 5 and 7 to 999:
- check the cross-checked data that resulted in a STOP F.
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

Re fault value = 6:
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

Re fault value = 1000:
- check the EP terminal at the Motor Module (contact problems).
- PROFIsafe: rectify contact problems/faults on the PROFIBUS master/PROFINET controller.
- check the wiring of the fail-safe inputs on TM54F (contact problems).

Re fault value = 1001, 1002:
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

Re fault value = 2000, 2001, 2002, 2004, 2005:
- check the tolerance time SGE changeover and if required, increase the value (p9650/p9850, p9652/p9852).
- check the wiring of the safety-relevant inputs (SGE) (contact problems).
- check the causes of STO selection in r9772. Active SMM functions (p9501=1) can also cause STO to be selected.
- replace the Motor Module involved.

Note:
CU: Control Unit
EP: Enable Pulses (pulse enable)
MM: Motor Module
SGE: Safety-relevant input
SI: Safety Integrated
SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)
STO: Safe Torque Off / SH: Safe standstill
SMM: see r9772

F01612 SI CU: STO inputs for power units connected in parallel different

Message value: Fault cause: %1 bin

Drive object: SERVO, VECTOR

Reaction: NONE (OFF1, OFF2, OFF3)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive-based "Safety Integrated" function on the Control Unit (CU) has identified different states of the AND'ed STO inputs for power units connected in parallel and has initiated a STOP F.
As a result of this fault, after the parameterized transition has expired (p9658), fault F01600 (SI CU: STOP A initiated) is output.
Fault value (r0949, interpret binary):
Binary image of the digital inputs of the Control Unit that are used as signal source for the function "Safe Torque Off".

Remedy: - check the tolerance time SGE changeover and if required, increase the value (p9650).
- check the wiring of the safety-relevant inputs (SGE) (contact problems).
Note:
CU: Control Unit
SGE: Safety-relevant input
SI: Safety Integrated
STO: Safe Torque Off / SH: Safe standstill

N01620 (F, A) SI CU: Safe Torque Off active

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The "Safe Torque Off" (STO) function has been selected on the Control Unit (CU) using the input terminal and is active.
Note:
This message does not result in a safety stop response.

Remedy: None necessary.
Note:
CU: Control Unit
SI: Safety Integrated
STO: Safe Torque Off / SH: Safe standstill

Reaction upon F: OFF2

Acknowl. upon F: IMMEDIATELY (POWER ON)

Reaction upon A: NONE

Acknowl. upon A: NONE

N01621 (F, A) SI CU: Safe Stop 1 active

Reaction: NONE

Acknowledge: NONE

Cause: The "Safe Stop 1" (SS1) function has been selected on the Control Unit (CU) and is active.
Note:
This message does not result in a safety stop response.

Remedy: None necessary.
Note:
CU: Control Unit
SI: Safety Integrated
SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)

Reaction upon F: OFF3

Acknowl. upon F: IMMEDIATELY (POWER ON)

Reaction upon A: NONE

Acknowl. upon A: NONE

F01625 SI CU: Sign-of-life error in safety data

Message value: %1

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive-based "Safety Integrated" function in the Control Unit (CU) has detected an error in the sign-of-life of the safety data between the CU and Motor Module (MM) and initiated a STOP A.
- there is either a DRIVE-CLiQ communication error or communication has failed.
- a time slice overflow of the safety software has occurred.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.

Remedy:
- select Safe Torque Off and de-select again.
- carry out a POWER ON (power off/on) for all components.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
- de-select all drive functions that are not absolutely necessary.
- reduce the number of drives.
- check the electrical cabinet design and cable routing for EMC compliance
Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated

F01630 SI CU: Brake control error

Message value: %1

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive-based "Safety Integrated" function in the Control Unit (CU) has detected a brake control error and initiated a STOP A.
Fault value (r0949, interpret decimal):
10, 11:
Fault in "open holding brake" operation.
- Parameter p1278 incorrectly set.
- No brake connected or wire breakage (check whether brake releases for p1278 = 1 and p9602/p9802 = 0 (SBC deactivated)).
- Ground fault in brake cable.
20:
Fault in "brake open" state.
- Short-circuit in brake winding.
30, 31:
Fault in "close holding brake" operation.
- No brake connected or wire breakage (check whether brake releases for p1278 = 1 and p9602/p9802 = 0 (SBC deactivated)).
- Short-circuit in brake winding.
40:
Fault in "brake closed" state.
50:
Fault in the brake control circuit of the Control Unit or communication fault between the Control Unit and Motor Module (brake control).
Note:
The following causes may apply to fault values:
- motor cable is not shielded correctly.
- defect in control circuit of the Motor Module.

Remedy: - check parameter p1278 (for SBC, only p1278 = 0 is permissible).
- select Safe Torque Off and de-select again.
- check the motor holding brake connection.
- check the function of the motor holding brake.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
- check that the electrical cabinet design and cable routing are in compliance with EMC regulations (e.g. shield of the motor cable and brake conductors are connected with the shield connecting plate and the motor connectors are tightly screwed to the housing).
- replace the Motor Module involved.
Operation with Safe Brake Module:
- check the Safe Brake Modules connection.
- replace the Safe Brake Module.
Note:
CU: Control Unit
SBC: Safe Brake Control
SI: Safety Integrated

F01649 SI CU: Internal software error

Message value: %1

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: An internal error in the Safety Integrated software on the Control Unit has occurred.
Note:
This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.

Remedy: - carry out a POWER ON (power off/on) for all components.
- re-commission the "Safety Integrated" function and carry out a POWER ON.
- upgrade the Control Unit software.
- contact the Hotline.
- replace the Control Unit.
Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated

F01650 SI CU: Acceptance test required

Message value: %1

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive-based "Safety Integrated" function in the Control Unit requires an acceptance test.
Note:
This fault results in a STOP A that can be acknowledged.
Fault value (r0949, interpret decimal):
130: Safety parameters for the Motor Module not available.
1000: Reference and actual checksum on the Control Unit are not identical (booting).
- at least one checksum-checked piece of data is defective.
2000: Reference and actual checksum on the Control Unit are not identical (commissioning mode).
- reference checksum incorrectly entered into the Control Unit (p9799 not equal to r9798).
- when de-activating the safety functions, p9501 or p9503 are not deleted.
2001: Reference and actual checksum on the Motor Module are not identical (commissioning mode).
- reference checksum incorrectly entered into the Motor Module (p9899 not equal to r9898).
- when de-activating the safety functions, p9501 or p9503 are not deleted.
2002: Enable of safety-related functions between the Control Unit and Motor Module differ (p9601 not equal to p9801).
2003: Acceptance test is required as a safety parameter has been changed.
2004: An acceptance test is required because a project with enabled safety-functions has been downloaded.

2005: The Safety LogBook has identified that a functional safety checksum has changed. An acceptance test is required.
2010: Safe Brake Control is enabled differently between the Control Unit and Motor Module (p9602 not equal to p9802).
2020: Error when saving the safety parameters for the Motor Module.
3003: Acceptance test is required as a hardware-related safety parameter has been changed.
3005: The Safety LogBook has identified that a hardware-related safety checksum has changed. An acceptance test is required.
9999: Subsequent response of another safety-related fault that occurred when booting that requires an acceptance test.

Remedy:
Re fault value = 130:
- carry out safety commissioning routine.
Re fault value = 1000:
- again carry out safety commissioning routine.
- replace the CompactFlash card.
Re fault value = 2000:
- check the safety parameters in the Control Unit and adapt the reference checksum (p9799).
Re fault value = 2001:
- check the safety parameters in the Motor Module and adapt the reference checksum (p9899).
Re fault value = 2002:
- enable the safety-related functions in the Control Unit and check in the Motor Module (p9601 = p9801).
Re fault value = 2003, 2004, 2005:
- Carry out an acceptance test and generate an acceptance report.
The procedure when carrying out an acceptance test as well as an example of the acceptance report are provided in the documentation for SINAMICS Safety Integrated.
The fault with fault value 3005 can only be acknowledged when the "STO" function is deselected.
Re fault value = 2010:
- check enable of the safety-related brake control in the Control Unit and Motor Module (p9602 = p9802).
Re fault value = 2020:
- again carry out safety commissioning routine.
- replace the CompactFlash card.
Re fault value = 3003:
- carry out the function checks for the modified hardware and generate an acceptance report.
The procedure when carrying out an acceptance test as well as an example of the acceptance report are provided in the following literature:
SINAMICS S120 Function Manual Safety Integrated
Re fault value = 3005:
- carry out the function checks for the modified hardware and generate an acceptance report.
The fault with fault value 3005 can only be acknowledged when the "STO" function is deselected.
Re fault value = 9999:
- carry out diagnostics for the other safety-related fault that is present.
Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated
STO: Safe Torque Off

F01651 SI CU: Synchronization safety time slices unsuccessful

Message value: %1

Drive object: A_INF, B_INF, CU_LINK, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The "Safety Integrated" function requires a synchronization of the safety time slices between the Control Unit (CU) and Motor Module (MM) and between the Control Unit and the higher-level control. This synchronization routine was unsuccessful.
Note:
This fault results in a STOP A that cannot be acknowledged.

Fault value (r0949, interpret decimal):
150: Fault in the synchronization to the PROFIBUS master.
All other values: Only for internal Siemens troubleshooting.
See also: p9510 (SI Motion clock-cycle synchronous PROFIBUS master)

Remedy: Re fault value = 150:
- check the setting of p9510 (SI Motion clock-cycle synchronous PROFIBUS master) and if required, correct.
General:
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.
- upgrade the software of the higher-level control.
Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated

F01652 SI CU: Illegal monitoring clock cycle

Message value: %1

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: One of the Safety Integrated monitoring clock cycles is not permissible:
- the drive-based monitoring clock cycle cannot be maintained due to the communication conditions required in the system.
- the monitoring clock cycle for safe motion monitoring functions with the higher-level control is not permissible (p9500).
- The sampling time for the current controller (p0112, p0115) cannot be supported.
Note:
This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret decimal):
- for enabled drive-based SI monitoring (p9601/p9801 > 0):
Minimum setting for the monitoring clock cycle (in µs).
- with the motion monitoring function enabled (p9501 > 0):
100: No matching monitoring clock cycle was able to be found.
101: The monitoring clock cycle is not an integer multiple of the actual value sensing clock cycle.
102: An error has occurred when transferring the DP clock cycle to the Motor Module (MM).
103: An error has occurred when transferring the DP clock cycle to the Sensor Module.
104,105:
- four times the sampling time of the current controller is greater than 1 ms when operating with a non-clock-cycle synchronous PROFIBUS.
- Four times the sampling time of the current controller is greater than the DP clock cycle when operating with a clock-cycle synchronous PROFIBUS.
- the DP clock cycle is not an integer multiple of the sampling time of the current controller.
106: The monitoring clock cycle does not match the monitoring clock cycle of the TM54F.
107: Four times the sampling time of the current controller is greater than the actual value sensing clock cycle (p9511) or
the actual value sensing clock cycle is not an integer multiple of the sampling time of the current controller.
108: The parameterized actual value sensing clock cycle cannot be set on this component

Remedy: For enabled drive-based SI monitoring (p9601/p9801 > 0):
- upgrade the Control Unit software.
For enabled motion monitoring function (p9501 > 0):
- correct the monitoring clock cycle (p9500) and carry out POWER ON.
Re fault value 101:
- the actual value sensing clock cycle is per default the position control clock cycle / DP clock cycle.
- for the drive-based motion monitoring functions (p9601/p9801bit 2 = 1) the
actual value sensing clock cycle can be directly parameterized in p9511/p9311.

Re fault value = 104, 105:
- set a separate actual value sensing clock cycle in p9511.
- restrict operation to a maximum of two vector drives. For the standard settings in p0112, p0115, the current controller sampling time is automatically reduced to 250 µs. If the standard values were changed, then the current controller sampling time (p0112, p0115) should be appropriately set.
- increase the DP clock cycle for operation with a clock-cycle synchronous PROFIBUS so that there is a multiple clock cycle ratio of at least 4:1 between the DP clock cycle and the current controller sampling time.
Re fault value 106:
- set the parameters for the monitoring clock cycles the same (p10000 and p9500 / p9300).
Re fault value 107:
- set an actual value sensing clock cycle in p9511 that matches the current control clock cycle.
Re fault value 108:
- set a suitable actual value sensing clock cycle in p9511.
- if, when operating with clock-cycle synchronous PROFIBUS, the DP clock cycle is used as actual value sensing clock cycle (p9511 = 0) a suitable DP clock cycle must be configured.
A suitable multiple of the DP clock cycle (e.g. 1,2,3,4,5,6,8,10) must be parameterized on the D410.
Otherwise, the clock cycle must be set to less than 8 ms.
Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated

F01653 SI CU: PROFIBUS configuration error

Message value: %1

Drive object: SERVO, VECTOR

Reaction: NONE (OFF1, OFF2, OFF3)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: There is a PROFIBUS configuration error for using Safety Integrated monitoring functions with a higher-level control (SINUMERIK or F-PLC).
Note:
For safety functions that have been enabled, this fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret decimal):
200: A safety slot for receive data from the control has not been configured.
210, 220: The configured safety slot for the receive data from the control has an unknown format.
230: The configured safety slot for the receive data from the F-PLC has the incorrect length.
240: The configured safety slot for the receive data from the SINUMERIK has the incorrect length.
250: A PROFIsafe slot is configured in the higher-level F control, however PROFIsafe is not enabled in the drive.
300: A safety slot for the send data to the control has not been configured.
310, 320: The configured safety slot for the send data to the control has an unknown format.
330: The configured safety slot for the send data to the F-PLC has the incorrect length.
340: The configured safety slot for the send data to the SINUMERIK has the incorrect length.

Remedy: Re fault value = 250:
- remove the PROFIsafe configuring in the higher-level F control or enable PROFIsafe in the drive.
The following generally applies:
- check the PROFIBUS configuration of the safety slot on the master side and, if necessary, correct.
- upgrade the Control Unit software.

F01655 SI CU: Align monitoring functions

Message value: %1

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: An error has occurred when aligning the Safety Integrated monitoring functions on the Control Unit (CU) and Motor Module (MM). Control Unit and Motor Module were not able to determine a common set of supported SI monitoring functions.
- there is either a DRIVE-CLiQ communication error or communication has failed.
- Safety Integrated software releases on the Control Unit and Motor Module are not compatible with one another.
Note:
This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.

Remedy: - carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.
- check the electrical cabinet design and cable routing for EMC compliance
Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated

F01656 SI CU: Motor Module parameter error

Message value: %1

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: When accessing the Safety Integrated parameters for the Motor Module (MM) on the CompactFlash card, an error has occurred.
Note:
This fault results in a STOP A that can be acknowledged.
Fault value (r0949, interpret decimal):
129: Safety parameters for the Motor Module corrupted.
131: Internal Motor Module software error.
132: Communication errors when uploading or downloading the safety parameters for the Motor Module.
255: Internal software error on the Control Unit.

Remedy: - re-commission the safety functions.
- upgrade the Control Unit software.
- upgrade the Motor Module software.
- replace the CompactFlash card.
Re fault value = 132:
- check the electrical cabinet design and cable routing for EMC compliance
Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated

F01659 SI CU: Write request for parameter rejected

Message value: %1

Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The write request for one or several Safety Integrated parameters on the Control Unit (CU) was rejected.
Note:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
1: The Safety Integrated password is not set.
2: A reset of the drive parameters was selected. However, the Safety Integrated parameters cannot be reset, as Safety Integrated is presently enabled.
3: The interconnected STO input is in the simulation mode.
10: An attempt was made to enable the STO function although this cannot be supported.
11: An attempt was made to enable the SBC function although this cannot be supported.
12: An attempt was made to enable the SBC function although this cannot be supported for a parallel circuit configuration.
13: An attempt was made to enable the SS1 function although this cannot be supported.
14: An attempt was made to enable the PROFIsafe communication - although this cannot be supported or the version of the PROFIsafe driver used on the CU and MM is different.
15: An attempt was made to enable the motion monitoring functions integrated in the drive although these cannot be supported.
16: An attempt was made to enable the STO function although this cannot be supported when the internal voltage protection (p1231) is enabled.
See also: p0970, p3900, r9771, r9871

Remedy: Re fault value = 1:
- set the Safety Integrated password (p9761).
Re fault value = 2:
- inhibit Safety Integrated and again reset the drive parameters.
Re fault value = 3:
- end the simulation mode for the digital input (p0795).
Re fault value = 10, 11, 12, 13, 14, 15:
- check whether there are faults in the safety function alignment between the Control Unit and the Motor Module involved (F01655, F30655) and if required, carry out diagnostics for the faults involved.
- use a Motor Module that supports the required function ("Safe Torque Off", "Safe Brake Control", "PROFIsafe/PROFIsafe V2", "motion monitoring functions integrated in the drive").
- upgrade the Motor Module software.
- upgrade the Control Unit software.
Re fault value = 16:
- inhibit the internal voltage protection (p1231).
Note:
CU: Control Unit
MM: Motor Module
SBC: Safe Brake Control
SI: Safety Integrated
SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)
STO: Safe Torque Off / SH: Safe standstill
See also: p9501 (SI Motion enable safety functions (Control Unit)), p9601 (SI enable, functions integrated in the drive (Control Unit)), p9620 (SI signal source for STO (SH)/SBC/SS1 (Control Unit)), p9761 (SI password input), p9801 (SI enable, functions integrated in the drive (Motor Module))

F01660 SI CU: Safety-related functions not supported

Message value: -

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The Motor Module (MM) does not support the safety-related functions (e.g. the Motor Module version is not the correct one). Safety Integrated cannot be commissioned.
Note:
This fault does not result in a safety stop response.

Remedy: - use a Motor Module that supports the safety-related functions.
- upgrade the Motor Module software.
Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated

F01663 SI CU: Copying of SI parameters rejected

Message value: -

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: One of the following values is stored in p9700 or has been entered offline: 87 or 208. This is the reason that the system is attempting to copy the SI parameters from the Control Unit to the Motor Module during booting. However, no safety function is selected on the Control Unit (p9501 = 0, p9601 = 0) which is why the copy operation is rejected.
Note:
This fault does not result in a safety stop response.
See also: p9700 (SI Motion copy function)

Remedy: - set p9700 = 0.
- check p9501and p9601 and correct if necessary.
- start the copy function again by entering the appropriate value in p9700.

F01664 SI CU: No automatic firmware update

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: When booting, parameter p7826 "automatic firmware update" did not have the value "1" that is required for the automatic firmware upgrade/downgrade. This means that when the safety functions are enabled, an inadmissible combination of versions can occur.
Note:
This fault does not result in a safety stop response.
See also: p7826 (Firmware update automatic)
Remedy: For enabled drive-based SI monitoring:
1. Set parameter p7826 to the value 1
2. Save the parameter (p0977 = 1) and carry out a power-on reset
When de-activating the drive-based SI monitoring (p9601 = 0), the alarm can be acknowledged after exiting the safety commissioning mode.

F01670 SI Motion: Invalid parameterization Sensor Module

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The parameterization of a Sensor Module used for Safety Integrated is not permissible.
Note:
This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret decimal):
1: No encoder was parameterized for Safety Integrated.
2: An encoder was parameterized for Safety Integrated that does not have an A/B track (sine/cosine).
3: The encoder data set selected for Safety Integrated is still not valid.
4: A communication error with the encoder has occurred.
10: For an encoder used for Safety Integrated, not all of the Drive Data Sets (DDS) are assigned to the same Encoder Data Set (EDS) (p0187 ... p0189).
Remedy: Re fault value = 1, 2:
- use and parameterize an encoder that Safety Integrated supports (encoder with track A/B sine-wave, p0404.4 = 1).
Re fault value = 3:
- check whether the drive or drive commissioning function is active and if required, exit this (p0009 = p00010 = 0), save the parameters (p0971 = 1) and carry out a POWER ON
Re fault value = 4:
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Sensor Module involved and if required, carry out a diagnostics routine for the faults identified.
Re fault value = 10:
- align the EDS assignment of all of the encoders used for Safety Integrated (p0187 ... p0189).
Note:
SI: Safety Integrated

F01671 SI Motion: Parameterization encoder error

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The parameterization of the encoder used by Safety Integrated is different to the parameterization of the standard encoder.
Note:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
Parameter number of the non-corresponding safety parameter.
Remedy: Align the encoder parameterization between the safety encoder and the standard encoder.
Note:
SI: Safety Integrated

F01672 SI Motion: Motor Module software/hardware incompatible

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The existing Motor Module software does not support safe motion monitoring or is not compatible to the software on the Control Unit or there is a communications error between the Control Unit and Motor Module.
Note:
This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret decimal):
1: The existing Motor Module software does not support the safe motion monitoring function.
4, 5, 7: The existing Motor Module software is not compatible to the software on the Control Unit.
2, 3, 6, 8: There is a communications error between the Control Unit and Motor Module.
Remedy: - check whether there are faults in the safety function alignment between the Control Unit and the Motor Module involved
(F01655, F30655) and if required, carry out the appropriate diagnostics routine for the particular faults.
Re fault value = 1:
- use a Motor Module that supports safe motion monitoring
Re fault value = 4, 5, 7:
- upgrade the Motor Module software.
Re fault value = 2, 3, 6, 8:
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
Note:
SI: Safety Integrated

F01673 SI Motion: Sensor Module software/hardware incompatible

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The existing Sensor Module software and/or hardware does not support the safe motion monitoring function with the higher-level control.
Note:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
Remedy: - upgrade the Sensor Module software.
- use a Sensor Module that supports the safe motion monitoring function.
Note:
SI: Safety Integrated

F01680 SI Motion CU: Checksum error safety monitoring functions

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The actual checksum calculated by the drive and entered in r9728 via the safety-relevant parameters does not match the reference checksum saved in p9729 at the last machine acceptance.
Safety-relevant parameters have been changed or a fault is present.
Note:
This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret decimal):
0: Checksum error for SI parameters for motion monitoring.
1: Checksum error for SI parameters for actual values.
2: Checksum error for SI parameters for component assignment.

Remedy: - Check the safety-relevant parameters and if required, correct.
- carry out a POWER ON.
- carry out an acceptance test.
Note:
SI: Safety Integrated

F01681 SI Motion CU: Incorrect parameter value

Message value: Parameter: %1

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The parameter cannot be parameterized with this value.
Note:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
Parameter number with the incorrect value.

Remedy: Correct the parameter value.

F01682 SI Motion CU: Monitoring function not supported

Message value: %1

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The monitoring function enabled in p9501, p9601 or p9801 is not supported in this firmware version.
Note:
This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret decimal):
1: Monitoring function SLP not supported (p9501.1).
2: Monitoring function SCA not supported (p9501.7 and p9501.8 ... 15 and p9503).
3: Monitoring function SLS override not supported (p9501.5).
10: Monitoring functions only supported for a SERVO drive object.
20: Drive-based motion monitoring functions are only supported in conjunction with PROFIsafe (p9501 and p9601.1 ... 2 and p9801.1 ... 2).
21: PROFIsafe only supported in conjunction with motion monitoring functions in the drive (p9501 and p9601.1 ... 2 and p9801.1 ... 2).

Remedy: De-select the monitoring function involved (p9501, p9503, p9601, p9801).
Note:
SCA: Safe Cam / SN: Safe software cam
SI: Safety Integrated
SLP: Safely-Limited Position / SE: Safe software limit switches
SLS: Safely-Limited Speed / SG: Safely reduced speed
See also: p9501 (SI Motion enable safety functions (Control Unit)), p9503 (SI Motion SCA (SN) enable (Control Unit))

F01683 SI Motion CU: SOS/SLS enable missing

Message value: -

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The safety-relevant basic function "SOS/SLS" is not enabled in p9501 although other safety-relevant monitoring functions are enabled.
Note:
This fault does not result in a safety stop response.

Remedy: Enable the function "SOS/SLS" (p9501.0) and carry out a POWER ON.
Note:
SI: Safety Integrated
SLS: Safely-Limited Speed / SG: Safely reduced speed
SOS: Safe Operating Stop / SBH: Safe operating stop
See also: p9501 (SI Motion enable safety functions (Control Unit))

F01684 SI Motion: Safely limited position limit values interchanged

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: For the function "Safely-Limited Position" (SE), a lower value is in p9534 than in p9535.
Note:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
1: Limit values SLP1 interchanged.
2: Limit values SLP2 interchanged.
Remedy: Correct the limit values in p9534 and p9535 and carry out a POWER ON.
Note:
SI: Safety Integrated
SLP: Safely-Limited Position / SE: Safe software limit switches

F01685 SI Motion CU: Safely-limited speed limit value too high

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The limit value for the function "Safely-Limited Speed" (SLS) is greater than the speed that corresponds to an encoder limit frequency of 500 kHz.
Note:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
Maximum permissible speed.
Remedy: Correct the limit values for SLS and carry out a POWER ON.
Note:
SI: Safety Integrated
SLS: Safely-Limited Speed / SG: Safely reduced speed
See also: p9531 (SI Motion SLS (SG) limit values (Control Unit))

F01686 SI Motion: Illegal parameterization cam position

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: At least one enabled "Safety Cam" (SCA) is parameterized in p9536 or p9537 too close to the tolerance range around the modulo position.
The following conditions must be complied with to assign cams to a cam track:
- the cam length of cam x = p9536[x]-p9537[x] must be greater or equal to the cam tolerance + the position tolerance (= p9540 + p9542). This also means that for cams on a cam track, the minus position value must be less than the plus position value.
- the distance between 2 cams x and y (minus position value[y] - plus position value[x] = p9537[y] - p9536[x]) on a cam track must be greater than or equal to the cam tolerance + position tolerance (= p9540 + p9542).
Note:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
Number of the "Safe Cam" with an illegal position.
See also: p9501 (SI Motion enable safety functions (Control Unit))
Remedy: Correct the cam position and carry out a POWER ON.
Note:
SCA: Safe Cam / SN: Safe software cam
SI: Safety Integrated
See also: p9536 (SI Motion SCA (SN) plus cam position (Control Unit)), p9537 (SI Motion SCA (SN) plus cam position (Control Unit))

F01687 SI Motion: Illegal parameterization modulo value SCA (SN)

Message value: -

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The parameterized modulo value for the "Safe Cam" (SCA) function is not a multiple of 360 000 mDegrees.
Note:
This fault does not result in a safety stop response.

Remedy: Correct the modulo value for SCA and carry out a POWER ON.
Note:
SCA: Safe Cam / SN: Safe software cam
SI: Safety Integrated
See also: p9505 (SI Motion SCA (SN) modulo value (Control Unit))

F01688 SI Motion CU: Actual value synchronization not permissible

Message value: -

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: It is not permissible to simultaneously enable the actual value synchronization and a monitoring function with absolute reference (SCA/SLP).
Note:
This fault results in a STOP A that cannot be acknowledged.

Remedy: Either de-select the function "actual value synchronization" or the monitoring functions with absolute reference (SCA/SLP) and carry out a POWER ON.
Note:
SCA: Safe Cam / SN: Safe software cam
SI: Safety Integrated
SLP: Safely-Limited Position / SE: Safe software limit switches
See also: p9501 (SI Motion enable safety functions (Control Unit))

C01689 SI Motion: Axis re-configured

Message value: Parameter: %1

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: POWER ON

Cause: The axis configuration was changed (e.g. changeover between linear axis and rotary axis).
Parameter p0108.13 is internally set to the correct value.
Note:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
Parameter number of parameter that initiated the change.
See also: p9502 (SI Motion axis type (Control Unit))

Remedy: The following should be carried out after the changeover:
- exit the safety commissioning mode (p0010).
- save all parameters (p0977 = 1 or "copy RAM to ROM").
- carry out a POWER ON.

Once the Control Unit has been switched on, safety message F01680 or F30680 indicates that the checksums in r9398[0] and r9728[0] have changed in the drive. The following must, therefore, be carried out:
- activate safety commissioning mode again.
- complete safety commissioning of the drive.
- exit the safety commissioning mode (p0010).
- save all parameters (p0977 = 1 or "copy RAM to ROM").
- carry out a POWER ON.

Note:
For the commissioning software, the units are only consistently displayed after a project upload.

F01690 SI Motion: Data save problem for the NVRAM

Message value: %1
Drive object: All objects
Reaction: A_INFEED: NONE (OFF1, OFF2)
SERVO: NONE (OFF1, OFF2, OFF3)
VECTOR: NONE (OFF1, OFF2, OFF3)
Acknowledge: POWER ON
Cause: There is not sufficient memory space in the NVRAM on the drive to save parameters r9781 and r9782 (safety logbook).
Note:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
0: There is no physical NVRAM available in the drive.
1: There is no longer any free memory space in the NVRAM.
Remedy: Re fault value = 0:
- use a Control Unit NVRAM.
Re fault value = 1:
- deselect functions that are not required and that take up memory space in the NVRAM.
- contact the Hotline.

A01691 (F) SI Motion: Ti and To unsuitable for DP cycle

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The configured times for PROFIBUS communication are not permitted and the DP cycle is used as the actual value acquisition cycle for the safe movement monitoring functions:
Isochronous PROFIBUS: the total of Ti and To is too high for the set DP cycle. The DP cycle should be at least 1 current controller cycle greater than the sum of Ti and To.
Non-isochronous PROFIBUS: the DP cycle must be at least 4 x current controller cycle.
Remedy: Configure Ti and To low so that they are suitable for the DP cycle or increase the DP cycle time.
Option for enabled drive-based SI monitoring (p9601/p9801 > 0):
Use the actual value sampling cycle p9511/p9311 and, therefore, set it independently of the DP cycle.
See also: p9511 (SI Motion clock cycle actual value sensing (Control Unit))
Reaction upon F: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY (POWER ON)

A01696 (F) SI Motion: Testing of the motion monitoring functions selected when booting

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The test of the motion monitoring functions was already illegally active when booting.
This is the reason that the test is only carried out again after selecting the forced checking procedure parameterized in p9705.
Note:
This message does not result in a safety stop response.
See also: p9705 (SI Motion: Test stop signal source)
Remedy: De-select the forced checking procedure of the safety motion monitoring functions and then select again.
The signal source for initiation is parameterized in binector input p9705.
Note:
SI: Safety Integrated
See also: p9705 (SI Motion: Test stop signal source)
Reaction upon F: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY (POWER ON)

A01697 (F) SI Motion: Motion monitoring functions must be tested

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The time set in p9559 for the forced checking procedure of the safety motion monitoring functions has been exceeded. A new test is required.
After next selecting the forced checking procedure parameterized in p9705, the message is withdrawn and the monitoring time is reset.
Note:
This message does not result in a safety stop response.
See also: p9559 (SI Motion forced checking procedure timer (Control Unit)), p9705 (SI Motion: Test stop signal source)

Remedy: Carry out the forced checking procedure of the safety motion monitoring functions.
The signal source for initiation is parameterized in BI: p9705.
Note:
SI: Safety Integrated
See also: p9705 (SI Motion: Test stop signal source)

Reaction upon F: NONE (OFF1, OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY (POWER ON)

A01698 (F) SI CU: Commissioning mode active

Message value: -

Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The commissioning of the "Safety Integrated" function is selected.
This message is withdrawn after the safety functions have been commissioned.
Note:
This message does not result in a safety stop response.
See also: p0010

Remedy: None necessary.
Note:
CU: Control Unit
SI: Safety Integrated

Reaction upon F: A_INFEED: NONE (OFF1, OFF2)
SERVO: NONE (OFF1, OFF2, OFF3)
VECTOR: NONE (OFF1, OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY (POWER ON)

A01699 (F) SI CU: Shutdown path must be tested

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The time set in p9659 for the forced checking procedure of the safety shutdown paths has been exceeded. The safety shutdown paths must be re-tested.
After the next time the "STO" function is de-selected, the message is withdrawn and the monitoring time is reset.
Note:
This message does not result in a safety stop response.
See also: p9659 (SI forced checking procedure timer)

Remedy: Select STO and then deselect again.
Note:
CU: Control Unit
SI: Safety Integrated
STO: Safe Torque Off / SH: Safe standstill

Reaction upon F: NONE (OFF1, OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY (POWER ON)

C01700 SI Motion CU: STOP A initiated

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The drive is stopped via a STOP A (pulses are suppressed via the safety shutdown path of the Control Unit).
Possible causes:
- stop request from the higher-level control.
- pulses not suppressed after a parameterized time (p9557) after test stop selection.
- subsequent response to the message C01706 "SI Motion CU: Safe Acceleration Monitoring limit exceeded".
- subsequent response to the message C01714 "SI Motion CU: Safely-Limited Speed exceeded".
- subsequent response to the message C01701 "SI Motion CU: STOP B initiated".

Remedy:
- remove the fault cause in the control and carry out a POWER ON.
- check the value in p9557, if necessary, increase the value, and carry out POWER ON.
- check the shutdown path of the Control Unit (check DRIVE-CLiQ communication).
- carry out a diagnostics routine for message C01706.
- carry out a diagnostics routine for message C01714.
- carry out a diagnostics routine for message C01701.
- replace Motor Module.
- replace Control Unit.

This message can only be acknowledged as follows in the acceptance test mode without POWER ON:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel.

Note:
SI: Safety Integrated

C01701 SI Motion CU: STOP B initiated

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF3
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The drive is stopped via STOP B (braking along the OFF3 deceleration ramp).
As a result of this fault, after the time parameterized in p9556 has expired, or the speed threshold parameterized in p9560 has been undershot, message C01700 "STOP A initiated" is output.
Possible causes:
- stop request from the higher-level control.
- subsequent response to the message C01714 "SI Motion: Safely reduced speed exceeded".
- subsequent response to the message C01711 "SI Motion: Defect in a monitoring channel".

Remedy:
- remove the fault cause in the control and carry out a POWER ON.
- carry out a diagnostics routine for message C01714.
- carry out a diagnostics routine for message C01711.

This message can only be acknowledged as follows in the acceptance test mode without POWER ON:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel.

Note:
SI: Safety Integrated

C01706 SI Motion CU: Safe Acceleration Monitor limit exceeded

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: After initiating STOP B or STOP C, the velocity has exceeded the selected tolerance.
The drive is shut down by the message C01700 "SI Motion: STOP A initiated".

Remedy: Check the braking behavior, if required, adapt the tolerance for "Safe Acceleration Monitor".
This message can only be acknowledged as follows in the acceptance test mode without POWER ON:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel.
Note:
SBR: Safe Acceleration Monitor
SI: Safety Integrated
See also: p9548 (SI Motion SBR actual velocity tolerance (Control Unit))

C01707 SI Motion CU: Tolerance for safe operating stop exceeded

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The actual position has distanced itself further from the target position than the standstill tolerance.
The drive is shut down by the message C01701 "SI Motion: STOP B initiated".

Remedy: - check whether safety faults are present and if required carry out the appropriate diagnostic routines for the particular faults.
- check whether the standstill tolerance matches the accuracy and control dynamic performance of the axis.
- carry out a POWER ON.
This message can only be acknowledged as follows in the acceptance test mode without POWER ON:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel
Note:
SI: Safety Integrated
SOS: Safe Operating Stop / SBH: Safe operating stop
See also: p9530 (SI Motion standstill tolerance (Control Unit))

C01708 SI Motion CU: STOP C initiated

Message value: -

Drive object: SERVO, VECTOR

Reaction: STOP2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive is stopped via STOP C (braking along the OFF3 deceleration ramp).
"Safe Operating Stop" (SOS) is activated after the parameterized timer has expired.
Possible causes:
- stop request from the higher-level control.
- subsequent response to the message C01714 "SI Motion: Safely reduced speed exceeded".
- subsequent response to the message C01715 "SI Motion: Safe end stop exceeded".
See also: p9552 (SI Motion transition time STOP C to SOS (SBH) (Control Unit))

Remedy: - remove the cause of the fault at the control.
- carry out a diagnostics routine for message C01714.
This message can be acknowledged as follows:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel
Note:
SI: Safety Integrated
SOS: Safe Operating Stop / SBH: Safe operating stop

C01709 SI Motion CU: STOP D initiated

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive is stopped via a STOP D (braking along the path).
"Safe Operating Stop" (SOS) is activated after the parameterized timer has expired.

Possible causes:
- stop request from the higher-level control.
- subsequent response to the message C01714 "SI Motion: Safely reduced speed exceeded".
- subsequent response to the message C01715 "SI Motion: Safe end stop exceeded".
See also: p9553 (SI Motion transition time STOP D to SOS (SBH) (Control Unit))

Remedy: - remove the cause of the fault at the control.
- carry out a diagnostics routine for message C01714.
This message can be acknowledged as follows:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel
Note:
SI: Safety Integrated
SOS: Safe Operating Stop / SBH: Safe operating stop

C01710 SI Motion CU: STOP E initiated

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive is stopped via a STOP E (retraction motion).
"Safe Operating Stop" (SOS) is activated after the parameterized timer has expired.
Possible causes:
- stop request from the higher-level control.
- subsequent response to the message C01714 "SI Motion: Safely reduced speed exceeded".
- subsequent response to the message C01715 "SI Motion: Safe end stop exceeded".
See also: p9554 (SI Motion transition time STOP E to SOS (SBH) (Control Unit))

Remedy: - remove the cause of the fault at the control.
- carry out a diagnostics routine for message C01714.
This message can be acknowledged as follows:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel
Note:
SI: Safety Integrated
SOS: Safe Operating Stop / SBH: Safe operating stop

C01711 SI Motion CU: Defect in a monitoring channel

Message value: %1

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: When cross-checking and comparing the two monitoring channels, the drive detected a difference between the input data or results of the monitoring functions and initiated a STOP F. One of the monitoring functions no longer reliably functions - i.e. safe operation is no longer possible.
If at least one monitoring function is active, then after the parameterized timer has expired, the message C01701 "SI Motion: STOP B initiated" is output.
The message value that resulted in a STOP F is displayed in r9725. The described message values involve the data cross-check between the Control Unit and Motor Module. If the drive is operated together with a SINUMERIK, the message values are described in message 27001 of SINUMERIK.
Message value (r9749, interpret decimal):
0 to 999: Number of the cross-checked data that resulted in this fault.
Fault values, which are not listed below, are intended solely for Siemens internal troubleshooting.
0: Stop request from the other monitoring channel.
1: Status image of monitoring functions SOS, SLS or SLP (result list 1) (r9710[0], r9710[1]).
2: Status image of monitoring function SCA or n < nx (result list 2) (r9711[0], r9711[1]).
3: Pos. act. val. (r9712).
4: Error when synchronizing the crosswise data comparison between the two channels.
5: Function enable signals (p9501, p9301).
6: Limit value for SLS1 (p9531[0], p9331[0]).
7: Limit value for SLS2 (p9531[1], p9331[1]).
8: Limit value for SLS3 (p9531[2], p9331[2]).
9: Limit value for SLS4 (p9531[3], p9331[3]).

10: Standstill tol. (p9530, p9330).
31: Pos. tol. (p9542, p9342).
33: Time, velocity changeover (p9551, p9351).
35: Delay time, pulse supp. (p9556, p9356).
36: Checking time, pulse supp (p9557, p9357).
37: Trans. time, STOP C to SOS (p9552, p9352).
38: Trans. time STOP D to SOS (p9553, p9353).
40: Stop response for SLS.
42: Shutdown speed, pulse supp. (p9560, p9360).
43: Memory test, stop response (STOP A).
44: Position actual value + limit value SLS1 / safety monitoring clock cycle.
45: Pos. act. val. - limit value SLS1 / safety monitoring clock cycle.
46: Pos. act. val. + limit value SLS2 / safety monitoring clock cycle.
47: Pos. act. val. - limit value SLS2 / safety monitoring clock cycle.
48: Pos. act. val. + limit value SLS3 / safety monitoring clock cycle.
49: Pos. act. val. - limit value SLS3 / safety monitoring clock cycle.
50: Pos. act. val. + limit value SLS4 / safety monitoring clock cycle.
51: Pos. act. val. - limit value SLS4 / safety monitoring clock cycle.
52: Standstill position + tolerance.
53: Standstill position - tolerance
54: Pos. act. val. + limit value nx / safety monit. clock cycle + tolerance.
55: Pos. act. val. + limit value nx / safety monit. clock cycle.
56: Pos. act. val. - limit value nx / safety monit. clock cycle.
57: Pos. act. val. - limit value nx / safety monit. clock cycle - tolerance.
58: Current stop request.
75: Velocity limit nx (p9546, p9346).
76: Stop response for SLS1 (p9563[0], p9363[0]).
77: Stop response for SLS2 (p9563[1], p9363[1]).
78: Stop response for SLS3 (p9563[2], p9363[2]).
79: Stop response for SLS4 (p9563[3], p9363[3]).
81: Velocity tolerance for SBR (p9548, p9348).
82: SGEs for SLS correction factor.
83: Acceptance test timer (p9558, p9358).
84: Trans. time STOP F (p9555, p9355).
85: Trans. time bus failure (p9580, p9380).
86: Ident. 1-encoder system.
87: Encoder assignment, 2nd channel (p9526, p9326).
89: Encoder limit freq.
230: Filter time constant for n < nx.
231: Hysteresis tolerance for n < nx.
232: Smoothed velocity actual value.
233: Smoothed velocity actual value + limit value nx / safety monitoring clock cycle + hysteresis tolerance.
234: Smoothed velocity actual value + limit value nx / safety monitoring clock cycle.
235: Smoothed velocity actual value - limit value nx / safety monitoring clock cycle.
236: Smoothed velocity actual value - limit value nx / safety monitoring clock cycle - hysteresis tolerance.
237: SGA n < nx.
1000: Watchdog timer has expired. Too many signal changes have occurred at safety-relevant inputs.
1001: Initialization error of watchdog timer.
1005: Pulses already suppressed for test stop selection.
1011: Acceptance test status between the monitoring channels differ.
1012: Plausibility violation of the actual value from the encoder.
1020: Cyc. communication failure between the monit. cycles.
1021: Cyc. communication failure between the monit. channel and Sensor Module.
1022: Sign-of-life for DQL Sensor Module CU
1032: Sign-of-life for DQL Sensor Module MM
1033: Error occurred during check of offset between POS1 and POS2 for DQL Sensor Module CU
1034: Error occurred during check of offset between POS1 and POS2 for DQL Sensor Module MM
5000 ... 5140: PROFIsafe message values.
5000, 5014, 5023, 5024, 5030 ... 5032, 5042, 5043, 5052, 5053, 5068, 5072, 5073, 5082 ... 5087, 5090, 5091, 5122 ... 5125, 5132 ... 5135, 5140: An internal software error has occurred (only for internal Siemens troubleshooting).
5012: Error when initializing the PROFIsafe driver.
5013: The result of the initialization is different for the two controllers.
5022: Error when evaluating the F parameters. The values of the transferred F parameters do not match the expected values in the PROFIsafe driver.

5025: The result of the F parameterization is different for the two controllers.
5026: CRC error for the F parameters. The transferred CRC value of the F parameters does not match the value calculated in the PST.
5065: A communications error was identified when receiving the PROFIsafe telegram.
5066: A time monitoring error (timeout) was identified when receiving the PROFIsafe telegram.
6000 ... 6166: PROFIsafe message values (PROFIsafe driver for PROFIBUS DP V1/V2 and PROFINET).
Message values 6000, 6072:
- an internal software error has occurred (only for internal Siemens troubleshooting).
Message values 6064 ... 6071:
- Error when evaluating the F parameters. The values of the transferred F parameters do not match the expected values in the PROFIsafe driver.
6064: Destination address and PROFIsafe address are different (F_Dest_Add).
6065: Destination address not valid (F_Dest_Add).
6066: Source address not valid (F_Source_Add).
6067: Watchdog time not valid (F_WD_Time).
6068: Incorrect SIL level (F_SIL).
6069: Incorrect F-CRC length (F_CRC_Length).
6070: Incorrect F parameter version (F_Par_Version).
6071: CRC error for the F parameters (CRC1). The transferred CRC value of the F parameters does not match the value calculated in the PROFIsafe driver.
6165: A communications error was identified when receiving the PROFIsafe telegram.
6166: A time monitoring error (timeout) was identified when receiving the PROFIsafe telegram.
See also: p9555 (SI Motion transition time STOP F to STOP B (Control Unit)), r9725 (SI Motion, diagnostics STOP F)

Remedy: The following generally applies:
The monitoring clock cycles in both channels should be checked for equality and if required, set the same.
Re fault value = 0:
- no error was identified in this monitoring channel. Note the error message of the other monitoring channel (for MM: F30711).
Re fault value = 4:
The monitoring clock cycles in both channels should be checked for equality and if required, set the same.
Re fault value = 1 ... 999:
- if the fault value is listed under cause: check the cross-checked parameters to which the fault value refers.
- copy the safety parameters.
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.
- correction of the encoder evaluation. The actual values differ as a result of mechanical faults (V belts, travel to a mechanical endstop, wear and window setting that is too narrow, encoder fault, ...).
Re fault value = 1000:
- investigate the signal associated with the safety-relevant input (contact problems).
Re fault value = 1001:
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.
Re fault value = 1005:
- check the conditions for pulse enable.
Re fault value = 1011:
- for diagnostics, refer to parameter (r9571).
Re fault value = 1012:
- upgrade the Sensor Module software.
Re fault value = 1020, 1021:
- check the communication link.
- carry out a POWER ON (power off/on) for all components.
- replace the hardware.
Re fault value = 5000, 5014, 5023, 5024, 5030, 5031, 5032, 5042, 5043, 5052, 5053, 5068, 5072, 5073, 5082 ... 5087, 5090, 5091, 5122 ... 5125, 5132 ... 5135, 5140:
- carry out a POWER ON (power off/on) for all components.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
- upgrade firmware to later version.
- contact the Hotline.
- replace the Control Unit.
Re fault value = 5012:

- check the setting of the PROFIsafe address of the Control Unit (p9610) and that of the Motor Module (p9810). It is not permissible for the PROFIsafe address to be 0 or FFFF!
Re fault value = 5013, 5025:
- carry out a POWER ON (power off/on) for all components.
- check the setting of the PROFIsafe address of the Control Unit (p9610) and that of the Motor Module (p9810).
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
Re fault value = 5022:
- check the setting of the values of the F parameters at the PROFIsafe slave (F_SIL, F_CRC_Length, F_Par_Version, F_Source_Add, F_Dest_add, F_WD_Time).
Re fault value = 5026:
- check the settings of the values of the F parameters and the F parameter CRC (CRC1) calculated from these at the PROFIsafe slave and update.
Re fault value = 5065:
- check the configuration and communication at the PROFIsafe slave (cons. No. / CRC).
- check the setting of the value for F parameters F_WD_Time at the PROFIsafe slave and increase if necessary.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
Re fault value = 5066:
- check the setting of the value for F parameters F_WD_Time at the PROFIsafe slave and increase if necessary.
Re fault value = 6000, 6072:
- carry out a POWER ON (power off/on) for all components.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
- upgrade firmware to later version.
- contact the Hotline.
- replace the Control Unit.
Re fault value = 6064:
- check the setting of the value in the F parameter F_Dest_Add at the PROFIsafe slave.
- check the setting of the PROFIsafe address of the Control Unit (p9610) and that of the Motor Module (p9810).
Re fault value = 6065:
- check the setting of the value in the F parameter F_Dest_Add at the PROFIsafe slave. It is not permissible for the destination address to be either 0 or FFFF!
Re fault value = 6066:
- check the setting of the value in the F parameter F_Source_Add at the PROFIsafe slave. It is not permissible for the source address to be either 0 or FFFF!
Re fault value = 6067:
- check the setting of the value in the F parameter F_WD_Time at the PROFIsafe slave. It is not permissible for the watch time ito be 0!
Re fault value = 6068:
- check the setting of the value in the F parameter F_SIL at the PROFIsafe slave. The SIL level must correspond to SIL2!
Re fault value = 6069:
- check the setting of the value in the F parameter F_CRC_Length at the PROFIsafe slave. The setting of the CRC2 length is 2-byte CRC in the V1 mode and 3-byte CRC in the V2 mode!
Re fault value = 6070:
- check the setting of the value in the F parameter F_Par_Version at the PROFIsafe slave. The value for the F parameter version is 0 in the V1 mode and 1 in the V2 mode!
Re fault value = 6071:
- check the settings of the values of the F parameters and the F parameter CRC (CRC1) calculated from these at the PROFIsafe slave and, if required, update.
Re fault value = 6165:
- check the configuration and communication at the PROFIsafe slave.
- check the setting of the value for F parameters F_WD_Time at the PROFIsafe slave and increase if necessary.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
Re fault value = 6166:
- check the configuration and communication at the PROFIsafe slave.
- check the setting of the value for F parameters F_WD_Time at the PROFIsafe slave and increase if necessary.
This message can be acknowledged as follows:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel
See also: p9300 (SI Motion monitoring clock cycle (Motor Module)), p9500 (SI Motion monitoring clock cycle (Control Unit))

C01714 SI Motion CU: Safely-Limited Speed exceeded

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The drive has moved faster than that specified by the velocity limit value (p9531). The drive is stopped as a result of the configured stop response (p9563).
Message value (r9749, interpret decimal):
100: SLS1 exceeded.
200: SLS2 exceeded.
300: SLS3 exceeded.
400: SLS4 exceeded.
1000: Encoder limit frequency exceeded.
Remedy: - check the traversing/motion program in the control.
- check the limits for "Safely-Limited Speed (SLS) and if required, adapt (p9531).
This message can be acknowledged as follows:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel
Note:
SI: Safety Integrated
SLS: Safely-Limited Speed / SG: Safely reduced speed
See also: p9531 (SI Motion SLS (SG) limit values (Control Unit)), p9563 (SI Motion SLS (SG)-specific stop response (Control Unit))

C01745 SI Motion CU: Checking braking torque for the brake test

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: POWER ON (IMMEDIATELY)
Cause: The normalization of the brake torque for the brake test can be changed using parameter p2003.
An acceptance test must be carried out again for the braking test. This determines whether the braking test is still carried out with the correct braking torque.
Remedy: - carry out a POWER ON (power off/on) for all components.
- repeat the acceptance test for the safe brake test if the brake test is used.
See also: p2003

C01750 SI Motion CU: Hardware fault safety-relevant encoder

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The encoder that is used for the safety-relevant motion monitoring functions signals a hardware fault.
Message value (r9749, interpret decimal):
Encoder status word 1, encoder status word 2 that resulted in the message.
Remedy: - check the encoder connection.
- replace the encoder.
This message can be acknowledged as follows:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel.

C01751 SI Motion CU: eff.test error safe encoder

Message value: %1

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The DQ encoder used for the safety-relevant motion monitoring functions signals an effectiveness test error.
Message value (r9749, interpret decimal):
1 - TFD bit in EncoderStatusWord2 set in last effectiveness test set
2 - Actual effectiveness test no. in last effectiveness test set smaller/greater than expected
3 - IG1/IG2 bits in EncoderStatusWord2 in last effectiveness test set longer than expected
4 - F1/F2 bits in EncoderStatusWord2 in last effectiveness test set not dynamized
5 - Effectiveness tests performed too frequently
6 - LS1/LS2 were not frozen during effectiveness test
7 - Effectiveness tests performed too rarely or not at all

Remedy: - check the encoder connection.
- replace the encoder.
This message can be acknowledged as follows:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel.

A01796 (F, N) SI Motion CU: Wait for communication

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The drive waits for communication to be established with SINUMERIK or TM54F to execute the safety-relevant motion monitoring functions.
Note:
In this state, the pulses are safely suppressed.

Remedy: After a longer period of time, if the message is not automatically withdrawn, the following checks should be made dependent on the communication:
For communication with SINUMERIK, the following applies:
- check additional messages that are present regarding PROFIBUS communication and resolve.
- check the correct assignment of the axes on the higher-level control to the drives in the drive unit.
- check the enable signal of the safety-relevant motion monitoring functions for the corresponding axis on the higher-level control - and if required, set
For communication with TM54F, the following applies:
- check additional messages that are present regarding DRIVE-CLiQ communication with TM54F and resolve.
- check the setting of p10010. All of the drive objects controlled by the TM54F must be listed.
See also: p9601 (SI enable, functions integrated in the drive (Control Unit)), p9801 (SI enable, functions integrated in the drive (Motor Module)), p10010 (SI drive object assignment)

C01798 SI Motion CU: Test stop running

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The test stop is active.

Remedy: None necessary.
The message is withdrawn when the test stop is finished.
Note:
SI: Safety Integrated

C01799 SI Motion CU: Acceptance test mode active

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The acceptance test mode is active. The POWER ON signals of the safety-relevant motion monitoring functions can be acknowledged during the acceptance test using the RESET button of the higher-level control.
Remedy: None necessary.
The message is withdrawn when exiting the acceptance test mode.
Note:
SI: Safety Integrated

F01800 DRIVE-CLiQ: Hardware/configuration error

Message value: %1
Drive object: All objects
Reaction: A_INFEED: NONE (OFF1, OFF2)
SERVO: NONE (ENCODER, IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
VECTOR: NONE (ENCODER, IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: A DRIVE-CLiQ connection fault has occurred.
Fault value (r0949, interpret decimal):
100 ... 107:
Communication via DRIVE-CLiQ sockets X100 ... X107 has not switched to cyclic mode. The cause may be an incorrect structure or a configuration that results in an impossible bus timing.
10:
Loss of the DRIVE-CLiQ connection. The cause may be, for example, that the DRIVE-CLiQ cable was withdrawn from the Control Unit or as a result of a short-circuit for motors with DRIVE-CLiQ. This fault can only be acknowledged in cyclic communication.
11:
Repeated faults when detecting the connection. This fault can only be acknowledged in cyclic communication.
12:
A connection was detected but the node ID exchange mechanism does not function. The reason is probably that the component is defective. This fault can only be acknowledged in cyclic communication.
Remedy: Re fault value = 100 ... 107:
- ensure that the DRIVE-CLiQ components have the same firmware releases.
- avoid longer topologies for short current controller clock cycles.
Re fault value = 10:
- check the DRIVE-CLiQ cables at the Control Unit.
- remove any short-circuit for motors with DRIVE-CLiQ.
- carry out a POWER ON.
Re fault value = 11:
- check the electrical cabinet design and cable routing for EMC compliance
Re fault value = 12:
- replace the component involved.

F01802 (A) CU DRIVE-CLiQ: POWER ON due to basic sampling times

Message value: %1
Drive object: All objects
Reaction: A_INFEED: OFF2 (OFF1)
SERVO: OFF2 (IASC/DCBRAKE, OFF1)
VECTOR: OFF2 (IASC/DCBRAKE, OFF1)
Acknowledge: POWER ON
Cause: It is not possible to change the DRIVE-CLiQ basic sampling times p0110 in operation. POWER ON is required.
Fault value (r0949, interpret decimal):
Index of p0110.
Remedy: - save (p0971 = 1).
- carry out a POWER ON.
Reaction upon A: NONE
Acknowl. upon A: NONE

F01840 SMI: Component found with changed data

Message value: %1

Drive object: All objects

Reaction: OFF2

Acknowledge: POWER ON

Cause: Another Sensor Module Integrated (SMI) was found.
The reasons could be as follows:
1. A motor with DRIVE-CLiQ (SMI) and another order No. were used as replacement.
2. A Sensor Module Integrated was used as spare part where there is no encoder data and motor data or the incorrect data are present.
Fault value (r0949, interpret hexadecimal):
The value should be interpreted as follows as 8-digit hexadecimal number AAAABBBB:
BBBB = Reserved.
AAAA = Component number of the component involved.

Remedy: Re 1.
- restore the factory setting.
- carry out the first commissioning.
Re 2.
- download the SMI data from the back-up (p4690, p4691).
- carry out a POWER ON (power off/on) for all components.

A01900 (F) PROFIBUS: Configuration telegram error

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: A PROFIBUS master attempts to establish a connection using an incorrect configuring telegram.
Alarm value (r2124, interpret decimal):
50: Syntax error.
51: Connection established to more drive objects than configured in the device. The drive objects for process data exchange and their sequence were defined using p0978.
52: Too many data words for input or output to a drive object. A maximum of 16 words is permitted for SERVO and VECTOR; and a maximum of 5 words for A_INFEED, TB30, TM31 and CU320.
53: Uneven number of bytes for input or output.

Remedy: Check the bus configuring on the master and slave sides.
Re alarm value = 51:
Check the list of the drive objects with process data exchange (p0978). With p0978[x] = 0, all of the following drive objects in the list are excluded from the process data exchange.

Reaction upon F: NONE (OFF1)

Acknowl. upon F: IMMEDIATELY

A01901 (F) PROFIBUS: Parameterizing telegram error

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: A PROFIBUS master attempts to establish a connection using an incorrect parameterizing telegram.
Alarm value (r2124, interpret decimal):
1: Incorrect parameterizing bits.
10: Illegal length of an optional parameterizing block.
11: Illegal ID of an optional parameterizing block.
20: Double parameterizing block for clock synchronization.
21: Incorrect parameterizing block for clock synchronization.
22: Incorrect parameterizing bits for clock synchronization.
23: Illegal clock synchronization for PZD interface 2.
30: Double parameterizing block for peer-to-peer data transfer.
31: Incorrect parameterizing block for peer-to-peer data transfer.

Remedy: Check the bus configuration:
- bus addresses
- slave configuring

Reaction upon F: NONE (OFF1)
Acknowl. upon F: IMMEDIATELY

A01902 IF1: PB/PN clock cycle synchronous operation parameterization not permissible

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: Alarm value (r2124, interpret decimal):
0: Bus cycle time Tdp < 0.5 ms.
1: Bus cycle time Tdp > 32 ms.
2: Bus cycle time Tdp is not an integer multiple of the current controller clock cycle.
3: Instant of the actual value sensing Ti > Bus cycle time Tdp or Ti = 0.
4: Instant of the actual value sensing Ti is not an integer multiple of the current controller clock cycle.
5: Instant of the setpoint acceptance To >= Bus cycle time Tdp or To = 0.
6: Instant of the setpoint acceptance To is not an integer multiple of the current controller clock cycle.
7: Master application cycle time Tmapc is not an integer multiple of the speed controller clock cycle.
8: Bus reserve bus cycle time Tdp - data exchange time Tdx less than two current controller clock cycles.
9: Bus cycle time Tdp has been modified with respect to the first time that the connection was established.
10: Instant of the setpoint acceptance not To <= data exchange time Tdx + To_min.
11: Master application cycle time Tmapc > 14 or Tmapc = 0.
12: PLL tolerance window Tpll_w > Tpll_w_max.
13: Bus cycle time Tdp is not a multiple of all basic clock cycles p0110[x].
14: For COMM BOARD with the setting To - 1 = Tdp - Ti, the instant of the setpoint acceptance is not To <= Data exchange time Tdx + 2 * To_min.
15: This configuration is not permitted for Tdp < 1 ms.
16: Instant of the actual value sensing Ti is less than the permitted value (COMM BOARD: Ti >= 2).
17: The setting (To + Ti = Tdp + 2) is not permitted for COMM BOARD.
Remedy: - adapt the parameterizing telegram.
- adapt the current and speed controller clock cycle.
Re alarm value = 9:
- carry out a POWER ON.
Re alarm value = 15:
- check the number of specific drive object types in the configuration.
Note:
IF1: Interface 1
PB: PROFIBUS
PN: PROFINET

A01903 (F) COMM INT: Receive configuration data invalid

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The drive unit did not accept the receive configuration data.
Alarm value (r2124, interpret decimal):
Return value of the receive configuration data check.
0: Configuration accepted.
1: Connection established to more drive objects than configured in the device. The drive objects for process data exchange and their sequence were defined using p0978.
2: Too many data words for input or output to a drive object. A maximum of 16 words is permitted for SERVO and VECTOR; and a maximum of 5 words for A_INFEED, TB30, TM31 and CU320.
3: Uneven number of bytes for input or output.
4: Setting data for synchronization not accepted.
5: Drive still not in cyclic operation.
6: Buffer system not accepted.
7: Cyclic channel length too short for this setting.
8: Cyclic channel address not initialized.

9: 3-buffer system not permitted.
10: DRIVE-CLiQ fault.
11: CU-Link fault.
12: CX32 not in cyclic operation.

Remedy: Check the receive configuration data.
Re alarm value = 1:
Check the list of the drive objects with process data exchange (p0978). With p0978[x] = 0, all of the following drive objects in the list are excluded from the process data exchange.

F01911 IF1: PB/PN clock cycle synchronous operation clock cycle failure

Message value: -

Drive object: All objects

Reaction: OFF1

Acknowledge: IMMEDIATELY

Cause: The global control telegram to synchronize the clock cycles has failed - in cyclic operation - for several DP clock cycles or has violated the time grid specified in the parameterizing telegram over several consecutive DP clock cycles (refer to the bus cycle time, Tdp and Tpllw).

Remedy: - check the PROFIBUS cables and connectors.
- check whether communication was briefly or permanently interrupted.
- check the bus and master for utilization level (e.g. bus cycle time Tdp was set too short).
Note:
IF1: Interface 1
PB: PROFIBUS
PN: PROFINET

F01912 IF1: PB/PN clock cycle synchronous operation sign-of-life failure

Message value: -

Drive object: All objects

Reaction: OFF1

Acknowledge: IMMEDIATELY

Cause: The maximum permissible number of errors in the master sign-of-life (clock synchronous operation) has been exceeded in cyclic operation.

Remedy: - check the physical bus configuration (terminating resistor, shielding, etc.).
- correct the interconnection of the master sign-of-life (p2045).
- check whether the master correctly sends the sign-of-life (e.g. create a trace with STW2.12 ... STW2.15 and trigger signal ZSW1.3).
- check the permissible telegram failure rate (p0925).
- check the bus and master for utilization level (e.g. bus cycle time Tdp was set too short).
Note:
IF1: Interface 1
PB: PROFIBUS
PN: PROFINET

F01913 (N, A) COMM INT: Monitoring time sign-of-life expired

Message value: -

Drive object: All objects

Reaction: A_INFEED: OFF1 (NONE, OFF2)
SERVO: OFF1 (NONE, OFF2, OFF3)
VECTOR: OFF1 (NONE, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: The monitoring time for the sign-of-life counter has expired.
The connection between the drive and the higher-level control (SIMOTION, SINUMERIK) has been interrupted for the following reasons:
- the control was reset.
- the data transfer to the control was interrupted.

Remedy: - wait until the control has re-booted.
- restore data transfer to the control.

Reaction upon N: NONE

Acknowl. upon N: NONE

Reaction upon A: NONE

Acknowl. upon A: NONE

F01914 (N, A) COMM INT: Monitoring time configuration expired

Message value: %1

Drive object: All objects

Reaction: A_INFEED: OFF1 (NONE, OFF2)
SERVO: OFF1 (NONE, OFF2, OFF3)
VECTOR: OFF1 (NONE, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: The monitoring time for the configuration has expired.
Fault value (r0949, interpret decimal):
0: The transfer time of the send configuration data has been exceeded.
1: The transfer time of the receive configuration data has been exceeded.

Remedy: - acknowledge faults that are present.
- carry out a POWER ON (power off/on) for all components.
- upgrade firmware to later version.
- contact the Hotline.

A01921 (F) PROFIBUS: Receive setpoints after To

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: Output data of PROFIBUS master (setpoints) received at the incorrect instant in time within the PROFIBUS clock cycle.
Remedy: - check bus configuration.
- check parameters for clock cycle synchronization (ensure To > Tdx).
Note:
To: Time of setpoint acceptance
Tdx: Data exchange time

Reaction upon F: NONE (OFF1)
Acknowl. upon F: IMMEDIATELY

A01930 IF1: PB/PN current controller clock cycle clock cycle synchronous not equal

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The current controller clock cycle of all drives must be set the same for the clock cycle synchronous operation.
Alarm value (r2124, interpret decimal):
Number of the drive object with different current controller clock cycle.
Remedy: Set current controller clock cycles to identical values (p0115[0]).
Note:
IF1: Interface 1
PB: PROFIBUS
PN: PROFINET
See also: p0115

A01931 IF1: PB/PN speed controller clock cycle clock cycle synchronous not equal

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The speed controller clock cycle of all drives must be set the same for the clock cycle synchronous operation.
Alarm value (r2124, interpret decimal):
Number of the drive object with the different speed controller clock cycle.
Remedy: Set the speed controller clock cycles the same (p0115[1]).
Note:
IF1: Interface 1
PB: PROFIBUS
PN: PROFINET
See also: p0115

A01932 IF1: PB/PN clock cycle synchronization missing for DSC

Message value: -
Drive object: SERVO, TM41
Reaction: NONE
Acknowledge: NONE
Cause: There is no clock cycle synchronization and DSC is selected.
Note:
DSC: Dynamic Servo Control
Remedy: Set the clock cycle synchronization when configuring the bus.

A01940 IF1: PB/PN clock cycle synchronism not reached

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The bus is in the data exchange state and clock synchronous operation has been selected using the parameterizing telegram. It was not possible to synchronize to the clock cycle specified by the master.
- the master does not send a clock synchronous global control telegram although clock synchronous operation was selected when configuring the bus.
- the master is using another clock synchronous DP clock cycle than was transferred to the slave in the parameterizing telegram.
- at least one drive object (that is not controlled from PROFIBUS/PROFINET) has a pulse enable.

Remedy: - check the master application and bus configuration.
- check the consistency between the clock cycle input when configuring the slave and clock cycle setting at the master.
- ensure that the pulses of drive objects that are not controlled by PROFIBUS/PROFINET are not enabled. Only enable the pulses after synchronizing the PROFIBUS/PROFINET drives.
Note:
IF1: Interface 1
PB: PROFIBUS
PN: PROFINET

A01941 IF1: PB/PN clock cycle signal missing when establishing bus communication

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The bus is in the data exchange state and clock synchronous operation has been selected using the parameterizing telegram. The global control telegram for synchronization is not being received.

Remedy: Check the master application and bus configuration.
Note:
IF1: Interface 1
PB: PROFIBUS
PN: PROFINET

A01943 IF1: PB/PN clock cycle signal error when establishing bus communication

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The bus is in the data exchange state and clock synchronous operation has been selected using the parameterizing telegram. The global control telegram for synchronization is being irregularly received.
-.the master is sending an irregular global control telegram.
- the master is using another clock synchronous DP clock cycle than was transferred to the slave in the parameterizing telegram.

Remedy: - check the master application and bus configuration.
- check the consistency between the clock cycle input when configuring the slave and clock cycle setting at the master.
Note:
IF1: Interface 1
PB: PROFIBUS
PN: PROFINET

A01944 IF1: PB/PN sign-of-life synchronism not reached

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The bus is in the data exchange state and clock synchronous operation has been selected using the parameterizing telegram. Synchronization with the master sign-of-life (STW2.12 ... STW2.15) could not be completed because the sign-of-life is changing differently to how it was configured in the Tmapc time grid.

Remedy: - ensure that the master correctly increments the sign-of-life in the master application clock cycle Tmapc.
- correct the interconnection of the master sign-of-life (p2045).
Note:
IF1: Interface 1
PB: PROFIBUS
PN: PROFINET

A01945 PROFIBUS: Connection to the Publisher failed

Message value: Fault cause: %1 bin

Drive object: A_INF, B_INF, CU_LINK, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: For PROFIBUS peer-to-peer data transfer, the connection to at least one Publisher has failed.
Alarm value (r2124, interpret binary):
Bit 0 = 1: Publisher with address in r2077[0], connection failed.
...
Bit 15 = 1: Publisher with address in r2077[15], connection failed.

Remedy: - check the PROFIBUS cables.
- carry out a first commissioning of the Publisher that has the failed connection.
See also: r2077 (PROFIBUS diagnostics peer-to-peer data transfer addresses)

F01946 (A) PROFIBUS: Connection to the Publisher aborted

Message value: Fault cause: %1 bin

Drive object: A_INF, B_INF, CU_LINK, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR

Reaction: A_INFEED: OFF1 (NONE, OFF2)
SERVO: OFF1 (NONE, OFF2, OFF3)
VECTOR: OFF1 (NONE, OFF2, OFF3)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: At this drive object, the connection to at least one Publisher for PROFIBUS peer-to-peer data transfer in cyclic operation has been aborted.
Alarm value (r2124, interpret binary):
Bit 0 = 1: Publisher with address in r2077[0], connection aborted.
...
Bit 15 = 1: Publisher with address in r2077[15], connection aborted.

Remedy: - check the PROFIBUS cables.

F01951 CU DRIVE-CLiQ: Synchronization application clock cycle missing

Message value: %1
Drive object: All objects
Reaction: OFF2 (NONE)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: If DRIVE-CLiQ components with different application clock cycle are operated at a DRIVE-CLiQ port, then this requires synchronization with the Control Unit.
This synchronization routine was unsuccessful.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
Remedy: - carry out a POWER ON (power off/on) for all components.
- upgrade the software of the DRIVE-CLiQ components.
- upgrade the Control Unit software.

F01952 CU DRIVE-CLiQ: Synchronization of component not supported

Message value: %1
Drive object: All objects
Reaction: OFF2 (NONE)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The existing system configuration requires that the connected DRIVE-CLiQ components support the synchronization between the basic clock cycle, DRIVE-CLiQ clock cycle and the application clock cycle.
However, not all DRIVE-CLiQ components have this functionality.
Fault value (r0949, interpret decimal):
Component number of the first faulty DRIVE-CLiQ component.
Remedy: Upgrade the firmware of the component specified in the fault value.
Note:
If required, also upgrade additional components in the DRIVE-CLiQ line.

A01953 CU DRIVE-CLiQ: Synchronization not completed

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: After the drive system is powered up, the synchronization between the basic clock cycle, DRIVE-CLiQ clock cycle and application clock cycle was started but was not completed within the selected time tolerance.
Alarm value (r2124, interpret decimal):
Only for internal Siemens troubleshooting.
Remedy: Carry out a POWER ON (power off/on) for all components.
If the error occurs after the drive sampling times were adjusted, and if a TM31 module is being used, the sampling times (p0115, p4099) should be set as integer multiples to the drive clock cycles (p0115).

F01954 CU DRIVE-CLiQ: Synchronization unsuccessful

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: After the drive system is powered up, the synchronization between the basic clock cycle, DRIVE-CLiQ clock cycle and application clock cycle was started and was not able to be successfully completed.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
Remedy: 1. Ensure perfect functioning of the DRIVE-CLiQ.
2. Initiate a new synchronization, e.g. as follows:
- remove the PROFIBUS master and re-insert again.
- restart the PROFIBUS master.
- power down the Control Unit and power it up again.
- press the Control Unit reset button.
- reset the parameter and download the saved parameters (p0009 = 30, p0976 = 2).

A01955 CU DRIVE-CLiQ: Synchronization DO not completed

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: After the drive system is powered up, the synchronization between the basic clock cycle, DRIVE-CLiQ clock cycle and application clock cycle was started but was not completed within the selected time tolerance.
Alarm value (r2124, interpret decimal):
Only for internal Siemens troubleshooting.
Remedy: Carry out a POWER ON (power off/on) for all components of the DO.

A02000 Function generator: Start not possible

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The function generator has already been started.
Remedy: Stop the function generator and restart again if necessary.
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.
See also: p4800 (Function generator control)

A02005 Function generator: Drive does not exist

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The drive object specified for connection does not exist.
See also: p4815 (Function generator drive number)
Remedy: Use the existing drive object with the corresponding number.
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.
See also: p4815 (Function generator drive number)

A02006 Function generator: No drive specified for connection

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: No drive specified for connection in p4815.
See also: p4815 (Function generator drive number)
Remedy: At least one drive to be connected must be specified in p4815.
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.
See also: p4815 (Function generator drive number)

A02007 Function generator: Drive not SERVO / VECTOR

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The drive object specified for connection is not a SERVO / VECTOR.
See also: p4815 (Function generator drive number)
Remedy: Use a SERVO / VECTOR drive object with the corresponding number.
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.

A02008 Function generator: Drive specified a multiple number of times

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The drive object specified for connection is already specified.
Alarm value (r2124, interpret decimal):
Drive object number of the drive object that is specified a multiple number of times.
Remedy: Specify a different drive object.
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.

A02009 Function generator: Illegal mode

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The set operating mode (p1300) of the drive object is not permissible when using the function generator.
Alarm value (r2124, interpret decimal):
Number of the drive object involved.
Remedy: Change the operating mode for this drive object to p1300 = 20 (encoderless speed control) or p1300 = 21 (speed control with encoder).
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.

A02010 Function generator: Speed setpoint from the drive is not zero

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The speed setpoint of a drive selected for connection is greater than the value for the standstill detection set using p1226.
Alarm value (r2124, interpret decimal):
Number of the drive object involved.
Remedy: For all of the drives specified for connection, set the speed setpoints to 0.
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.

A02011 Function generator: The actual drive speed is not zero

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The speed actual value of a drive selected for connection is greater than the value for the standstill detection set using p1226.
Alarm value (r2124, interpret decimal):
Number of the drive object involved.
Remedy: Set the relevant drives to zero speed before starting the function generator.
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.

A02015 Function generator: Drive enable signals missing

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The master control and/or enable signals are missing to connect to the specified drive.
Alarm value (r2124, interpret decimal):
Number of the drive object involved.
See also: p4815 (Function generator drive number)
Remedy: Fetch the master control to the specified drive object and set all enable signals.
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.

A02016 Function generator: Magnetizing running

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: Magnetizing has not yet been completed on a drive object specified for connection.
Alarm value (r2124, interpret decimal):
Number of the drive object involved.
See also: p4815 (Function generator drive number)

Remedy: Wait for magnetizing of the motor (r0056.4).
Note:
The alarm is reset as follows:
- restart the function generator.
See also: r0056 (Status word, closed-loop control)

A02020 Function generator: Parameter cannot be changed

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: This parameter setting cannot be changed when the function generator is active (p4800 = 1).
See also: p4810, p4812, p4813, p4815, p4820, p4821, p4822, p4823, p4824, p4825, p4826, p4827, p4828, p4829
Remedy: - stop the function generator before parameterizing (p4800 = 0).
- if required, start the function generator (p4800 = 1).
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.
See also: p4800 (Function generator control)

A02025 Function generator: Period too short

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The value for the period is too short.
See also: p4821 (Function generator period)
Remedy: Check and adapt the value for the period.
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.
See also: p4821 (Function generator period)

A02026 Function generator: Pulse width too high

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The selected pulse width is too high.
The pulse width must be less than the period duration.
See also: p4822 (Function generator pulse width)
Remedy: Reduce pulse width.
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.
See also: p4821 (Function generator period), p4822 (Function generator pulse width)

A02030 Function generator: Physical address equals zero

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The specified physical address is zero.
See also: p4812 (Function generator physical address)

Remedy: Set a physical address with a value other than zero.
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.
See also: p4812 (Function generator physical address)

A02040 Function generator: Illegal value for offset

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The value for the offset is higher than the value for the upper limit or lower than the value for the lower limit.
See also: p4826 (Function generator offset)
Remedy: Adjust the offset value accordingly.
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.
See also: p4826 (Function generator offset), p4828 (Function generator lower limit), p4829 (Function generator upper limit)

A02041 Function generator: Illegal value for bandwidth

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The bandwidth referred to the time slice clock cycle of the function generator has either been set too low or too high.
Depending on the time slice clock cycle, the bandwidth is defined as follows:
Bandwidth_max = 1 / (2 * time slice clock cycle)
Bandwidth_min = Bandwidth_max / 100000
Example:
Assumption: p4830 = 125 µs
--> Bandwidth_max = 1 / (2 * 125 µs) = 4000 Hz
--> Bandwidth_min = 4000 Hz / 100000 = 0.04 Hz
Note:
p4823: Function generator bandwidth
p4830: Function generator time slice clock cycle
See also: p4823 (Function generator bandwidth), p4830 (Function generator time slice cycle)
Remedy: Check the value for the bandwidth and adapt accordingly.
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.

A02047 Function generator: Time slice clock cycle invalid

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The time slice clock cycle selected does not match any of the existing time slices.
See also: p4830 (Function generator time slice cycle)
Remedy: Enter an existing time slice clock cycle. The existing time slices can be read out via p7901.
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.
See also: r7901 (Time slice cycle times)

A02050 Trace: Start not possible

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The trace has already been started.
See also: p4700 (Trace control)
Remedy: Stop the trace and, if necessary, start again.

A02055 Trace: Recording time too short

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The trace duration is too short.
The minimum is twice the value of the trace clock cycle.
See also: p4721 (Trace recording time)
Remedy: Check the selected recording time and, if necessary, adjust.

A02056 Trace: Recording cycle too short

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The selected recording cycle is shorter than the selected basic clock cycle 0 (p0110[0]).
See also: p4720 (Trace recording cycle)
Remedy: Increase the value for the trace cycle.

A02057 Trace: Time slice clock cycle invalid

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The time slice clock cycle selected does not match any of the existing time slices.
See also: p4723 (Time slice cycle for trace)
Remedy: Enter an existing time slice clock cycle. The existing time slices can be read out via p7901.
See also: r7901 (Time slice cycle times)

A02058 Trace: Time slice clock cycle for endless trace not valid

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The selected time slice clock cycle cannot be used for the endless trace
See also: p4723 (Time slice cycle for trace)
Remedy: Enter the clock cycle of an existing time slice with a cycle time >= 2 ms for up to 4 recording channels or >= 4 ms from 5 recording channels per trace.
The existing time slices can be read out via p7901.
See also: r7901 (Time slice cycle times)

A02059 Trace: Time slice clock cycle for 2 x 8 recording channels not valid

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The selected time slice clock cycle cannot be used for the setting p4702 = 1 (2 x 8 recording channels).
See also: p4723 (Time slice cycle for trace)
Remedy: Enter the clock cycle of an existing time slice with a cycle time >= 4 ms or reduce the number of recording channels to 4 per trace.
The existing time slices can be read out via p7901.
See also: r7901 (Time slice cycle times)

A02060 Trace: Signal to be traced missing

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: - a signal to be traced was not specified.
- the specified signals are not valid.
See also: p4730 (Trace record signal 0), p4731 (Trace record signal 1), p4732 (Trace record signal 2), p4733 (Trace record signal 3)
Remedy: - specify the signal to be traced.
- check whether the relevant signal can be traced.

A02061 Trace: Invalid signal

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: - the specified signal does not exist.
- the specified signal can no longer be traced (recorded).
See also: p4730 (Trace record signal 0), p4731 (Trace record signal 1), p4732 (Trace record signal 2), p4733 (Trace record signal 3)
Remedy: - specify the signal to be traced.
- check whether the relevant signal can be traced.

A02062 Trace: Invalid trigger signal

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: - a trigger signal was not specified.
- the specified signal does not exist.
- the specified signal is not a fixed-point signal.
- the specified signal cannot be used as a trigger signal for the trace.
See also: p4711 (Trace trigger signal)
Remedy: Specify a valid trigger signal.

A02063 Trace: Invalid data type

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The specified data type to select a signal using a physical address is invalid.
See also: p4711 (Trace trigger signal), p4730 (Trace record signal 0), p4731 (Trace record signal 1), p4732 (Trace record signal 2), p4733 (Trace record signal 3)

Remedy: Use a valid data type.

A02070 Trace: Parameter cannot be changed

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The trace parameter settings cannot be changed when the trace is active.
See also: p4700, p4710, p4711, p4712, p4713, p4714, p4715, p4716, p4720, p4721, p4722, p4730, p4731, p4732, p4733, p4780, p4781, p4782, p4783, p4789, p4795
Remedy: - stop the trace before parameterization.
- if required, start the trace.

A02075 Trace: Pretrigger time too long

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The selected pretrigger time must be shorter than the trace time.
See also: p4721 (Trace recording time), p4722 (Trace trigger delay)
Remedy: Check the pretrigger time setting and change if necessary.

F02080 Trace: Delete trace because units changed over

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The trace was deleted due to the fact that the units were changed over or the reference parameters changed.
Remedy:

A02099 Trace: Insufficient Control Unit memory

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The memory space still available on the Control Unit is no longer sufficient for the trace function.
Remedy: Reduce the memory required, e.g. as follows:
- reduce the trace time.
- increase the trace clock cycle.
- reduce the number of signals to be traced.
See also: r4708 (Trace memory space required), r4799 (Trace memory location free)

A02100 CU: Computing dead time current controller too short

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The value in p0118 produces a dead time of one clock cycle because it is prior to setpoint availability. A possible cause could be, for example, that the system characteristics no longer match those parameterized after a component has been replaced.
Alarm value (r2134, floating point):
The minimum value for p0118 where a dead time no longer occurs.
Remedy: - set p0118 to a value greater than or equal to the alarm value.
- set p0117 to an automatic setting.
- check the firmware releases of the components involved.
See also: p0117 (Current controller computing dead time mode), p0118 (Current controller computing dead time)

A02150 OA: Application cannot be loaded

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The system was not able to load an OA application.
Alarm value (r2124, interpret hexadecimal):
Only for internal Siemens troubleshooting.
Remedy: - carry out a POWER ON (power off/on) for all components.
- upgrade firmware to later version.
- contact the Hotline.
Note:
OA: Open Architecture
See also: r4950, r4955, p4956, r4957

F02151 (A) OA: Internal software error

Message value: %1
Drive object: All objects
Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: OFF2 (NONE, OFF1, OFF3)
VECTOR: OFF2 (NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: An internal software error has occurred within an OA application.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.
Remedy: - carry out a POWER ON (power off/on) for all components.
- upgrade firmware to later version.
- contact the Hotline.
- replace the Control Unit.
Note:
OA: Open Architecture
See also: r4950, r4955, p4956, r4957
Reaction upon A: NONE
Acknowl. upon A: NONE

F02152 (A) OA: Insufficient memory

Message value: %1
Drive object: All objects
Reaction: OFF1
Acknowledge: IMMEDIATELY (POWER ON)
Cause: Too many functions have been configured on this Control Unit (e.g. too many drives, function modules, data sets, OA applications, blocks, etc).
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
Remedy: - change the configuration on this Control Unit (e.g. fewer drives, function modules, data sets, OA applications, blocks, etc).
- use an additional Control Unit.
Note:
OA: Open Architecture
Reaction upon A: NONE
Acknowl. upon A: NONE

F03500 (A) TM: Initialization

Message value: %1
Drive object: All objects
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: When initializing the Terminal Modules, the terminals of the Control Unit or the Terminal Board 30, an internal software error has occurred.
Fault value (r0949, interpret decimal):
The thousands digit = 1 ... 3:
The component number (p0151) of the module involved is specified at the units, tens and hundreds digit.
Remedy: - power down the power supply for the Control Unit and power it up again.
- check the DRIVE-CLiQ connection.
- if required, replace the Terminal Module.
The Terminal Module should be directly connected to a DRIVE-CLiQ socket of the Control Unit.
If the fault occurs again, replace the Terminal Module.
Reaction upon A: NONE
Acknowl. upon A: NONE

A03501 TM: Sampling time change

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The sampling times of the inputs/outputs were changed.
This change only becomes valid after the next boot.
Remedy: Carry out a POWER ON.

F03505 (N, A) TM: Analog input wire breakage

Message value: %1
Drive object: All objects
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The input current of the Terminal Module analog input has exceeded the threshold value parameterized in p4061[x].
This fault can only occur if p4056[x] = 3 (4 ... 20 mA with monitoring) is set.
Index x = 0: Analog input 0 (X522.1 to .3)
Index x = 1: Analog input 1 (X522.4 to .5)
Fault value (r0949, interpret decimal):
The component number (p0151) of the module involved is specified at the units, tens and hundreds digit.
The thousands digit specifies the analog input involved: 0: Analog input 0 (AI 0), 1: Analog input 1 (AI 1)
Remedy: Check the connection to the signal source for interruptions.
Check the magnitude of the injected current - it is possible that the infed signal is too low.
Please note that the input has a load resistance of 250 Ohm.
The input current measured by the Terminal Module can be read out from r4052[x].
Reaction upon N: NONE
Acknowl. upon N: NONE
Reaction upon A: NONE
Acknowl. upon A: NONE

A03506 (F, N) 24 V power supply missing

Message value: %1
Drive object: A_INF, B_INF, CU_I, CU_LINK, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The 24 V power supply for the digital outputs (X124) is missing.
Remedy: Check the terminals for the power supply voltage (X124, L1+, M).

Reaction upon F: NONE
Acknowl. upon F: IMMEDIATELY (POWER ON)
Reaction upon N: NONE
Acknowl. upon N: NONE

A03550 TM: Speed setpoint filter natural frequency > Shannon frequency

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The natural filter frequency of the speed setpoint filter (p1417) is greater than the Shannon frequency.
The Shannon frequency is calculated according to the following formula: 0.5 / p0115[0]
See also: p1417
Remedy: Reduce the natural frequency of the speed setpoint filter (PT2 low pass) (p1417).

F03590 (N, A) TM: Module not ready

Message value: %1
Drive object: All objects
Reaction: A_INFEED: OFF2 (NONE)
SERVO: NONE (ENCODER, IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
VECTOR: OFF2 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The Terminal Module involved does not send a ready signal and no valid cyclic data.
Fault value (r0949, interpret decimal):
Drive object number of the Terminal Module involved.
Remedy: - check the 24 V power supply.
- check the DRIVE-CLiQ connection.
- check whether the sampling time of the drive object involved is not equal to zero (p4099[0]).
Reaction upon N: NONE
Acknowl. upon N: NONE
Reaction upon A: NONE
Acknowl. upon A: NONE

A05000 (N) Power unit: Heat sink overtemperature

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The alarm threshold for overtemperature at the inverter heat sink has been reached. The response is set using p0290.
If the temperature of the heat sink increases by an additional 5 K, then fault F30004 is initiated.
Remedy: Check the following:
- is the ambient temperature within the defined limit values?
- have the load conditions and the load duty cycle been appropriately dimensioned?
- has the cooling failed?
Reaction upon N: NONE
Acknowl. upon N: NONE

A05001 (N) Power unit: Chip overtemperature

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: Alarm threshold for overtemperature of the power semiconductor in the AC converter has been reached. The response is set using p0290.
If the chip temperature increases by an additional 15 K, then fault F30025 is initiated.

Remedy: Check the following:
- is the ambient temperature within the defined limit values?
- have the load conditions and the load duty cycle been appropriately dimensioned?
- has the cooling failed?
- pulse frequency too high?
See also: r0037, p0290 (Power unit overload response)

Reaction upon N: NONE

Acknowl. upon N: NONE

A05002 (N) Power unit: Air intake overtemperature

Message value: -

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The alarm threshold for the air intake overtemperature has been reached. For air-cooled power units, the threshold is 42 °C (hysteresis 2 K). The response is set using p0290.
If the air intake temperature increases by an additional 13 K, then fault F30035 is output.

Remedy: Check the following:
- is the ambient temperature within the defined limit values?
- has the fan failed? Check the direction of rotation.

Reaction upon N: NONE

Acknowl. upon N: NONE

A05003 (N) Power unit: Electronics board overtemperature

Message value: -

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The alarm threshold for the overtemperature of the electronics module has been reached. The response is set using p0290.
If the temperature of the electronics module increases by an additional 5 K, then fault F30036 is initiated.

Remedy: Check the following:
- is the ambient temperature within the defined limit values?
- has the fan failed? Check the direction of rotation.

Reaction upon N: NONE

Acknowl. upon N: NONE

A05004 (N) Power unit: Rectifier overtemperature

Message value: -

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The alarm threshold for the overtemperature of the rectifier has been reached. The response is set using p0290.
If the temperature of the rectifier increases by an additional 5 K, then fault F30037 is initiated.

Remedy: Check the following:
- is the ambient temperature within the defined limit values?
- have the load conditions and the load duty cycle been appropriately dimensioned?
- has the fan failed? Check the direction of rotation.
- has a phase of the line supply failed?
- is an arm of the supply (incoming) rectifier defective?

Reaction upon N: NONE

Acknowl. upon N: NONE

A05005 Cooling system: Cooling medium flow rate too low

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: Cooling system: Alarm - flow rate has fallen below the alarm value
Remedy:

A05006 (N) Power unit: Overtemperature thermal model

Message value: -
Drive object: A_INF, S_INF, SERVO
Reaction: NONE
Acknowledge: NONE
Cause: The temperature difference between the chip and heat sink has exceeded the permissible limit value (for blocksize power units only). Depending on p0290, a suitable overload response is initiated.
See also: r0037
Remedy: None necessary.
The alarm automatically disappears when the limit value is undershot.
Note:
If the alarm does not disappear automatically and the temperature continues to rise, this can trigger fault F30024.
See also: p0290 (Power unit overload response)
Reaction upon N: NONE
Acknowl. upon N: NONE

A05006 (N) Power unit: Overtemperature thermal model

Message value: -
Drive object: VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The temperature difference between the chip and heat sink has exceeded the permissible limit value (for blocksize power units only). Depending on p0290, a suitable overload response is initiated.
See also: r0037
Remedy: None necessary.
The alarm automatically disappears when the limit value is undershot.
Note:
If the alarm does not disappear automatically and the temperature continues to rise, this can trigger fault F30024.
- If DC brake is active: reduce braking current (see p1232).
See also: p0290 (Power unit overload response)
Reaction upon N: NONE
Acknowl. upon N: NONE

N05007 (A) Power unit: Overtemperature thermal model (chassis PU)

Message value: -
Drive object: A_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The temperature difference between the chip and heat sink has exceeded the permissible limit value (r0293) (for chassis power units only). Depending on p0290, a suitable overload response is initiated.
See also: r0037, r0293 (Power unit alarm threshold model temperature)
Remedy: None necessary. The alarm automatically disappears when the limit value is undershot.
See also: p0290 (Power unit overload response)
Reaction upon A: NONE
Acknowl. upon A: NONE

F05050 Parallel circuit: Pulse enable in spite of pulse inhibit

Message value: %1
Drive object: A_INF, B_INF, S_INF, VECTOR
Reaction: A_INFEED: OFF2 (NONE, OFF1)
VECTOR: OFF2 (NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY
Cause: A power unit signals that the pulses are enabled although the pulses are inhibited.
Fault value (r0949, interpret decimal):
Number of the power unit involved.
Remedy: The power unit is defective and must be replaced.

F05051 Parallel circuit: Power unit pulse enable missing

Message value: %1
Drive object: A_INF, B_INF, S_INF, VECTOR
Reaction: A_INFEED: OFF2 (NONE, OFF1)
VECTOR: OFF2 (NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY
Cause: For one or several power units, the pulses were not able to be enabled.
Fault value (r0949, interpret decimal):
Number of the power unit involved.
Remedy: - acknowledge power unit faults that are still present.
- inhibit the pulses of the power unit involved (p7001).

A05052 (F) Parallel circuit: Illegal current dissymmetry

Message value: %1
Drive object: A_INF, B_INF, S_INF, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The deviation of the individual currents of the power units exceeds the alarm threshold specified in p7010.
Alarm value (r2124, interpret decimal):
1: Phase U.
2: Phase V.
3: Phase W.
Remedy: - inhibit the pulses of the faulted power unit (p7001).
- check the connecting cables. Loose contacts can cause current spikes.
- the motor reactors are non-symmetrical or faulty and must be replaced.
- the CTs must be calibrated or replaced.
Reaction upon F: A_INFEED: NONE (OFF1, OFF2)
VECTOR: NONE (OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowl. upon F: IMMEDIATELY

A05053 (F) Parallel circuit: Inadmissible DC link voltage dissymmetry

Message value: -
Drive object: A_INF, B_INF, S_INF, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The deviation of the DC link voltage measured values exceeds the alarm threshold specified in p7011.
Remedy: - inhibit the pulses of the faulted power unit (p7001).
- check the DC link connecting cables.
- the DC link voltage measurement is incorrect and must be calibrated or renewed.
Reaction upon F: A_INFEED: NONE (OFF1, OFF2)
VECTOR: NONE (OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowl. upon F: IMMEDIATELY

A05054 Parallel circuit: Power unit de-activated

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: For the drive object involved, fewer power unit components connected in parallel are active than exist in the target topology. Operation is only possible at reduced power (power de-rating).
Remedy: Re-activate the de-activated power unit components.
See also: p0125 (Activate/de-activate power unit components), p0895 (Activate/de-activate power unit components), p0897 (Parking axis selection)

F05055 Power circuit: Power units with different code numbers

Message value: Parameter: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2 (NONE)
Acknowledge: IMMEDIATELY
Cause: The code numbers of the power units do not match.
Fault value (r0949, interpret decimal):
Parameter in which the first different power unit code number was detected.
Remedy: For parallel circuit configurations, only power units with identical power unit data may be used.

F05056 Parallel circuit: Power unit EPROM versions differ

Message value: Parameter: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2 (NONE)
Acknowledge: IMMEDIATELY
Cause: The EEPROM versions of the power units do not match.
Fault value (r0949, interpret decimal):
Parameter in which the first different version number was detected.
Remedy: For parallel circuit configurations, only power units with identical EEPROM versions may be used.

F05057 Parallel circuit: Power unit firmware versions differ

Message value: Parameter: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2 (NONE)
Acknowledge: IMMEDIATELY
Cause: The firmware versions of the power units connected in parallel do not match.
Fault value (r0949, interpret decimal):
Parameter in which the first different version number was detected.
Remedy: For parallel circuit configurations, only power units with identical firmware versions may be used.

F05058 Parallel circuit: VSM EEPROM versions differ

Message value: Parameter: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The EEPROM versions of the Voltage Sensing Modules (VSM) do not match.
Fault value (r0949, interpret decimal):
Parameter in which the first different version number was detected.
Remedy: For parallel circuit configurations, only Voltage Sensing Modules (VSM) with identical EEPROM versions may be used.

F05059 Parallel circuit: VSM firmware versions differ

Message value: Parameter: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The firmware versions of the Voltage Sensing Module (VSM) do not match.
Fault value (r0949, interpret decimal):
Parameter in which the first different version number was detected.
Remedy: For parallel circuit configurations, only Voltage Sensing Modules (VSM) with identical firmware versions may be used.

F05060 Parallel circuit: Power unit firmware version does not match

Message value: Parameter: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: Firmware from version V02.30.01.00 is required when connecting the power units in parallel.
Remedy: Update the firmware of the power units (at least V02.30.01.00).

F05061 Infeed, number of VSM

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The number of active Voltage Sensing Modules (VSM) for the drive object infeed with chassis power units is not correct.
For A_Infeed, each active power unit must be assigned an active VSM also for a parallel circuit configuration.
For S_Infeed, the active drive object, must be assigned at least one active VSM.
Fault value (r0949, interpret decimal):
Number of VSMs that are currently assigned to the drive object.
Remedy: Adapts the number of active Voltage Sensing Modules (VSM).

F06000 Infeed: Precharging monitoring time expired

Message value: -
Drive object: A_INF, B_INF, S_INF
Reaction: OFF2 (OFF1)
Acknowledge: IMMEDIATELY
Cause: After the line contactor closes the power unit does not signal the READY state within the monitoring time (p0857).
The end of the DC link pre-charging was not able to be completed for one of the following reasons:
1) There is no line supply voltage connected.
2) The line contactor/line side switch has not been closed.
3) The line supply voltage is too low.
4) Line supply voltage incorrectly set (p0210).
5) The pre-charging resistors are overheated as there were too many pre-charging operations per time unit.
6) The pre-charging resistors are overheated as the DC link capacitance is too high.
7) The pre-charging resistors are overheated because when there is no "ready for operation" (r0863.0) of the infeed unit, power is taken from the DC link.
8) The pre-charging resistors are overheated as the line contactor was closed during the DC link fast discharge through the Braking Module.
9) The DC link has either a ground fault or a short-circuit.
10) The pre-charging circuit is possibly defective (only for chassis units).
See also: p0210 (Drive unit line supply voltage), p0857 (Power unit monitoring time)

Remedy: In general:
- check the line supply voltage at the connecting terminals.
- check the line supply voltage setting (p0210).
- check the monitoring time and, if required, increase (p0857).
- where relevant, observe additional power unit messages/signals (e.g. F30027).
- the following applies to booksize units: Wait (approx. 8 min.) until the pre-charging resistors have cooled down. The infeed unit must be disconnected from the supply for this purpose.
Re 5):
- carefully observe the permissible pre-charging frequency (refer to the appropriate Equipment Manual).
Re 6):
- check the total capacitance of the DC link and if required, correspondingly reduce the maximum permissible DC link capacitance (refer to the appropriate Equipment Manual).
Re 7):
- interconnect the ready for operation signal of the infeed unit (r0863.0) in the enable logic of the drives connected to this DC link.
Re 8):
- check the connections of the external line contactor. The line contactor must be open during the DC link fast discharge.
Re 9):
- check the DC link regarding ground fault or short-circuit.

F06010 Infeed: Power unit EP 24 V missing in operation

Message value: -
Drive object: A_INF, B_INF, S_INF
Reaction: OFF2 (OFF1)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: In operation, withdraw the pulse enable at terminal EP at the Line Module (X21.3, X21.4).
Remedy: - do not open the Line Side Switch in operation - only when the pulses are inhibited.
- check the wiring of the DP input (X21.3, X21.4) at the Line Module to exclude any poor contacts.

F06050 Infeed: Smart Mode not supported

Message value: -
Drive object: A_INF, S_INF
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The power unit does not support the Smart Mode.
Remedy: - set the suitable sampling time 250 µs <= p0115[0] <= 400 µs (e.g. by setting p0112 and p0115 to the factory setting).
- upgrade the power unit software and/or hardware for the Smart Mode. The availability of the Smart Mode function is displayed in r0192.
- for A_INF the following applies: De-activate the Smart Mode with p3400.0 = 0 and activate the voltage control with p3400.3 = 1. For booksize power units, it must be noted that for a supply voltage p0210 > 415 V only the Smart Mode is possible in the pre-setting. If DC link voltages above 660 V are permissible in the application, then voltage-controlled operation can be activated with p0280, p0210, p3400 and p3510. The information regarding p0210 should be carefully noted.
See also: r0192 (Power unit firmware properties)

F06052 Infeed: Filter temperature evaluation not supported

Message value: -
Drive object: A_INF, S_INF
Reaction: OFF2 (NONE)
Acknowledge: IMMEDIATELY
Cause: The power unit does not support filter temperature evaluation (r0192.11).
This feature is required when using an Active Interface Module as line filter (p0220 = 41 ... 45).
Remedy: Upgrade the firmware for the power unit to a later version.
See also: r0192 (Power unit firmware properties), p0220 (Infeed line filter type)

F06100 Infeed: Shutdown due to line supply undervoltage condition

Message value: %1
Drive object: A_INF, B_INF, S_INF
Reaction: OFF2 (OFF1)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The filtered (steady-state) value of the line supply voltage is less than the fault threshold (p0283).
Fault condition: Vrms < p0283 * p0210
Fault value (r0949, floating point):
Current steady-state line supply voltage.
See also: p0283 (Line supply undervoltage, shutdown (trip) threshold)
Remedy: - check the line supply.
- check the line supply voltage (p0210).
- check the fault threshold (p0283).

A06105 (F) Infeed: Line supply undervoltage

Message value: %1
Drive object: A_INF, B_INF, S_INF
Reaction: NONE
Acknowledge: NONE
Cause: The filtered (steady-state) value of line supply voltage is lower than the alarm threshold (p0282).
Alarm condition: Vrms < p0282 * p0210
Alarm value (r2124, floating point):
Current steady-state line supply voltage.
See also: p0282 (Line supply undervoltage, alarm threshold)
Remedy: - check the line supply.
- check the line supply voltage (p0210).
- check the alarm threshold (p0282).

Reaction upon F: NONE (OFF1, OFF2)
Acknowl. upon F: IMMEDIATELY (POWER ON)

F06200 Infeed: Failure of one or several line phases

Message value: -
Drive object: A_INF, S_INF
Reaction: OFF2 (OFF1)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: Failure overvoltage in one or several line supply phases.
The fault can be output in two operating states:
1. During the power-on phase of the infeed unit.
The measured line supply angle deviates from the regular characteristic for a 3-phase system - the PLL cannot be synchronized.
The fault occurs immediately after power-up if, when operating with a VSM, the phase assignment L1, L2, L3 at the VSM differs from the phase assignment at the power unit.
2. While the infeed is operational.
After a voltage dip has been detected or an overvoltage (note A06205) in one or several line phases a fault occurred within 100 ms (also refer to other relevant messages). Generally, before fault message F06200 is output, Alarm A06205 occurs at least once, whose warning value can provide information regarding the cause of the line supply fault.
Probable causes of the fault:
- voltage dip on the line side or phase failure or overvoltage lasting longer than 10 ms.
- overload condition on the load side with peak current.
- commutating reactor missing.
Remedy: - check the line supply and fuses.
- check the connection and size (rating) of the line commutating reactor.
- check and correct the phase assignment at the VSM (X521 or X522) and at the power unit.
- check the load.
- if failed in operation, carefully note the previous alarm messages A6205 with alarm values.
See also: p3463 (Infeed, line angle change, phase failure detection)

A06205 (F) Infeed: Voltage dip in at least one line supply phase

Message value: %1

Drive object: A_INF, S_INF

Reaction: NONE

Acknowledge: NONE

Cause: Voltage dip or overvoltage in one or several line supply phases has been detected in operation.
The pulses are then inhibited for a time of at least 8 ms. The operating signal of the infeed unit in r0863.0 remains and the pulse inhibit due to the phase failure is displayed in r3405.2.
Alarm value (r2124, bitwise coded cause of the alarm):
Bit 0: Line angle deviation (limit value p3463) due to a line supply fault
Bit 2: Active current deviation
Bit 3: Line frequency deviation (limit values: 115 % * p0284, 85 % * p0285)
Bit 4: Line overvoltage (limit value 120 % * p0281 * p0210)
Bit 5: Line undervoltage (limit value 20 % * p0210)
Bit 7: Peak current fault
Bit 8: Smart Mode without VSM (p3400.5 = 0): Line angle deviation
Bit 9: Smart Mode: DC link voltage dip
Bit 10: Smart Mode: Line currents not symmetrical

Remedy: Generally, the following applies when an alarm message is output:
- check the line supply and fuses.
- check the line supply quality and system fault level.
- check the load.

Dependent on the alarm value in r2124, the following applies:
Bit 0 = 1: Line fault occurred or poor/incorrect controller setting. For poor line quality or frequent line supply changeover operations, when required, limit value p3463 can be increased until the alarm value no longer occurs.
Bit 2 = 1: Line fault occurred or poor/incorrect controller setting. - check the controller setting and load.
Bit 3 = 1: Line fault occurred. For poor line quality or frequent line changeover operations, when required, limit values p0284 and p0285 can be increased until the alarm value no longer occurs.
Bit 4 = 1: Line interrupted or line overvoltage has occurred.
Bit 5 = 1: Line interrupted or line undervoltage has occurred.
Bit 7 = 1: Peak current trip due to line fault or overload. Check the load.
Bit 8 = 1: Line fault occurred.
Bit 9 = 1: Line undervoltage or overload. Check the load.
Bit 10 = 1: Line supply interrupted in at least one line phase. Check the fuses.
See also: r3405 (Status word infeed), p3463 (Infeed, line angle change, phase failure detection)

Reaction upon F: NONE (OFF1, OFF2)

Acknowl. upon F: IMMEDIATELY (POWER ON)

F06207 (N, A) Infeed: Line currents not symmetrical

Message value: -

Drive object: A_INF, S_INF

Reaction: OFF1 (NONE, OFF2)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: Asymmetry of the currents in the line phase too high.
The most probable cause is failure of a line phase.

Remedy: - check the line supply and fuses.
- check the connection and size (rating) of the line commutating reactor.
- note the previous alarm messages A6205 with alarm values.

Reaction upon N: NONE

Acknowl. upon N: NONE

Reaction upon A: NONE

Acknowl. upon A: NONE

F06210 Infeed: Summation current too high

Message value: %1
Drive object: A_INF, B_INF, S_INF
Reaction: OFF2 (OFF1)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The smoothed total of the phase currents (i1 + i2 + i3) is greater than 4 % of the maximum power unit current (r0209).
Possible causes:
- the DC link has a ground fault that results in a high summation current (r0069.6). The DC component in the line currents can damage/destroy the power unit, commutating reactor or line filter!
- the zero point calibration of the current measurement was not carried out (p3491, A06602).
- defective current measurement in the power unit.
Fault value (r0949, floating point):
Smoothed total of the phase currents.
Remedy:
- check the DC link for a low-ohmic or high-ohmic ground fault and if present, remove.
- increase the monitoring time of the current offset measurement (p3491).
- if required, replace the power unit.

A06215 (F) Infeed: Summation current too high

Message value: %1
Drive object: A_INF, B_INF, S_INF
Reaction: NONE
Acknowledge: NONE
Cause: The smoothed total of the phase currents (i1 + i2 + i3) is greater than 3 % of the maximum power unit current (r0209).
Possible causes:
- the DC link has a ground fault that results in a high summation current (r0069.6). The DC component in the line currents can damage/destroy the power unit, commutating reactor or line filter!
- the zero point calibration of the current measurement was not carried out (p3491, A06602).
- defective current measurement in the power unit.
Alarm value (r2124, floating point):
Smoothed total of the phase currents.
Remedy:
- check the DC link for a low-ohmic or high-ohmic ground fault and if present, remove.
- increase the monitoring time of the current offset measurement (p3491).
- if required, replace the power unit.

Reaction upon F: NONE (OFF1, OFF2)
Acknowl. upon F: IMMEDIATELY (POWER ON)

A06250 (F, N) Infeed: Defective capacitor(s) in at least one phase of line filter

Message value: %1
Drive object: A_INF, S_INF
Reaction: NONE
Acknowledge: NONE
Cause: A change in the line filter capacitance was detected in at least line phase.
The voltages and phase currents of the line filter, measured using a Voltage Sensing Module (VSM), indicated a deviation of the filter capacitances from the value parameterized in p0221.
A change or a defect of the line filter capacitors results in a shift of the resonant frequencies and can result in severe damage to the drive system.
Alarm value (r2124, floating point):
The calculated present capacitance in µF (rounded-off to an integer number).
The 1st decimal point specifies the number of the phase (1, 2, 3) where the capacitance deviates from the specified value.

Remedy: - check the parameterized value of the filter capacitance (p0221).
- check the correct wiring of the Voltage Sensing Module (VSM):
Differential voltages u12 and u23 must be present at the 100 V/690 V inputs of the VSM; the phase currents of the line filter must be connected to the 10 V inputs through a current - voltage converter.
- check the alarm limits for the permissible filter capacitance deviation (p3676).
- check the normalization of the line supply voltage measurement using the VSM (p3660).
- check the normalization of the filter current measurement using the VSM (p3670).
- check the line filter capacitors and if required, replace the line filter.
See also: p0221 (Infeed filter capacitance), p3660 (VSM input line supply voltage, voltage scaler), p3670 (VSM 10 V input CT gain), p3676 (VSM line filter capacitance alarm threshold)

Reaction upon F: NONE (OFF1, OFF2)

Reaction upon N: NONE

Acknowl. upon N: NONE

A06260 Infeed: Temperature in the line filter too high

Message value: -

Drive object: A_INF, S_INF

Reaction: NONE

Acknowledge: NONE

Cause: The temperature monitoring in the line filter has responded.
If the temperature remains too high during the complete monitoring time, this results in fault F06261.
Note:
The temperature monitoring is only available for an Active Interface Module.

Remedy: - check whether the line filter type set in p0220[0] matches the line filter that is actually connected. Ensure that the line filter specified for the infeed being used is connected or correct the setting of the line filter type in P0220[0].
- temperature monitoring is mandatory for AIM line filters (refer to P0220). Ensure that the line filter temperature switch is correctly and reliably connected to input X21 of the infeed.
- reduce the ambient temperature of the line filter.
- reduce the load on the infeed and the filter module.
- check the magnitude of the line supply voltage.
- the internal fan of the filter module is defective. If required, replace the fan.
- defective temperature switch of the filter module. If required, replace the filter module.

F06261 Infeed: Temperature in the line filter permanently too high

Message value: -

Drive object: A_INF, S_INF

Reaction: OFF2 (OFF1)

Acknowledge: IMMEDIATELY

Cause: After the temperature monitoring responded, the temperature in the line filter was permanently exceeded.
Note:
The temperature monitoring is only available for an Active Interface Module.

Remedy: - check whether the line filter type set in p0220[0] matches the line filter that is actually connected. Ensure that the line filter specified for the infeed being used is connected or correct the setting of the line filter type in P0220[0].
- temperature monitoring is mandatory for AIM line filters (refer to P0220). Ensure that the line filter temperature switch is correctly and reliably connected to input X21 of the infeed.
- reduce the ambient temperature of the line filter.
- reduce the load on the infeed and the filter module.
- check the magnitude of the line supply voltage.
- the internal fan of the filter module is defective. If required, replace the fan.
- defective temperature switch of the filter module. If required, replace the filter module.

F06262 Infeed: Temperature switch in the line filter open when powering up

Message value: -

Drive object: A_INF, S_INF

Reaction: OFF2 (OFF1)

Acknowledge: IMMEDIATELY

Cause: When powering up the infeed, the temperature in the line filter is too high. Powering up is prevented.

Remedy: - check whether the line filter type set in p0220[0] matches the line filter that is actually connected. Ensure that the line filter specified for the infeed being used is connected or correct the setting of the line filter type in P0220[0].
- temperature monitoring is mandatory for AIM line filters (refer to P0220). Ensure that the line filter temperature switch is correctly and reliably connected to input X21 of the infeed.
- the filter temperature is too high. Allow the system to cool down.
- the internal fan of the filter module is defective. If required, replace the fan.
- defective temperature switch of the filter module. If required, replace the filter module.

F06300 Infeed: Line voltage too high at power on

Message value: %1
Drive object: A_INF, S_INF
Reaction: OFF2 (NONE, OFF1)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The RMS line supply voltage Vrms was so high when powering up that controlled operation is not possible without exceeding the permissible maximum voltage in the DC link (p0280).
Fault condition: Vrms * 1.5 > p0280.
Fault value (r0949, floating point):
Lowest possible controlled DC link voltage for the line supply voltage presently connected.
See also: p0280 (DC link voltage maximum steady-state)
Remedy: - check the line supply voltage
- check the maximum DC link voltage and if required, increase (p0280).
- check the line supply voltage and compare with the actual line supply voltage (p0210).
- check whether the power unit is dimensioned for the line supply voltage actually being used.
See also: p0210 (Drive unit line supply voltage), p0280 (DC link voltage maximum steady-state)

A06301 (F) Infeed: Line supply overvoltage

Message value: Line supply voltage: %1
Drive object: A_INF, B_INF, S_INF
Reaction: NONE
Acknowledge: NONE
Cause: The filtered (steady-state) value of the rms line supply voltage Vrms is higher than the alarm threshold (p0281).
Alarm condition: Vrms > p0281 * p0210.
Alarm value (r2124, floating point):
Current steady-state line supply voltage.
See also: p0281 (Line supply overvoltage, alarm threshold)
Remedy: - check the line supply.
- check the line supply voltage (p0210).
- check the alarm threshold (p0281).
See also: p0210 (Drive unit line supply voltage), p0281 (Line supply overvoltage, alarm threshold)
Reaction upon F: NONE (OFF1, OFF2)
Acknowl. upon F: IMMEDIATELY (POWER ON)

F06310 (A) Infeed: Supply voltage (p0210) incorrectly parameterized

Message value: Line supply voltage: %1
Drive object: A_INF, B_INF, S_INF
Reaction: NONE (OFF1, OFF2)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: After pre-charging was completed, the line supply voltage Vrms was calculated using the measured DC link voltage. This voltage Vrms is not within the tolerance range of the supply voltage.
The following applies for the tolerance range: 85 % * p0210 < Vrms < 110 % * p0210.
Alarm value (r2124, floating point):
Line supply voltage Vrms present.
See also: p0210 (Drive unit line supply voltage)
Remedy: - check the parameterized supply voltage and if required change (p0210).
- check the line supply voltage.
See also: p0210 (Drive unit line supply voltage)
Reaction upon A: NONE
Acknowl. upon A: NONE

F06310 (A) Supply voltage (p0210) incorrectly parameterized

Message value: -
Drive object: SERVO
Reaction: NONE (OFF1, OFF2)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: For AC/AC drive units, the measured DC voltage lies outside the tolerance range after pre-charging has been completed. The following applies for the tolerance range: 1.16 * p0210 < r0070 < 1.6 * p0210.
The fault can only be acknowledged when the drive is powered down.
See also: p0210 (Drive unit line supply voltage)
Remedy: - check the parameterized supply voltage and if required change (p0210).
- check the line supply voltage.
See also: p0210 (Drive unit line supply voltage)
Reaction upon A: NONE
Acknowl. upon A: NONE

F06310 (A) Supply voltage (p0210) incorrectly parameterized

Message value: -
Drive object: VECTOR
Reaction: NONE (OFF1, OFF2)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: For AC/AC drive units, the measured DC voltage lies outside the tolerance range after pre-charging has been completed: 1.16 * p0210 < r0070 < 1.6 * p0210.
The fault can only be acknowledged when the drive is powered down.
See also: p0210 (Drive unit line supply voltage)
Remedy: - check the parameterized supply voltage and if required change (p0210).
- check the line supply voltage.
See also: p0210 (Drive unit line supply voltage)
Reaction upon A: NONE
Acknowl. upon A: NONE

F06311 Infeed: Supply voltage (p0210) incorrect

Message value: Line supply voltage: %1
Drive object: A_INF, B_INF, S_INF
Reaction: OFF2 (OFF1)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The line voltage nominal value indicated in p0210 is outside the nominal voltage range of the power unit.
After pre-charging was completed, the current line supply voltage Vrms was calculated using the measured DC link voltage. This voltage Vrms does not lie within the extended tolerance range of the supply voltage set in p0210.
The following applies for the extended tolerance range: 75 % * p0210 < Vrms < 120 % * p0210
Alarm value (r2124, floating point):
Line supply voltage Vrms present.
See also: p0210 (Drive unit line supply voltage)
Remedy: - check the parameterized supply voltage and if required change (p0210).
- check the line supply voltage.
See also: p0210 (Drive unit line supply voltage)

F06320 Master/slave: 4-channel multiplexer control not valid

Message value: %1
Drive object: A_INF
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: Values 0, 1, 2 and 3 are valid to control the 4-channel multiplexer via CI: 3572. In this case, an invalid value was identified. The control remains effective with the previous value.
Fault value (r0949, interpret decimal):
Invalid value to control the multiplexer.
See also: p3572 (Master/slave active current setpoint, multiplexer selection)

Remedy: - check the interconnection to control the multiplexer (CI: p3572).
- check the signal source signal value of the BICO interconnection.
See also: p3572 (Master/slave active current setpoint, multiplexer selection)

F06321 Master/slave: 6-channel multiplexer control not valid

Message value: %1
Drive object: A_INF
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: Values 0, 1, 2, 3, 4 and 5 are valid to control the 6-channel multiplexer via CI: 3577. In this case, an invalid value was identified. The control remains effective with the previous value.
Fault value (r0949, interpret decimal):
Invalid value to control the multiplexer.
See also: p3577 (Master/slave current distribution factor, multiplexer selection)
Remedy: - check the interconnection to control the multiplexer (CI: p3577).
- check the signal source signal value of the BICO interconnection.
See also: p3577 (Master/slave current distribution factor, multiplexer selection)

A06350 (F) Infeed: Measured line frequency too high

Message value: Line frequency: %1
Drive object: A_INF, S_INF
Reaction: NONE
Acknowledge: NONE
Cause: The actual line frequency f_line is higher than the parameterized alarm threshold (f_line > p0211 * p0284).
The alarm can be output in two operating states:
1. During the power-on phase of the infeed unit.
Consequence:
Synchronization of the infeed to the line supply is interrupted and is restarted.
2. While the infeed is operational.
Consequence:
The infeed remains in the operating (run) state and alarm A6350 is output. This signifies a critical operational fault.
Alarm value (r2124, floating point):
Current line frequency determined.
See also: p0284 (Line supply frequency exceeded, alarm threshold)
Remedy: - check the parameterized line frequency and if required change (p0211).
- check the alarm threshold (p0284).
- check the line supply.
- check the line supply quality.
See also: p0211 (Rated line freq), p0284 (Line supply frequency exceeded, alarm threshold)
Reaction upon F: NONE (OFF1, OFF2)
Acknowl. upon F: IMMEDIATELY (POWER ON)

A06351 (F) Infeed: Measured line frequency too low

Message value: Line frequency: %1
Drive object: A_INF, S_INF
Reaction: NONE
Acknowledge: NONE
Cause: The actual line frequency f_line is lower than the parameterized alarm threshold (f_line < p0211 * p0285).
The alarm can be output in two operating states:
1. During the power-on phase of the infeed unit.
Consequence:
Synchronization of the infeed to the line supply is interrupted and is restarted.
2. While the infeed is operational.
Consequence:
The infeed remains in the operating (run) state and alarm A06351 is output. This signifies a critical operational fault.
Alarm value (r2124, floating point):
Current line frequency determined.
See also: p0285 (Line supply frequency undershot, alarm threshold)

Remedy: - check the parameterized line frequency and if required change (p0211).
- check the alarm threshold (p0285).
- check the line supply.
- check the line supply quality.
See also: p0211 (Rated line freq), p0285 (Line supply frequency undershot, alarm threshold)

Reaction upon F: NONE (OFF1, OFF2)

Acknowl. upon F: IMMEDIATELY (POWER ON)

A06400 Infeed: Line supply data identification selected/active

Message value: -

Drive object: A_INF, S_INF

Reaction: NONE

Acknowledge: NONE

Cause: The line supply data identification is selected and active.
The line inductance and the DC link capacitance are measured at the next pulse enable.
See also: p3410 (Infeed identification method)

Remedy: No remedial action required.

F06500 Infeed: Line synchronization not possible

Message value: -

Drive object: A_INF, S_INF

Reaction: OFF2 (OFF1)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The line synchronization is not possible within the monitoring time.
The infeed was re-synchronized to the line supply because it was interrupted due to a line frequency that was determined to be either too low or too high.
After 20 attempts, synchronization - and therefore also the power-on operation - were interrupted.

Remedy: - check the parameterized line frequency and if required change (p0211).
- check the setting of the threshold values (p0284, p0285).
- check the line supply.
- when a Voltage Sensing Module (VSM) is used: check the line supply to the VSM terminals X521 or X522.
- check the line supply quality.
See also: p0211 (Rated line freq), p0284 (Line supply frequency exceeded, alarm threshold), p0285 (Line supply frequency undershot, alarm threshold)

A06601 (F) Infeed: Current offset measurement interrupted

Message value: %1

Drive object: A_INF, B_INF, S_INF

Reaction: NONE

Acknowledge: NONE

Cause: Defective current measurement or a DC current is present during the offset measurement.
Alarm value (r2124, interpret decimal):
1: Excessively high phase current has occurred during the current offset calibration.
2: The measured current offset is greater than the 3% of the maximum permissible converter current (e.g. due to a ground fault in the DC link).

Remedy: Re alarm value = 1:
- possible counter-measure if there is no line contactor: Power up an adequately long time before OFF1 = 1.
Re alarm value = 2:
- defective current measurement or a DC current is present during the offset measurement.
- check the DC link for a ground fault.

Reaction upon F: NONE (OFF1, OFF2)

Acknowl. upon F: IMMEDIATELY (POWER ON)

A06602 (F) Infeed: Current offset measurement not possible

Message value: -
Drive object: A_INF, B_INF, S_INF
Reaction: NONE
Acknowledge: NONE
Cause: After an OFF1 = 1 no valid current offset measurement was able to be made within the monitoring time (p3491) before closing the line contactor. The current offset is set to 0.
See also: p3491 (Infeed I-offset measurement monitoring time)
Remedy: - check the DC link for a ground fault. A ground fault can destroy parts and components!
- Check the monitoring time setting and if required increase (p3491). At least 100 ms is required for a valid measurement (p3491 > 100 ms).
Notice:
If there is no valid measurement, then under certain circumstances the quality of the DC link control will be reduced.
See also: p3491 (Infeed I-offset measurement monitoring time)
Reaction upon F: NONE (OFF1, OFF2)
Acknowl. upon F: IMMEDIATELY (POWER ON)

F06700 (A) Infeed: Switch line contactor for load condition

Message value: -
Drive object: A_INF, B_INF, S_INF
Reaction: NONE (OFF2)
Acknowledge: IMMEDIATELY
Cause: For an ON command, the infeed line contactor should be switched under load.
Remedy: - do not load the DC link if the infeed has not issued an operating signal (r0863.0 = 1).
- after the infeed has been powered down, all power units connected to the DC link should be powered down. To realize this, the operating signal of the infeed (r0863.0) must be suitably interconnected.
Reaction upon A: NONE
Acknowl. upon A: NONE

A06800 (F) Infeed: Maximum steady-state DC link voltage reached

Message value: -
Drive object: A_INF, S_INF
Reaction: NONE
Acknowledge: NONE
Cause: The DC link voltage setpoint has reached the maximum steady-state voltage parameterized in p0280.
The DC link voltage is increased by the modulation depth reserve controller for the following reasons:
- modulation depth reserve is too low (p3480).
- line supply voltage is too high.
- supply voltage (p0210) parameterized to be too low.
- excessively high setpoint for the reactive line current.
Remedy: - check the line supply voltage setting (p0210).
- check the line supply for an overvoltage condition.
- reduce the modulation depth reserve (p3480).
- reduce the reactive current setpoint.
See also: p0210 (Drive unit line supply voltage), p0280 (DC link voltage maximum steady-state), p3480 (Infeed modulation depth limit)
Reaction upon F: NONE (OFF1, OFF2)
Acknowl. upon F: IMMEDIATELY (POWER ON)

A06810 (F) Infeed: DC link voltage alarm threshold

Message value: -
Drive object: A_INF, B_INF, S_INF
Reaction: NONE
Acknowledge: NONE
Cause: In operation, the DC link voltage has dropped to below the alarm threshold. The alarm threshold is obtained from the sum of p0279 and r0296.

Possible causes include:
- line supply voltage dip or another line supply fault.
- overload of the infeed.
- for ALM: Incorrect controller parameterization.
See also: p0279 (DC link voltage offset alarm threshold), r0296 (DC link voltage undervoltage threshold)

Remedy:
- check the line voltage and line supply quality.
- reduce the power drawn, avoid step-like load changes
- for ALM: Adapt the controller parameterization, e.g. using an automatic line supply identification (p3410 = 4, 5).

Reaction upon F: NONE (OFF1, OFF2)

Acknowl. upon F: IMMEDIATELY (POWER ON)

A06900 (F) Braking Module: Fault (1 -> 0)

Message value: %1

Drive object: A_INF, B_INF, S_INF

Reaction: NONE

Acknowledge: NONE

Cause: The Braking Module signals a fault (1 -> 0) via X21.4 ("booksize" format) or terminal X21.5 ("chassis" format).
This signal is interconnected via binector input BI: p3866[0...7].
See also: p3866 (Braking Module fault)

Remedy:
- reduce the number of braking operations.
- check binector input BI: p3866[0...7] and the wiring from terminal X21.4 ("booksize" format) or terminal X21.5 ("chassis" format).

Reaction upon F: NONE (OFF2)

Acknowl. upon F: IMMEDIATELY

A06901 Braking Module: Pre-alarm I2t shutdown

Message value: %1

Drive object: A_INF, B_INF, S_INF

Reaction: NONE

Acknowledge: NONE

Cause: The Braking Module signals "Pre-alarm I2t shutdown" via terminal X21.3.
This signal is interconnected via binector input p3865[0...7].
Note:
The pre-alarm I2t shutdown is only possible for "booksize" formats. This function is not supported for "chassis" formats.

Remedy:
- reduce the number of braking operations.
- check binector input BI: p3865[0...7] and the wiring from terminal X21.3 of the particular Braking Module.

A06904 (N) Braking Module internal is inhibited

Message value: %1

Drive object: B_INF

Reaction: NONE

Acknowledge: NONE

Cause: The internal Braking Module was inhibited via the binector input BI: p3680 = 1 signal.
In the inhibited state, energy cannot be dissipated using the braking resistor.
See also: p3680 (Braking Module internal inhibit)

Remedy: Release the internal Braking Module (BI: p3680 = 0 signal).

Reaction upon N: NONE

Acknowl. upon N: NONE

A06905 Braking Module internal I2t shutdown alarm

Message value: %1
Drive object: B_INF
Reaction: NONE
Acknowledge: NONE
Cause: The internal Braking Module outputs an alarm due to the high I2t value.
80% of the maximum switch-on duration of the braking resistor has been reached.
Note:
This message is also displayed via BO: p3685.
See also: r3685 (Digital Braking Module: Pre-alarm I2t shutdown)
Remedy: Reduce the number of braking operations.

F06906 (A) Braking Module internal fault

Message value: %1
Drive object: B_INF
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The internal Braking Module outputs a fault due to overcurrent or an excessively high I2t value and is therefore inhibited.
Note:
This message is also displayed via BO: p3686.
Fault value (r0949, interpret bitwise binary):
Bit 0 = 1: I2t exceeded
Bit 1 = 1: overcurrent
See also: r3686 (Digital Braking Module Fault)
Remedy: Reduce the number of braking operations.
Reaction upon A: NONE
Acknowl. upon A: NONE

F06907 Braking Module internal overtemperature

Message value: -
Drive object: B_INF
Reaction: OFF2 (NONE, OFF1)
Acknowledge: IMMEDIATELY
Cause: The temperature sensor connected to the braking resistor signals an overtemperature. The Braking Module is still active. If the overtemperature continues for an additional 60s, the Braking Module is shut down (F6908).
See also: r3687 (Digital Braking Module pre-alarm overtemperature)
Remedy: - reduce the temperature at the sensor.
- check the temperature sensor connection.

F06908 Braking Module internal shutdown due to overtemperature

Message value: -
Drive object: B_INF
Reaction: OFF2 (OFF1)
Acknowledge: IMMEDIATELY
Cause: Shutdown of the Braking Module due to overtemperature at the temperature sensor of the braking resistor for more than 60s.
See also: r3688 (Digital Braking Module fault overtemperature)
Remedy: - reduce the temperature at the sensor.
- check the temperature sensor connection.

F06909 Braking Module internal Vce fault

Message value: %1
Drive object: B_INF
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: Trip due to Vce fault. Collector emitter voltage dip (Vce)
See also: r3689 (Digital Braking Module Vce fault)
Remedy: - Power ON
- replace the unit.

F07011 Drive: Motor overtemperature

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2 (NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY
Cause: KTY:
The motor temperature has exceeded the fault threshold (p0605) or the timer (p0606) after the alarm threshold was exceeded (p0604) has expired.
The response parameterized in p0610 becomes active.
PTC:
The response threshold of 1650 Ohm was exceeded and the timer (p0606) has expired.
The response parameterized in p0610 becomes active.
Possible causes:
- motor is overloaded.
- motor ambient temperature too high.
- wire breakage or sensor not connected.
Fault value (r0949, interpret decimal):
For SME selected (p0601 = 10), number of the sensor channel leading to the message.
For I2t motor model activated (p0612 bit 0 = yes, p0611 > 0), fault value = 200 refers to a fault that was initiated by the I2t motor model.
See also: p0604 (Motor overtemperature alarm threshold), p0605 (Motor overtemperature fault threshold), p0606 (Motor overtemperature timer), p0610 (Motor overtemperature response)
Remedy: - reduce the motor load.
- check the ambient temperature.
- check the wiring and sensor connector.
See also: p0604 (Motor overtemperature alarm threshold), p0605 (Motor overtemperature fault threshold), p0606 (Motor overtemperature timer)

A07012 (N) Drive: I2t motor model overtemperature

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The thermal I2t motor model identified that the temperature alarm threshold was exceeded.
See also: r0034 (Motor utilization), p0605 (Motor overtemperature fault threshold), p0611 (I2t motor model thermal time constant)
Remedy: - check the motor load and if required, reduce.
- check the motor ambient temperature.
- check the thermal time constant p0611.
- check the overtemperature fault threshold p0605 (= alarm threshold for the I2t motor model)
Reaction upon N: NONE
Acknowl. upon N: NONE

A07015 Drive: Motor temperature sensor alarm

Message value: %1

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: An error was detected when evaluating the temperature sensor set in p0600 and p0601.
With the fault, the time in p0607 is started. If the fault is still present after this time has expired, then fault F07016 is output; however, at the earliest, 1 s after alarm A07015.
Possible causes:
- wire breakage or sensor not connected (KTY: R > 1630 Ohm).
- measured resistance too low (PTC: R < 20 Ohm, KTY: R < 50 Ohm).
Alarm value (r2124, interpret decimal):
For SME selected (p0601 = 10), number of the sensor channel leading to the message.

Remedy: - check that the sensor is connected correctly.
- check the parameterization (p0600, p0601).
See also: r0035, p0600, p0601, p0607, p4600, p4601, p4602, p4603, r4620

F07016 Drive: Motor temperature sensor fault

Message value: %1

Drive object: SERVO, VECTOR

Reaction: OFF1 (NONE, OFF2, OFF3, STOP1, STOP2)

Acknowledge: IMMEDIATELY

Cause: An error was detected when evaluating the temperature sensor set in p0600 and p0601.
Possible causes:
- wire breakage or sensor not connected (KTY: R > 1630 Ohm).
- measured resistance too low (PTC: R < 20 Ohm, KTY: R < 50 Ohm).
Note:
If alarm A07015 is present, the time in p0607 is started. If the fault is still present after this time has expired, then fault F07016 is output; however, at the earliest, 1 s after alarm A07015.
Fault value (r0949, interpret decimal):
For SME selected (p0601 = 10), number of the sensor channel leading to the message.
See also: p0607 (Temperature sensor fault timer)

Remedy: - check that the sensor is connected correctly.
- check the parameterization (p0600, p0601).
- induction motors: De-activate temperature sensor fault (p0607 = 0).
See also: r0035, p0600, p0601, p0607, p4600, p4601, p4602, p4603, r4620

F07080 Drive: Incorrect control parameter

Message value: Parameter: %1

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The closed-loop control parameters have been parameterized incorrectly (e.g. p0356 = L_spread = 0).
Fault value (r0949, interpret decimal):
The fault value includes the parameter number involved.
The following parameter numbers only occur as fault values for vector drives:
p0310, for synchronous motors: p0341, p0344, p0350, p0357
The following parameter numbers do not occur as fault values for synchronous motors:
p0354, p0358, p0360
See also: p0310, p0311, p0341, p0344, p0350, p0354, p0356, p0357, p0358, p0360, p0400, p0404, p0408, p0640, p1082, p1300

Remedy: Modify the parameter indicated in the fault value (r0949) (e.g. p0640 = current limit > 0).
See also: p0311, p0341, p0344, p0350, p0354, p0356, p0358, p0360, p0400, p0404, p0408, p0640, p1082

F07082 Macro: Execution not possible

Message value: Fault cause: %1, supplementary information: %2, preliminary parameter number: %3

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The macro cannot be executed.
Fault value (r0949, interpret hexadecimal):
ccccbbaa hex:
cccc = preliminary parameter number, bb = supplementary information, aa = fault cause
Fault causes for the trigger parameter itself:
-20: Called file is not valid for parameter 15.
-21: Called file is not valid for parameter 700.
-22: Called file is not valid for parameter 1000.
-23: Called file is not valid for parameter 1500.
-24: Data type of a TAG is incorrect (e.g.: Index, number or bit is not U16).
Fault causes for the parameters to be set:
-25: Error level has an undefined value.
-26: Mode has an undefined value.
-27: A value was entered as string in the tag value that is not "DEFAULT".
-31: Entered drive object type unknown.
-32: A device was not able to be found for the determined drive object number.
-34: A trigger parameter was recursively called.
-35: It is not permissible to write to the parameter via macro.
-36: Check, writing to a parameter unsuccessful, parameter can only be read, not available, incorrect data type, value range or assignment incorrect.
-37: Source parameter for a BICO interconnection was not able to be determined.
-38: An index was set for a non-indexed (or CDS-dependent) parameter.
-39: No index was set for an indexed parameter.
-41: A bit operation is only permissible for parameters with the parameter format DISPLAY_BIN.
-42: A value not equal to 0 or 1 was set for a BitOperation.
-43: Reading the parameter to be changed by the BitOperation was unsuccessful.
-51: Factory setting for DEVICE may only be executed on the DEVICE.
-61: The setting of a value was unsuccessful.

Remedy: - check the parameter involved.
- check the macro file and BICO interconnection.
See also: p0015, p0700, p1000, p1500

F07083 Macro: ACX file not found

Message value: Parameter: %1

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The ACX file (macro) to be executed was not able to be found in the appropriate directory.
Fault value (r0949, interpret decimal):
Parameter number with which the execution was started.
See also: p0015, p0700, p1000, p1500

Remedy: - check whether the file is saved in the appropriate directory on the memory card.
Example:
If p0015 is set to 1501, then the selected ACX file must be located in the following directory:
... /PMACROS/DEVICE/P15/PM001501.ACX

F07084 Macro: Condition for WaitUntil not fulfilled

Message value: Parameter: %1

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The WaitUntil condition set in the macro was not fulfilled in a certain number of attempts.
Fault value (r0949, interpret decimal):
Parameter number for which the condition was set.

Remedy: Check and correct the conditions for the WaitUntil loop.

F07085 Drive: Open-loop/closed-loop control parameters changed

Message value: Parameter: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: Parameters of the open-loop/closed-loop control had to be changed as they exceeded dynamic limits as a result of other parameters.
Fault value (r0949, interpret decimal):
The fault value includes the modified parameter number.
340: The motor and control parameters were automatically calculated (p0340 = 1), because the vector control was subsequently activated as configuration (r0108.2).
See also: p0640, p1082, p1300, p1800
Remedy: It is not necessary to change the parameters as they have already been correctly limited.

F07086 Units changeover: Parameter limit violation due to reference value change

Message value: Parameter: %1
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: A reference parameter was changed in the system. This resulted in the fact that for the parameters involved, the selected value was not able to be written in the per unit representation (cause: e.g. the steady-state minimum/maximum limit or that defined in the application was violated). The values of the parameters were set to the corresponding violated minimum/maximum limit or to the factory setting.
Fault value (r0949, parameter):
Diagnostics parameter r9450 to display the parameters that were not able to be re-calculated.
See also: p0304, p0305, p0310, p0596, p2000, p2001, p2002, p2003, r2004
Remedy: Check the adapted parameter value and if required correct.
See also: r9450 (Reference value change parameter with unsuccessful calculation)

F07087 Drive: Encoderless operation not possible for the selected pulse frequency

Message value: Parameter: %1
Drive object: SERVO
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: Encoderless operation is not possible for the selected pulse frequency (p1800).
Encoderless operation is activated under the following conditions:
- the changeover speed for encoderless operation (p1404) is less than the maximum speed (p0322).
- a control type with encoderless operation has been selected (p1300).
- encoder faults of the motor encoder result in a fault response with encoderless operation (p0491).
See also: p0491, p1300, p1404, p1800
Remedy: Increase the pulse frequency (p1800).
Note:
In encoderless operation, the pulse frequency must be at least as high as half the current controller clock cycle (1/p0115[0]).

F07088 Units changeover: Parameter limit violation due to units changeover

Message value: Parameter: %1
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: A changeover of units was initiated.
Possible causes for the violation of a parameter limit are:
- when rounding off a parameter corresponding to its decimal places, the steady-state minimum or maximum limit was violated.
- inaccuracies for the data type "Floating Point".

In these cases, when the minimum limit is violated then the parameter value is rounded up and when the maximum limited is violated the parameter value is rounded down.
Fault value (r0949, interpret decimal):
Diagnostics parameter r9451 to display all parameters whose value had to be adapted.
See also: p0100 (IEC/NEMA mot stds), p0349 (System of units, motor equivalent circuit diagram data), p0505 (Selecting the system of units), p0595 (Selecting technological units)

Remedy: Check the adapted parameter values and if required correct.
See also: r9451 (Units changeover adapted parameters)

A07089 Changing over units: Adding a function module blocked if units changed over

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: An attempt was made to add a function module. This is not permissible if the units have already been changed over.
See also: p0100 (IEC/NEMA mot stds), p0349 (System of units, motor equivalent circuit diagram data), p0505 (Selecting the system of units)
Remedy: Restore units that have been changed over to the default value.

F07090 Drive: Upper torque limit less than the lower torque limit

Message value: -
Drive object: SERVO
Reaction: OFF2 (NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY
Cause: The upper torque limit is lower than the lower torque limit.
Remedy: P1 must be >= P2 if parameter P1 is connected to p1522 and parameter P2 to p1523.

F07100 Drive: Sampling times cannot be reset

Message value: Parameter: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: When resetting drive parameter (p0976) sampling times cannot be reset using p0111, p0112, p0115.
Fault value (r0949, interpret decimal):
Parameter whose setting prevents the sampling times being reset.
See also: r0110 (Basic sampling times)
Remedy: - continue to work with the set sampling times.
- before resetting the drive parameters, set the basic clock cycle p0110[0] to the original value.
See also: r0110 (Basic sampling times)

F07110 Drive: Sampling times and basic clock cycle do not match

Message value: Parameter: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The parameterized sampling times do not match the basic clock cycle.
Fault value (r0949, interpret decimal):
The fault value specifies the parameter involved.
See also: r0110, r0111, p0115
Remedy: Enter the current controller sampling times so that they are identical to the basic clock cycle, e.g. by selecting p0112.
Note which basic clock cycle is selected in p0111.
The sampling times in p0115 can only be changed manually in the sampling times presetting "Expert" (p0112).
See also: r0110, r0111, p0112, p0115

A07200 Drive: Master control ON/OFF1 command present

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The ON/OFF1 command is not 0, either via binector input p0840 (current CDS) or in control word p3982 bit 0.
Remedy: The signal at binector input p0840 (current CDS) as well as p3982 bit 0 must be 0.

F07210 Master control PC/AOP inhibited

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The transfer of master control is disabled via binector input p3985.
Remedy: Change the signal via binector input p3985.

F07220 (N, A) Drive: Master control by PLC missing

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: A_INFEED: OFF1 (NONE, OFF2)
SERVO: OFF1 (NONE, OFF2, OFF3, STOP1, STOP2)
VECTOR: OFF1 (NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY
Cause: The "master control by PLC" signal was missing in operation.
- interconnection of the binector input for "master control by PLC" is incorrect (p0854).
- the higher-level control has withdrawn the "master control by PLC" signal.
- data transfer via the fieldbus (master/drive) was interrupted.

Remedy: - check the interconnection of the binector input for "master control by PLC" (p0854).
- check the "master control by PLC" signal and, if required, switch in.
- check the data transfer via the fieldbus (master/drive).

Note:
If the drive should continue to operate after withdrawing "master control by PLC" then fault response must be parameterized to NONE or the message type should be parameterized as alarm.

Reaction upon N: NONE
Acknowl. upon N: NONE
Reaction upon A: NONE
Acknowl. upon A: NONE

F07300 (A) Drive: Line contactor feedback signal missing

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2 (NONE)
Acknowledge: IMMEDIATELY
Cause: - the line contactor was not able to be closed within the time in p0861.
- the line contactor was not able to be opened within the time in p0861.
- the line contactor has dropped out in operation.
- the line contactor has closed although the drive converter is powered down.

Remedy: - check the setting of p0860.
- check the feedback circuit from the line contactor.
- increase the monitoring time in p0861.

See also: p0860 (Line cont. fdbk sig), p0861 (Line contactor monitoring time)

Reaction upon A: NONE
Acknowl. upon A: NONE

F07311 Bypass motor switch

Message value: Fault cause: %1 bin

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: Fault value: Bit field BYPASS_CONTACTOR_ERROR_STATE
Bit 1
BYPASS_CONTACTOR_ERR_FBK_ON_MISSING
Switch "Closed" feedback signal missing
Bit 2
BYPASS_CONTACTOR_ERR_FBK_OFF_MISSING
Switch "opened" feedback signal missing
Bit 3
BYPASS_CONTACTOR_ERR_TOO_SLOW
Switch feedback signal too slow:
After switching, the system waits for the positive feedback signal. If the feedback signal is received later than the specified time, then a fault trip (shutdown) is issued.
Bit 6
BYPASS_CONTACTOR_ERR_BYPASS_INCONSISTENCY
Drive switch feedback signal is not consistent with the bypass state:
When powering up or for STAGING, the drive switch is closed.
See also: p1260 (Bypass configuration), r1261 (Bypass control/status word), p1266 (Bypass, control command), p1267 (Bypass changeover source configuration), p1269 (Bypass switch feedback signal), p1274 (Bypass switch monitoring time)

Remedy: - check the transfer of the feedback signals.
- check the switch

F07312 Bypass LSS:

Message value: Fault cause: %1 bin

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: Fault value: Bit field BYPASS_CONTACTOR_ERROR_STATE
Bit 1
BYPASS_CONTACTOR_ERR_FBK_ON_MISSING
Switch "Closed" feedback signal missing
Bit 2
BYPASS_CONTACTOR_ERR_FBK_OFF_MISSING
Switch "opened" feedback signal missing
Bit 3
BYPASS_CONTACTOR_ERR_TOO_SLOW
Switch feedback signal too slow:
After switching, the system waits for the positive feedback signal. If the feedback signal is received later than the specified time, then a fault trip (shutdown) is issued.
Bit 6
BYPASS_CONTACTOR_ERR_BYPASS_INCONSISTENCY
Line Side Switch feedback signal is not consistent with the bypass state:
When powering up or for STAGING, the Line Side Switch is closed without this having been requested from the bypass.
See also: p1260 (Bypass configuration), r1261 (Bypass control/status word), p1266 (Bypass, control command), p1267 (Bypass changeover source configuration), p1269 (Bypass switch feedback signal), p1274 (Bypass switch monitoring time)

Remedy: - check the transfer of the feedback signals.
- check the switch

F07320 Drive: Automatic restart interrupted

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: - The specified number of restart attempts (p1211) has been completely used up because within the monitoring time (p1213) the faults were not able to be acknowledged. The number of restart attempts (p1211) is decremented at each new start attempt.
- there is no active ON command.
- the monitoring time for the power unit has expired (p0857).
- when exiting commissioning or at the end of the motor identification routine or the speed controller optimization, the drive unit is not automatically powered up again.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.
Remedy: - increase the number of restart attempts (p1211). The current number of starting attempts is displayed in r1214.
- increase the delay time in p1212 and/or the monitoring time in p1213.
- issue an ON command (p0840).
- either increase or disable the monitoring time of the power unit (p0857).

A07321 Drive: Automatic restart active

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The automatic restart (AR) is active. When the line supply returns and/or the causes of the existing faults are removed the drive is automatically restarted. The pulses are enabled and the motor starts to rotate.
Remedy: - the automatic restart (AR) should, if required, be inhibited (p1210 = 0).
- an automatic restart can be directly interrupted by withdrawing the power-on command (BI: p0840).

A07329 (N) Drive: kT estimator, kT(iq) characteristic or voltage compensation does not function

Message value: %1
Drive object: SERVO
Reaction: NONE
Acknowledge: NONE
Cause: A function of the function module "extended torque control" (r0108.1) was activated - however the (complete) function is not available.
Fault value (r0949, interpret decimal):
1 ... 3: The kT estimator is active (p1780.3 = 1) without a functioning compensation of the voltage emulation error in the drive converter. This means that the accuracy is severely restricted.
1: The drive converter voltage emulation error "final value" is 0 (p1952).
2: The drive converter voltage emulation error "current offset" is 0 (p1953).
3: The compensation of the voltage emulation error is disabled (p1780.8 = 0).
4: The kT estimator (p1780.3 = 1), the kT(iq) characteristic (p1780.9 = 1) or the compensation of the voltage emulation error (p1780.8 = 1) was activated without activating the function module "extended torque control" (when the function module is activated, the following must apply: r0108.1 = 1).
Remedy: Re fault value = 1, 2:
- carry out an identification of the voltage emulation error in the drive converter (p1909.14 = 1, p1910 = 1).
- set the parameter to compensate the voltage emulation error in the drive converter (p1952, p1953).
Re fault value = 3:
- enable the compensation of the voltage emulation error in the drive converter (p1780.8 = 1).
Re fault value = 4:
- activate the function module "extended torque control" (r0108.1 = 1) or de-activate the corresponding functions (p1780.3 = 0, p1780.8 = 0, p1780.9 = 0).

F07330 Flying restart: Measured search current too low

Message value: -
Drive object: VECTOR
Reaction: OFF2 (NONE, OFF1)
Acknowledge: IMMEDIATELY
Cause: During a flying restart, it was identified that the search current reached is too low.
It is possible that the motor is not connected.
Remedy: Check the motor feeder cables.

F07331 FlyRestart: Not supported

Message value: -
Drive object: VECTOR
Reaction: OFF2 (NONE, OFF1)
Acknowledge: IMMEDIATELY
Cause: It is not possible to power up with the motor rotating (no flying restart). In the following cases, the "flying restart" function is not supported:
Permanent-magnet and separately-excited synchronous motors (PEM, FEM): Operation with V/f characteristic.
Permanent-magnet synchronous motor (PEM): Encoderless operation without a Voltage Sensing Module (VSM) being connected.
Remedy: - de-activate the "flying restart" function (p1200 = 0).
- change the open-loop/closed-loop control mode (p1300).
- connect a Voltage Sensing Module (VSM) (voltage measurement).

A07350 (F) Drive: Measuring probe parameterized to a digital output

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The measuring probe is connected to a bi-directional digital input/output and the terminal is set as output.
Alarm value (r2124, decimal):
9: DI/DO 9 (X122.8)
10: DI/DO 10 (X122.10)
11: DI/DO 11 (X122.11)
13: DI/DO 13 (X132.8)
14: DI/DO 14 (X132.10)
15: DI/DO 15 (X132.11)
Remedy: - set the terminal as input (p0728).
- de-select the measuring probe (p0488, p0489, p0580).
Reaction upon F: OFF1
Acknowl. upon F: IMMEDIATELY

A07400 (N) Drive: DC link voltage maximum controller active

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The DC link voltage controller has been activated because the upper switch-in threshold has been exceeded (r1242). The ramp-down times are automatically increased in order to maintain the DC link voltage (r0026) within the permissible limits. There is a system deviation between the setpoint and actual speeds.
When the DC link voltage controller is switched out (disabled), this is the reason that the ramp-function generator output is set to the speed actual value.
See also: p1240 (Vdc controller or Vdc monitoring configuration)
Remedy: If the controller is not to intervene:
- increase the ramp-down times.
- disable the Vdc max controller
If the ramp-down times are not to be changed:
- use a chopper or regenerative feedback unit

Reaction upon N: NONE
Acknowl. upon N: NONE

A07401 (N) Drive: DC link voltage maximum controller de-activated

Message value: -
Drive object: VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The Vdc_max controller can no longer maintain the DC link voltage (r0026) below the limit value (r1242) and was therefore switched out (disabled).
- the line supply voltage is permanently higher than specified for the power unit.
- the motor is permanently in the regenerative mode as a result of a load that is driving the motor.

Remedy:
- check whether the input voltage is within the permissible range.
- check whether the load duty cycle and load limits are within the permissible limits.

Reaction upon N: NONE
Acknowl. upon N: NONE

A07402 (N) Drive: DC link voltage minimum controller active

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The DC link voltage controller has been activated as the lower switch-in threshold has been undershot (r1246). The kinetic energy of the motor is used in order to buffer the DC link. This brakes the drive.
See also: p1240 (Vdc controller or Vdc monitoring configuration)
Remedy: The alarm disappears when power supply returns.
Reaction upon N: NONE
Acknowl. upon N: NONE

F07403 (N, A) Drive: Lower DC link voltage threshold reached

Message value: -
Drive object: SERVO
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The DC link voltage monitoring is active (p1240 = 2, 3) and the lower DC link voltage threshold (p1248) was reached in the "Operation" state.
Remedy:
- check the line supply voltage.
- check the infeed module
- reduce the lower DC link threshold (p1248).
- switch out (disable) the DC link voltage monitoring (p1240 = 0).

F07404 Drive: Upper DC link voltage threshold reached

Message value: -
Drive object: SERVO
Reaction: OFF2 (NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY
Cause: The DC link voltage monitoring is active (p1240 = 1, 3) and the upper DC link voltage threshold (p1244) was reached in the "Operation" state.
Remedy: - check the line supply voltage.
- check the infeed module or the Braking Module.
- increase the upper DC link voltage threshold (p1244).
- switch out (disable) the DC link voltage monitoring (p1240 = 0).

F07404 Drive: Upper DC link voltage threshold reached

Message value: -
Drive object: VECTOR
Reaction: OFF2 (NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY
Cause: The DC link voltage monitoring is active (p1240 , p1280 = 4, 6) and the upper DC link voltage threshold (r1242, r1282) was reached in the "Operation" state.
Remedy: - check the line supply voltage.
- check the infeed module
- adapt the device supply voltage (p0210).
- disable the DC link voltage monitoring (p1240, p1280 = 0).

F07405 (N, A) Drive: Kinetic buffering minimum speed not reached

Message value: -
Drive object: VECTOR
Reaction: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY
Cause: During kinetic buffering the speed fell below minimum speed (p1257 or p1297 for vector drives with V/f control) and the line supply did not return.
Remedy: Check the speed threshold for the Vdc_min controller (kinetic buffering) (p1257, p1297).
See also: p1257 (Vdc_min controller speed threshold)
Reaction upon N: NONE

A07409 Drive: V/f control, current limiting controller active

Message value: %1
Drive object: VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The current limiting controller of the V/f control was activated because the current limit was exceeded.
Remedy: The alarm is automatically withdrawn when increasing the current limit (p0640), reducing the load or using a slower up ramp for the setpoint (reference) speed.

F07410 Drive: Current controller output limited

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF2 (NONE, OFF1)
Acknowledge: IMMEDIATELY
Cause: The condition "I_act = 0 and Uq_set_1 longer than 16 ms at its limit" is present and can be caused by the following:
- motor not connected or motor contactor open.
- no DC link voltage present.
- Motor Module defective.
- the "flying restart" function is not activated.

Remedy:
- connect the motor or check the motor contactor.
- check the DC link voltage (r0070).
- check the Motor Module.
- activate the "flying restart" function (p1200).

F07411 Drive: Flux controller output limited

Message value: -
Drive object: SERVO
Reaction: SERVO: OFF2 (NONE, OFF1)
VECTOR: OFF2
Acknowledge: IMMEDIATELY
Cause: The specified flux setpoint cannot be reached although 90% of the maximum current has been specified.
- incorrect motor data.
- motor data and motor configuration (star/delta) do not match.
- the current limit has been set too low for the motor.
- induction motor (encoderless, open-loop controlled) in I2t limiting.
- the Motor Module is too small.

Remedy:
- correct the motor data.
- check the motor configuration.
- correct the current limits (p0640, p0323).
- reduce the induction motor load.
- if required, use a larger Motor Module.

F07411 Drive: Flux setpoint not reached when building up excitation

Message value: -
Drive object: VECTOR
Reaction: SERVO: OFF2 (NONE, OFF1)
VECTOR: OFF2
Acknowledge: IMMEDIATELY
Cause: When quick magnetizing is configured (p1401 Bit6 = 1) the specified flux setpoint is not reached although 90 % of the maximum current is specified.
- incorrect motor data.
- motor data and motor configuration (star/delta) do not match.
- the current limit has been set too low for the motor.
- induction motor (encoderless, open-loop controlled) in I2t limiting.
- the Motor Module is too small.

Remedy:
- correct the motor data.
- check the motor configuration.
- correct the current limits (p0640).
- reduce the induction motor load.
- if required, use a larger Motor Module.
- check motor supply cable.
- check power unit.

F07412 Drive: Commutation angle incorrect (motor model)

Message value: -

Drive object: SERVO, VECTOR

Reaction: ENCODER (NONE, OFF2)

Acknowledge: IMMEDIATELY

Cause: An incorrect commutation angle was detected, that can result in a positive coupling in the speed controller.
Possible causes:
- the motor encoder is incorrectly adjusted with respect to the magnet position.
- the motor encoder is damaged.
- the angular commutation offset is incorrectly set (p0431).
- data to calculate the motor model has been incorrectly set (p0356 (motor-stator leakage inductance) and/or p0350 (motor-stator resistance) and/or p0352 (cable resistance).
- the changeover speed for the motor model is too low (p1752). The monitoring function only becomes effective above the changeover speed.
- the motor encoder speed signal is faulted.
- the control loop is instable due to incorrect parameterization.

Fault value (r0949, interpret decimal):
SERVO:
0: The comparison of the pole position angle from the encoder and the motor model resulted in an excessively high value (> 80 ° electrical).
1: -
VECTOR:
0: The comparison of the pole position angle from the encoder and the motor model resulted in an excessively high value (> 45 ° electrical).
1: The change in the speed signal from the motor encoder has changed by > p0492 within a current controller clock cycle.

Remedy:
- if the encoder mounting was changed - re-adjust the encoder.
- replace the defective motor encoder.
- correctly set the angular commutation offset (p0431).
- correctly set the motor stator resistance, cable resistance and motor-stator leakage inductance (p0350, p0352, p0356).
- increase the changeover speed for the motor model (p1752). The monitoring is completely de-activated for p1752 > p1082 (maximum speed)

Note:
For High Dynamic Motors (1FK7xxx-7xxx), for applications with a higher current, if necessary, the monitoring should be disabled.

F07413 Drive: Commutation angle incorrect (pole position identification)

Message value: -

Drive object: SERVO, VECTOR

Reaction: ENCODER (NONE, OFF2)

Acknowledge: IMMEDIATELY

Cause: An incorrect commutation angle was detected, that can result in a positive coupling in the speed controller.
- within the pole position identification routine (p1982 = 2):
A difference of > 45° electrical to the encoder angle was determined.
- for VECTOR, within the encoder adjustment (p1990 = 2):
A difference of > 6 ° electrical to the encoder angle was determined.

Remedy:
- correctly set the angular commutation offset (p0431).
- re-adjust the motor encoder after the encoder has been replaced.
- replace the defective motor encoder.
- check the pole position identification routine. If the pole position identification routine is not suitable for this motor type, then disable the plausibility check (p1982 = 0).

F07414 (N, A) Drive: Encoder serial number changed

Message value: -

Drive object: SERVO

Reaction: ENCODER (NONE, OFF2)

Acknowledge: IMMEDIATELY

Cause: The serial number of the motor encoder of a synchronous motor has changed. The change was only checked for encoders with serial number (e.g. EnDat encoders) and build-in motors (e.g. p0300 = 401) or third-party motors (p0300 = 2).
Cause 1:
The encoder was replaced.
Cause 2:
A third-party, build-in or linear motor was re-commissioned.
Cause 3:
The motor with integrated and adjusted encoder was replaced.
Cause 4:
The firmware was updated to a version that checks the encoder serial number.

Remedy: Re causes 1, 2:
Carry out an automatic adjustment using the pole position identification routine. First, accept the serial number with p0440 = 1. Acknowledge the fault. Initiate the pole position identification routine with p1990 = 1. Then check that the pole position identification routine is correctly executed.
SERVO:
If a pole position identification technique is selected in p1980, and if p0301 does not contain a motor type with an encoder adjusted in the factory, then p1990 is automatically activated.
or
Set the adjustment via p0431. In this case, the new serial number is automatically accepted.
or
Mechanically adjust the encoder. Accept the new serial number with p0440 = 1.
Re causes 3, 4:
Accept the new serial number with p0440 = 1.

N07415 (F) Drive: Angular commutation offset transfer running

Message value: -

Drive object: SERVO

Reaction: OFF2

Acknowledge: NONE

Cause: The angular commutation offset was automatically determined using p1990 = 1.
This fault causes the pulses to be suppressed - this is necessary to transfer the angular commutation offset to p0431.
See also: p1990 (Encoder adjustment, determine angular commutation offset)

Remedy: The fault can be acknowledged without any additional measures.

Reaction upon F: OFF2

Acknowl. upon F: IMMEDIATELY

A07416 Drive: Flux controller configuration

Message value: Parameter: %1, Index: %2, fault cause: %3

Drive object: VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The configuration of the flux control (p1401) is contradictory.
Alarm value (r2124, interpret hexadecimal):
ccbbaaaa hex
aaaa = parameter
bb = index
cc = fault cause
cc = 01 hex = 1 dec:
Quick magnetizing (p1401.6) for soft start (p1401.0).
cc = 02 hex = 2 dec:
Quick magnetizing (p1401.6) for flux build-up control (p1401.2).
cc = 03 hex = 3 dec:
Quick magnetizing (p1401.6) for Rs identification after restart (p0621 = 2).

Remedy: Re fault cause = 1:
- Shut down soft start (p1401.0 = 0).
- Shut down quick magnetizing (p1401.6 = 0).
Re fault cause = 2:
- De-energize flux build-up control (p1401.2 = 0).
- Shut down quick magnetizing (p1401.6 = 0).
Re fault cause = 3:
- Re-parameterize Rs identification (p0621 = 0, 1)
- Shut down quick magnetizing (p1401.6 = 0).

F07420 Drive: Current setpoint filter natural frequency > Shannon frequency

Message value: %1

Drive object: SERVO

Reaction: NONE (OFF1, OFF2, OFF3)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: One of the filter natural frequencies is greater than the Shannon frequency.
The Shannon frequency is calculated according to the following formula: 0.5 / p0115[0]
Fault value (r0949, interpret hexadecimal):
Bit 0: Filter 1 (p1658, p1660)
Bit 1: Filter 2 (p1663, p1665)
Bit 2: Filter 3 (p1668, p1670)
Bit 3: Filter 4 (p1673, p1675)
Bit 8 ... 15: Data set number (starting from zero).

Remedy: - reduce the numerator or denominator natural frequency of the current setpoint filter involved.
- reduce the current controller sampling time (p0115[0]).
- switch out the filter involved (p1656).

F07421 Drive: Speed setpoint filter natural frequency > Shannon frequency

Message value: %1

Drive object: SERVO

Reaction: NONE (OFF1, OFF2, OFF3)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: One of the filter natural frequencies is greater than the Shannon frequency.
The Shannon frequency is calculated according to the following formula: 0.5 / p0115[1]
Fault value (r0949, interpret hexadecimal):
Bit 0: Filter 1 (p1417, p1419)
Bit 1: Filter 2 (p1423, p1425)
Bit 8 ... 15: Data set number (starting from zero).

Remedy: - reduce the numerator or denominator natural frequency of the speed setpoint filter involved.
- reduce the speed controller sampling time (p0115[1]).
- switch out the filter involved (p1414).

F07422 Drive: Reference model natural frequency > Shannon frequency

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The natural filter frequency of the PT2 element for the reference model (p1433) is greater than the Shannon frequency.
The Shannon frequency is calculated according to the following formula: 0.5 / p0115[1]
Remedy: - reduce the natural frequency of PT2 element for reference model (p1433).
- reduce the speed controller sampling time (p0115[1]).

F07423 Drive: APC filter natural frequency > Shannon frequency

Message value: %1
Drive object: SERVO
Reaction: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: One of the filter natural frequencies is greater than the Shannon frequency.
The Shannon frequency is calculated according to the following formula: 0.5 / (p0115[1] * x)
Fault value (r0949, interpret hexadecimal):
Bit 0: Filter 1.1 (p3711, p3713), x = 1
Bit 4: Filter 2.1 (p3721, p3723), x = p3706
Bit 5: Filter 2.2 (p3726, p3728), x = p3706
Bit 8: Filter 3.1 (p3731, p3733), x = p3707
Bit 9: Filter 3.2 (p3736, p3738), x = p3707
Bit 16 ... 32: Data set number (starting from zero)
Remedy: - reduce the numerator or denominator natural frequency of the filter involved.
- reduce the speed controller sampling time (p0115[1]) or the sub-sampling (p3706, p3707).
- switch out the filter involved (p3704).

A07424 Drive: Operating condition for APC not valid

Message value: Fault cause: %1 bin
Drive object: SERVO
Reaction: NONE
Acknowledge: NONE
Cause: The APC function (Advanced Positioning Control) has identified an invalid operating condition.
Alarm value (r2124, interpret hexadecimal):
Bit 0 = 1:
APC is operating without encoder
Bit 1 = 1:
The load measuring system for APC, selected using p3701, has a fault. The APC function is disabled.
Bit 2 = 1:
The load measuring system for APC, selected using p3701, has a fault. The pulse de-coupling is disabled, i.e. the speed of the motor measuring system is used as speed for the closed-loop motor speed control.
Remedy: Re bit 0:
Only use the APC function in operation with an encoder.
Re Bit 1, 2:
Check the load measuring system.

F07425 Drive: APC monitoring time for speed limit expired

Message value: -
Drive object: SERVO
Reaction: OFF1
Acknowledge: IMMEDIATELY
Cause: The limit value (p3778) for the speed/velocity was exceeded for a time longer than that set in the monitoring time (p3779).
Note:
APC: Advanced Positioning Control

Remedy: - check the measured value.
- check the limit value and monitoring time (p3778, p3779).

F07429 Drive: DSC without encoder not possible

Message value: -
Drive object: SERVO
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The function DSC (Dynamic Servo Control) was activated although there is no encoder.
See also: p1191 (DSC position controller gain KPC)
Remedy: If there is no encoder and CI: p1191 (DSC position controller gain) is interconnected, then connector input CI: p1191 must have a 0 signal.

F07430 Drive: Changeover to open-loop torque controlled operation not possible

Message value: -
Drive object: SERVO
Reaction: OFF2 (NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY
Cause: For encoderless operation, the converter cannot change over to closed-loop torque-controlled operation (BI: p1501).
Remedy: Do not attempt to cover over to closed-loop torque-controlled operation.

F07431 Drive: Changeover to encoderless operation not possible

Message value: -
Drive object: SERVO
Reaction: OFF2 (OFF1)
Acknowledge: IMMEDIATELY
Cause: For closed-loop torque control, the converter cannot change over to encoderless operation (p1404).
Remedy: Do not attempt to change over to encoderless operation.

F07432 Drive: Synchronous motor without overvoltage protection

Message value: %1
Drive object: SERVO
Reaction: OFF2 (OFF1)
Acknowledge: IMMEDIATELY
Cause: Under voltage conditions, a synchronous motor can generate an overvoltage condition that can destroy the drive system.
Fault value (r0949, interpret hexadecimal):
Associated Drive Data Set (DDS).
Remedy: Overvoltage protection can be implemented in the following ways:
- limit the maximum speed (p1082) without any additional protection.
The maximum speed without protection is calculated as follows:
Rotary motors: p1082 [rpm] <= 11.695 * p0297/p0316 [Nm/A]
Linear motors: p1082 [m/min] <= 73.484 * p0297/p0316 [N/A]
- use a voltage protection module (VPM) in conjunction with the function "Safe Torque Off" (p9601, p9801).
When a fault condition exists, the VPM short-circuits the motors. During the short-circuit, the pulses must be suppressed - this means that the terminals for the function "Safe Torque Off" must be connected to the VPM.
When using a VPM, p0643 must be set to 1.
- activating the internal voltage protection (IVP) with p1231 = 3.
See also: p0643 (Overvoltage protection for synchronous motors), p1231 (Armature short-circuit / DC brake configuration)

F07433 Drive: Closed-loop control with encoder is not possible as the encoder has not been unparked

Message value: %1
Drive object: SERVO
Reaction: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The changeover to closed-loop control with encoder is not possible as the encoder has not been unparked.
Remedy: - check whether the encoder firmware supports the "parking" function (r0481.6 = 1).
- upgrade the firmware.
Note:
For long-stator motors (p3870.0 = 1), the following applies:
The encoder must have completed the unparking procedure (r3875.0 = 1) before a changeover can be made to closed-loop control with encoder. The encoder is unparked with a 0/1 edge at BI: p3876 and remains unparked until a 0 signal is again present.

F07434 Drive: It is not possible to change the direction of rotation with the pulses enabled

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: A drive data set was selected - with the pulses enabled - which has a different parameterized direction of rotation (p1821).
It is only possible to change the motor direction of rotation using p1821 when the pulses are inhibited.
Remedy: - change over the drive data set with the pulses inhibited.
- ensure that the changeover to a drive data set does not result in the motor direction of rotation being changed (i.e. for these drive data sets, the same value must be in p1821).
See also: p1821

F07435 (N) Drive: Setting the ramp-function generator for sensorless vector control

Message value: Parameter: %1
Drive object: SERVO, VECTOR
Reaction: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY
Cause: During operation with sensorless vector control (r1407.1) the ramp-function generator was stopped (p1141) or bypassed (p1122). An internal setting command of the ramp-function generator output caused the set setpoint speed to be frozen or was not able to be realized.
Remedy: - de-activate the holding command for the ramp-function generator (p1141).
- do not bypass the ramp-function generator (p1122).
- suppress the fault (p2101, p2119). This is necessary if the ramp-function generator is held using jogging and the speed setpoint is simultaneously inhibited (r0898.6).
Note:
For sensorless vector control it is not practical to read-in the main setpoint of the speed control via p1155 or p1160 (p0922). In this case, the main setpoint should be injected before the ramp-function generator (p1070). The reason for this is that the ramp-function generator output is automatically set when transitioning from closed-loop speed controlled into open-loop speed controlled operation.
Reaction upon N: NONE
Acknowl. upon N: NONE

A07440 EPOS: Jerk time is limited

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The calculation of the jerk time Tr = MAX(p2572, p2573) / p2574 resulted in an excessively high value so that the jerk time is internally limited to 1000 ms.
Note:
The alarm is also output if jerk limiting is not active.

Remedy: - increase the jerk limiting (p2574).
- reduce maximum acceleration or maximum deceleration (p2572, p2573).
See also: p2572 (EPOS maximum acceleration), p2573 (EPOS maximum deceleration), p2574 (EPOS jerk limiting)

A07441 LR: Save the position offset of the absolute encoder adjustment

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The status of the absolute encoder adjustment has changed.
In order to permanently save the determined position offset (p2525) it must be saved in a non-volatile fashion (p0971, p0977).
Remedy: None necessary.
This alarm automatically disappears after the offset has been saved.
See also: p2507 (LR absolute encoder adjustment status), p2525 (LR encoder adjustment, offset)

F07442 (A) LR: Multiturn does not match the modulo range

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The ratio between the multiturn resolution and the modular range (p2576) is not an integer number.
This results in the adjustment being set back, as the position actual value cannot be reproduced after power-off/power-on.
Remedy: Make the ration between the multiturn resolution and the modulo range an integer number.
The ratio v is calculated as follows:
1. Motor encoder without position tracking:
v = (p0421 * p2506 * p0433 * p2505) / (p0432 * p2504 * p2576)
2. Motor encoder with position tracking for the measuring gear:
v = (p0412 * p2506 * p2505) / (p2504 * p2576)
3. Motor encoder with position tracking for the load gear:
v = (p2721 * p2506 * p0433) / (p0432 * p2576)
4. Motor encoder with position tracking for the load and measuring gear:
v = (p2721 * p2506) / p2576
5. Direct encoder without position tracking:
v = (p0421 * p2506 * p0433) / (p0432 * p2576)
6. Direct encoder with position tracking for the measuring gear:
v = (p0412 * p2506) / p2576
Note:
With position tracking, it is recommended that p0412 and p2721 are changed
See also: p0412, p0432, p0433, p2504, p2505, p2506, p2576, p2721
Reaction upon A: NONE
Acknowl. upon A: NONE

F07443 (A) LR: Reference point coordinate not in the permissible range

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The reference point coordinate received when adjusting the encoder via connector input p2599 lies outside the half of the encoder range and cannot be set as current axis position.
Fault value (r0949, interpret decimal):
Maximum permissible value for the reference point coordinate.
Remedy: Set the reference point coordinate to a lower value than specified in the fault value.
See also: p2598 (EPOS reference point coordinate, signal source), p2599 (EPOS reference point coordinate value)
Reaction upon A: NONE
Acknowl. upon A: NONE

F07446 (A) Load gear: Position tracking cannot be reset

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The position tracking cannot be reset.
Remedy: Reset the position tracking as follows:
- select encoder commissioning (p0010 = 4).
- reset position tracking, position (p2720.2 = 1).
- de-select encoder commissioning (p0010 = 0).
The fault should then be acknowledged and, if necessary, the absolute encoder adjusted (p2507).
Reaction upon A: NONE
Acknowl. upon A: NONE

F07447 Load gear: Position tracking, maximum actual value exceeded

Message value: Component number: %1, encoder data set: %2, drive data set: %3
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: When the position tracking of the load gear is configured, the drive/encoder (motor encoder) identifies a maximum possible absolute position actual value (r2723) that can no longer be represented within 32 bits.
Maximum value: p0408 * p2721 * 2^p0419
Fault value (r0949, interpret hexadecimal):
ccbbaa hex
aa = encoder data set
bb = component number
cc = drive data set
See also: p0408 (Rotary encoder pulse No.), p0419 (Fine resolution absolute value Gx_XIST2 (in bits)), p2721 (Load gear, rotary absolute gearbox, revolutions, virtual)
Remedy: - reduce the fine resolution (p0419).
- reduce the multiturn resolution (p2721).
See also: p0419 (Fine resolution absolute value Gx_XIST2 (in bits)), p2721 (Load gear, rotary absolute gearbox, revolutions, virtual)

F07448 (A) Load gear: Position tracking, linear axis has exceeded the maximum range

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: For a configured linear axis/no modulo axis, the currently effective motor encoder (encoder 1) has exceeded the maximum possible traversing range.
For the configured linear axis, the maximum traversing range is defined to be 64x (+/- 32x) of p0421. It should be read in p2721 and interpreted as the number of load revolutions.
Note:
Here, only the motor encoder in the currently effective drive data set is monitored. The currently effective drive data set is displayed in x = r0051 and the corresponding motor encoder is specified in p0187[x].
Remedy: The fault should be resolved as follows:
- select encoder commissioning (p0010 = 4).
- reset position tracking, position (p2720.2 = 1).
- de-select encoder commissioning (p0010 = 0).
The fault should then be acknowledged and the absolute encoder adjusted.
Reaction upon A: NONE
Acknowl. upon A: NONE

F07449 (A) Load gear: Position tracking, current position outside tolerance window

Message value: %1

Drive object: SERVO, VECTOR

Reaction: OFF1 (NONE, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: When powered down, the currently effective motor encoder was moved through a distance greater than was parameterized in the tolerance window. It is possible that there is no longer any reference between the mechanical system and encoder.
Note:
Here, only the motor encoder in the currently effective drive data set is monitored. The currently effective drive data set is displayed in x = r0051 and the corresponding motor encoder is specified in p0187[x].
Fault value (r0949, interpret decimal):
Deviation (difference) to the last encoder position in increments of the absolute value after the measuring gear - if one is being used. The sign designates the traversing direction.
Note:
The deviation (difference) found is also displayed in r2724.
See also: p2722 (Load gear, position tracking tolerance window), r2724 (Load gear position difference)

Remedy: Reset the position tracking as follows:
- select encoder commissioning (p0010 = 4).
- reset position tracking, position (p2720.2 = 1).
- de-select encoder commissioning (p0010 = 0).
The fault should then be acknowledged and, if necessary, the absolute encoder adjusted (p2507).
See also: p0010, p2507

Reaction upon A: NONE

F07450 (A) LR: Standstill monitoring has responded

Message value: -

Drive object: SERVO, VECTOR

Reaction: OFF1 (OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: After the standstill monitoring time (p2543) expired, the drive left the standstill window (p2542).
- position actual value inversion incorrectly set (p0410).
- standstill window set too small (p2542).
- standstill monitoring time set too low (p2543).
- position loop gain too low (p2538).
- position loop gain too high (instability/oscillation, p2538).
- mechanical overload.
- check the connecting cable, motor/drive converter (phase missing, interchange).
- when selecting motor identification, select tracking mode (BI: p2655[0] = 1 signal).
- when selecting function generator, select tracking mode (BI: p2655[0] = 1 signal) and de-activate position control (BI:p2550 = 0 signal).

Remedy: Check the causes and resolve.

Reaction upon A: NONE

Acknowl. upon A: NONE

F07451 (A) LR: Position monitoring has responded

Message value: -

Drive object: SERVO, VECTOR

Reaction: OFF1 (OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: When the position monitoring time (p2545) expired, the drive had still not reached the positioning window (p2544).
- positioning window parameterized too small (p2544).
- position monitoring time parameterized too short (p2545).
- position loop gain too low (p2538).
- position loop gain too high (instability/oscillation, p2538).
- drive mechanically locked.

Remedy: Check the causes and resolve.

Reaction upon A: NONE
Acknowl. upon A: NONE

F07452 (A) LR: Following error too high

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The difference between the position setpoint position actual value (following error dynamic model, r2563) is greater than the tolerance (p2546).
- the drive torque or accelerating capacity exceeded.
- position measuring system fault.
- position control sense incorrect.
- mechanical system locked.
- excessively high traversing velocity or excessively high position reference value (setpoint) differences

Remedy: Check the causes and resolve.
Reaction upon A: NONE
Acknowl. upon A: NONE

F07453 LR: Position actual value preprocessing error

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: An error has occurred during the position actual value preprocessing.
Remedy: Check the encoder for the position actual value preprocessing.
See also: p2502 (LR encoder assignment)

A07454 LR: Position actual value preprocessing does not have a valid encoder

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: One of the following problems has occurred with the position actual value preprocessing:
- an encoder is not assigned for the position actual value preprocessing (p2502 = 0).
- an encoder is assigned, but no encoder data set (p0187 = 99 or p0188 = 99 or p0189 = 99).
- an encoder an an encoder data set have been assigned, however, the encoder data set does not contain any encoder data (p0400 = 0) or invalid data (e.g. p0408 = 0).

Remedy: Check the drive data sets, encoder data sets and encoder assignment.
See also: p0187 (Encoder 1 encoder data set number), p0188 (Encoder 2 encoder data set number), p0189 (Encoder 3 encoder data set number), p0400 (Encoder type selection), p2502 (LR encoder assignment)

A07455 EPOS: Maximum velocity limited

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The maximum velocity (p2571) is too high to correctly calculate the modulo correction.
Within the sampling time for positioning (p0115[5]), with the maximum velocity, a maximum of the half modulo length must be moved through. p2571 was limited to this value.
Remedy: - reduce the maximum velocity (p2571).
- increase the sampling time for positioning (p0115[5]).

A07456 EPOS: Setpoint velocity limited

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The current setpoint velocity is greater than the parameterized maximum velocity (p2571) and is therefore limited.
Remedy: - check the entered setpoint velocity.
- reduce the velocity override (CI: p2646).
- increase the maximum velocity (p2571).
- check the signal source for the externally limited velocity (CI: p2594).

A07457 EPOS: Combination of input signals illegal

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: An illegal combination of input signals that are simultaneously set was identified.
Alarm value (r2124, interpret decimal):
0: Jog 1 and jog 2 (p2589, p2590).
1: Jog 1 or jog 2 and direct setpoint input/MDI (p2589, p2590, p2647).
2: Jog 1 or jog 2 and start referencing (p2589, p2590, p2595).
3: Jog 1 or jog 2 and activate traversing task (p2589, p2590, p2631).
4: Direct setpoint input/MDI and starting referencing (p2647, p2595).
5: Direct setpoint input/MDI and activate traversing task (p2647, p2631).
6: Start referencing and activate traversing task (p2595, p2631).
Remedy: Check the appropriate input signals and correct.

F07458 EPOS: Reference cam not found

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: After starting the search for reference, the axis moved through the maximum permissible distance to search for the reference cam without actually finding the reference cam.
Remedy: - check the "reference cam" binector input (BI: p2612).
- check the maximum permissible distance to the reference cam (p2606).
- if axis does not have any reference cam, then set p2607 to 0.
See also: p2606 (EPOS search for reference, reference cam, maximum distance), p2607 (EPOS search for reference, reference cam present), p2612 (EPOS search for reference, reference cam)

F07459 EPOS: No zero mark

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: After leaving the reference cam, the axis has traversed the maximum permissible distance between the reference cam and zero mark without finding the zero mark.
Remedy: - check the encoder regarding the zero mark
- check the maximum permissible distance between the reference cam and zero mark (p2609).
- use an external encoder zero mark (equivalent zero mark) (p0495).
See also: p0495 (Equivalent zero mark, input terminal), p2609 (EPOS search for reference, max. distance ref. cam and zero mark)

F07460 EPOS: End of reference cam not found

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: During the search for reference, when the axis reached the zero mark it also reached the end of the traversing range without detecting an edge at the binector input "reference cam" (BI: p2612).
Maximum traversing range: -2147483648 [LU] ... -2147483647 [LU]
Remedy: - check the "reference cam" binector input (BI: p2612).
- repeat the search for reference.
See also: p2612 (EPOS search for reference, reference cam)

A07461 EPOS: Reference point not set

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: When starting a traversing block/direct setpoint input, a reference point is not set (r2684.11 = 0).
Remedy: Reference the system (search for reference, flying referencing, set reference point).

A07462 EPOS: Selected traversing block number does not exist

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: A traversing block selected via BI: p2625 to BI: p2630 was started via BI: p2631 = 0/1 edge "Activate traversing task".
- the number of the started traversing block is not contained in p2616[0...n].
- the started traversing block is suppressed.
Alarm value (r2124, interpret decimal):
Number of the selected traversing block that is also not available.
Remedy: - correct the traversing program.
- select an available traversing block number.

A07463 (F) EPOS: External block change not requested in the traversing block

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: For a traversing block with the block change enable CONTINUE_EXTERNAL_ALARM, the external block change was not requested.
Alarm value (r2124, interpret decimal):
Number of the traversing block.
Remedy: Resolve the reason as to why the edge is missing at binector input (BI: p2632).
Reaction upon F: OFF1
Acknowl. upon F: IMMEDIATELY

F07464 EPOS: Traversing block is inconsistent

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The traversing block does not contain valid information.
Alarm value (r2124, interpret decimal):
Number of the traversing block with invalid information.
Remedy: Check the traversing block and where relevant, take into consideration alarms that are present.

A07465 EPOS: Traversing block does not have a subsequent block

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: There is no subsequent block in the traversing block.
Alarm value (r2124, interpret decimal):
Number of the traversing block with the missing subsequent block.
Remedy: - parameterize this traversing block with the block change enable END.
- parameterize additional traversing blocks with a higher block number and for the last block, using the block change enable END.

A07466 EPOS: Traversing block number assigned a multiple number of times

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The same traversing block number was assigned a multiple number of times.
Alarm value (r2124, interpret decimal):
Number of the traversing block that was assigned a multiple number of times.
Remedy: Correct the traversing blocks.

A07467 EPOS: Traversing block has illegal task parameters

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The task parameter in the traversing block contains an illegal value.
Alarm value (r2124, interpret decimal):
Number of the traversing block with an illegal task parameter.
Remedy: Correct the task parameter in the traversing block.

A07468 EPOS: Traversing block jump destination does not exist

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: In a traversing block, a jump was programmed to a non-existent block.
Alarm value (r2124, interpret decimal):
Number of the traversing block with a jump destination that does not exist.
Remedy: - correct the traversing block.
- add the missing traversing block.

A07469 EPOS: Traversing block < target position < software limit switch minus

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: In the traversing block the specified absolute target position lies outside the range limited by the software limit switch minus.
Alarm value (r2124, interpret decimal):
Number of the traversing block with illegal target position.
Remedy: - correct the traversing block.
- change software limit switch minus (CI: p2578, p2580).

A07470 EPOS: Traversing block> target position > software limit switch plus

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: In the traversing block the specified absolute target position lies outside the range limited by the software limit switch plus.
Alarm value (r2124, interpret decimal):
Number of the traversing block with illegal target position.
Remedy: - correct the traversing block.
- change software limit switch plus (CI: p2579, p2581).

A07471 EPOS: Traversing block target position outside the modulo range

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: In the traversing block the target position lies outside the modulo range.
Alarm value (r2124, interpret decimal):
Number of the traversing block with illegal target position.
Remedy: - in the traversing block, correct the target position.
- change the modulo range (p2576).

A07472 EPOS: Traversing block ABS_POS/ABS_NEG not possible

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: In the traversing block the positioning mode ABS_POS or ABS_NEG were parameterized with the modulo correction not activated.
Alarm value (r2124, interpret decimal):
Number of the traversing block with the illegal positioning mode.
Remedy: Correct the traversing block.

A07473 (F) EPOS: Beginning of traversing range reached

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: When traversing, the axis has moved to the traversing range limit.
Remedy: Move away in the positive direction.
Reaction upon F: OFF1 (OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY

A07474 (F) EPOS: End of traversing range reached

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: When traversing, the axis has moved to the traversing range limit.
Remedy: Move away in the negative direction.
Reaction upon F: OFF1 (OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY

F07475 (A) EPOS: Target position < start of traversing range

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The target position for relative traversing lies outside the traversing range.
Remedy: Correct the target position.
Reaction upon A: NONE
Acknowl. upon A: NONE

F07476 (A) EPOS: Target position > end of the traversing range

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The target position for relative traversing lies outside the traversing range.
Remedy: Correct the target position.
Reaction upon A: NONE
Acknowl. upon A: NONE

A07477 (F) EPOS: Target position < software limit switch minus

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: In the current traversing operation, the target position is less than the software limit switch minus.
Remedy: - correct the target position.
- change software limit switch minus (CI: p2578, p2580).
See also: p2578 (EPOS software limit switch minus signal source), p2580 (EPOS software limit switch minus), p2582 (EPOS software limit switch activation)
Reaction upon F: OFF1 (OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY

A07478 (F) EPOS: Target position > software limit switch plus

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: In the current traversing operation, the target position is greater than the software limit switch plus.
Remedy: - correct the target position.
- change software limit switch plus (CI: p2579, p2581).
See also: p2579 (EPOS software limit switch plus signal source), p2581 (EPOS software limit switch plus), p2582 (EPOS software limit switch activation)
Reaction upon F: OFF1 (OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY

A07479 EPOS: Software limit switch minus reached

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The axis is at the position of the software limit switch minus. An active traversing block was interrupted.

Remedy: - correct the target position.
- change software limit switch minus (CI: p2578, p2580).
See also: p2578 (EPOS software limit switch minus signal source), p2580 (EPOS software limit switch minus), p2582 (EPOS software limit switch activation)

A07480 EPOS: Software limit switch plus reached

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The axis is at the position of the software limit switch plus. An active traversing block was interrupted.
Remedy: - correct the target position.
- change software limit switch plus (CI: p2579, p2581).
See also: p2579 (EPOS software limit switch plus signal source), p2581 (EPOS software limit switch plus), p2582 (EPOS software limit switch activation)

F07481 (A) EPOS: Axis position < software limit switch minus

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The current position of the axis is less than the position of the software limit switch minus.
Remedy: - correct the target position.
- change software limit switch minus (CI: p2578, p2580).
See also: p2578 (EPOS software limit switch minus signal source), p2580 (EPOS software limit switch minus), p2582 (EPOS software limit switch activation)

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The current position of the axis is greater than the position of the software limit switch plus.
Remedy: - correct the target position.
- change software limit switch plus (CI: p2579, p2581).
See also: p2579 (EPOS software limit switch plus signal source), p2581 (EPOS software limit switch plus), p2582 (EPOS software limit switch activation)
Reaction upon A: NONE
Acknowl. upon A: NONE

A07483 EPOS: Travel to fixed stop clamping torque not reached

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The fixed stop in the traversing block was reached without the clamping torque/clamping force having been achieved.
Remedy: - Check the maximum torque-generating current (r1533).
- check the torque limits (p1520, p1521).
- check the power limits (p1530, p1531).
- check the BICO interconnections of the torque limits (p1522, p1523, p1528, p1529).

F07484 EPOS: Fixed stop outside the monitoring window

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF3 (OFF1, OFF2)
Acknowledge: IMMEDIATELY
Cause: In the "fixed stop reached" state, the axis has moved outside the defined monitoring window (p2635).
Remedy: - check the monitoring window (p2635).
- check the mechanical system.

F07485 (A) EPOS: Fixed stop not reached

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: In a traversing block with the task FIXED STOP, the end position was reached without detecting a fixed stop.
Remedy: - check the traversing block and locate the target position further into the workpiece.
- check the "fixed stop reached" control signal (p2637).
- if required, reduce the maximum following error window to detect the fixed stop (p2634).

Reaction upon A: NONE
Acknowl. upon A: NONE

A07486 EPOS: Intermediate stop missing

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: In the modes "traversing blocks" or "direct setpoint input/MDI" at the start of motion, the binector input "no intermediate stop/intermediate stop" (BI: p2640) did not have a 1 signal.
Remedy: Connect a 1 signal to the binector input "no intermediate stop/intermediate stop" (BI: p2640) and re-start motion.
See also: p2640 (EPOS intermediate stop (0 signal))

A07487 EPOS: Reject traversing task missing

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: In the modes "traversing blocks" or "direct setpoint input/MDI" at the start of motion, the binector input "do not reject traversing task/reject traversing task" (BI: p2641) does not have a 1 signal.
Remedy: Connect a 1 signal to the binector input "do not reject traversing task/reject traversing task" (BI: p2641) and re-start motion.
See also: p2641 (EPOS reject traversing task (0 signal))

F07488 EPOS: Relative positioning not possible

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: In the mode "direct setpoint input/MDI", for continuous transfer (p2649 = 1) relative positioning was selected (BI: p2648 = 0 signal).
Remedy: Check the control.

A07489 EPOS: Reference point correction outside the window

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: For the function "flying referencing" the difference between the measured position at the measuring probe and the reference point coordinate lies outside the parameterized window.
Remedy: - check the mechanical system.
- check the parameterization of the window (p2602).

F07490 EPOS: Enable signal withdrawn while traversing

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: - for a standard assignment, another fault may have occurred as a result of withdrawing the enable signals.
- the drive is in the "switching on inhibited" state (for a standard assignment).
Remedy: - set the enable signals or check the cause of the fault that first occurred and then result (for a standard assignment).
- check the assignment to enable the basic positioning function.

F07491 (A) EPOS: STOP cam minus reached

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF3
Acknowledge: IMMEDIATELY
Cause: A zero signal was detected at binector input BI: p2569, i.e. the STOP cam minus was reached.
For a positive traversing direction, the STOP cam minus was reached - i.e. the wiring of the STOP cam is incorrect.
See also: p2569 (EPOS STOP cam minus)
Remedy: - leave the STOP cam minus in the positive traversing direction and return the axis to the valid traversing range.
- check the wiring of the STOP cam.
Reaction upon A: NONE
Acknowl. upon A: NONE

F07492 (A) EPOS: STOP cam plus reached

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF3
Acknowledge: IMMEDIATELY
Cause: A zero signal was detected at binector input BI: p2570, i.e. the STOP cam plus was reached.
For a negative traversing direction, the STOP cam plus was reached - i.e. the wiring of the STOP cam is incorrect.
See also: p2570 (EPOS STOP cam plus)
Remedy: - leave the STOP cam plus in the negative traversing direction and return the axis to the valid traversing range.
- check the wiring of the STOP cam.
Reaction upon A: NONE
Acknowl. upon A: NONE

F07493 LR: Overflow of the value range for position actual value

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The value range (-2147483648 ... 2147483647) for the position actual value representation was exceeded.
When the overflow occurs, the "referenced" or "adjustment absolute measuring system" status is reset.

Fault value (r0949, interpret decimal):
1: The position actual value (r2521) has exceeded the value range.
2: The encoder position actual value Gn_XIST2 (r0483) or the absolute value after the load gear (r2723) has exceeded the value range.
3: The maximum encoder value times the factor to convert the absolute position (r0483 and/or r2723) from increments to length units (LU) has exceeded the value range for displaying the position actual value.

Remedy: If required, reduce the traversing range or position resolution (p2506).
Increase the fine resolution of absolute position actual value (p0419).
Reference to fault value = 3:
If the value for the maximum possible absolute position (LU) is greater than 4294967296, an adjustment cannot be made due to an overflow.
For rotary encoders, the maximum possible absolute position (LU) is calculated as follows:
1. Motor encoder without position tracking:
p2506 * p0433 * p2505 / (p0432 * p2504)
p2506 * p0433 * p2505 * p0421 / (p0432 * p2504) for multiturn encoders
2. Motor encoder with position tracking for measuring gear
p2506 * p0412 * p2505 / p2504
3. Motor encoder with position tracking for load gear:
p2506 * p2721 * p0433 / p0432
4. Motor encoder with position tracking for load and measuring gear:
p2506 * p2721
5. Direct encoder without position tracking:
p2506 * p0433 / p0432
p2506 * p0433 * p0421 / p0432 for multiturn encoders
6. Direct encoder with position tracking for measuring gear:
p2506 * p0412

F07494 LR: Drive Data Set changeover in operation

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: A drive data set changeover (DDS changeover) when the mechanical relationships change (p2503 .. 2506), the direction of rotation (p1821) or the encoder assignment (p2502) were requested during operation.
Remedy: To changeover the drive data set, initially, exit the "operation" mode.

A07495 (F) LR: Reference function interrupted

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: An activated reference function (reference mark search or measuring probe evaluation) was interrupted.
- an encoder fault has occurred (Gn_ZSW.15 = 1).
- position actual value was set during an activated reference function.
- simultaneously activate reference mark search and measuring probe evaluation (BI: p2508 and BI: p2509 = 1 signal).
- activated reference function (reference mark search or measuring probe evaluation) was de-activated (BI: p2508 and BI: p2509 = 0 signal).

Remedy: - check the causes and resolve.
- reset the control (BI: p2508 and BI: p2509 = 0 signal) and activate the requested function.

Reaction upon F: OFF1 (OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY

A07496 EPOS: Enable not possible

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: It is not possible to enable the basic positioner because at least one signal is missing.

Alarm value (r2124, interpret decimal):
1: EPOS enable missing (BI: p2656).
2: Position actual value, valid feedback signal missing (BI: p2658).
See also: p2656 (EPOS enable basic positioner), p2658 (EPOS pos. actual value valid, feedback signal)

Remedy: Check the appropriate binector inputs and signals.

A07497 LR: Position setting value activated

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The position actual value is set to the value received via CI: p2515while BI: p2514 = 1 signal. A possible system deviation cannot be corrected.
Remedy: None necessary.
The alarm automatically disappears with BI: p2514 = 0 signal.

A07498 (F) LR: Measuring probe evaluation not possible

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: When evaluating the measuring probe, an error occurred.
Alarm value (r2124, interpret decimal):
6: The input terminal for the measuring probe is not set.
4098: Error when initializing the measuring probe.
4100: The measuring pulse frequency is too high.
> 50000: The measuring clock cycle is not a multiple integer of the position controller clock cycle.
Remedy: De-activate the measuring probe evaluation (BI: p2509 = 0 signal).
Re alarm value = 6:
Set the input terminal for the measuring probe (p0488, p0489 or p2517, p2518).
Re alarm value = 4098:
Check the Control Unit hardware.
Re alarm value = 4100:
Reduce the frequency of the measuring pulses at the measuring probe.
Re alarm value > 50000:
Set the clock cycle ratio of the measuring clock cycle to the position controller clock cycle to an integer multiple.
To do this, the currently effective measuring clock cycle can be determined from the alarm value as follows:
Tmeas[125µs] = alarm value - 50000.
With PROFIBUS, the measuring clock cycle corresponds to the PROFIBUS clock cycle r2064[1].
Without PROFIBUS, the measuring clock cycle is an internal cycle time that cannot be influenced.
Reaction upon F: OFF1
Acknowl. upon F: IMMEDIATELY

F07499 (A) EPOS: Reversing cam approached with the incorrect traversing direction

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF3
Acknowledge: IMMEDIATELY
Cause: The reversing cam MINUS was approached in the positive traversing direction or the reversing cam PLUS was approached in the negative traversing direction.
See also: p2613 (EPOS search for reference reversing cam minus), p2614 (EPOS search for reference reversing cam plus)
Remedy: - check the wiring of the reversing cam (BI: p2613, BI: p2614).
- check the traversing direction to approach the reversing cam.
Reaction upon A: NONE
Acknowl. upon A: NONE

F07500 Drive: Power unit data set PDS not configured

Message value: Drive data set: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: Only for controlled line supply infeed/regenerative feedback units:
The power unit data set was not configured - this means that a data set number was not entered into the drive data set.
Fault value (r0949, interpret decimal):
Drive data set number of p0185.
Remedy: The index of the power unit data set associated with the drive data set should be entered into p0185.

F07501 Drive: Motor Data Set MDS not configured

Message value: Drive data set: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: Only for power units:
The motor data set was not configured - this means that a data set number was not entered into the associated drive data set.
Fault value (r0949, interpret decimal):
The fault value includes the drive data set number of p0186.
Remedy: The index of the motor data set associated with the drive data set should be entered into p0186.
See also: p0186 (Motor Data Sets (MDS) number)

F07502 Drive: Encoder Data Set EDS not configured

Message value: Drive data set: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: Only for power units:
The encoder data set was not configured - this means that a data set number was not entered into the associated drive data set.
Fault value (r0949, interpret decimal):
The fault value includes the drive data set number of p0187, p0188 and p0189.
The fault value is increased by 100 * encoder number (e.g. for p0189: Fault value 3xx with xx = data set number).
Remedy: The index of the encoder data set associated with the drive data set should be entered into p0187 (1st encoder), p0188 (2nd encoder) and p0189 (3rd encoder).

A07504 Drive: Motor data set is not assigned to a drive data set

Message value: %1
Drive object: SERVO, TM41, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: A motor data set is not assigned to a drive object.
All of the existing motor data sets in the drive data sets must be assigned using the MDS number (p0186[0...n]).
There must be at least as many drive data sets as motor data sets.
Alarm value (r2124, interpret decimal):
Number of the motor data set that has not been assigned.
Remedy: In the drive data sets, assign the non-assigned motor data set using the MDS number (p0186[0...n]).
- check whether all of the motor data sets are assigned to drive data sets.
- if required, delete superfluous motor data sets.
- if required, set up new drive data sets and assign to the corresponding motor data sets.
See also: p0186 (Motor Data Sets (MDS) number)

F07509 Drive: Component number missing

Message value: %1

Drive object: SERVO, TM41, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: A Drive Data Set (DDS) is assigned to a Motor Data Set (MDS) or Encoder Data Set (EDS) that does not have a component number.
Alarm value (r2124, interpret decimal):
nnmmmxxyyy
nn: Number of the MDS/EDS.
mmm: Parameter number of the missing component number.
xx: Number of the DDS that is assigned to the MDS/EDS.
yyy: Parameter number that references the MDS/EDS.
Example:
p0186[7] = 5: DDS 7 is assigned MDS 5.
p0131[5] = 0: There is no component number set in MDS 5.
Alarm value = 0513107186

Remedy: In the drive data sets, no longer assign MDS/EDS using p0186, p0187, p0188, p0189 or set a valid component number.
See also: p0131, p0141, p0142, p0186, p0187, p0188, p0189

F07510 Drive: Identical encoder in the drive data set

Message value: %1

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: More than one encoder with identical component number is assigned to a single drive data set. In one drive data set, it is not permissible that identical encoders are operated together.
Fault value (r0949, interpret decimal):
1000 * first identical encoder + 100 * second identical encoder + drive data set.
Example:
Fault value = 1203 means:
In drive data set 3, the first (p0187[3]) and second encoder (p0188[3]) are identical.

Remedy: Assign the drive data set to different encoders.
See also: p0141 (Encoder interface (Sensor Module) component number), p0187 (Encoder 1 encoder data set number), p0188 (Encoder 2 encoder data set number), p0189 (Encoder 3 encoder data set number)

F07511 Drive: Encoder used a multiple number of times

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: Each encoder may only be assigned to one drive and within a drive must - in each drive data set - either always be encoder 1, always encoder 2 or always encoder 3. This unique assignment has been violated.
Fault value (r0949, interpret decimal):
The two parameters in coded form, that refer to the same component number.
First parameter:
Index: First and second decimal place (99 for EDS, not assigned DDS)
Parameter number: Third decimal place (1 for p0187, 2 for p0188, 3 for p0189, 4 for EDS not assigned DDS)
Drive number: Fourth and fifth decimal place
Second parameter:
Index: Sixth and seventh decimal place (99 for EDS, not assigned DDS)
Parameter number: Eighth decimal place (1 for p0187, 2 for p0188, 3 for p0189, 4 for EDS, not assigned DDS)
Drive number: Ninth and tenth decimal place
See also: p0141 (Encoder interface (Sensor Module) component number)

Remedy: Correct the double use of a component number using the two parameters coded in the fault value.

F07512 Drive: Encoder data set changeover cannot be parameterized

Message value: %1

Drive object: SERVO, TM41, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: Using p0141, a changeover of the encoder data set is prepared that is illegal. In this firmware release, an encoder data set changeover is only permitted for the components in the actual topology.
Alarm value (r2124, interpret decimal):
Incorrect EDS data set number.
See also: p0187 (Encoder 1 encoder data set number), p0188 (Encoder 2 encoder data set number), p0189 (Encoder 3 encoder data set number)

Remedy: Every encoder data set must be assigned its own dedicated DRIVE-CLiQ socket. The component numbers of the encoder interfaces (p0141) must have different values within a drive object.
The following must apply:
p0141[0] not equal to p0141[1] not equal to ... not equal to p0141[n]

A07514 (N) Drive: Data structure does not correspond to the interface module

Message value: -

Drive object: SERVO, TM41, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The interface mode "SIMODRIVE 611 universal" was set (p2038 = 1) and the data structure does not correspond to this mode.
For the data structure, the following rule must be complied with.
Within the group of 8 drive data sets, the assignment to the motor data set must be set the same:
p0186[0] = p0186[1] = ... = p0186[7]
p0186[8] = p0186[9] = ... = p0186[15]
p0186[16] = p0186[17] = ... = p0186[23]
p0186[24] = p0186[25] = ... = p0186[31]
See also: p0180 (Number of Drive Data Sets (DDS)), p0186 (Motor Data Sets (MDS) number), p2038 (PROFIdrive STW/ZSW interface mode)

Remedy: - structure the data according to the rules of the "SIMODRIVE 611 universal" interface mode.
- check the interface mode (p2038).

Reaction upon N: NONE

Acknowl. upon N: NONE

F07515 Drive: Power unit and motor incorrectly connected

Message value: %1

Drive object: SERVO, TM41, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: A power unit (via PDS) was assigned to a motor (via MDS) in a drive data set that is not connected in the target topology.
Alarm value (r2124, interpret decimal):
Number of the incorrectly parameterized drive data set.

Remedy: - assign the drive data set to a combination of motor and power unit permitted by the target topology.
- adapt the target topology.
See also: p0121 (Power unit component number), p0131 (Motor component number), p0186 (Motor Data Sets (MDS) number)

F07516 Drive: Re-commission the data set

Message value: %1
Drive object: SERVO, TM41, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The assignment between the drive data set and motor data set (p0186) or between the drive data set and the encoder data set was modified (p0187). This is the reason that the drive data set must re-commissioned.
Fault value (r0949, interpret decimal):
Drive data set to be re-commissioned.
Remedy: Commission the drive data set specified in the fault value (r0949).

F07517 Drive: Encoder data set changeover incorrectly parameterized

Message value: %1
Drive object: SERVO, TM41, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: An MDS cannot have different motor encoders in two different DDS.
The following parameterization therefore results results in an error:
p0186[0] = 0, p0187[0] = 0
p0186[0] = 0, p0187[0] = 1
Alarm value (r2124, interpret decimal):
The lower 16 bits indicate the first DDS and the upper 16 bits indicate the second DDS.
Remedy: If you wish to operate a motor once with one motor encoder and then another time with the other motor encoder, then you must set up two different MDSs, in which the motor data are the same.
Example:
p0186[0] = 0, p0187[0] = 0
p0186[0] = 1, p0187[0] = 1

F07518 Drive: Motor data set changeover incorrectly parameterized

Message value: %1
Drive object: SERVO, TM41, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The system has identified that two motor data sets were incorrectly parameterized.
Parameter r0313 (calculated from p0314, p0310, p0311), r0315 and p1982 may only have different values if the motor data sets are assigned different motors. p0827 is used to assign the motors and/contactors.
It is not possible to toggle between motor data sets.
Alarm value (r2124, interpret hexadecimal):
xxxxyyyy:
xxxx: First DDS with assigned MDS, yyyy: Second DDS with assigned MDS
Remedy: Correct the parameterization of the motor data sets.

A07519 Drive: Motor changeover incorrectly parameterized

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: With the setting p0833.0 = 1, a motor changeover via the application is selected. This is the reason that p0827 must have different values in the appropriate motor data set.
Alarm value (r2124, interpret hexadecimal):
xxxxyyyy:
xxxx: First MDS, yyyy: Second MDS
Remedy: - parameterize the appropriate motor data sets differently (p0827).
- select the setting p0833.0 = 0 (motor changeover via the drive).

A07520 Drive: Motor cannot be changed over

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The motor cannot be changed over.
Alarm value (r2124, interpret decimal):
1:
The contactor for the motor that is presently active cannot be opened, because for a synchronous motor, the speed (r0063) is greater than the speed at the start of field weakening (p3048). As long as r0063 > p0348, the current in the motor does not decay in spite of the pulses being suppressed.
2:
The "contactor opened" feedback signal was not detected within 1 s.
3:
The "contactor closed" feedback signal was not detected within 1 s.
Remedy: Re alarm value = 1:
Set the speed lower than the speed at the start of field weakening (r0063 < p0348).
Re alarm value = 2, 3:
Check the feedback signals of the contactor involved.

A07530 Drive: Drive Data Set DDS not present

Message value: -
Drive object: SERVO, TM41, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The selected drive data set is not available (p0837 > p0180). The drive data set was not changed over.
See also: p0180, p0820, p0821, p0822, p0823, p0824, r0837
Remedy: - select the existing drive data set.
- set up additional drive data sets.

A07541 Drive: Data set changeover not possible

Message value: -
Drive object: SERVO, TM41, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The selected drive data set changeover and the assigned motor changeover are not possible and are not carried out. For synchronous motors, the motor contactor may only be switched for actual speeds less than the speed at the start of field weakening (r0063 < p0348).
See also: r0063, p0348
Remedy: Reduce the speed below the speed at the start of field weakening.

A07550 (F, N) Drive: Not possible to reset encoder parameters

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: When carrying out a factory setting (e.g. using p0970 = 1), it was not possible to reset the encoder parameters. The encoder parameters are directly read out of the encoder via DRIVE-CLiQ.
Alarm value (r2124, interpret decimal):
Component number of the encoder involved.
Remedy: - repeat the operation.
- check the DRIVE-CLiQ connection.
Reaction upon F: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowl. upon F: IMMEDIATELY (POWER ON)
Reaction upon N: NONE
Acknowl. upon N: NONE

F07551 Drive encoder: No commutation angle information

Message value: Fault cause: %1, drive data set: %2

Drive object: SERVO, VECTOR

Reaction: OFF2 (IASC/DCBRAKE)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The commutation angle information is missing. This means that synchronous motors cannot be controlled (closed-loop control)
Fault value (r0949, interpret decimal):
yyyyxxxx dec: yyyy = fault cause, xxxx = drive data set
yyyy = 1 dec:
The motor encoder used does not supply an absolute commutation angle.
yyyy = 2 dec:
The selected ratio of the measuring gear does not match the motor pole pair number.

Remedy: Re fault cause = 1:
- check the encoder parameterization (p0404).
- use an encoder with track C/D, EnDat interface of Hall sensors.
- use an encoder with sine-wave A/B track for which the motor pole pair number (r0313) is an integer multiple of the encoder pulse number (p0408).
- activate the pole position identification routine (p1982 = 1).

Re fault cause = 2:
- the quotient of the pole pair number divided by the ratio of the measuring gear must be an integer number: (p0314 * p0433) / p0432.

Note:
For operation with track C/D, this quotient must be less than 8.
See also: p0402, p0404, p0432, p0433

F07552 (A) Drive encoder: Encoder configuration not supported

Message value: Fault cause: %1, component number: %2, encoder data set: %3

Drive object: SERVO, VECTOR

Reaction: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The requested encoder configuration is not supported. Only bits may be requested in p0404 that are signaled as being supported by the encoder evaluation in r0456.
Fault value (r0949, interpret decimal):
Low word low byte: Encoder data set number
Low word high byte: Component number
High word:
The encoder evaluation does not support a function selected in p0404.
1: sin/cos encoder with absolute track (this is supported by SME25).
3: Squarewave encoder (this is supported by SMC30).
4: sin/cos encoder (this is supported by SMC20, SMI20, SME20, SME25).
12: sin/cos encoder with reference mark (this is supported by SME20).
15: Commutation with zero mark for separately-excited synchronous motors with VECTORMV.
23: Resolver (this is supported by SMC10, SMI10).
65535: Other function (compare r0456 and p0404).
See also: p0404 (Encoder configuration effective), r0456 (Encoder configuration supported)

Remedy: - check the encoder parameterization (p0400, p0404).
- use the matching encoder evaluation (r0456).

Reaction upon A: NONE

Acknowl. upon A: NONE

F07553 (A) Drive encoder: Sensor Module configuration not supported

Message value: Encoder data set: %1, first incorrect bit: %2, incorrect parameter: %3

Drive object: SERVO, VECTOR

Reaction: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The Sensor Module does not support the requested configuration.
If p0430 (cc = 0) incorrect, the following applies:
- In p0430 (requested functions), at least 1 bit was set that is not set in r0458 (supported functions) (exception: bits 19, 28, 29, 30, 31).
- p1982 > 0 (pole position identification requested), but r0458.16 = 0 (pole position identification not supported).
If p0437 (cc = 1) incorrect, the following applies:
- In p0437 (requested functions), at least 1 bit was set that is not set in r0459 (supported functions).
Fault value (r0949, interpret hexadecimal):
ddccbbaa hex
aa: encoder data set no.
bb: first incorrect bit
cc: incorrect parameter
cc = 0: incorrect parameter is p0430
cc = 1: incorrect parameter is p0437
dd: reserved (always 0)

Remedy: - check the encoder parameterization (p0430, p0437).
- check the pole position identification routine (p1982).
- use the matching encoder evaluation (r0458, r0459).
See also: p0430, p0437, r0458, r0459, p1982

Reaction upon A: NONE

Acknowl. upon A: NONE

F07555 (A) Drive encoder: Configuration position tracking

Message value: Component number: %1, encoder data set: %2, drive data set: %3, fault cause: %4

Drive object: SERVO, VECTOR

Reaction: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The configuration of the position tracking is not supported.
Position tracking can only be activated for absolute encoders.
For linear axes, it is not possible to simultaneously activate the position tracking for load- and measuring gear.
Fault value (r0949, interpret hexadecimal):
ddccbbaa hex
aa = encoder data set
bb = component number
cc = drive data set
dd = fault cause
dd = 00 hex = 0 dez
An absolute encoder is not being used.
dd = 01 hex = 1 dez
Position tracking cannot be activated because the memory of the internal NVRAM is not sufficient or a Control Unit does not have an NVRAM.
dd = 02 hex = 2 dez
For a linear axis, the position tracking was activated for the load and measuring gear.
dd = 03 hex = 3 dez
Position tracking cannot be activated because position tracking with another gear ratio, axis type or tolerance window has already been detected for this encoder data set.
dd = 04 hex = 4 dez
A linear encoder is being used.
See also: p0404 (Encoder configuration effective), p0411 (Measuring gear, configuration)

Remedy: - use an absolute encoder.
- if necessary, de-select the position tracking (p0411 for the measuring gear, p2720 for the load gear).
- use a Control Unit with sufficient NVRAM.
- Only activate position tracking of the load gear in the same encoder data set if the gear ratio (p2504, p2505), axis type (p2720.1) and tolerance window (p2722) are also the same.

F07556 Measuring gear: Position tracking, maximum actual value exceeded

Message value: Component number: %1, encoder data set: %2
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: When the position tracking of the measuring gear is configured, the drive/encoder identifies a maximum possible absolute position actual value (r0483) that cannot be represented within 32 bits.
Maximum value: p0408 * p0412 * 2^p0419
Fault value (r0949, interpret decimal):
Low word low byte: Encoder data set number
Low word high byte: Component number
See also: p0408 (Rotary encoder pulse No.), p0412 (Measuring gear, rotary absolute gearbox, revolutions, virtual), p0419 (Fine resolution absolute value Gx_XIST2 (in bits))
Remedy: - reduce the fine resolution (p0419).
- reduce the multiturn resolution (p0412).
See also: p0412 (Measuring gear, rotary absolute gearbox, revolutions, virtual), p0419 (Fine resolution absolute value Gx_XIST2 (in bits))

A07557 (F) Encoder 1: Reference point coordinate not in the permissible range

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The reference point coordinate received when adjusting the encoder via connector input CI:p2599 lies outside the half of the encoder range and cannot be set as current axis position. The maximum permissible value is displayed in the supplementary information.
Remedy: Set the reference point coordinate less than the value from the supplementary information.
See also: p2598 (EPOS reference point coordinate, signal source)
Reaction upon F: OFF1 (OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY

A07558 (F) Encoder 2: Reference point coordinate not in the permissible range

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The reference point coordinate received when adjusting the encoder via connector input CI:p2599 lies outside the half of the encoder range and cannot be set as current axis position. The maximum permissible value is displayed in the supplementary information.
Remedy: Set the reference point coordinate less than the value from the supplementary information.
See also: p2598 (EPOS reference point coordinate, signal source)

F07560 Drive encoder: Number of pulses is not to the power of two

Message value: Encoder data set: %1
Drive object: SERVO, VECTOR
Reaction: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: For rotary absolute encoders, the pulse number in p0408 must be to the power of two.
Fault value (r0949, interpret decimal):
The fault value includes the encoder data set number involved.
Remedy: - check the parameterization (p0408, p0404.1, r0458.5).
- if required, upgrade the Sensor Module firmware.

F07561 Drive encoder: Number of multiturn pulses is not to the power of two

Message value: Encoder data set: %1
Drive object: SERVO, VECTOR
Reaction: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The multiturn resolution in p0421 must be to the power of two.
Fault value (r0949, interpret decimal):
The fault value includes the encoder data set number involved.
Remedy: - check the parameterization (p0421, p0404.1, r0458.5).
- if required, upgrade the Sensor Module firmware.

F07562 (A) Drive, encoder: Position tracking, incremental encoder not possible

Message value: Fault cause: %1, component number: %2, encoder data set: %3
Drive object: SERVO, VECTOR
Reaction: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The requested position tracking for incremental encoders is not supported.
Fault value (r0949, interpret hexadecimal):
ccccbbaa hex
aa = encoder Data Set number
bb = component number
cccc = fault cause
cccc = 00 hex = 0 dec
The encoder type does not support the "Position tracking incremental encoder" function.
cccc = 01 hex = 1 dec
Position tracking cannot be activated because the memory of the internal NVRAM is not sufficient or a Control Unit does not have an NVRAM.
cccc = 04 hex = 4 dec
A linear encoder is used that does not support the position tracking function.
See also: p0404 (Encoder configuration effective), p0411 (Measuring gear, configuration), r0456 (Encoder configuration supported)
Remedy: - check the encoder parameterization (p0400, p0404).
- use a Control Unit with sufficient NVRAM.
- if required, deselect position tracking for the incremental encoder (p0411.3 = 0).

A07569 (F) Encoder could not be identified

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: During encoder identification (servicing) with p0400 = 10100, the encoder could not be identified.

Either the wrong encoder has been installed or no encoder has been installed, the wrong encoder cable has been connected or no encoder cable has been connected, or the DRIVE-CLiQ component has not been connected to DRIVE-CLiQ.
Note:
Encoder identification must be supported by the encoder and is possible in the following cases:
Encoder with EnDat interface, motor with DRIVE-CLiQ.

Remedy: - Check and, if necessary, connect the encoder and/or encoder cable.
- Check and, if necessary, establish the DRIVE-CLiQ connection.
- In the case of encoders that cannot be identified (e.g. encoders without EnDat interface), the correct encoder type must be entered in p0400.

Reaction upon F: NONE (OFF1, OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY

F07575 Drive: Motor encoder not ready

Message value: -

Drive object: SERVO, TM41, VECTOR

Reaction: OFF2 (ENCODER)

Acknowledge: IMMEDIATELY

Cause: The motor encoder signals that it is not ready.
- initialization of encoder 1 (motor encoder) was unsuccessful.
- the function "parking encoder" is active (encoder control word G1_STW.14 = 1).
- the encoder interface (Sensor Module) is de-activated (p0145).
- the Sensor Module is defective.

Remedy: Evaluate other queued faults via encoder 1.

A07576 Drive: Encoderless operation due to a fault active

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: Encoderless operation is active due to a fault (r1407.13).
The required response when an encoder fault occurs is parameterized in p0491.
See also: p0491 (Motor encoder fault response ENCODER)

Remedy:

A07577 (F) Encoder 1: Measuring probe evaluation not possible

Message value: %1

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: When evaluating the measuring probe, an error occurred.

Cause: An activated reference function (reference mark search or measuring probe evaluation) was interrupted.
- an encoder fault has occurred (Gn_ZSW.15 = 1).
- position actual value was set during an activated reference function.
- simultaneously activate reference mark search and measuring probe evaluation (BI: p2508 and BI: p2509 = 1 signal).
- activated reference function (reference mark search or measuring probe evaluation) was de-activated (BI: p2508 and BI: p2509 = 0 signal).

Remedy: - check the causes and resolve.
- reset the control (BI: p2508 and BI: p2509 = 0 signal) and activate the requested function.

Reaction upon F: OFF1 (OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY

A07597 (F) Encoder 2: Reference function interrupted

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: An activated reference function (reference mark search or measuring probe evaluation) was interrupted.
- an encoder fault has occurred (Gn_ZSW.15 = 1).
- position actual value was set during an activated reference function.
- simultaneously activate reference mark search and measuring probe evaluation (BI: p2508 and BI: p2509 = 1 signal).
- activated reference function (reference mark search or measuring probe evaluation) was de-activated (BI: p2508 and BI: p2509 = 0 signal).

Remedy: - check the causes and resolve.
- reset the control (BI: p2508 and BI: p2509 = 0 signal) and activate the requested function.

Reaction upon F: OFF1 (OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY

A07598 (F) Encoder 3: Reference function interrupted

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: An activated reference function (reference mark search or measuring probe evaluation) was interrupted.
- an encoder fault has occurred (Gn_ZSW.15 = 1).
- position actual value was set during an activated reference function.
- simultaneously activate reference mark search and measuring probe evaluation (BI: p2508 and BI: p2509 = 1 signal).
- activated reference function (reference mark search or measuring probe evaluation) was de-activated (BI: p2508 and BI: p2509 = 0 signal).

Remedy: - check the causes and resolve.
- reset the control (BI: p2508 and BI: p2509 = 0 signal) and activate the requested function.

Reaction upon F: OFF1 (OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY

F07599 (A) Encoder 1: Adjustment not possible

Message value: Drive data set: %1

Drive object: SERVO, VECTOR

Reaction: OFF1 (NONE, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: The maximum encoder value times the factor to convert the absolute position (r0483 and/or r2723) from increments to length units (LU) has exceeed the value range (-2147483648 ... 2147483647) for displaying the position actual value.

Remedy: If the value for the maximum possible absolute position (LU) is greater than 4294967296, an adjustment cannot be made due to an overflow.
For rotary encoders, the maximum possible absolute position (LU) is calculated as follows:
1. Motor encoder without position tracking:
p2506 * p0433 * p2505 / (p0432 * p2504)
p2506 * p0433 * p2505 * p0421 / (p0432 * p2504) for multiturn encoders
2. Motor encoder with position tracking for measuring gear
p2506 * p0412 * p2505 / p2504
3. Motor encoder with position tracking for load gear:
p2506 * p2721 * p0433 / p0432
4. Motor encoder with position tracking for load and measuring gear:
p2506 * p2721

5. Direct encoder without position tracking:
p2506 * p0433 / p0432
p2506 * p0433 * p0421 / p0432 for multiturn encoders
6. Direct encoder with position tracking for measuring gear:
p2506 * p0412

Reaction: OFF1 (NONE, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: The maximum encoder value times the factor to convert the absolute position (r0483 and/or r2723) from increments to length units (LU) has exceeed the value range (-2147483648 ... 2147483647) for displaying the position actual value.

Remedy: If the value for the maximum possible absolute position (LU) is greater than 4294967296, an adjustment cannot be made due to an overflow.
For rotary encoders, the maximum possible absolute position (LU) is calculated as follows:
1. Motor encoder without position tracking:
p2506 * p0433 * p2505 / (p0432 * p2504)
p2506 * p0433 * p2505 * p0421 / (p0432 * p2504) for multiturn encoders
2. Motor encoder with position tracking for measuring gear
p2506 * p0412 * p2505 / p2504
3. Motor encoder with position tracking for load gear:
p2506 * p2721 * p0433 / p0432
4. Motor encoder with position tracking for load and measuring gear:
p2506 * p2721
5. Direct encoder without position tracking:
p2506 * p0433 / p0432
p2506 * p0433 * p0421 / p0432 for multiturn encoders
6. Direct encoder with position tracking for measuring gear:
p2506 * p0412

Reaction upon A: NONE

Acknowl. upon A: NONE

F07601 (A) Encoder 3: Adjustment not possible

Message value: Drive data set: %1

Drive object: SERVO, VECTOR

Reaction: OFF1 (NONE, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: The maximum encoder value times the factor to convert the absolute position (r0483 and/or r2723) from increments to length units (LU) has exceeed the value range (-2147483648 ... 2147483647) for displaying the position actual value.

Remedy: If the value for the maximum possible absolute position (LU) is greater than 4294967296, an adjustment cannot be made due to an overflow.
For rotary encoders, the maximum possible absolute position (LU) is calculated as follows:
1. Motor encoder without position tracking:
p2506 * p0433 * p2505 / (p0432 * p2504)
p2506 * p0433 * p2505 * p0421 / (p0432 * p2504) for multiturn encoders
2. Motor encoder with position tracking for measuring gear
p2506 * p0412 * p2505 / p2504
3. Motor encoder with position tracking for load gear:
p2506 * p2721 * p0433 / p0432
4. Motor encoder with position tracking for load and measuring gear:
p2506 * p2721
5. Direct encoder without position tracking:
p2506 * p0433 / p0432
p2506 * p0433 * p0421 / p0432 for multiturn encoders

6. Direct encoder with position tracking for measuring gear:
p2506 * p0412

Acknowl. upon A: NONE

F07800 Drive: No power unit present

Message value: -

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The power unit parameters cannot be read or no parameters are stored in the power unit.
Connection between the Control Unit and the Motor Module was interrupted or is defective.
This fault also occurs if an incorrect topology was selected in the commissioning software and this parameterization is then downloaded to the Control Unit.
See also: r0200 (Power unit current code number)

Remedy: - connect the data line to power unit and restart the Control Unit (POWER ON).
- check or replace the Control Unit.
- check the cable between the Control Unit and Motor Module.
- after correcting the topology, the parameters must be again downloaded using the commissioning software.

F07801 Drive: Motor overcurrent

Message value: -

Drive object: SERVO

Reaction: OFF2 (NONE, OFF1, OFF3)

Acknowledge: IMMEDIATELY

Cause: The permissible motor limit current was exceeded.
- effective current limit set too low.
- current controller not correctly set.
- motor was braked with an excessively high stall torque correction factor.
- V/f operation: Up ramp was set too short or the load is too high.
- V/f operation: Short-circuit in the motor cable or ground fault.
- V/f operation: Motor current does not match the current of Motor Module.
Note:
Synchronous motor: Limit current= 1.3 * p0323
Induction motor: Limit current= 1.3 * r0209

Remedy: - check the current limits (p0323, p0640).
- check the current controller (p1715, p1717).
- reduce the stall torque correction factor (p0326).
- increase the up ramp (p1318) or reduce the load.
- check the motor and motor cables for short-circuit and ground fault.
- check the Motor Module and motor combination.

F07801 Drive: Motor overcurrent

Message value: -

Drive object: VECTOR

Reaction: OFF2 (NONE, OFF1, OFF3)

Acknowledge: IMMEDIATELY

Cause: The permissible motor limit current was exceeded.
- effective current limit set too low.
- current controller not correctly set.
- motor was braked with an excessively high stall torque correction factor.
- V/f operation: Up ramp was set too short or the load is too high.
- V/f operation: Short-circuit in the motor cable or ground fault.
- V/f operation: Motor current does not match the current of Motor Module.
Note:
Limit current = 2 * Minimum(p0640, 4 * p0305) >= 2 * p0305

Remedy: - check the current limits (p0640).
- vector control: Check the current controller (p1715, p1717).
- V/f control: Check the current limiting controller (p1340 ... p1346).
- increase the up ramp (p1120) or reduce the load.
- check the motor and motor cables for short-circuit and ground fault.
- check the Motor Module and motor combination.

F07802 Drive: Infeed or power unit not ready

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF2 (NONE)
Acknowledge: IMMEDIATELY
Cause: After an internal power-on command, the infeed or drive does not signal ready.
- monitoring time is too short.
- DC link voltage is not present.
- associated infeed or drive of the signaling component is defective.
- supply voltage incorrectly set.

Remedy: - increase the monitoring time (p0857).
- ensure that there is a DC link voltage. Check the DC link busbar. Enable the infeed.
- replace the associated infeed or drive of the signaling component.
- check the line supply voltage setting (p0210).

See also: p0857 (Power unit monitoring time)

A07805 (N) Infeed: Power unit overload I2t

Message value: -
Drive object: A_INF, B_INF, S_INF
Reaction: NONE
Acknowledge: NONE
Cause: Alarm threshold for I2t overload (p0294) of the power unit exceeded.
Remedy: - reduce the continuous load.
- adapt the load duty cycle.

Reaction upon N: NONE
Acknowl. upon N: NONE

A07805 (N) Drive: Power unit overload I2t

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: Alarm threshold for I2t overload (p0294) of the power unit exceeded.
The response parameterized in p0290 becomes active.
See also: p0290 (Power unit overload response)
Remedy: - reduce the continuous load.
- adapt the load duty cycle.
- check the assignment of the rated currents of the motor and Motor Module.

Reaction upon N: NONE
Acknowl. upon N: NONE

F07810 Drive: Power unit EEPROM without rated data

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: No rated data are stored in the power unit EEPROM.
See also: p0205 (Power unit application), r0206 (Rated power unit power), r0207 (Rated power unit current), r0208 (Rated power unit line supply voltage), r0209 (Power unit, maximum current)
Remedy: Replace the power unit or inform Siemens Customer Service.

F07815 Drive: Power unit has been changed

Message value: Parameter: %1

Drive object: A_INF, B_INF, S_INF

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The code number of the current power unit does not match the saved number. The fault only occurs if the comparator in p9906 or p9908 is not at f 2 (low) or 3 (minimum).
Fault value (r0949, interpret decimal):
Number of the incorrect parameter.
See also: r0200 (Power unit current code number), p0201 (Power unit code number)

Remedy: Connect the original power unit and power up the Control Unit again (POWER ON) or set p0201 to r0200 and exit commissioning with p0010 = 0.
For infeeds, the following applies:
Commutating reactors or line filters must be used that are specified for the new power unit. A line supply and DC link identification routine (p3410 = 5) must then be carried out. It is not possible to change the power unit without re-commissioning the system if the type of infeed (A_Infeed, B_Infeed, S_Infeed), the type of construction/design (booksize, chassis) or the voltage class differ between the old and new power units.
For inverters, the following applies:
If the new power unit is accepted, then if required, the current limit p0640 can be reduced by a lower maximum current of the power unit (r0209) (torque limits stay the same).
If not only the power unit is changed, but also the motor, then the motor must be re-commissioning (e.g. using p0010 = 1). This is also necessary if motor data is still to be downloaded via DRIVE-CLiQ.
See also: r0200 (Power unit current code number)

F07815 Drive: Power unit has been changed

Message value: Parameter: %1

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The code number of the current power unit does not match the saved number. The fault only occurs if the comparator in p9906 or p9908 is not at f 2 (low) or 3 (minimum).
Fault value (r0949, interpret decimal):
Number of the incorrect parameter.
See also: r0200 (Power unit current code number), p0201 (Power unit code number)

Remedy: Connect the original power unit and power up the Control Unit again (POWER ON) or set p0201 to r0200 and exit commissioning with p0010 = 0.
For infeeds, the following applies:
Commutating reactors or line filters must be used that are specified for the new power unit. A line supply and DC link identification routine (p3410 = 5) must then be carried out. It is not possible to change the power unit without re-commissioning the system if the type of infeed (A_Infeed, B_Infeed, S_Infeed), the type of construction/design (booksize, chassis) or the voltage class differ between the old and new power units.
For inverters, the following applies:
If the new power unit is accepted, then if required, the current limit p0640 can be reduced by a lower maximum current of the power unit (r0209) (torque limits stay the same).
If not only the power unit is changed, but also the motor, then the motor must be re-commissioning (e.g. using p0010 = 1). This is also necessary if motor data is still to be downloaded via DRIVE-CLiQ.
If the comparison stage in p9906 is set to 2, 3, then commissioning can be exited (p0010 = 0) and the fault acknowledged.

A07820 Drive: Temperature sensor not connected

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The temperature sensor for motor temperature monitoring, specified in p0600, is not available.
- parameter download with "incorrect" setting.
- module with sensor evaluation has been, in the meantime, been removed.
- temperature sensor via Motor Module, not for CU310.

Remedy: - connect the module with temperature sensor.
- set the available temperature sensor (p0600, p0601).
See also: p0600 (Motor temperature sensor for monitoring), p0601

A07825 (N) Drive: Simulation mode activated

Message value: -
Drive object: VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The simulation mode is activated.
The drive can only be powered up if the DC link voltage is less than 40 V.
Remedy: The alarm automatically disappears if simulation mode is de-activated with p1272 = 0.
Reaction upon N: NONE
Acknowl. upon N: NONE

F07826 Drive: Simulation mode with DC link voltage too high

Message value: -
Drive object: VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The simulation mode is activated and the DC link voltage is greater than the permissible value of 40 V.
Remedy: - switch out (disable) simulation mode (p1272 = 0) and acknowledge the fault.
- reduce the input voltage in order to reach a DC link voltage below 40 V.

F07840 Drive: Infeed operation missing

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF2 (NONE)
Acknowledge: IMMEDIATELY
Cause: The signal "infeed operation" is not present although the enable signals for the drive have been present for longer than the parameterized monitoring time (p0857).
- infeed not operational.
- interconnection of the binector input for the ready signal is either incorrect or missing (p0864).
- infeed is presently carrying out a line supply identification routine.
Remedy: - bring the infeed into an operational state.
- check the interconnection of the binector input for the signal "infeed operation" (p0864).
- increase the monitoring time (p0857).
- wait until the infeed has completed the line supply identification routine.
See also: p0857 (Power unit monitoring time), p0864 (Infeed operation)

F07841 Drive: Infeed operation withdrawn

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF2 (NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY
Cause: The signal "infeed operation" was withdrawn in operation.
- interconnection of the binector input for the signal "infeed operation" is either incorrect or missing (p0864).
- the enable signals of the infeed were disabled.
- due to a fault, the infeed withdraws the signal "infeed operation".
Remedy: - check the interconnection of the binector input for the signal "infeed operation" (p0864).
- check the enable signals of the infeed and if required, enable.
- remove and acknowledge an infeed fault.
Note:
If this drive is intended to back-up the DC link regeneratively, then the fault response must be parameterized for NONE, OFF1 or OFF3 so that the drive can continue to operate even after the infeed fails.

F07890 Internal voltage protection/internal armature short-circuit with Safe Torque Off active

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The internal armature short-circuit (p1231 = 4) is not possible as Safe Torque Off (STO) is enabled. The pulses cannot be enabled.
Remedy: Switch out the internal armature short-circuit (p1231=0) or de-activate Safe Torque Off (p9501 = p9561 = 0).
Note:
STO: Safe Torque Off / SH: Safe standstill

F07900 (N, A) Drive: Motor locked/speed controller at its limit

Message value: -
Drive object: SERVO
Reaction: OFF2 (NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY
Cause: Motor has been operating at the torque limit longer than the time specified in p2177 and below the speed threshold set in p2175.
This signal can also be initiated if the speed actual value is oscillating and the speed controller output repeatedly goes to its limit.
See also: p2175, p2177 (Motor locked delay time)
Remedy: - check that the motor can freely rotate.
- check the torque limit: For a positive direction of rotation r1538, for a negative direction of rotation r1539.
- check the parameter, message "Motor locked" and if required, correct (p2175, p2177).
- check the inversion of the actual value (p0410).
- check the motor encoder connection.
- check the encoder pulse number (p0408).
- for SERVO with encoderless operation and motors with low power ratings (< 300 W), increase the pulse frequency (p1800).
- after de-selecting basic positioning, check the torque limits when motoring (p1528) and when regenerating (p1529).

Reaction upon N: NONE

F07900 (N, A) Drive: Motor locked/speed controller at its limit

Message value: -
Drive object: VECTOR
Reaction: OFF2 (NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY
Cause: Motor has been operating at the torque limit longer than the time specified in p2177 and below the speed threshold set in p2175.
This signal can also be initiated if the speed actual value is oscillating and the speed controller output repeatedly goes to its limit.
If the simulation mode is enabled (p1272 = 1) and the closed-loop control with speed encoder activated (p1300 = 21), then the inhibit signal is generated if the encoder signal is not received from a motor that is driven with the torque setpoint of the closed-loop control.
See also: p2175, p2177 (Motor locked delay time)
Remedy: - check that the motor can freely rotate.
- check the torque limit: For a positive direction of rotation r1538, for a negative direction of rotation r1539.
- check the parameter, message "Motor locked" and if required, correct (p2175, p2177).
- check the inversion of the actual value (p0410).
- check the motor encoder connection.
- check the encoder pulse number (p0408).
- for SERVO with encoderless operation and motors with low power ratings (< 300 W), increase the pulse frequency (p1800).
- after de-selecting basic positioning, check the torque limits when motoring (p1528) and when regenerating (p1529).
- in the simulation mode and operation with speed encoder, the power unit to which the motor is connected must be powered up and must be supplied with the torque setpoint of the simulated closed-loop control. Otherwise, change over to encoderless control (refer to p1300).

F07901 Drive: Motor overspeed

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The maximum permissible speed was either positively or negatively exceeded.
The maximum permissible positive speed is formed as follows: Minimum (p1082, CI: p1085) + p2162
The maximum permissible negative speed is formed as follows: Maximum (-p1082, CI: 1088) - p2162
Remedy: The following applies for a positive direction of rotation:
- check r1084 and if required, correct p1082, CI:p1085 and p2162.
The following applies for a negative direction of rotation:
- check r1087 and if required, correct p1082, CI:p1088 and p2162.

F07902 (N, A) Drive: Motor stalled

Message value: %1
Drive object: SERVO
Reaction: OFF2 (NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY
Cause: For a vector drive the system has identified that the motor has stall for a time longer than is set in p2178.
Fault value (r0949, interpret decimal):
1: Stall detection using r1408.11 (p1744 or p0492).
2: Stall detection using r1408.12 (p1745).
3: Stall detection using r0056.11 (only for separately excited synchronous motors).
See also: p1744 (Motor model speed threshold stall detection), p2178 (Motor stalled delay time)
Remedy: For closed-loop speed and torque control with speed encoder, the following applies:
- check the speed signal (interrupted cable, polarity, pulse number, broken encoder shaft).
- check the speed encoder, if another speed encoder was selected using the data set changeover. This must be connected to the same motor that is controlled for the data set changeover.
If there is no fault, then the fault tolerance (p1744 and p0492) can be increased.
For closed-loop speed and torque control without speed encoder, the following applies:
- check whether the drive in the open-loop controlled mode (r1750.0) stalls under load. If yes, then increase the current setpoint using p1610.
- check whether the drive stalls due to the load if the speed setpoint is still zero. If yes, then increase the current setpoint using p1610.
- if the motor excitation (magnetizing) time (r0346) was significantly reduced, then it should be increased again.
- check the current limits (p0640, r0067). If the current limits are too low, then the drive cannot be magnetized.
- check the current controller (p1715, p1717) and the speed adaptation controller (p1764, p1767). If the dynamic response was significantly reduced, then this should be increased again.
- check the speed encoder, if another speed encoder was selected using the data set changeover. This must be connected to the motor that is controlled for the data set changeover.
If there is no fault, then the fault tolerance (p1745) or the delay time (p2178) can be increased.
For separately-excited synchronous motors (closed-loop control with speed encoder), the following applies:
- check the speed signal (interrupted cable, polarity, pulse number).
- ensure the correct motor parameterization (rating plate and equivalent circuit diagram parameters).
- check the excitation equipment and the interface to the closed-loop control.
- encoder the highest possible dynamic response of the closed-loop excitation current control.
- check the speed control for any tendency to oscillate and if resonance effects occur, use a bandstop filter.
- do not exceed the maximum speed (p2162).
If there is no fault, then the delay time can be increased (p2178).

F07902 (N, A) Drive: Motor stalled

Message value: %1
Drive object: VECTOR
Reaction: OFF2 (NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY
Cause: For a vector drive the system has identified that the motor has stall for a time longer than is set in p2178.
Fault value (r0949, interpret decimal):
1: Stall detection using r1408.11 (p1744 or p0492).
2: Stall detection using r1408.12 (p1745).
3: Stall detection using r0056.11 (only for separately excited synchronous motors).
See also: p1744 (Motor model speed threshold stall detection), p2178 (Motor stalled delay time)
Remedy: It should always be carefully ensured that the motor data identification (p1910) as well as the rotating measurement (p1960) were carried out (also refer to p3925). For synchronous motors with encoder, the encoder must have been adjusted (p1990).
For closed-loop speed and torque control with speed encoder, the following applies:
- check the speed signal (interrupted cable, polarity, pulse number, broken encoder shaft).
- check the speed encoder, if another speed encoder was selected using the data set changeover. This must be connected to the same motor that is controlled for the data set changeover.

If there is no fault, then the fault tolerance (p1744 and p0492) can be increased.
If the stalled motor should take place in the range of the monitor model and for speeds of less than 30 % of the rated motor speed, then a change can be made directly from the current model into the flux impression (p1401.5 = 1). We therefore recommend that the time-controlled model change is switched in (p1750.4 = 1) or the model changeover limits are significantly increased (p1752 > 0.35 * p0311; p1753 = 5 %).
For closed-loop speed and torque control without speed encoder, the following applies:
- Check whether the drive stalls solely due to the load in controlled mode (r1750.0) or when the speed setpoint is still zero. If so, increase the current setpoint via p1610 or set p1750 bit 2 = 1 (sensorless vector control to standstill for passive loads).
- If the motor excitation time (p0346) was reduced significantly and the drive stalls when it is switched on and run immediately, p0346 should be increased again or quick magnetization (p1401) selected.
- Check the current limits (p0640, r0067, r0289). If the current limits are too low, then the drive cannot be magnetized.
- check the current controller (p1715, p1717) and the speed adaptation controller (p1764, p1767). If the dynamic response was significantly reduced, then this should be increased again.
- check the speed encoder, if another speed encoder was selected using the data set changeover. This must be connected to the motor that is controlled for the data set changeover.
If there is no fault, then the fault tolerance (p1745) or the delay time (p2178) can be increased.
The following generally apply for closed-loop and torque control:
- Check whether the motor cables are disconnected.
- if the fault occurs with fault value 2 when the motor accelerates very quickly in the field weakening range, the deviation between the flux setpoint and actual value can be reduced by increasing p1596; as a consequence, the fault is not signaled.
For separately-excited synchronous motors (closed-loop control with speed encoder), the following applies:
- check the speed signal (interrupted cable, polarity, pulse number).
- ensure the correct motor parameterization (rating plate and equivalent circuit diagram parameters).
- check the excitation equipment and the interface to the closed-loop control.
- encoder the highest possible dynamic response of the closed-loop excitation current control.
- check the speed control for any tendency to oscillate and if resonance effects occur, use a bandstop filter.
- do not exceed the maximum speed (p2162).
If there is no fault, then the delay time can be increased (p2178).

Acknowl. upon N: NONE
Reaction upon A: NONE
Acknowl. upon A: NONE

A07903 Drive: Motor speed deviation

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The absolute value of the speed difference from the two setpoints (p2151, p2154) and the speed actual value (r2169) exceeds the tolerance threshold (p2163) longer than tolerated (p2164, p2166).
The alarm is only enabled for p2149.0 = 1.
Possible causes could be:
- the load torque is greater than the torque setpoint.
- when accelerating, the torque/current/power limit is reached. If the limits are not sufficient, then it is possible that the drive has been dimensioned too small.
- the speed controller is inhibited (refer to p0856; refer to Kp/Tn adaptation of the speed controller).
- for closed-loop torque control, the speed setpoint does not track the speed actual value.
- for active Vdc controller.
- the encoder pulse number was incorrectly parameterized (p0408).
The signal is not generated if the ramp-function generator tracking prevents the setpoint and actual speed from drifting (moving) apart.
Only for vector drives:
For V/f control, the overload condition is detected as the Imax controller is active.
See also: p2149 (Monitoring configuration)
Remedy: - increase p2163 and/or p2166.
- increase the torque/current/power limits.
- enable the speed controller.
- for closed-loop torque control: The speed setpoint should track the speed actual value.
- correct the encoder pulse number in p0408 or mount the correct tachometer.

A07904 (N) External armature short-circuit: Contactor feedback signal "Closed" missing

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: When closing, the contactor feedback signal (p1235) did not issue the signal "Closed" (r1239.1 = 1) within the monitoring time (p1236).
Remedy:
- check that the contactor feedback signal is correctly connected (p1235).
- check the logic of the contactor feedback signal (r1239.1 = 1: "Closed", r1239.1 = 0: "Open").
- increase the monitoring time (p1236).
- if required, set the external armature short-circuit without contactor feedback signal (p1231=2).

Reaction upon N: NONE
Acknowl. upon N: NONE

F07905 (N, A) External armature short-circuit: Contactor feedback signal "Open" missing

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2 (NONE)
Acknowledge: IMMEDIATELY
Cause: When opening, the contactor feedback signal (p1235) did not issue the signal "Open" (r1239.1 = 0) within the monitoring time (p1236).
Remedy:
- check that the contactor feedback signal is correctly connected (p1235).
- check the logic of the contactor feedback signal (r1239.1 = 1: "Closed", r1239.1 = 0: "Open").
- increase the monitoring time (p1236).
- if required, set the external armature short-circuit without contactor feedback signal (p1231=2).

F07906 Armature short-circuit / internal voltage protection: Parameterization error

Message value: Fault cause: %1, motor data set: %2
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The armature short-circuit is incorrectly parameterized.
Fault value (r0949, interpret decimal):
Low word: Motor data set number
High word: Cause:
1: A permanent-magnet synchronous motor has not been selected.
101: External armature short-circuit: Output (r1239.0) not connected up.
102: External armature short-circuit with contactor feedback signal: No feedback signal connected (BI:p1235).
103: External armature short-circuit without contactor feedback signal: Delay time when opening (p1237) is 0.
201: Internal voltage protection: The maximum output current of the Motor Module (r0289) is less than 1.8 * motor short-circuit current (r0331).
202: Internal voltage protection: A Motor Module in booksize format is not being used.
203: Internal voltage protection: The motor short-circuit current (p0320) is greater than the maximum motor current (p0323).
204: Internal voltage protection: The activation (p1231 = 4) is not given for all motor data sets with synchronous motors (p0300 = 2xx, 4xx).
Remedy: Re cause 1:
- an armature short-circuit / voltage protection is only permissible for permanent-magnetic synchronous motors. The highest position of the motor type in p0300 must either be 2 or 4.

Re cause 101:
- the contactor for the external armature short-circuit configuration should be controlled using output signal r1239.0. The signal can, e.g. be connected to an output terminal BI: p0738. Before this fault can be acknowledged, p1231 must be set again.

Re cause 102:

- if the external armature short-circuit with contactor feedback signal (p1231 = 1) is selected, this feedback signal must be connected to an input terminal (e.g. r722.x) and then connected to BI: p1235.
- alternatively, the external armature short-circuit without contactor feedback signal (p1231 = 2) can be selected.
Re cause 103:
- if the external armature short-circuit without contactor feedback signal (p1231 = 2) is selected, then a delay time must be parameterized in p1237. This time must always be greater than the actual contactor opening time, as otherwise the Motor Module would be short-circuited!
Re cause 201:
- a Motor Module with a higher maximum current or a motor with a lower short-circuit current must be used. The maximum Motor Module current must be higher than 1.8 * short-circuit current of the motor.
Re cause 202:
- for internal voltage protection, use a Motor Module in booksize format.
Re cause 203:
- for internal voltage protection, only use short-circuit proof motors.
Re cause 204:
- The internal voltage protection must either be activated for all motor data sets with synchronous motors (p0300 = 2xx, 4xx) (p1231 = 3) or it must be de-activated for all motor data sets (p1231 not equal to 3). This therefore ensures that the protection cannot be accidentally withdrawn as a result of a data set changeover. The fault can only be acknowledged if this condition is fulfilled.

F07907 Internal armature short-circuit: Motor terminals are not at zero potential after pulse suppression

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The function "Internal voltage protection" (p1231 = 3) was activated. The following must be observed:
- when the internal voltage protection is active, after pulse suppression, all of the motor terminals are at half of the DC link voltage (without an internal voltage protection, the motor terminals are at zero potential)!
- it is only permissible to use motors that are short-circuit proof (p0320 < p0323).
- the Motor Module must be able to continually conduct 180% short-circuit current (r0331) of the motor (r0289).
- the internal voltage protection cannot be interrupted due to a fault response. If an overcurrent condition occurs during the active, internal voltage protection, then this can destroy the Motor Module and/or the motor.
- if the Motor Module does not support the autonomous, internal voltage protection (r0192.10 = 0), in order to ensure safe, reliable functioning when the line supply fails, an external 24 V power supply (UPS) must be used for the components.
- if the Motor Module does support the autonomous, internal voltage protection (r0192.10 = 1), in order to ensure safe, reliable functioning when the line supply fails, the 24 V power supply for the components must be provided through a Control Supply Module.
- if the internal voltage protection is active, it is not permissible that the motor is driven by the load for a longer period of time (e.g. as a result of loads that move the motor or another coupled motor).

Remedy: None necessary.
This a note for the user.

A07908 Internal armature short-circuit active

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The Motor Module signals that the motor is short-circuited through the power semiconductors (r1239.5 = 1). The pulses cannot be enabled. The internal armature short-circuit is selected (p1231 = 4):

Remedy: For synchronous motors, the armature short-circuit braking is activated if a 1 signal is present via binector input p1230.
See also: p1230 (Armature short-circuit / DC brake activation), p1231 (Armature short-circuit / DC brake configuration)

F07909 Internal voltage protection: De-activation only effective after POWER ON

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: POWER ON
Cause: The de-activation of the internal voltage protection (p1231 not equal to 3) only becomes effective after POWER ON.
The status signal r1239.6 = 1 indicates that the internal voltage protection is ready.
Remedy: None necessary.
This a note for the user.

A07910 (N) Drive: Motor overtemperature

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: KTY:
The motor temperature has exceeded the fault threshold (p0604 or p0616).
VECTOR: The response parameterized in p0610 becomes active.
PTC:
The response threshold of 1650 Ohm was exceeded.
Alarm value (r2124, interpret decimal):
SME not selected in p0601:
1: No output current reduction.
2: Output current reduction active.
SME selected in p0601 (p0601 = 10):
The number specifies the sensor channel that resulted in the alarm being output.
See also: p0604 (Motor overtemperature alarm threshold), p0610 (Motor overtemperature response)
Remedy: - check the motor load.
- check the motor ambient temperature.
- check KTY84.
Reaction upon N: NONE
Acknowl. upon N: NONE

F07913 Excitation current outside the tolerance range

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The difference between the excitation current actual value and setpoint has exceeded the tolerance:
abs(r1641 - r1626) > p3201 + p3202
The cause of this fault is again reset for abs(r1641 - r1626) < p3201.
Remedy: - check the parameterization (p1640, p3201, p3202).
- check the interfaces to the excitation equipment (r1626, p1640).
- check the excitation equipment.

F07914 Flux out of tolerance

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The difference between the flux actual value and setpoint has exceeded the tolerance:
abs(r0084 - r1598) > p3204 + p3205
The cause of this fault is again reset for abs(r0084 - r1598) < p3204.
The fault is only issued after the delay time in p3206 has expired.

Remedy: - check the parameterization (p3204, p3205).
- check the interfaces to the excitation equipment (r1626, p1640).
- check the excitation equipment.
- check the flux control (p1592, p1592, p1597).
- check the control for oscillation and take the appropriate counter measures (e.g. optimize the speed control loop, parameterize a bandstop filter).

A07918 (N) Three-phase setpoint generator operation selected/active

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: Only for separately excited synchronous motors (p0300 = 5):
The current open-loop/closed-loop control mode is I/f control (open-loop) with a fixed current (p1300 = 18).
The speed is entered via the setpoint channel and the current setpoint is given by the minimum current (p1620).
It must be ensured that in this mode, the control dynamic performance is very limited. This is the reason that longer ramp-up times should be set for the setpoint speed than for normal operation.
See also: p1620 (Stator current, minimum)
Remedy: Select another open-loop/closed-loop control mode
See also: p1300 (Open-loop/closed-loop control operating mode)
Reaction upon N: NONE
Acknowl. upon N: NONE

A07920 Drive: Torque too low

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The torque deviates from the torque/speed envelope characteristic in the negative direction (too low).
See also: p2181 (Load monitoring response)
Remedy: Adapt the load.

A07921 Drive: Torque too high

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The torque deviates from the torque/speed envelope characteristic in the positive direction (too high).
Remedy: Adapt the load.

A07922 Drive: Torque outside the tolerance

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The torque deviates from the torque/speed envelope characteristic.
Remedy: Adapt the load.

F07923 Drive: Torque too low

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The torque deviates from the torque/speed envelope characteristic in the negative direction (too low).
Remedy: Adapt the load.

F07924 Drive: Torque too high

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The torque deviates from the torque/speed envelope characteristic in the positive direction (too high).
Remedy: Adapt the load.

F07925 Drive: Torque outside the tolerance

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The torque deviates from the torque/speed envelope characteristic.
Remedy: Adapt the load.

A07926 Drive: Envelope curve, parameter invalid

Message value: Parameter: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: Invalid parameter values were entered for the envelope characteristic of the load monitoring.
The following rules apply for the speed thresholds:
p2182 < p2183 < p2184
The following rules apply for the torque thresholds:
p2185 > p2186
p2187 > p2188
p2189 > p2190
Alarm value (r2124, interpret decimal):
Number of the parameter with the invalid value.
Remedy: Set the parameters for the load monitoring according to the applicable rules.

A07927 DC brake active

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The motor is braked using DC current - the DC current brake is active.
Remedy: 1) An alarm with alarm response DC brake is active.
The motor is braked with the DC braking current p1232 for the duration in p1233. If the standstill threshold p1226 is undershot, then braking is prematurely canceled.
2) The DC braking function was activated at Bico input p1230 for a set DC brake p1230=4.
Braking current p1232 should be impressed until the Bico activation is canceled again.

F07928 Internal voltage protection initiated

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The Motor Module signals that the motor is short-circuited through the power semiconductors (r1239.5 = 1). The pulses cannot be enabled. The internal voltage protection is selected (p1231 = 3).

Remedy: If the Motor Module supports the autonomous internal voltage protection (r0192.10 = 1), then the Motor Module automatically decides - using the DC link voltage - as to whether the armature short-circuit should be activated.
The armature short-circuit is activated and response OFF2 is initiated if the DC link voltage exceeds 800 V. If the DC link voltage falls below 450 V, then the armature short-circuit is withdrawn.
If the motor is still in a critical speed range, the armature short-circuit is re-activated once the DC link voltage exceeds the threshold of 800 V.
If the autonomous (independent) internal voltage protection is active (r1239.5 = 1) and the line supply returns (450 V < DC link voltage < 800 V), the armature short-circuit is withdrawn after 1 minute.

F07930 Drive: Brake control error

Message value: %1

Drive object: SERVO, VECTOR

Reaction: OFF1 (NONE, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: The Control Unit has detected a brake control error.
Fault value (r0949, interpret decimal):
10, 11:
Fault in "open holding brake" operation.
- No brake connected or wire breakage (check whether brake releases for p1278 = 1).
- Ground fault in brake cable.
20:
Fault in "brake open" state.
- Short-circuit in brake winding.
30, 31:
Fault in "close holding brake" operation.
- No brake connected or wire breakage (check whether brake releases for p1278 = 1).
- Short-circuit in brake winding.
40:
Fault in "brake closed" state.
50:
Fault in the brake control circuit of the Control Unit or communication fault between the Control Unit and Motor Module (brake control).
Note:
The following causes may apply to fault values:
- motor cable is not shielded correctly.
- defect in control circuit of the Motor Module.
See also: p1278 (Brake control, diagnostics evaluation)

Remedy: - check the motor holding brake connection.
- check the function of the motor holding brake.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
- check that the electrical cabinet design and cable routing are in compliance with EMC regulations (e.g. shield of the motor cable and brake conductors are connected with the shield connecting plate and the motor connectors are tightly screwed to the housing).
- replace the Motor Module involved.
Operation with Safe Brake Module:
- check the Safe Brake Modules connection.
- replace the Safe Brake Module.
See also: p1215 (Motor holding brake configuration), p1278 (Brake control, diagnostics evaluation)

A07931 (F, N) Brake does not open

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: This alarm is output for r1229.4 = 1.
See also: p1216 (Motor holding brake, opening time), r1229 (Motor holding brake status word)

Remedy: - check the functionality of the motor holding brake.
- check the feedback signal (p1223).

Reaction upon F: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY
Reaction upon N: NONE
Acknowl. upon N: NONE

A07932 Brake does not close

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: This alarm is output for r1229.5 = 1.
For r1229.5 = 1, OFF/OFF3 are suppressed to prevent the drive accelerating by a load that drives the motor - whereby OFF2 remains effective.
See also: p1217 (Motor holding brake closing time), r1229 (Motor holding brake status word)
Remedy: - check the functionality of the motor holding brake.
- check the feedback signal (p1222).

F07935 (N) Drv: Motor holding brake detected

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: A motor with integrated motor holding brake was detected where the brake control has not been configured (p1215 = 0). The brake control configuration was then set to "motor holding brake the same as sequence control" (p1215 = 1).
Remedy: None necessary.
See also: p1215 (Motor holding brake configuration)
Reaction upon N: NONE
Acknowl. upon N: NONE

F07940 Sync-line-drive: Synchronization error

Message value: -
Drive object: VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: After synchronization has been completed, the phase difference (r3808) is greater than the threshold value, phase synchronism (p3813).
OFF1 or OFF3 response, while the closed-loop phase control is active (r3819.6 = 1) or synchronism reached (r3819.2 = 1).
Enable signal withdrawn (p3802 = 0), while the closed-loop phase control was active (r3819.6 = 1).
Remedy: If required increase the threshold value phase synchronism (p3813) for synchronizing the line supply to the drive.
Before OFF1 or OFF3, complete synchronizing (r03819.0 = 0).
Before withdrawing the enable signal (p3802 = 0), reach synchronism (r3819.2 = 1).
See also: p3813 (Sync-line-drive phase synchronism threshold value)

A07941 Sync-line-drive: Target frequency not permissible

Message value: Parameter: %1
Drive object: VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The target frequency is outside the permissible value range.
Alarm value (r2124, interpret decimal):
1084: Target frequency greater than the positive speed limit, f_sync > f_max (r1084).
1087: Target frequency less than the negative speed limit, f_sync < f_min (r1087).
Remedy: Fulfill the conditions for the target frequency for line-drive synchronization.
See also: r1084, r1087

A07942 Sync-line-drive: Setpoint frequency is completely different than the target frequency

Message value: -
Drive object: VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: There is a considerable difference between the setpoint frequency and the target frequency (f_set <> f_target). The deviation that can be tolerated is set in p3806.
Remedy: The alarm automatically disappears after the difference that can be tolerated between the setpoint and target frequencies (p3806) is reached.
See also: p3806 (Sync-line-drive frequency difference threshold value)

A07943 Sync-line-drive: Synchronization not permitted

Message value: Parameter: %1
Drive object: VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: Synchronization is not permitted.
Alarm value (r2124, interpret decimal):
1300: The control mode (p1300) has not been set to encoderless closed-loop speed control or V/f characteristic.
1910: Motor data identification activated.
1960: Speed controller optimization activated.
1990: Encoder adjustment activated.
3801: Voltage Sensing Module (VSM) not found.
3845: Friction characteristic record activated.
Remedy: Fulfill the conditions for the line-drive synchronization.
Re alarm value = 1300:
Set the control mode (p1300) to encoderless closed-loop speed control (p1300 = 20) or V/f characteristic (p1300 = 0 ... 19).
Re alarm value = 1910:
Exit the motor data identification routine (p1910).
Re alarm value = 1960:
Exist the speed controller optimization routine (p1960).
Re alarm value = 1990:
Exit the encoder adjustment (p1990).
Re alarm value = 3801:
Connect-up a Voltage Sensing Module (VSM) and when connecting to an adjacent drive object ensure that the drive objects have the same basis clock cycle.
Re alarm value = 3845:
Exit the friction characteristic record (p3845).

F07950 (A) Drive: Incorrect motor parameter

Message value: Parameter: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: - the motor parameters were incorrectly entered while commissioning (e.g. p0300 = 0, no motor)
The braking resistor (p6811) has still not been parameterized - commissioning cannot be completed.
Fault value (r0949, interpret decimal):
The parameter number involved.
See also: p0300, p0301, p0304, p0305, p0307, p0310, p0311, p0314, p0315, p0316, p0320, p0322, p0323
Remedy: Compare the motor data with the rating plate data and if required, correct.
See also: p0300, p0301, p0304, p0305, p0307, p0310, p0311, p0314, p0316, p0320, p0322, p0323
Reaction upon A: NONE
Acknowl. upon A: NONE

F07955 Drive: Motor has been changed

Message value: Parameter: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The code number of the current motor with DRIVE-CLiQ does not match the saved number.
Fault value (r0949, interpret decimal):
Number of the incorrect parameter.
See also: p0301 (Motor code number selection), r0302 (Motor code number of motor with DRIVE-CLiQ)
Remedy: Connect the original motor, power up the Control Unit again (POWER ON) and exit the quick commissioning by setting p0010 to 0.
Or set p0300 = 10000 (load the motor parameter with DRIVE-CLiQ) and re-commission.
Quick commissioning (p0010 = 1) is automatically exited with p3900 > 0.
If quick commissioning was exited by setting p0010 to 0, then an automatic controller calculation (p0340 = 1) is not carried out.

F07956 (A) Drive: Motor code does not match the list (catalog) motor

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The motor code of the current motor with DRIVE-CLiQ does not match the possible list motor types (refer to the selection, p0300).
Fault value (r0949, interpret decimal):
Motor code of the motor with DRIVE-CLiQ
Remedy: Use a motor with DRIVE-CLiQ and the matching motor code.
The first three digits of the motor code generally correspond to the matching list motor type.
Reaction upon A: NONE
Acknowl. upon A: NONE

A07960 Drive: Incorrect friction characteristic

Message value: Parameter: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The friction characteristic is incorrect.
Alarm value (r2124, interpret decimal):
1538:
The friction torque is greater than the maximum from the upper effective torque limit (p1538) and zero. This is the reason that the output of the friction characteristic (r3841) is limited to this value.
1539:
The friction torque is less than the minimum from the lower effective torque limit (p1539) and zero. This is the reason that the output of the friction characteristic (r3841) is limited to this value.
3820 ... 3829:
Incorrect parameter number. The speeds entered in the parameters for the friction characteristic do not correspond to the following condition:
0.0 < p3820 < p3821 < ... < p3829 <= p0322 or p1082, if p0322 = 0
Therefore the output of the friction characteristic (r3841) is set to zero.
3830 ... 3839:
Incorrect parameter number. The torques entered in the parameters for the friction characteristic do not correspond to the following condition:
0 <= p3830, p3831 ... p3839 <= p0333
Therefore the output of the friction characteristic (r3841) is set to zero.
See also: r3840 (Friction characteristic, status word)

Remedy: Fulfill the conditions for the friction characteristic.
Re alarm value = 1538:
Check the upper effective torque limit (e.g. in the field weakening range).
Re alarm value = 1539:
Check the lower effective torque limit (e.g. in the field weakening range).
Re alarm value = 3820 ... 3839:
Fulfill the conditions to set the parameters of the friction characteristic.
If the motor data (e.g. the maximum speed p0322) are changed during commissioning (p0010 = 1, 3), then the technological limits and threshold values, dependent on this, must be re-calculated by selecting p0340= 5).

A07961 Drive: Friction characteristic record activated

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The automatic friction characteristic record is activated.
The friction characteristic is recorded at the next power-on command.
Remedy: None necessary.
The alarm disappears automatically after the friction characteristic record has been successfully completed or the record is de-activated (p3845 = 0).

F07963 Drive: Friction characteristic record interrupted

Message value: Parameter: %1
Drive object: SERVO, VECTOR
Reaction: OFF1
Acknowledge: IMMEDIATELY
Cause: The conditions to record the friction characteristic are not fulfilled.
Fault value (r0949, interpret decimal):
0046: Missing enable signals (r0046).
1082: The highest speed value to be approached (p3829) is greater than the maximum speed (p1082).
1084: The highest speed value to be approached (p3829) is greater than the maximum speed (r1084, p1083, p1085).
1087: The highest speed value to be approached (p3829) is greater than the maximum speed (r1087, p1086, p1088).
1110: Friction characteristic record, negative direction selected (p3845) and negative direction inhibited (p1110).
1111: Friction characteristic record, positive direction selected (p3845) and positive direction inhibited (p1111).
1198: Friction characteristic record selected (p3845 > 0) and negative (p1110) and positive directions (p1111) inhibited (r1198).
1300: The control mode (p1300) has not been set to closed-loop speed control.
1755: For encoderless closed-loop control (p1300 = 20), the lowest speed value to be approached (p3820) is less than or equal to the changeover speed, open-loop controlled operation (p1755).
1910: Motor data identification activated.
1960: Speed controller optimization activated.
3820 ... 3829: Speed (p382x) cannot be approached.
3840: Friction characteristic incorrect.
3845: Friction characteristic record de-selected.
Remedy: Fulfill the conditions to record the friction characteristic.
Re fault value = 0046:
Establish missing enable signals.
Re fault value = 0840:
Select OFF1 (p0840) only after the friction characteristic record has been completed.
Re fault value = 1082, 1084, 1087:
Select the highest speed value to be approached (p3829) less than or equal to the maximum speed (p1082, r1084, r1087).
Re-calculate the speed points along the friction characteristic (p0340 = 5).
Re fault value = 1110:
Select the friction characteristic record, positive direction (p3845).
Re fault value = 1111:
Select the friction characteristic record, negative direction (p3845).
Re fault value = 1198:
Enable the permitted direction (p1110, p1111, r1198).
Re fault value = 1300:
Set the control mode (p1300) on the closed-loop speed control (p1300 = 20, 21).

Re fault value = 1755:
For encoderless closed-loop speed control (p1300 = 20) select the lowest speed value to be approached (p3820) greater than the changeover speed of open-loop controlled operation (p1755).
Re-calculate the speed points along the friction characteristic (p0340 = 5).
Re fault value = 1910:
Exit the motor data identification routine (p1910).
Re fault value = 1960:
Exist the speed controller optimization routine (p1960).
Re fault value 3820 ... 3829:
- check the load at speed p382x.
- check the speed signal (r0063) for oscillation at speed p382x. If required, check the speed controller settings.
Re fault value = 3840:
Make the friction characteristic error-free (p3820 - p3829, p3830 - p3839, p3840).
Re fault value = 3845:
Activate the friction characteristic record (p3845).

A07965 (N) Drive: Save required

Message value: -
Drive object: SERVO
Reaction: NONE
Acknowledge: NONE
Cause: The angular commutation offset (p0431) was re-defined and has still not been saved.
In order to permanently accept the new value, it must be saved in a non-volatile fashion (p0971, p0977).
See also: p0431 (Angular commutation offset), p1990 (Encoder adjustment, determine angular commutation offset)
Remedy: None necessary.
This alarm automatically disappears after the data has been saved.
See also: p0971 (Save drive object parameters), p0977 (Save all parameters)
Reaction upon N: NONE
Acknowl. upon N: NONE

F07966 Drive: Check the commutation angle

Message value: -
Drive object: SERVO
Reaction: OFF2 (NONE)
Acknowledge: IMMEDIATELY
Cause: The speed actual value was inverted and the associated angular commutation offset is not equal to zero and is therefore possibly incorrect.
Remedy: Angular commutation offset after the actual value inversion or determine it again (p1990=1).

F07967 Drive: Automatic encoder adjustment incorrect

Message value: %1
Drive object: VECTOR
Reaction: OFF2 (NONE, OFF1)
Acknowledge: IMMEDIATELY
Cause: A fault has occurred during the automatic encoder adjustment or the pole position identification.
Only for internal Siemens troubleshooting.
Remedy: Carry out a POWER ON.

F07968 Drive: Lq-Ld measurement incorrect

Message value: %1

Drive object: VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: A fault has occurred during the Lq-Ld measurement.
Fault value (r0949, interpret decimal):
10: Stage 1: The ratio between the measured current and zero current is too low.
12: Stage 1: The maximum current was exceeded.
15: Second harmonic too low.
16: Drive converter too small for the measuring technique.
17: Abort due to pulse inhibit.

Remedy: Re fault value = 10:
Check whether the motor is correctly connected.
Replace the Motor Module involved.
De-activate traversing (p1909).
Re fault value = 12:
Check whether motor data have been correctly entered.
De-activate traversing (p1909).
Re fault value = 16:
De-activate traversing (p1909).
Re fault value = 17:
Repeat traversing.

F07969 Drive: Incorrect pole position identification

Message value: %1

Drive object: VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: A fault has occurred during the pole position identification routine.
Fault value (r0949, interpret decimal):
1: Current controller limited
2: Motor shaft locked.
4: Encoder speed signal not plausible.
10: Stage 1: The ratio between the measured current and zero current is too low.
11: Stage 2: The ratio between the measured current and zero current is too low.
12: Stage 1: The maximum current was exceeded.
13: Stage 2: The maximum current was exceeded.
14: Current difference to determine the +d axis too low.
15: Second harmonic too low.
16: Drive converter too small for the measuring technique.
17: Abort due to pulse inhibit.
18: First harmonic too low.
20: Pole position identification requested with the motor shaft rotating and activated flying restart function.

Remedy: Re fault value = 1:
Check whether the motor is correctly connected.
Check whether motor data have been correctly entered.
Replace the Motor Module involved.
Re fault value = 2:
Open the motor holding brake (p1215) and bring the motor into a no-load condition.
Re fault value = 4:
Check whether the encoder pulse number (p0408) and gearbox factor (p0432, p0433) are correct.
Check whether the motor pole pair number is correct (p0314).
Re fault value = 10:
When selecting p1980 = 4: Increase the value for p0325.
When selecting p1980 = 1: Increase the value for p0329.
Check whether the motor is correctly connected.
Replace the Motor Module involved.

Re fault value = 11:
Increase the value for p0329.
Check whether the motor is correctly connected.
Replace the Motor Module involved.
Re fault value = 12:
When selecting p1980 = 4: Reduce the value for p0325.
When selecting p1980 = 1: Reduce the value for p0329.
Check whether motor data have been correctly entered.
Re fault value = 13:
Reduce the value for p0329.
Check whether motor data have been correctly entered.
Re fault value = 14:
Increase the value for p0329.
Re fault value = 15:
Increase the value for p0325.
Motor not sufficiently anisotropic, change the technique (p1980==1 or 10).
Re fault value = 16:
De-activate traversing/moving (p1982).
Re fault value = 17:
Repeat traversing.
Re fault value = 18:
Increase the value for p0329.
Saturation not sufficient, change the technique (p1980==10).
Re fault value = 20:
Before carrying out a pole position identification routine ensure that the motor shaft is absolutely stationary (zero speed).

F07970 Drive: Automatic encoder adjustment incorrect

Message value: %1

Drive object: VECTOR

Reaction: OFF2 (NONE)

Acknowledge: IMMEDIATELY

Cause: A fault has occurred during the automatic encoder adjustment.
Fault value (r0949, decimal):
1: Current controller limited
2: Motor shaft locked.
4: Encoder speed signal not plausible.
10: Stage 1: The ratio between the measured current and zero current is too low.
11: Stage 2: The ratio between the measured current and zero current is too low.
12: Stage 1: The maximum current was exceeded.
13: Stage 2: The maximum current was exceeded.
14: Current difference to determine the +d axis too low.
15: Second harmonic too low.
16: Drive converter too small for the measuring technique.
17: Abort due to pulse inhibit.

Remedy: Re fault value = 1:
Check whether the motor is correctly connected.
Check whether motor data have been correctly entered.
Replace the Motor Module involved.
Re fault value = 2:
Open the motor holding brake (p1215) and bring the motor into a no-load condition.
Re fault value = 4:
Check whether the speed actual value inversion is correct (p0410.0).
Check whether the motor is correctly connected.
Check whether the encoder pulse number (p0408) and gearbox factor (p0432, p0433) are correct.
Check whether the motor pole pair number is correct (p0314).
Re fault value = 10:
Increase the value for p0325.
Check whether the motor is correctly connected.
Replace the Motor Module involved.
Re fault value = 11:
Increase the value for p0329.

Check whether the motor is correctly connected.
Replace the Motor Module involved.
Re fault value = 12:
Reduce the value for p0325.
Check whether motor data have been correctly entered.
Re fault value = 13:
Reduce the value for p0329.
Check whether motor data have been correctly entered.
Re fault value = 14:
Increase the value for p0329.
Re fault value = 15:
Increase the value for p0325.
Re fault value = 16:
De-activate traversing/moving (p1982).
Re fault value = 17:
Repeat traversing.

A07971 (N) Drive: Angular commutation offset determination activated

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The automatic determination of the angular commutation offset (encoder adjustment) is activated (p1990 = 1).
The automatic determination is carried out with the next power-on command.
For SERVO and fault F07414 present, the following applies:
The determination of the angular commutation offset is automatically activated (p1990 = 1), if a pole position identification technique is set in p1980.
See also: p1990 (Encoder adjustment, determine angular commutation offset)
Remedy: None necessary.
The alarm automatically disappears after determination or for the setting p1990 = 0.
Reaction upon N: NONE
Acknowl. upon N: NONE

A07980 Drive: Rotating measurement activated

Message value: -
Drive object: SERVO
Reaction: NONE
Acknowledge: NONE
Cause: The rotating measurement is activated. For the rotating measurement, the motor can accelerate up to the maximum speed and with maximum torque. Only the parameterized current limit (p0640) and the maximum speed (p1082) are effective. The behavior of the motor can be influenced using the direction inhibit (p1959.14, p1959.15) and the ramp-up/ramp-down time (p1958).
The rotating measurement is carried out at the next power-on command.
See also: p1960
Remedy: None necessary.
The alarm automatically disappears after the rotating measurement has been successfully completed or for the setting p1960 = 0.

A07980 Drive: Rotating measurement activated

Message value: -
Drive object: VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The rotating measurement (automatic speed controller optimization) is activated.
The rotating measurement is carried out at the next power-on command.
See also: p1960
Remedy: None necessary.
The alarm disappears automatically after the speed controller optimization has been successfully completed or for the setting p1900 = 0.

A07981 Drive: Enable signals for the rotating measurement missing

Message value: -
Drive object: VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The rotating measurement cannot be started due to missing enable signals.
Remedy: - acknowledge faults that are present.
- establish missing enable signals.
See also: r0002, r0046

F07982 Drive: Rotating measurement encoder test

Message value: %1
Drive object: VECTOR
Reaction: OFF1 (NONE, OFF2)
Acknowledge: IMMEDIATELY
Cause: A fault has occurred during the encoder test.
Fault value (r0949, interpret decimal):
1: The speed did not reach a steady-state condition.
2: The speed setpoint was not able to be approached as the minimum limiting is active.
3: The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active.
4: The speed setpoint was not able to be approached as the maximum limiting is active.
5: The encoder does not supply a signal.
6: Incorrect polarity.
7: Incorrect pulse number.
8: Noise in the encoder signal or speed controller unstable.
9: Voltage Sensing Module (VSM) incorrectly connected.
Remedy: Re fault value = 1:
- check the motor parameters.
- carry out a motor data identification routine (p1910).
- if required, reduce the dynamic factor (p1967 < 25 %).
Re fault value = 2:
- adapt the speed setpoint (p1965) or adapt the minimum limit (p1080).
Re fault value = 3:
- adapt the speed setpoint (p1965) or suppression (skip) bandwidths (p1091 ... p1094, p1101).
Re fault value = 4:
- adapt the speed setpoint (p1965) or maximum limit (p1082, p1083 and p1086).
Re fault value = 5:
- check the encoder connection. If required, replace the encoder.
Re fault value = 6:
- check the connection assignment of the encoder cable. Adapt the polarity (p0410).
Re fault value = 7:
- adapt the pulse number (p0408).
Re fault value = 8:
- check the encoder connection and encoder cable. It is possible that there is a problem associated with the ground connection.
- reduce the dynamic response of the speed controller (p1460, p1462 and p1470, p1472).
Re fault value = 9:
- check the connections of the Voltage Sensing Module (VSM).
Note:
The encoder test can be switched out (disabled) using p1959.0.
See also: p1959

F07983 Drive: Rotating measurement saturation characteristic

Message value: %1

Drive object: VECTOR

Reaction: OFF1 (NONE, OFF2)

Acknowledge: IMMEDIATELY

Cause: A fault has occurred while determining the saturation characteristic.
Fault value (r0949, interpret decimal):
1: The speed did not reach a steady-state condition.
2: The rotor flux did not reach a steady-state condition.
3: The adaptation circuit did not reach a steady-state condition.
4: The adaptation circuit was not enabled.
5: Field weakening active.
6: The speed setpoint was not able to be approached as the minimum limiting is active.
7: The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active.
8: The speed setpoint was not able to be approached as the maximum limiting is active.
9: Several values of the determined saturation characteristic are not plausible.
10: Saturation characteristic could not be sensibly determined because load torque too high.

Remedy: Re fault value = 1:
- the total drive moment of inertia is far higher than that of the motor (p0341, p0342).
De-select rotating measurement (p1960), enter the moment of inertia p0342, re-calculate the speed controller p0340 = 4 and repeat the measurement.
Re fault value = 1 ... 2:
- increase the measuring speed (p1961) and repeat the measurement.
Re fault value = 1 ... 4:
- check the motor parameters (rating plate data). After the change: Calculate p0340 = 3.
- check the moment of inertia (p0341, p0342). After the change: Calculate p0340 = 3.
- carry out a motor data identification routine (p1910).
- if required, reduce the dynamic factor (p1967 < 25 %).
Re fault value = 5:
- the speed setpoint (p1961) is too high. Reduce the speed.
Re fault value = 6:
- adapt the speed setpoint (p1961) or minimum limiting (p1080).
Re fault value = 7:
- adapt the speed setpoint (p1961) or suppression (skip) bandwidths (p1091 ... p1094, p1101).
Re fault value = 8:
- adapt the speed setpoint (p1961) or maximum limit (p1082, p1083 and p1086).
Re fault value = 9, 10:
- the measurement was carried out at an operating point where the load torque is too high. Select a more suitable operating point, either by changing the speed setpoint (p1961) or by reducing the load torque. The load torque may not be varied while making measurements.
Note:
The saturation characteristic identification routine can be disabled using p1959.1.
See also: p1959

F07984 Drive: Speed controller optimization, moment of inertia

Message value: %1

Drive object: VECTOR

Reaction: OFF1 (NONE, OFF2)

Acknowledge: IMMEDIATELY

Cause: A fault has occurred while identifying the moment of inertia.
Fault value (r0949, interpret decimal):
1: The speed did not reach a steady-state condition.
2: The speed setpoint was not able to be approached as the minimum limiting is active.
3. The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active.
4. The speed setpoint was not able to be approached as the maximum limiting is active.

5: It is not possible to increase the speed by 10% as the minimum limiting is active.
6: It is not possible to increase the speed by 10% as the suppression (skip) bandwidth is active.
7: It is not possible to increase the speed by 10% as the maximum limiting is active.
8: The torque difference after the speed setpoint step is too low in order to be able to still reliably identify the moment of inertia.
9: Too few data to be able to reliably identify the moment of inertia.
10: After the setpoint step, the speed either changed too little or in the incorrect direction.
11: The identified moment of inertia is not plausible.

Remedy: Re fault value = 1:
- check the motor parameters (rating plate data). After the change: Calculate p0340 = 3.
- check the moment of inertia (p0341, p0342). After the change: Calculate p0340 = 3.
- carry out a motor data identification routine (p1910).
- if required, reduce the dynamic factor (p1967 < 25 %).

Re fault value = 2, 5:
- adapt the speed setpoint (p1965) or adapt the minimum limit (p1080).

Re fault value = 3, 6:
- adapt the speed setpoint (p1965) or suppression (skip) bandwidths (p1091 ... p1094, p1101).

Re fault value = 4, 7:
- adapt the speed setpoint (p1965) or maximum limit (p1082, p1083 and p1086).

Re fault value = 8:
- the total drive moment of inertia is far higher than that of the motor (refer to p0341, p0342). De-select rotating measurement (p1960), enter the moment of inertia p342, re-calculate the speed controller p0340 = 4 and repeat the measurement.

Re fault value = 9:
- check the moment of inertia (p0341, p0342). After the change, re-calculate (p0340 = 3 or 4)

Re fault value = 10:
- check the moment of inertia (p0341, p0342). After the change: Calculate p0340 = 3.

Note:
The moment of inertia identification routine can be disabled using p1959.2.
See also: p1959

F07985 Drive: Speed controller optimization (oscillation test)

Message value: %1

Drive object: VECTOR

Reaction: OFF1 (NONE, OFF2)

Acknowledge: IMMEDIATELY

Cause: A fault has occurred during the vibration test.
Fault value (r0949, interpret decimal):
1: The speed did not reach a steady-state condition.
2: The speed setpoint was not able to be approached as the minimum limiting is active.
3: The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active.
4: The speed setpoint was not able to be approached as the maximum limiting is active.
5: Torque limits too low for a torque step.
6: No suitable speed controller setting was found.

Remedy: Re fault value = 1:
- check the motor parameters (rating plate data). After the change: Calculate p0340 = 3.
- check the moment of inertia (p0341, p0342). After the change: Calculate p0340 = 3.
- carry out a motor data identification routine (p1910).
- if required, reduce the dynamic factor (p1967 < 25 %).

Re fault value = 2:
- adapt the speed setpoint (p1965) or adapt the minimum limit (p1080).

Re fault value = 3:
- adapt the speed setpoint (p1965) or suppression (skip) bandwidths (p1091 ... p1094, p1101).

Re fault value = 4:
- adapt the speed setpoint (p1965) or maximum limit (p1082, p1083 and p1086).

Re fault value = 5:
- increase the torque limits (e.g. p1520, p1521).

Re fault value = 6:
- reduce the dynamic factor (p1967).
- disable the vibration test (p1959.4 = 0) and repeat the rotating measurement.

See also: p1959

F07986 Drive: Rotating measurement ramp-function generator

Message value: %1
Drive object: VECTOR
Reaction: OFF1 (NONE, OFF2)
Acknowledge: IMMEDIATELY
Cause: During the rotating measurements, problems with the ramp-function generator occurred.
Fault value (r0949, interpret decimal):
1: The positive and negative directions are inhibited.
Remedy: Re fault value = 1:
Enable the direction (p1110 or p1111).

A07987 Drive: Rotating measurement, no encoder available

Message value: %1
Drive object: VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: No encoder available. The rotating measurement was carried out without encoder.
Remedy: Connect encoder or select p1960 = 1, 3.

F07988 Drive: Rotating measurement, no configuration selected

Message value: -
Drive object: VECTOR
Reaction: OFF2 (NONE, OFF1)
Acknowledge: IMMEDIATELY
Cause: When configuring the rotating measurement (p1959), no function was selected.
Remedy: Select at least one function for automatic optimization of the speed controller (p1959).
See also: p1959

F07989 Drive: Rotating measurement leakage inductance (q-axis)

Message value: %1
Drive object: VECTOR
Reaction: OFF1 (NONE, OFF2)
Acknowledge: IMMEDIATELY
Cause: An error has occurred while measuring the dynamic leakage inductance.
Fault value (r0949, interpret decimal):
1: The speed did not reach a steady-state condition.
2: The speed setpoint was not able to be approached as the minimum limiting is active.
3: The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active.
4: The speed setpoint was not able to be approached as the maximum limiting is active.
5: The 100% flux setpoint was not reached.
6: No Lq measurement possible because field weakening is active.
7: Speed actual value exceeds the maximum speed p1082 or 75% of the rated motor speed.
8: Speed actual value is below 2 % of the rated motor speed.
Remedy: Re fault value = 1:
- check the motor parameters.
- carry out a motor data identification routine (p1910).
- if required, reduce the dynamic factor (p1967 < 25 %).
Re fault value = 2:
- adapt the speed setpoint (p1965) or adapt the minimum limit (p1080).
Re fault value = 3:
- adapt the speed setpoint (p1965) or suppression (skip) bandwidths (p1091 ... p1094, p1101).
Re fault value = 4:
- adapt the speed setpoint (p1965) or maximum limit (p1082, p1083 and p1086).
Re fault value = 5:
- flux setpoint p1570 = 100% and current setpoint p1610 = 0% kept during the Lq measurement.

Re fault value = 6:
- reduce the regenerative load so that the drive does not reach field weakening when accelerating.
- reduce p1965 so that the q leakage inductance is recorded at lower speeds.
Re fault value = 7:
- increase p1082 if this is technically permissible.
- reduce p1965 so that the q leakage inductance is recorded at lower speeds.
Re fault value = 8:
- reduce the load when motoring so that the drive is not braked.
- increase p1965 so that the measurement is possibly done at higher speeds.
Note:
The measurement of the q leakage inductance can be disabled using p1959.5. If only p1959.5 is set, then only this measurement is carried out if p1960 is set to 1, 2 and the drive is powered up.
See also: p1959

F07990 Drive: Incorrect motor data identification

Message value: %1

Drive object: SERVO, VECTOR

Reaction: OFF2 (NONE, OFF1)

Acknowledge: IMMEDIATELY

Cause: A fault has occurred during the identification routine.
Fault value (r0949, interpret decimal):
1: Current limit value reached.
2: Identified stator resistance lies outside the expected range 0.1 ... 100 % of Zn.
3: Identified rotor resistance lies outside the expected range 0.1 ... 100 % of Zn.
4: Identified stator reactance lies outside the expected range 50 ... 500 % of Zn.
5: Identified magnetizing reactance lies outside the expected range 50 ... 500 % of Zn.
6: Identified rotor time constant lies outside the expected range 10 ms ... 5 s.
7: Identified total leakage reactance lies outside the expected range 4 ... 50 % of Zn.
8: Identified stator leakage reactance lies outside the expected range 2 ... 50 % of Zn.
9: Identified rotor leakage reactance lies outside the expected range 2 ... 50 % of Zn.
10: Motor has been incorrectly connected.
11: Motor shaft rotates.
20: Identified threshold voltage of the semiconductor devices lies outside the expected range 0 ... 10 V.
30: Current controller in voltage limiting.
40: At least one identification contains errors. The identified parameters are not saved to prevent inconsistencies.
50: With the selected current controller sampling rate, the pulse frequency cannot be implemented.
Note:
Percentage values are referred to the rated motor impedance:
Zn = Vmot.nom / sqrt(3) / Imot,nom
101: Voltage amplitude even at 30% maximum current amplitude is too low to measure the inductance.
102, 104: Voltage limiting while measuring the inductance.
103: Maximum frequency exceeded during the rotating inductance measurement.
110: Motor not finely synchronized before the rotating measurement.
111: The zero mark is not received within 2 revolutions.
112: Fine synchronization is not realized within 8 seconds after the zero mark has been passed.
113: The power, torque or current limit is zero.
120: Error when evaluating the magnetizing inductance.
125: Cable resistance greater than the total resistance.
126: Series inductance greater than the total leakage inductance.
127: Identified leakage inductance negative.
128: Identified stator resistance negative.
129: Identified rotor resistance negative.
130: Drive data set changeover during the motor data identification routine.
140: The setpoint channel inhibits both directions.
160: Accelerating when determining kT, moment of inertia or reluctance torque too short or the accelerating time is too long.

173: Internal problem.
180: Identification speed (maximum speed, rated speed, 0.9 * p0348) less than p1755.
190: Speed setpoint not equal to zero.
191: An actual speed of zero is not reached.
192: Speed setpoint not reached.
193: Inadmissible motion of the motor when identifying the voltage emulation error.
194: Supplementary torque (r1515) not equal to zero.
195: Closed-loop torque control active.
200, 201: Not possible to identify the voltage emulation error characteristic of the drive converter (p1952, p1953).

Remedy:

Re fault value = 0:
- check whether the motor is correctly connected. Observe configuration (star/delta).

Re fault value = 1 ... 40:
- check whether motor data have been correctly entered in p0300, p0304 ... p0311.
- is there an appropriate relationship between the motor power rating and that of the Motor Module? The ratio of the Motor Module to the rated motor current should not be less than 0.5 and not be greater than 4.
- check configuration (star/delta).

Re fault value = 2:
- for parallel circuits, check the motor winding system in p7003. If, for power units connected in parallel, a motor is specified with a single-winding system (p7003 = 0), although a multi-winding system is being used, then a large proportion of the stator resistance is interpreted as feeder cable resistance and entered in p0352.

Re fault value = 4, 7:
- check whether inductances are correctly entered in p0233 and p0353.
- check whether motor was correctly connected (star/delta).

Re fault value = 50:
- reduce the current controller sampling rate.

Re fault value = 101:
- increase current limit (p0640) or torque limit (p1520, p1521).
- check current controller gain (p1715).
- reduce current controller sampling time (p0115).
- it may be impossible to completely identify the L characteristic, as required current amplitude is too high.
- suppress meas. (p1909, p1959).

Re fault value = 102, 104:
- reduce current limit (p0640).
- check current controller P gain.
- suppress meas. (p1909, p1959).

Re fault value = 103:
- increase external moment of inertia (if possible).
- reduce current controller sampling time (p0115).
- suppress meas. (p1909, p1959).

Re fault value = 110:
- before rotating measurement, traverse motor over zero mark.

Re fault value = 111:
- it is possible that encoder does not have zero mark. Correct setting in p0404.15.
- encoder pulse number was incorrectly entered. Correct setting in p0408.
- if zero mark signal is defective, replace encoder.

Re fault value = 112:
- upgrade encoder software.

Re fault value = 113:
- check the limits (p0640, p1520, p1521, p1530, p1531), correct the zero values.

Re fault value = 120:
- check current controller P gain (p1715) and if required, reduce.
- increase the pulse frequency (p1800).

Re fault value = 125:
- reduce cable resistance (p0352).

Re fault value = 126:
- reduce series inductance (p0353).

Re fault value = 127, 128, 129:
- it is possible that current controller is oscillating. Reduce p1715 before next measurement.

Re fault value = 130:
- do not initiate a drive data set changeover during motor ident. routine.

Re fault value = 140:
- before the measurement, enable at least one direction (p1110 = 0 or p1111 = 0 or p1959.14 = 1 or p1959.15 = 1).

Re fault value = 160:
- extend accelerating time when determining kT, moment of inertia and reluctance torque, e.g. by increasing max. speed (p1082), increasing moment of inertia or reducing max. current (p0640).
- in encoderless operation with load moment of inertia, parameterize the load moment of inertia (p1498).
- reduce the ramp-up time (p1958).
- increase speed controller P-gain (p1460).
- suppress meas. (p1959).

Re fault value = 173:
-

Re fault value = 180:
- increase max. speed (p1082).
- reduce p1755.
- suppress meas. (p1909, p1959).

Re fault value = 190:
- set speed setpoint to zero.

Re fault value = 191:
- do not start motor data ident. routine while motor is still rotating.

Re fault value = 192:
- check closed-loop speed control (motor rotor may be locked or closed-loop speed control is not functioning).
- for p1215 = 1, 3 (brake the same as the sequence control) check the control sense (p0410.0).
- ensure that enable signals are present during measurement.
- remove any pulling loads from motor.
- increase max. current (p0640).
- reduce max. speed (p1082).
- suppress meas. (p1959).

Re fault value = 193:
- the motor has moved through more than 5° electrical (r0093). Lock motor rotor at one of these pole position angles (r0093): 90 °, 210 ° or 330 ° (+/-5 °) and then start identification.

Re fault value = 194:
- switch out all supplementary torques (e.g. CI: p1511).
- for hanging/suspended axes: Lock motor rotor at one of these pole position angles (r0093): 90 °, 210 ° or 330 ° (+/-1 °) and then start identification.

Re fault value = 195:
- de-select closed-loop torque control (p1300 = 21 or 20, or set the signal source in p1501 to a 0 signal).

Re fault value = 200, 201:
- set pulse frequency to 0.5 * current controller frequency (e.g. 4 kHz for a current controller clock cycle of 125 us).
- reduce cable length between Motor Module and motor.
- read-out measured values (r1950, r1951) and therefore determine suitable values for p1952, p1953 according to your own estimation.

A07991 (N) Drive: Motor data identification activated

Message value: -

Drive object: SERVO

Reaction: NONE

Acknowledge: NONE

Cause: The motor data ident. routine is activated.
The motor data identification routine is carried out at the next power-on command.
See also: p1910, p1960

Remedy: None necessary.
The alarm automatically disappears after the motor data identification routine has been successfully completed or for the setting p1910 = 0 or p1960 = 0.

Reaction upon N: NONE

Acknowl. upon N: NONE

A07991 (N) Drive: Motor data identification activated

Message value: -
Drive object: VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The motor data ident. routine is activated.
The motor data identification routine is carried out at the next power-on command.
See also: p1910
Remedy: None necessary.
The alarm automatically disappears after the motor data identification routine has been successfully completed or for the setting p1900 = 0.
Reaction upon N: NONE
Acknowl. upon N: NONE

F07993 Drive: Incorrect direction of rotation of the field or encoder actual value inversion

Message value: -
Drive object: SERVO
Reaction: OFF2 (NONE)
Acknowledge: IMMEDIATELY
Cause: Either the direction of the rotating field or the encoder actual value has an incorrect sign. The motor data identification automatically changed the actual value inversion (p0410) in order to correct the control sense. This can result in a direction of rotation change. To acknowledge this fault, the correctness of the direction of rotation must first be acknowledged with p1910 = -2.
Remedy: Check the direction of rotation, also for the position controller, if one is being used.
If the direction of rotation is correct, the following applies:
No additional measures are required (except p1910 = -2 and acknowledge fault).
If the direction of rotation is incorrect, the following applies:
To change the direction of rotation, two phases must be interchanged and the motor identification routine must be repeated.

F07995 Drive: Pole position identification not successful

Message value: %1
Drive object: SERVO
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The pole position identification routine was unsuccessful.
Fault value (r0949, interpret decimal):
1: No current is established.
2: The starting current is not zero.
3: The selected max. distance was exceeded (p1981).
4x: The measuring signal does not permit a clear evaluation.
5: The max. current was exceeded during the measurement.
6: The current measurement must be re-calibrated.
7x: The Sensor Module does not support the pole position identification routine.
70 ... 79: Only for internal Siemens troubleshooting.
8: The pole position identification routine current required is greater than the max. current.
9: The set pole position identification routine current is zero.
10: Data set changeover during the pole position identification.
11: The encoder adjustment to determine the commutation angle (p1990 = 1) and the encoder without zero mark is not finely synchronized or does not have any valid data.
100: Motion-based pole position identification, 1st and 2nd measurement different. Motor locked or current (p1993) too low.
101: Motion-based position position identification, insufficient motion, motor locked or current (p1993) too low.
102: Motion-based pole position identification, brake is being used and is closed. The motion-based position position identification in conjunction with the brake is not permitted.
103: Motion-based pole position identification without encoder.
104: Motion-based pole position identification, speed actual value not zero after stabilizing time.
Note: x = 0 ... 9

Remedy: Re fault value = 1:
Check the motor connection and DC link voltage.
For the following parameters, set practical values that are not zero (p0325, p0329).
Re fault value = 3:
Increase the max. distance (p1981).
Reduce the currents for the pole position identification routine (p0325, p0329).
Stop the motor in order to carry out the pole position identification routine.
Re fault value = 40 ... 49:
Increase the currents for the pole position identification routine (p0325, p0329).
Stop the motor in order to carry out the pole position identification routine.
Select another technique for pole position identification routine (p1980).
Use another motor, absolute encoder or Hall sensors.
Re fault value = 5:
Reduce the currents for the pole position identification routine (p0325, p0329).
Re fault value = 6:
Re-calibrate the Motor Module.
Re fault value = 7x:
Upgrade the software in the Sensor Module.
Re fault value = 8:
Reduce the currents for the pole position identification routine (p0329, p0325, p1993).
The power unit cannot provide the necessary pole position identification routine current (p0209 < p0329, p0325, p1993), replace the power unit by a power unit with a higher max. current.
Re fault value = 9:
Enter a value not equal to zero in the pole position identification routine current (p0329, p0325, p1993).
Re fault value = 10:
Do not initiate a data set changeover during the pole position identification.
Re fault value = 11:
- for incremental encoders without commutation with zero mark (p0404.15 = 0), it does not make sense to adjust the encoder to determine the commutation angle (p1990 = 1). In this case, the function should be de-selected (p1990 = 0) or, for an encoder with suitable zero mark, commutation with zero mark should be selected (p0404.15 = 1).
- for absolute encoders, only adjust the encoder to determine the commutation angle (p1990 = 1) if the encoder supplies commutation information and is finely synchronized (p1992.8 = 1 and p1992.10 = 1). The encoder is possibly parked, de-activated (p0145), not ready to operate or signals a fault condition.
- deselect the encoder adjustment to determine the commutation angle (set p1990 to 0).
Re fault value = 100, 101:
Check and ensure that the motor is free to move.
Increase the current for motion-based pole position identification (p1993).
Re fault value = 102:
If the motor is to be operated with a brake: Select a different technique to identify the pole position (p1980).
If the motor can be operated without a brake: Open the brake (p1215 = 2).
Re fault value = 103:
The motion-based pole position identification can only be carried out using an encoder. Connect an encoder or select another technique for pole position identification routine (p1980).
Re fault value = 104:
Pole position identification, increase the smoothing time, motion-based (p1997).
Pole position identification, increase the rise time, motion-based (p1994).
Pole position identification, check the gain, motion-based (p1995).
Pole position identification, check the integral time, motion-based (p1996).

F07996 Drive: Pole position identification routine not carried out

Message value: -
Drive object: SERVO
Reaction: ENCODER (OFF2)
Acknowledge: IMMEDIATELY
Cause: In operation, the operating mode that requires a pole position identification was changed over, which is not possible in this state:
- the drive was changed over, flying, from encoderless operation to operation with encoder without having previously carried out a pole position identification for the encoder. p1404 is then at a value between zero and the max. speed and the pulses in the speed range above p1404 were enabled without a pole position ident. routine having been previously carried out in operation with encoder.
- in operation, an EDS changeover was made to an encoder where it is necessary to carry out a pole position identification. However, this has still not been carried out (p1982 = 1 or 2 and p1992.7 = 0).

Remedy: - for a flying changeover between operation with and without encoder with pole position identification after POWER ON or commissioning (p0010 not equal to zero) enable the pulses once at zero speed. This means that the pole position identification routine is carried out and the result is available for operation.
- carry out the EDS changeover with the pulses inhibited, or, before the changeover, carry out a pole position identification using this data set.

A07998 Drive: Motor data identification active on another drive

Message value: %1
Drive object: SERVO
Reaction: NONE
Acknowledge: NONE
Cause: The motor data identification is activated on the drive object specified in the fault value and interlocks the other drive objects so they cannot be powered up.
Fault value (r0949, interpret decimal):
Drive object with the active motor data identification.
See also: p1910, p1960
Remedy: - wait for the complete execution of the motor data identification of the drive object designated in the fault value.
- de-select the motor data identification for the drive object designated in the fault value (p1910 = 0 or p1960 = 0).

A07999 Drive: Motor data identification cannot be activated

Message value: %1
Drive object: SERVO
Reaction: NONE
Acknowledge: NONE
Cause: Closed-loop control is enabled on a SERVO drive object type. To select motor data identification, pulses must be suppressed for all SERVO drive objects.
Fault value (r0949, interpret decimal):
Drive object with enabled closed-loop control.
Remedy: Withdraw the pulse enable on all drives and re-activate the motor data identification.

Acknowledge: IMMEDIATELY

Cause: A CANopen NMT state transition from "operational" to "pre-operational" or after "stopped".
Fault value (r0949, interpret decimal):
1: CANopen NMT state transition from "operational" to "pre-operational".
2: CANopen NMT state transition from "operational" to "stopped".
Note:
In the NMT state "pre-operational", process data cannot be transferred and in the NMT state "stopped", no process data and no service data can be transferred.

Remedy: None necessary.
Acknowledge the fault and continue operation.

A08751 CBC: Telegram loss

Message value: -

Drive object: A_INF, B_INF, CU_LINK, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The CAN controller has lost a receive message (telegram).

Remedy: Reduce the cycle times of the receive messages.

A08752 CBC: Error counter for error passive exceeded

Message value: -

Drive object: A_INF, B_INF, CU_LINK, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The error counter for the send or receive telegrams has exceeded the value 127.

Remedy: - check the bus cable
- set a higher baud rate (p8622).
- check the bit timing and if required optimize (p8623).
See also: p8622 (CBC baud rate), p8623 (CBC bit timing selection)

A08753 CBC: Message buffer overflow

Message value: %1

Drive object: A_INF, B_INF, CU_LINK, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: A message buffer overflow.
Alarm value (r2124, interpret decimal):
1: Non-cyclic send buffer (SDO response buffer) overflow.
2: Non-cyclic receive buffer (SDO receive buffer) overflow.
3: Cyclic send buffer (PDO send buffer) overflow.

Remedy: Check the bus cable.
Set a higher baud rate (p8622).
Check the bit timing and if required optimize (p8623).
Re alarm value = 2:
- reduce the cycle times of the SDO receive messages.
See also: p8622 (CBC baud rate), p8623 (CBC bit timing selection)

A08754 CBC: Incorrect communications mode

Message value: -

Drive object: A_INF, B_INF, CU_LINK, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: In the "operational" mode, an attempt was made to change parameters p8700 ... p8737.

Remedy: Change to the "pre-operational" or "stopped" mode.

A08755 CBC: Obj cannot be mapped

Message value: -

Drive object: A_INF, B_INF, CU_LINK, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The CANopen object is not provided for the Process Data Object (PDO) Mapping.

Remedy: Use a CANopen object intended for the PDO mapping or enter 0.
The following objects can be mapped in the Receive Process Data Object (RPDO) or Transmit Process Data Object (TPDO):
- RPDO: 6040 hex, 6060 hex, 60FF hex, 6071 hex; 5800 hex - 580F hex; 5820 hex - 5827 hex
- TPDO: 6041 hex, 6061 hex, 6063 hex, 6069 hex, 606B hex, 606C hex, 6074 hex; 5810 hex - 581F hex; 5830 hex - 5837 hex
Only sub-index 0 of the specified objects can be mapped.
Note:
As long as A08755 is present, the COB-ID cannot be set to valid.

A08756 CBC: Number of mapped bytes exceeded

Message value: -
Drive object: A_INF, B_INF, CU_LINK, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The number of bytes of the mapped objects exceeds the telegram size for net data. A max. of 8 bytes is permissible.
Remedy: Map fewer objects or objects with a smaller data type.
See also: p8710, p8711, p8712, p8713, p8714, p8715, p8716, p8717, p8730, p8731, p8732, p8733, p8734, p8735, p8736, p8737

A08757 CBC: Set COB-ID invalid

Message value: -
Drive object: A_INF, B_INF, CU_LINK, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: For online operation, the appropriate COB-ID must be set invalid before mapping.
Example:
Mapping for RPDO 1 should be changed (p8710[0]).
--> set p8700[0] = C00006E0 hex (invalid COB-ID)
--> set p8710[0] as required.
--> p8700[0] enter a valid COB-ID
Remedy: Set the COB-ID to invalid.

A08758 CBC: Number of PDO channels too low

Message value: -
Drive object: A_INF, B_INF, CU_LINK, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The number of PDO channels in p8740 has either been set to 0 or too low.
See also: p8740 (CBC channel assignment)
Remedy: The number of channels set in p8740 must be greater than or equal to the number of PDOs.
There are 2 possibilities:
Increase the number of channels in p8740 and confirm the selection using p8741.
Reduce the number of PDOs by setting the COB-ID to invalid.
See also: p8740 (CBC channel assignment), p8741 (CBC PDO configuration acknowledgement)

A08759 CBC: PDO COB-ID already available

Message value: -
Drive object: A_INF, B_INF, CU_LINK, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: An existing PDO COB-ID was allocated.
Remedy: Select another PDO COB-ID.

A13000 License not adequate

Message value: %1

Drive object: A_INF, B_INF, CU_LINK, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: - for the drive unit, the options that require a license are being used but the licenses are not sufficient.
- an error occurred when checking the existing licenses.
Alarm value (r2124, interpret decimal):
0:
The existing license is not sufficient.
1:
An adequate license was not able to be determined as the memory card with the required licensing data was withdrawn in operation.
2:
An adequate license was not able to be determined, as an error occurred when reading-out the required licensing data from the memory card.
3:
An adequate license was not able to be determined as there is a checksum error in the license key.
4:
An internal error occurred when checking the license.

Remedy: Re alarm value = 0:
Additional licenses are required and these must be activated (p9920, p9921).
Re alarm value = 1:
With the system powered down, re-insert the memory card that matches the system.
Re alarm value = 2:
Enter and activate the license key (p9920, p9921).
Re alarm value = 3:
Compare the license key (p9920) entered with the license key on the certificate of license.
Re-enter the license key and activate (p9920, p9921).
Re alarm value = 4:
- carry out a POWER ON.
- upgrade firmware to later version.
- contact the Hotline.

A13001 Error in license checksum

Message value: -

Drive object: A_INF, B_INF, CU_LINK, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: When checking the checksum of the license key, an error was detected.

Remedy: Compare the license key (p9920) entered with the license key on the certificate of license.
Re-enter the license key and activate (p9920, p9921).

F30001 Power unit: Overcurrent

Message value: Fault cause: %1 bin

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: The power unit has detected an overcurrent condition.
- closed-loop control is incorrectly parameterized.
- motor has a short-circuit or fault to ground (frame).
- V/f operation: Up ramp set too low.
- V/f operation: Rated motor current is significantly greater than that of the Motor Module.
- infeed: High discharge and post-charging current for line supply voltage interruptions.
- infeed: High post-charging currents for overload when motoring and DC link voltage dip.
- infeed: Short-circuit currents at power-on due to the missing commutating reactor.
- power cables are not correctly connected.
- power cables exceed the maximum permissible length.
- power unit defective.

Additional causes for a parallel switching device (r0108.15 = 1):
- a power unit has tripped (powered down) due to a ground fault.
- the closed-loop circulating current control is either too slow or has been set too fast.

Fault value (r0949, interpret bitwise binary):
Bit 0: Phase U.
Bit 1: Phase V.
Bit 2: Phase W.
Note:
Fault = 0 means that the phase with overcurrent is not recognized (e.g. for Blocksize device).

Remedy:
- check the motor data - if required, carry out commissioning.
- check the motor circuit configuration (star-delta).
- V/f operation: Increase up ramp.
- V/f operation: Check the assignment of the rated currents of the motor and Motor Module.
- infeed: Check the line supply quality.
- infeed: Reduce the load when motoring.
- infeed: Correct connection of the line commutating reactor.
- check the power cable connections.
- check the power cables for short-circuit or ground fault.
- check the length of the power cables.
- replace power unit.

For a parallel switching device (r0108.15 = 1) the following additionally applies:
- check the ground fault monitoring thresholds (p0287).
- check the setting of the closed-loop circulating current control (p7036, p7037).

F30002 Power unit: DC link voltage, overvoltage

Message value: %1

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: The power unit has detected an overvoltage condition in the DC link.
- motor regenerates too much energy.
- device supply voltage too high.
- when operating with a VSM, the phase assignment L1, L2, L3 at the VSM differs from the phase assignment at the power unit.

Fault value (r0949, interpret decimal):
DC link voltage [1 bit = 100 mV].
For SINAMICS GM/SM, the following applies:
Fault value (r0949, interpret decimal):
32: Overvoltage in the negative partial DC link (VdcP)
64: Overvoltage in the positive partial DC link (VdcN)
96: Overvoltage in both partial DC links

Remedy: - increase the ramp-down time.
- activate the DC link voltage controller.
- use a brake resistor or Active Line Module.
- increase the current limit of the infeed or use a larger module (for the Active Line Module).
- check the device supply voltage.
- check and correct the phase assignment at the VSM and at the power unit.
See also: p0210 (Drive unit line supply voltage), p1240 (Vdc controller or Vdc monitoring configuration)

F30003 Power unit: DC link voltage, undervoltage

Message value: -

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: The power unit has detected an undervoltage condition in the DC link.
- line supply failure
- line supply voltage below the permissible value.
- line supply infeed failed or interrupted.
Note:
The monitoring threshold for the DC link undervoltage is the minimum of the following values:
- for a calculation, refer to p0210.

Remedy: - check the line supply voltage
- check the line supply infeed and if necessary observe the fault messages of the line supply infeed.
Note:
The "ready for operation" signal of the infeed r0863 must be connected to the associated inputs p0864 of the drives.
See also: p0210 (Drive unit line supply voltage)

F30004 Power unit: Overtemperature heat sink AC inverter

Message value: %1

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: The temperature of the power unit heat sink has exceeded the permissible limit value.
- insufficient cooling, fan failure.
- overload.
- ambient temperature too high.
- pulse frequency too high.
Fault value (r0949):
Temperature [1 bit = 0.01 °C].

Remedy: - check whether the fan is running.
- check the fan elements
- check whether the ambient temperature is in the permissible range.
- check the motor load.
- reduce the pulse frequency if this is higher than the rated pulse frequency.
Notice:
This fault can only be acknowledged after this alarm threshold for alarm A05000 has been undershot.
See also: p1800 (Pulse frequency)

F30005 Power unit: Overload I2t

Message value: %1

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: The power unit was overloaded (r0036 = 100 %).
- the permissible rated power unit current was exceeded for an inadmissibly long time.
- the permissible load duty cycle was not maintained.
Fault value (r0949, interpret decimal):
I2t [100 % = 16384].

Remedy: - reduce the continuous load.
- adapt the load duty cycle.
- check the motor and power unit rated currents.
See also: r0036 (Power unit overload I2t), r0206 (Rated power unit power), p0307 (Rated motor power)

F30006 Power unit: Thyristor Control Board

Message value: -

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: The Thyristor Control Board (TCB) of the Basic Line Module signals a fault.
- there is no line supply voltage.
- the line contactor is not closed.
- the line supply voltage is too low.
- line supply frequency outside the permissible range (45 ... 66 Hz).
- there is a DC link short-circuit.
- there is a DC link short-circuit (during the pre-charging phase).
- voltage supply for the Thyristor Control Board outside the nominal range (5 ... 18 V) and line voltage >30 V.
- there is an internal fault in the Thyristor Control Board.

Remedy: The faults must be saved in the Thyristor Control Board and must be acknowledged. To do this, the supply voltage of the Thyristor Control Board must be switched out for at least 10 s!
- check the line supply voltage
- check or energize the line contactor.
- check the monitoring time and, if required, increase (p0857).
- if required, observe additional power unit messages/signals.
- check the DC link regarding short-circuit or ground fault.
- evaluate diagnostic LEDs for the Thyristor Control Board.

F30008 Power unit: Sign-of-life error cyclic data

Message value: -

Drive object: All objects

Reaction: A_INFEED: NONE (OFF1, OFF2)
SERVO: NONE (OFF1, OFF2, OFF3)
VECTOR: NONE (OFF1, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: The power unit has detected that the cyclic setpoint telegrams of the Control Unit were not punctually updated for at least two clock cycles within a time interval of 20 ms.

Remedy: - check the electrical cabinet design and cable routing for EMC compliance
- for projects with the VECTOR drive object, check whether p0117 = 6 has been set on the Control Unit.
See also: p0117 (Current controller computing dead time mode)

A30010 (F) Power unit: Sign-of-life error cyclic data

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: A DRIVE-CLiQ communication error has occurred between the Control Unit and the power unit involved.
The cyclic setpoint telegrams of the Control Unit were not received on time by the power unit for at least one clock cycle.

Remedy: - check the electrical cabinet design and cable routing for EMC compliance

Reaction upon F: A_INFEED: NONE (OFF1, OFF2)
SERVO: NONE (OFF1, OFF2, OFF3)
VECTOR: NONE (OFF1, OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY (POWER ON)

F30011 Power unit: Line phase failure in main circuit

Message value: -
Drive object: All objects
Reaction: OFF2 (OFF1)
Acknowledge: IMMEDIATELY
Cause: A line phase failure was detected at the power unit.
- the fuse of a phase of a main circuit has ruptured.
- the DC link voltage ripple has exceeded the permissible limit value.

Remedy: Check the fuses in the main circuit.

F30012 Power unit: Temperature sensor heat sink wire breakage

Message value: %1
Drive object: All objects
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY
Cause: The connection to one of the heat sink temperature sensors in the power unit is interrupted.
Fault value (r0949, interpret hexadecimal):
Bit 0: Module slot (electronics slot)
Bit 1: Air intake
Bit 2: Inverter 1
Bit 3: Inverter 2
Bit 4: Inverter 3
Bit 5: Inverter 4
Bit 6: Inverter 5
Bit 7: Inverter 6
Bit 8: Rectifier 1
Bit 9: Rectifier 2

Remedy: Contact the manufacturer.

F30013 Power unit: Temperature sensor heat sink short-circuit

Message value: %1
Drive object: All objects
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY
Cause: The heat sink temperature sensor in the Motor Module is short-circuited.
Fault value (r0949, interpret hexadecimal):
Bit 0: Module slot (electronics slot)
Bit 1: Air intake
Bit 2: Inverter 1
Bit 3: Inverter 2
Bit 4: Inverter 3
Bit 5: Inverter 4
Bit 6: Inverter 5
Bit 7: Inverter 6
Bit 8: Rectifier 1
Bit 9: Rectifier 2

Remedy: Contact the manufacturer.

A30016 (N) Power unit: Load supply switched out

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The following applies for CU31x and CUA31:
The DC link voltage is too low.
Fault value (r0949, interpret decimal):
DC link voltage in [V].

Remedy: The following applies for CU31x and CUA31:
Under certain circumstances, the AC line supply is not switched in.
Reaction upon N: NONE
Acknowl. upon N: NONE

F30017 Power unit: Hardware current limit has responded too often

Message value: Fault cause: %1 bin
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The hardware current limitation in the relevant phase (see A30031, A30032, A30033) has responded too often. The number of times the limit has been exceeded depends on the design and type of power unit.
For infeed units, the following applies:
- closed-loop control is incorrectly parameterized.
- load on the infeed is too high.
- Voltage Sensing Module incorrectly connected.
- commutating reactor missing or the incorrect type.
- power unit defective.

The following applies to Motor Modules:
- closed-loop control is incorrectly parameterized.
- fault in the motor or in the power cables.
- the power cables exceed the maximum permissible length.
- motor load too high
- power unit defective.

Fault value (r0949, interpret binary):
Bit 0: Phase U
Bit 1: Phase V
Bit 2: Phase W

Remedy: For infeed units, the following applies:
- check the controller settings, if required, reset and identify the controller (p0340 = 2, p3410 = 5).
- reduce the load, if required, increase the DC link capacitance or use a higher-rating infeed.
- check the connection of the optional Voltage Sensing Module.
- check the connection and technical data of the commutating reactor.
- check the power cables for short-circuit or ground fault.
- replace power unit.

The following applies to Motor Modules:
- check the motor data.
- check the motor circuit configuration (star-delta).
- check the motor load.
- check the power cable connections.
- check the power cables for short-circuit or ground fault.
- check the length of the power cables.
- replace power unit.

F30020 Power unit: Configuration not supported

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: A configuration is requested that is not supported by the power unit.
Fault value (r0949, interpret hexadecimal):
0:
Autonomous operation is requested but is not supported.

Remedy: Re fault value = 0:
If internal voltage protection is active (p1231 = 3), de-activate it if necessary.
See also: p1231 (Armature short-circuit / DC brake configuration)

F30021 Power unit: Ground fault

Message value: %1

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: Power unit has detected a ground fault.
- ground fault in the power cables
- winding fault or ground fault at the motor.
- CT defective.

Additional cause for CU310/CUA31:
- when the brake is applied, this causes the hardware DC current monitoring to respond.

Additional cause for parallel switching devices (r0108.15 = 1):
- the closed-loop circulating current control is either too slow or has been set too fast.

Fault value (r0949, interpret decimal):
Absolute value, summation current [32767 = 271 % rated current].

Remedy:
- check the power cable connections.
- check the motor.
- check the CT.

The following applies additionally for CU310 and CUA31:
- check the cables and contacts of the brake connection (a wire is possibly broken).

For parallel switching devices (r0108.15 = 1) the following additionally applies:
- check the ground fault monitoring thresholds (p0287).
- check the setting of the closed-loop circulating current control (p7036, p7037).

See also: p0287 (Ground fault monitoring thresholds)

F30022 Power unit: Monitoring V_ce

Message value: Fault cause: %1 bin

Drive object: All objects

Reaction: OFF2

Acknowledge: POWER ON

Cause: In the power unit, the monitoring of the collector-emitter voltage (V_ce) of the semiconductor has responded.
Possible causes:
- fiber-optic cable interrupted.
- power supply of the IGBT gating module missing.
- short-circuit at the Motor Module output.
- defective semiconductor in the power unit.

Fault value (r0949, interpret binary):
Bit 0: Short-circuit in phase U
Bit 1: Short circuit in phase V
Bit 2: Short-circuit in phase W
Bit 3: Light transmitter enable defective
Bit 4: V_ce group fault signal interrupted
See also: r0949 (Fault value)

Remedy:
- check the fiber-optic cable and if required, replace.
- check the power supply of the IGBT gating module (24 V).
- check the power cable connections.
- select the defective semiconductor and replace.

A30023 Power unit: Overtemperature thermal model alarm

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The temperature difference between the heat sink and chip has exceeded the permissible limit value.
- the permissible load duty cycle was not maintained.
- insufficient cooling, fan failure.
- overload.
- ambient temperature too high.
- pulse frequency too high.
See also: r0037

Remedy:
- adapt the load duty cycle.
- check whether the fan is running.
- check the fan elements
- check whether the ambient temperature is in the permissible range.
- check the motor load.
- reduce the pulse frequency if this is higher than the rated pulse frequency.

F30024 Power unit: Overtemperature thermal model

Message value: -
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The temperature difference between the heat sink and chip has exceeded the permissible limit value.
- the permissible load duty cycle was not maintained.
- insufficient cooling, fan failure.
- overload.
- ambient temperature too high.
- pulse frequency too high.
See also: r0037

Remedy:
- adapt the load duty cycle.
- check whether the fan is running.
- check the fan elements
- check whether the ambient temperature is in the permissible range.
- check the motor load.
- reduce the pulse frequency if this is higher than the rated pulse frequency.

F30025 Power unit: Chip overtemperature

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: Chip temperature of the semiconductor has exceeded the permissible limit value.
- the permissible load duty cycle was not maintained.
- insufficient cooling, fan failure.
- overload.
- ambient temperature too high.
- pulse frequency too high.
Fault value (r0949):
Temperature difference between the heat sink and chip [1 Bit = 0.01 °C].

Remedy: - adapt the load duty cycle.
- check whether the fan is running.
- check the fan elements
- check whether the ambient temperature is in the permissible range.
- check the motor load.
- reduce the pulse frequency if this is higher than the rated pulse frequency.
Notice:
This fault can only be acknowledged after this alarm threshold for alarm A05001 has been undershot.
See also: r0037

F30027 Power unit: Precharging DC link time monitoring

Message value: Enable signals: %1, Status: %2

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: The power unit DC link was not able to be pre-charged within the expected time.
1) There is no line supply voltage connected.
2) The line contactor/line side switch has not been closed.
3) The line supply voltage is too low.
4) Line supply voltage incorrectly set (p0210).
5) The pre-charging resistors are overheated as there were too many pre-charging operations per time unit.
6) The pre-charging resistors are overheated as the DC link capacitance is too high.
7) The pre-charging resistors are overheated because when there is no "ready for operation" (r0863.0) of the infeed unit, power is taken from the DC link.
8) The pre-charging resistors are overheated as the line contactor was closed during the DC link fast discharge through the Braking Module.
9) The DC link has either a ground fault or a short-circuit.
10) The pre-charging circuit is possibly defective (only for chassis units).
Fault value (r0949, interpret binary):
Missing internal enable signals, power unit (lower 16 bit):
(Inverted bit-coded representation FFFF hex -> all internal enable signals available)
Bit 0: Power supply of the IGBT gating shut down
Bit 1: Reserved
Bit 2: Reserved
Bit 3: Ground fault detected
Bit 4: Peak current intervention
Bit 5: I2t exceeded
Bit 6. Thermal model overtemperature calculated
Bit 7: (heat sink, gating module, power unit) overtemperature measured
Bit 8: Reserved
Bit 9: Overvoltage detected
Bit 10: Power unit has completed pre-charging, ready for pulse enable
Bit 11: STO terminal missing
Bit 12: Overcurrent detected
Bit 13: Armature short-circuit active
Bit 14: DRIVE-CLiQ fault active
Bit 15: Uce fault detected, transistor de-saturated due to overcurrent/short-circuit
Status, power unit (upper 16 bit, hexadecimal number):
0: Fault status (wait for OFF and fault acknowledgement)
1: Restart inhibit (wait for OFF)
2: Overvoltage condition detected -> change into the fault state
3: Undervoltage condition detected -> change into the fault state
4: Wait for bypass contactor to open -> change into the fault state
5: Wait for bypass contactor to open -> change into restart inhibit
6: Commissioning
7: Ready for pre-charging
8: Pre-charging started, DC link voltage lower than the minimum switch-on voltage
9: Pre-charging, DC link voltage end of pre-charging still not detected
10: Wait for the end of the de-bounce time of the main contactor after pre-charging has been completed
11: Pre-charging completed, ready for pulse enable
12: It was detected that the STO terminal was energized at the power unit
See also: p0210 (Drive unit line supply voltage)

Remedy: In general:
- check the line supply voltage at the input terminals.
- check the line supply voltage setting (p0210).
- the following applies to booksize units: Wait (approx. 8 min.) until the pre-charging resistors have cooled down. For this purpose, preferably disconnect the infeed unit from the line supply.

Re 5):
- carefully observe the permissible pre-charging frequency (refer to the appropriate Equipment Manual).

Re 6):
- check the total capacitance of the DC link and if required, correspondingly reduce the maximum permissible DC link capacitance (refer to the appropriate Equipment Manual).

Re 7):
- interconnect the ready for operation signal of the infeed unit (r0863.0) in the enable logic of the drives connected to this DC link.

Re 8):
- check the connections of the external line contactor. The line contactor must be open during the DC link fast discharge.

Re 9):
- check the DC link regarding ground fault or short-circuit.

See also: p0210 (Drive unit line supply voltage)

A30031 Power unit: Hardware current limiting, phase U

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: Hardware current limit for phase U responded. The pulsing in this phase is inhibited for one pulse period.
- closed-loop control is incorrectly parameterized.
- fault in the motor or in the power cables.
- the power cables exceed the maximum permissible length.
- motor load too high
- power unit defective.

Note:
Alarm A30031 is always output if the hardware current limit for phase U, V or W on a Power Module responds.

Remedy:
- check the motor data.
- check the motor circuit configuration (star-delta).
- check the motor load.
- check the power cable connections.
- check the power cables for short-circuit or ground fault.
- check the length of the power cables.

A30032 Power unit: Hardware current limiting, phase V

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: Hardware current limit for phase V responded. The pulsing in this phase is inhibited for one pulse period.
- closed-loop control is incorrectly parameterized.
- fault in the motor or in the power cables.
- the power cables exceed the maximum permissible length.
- motor load too high
- power unit defective.

Note:
Alarm A30031 is always output if the hardware current limit for phase U, V or W on a Power Module responds.

Remedy:
- check the motor data.
- check the motor circuit configuration (star-delta).
- check the motor load.
- check the power cable connections.
- check the power cables for short-circuit or ground fault.
- check the length of the power cables.

A30033 Power unit: Hardware current limiting, phase W

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: Hardware current limit for phase W responded. The pulsing in this phase is inhibited for one pulse period.
- closed-loop control is incorrectly parameterized.
- fault in the motor or in the power cables.
- the power cables exceed the maximum permissible length.
- motor load too high
- power unit defective.

Note:
Alarm A30031 is always output if the hardware current limit for phase U, V or W on a Power Module responds.

Remedy:
- check the motor data.
- check the motor circuit configuration (star-delta).
- check the motor load.
- check the power cable connections.
- check the power cables for short-circuit or ground fault.
- check the length of the power cables.

F30035 Power unit: Air intake overtemperature

Message value: %1

Drive object: All objects

Reaction: OFF1 (OFF2)

Acknowledge: IMMEDIATELY

Cause: The air intake in the power unit has exceeded the permissible temperature limit.
For air-cooled power units, the temperature limit is at 55 °C.
- ambient temperature too high.
- insufficient cooling, fan failure.

Fault value (r0949, interpret decimal):
Temperature [1 bit = 0.01 °C].

Remedy:
- check whether the fan is running.
- check the fan elements
- check whether the ambient temperature is in the permissible range.

Notice:
This fault can only be acknowledged after this alarm threshold for alarm A05002 has been undershot.

F30036 Power unit: Electronics board overtemperature

Message value: %1

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: The temperature in the module slot of the drive converter has exceeded the permissible temperature limit.
- insufficient cooling, fan failure.
- overload.
- ambient temperature too high.

Fault value (r0949, interpret decimal):
Temperature [1 bit = 0.1 °C].

Remedy:
- check whether the fan is running.
- check the fan elements
- check whether the ambient temperature is in the permissible range.

Notice:
This fault can only be acknowledged after this alarm threshold for alarm A05003 has been undershot.

F30037 Power unit: Rectifier overtemperature

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The temperature in the rectifier of the power unit has exceeded the permissible temperature limit.
- insufficient cooling, fan failure.
- overload.
- ambient temperature too high.
- line supply phase failure.
Fault value (r0949, interpret decimal):
Temperature [1 bit = 0.01 °C].
Remedy: - check whether the fan is running.
- check the fan elements
- check whether the ambient temperature is in the permissible range.
- check the motor load.
- check the line supply phases.
Notice:
This fault can only be acknowledged after this alarm threshold for alarm A05004 has been undershot.

A30038 Power unit: Capacitor fan monitoring

Message value: %1
Drive object: B_INF
Reaction: NONE
Acknowledge: NONE
Cause: The capacitor fan signals a fault.
Remedy: Replace the capacitor fan in the power unit.

F30039 Power unit: Failure capacitor fan

Message value: %1
Drive object: B_INF
Reaction: OFF1
Acknowledge: IMMEDIATELY
Cause: The capacitor fan has failed.
Remedy: Replace the capacitor fan in the power unit.

F30040 Power unit: Undervolt 24 V

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: Failure of the 24 V power supply for the power unit.
- the 16 V threshold was undershot for longer than 3 ms.
Fault value (r0949, interpret decimal):
24 V voltage [1 bit = 0.1 V].
Remedy: Check the 24 V DC voltage supply to power unit.

A30041 (F) Power unit: Undervoltage 24 V alarm

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: 24 V power supply fault for the power unit.
- the 16 V threshold was undershot..
Fault value (r0949, interpret decimal):
24 V voltage [1 bit = 0.1 V].

Remedy: Check the 24 V DC voltage supply to power unit.
Reaction upon F: A_INFEED: NONE (OFF1, OFF2)
SERVO: NONE (OFF1, OFF2, OFF3)
VECTOR: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY (POWER ON)

A30042 Power unit: Fan operating time reached or exceeded

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The maximum operating time of the fan in the power unit is set in p0252.
This message indicates the following:
Fault value (r0949, interpret decimal):
0: The maximum fan operating time is 500 hours.
1: The maximum fan operating time has been exceeded.
Remedy: Replace the fan in the power unit and reset the operating hours counter to 0 (p0251 = 0).
See also: p0251 (Operating hours counter power unit fan), p0252 (Maximum operating time power unit fan)

F30043 Power unit: Overvolt 24 V

Message value: -
Drive object: All objects
Reaction: OFF2
Acknowledge: POWER ON
Cause: The following applies for CU31x:
Overvoltage of the 24 V power supply for the power unit.
- the 31.5 V threshold was exceeded for more than 3 ms.
Fault value (r0949):
24 V voltage [1 bit = 0.1 V].
Remedy: Check the 24 V DC voltage supply to power unit.

A30044 (F) Power unit: Overvoltage 24 V alarm

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The following applies for CU31x:
24 V power supply fault for the power unit.
- the 32.0 V threshold was exceeded.
Fault value (r0949):
24 V voltage [1 bit = 0.1 V].
Remedy: Check the 24 V DC voltage supply to power unit.
Reaction upon F: A_INFEED: NONE (OFF1, OFF2)
SERVO: NONE (OFF1, OFF2, OFF3)
VECTOR: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY (POWER ON)

F30045 Power unit: Supply undervoltage

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The following applies for CU31x:
Power supply fault in the power unit.
- the voltage monitoring on the DAC board signals an undervoltage fault on the module.
Remedy: Check the 24 V DC power supply for the power unit and if required replace the module.

A30046 (F) Power unit: Undervoltage, alarm

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: Before the last new start, a problem occurred at the power unit power supply.
- the voltage monitoring in the internal FPGA of the PSA signals an undervoltage fault on the module.
Fault value (r0949):
Register value of the voltage fault register.
Remedy: Check the 24 V DC power supply for the power unit and if required replace the module.
Reaction upon F: A_INFEED: NONE (OFF1, OFF2)
SERVO: NONE (OFF1, OFF2, OFF3)
VECTOR: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY (POWER ON)

F30047 Cooling system: Cooling medium flow rate too low

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: Cooling system: Fault - flow rate has fallen below the fault value
Remedy:

F30050 Power unit: Supply overvoltage

Message value: -
Drive object: All objects
Reaction: OFF2
Acknowledge: POWER ON
Cause: The following applies for CU31x and CUA31:
- the voltage monitoring on the DAC board signals an overvoltage fault on the module.
Remedy: - check the voltage supply for the Control Unit (24 V).
- if required, replace the module.

F30052 EEPROM data error

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: POWER ON
Cause: EEPROM data error of the power unit module.
Fault value (r0949, interpret hexadecimal):
0: The EEPROM data read in from the power unit module is inconsistent.
1: EEPROM data is not compatible to the firmware of the power unit application.
Remedy: Re fault value = 0:
Replace the power unit module or update the EEPROM data.
Re fault value = 1:
The following applies for CU31x and CUA31:
Update the firmware \SIEMENS\SINAMICS\CODE\SAC\cu31xi.ufw (cua31.ufw)

F30062 (N, A) The bypass contactor was opened under current

Message value: -
Drive object: All objects
Reaction: NONE (OFF1, OFF2)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The bypass contactor of the infeed unit was damaged by being opened (multiple number of times) while it was conducting current.

Possible causes:
- scheduled opening under load can be necessary, for example, to protect the drive converter group in the event of a ground fault in high frequency spindles.
- incorrect operator control of the infeed can cause the contactor to switch under load. If, in spite of a missing operating enable, the infeed unit draws active motoring power from the DC link.

Remedy: In order to avoid critically damaging the complete drive converter group, it is urgently recommended to replace the damaged infeed unit.

Reaction upon N: NONE
Acknowl. upon N: NONE
Reaction upon A: NONE
Acknowl. upon A: NONE

F30070 Cycle requested by the power unit module not supported

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The following applies for CU31x and CUA31:
A cycle is requested that is not supported by the power unit.
Fault value (r0949, interpret hexadecimal):
The following applies for CU31x and CUA31:
0: The current control cycle is not supported.
1: The DRIVE-CLiQ cycle is not supported.
2: Internal timing problem (distance between RX and TX instants too low).
3: Internal timing problem (TX instant too early).
Remedy: The following applies for CU31x and CUA31:
The power unit only supports the following cycles:
62.5 µs, 125 µs, 250 µs and 500 µs
Fault value (r0949, interpret hexadecimal):
The following applies for CU31x and CUA31:
0: Set a permitted current control cycle.
1: Set a permitted DRIVE-CLiQ cycle.
2/3: Contact the manufacturer (there is possibly an incompatible firmware version).

F30071 No new actual values received from the power unit module

Message value: -
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The following applies for CU31x and CUA31:
More than one actual value telegram from the power unit has failed.
Remedy: The following applies for CU31x and CUA31:
Check the interface (adjustment and locking) to the power unit.

F30072 Setpoints are no longer being transferred to the power unit

Message value: -
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The following applies for CU31x and CUA31:
More than one setpoint telegram was not able to be transferred to the power unit.
Remedy: The following applies for CU31x and CUA31:
Check the interface (adjustment and locking) to the power unit.

A30073 (N) Actual value/setpoint preprocessing no longer synchronous to DRIVE-CLiQ

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The following applies for CU31x and CUA31:
Communications to the power unit module are no longer in synchronism with DRIVE-CLiQ.
Remedy: The following applies for CU31x and CUA31:
Wait until synchronization is re-established.
Reaction upon N: NONE
Acknowl. upon N: NONE

F30074 Communications error to the power unit module

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: Communication is not possible with the power unit via the plug contact.
Remedy: The following applies for CU31x and CUA31:
Either replace the CU board or the power unit. You must check which of the two components must be replaced by replacing one and then the other component; if neither are available then both components must be returned.

F30105 PU: Actual value sensing fault

Message value: -
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: At least one incorrect actual value channel was detected on the Power Stack Adapter (PSA).
The incorrect actual value channels are displayed in the following diagnostic parameters.
Remedy: Evaluate the diagnostic parameters.
If the actual value channel is incorrect, check the components and if required, replace.

F30502 Power unit: DC link voltage, overvoltage

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The power unit has detected overvoltage in the DC link with a pulse inhibit.
- device supply voltage too high.
- line reactor incorrectly dimensioned.
Fault value (r0949, interpret decimal):
DC link voltage [1 bit = 100 mV].
See also: r0070 (Actual DC link voltage)
Remedy: - check the device supply voltage (p0210).
- check the dimensioning of the line reactor.
See also: p0210 (Drive unit line supply voltage)

F30600 SI MM: STOP A initiated

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The drive-based "Safety Integrated" function in the Motor Module (MM) has detected a fault and initiated STOP A (pulse suppression via the safety shutdown path of the Motor Module).
- forced checking procedure of the safety shutdown path of the Motor Module unsuccessful.
- subsequent response to fault F30611 (defect in a monitoring channel).

Fault value (r0949, interpret decimal):
0: Stop request from the Control Unit.
1005: Pulses suppressed although STO not selected and there is no internal STOP A present.
1010: Pulses enabled although STO is selected or an internal STOP A is present.
1020: Internal software error in the "Internal voltage protection" function. The "Internal voltage protection" function is withdrawn. A STOP A that cannot be acknowledged is initiated.
9999: Subsequent response to fault F30611.

Remedy:
- select Safe Torque Off and de-select again.
- replace the Motor Module involved.

Re fault value = 1020:
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- replace the Motor Module.

Re fault value = 9999:
- carry out diagnostics for fault F30611.

Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated
STO: Safe Torque Off / SH: Safe standstill

F30611 SI MM: Defect in a monitoring channel

Message value: %1

Drive object: All objects

Reaction: A_INFEED: NONE (OFF1, OFF2)
SERVO: NONE (OFF1, OFF2, OFF3)
VECTOR: NONE (OFF1, OFF2, OFF3)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive-based "Safety Integrated" function in the Motor Module (MM) has detected a fault in the data cross-check between the Control Unit (CU) and MM and initiated a STOP F.
As a result of this fault, after the parameterized transition has expired (p9858), fault F30600 is output (SI MM: STOP A initiated).
Fault value (r0949, interpret decimal):
0: Stop request from the Control Unit.
1 to 999:
Number of the cross-checked data that resulted in this fault. This number is also displayed in r9895.
1: SI monitoring clock cycle (r9780, r9880).
2: SI enable safety functions (p9601, p9801). Crosswise data comparison is only carried out for the supported bits.
3: SI SGE changeover tolerance time (p9650, p9850).
4: SI transition period STOP F to STOP A (p9658, p9858).
5: SI enable Safe Brake Control (p9602, p9802).
6: SI Motion enable, safety-relevant functions (p9501, internal value).
7: SI pulse suppression delay time for Safe Stop 1 (p9652, p9852).
8: SI PROFIsafe address (p9610, p9810).
1000: Watchdog timer has expired. Within a period corresponding to approximately 5 * p9850, too many switching operations have occurred at the safety-relevant inputs of the Control Unit, or STO (including subsequent responses) has been triggered too frequently via PROFIsafe/TM54F.
1001, 1002: Initialization error, change timer / check timer.
2000: Status of the STO selection on the Control Unit and Motor Module are different.
2001: Feedback signal for safe pulse suppression on the Control Unit and Motor Module are different.
2002: Status of the delay timer SS1 on the Control Unit and Motor Module are different.

Remedy:

Re fault value = 1 to 5 and 7 to 999:
- check the cross-checked data that resulted in a STOP F.
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

Re fault value = 6:
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

Re fault value = 1000:
- check the wiring of the safety-relevant inputs (SGE) on the Control Unit (contact problems).
- PROFIsafe: rectify contact problems/faults on the PROFIBUS master/PROFINET controller. - check the wiring of the fail-safe inputs on TM54F (contact problems).
Re fault value = 1001, 1002:
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.
Re fault value = 2000, 2001, 2002:
- check the tolerance time SGE changeover and if required, increase the value (p9650/p9850, p9652/p9852).
- check the wiring of the safety-relevant inputs (SGE) (contact problems).
- check the cause of STO selection in r9772. Active SMM functions (p9501=1) can also cause STO to be selected.
- replace the Motor Module involved.
Note:
CU: Control Unit
MM: Motor Module
SGE: Safety-relevant input
SI: Safety Integrated
SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)
STO: Safe Torque Off / SH: Safe standstill
SMM: see r9772

N30620 (F, A) SI MM: Safe Torque Off active

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The "Safe Torque Off" function was selected on the Motor Module (MM) via the input terminal and is active.
Note:
This message does not result in a safety stop response.

Remedy: None necessary.
Note:
MM: Motor Module
SI: Safety Integrated
STO: Safe Torque Off / SH: Safe standstill

F30625 SI MM: Sign-of-life error in safety data

Message value: %1

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive-based "Safety Integrated" function on the Motor Module (MM) has detected an error in the sign-of-life of the safety data between the Control Unit (CU) and MM and initiated a STOP A.
- there is either a DRIVE-CLiQ communication error or communication has failed.
- a time slice overflow of the safety software has occurred.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.

Remedy: - select Safe Torque Off and de-select again.
- carry out a POWER ON (power off/on) for all components.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
- de-select all drive functions that are not absolutely necessary.
- reduce the number of drives.
- check the electrical cabinet design and cable routing for EMC compliance
Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated

F30630 SI MM: Brake control error

Message value: %1

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive-based "Safety Integrated" function on the Motor Module (MM) has detected a brake control error and initiated a STOP A.
Fault value (r0949, interpret decimal):
10:
Fault in "open holding brake" operation.
- Parameter p1278 incorrectly set.
- No brake connected or wire breakage (check whether brake releases for p1278 = 1 and p9602/p9802 = 0 (SBC deactivated)).
- Ground fault in brake cable.
30:
Fault in "close holding brake" operation.
- No brake connected or wire breakage (check whether brake releases for p1278 = 1 and p9602/p9802 = 0 (SBC deactivated)).
- Short-circuit in brake winding.
40:
Fault in "brake closed" state.
60, 70:
Fault in the brake control circuit of the Control Unit or communication fault between the Control Unit and Motor Module (brake control).
Note:
The following causes may apply to fault values:
- motor cable is not shielded correctly.
- defect in control circuit of the Motor Module.

Remedy: - check parameter p1278 (for SBC, only p1278 = 0 is permissible).
- select Safe Torque Off and de-select again.
- check the motor holding brake connection.
- check the function of the motor holding brake.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
- check that the electrical cabinet design and cable routing are in compliance with EMC regulations (e.g. shield of the motor cable and brake conductors are connected with the shield connecting plate and the motor connectors are tightly screwed to the housing).
- replace the Motor Module involved.
Operation with Safe Brake Module:
- check the Safe Brake Modules connection.
- replace the Safe Brake Module.
Note:
MM: Motor Module
SBC: Safe Brake Control
SI: Safety Integrated

F30640 SI MM: Fault in the shutdown path of the second channel

Message value: %1

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The Motor Module has detected a communications error with the higher-level control or the TM54F to transfer the safety-relevant information.
Note:
This fault results in a STOP A that can be acknowledged.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.

Remedy: For the higher-level control, the following applies:
- check the PROFIsafe address in the higher-level control and Motor Modules and if required, align.
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.
For TM54F, carry out the following steps:
- start the copy function for the node identifier (p9700 = 1D hex).
- acknowledge hardware CRC (p9701 = EC hex).
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.
The following generally applies:
- upgrade the Motor Module software.
Note:
MM: Motor Module
SI: Safety Integrated
See also: p9810 (SI PROFIsafe address (Motor Module))

F30649 SI MM: Internal software error

Message value: %1

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: An internal error in the Safety Integrated software on the Motor Module has occurred.
Note:
This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.

Remedy: - carry out a POWER ON (power off/on) for all components.
- re-commission the Safety Integrated function and carry out a POWER ON.
- upgrade the Motor Module software.
- contact the Hotline.
- replace the Motor Module.
Note:
MM: Motor Module
SI: Safety Integrated

F30650 SI MM: Acceptance test required

Message value: %1

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The "Safety Integrated" function on the Motor Module requires an acceptance test.
Note:
This fault results in a STOP A that can be acknowledged.
Fault value (r0949, interpret decimal):
130: Safety parameters for the Motor Module not available.
1000: Reference and actual checksum in the Motor Module are not identical (booting).
- at least one checksum-checked piece of data is defective.
2000: Reference and actual checksum on the Motor Module are not identical (commissioning mode).
- reference checksum incorrectly entered into the Motor Module (p9899 not equal to r9898).
2003: Acceptance test is required as a safety parameter has been changed.
2005: The safety logbook has identified that the safety checksums have changed. An acceptance test is required.
3003: Acceptance test is required as a hardware-related safety parameter has been changed.
9999: Subsequent response of another safety-related fault that occurred when booting that requires an acceptance test.

Remedy: Re fault value = 130:
- carry out safety commissioning routine.
Re fault value = 1000:
- again carry out safety commissioning routine.
- replace the CompactFlash card.
Re fault value = 2000:
- check the safety parameters in the Motor Module and adapt the reference checksum (p9899).
Re fault value = 2003, 2005:
- Carry out an acceptance test and generate an acceptance report.
The procedure when carrying out an acceptance test as well as an example of the acceptance report are provided in the following literature:
SINAMICS S120 Function Manual Safety Integrated
Re fault value = 3003:
- carry out the function checks for the modified hardware and generate an acceptance report.
The procedure when carrying out an acceptance test as well as an example of the acceptance report are provided in the following literature:
SINAMICS S120 Function Manual Safety Integrated
Re fault value = 9999:
- carry out diagnostics for the other safety-related fault that is present.
Note:
MM: Motor Module
SI: Safety Integrated
See also: p9799 (SI reference checksum SI parameters (Control Unit)), p9899 (SI reference checksum SI parameters (Motor Module))

F30651 SI MM: Synchronization with Control Unit unsuccessful

Message value: %1

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive-based "Safety Integrated" function is requesting synchronization of the safety time slices on the Control Unit and Motor Module. This synchronization routine was unsuccessful.

Note:
This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.

Remedy: - carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.
Note:
MM: Motor Module
SI: Safety Integrated

F30652 SI MM: Illegal monitoring clock cycle

Message value: %1

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The Safety Integrated monitoring clock cycle cannot be maintained due to the communication conditions requested in the system.
Note:
This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.

Remedy: Upgrade the Motor Module software.
Note:
MM: Motor Module
SI: Safety Integrated

F30655 SI MM: Align monitoring functions

Message value: %1

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: An error has occurred when aligning the Safety Integrated monitoring functions on the Control Unit (CU) and Motor Module (MM). Control Unit and Motor Module were not able to determine a common set of supported SI monitoring functions.
- there is either a DRIVE-CLiQ communication error or communication has failed.
- Safety Integrated software releases on the Control Unit and Motor Module are not compatible with one another.
Note:
This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.

Remedy: - carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.
- check the electrical cabinet design and cable routing for EMC compliance
Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated

F30656 SI MM: Motor Module parameter error

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: When accessing the Safety Integrated parameters for the Motor Module (MM) on the CompactFlash card, an error has occurred.
Note:
This fault results in a STOP A that can be acknowledged.
Fault value (r0949, interpret decimal):
129: Safety parameters for the Motor Module corrupted.
131: Internal software error on the Control Unit.
255: Internal Motor Module software error.
Remedy: - re-commission the safety functions.
- upgrade the Control Unit software.
- upgrade the Motor Module software.
- replace the CompactFlash card.
Note:
MM: Motor Module
SI: Safety Integrated

F30659 SI MM: Write request for parameter rejected

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The write request for one or several Safety Integrated parameters on the Motor Module (MM) was rejected.
Note:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
10: An attempt was made to enable the STO function although this cannot be supported.
11: An attempt was made to enable the SBC function although this cannot be supported.
13: An attempt was made to enable the SS1 function although this cannot be supported.
14: An attempt was made to enable the safe motion monitoring function with the higher-level control, although this cannot be supported.
15: An attempt was made to enable the motion monitoring functions integrated in the drive although these cannot be supported.
16: An attempt was made to enable the PROFIsafe communication - although this cannot be supported or the version of the PROFIsafe driver used on the CU and MM is different.
See also: r9771 (SI common functions (Control Unit)), r9871 (SI common functions (Motor Module)
Remedy: Re fault value = 10, 11, 13, 14, 15, 16:
- check whether there are faults in the safety function alignment between the Control Unit and the Motor Module involved (F01655, F30655) and if required, carry out diagnostics for the faults involved.
- use a Motor Module that supports the required function ("Safe Torque Off", "Safe Brake Control", "PROFIsafe/PROFIsafe V2", "motion monitoring functions integrated in the drive").
- upgrade the Motor Module software.
- upgrade the Control Unit software.
Note:
CU: Control Unit
MM: Motor Module
SBC: Safe Brake Control
SI: Safety Integrated
SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)
STO: Safe Torque Off / SH: Safe standstill

F30672 SI Motion: Control Unit software incompatible

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The existing Control Unit software does not support the safe drive-based motion monitoring function.
Note:
This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
Remedy: - check whether there are faults in the safety function alignment between the Control Unit and the Motor Module involved (F01655, F30655) and if required, carry out diagnostics for the faults involved.
- use a Control Unit that supports the safe motion monitoring function.
- upgrade the Control Unit software.
Note:
SI: Safety Integrated

F30680 SI Motion MM: Checksum error safety monitoring functions

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The actual checksum calculated by the Motor Module and entered in r9398 over the safety-relevant parameters does not match the reference checksum saved in p9399 at the last machine acceptance.
Safety-relevant parameters have been changed or a fault is present.
Note:
This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret decimal):
0: Checksum error for SI parameters for motion monitoring.
1: Checksum error for SI parameters for component assignment.
Remedy: - Check the safety-relevant parameters and if required, correct.
- set the reference checksum to the actual checksum.
- carry out a POWER ON.
- carry out an acceptance test.
Note:
SI: Safety Integrated

C30681 SI Motion MM: Incorrect parameter value

Message value: Parameter: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The parameter value cannot be parameterized with this value.
Note:
This message does not result in a safety stop response.
Fault value (r0949, interpret decimal):
Parameter number with the incorrect value.
Remedy: Correct the parameter value.

F30682 SI Motion MM: Monitoring function not supported

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The monitoring function enabled in p9301, p9501, p9601 or p9801 is not supported in this firmware version.
Note:
This message does not result in a safety stop response.
Fault value (r0949, interpret decimal):
30: The firmware version of the Motor Module is older than the version of the Control Unit.
Remedy: - De-select the monitoring function involved (p9301, p9301, p9303, p9601, p9801).
- Upgrade the Motor Module firmware.
See also: p9301 (SI Motion enable safety functions (Motor Module)), p9501 (SI Motion enable safety functions (Control Unit)), p9503 (SI Motion SCA (SN) enable (Control Unit)), p9601 (SI enable, functions integrated in the drive (Control Unit)), p9801 (SI enable, functions integrated in the drive (Motor Module))

F30683 SI Motion MM: SOS/SLS enable missing

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The safety-relevant basic function "SOS/SLS" is not enabled in p9301 although other safety-relevant monitoring functions are enabled.
Note:
This message does not result in a safety stop response.
Remedy: Enable the function "SOS/SLS" (p9301.0).
Note:
SI: Safety Integrated
SLS: Safely-Limited Speed / SG: Safely reduced speed
SOS: Safe Operating Stop / SBH: Safe operating stop
See also: p9301 (SI Motion enable safety functions (Motor Module))

F30685 SI Motion MM: Safely-Limited Speed limit value too high

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The limit value for the function "Safely-Limited Speed" (SLS) is greater than the speed that corresponds to an encoder limit frequency of 500 kHz.
Note:
This message does not result in a safety stop response.
Fault value (r0949, interpret decimal):
Maximum permissible speed.
Remedy: Correct the limit values for SLS and carry out a POWER ON.
Note:
SI: Safety Integrated
SLS: Safely-Limited Speed / SG: Safely reduced speed
See also: p9331 (SI Motion SLS limit values (Motor Module))

F30688 SI Motion MM: Actual value synchronization not permissible

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: It is not permissible to simultaneously enable the actual value synchronization and a monitoring function with absolute reference (SCA/SLP).
Note:
This fault results in a STOP A that cannot be acknowledged.

Remedy: Either de-select the function "actual value synchronization" or the monitoring functions with absolute reference (SCA/SLP) and carry out a POWER ON.
Note:
SCA: Safe Cam / SN: Safe software cam
SI: Safety Integrated
SLP: Safely-Limited Position / SE: Safe software limit switches
See also: p9501 (SI Motion enable safety functions (Control Unit))

C30700 SI Motion MM: STOP A initiated

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The drive is stopped via a STOP A (pulses are suppressed via the safety shutdown path of the Control Unit).
Possible causes:
- stop request from the Control Unit.
- pulses not suppressed after a parameterized time (p9357) after test stop selection.
- subsequent response to the message C30706 "SI Motion MM: Safe Acceleration Monitoring, limit exceeded".
- subsequent response to the message C30714 "SI Motion MM: Safely-Limited Speed exceeded".
- subsequent response to the message C30701 "SI Motion MM: STOP B initiated".

Remedy:
- remove the cause to the fault on the Control Unit.
- check the value in p9357, if required, increase the value.
- check the shutdown path of the Control Unit (check DRIVE-CLiQ communication).
- carry out a diagnostics routine for message C30706.
- carry out a diagnostics routine for message C30714.
- carry out a diagnostics routine for message C30701.
- replace Motor Module.
- replace Control Unit.

This message can only be acknowledged in the acceptance test mode without POWER ON via the Terminal Module 54F (TM54F) or PROFIsafe.
Note:
SI: Safety Integrated

C30701 SI Motion MM: STOP B initiated

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF3
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The drive is stopped via a STOP B (braking along the OFF3 ramp).
As a result of this fault, after the time parameterized in p9356 has expired, or the speed threshold parameterized in p9360 has been undershot, message C30700 "SI Motion MM: STOP A initiated" is output.
Possible causes:
- stop request from the Control Unit.
- subsequent response to the message C30714 "SI Motion MM: Safely limited speed exceeded".
- subsequent response to the message C30711 "SI Motion MM: Defect in a monitoring channel".

Remedy:
- remove the fault cause in the control and carry out a POWER ON.
- carry out a diagnostics routine for message C01714.
- carry out a diagnostics routine for message C01711.

This message can only be acknowledged in the acceptance test mode without POWER ON via the Terminal Module 54F (TM54F) or PROFIsafe.
Note:
SI: Safety Integrated

C30706 SI Motion MM: Safe Acceleration Monitor limit exceeded

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: After initiating STOP B or STOP C, the velocity has exceeded the selected tolerance.
The drive is shut down by the message C30700 "SI Motion MM: STOP A initiated".

Remedy: Check the braking behavior, if required, adapt the tolerance for "Safe Acceleration Monitor".
This message can only be acknowledged in the acceptance test mode without POWER ON via the Terminal Module 54F (TM54F) or PROFIsafe.
Note:
SBR: Safe Acceleration Monitor
SI: Safety Integrated
See also: p9548 (SI Motion SBR actual velocity tolerance (Control Unit))

C30707 SI Motion MM: Tolerance for safe operating stop exceeded

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The actual position has distanced itself further from the target position than the standstill tolerance.
The drive is shut down by the message C30701 "SI Motion MM: STOP B initiated".

Remedy: - check whether safety faults are present and if required carry out the appropriate diagnostic routines for the particular faults.
- check whether the standstill tolerance matches the accuracy and control dynamic performance of the axis.
- carry out a POWER ON.
This message can only be acknowledged in the acceptance test mode without POWER ON via the Terminal Module 54F (TM54F) or PROFIsafe.
Note:
SI: Safety Integrated
SOS: Safe Operating Stop / SBH: Safe operating stop
See also: p9530 (SI Motion standstill tolerance (Control Unit))

C30708 SI Motion MM: STOP C initiated

Message value: -

Drive object: SERVO, VECTOR

Reaction: STOP2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive is stopped via a STOP C (braking along the OFF3 ramp).
"Safe Operating Stop" (SOS) is activated after the parameterized timer has expired.
Possible causes:
- stop request from the higher-level control.
- subsequent response to the message C30714 "SI Motion MM: Safely limited speed exceeded".
See also: p9552 (SI Motion transition time STOP C to SOS (SBH) (Control Unit))

Remedy: - remove the cause of the fault at the control.
- carry out a diagnostics routine for message C30714.
This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.
Note:
SI: Safety Integrated
SOS: Safe Operating Stop / SBH: Safe operating stop

C30709 SI Motion MM: STOP D initiated

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive is stopped via a STOP D (braking along the path).
"Safe Operating Stop" (SOS) is activated after the parameterized timer has expired.
Possible causes:
- stop request from the Control Unit.
- subsequent response to the message C30714 "SI Motion: Safely limited speed exceeded".
See also: p9353 (SI Motion transition time STOP D to SOS (Motor Module)), p9553 (SI Motion transition time STOP D to SOS (SBH) (Control Unit))

Remedy: - remove the cause of the fault at the control.
- carry out a diagnostics routine for message C30714.
This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.
Note:
SI: Safety Integrated
SOS: Safe Operating Stop / SBH: Safe operating stop

C30711 SI MM MM: Defect in a monitoring channel

Message value: %1

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: When cross-checking and comparing the two monitoring channels, the drive detected a difference between the input data or results of the monitoring functions and initiated a STOP F. One of the monitoring functions no longer reliably functions - i.e. safe operation is no longer possible.
If at least one monitoring function is active, then after the parameterized timer has expired, the message C30701 "SI Motion: STOP B initiated" is output. The message is output with message value 1031 when the Sensor Module hardware is replaced.
Message value (r9749, interpret decimal):
0 ... 999: Number of the cross-checked data that resulted in this message. Refer to safety message C01711for a description of the individual data.
The significance of the individual message values is described in safety message C01711 of the Control Unit.
1000: Watchdog timer has expired. Too many signal changes have occurred at safety-relevant inputs.
1001: Initialization error of watchdog timer.
1005: Pulses already suppressed for test stop selection.
1011: Acceptance test status between the monitoring channels differ.
1012: Plausibility violation of the actual value from the encoder.
1020: Cyc. communication failure between the monit. cycles.
1021: Cyc. communication failure between the monit. channel and Sensor Module.
1023: Error during the effectivity test in the Sensor Module.
1030: Encoder fault detected from another monitoring channel.
1031: Data transfer error between the monitoring channel and the Sensor Module.
5000 ... 5140: PROFIsafe message values.
The significance of the individual message values is described in safety message C01711 of the Control Unit.
6000 ... 6166: PROFIsafe message values (PROFIsafe driver for PROFIBUS DP V1/V2 and PROFINET).
The significance of the individual message values is described in safety message C01711 of the Control Unit.
See also: p9555 (SI Motion transition time STOP F to STOP B (Control Unit)), r9725 (SI Motion, diagnostics STOP F)

Remedy: Re message value = 1030:
- check the encoder connection.
- if required, replace the encoder.
Re message value = 1031:
When replacing a Sensor Module, carry out the following steps:
- start the copy function for the node identifier on the drive (p9700 = 1D hex).
- acknowledge the hardware CRC on the drive (p9701 = EC hex).
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.
The following always applies:
- check the encoder connection.
- if required, replace the encoder.
Re other message values:
- The significance of the individual message values is described in safety message C01711 of the Control Unit.
Note:
This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.
See also: p9300 (SI Motion monitoring clock cycle (Motor Module)), p9500 (SI Motion monitoring clock cycle (Control Unit))

C30714 SI Motion MM: Safely-Limited Speed exceeded

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The drive had moved faster than that specified by the velocity limit value (p9331). The drive is stopped as a result of the configured stop response (p9363).
Message value (r9749, interpret decimal):
100: SLS1 exceeded.
200: SLS2 exceeded.
300: SLS3 exceeded.
400: SLS4 exceeded.
1000: Encoder limit frequency exceeded.
Remedy: - check the traversing/motion program in the control.
- check the limits for "Safely-Limited Speed" (SLS) and if required, adapt (p9331).
This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.
Note:
SI: Safety Integrated
SLS: Safely-Limited Speed / SG: Safely reduced speed
See also: p9331 (SI Motion SLS limit values (Motor Module)), p9363 (SI Motion SLS stop response (Motor Module))

C30798 SI Motion MM: Test stop running

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The test stop is active.
Remedy: None necessary.
The message is withdrawn when the test stop is finished.
Note:
SI: Safety Integrated

C30799 SI Motion MM: Acceptance test mode active

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The acceptance test mode is active. The POWER ON signals of the safety-relevant motion monitoring functions can be acknowledged during the acceptance test using the acknowledgement functions of the higher-level control.
Remedy: None necessary.
The message is withdrawn when exiting the acceptance test mode.
Note:
SI: Safety Integrated

N30800 (F) Power unit: Group signal

Message value: -
Drive object: All objects
Reaction: OFF2
Acknowledge: NONE
Cause: The power unit has detected at least one fault.
Remedy: Evaluates other current messages.
Reaction upon F: OFF2
Acknowl. upon F: IMMEDIATELY

F30801 Power unit DRIVE-CLiQ: Sign-of-life missing

Message value: Component number: %1, fault cause: %2
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communication error has occurred form the Control Unit to the power unit involved.
The computing time load might be too high.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 0A hex:
The sign-of-life bit in the receive telegram is not set.
Remedy: - check the electrical cabinet design and cable routing for EMC compliance
- remove DRIVE-CLiQ components that are not required.
- de-select functions that are not required.
- if required, increase the sampling times (p0112, p0115).
- replace the component involved.

F30802 Power unit: Time slice overflow

Message value: -
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: Time slide overflow.
Remedy: - carry out a POWER ON (power off/on) for all components.
- upgrade firmware to later version.
- contact the Hotline.

A30804 (F) Power unit: CRC

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: CRC error actuator
Remedy: - carry out a POWER ON (power off/on) for all components.
- upgrade firmware to later version.
- contact the Hotline.

Reaction upon F: A_INFEED: OFF2 (OFF1)
SERVO: OFF2 (OFF1, OFF3)
VECTOR: OFF2 (OFF1, OFF3)
Acknowl. upon F: IMMEDIATELY

F30805 Power unit: EPROM checksum error

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: Internal parameter data is corrupted.
Fault value (r0949, interpret hexadecimal):
01: EEPROM access error.
02: Too many blocks in the EEPROM.
Remedy: Replace the module.

F30809 Power unit: Switching information not valid

Message value: -
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: For 3P gating unit:
The last switching status word in the setpoint telegram is identified by the end ID. Such an end ID was not found.
Remedy: - carry out a POWER ON (power off/on) for all components.
- upgrade firmware to later version.
- contact the Hotline.

A30810 (F) Power unit: Watchdog timer

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: When booting it was detected that the cause of the previous reset was an SAC watchdog timer overflow.
Remedy: - carry out a POWER ON (power off/on) for all components.
- upgrade firmware to later version.
- contact the Hotline.

Reaction upon F: NONE (OFF2)
Acknowl. upon F: IMMEDIATELY

F30820 Power unit DRIVE-CLiQ: Telegram error

Message value: Component number: %1, fault cause: %2
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communication error has occurred form the Control Unit to the power unit involved.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 01 hex:
CRC error.
xx = 02 hex:
Telegram is shorter than specified in the length byte or in the receive list.
xx = 03 hex:
Telegram is longer than specified in the length byte or in the receive list.
xx = 04 hex:
The length of the receive telegram does not match the receive list.
xx = 05 hex:
The type of the receive telegram does not match the receive list.
xx = 06 hex:
The address of the component in the telegram and in the receive list do not match.
xx = 07 hex:
A SYNC telegram is expected - but the receive telegram is not a SYNC telegram.
xx = 08 hex:
No SYNC telegram is expected - but the receive telegram is one.
xx = 09 hex:
The error bit in the receive telegram is set.
xx = 10 hex:
The receive telegram is too early.
Remedy: - carry out a POWER ON.
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F30835 Power unit DRIVE-CLiQ: Cyclic data transfer error

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communication error has occurred form the Control Unit to the power unit involved. The nodes do not send and receive in synchronism.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 21 hex:
The cyclic telegram has not been received.
xx = 22 hex:
Timeout in the telegram receive list.
xx = 40 hex:
Timeout in the telegram send list.

Remedy: - carry out a POWER ON.
- replace the component involved.
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F30836 Power unit DRIVE-CLiQ: Send error for DRIVE-CLiQ data

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communication error has occurred form the Control Unit to the power unit involved. Data were not able to be sent.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 41 hex:
Telegram type does not match send list.

Remedy: Carry out a POWER ON.

F30837 Power unit DRIVE-CLiQ: Component fault

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: Fault detected on the DRIVE-CLiQ component involved. Faulty hardware cannot be excluded.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 20 hex:
Error in the telegram header.
xx = 23 hex:
Receive error: The telegram buffer memory contains an error.
xx = 42 hex:
Send error: The telegram buffer memory contains an error.
xx = 43 hex:
Send error: The telegram buffer memory contains an error.

Remedy: - check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

F30845 Power unit DRIVE-CLiQ: Cyclic data transfer error

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communication error has occurred form the Control Unit to the power unit involved.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 0B hex:
Synchronization error during alternating cyclic data transfer.

Remedy: Carry out a POWER ON.
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F30850 Power unit: Internal software error

Message value: %1

Drive object: All objects

Reaction: A_INFEED: OFF1 (NONE, OFF2)
SERVO: OFF1 (NONE, OFF2, OFF3)
VECTOR: OFF1 (NONE, OFF2, OFF3)

Acknowledge: POWER ON

Cause: An internal software error in the power unit has occurred.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.

Remedy: - replace power unit.
- if required, upgrade the firmware in the power unit.
- contact the Hotline.

F30851 Power unit DRIVE-CLiQ (CU): Sign-of-life missing

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: OFF2 (NONE, OFF1, OFF3)
VECTOR: OFF2 (NONE, OFF1, OFF3)

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communication error has occurred from the power unit to the Control Unit involved.
The DRIVE-CLiQ component did not set the sign-of-life to the Control Unit.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 0A hex = 10 dec:
The sign-of-life bit in the receive telegram is not set.

Remedy: Upgrade the firmware of the component involved.

F30860 Power unit DRIVE-CLiQ (CU): Telegram error

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communication error has occurred from the power unit to the Control Unit involved.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 11 hex = 17 dec:
CRC error and the receive telegram is too early.
xx = 01 hex = 01 dec:
Checksum error (CRC error).
xx = 12 hex = 18 dec:
The telegram is shorter than that specified in the length byte or in the receive list and the receive telegram is too early.
xx = 02 hex = 02 dec:
Telegram is shorter than specified in the length byte or in the receive list.

xx = 13 hex = 19 dec:
The telegram is longer than that specified in the length byte or in the receive list and the receive telegram is too early.
xx = 03 hex = 03 dec:
Telegram is longer than specified in the length byte or in the receive list.
xx = 14 hex = 20 dec:
The length of the receive telegram does not match the receive list and the receive telegram is too early.
xx = 04 hex = 04 dec:
The length of the receive telegram does not match the receive list.
xx = 15 hex = 21 dec:
The type of the receive telegram does not match the receive list and the receive telegram is too early.
xx = 05 hex = 05 dec:
The type of the receive telegram does not match the receive list.
xx = 16 hex = 22 dec:
The address of the power unit in the telegram and in the receive list does not match and the receive telegram is too early.
xx = 06 hex = 06 dec:
The address of the power unit in the telegram and in the receive list do not match.
xx = 19 hex = 25 dec:
The error bit in the receive telegram is set and the receive telegram is too early.
xx = 09 hex = 09 dec:
The error bit in the receive telegram is set.
xx = 10 hex = 16 dec:
The receive telegram is too early.

Remedy: - carry out a POWER ON.
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

F30885 CU DRIVE-CLiQ (CU): Cyclic data transfer error

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communication error has occurred from the power unit to the Control Unit involved.
The nodes do not send and receive in synchronism.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 1A hex = 26 dec:
Sign-of-life bit in the receive telegram not set and the receive telegram is too early.
xx = 21 hex = 33 dec:
The cyclic telegram has not been received.
xx = 22 hex 34 dec:
Timeout in the telegram receive list.
xx = 40 hex = 64 dec:
Timeout in the telegram send list.
xx = 62 hex = 98 dec:
Error at the transition to cyclic operation.

Remedy: - check the power supply voltage of the component involved.
- carry out a POWER ON.
- replace the component involved.
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F30886 PU DRIVE-CLiQ (CU): Error when sending DRIVE-CLiQ data

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communication error has occurred from the power unit to the Control Unit involved.
Data were not able to be sent.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 41 hex:
Telegram type does not match send list.

Remedy: Carry out a POWER ON.

F30887 Power unit DRIVE-CLiQ (CU): Component fault

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: Fault detected on the DRIVE-CLiQ component (power unit) involved. Faulty hardware cannot be excluded.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 20 hex:
Error in the telegram header.
xx = 23 hex:
Receive error: The telegram buffer memory contains an error.
xx = 42 hex:
Send error: The telegram buffer memory contains an error.
xx = 43 hex:
Send error: The telegram buffer memory contains an error.
xx = 60 hex:
Response received too late during runtime measurement.
xx = 61 hex:
Time taken to exchange characteristic data too long.

Remedy: - check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

F30895 PU DRIVE-CLiQ (CU): Alternating cyclic data transfer error

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
VECTOR: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communication error has occurred from the power unit to the Control Unit involved.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 0B hex:
Synchronization error during alternating cyclic data transfer.

Remedy: Carry out a POWER ON.
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F30896 Power unit DRIVE-CLiQ (CU): Inconsistent component properties

Message value: Component number: %1

Drive object: All objects

Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
VECTOR: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)

Acknowledge: IMMEDIATELY

Cause: The properties of the DRIVE-CLiQ component (power unit), specified by the fault value, have changed in an incompatible fashion with respect to the properties when booted. One cause can be, e.g. that a DRIVE-CLiQ cable or DRIVE-CLiQ component has been replaced.
Fault value (r0949, interpret decimal):
Component number.

Remedy: - when replacing cables, only use cables with the same length as the original cables.
- when replacing components, use the same components and firmware releases.
- carry out a POWER ON.

F30899 (N, A) Power unit: Unknown fault

Message value: New message: %1

Drive object: All objects

Reaction: A_INFEED: NONE (OFF1, OFF2)

F31100 (N, A) Encoder 1: Zero mark distance error

Message value: %1

Drive object: All objects

Reaction: A_INFEED: NONE (OFF1, OFF2)
SERVO: ENCODER (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
VECTOR: ENCODER (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

Acknowledge: PULSE INHIBIT

Cause: The measured zero mark distance does not correspond to the parameterized zero mark distance.

For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system.
The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder).
Fault value (r0949, interpret decimal):
Last measured zero mark distance in increments (4 increments = 1 encoder pulse).
The sign designates the direction of motion when detecting the zero mark distance.
See also: p0491 (Motor encoder fault response ENCODER)

Remedy: - check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
. check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the distance between zero marks (p0424, p0425).
- if message output above speed threshold, reduce filter time if necessary (p0438).
- replace the encoder or encoder cable.

SERVO: ENCODER (IASC/DCBRAKE, NONE, OFF1, OFF2, OFF3, STOP1, STOP2)
VECTOR: ENCODER (IASC/DCBRAKE, NONE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowledge: PULSE INHIBIT
Cause: The 1.5 x parameterized zero mark distance was exceeded.
The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder).
Fault value (r0949, interpret decimal):
Number of increments after POWER ON or since the last zero mark that was detected (4 increments = 1 encoder pulse).
See also: p0491 (Motor encoder fault response ENCODER)
Remedy: - check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
. check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the distance between zero marks (p0425).
- if message output above speed threshold, reduce filter time if necessary (p0438).
- when p0437.1 is active, check p4686.
- replace the encoder or encoder cable.

Reaction upon N: NONE
Acknowl. upon N: NONE
Reaction upon A: NONE
Acknowl. upon A: NONE

F31103 (N, A) Encoder 1: Amplitude error, track R

Message value: R track: %1
Drive object: All objects
Reaction: A_INFEED: NONE
SERVO: ENCODER (IASC/DCBRAKE, NONE)
VECTOR: ENCODER (IASC/DCBRAKE, NONE)
Acknowledge: PULSE INHIBIT
Cause: The amplitude of the reference track signal (track R) does not lie within the tolerance bandwidth for encoder 1.
The fault can be initiated when the unipolar voltage range is exceeded or the differential amplitude is initiated.
Fault value (r0949, interpret hexadecimal):
xxxx hex:
xxxx = Signal level, track R (16 bits with sign).

The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV.
The response threshold is < 1700 mV and > 3300 mV.
The nominal differential signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response threshold is > 750 mV.
A signal level of 500 mV peak value corresponds to the numerical value of 5333 hex = 21299 dec.
Note:
The analog value of the amplitude error is not measured at the same time with the hardware fault output by the sensor module.
The signal level is not evaluated unless the following conditions are satisfied:
- Sensor Module properties available (r0459.30 = 1, r0459.31 = 1).
- monitoring active (p0437.30 = 1, p0437.31 = 1).
See also: p0491 (Motor encoder fault response ENCODER)

Remedy:
- check the speed range, frequency characteristic (amplitude characteristic) of the measuring equipment may not be sufficient for the speed range.
- check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections and contacts.
- check whether the zero mark is connected and the signal cables RP and RN connected correctly.
- replace the encoder cable.
- if the coding disk is soiled or the lighting worn, replace the encoder.

F31110 (N, A) Encoder 1: Serial communications error

Message value: Fault cause: %1 bin
Drive object: All objects
Reaction: A_INFEED: NONE
SERVO: ENCODER (IASC/DCBRAKE, NONE)
VECTOR: ENCODER (IASC/DCBRAKE, NONE)
Acknowledge: PULSE INHIBIT
Cause: Serial communication protocol transfer error between the encoder and evaluation module.
Fault value (r0949, interpret binary):
Bit 0: Alarm bit in the position protocol.
Bit 1: Incorrect quiescent level on the data line.
Bit 2: Encoder does not respond (does not supply a start bit within 50 ms).
Bit 3: CRC error: The checksum in the protocol from the encoder does not match the data.
Bit 4: Encoder acknowledgement error: The encoder incorrectly understood the task (request) or cannot execute it.
Bit 5: Internal error in the serial driver: An illegal mode command was requested.
Bit 6: Timeout when cyclically reading.
Bit 8: Protocol is too long (e.g. > 64 bits).
Bit 9: Receive buffer overflow.
Bit 10: Frame error when reading twice.
Bit 11: Parity error.
Bit 12: Data line signal level error during the monoflop time.
Bit 13: Data line incorrect.

Remedy:
Re fault value, bit 0 = 1:
- encoder defective. F31111 may provide additional details.
Re fault value, bit 1 = 1:
- Incorrect encoder type / replace the encoder or encoder cable.
Re fault value, bit 2 = 1:
- Incorrect encoder type / replace the encoder or encoder cable.
Re fault value, bit 3 = 1:
- EMC / connect the cable shield, replace the encoder or encoder cable.
Re fault value, bit 4 = 1:
- EMC / connect the cable shield, replace the encoder or encoder cable, replace the Sensor Module.
Re fault value, bit 5 = 1:
- EMC / connect the cable shield, replace the encoder or encoder cable, replace the Sensor Module.
Re fault value, bit 6 = 1:
- Update the firmware for the Sensor Module.
Re fault value, bit 8 = 1:

- Check the parameterization (p0429.2).
Re fault value, bit 9 = 1:
- EMC / connect the cable shield, replace the encoder or encoder cable, replace the Sensor Module.
Re fault value, bit 10 = 1:
- Check the parameterization (p0429.2, p0449).
Re fault value, bit 11 = 1:
- Check the parameterization (p0436).

F31115 (N, A) Encoder 1: Amplitude error track A/B fault (A^2 + B^2)

Message value: A track: %1, B-track: %2

Drive object: All objects

Reaction: A_INFEED: NONE
SERVO: ENCODER (IASC/DCBRAKE, NONE)
VECTOR: ENCODER (IASC/DCBRAKE, NONE)

Acknowledge: PULSE INHIBIT

Cause: The amplitude (root of A^2 + B^2) for encoder 1 exceeds the permissible tolerance.
Fault value (r0949, interpret hexadecimal):
yyyyxxxx hex:
yyyy = Signal level, track B (16 bits with sign).
xxxx = Signal level, track A (16 bits with sign).
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response thresholds are < 230 mV (observe the frequency response of the encoder) and > 750 mV.
A signal level of 500 mV peak value corresponds to the numerical value of 5333 hex = 21299 dec.
Note for sensors modules for resolvers (e. g. SMC10):
The nominal signal level is at 2900 mV (2.0 Vrms). The response thresholds are < 1070 mV and > 3582 mV.
A signal level of 2900 mV peak value corresponds to the numerical value of 6666 hex = 26214 dec.
Note:
The analog values of the amplitude error are not measured at the same time with the hardware fault output by the sensor module.
See also: p0491 (Motor encoder fault response ENCODER)

Remedy: - check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections.
- replace the encoder or encoder cable.
- check the Sensor Module (e.g. contacts).
- with measuring systems without their own bearing system: Adjust the scanning head and check the bearing system of the measuring wheel.
- for measuring systems with their own bearing system: Ensure that the encoder housing is not subject to any axial force.

F31117 (N, A) Encoder 1: Inversion error signals A and B and R

Message value: -

Drive object: All objects

Reaction: A_INFEED: NONE
SERVO: ENCODER (IASC/DCBRAKE, NONE)
VECTOR: ENCODER (IASC/DCBRAKE, NONE)

Acknowledge: IMMEDIATELY

Cause: For a square-wave signal encoder (TTL. bipolar. double ended) the A* and B* and R* signals are not inverted with respect to signals A and B and R.
Note:
For CU310, CUA32, D410, SMC30 (only Order No. 6SL3055-0AA00-5CA0 and 6SL3055-0AA00-5CA1), the following applies:
A squarewave encoder without track R is used and the track monitoring (p0405.2 = 1) is activated.
See also: p0491 (Motor encoder fault response ENCODER)

Remedy: - check the setting of p0405: p0405.2 = 1 is only possible if the encoder is connected at X520.
- check the encoder/cable: Does the encoder supply TTL signals and the associated inverted signals?
Note:
For a squarewave encoder without track R, the following jumpers must be set at the encoder connection:
- pin 10 (reference signal R) <--> pin 7 (encoder power supply, ground)
- pin 11 (reference signal R inverted) <--> pin 4 (encoder power supply)

Cause: Fault in internal reference voltage of ASICs for encoder 1.
Fault value (r0949, interpret decimal):
1: Reference voltage error.
2: Internal undervoltage.
3: Internal overvoltage.
Remedy: Replace the motor with DRIVE-CLiQ or the appropriate Sensor Module.

F31123 (N, A) Encoder 1: Signal level A/B unipolar outside tolerance

Message value: Fault cause: %1 bin
Drive object: All objects
Reaction: A_INFEED: NONE
SERVO: ENCODER (IASC/DCBRAKE, NONE)
VECTOR: ENCODER (IASC/DCBRAKE, NONE)
Acknowledge: PULSE INHIBIT
Cause: The unipolar level (AP/AN or BP/BN) for encoder 1 is outside the permissible tolerance.
Fault value (r0949, interpret binary):
Bit 0 = 1: Either AP or AN outside the tolerance.
Bit 16 = 1: Either BP or BN outside the tolerance.
The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV.
The response thresholds are < 1700 mV and > 3300 mV.
Note:
The signal level is not evaluated unless the following conditions are satisfied:
- Sensor Module properties available (r0459.31 = 1).
- Monitoring active (p0437.31 = 1).
See also: p0491 (Motor encoder fault response ENCODER)
Remedy: - make sure that the encoder cables and shielding are installed in an EMC-compliant manner.
- check the plug connections and contacts.
- check the short-circuit of a signal cable with mass or the operating voltage.
- replace the encoder cable.

F31125 (N, A) Encoder 1: Amplitude error track A/B overcontrolled

Message value: A track: %1, B-track: %2

Drive object: All objects

Reaction: A_INFEED: NONE
SERVO: ENCODER (IASC/DCBRAKE, NONE)
VECTOR: ENCODER (IASC/DCBRAKE, NONE)

Acknowledge: PULSE INHIBIT

Cause: The amplitude of track A or B for encoder 1 exceeds the permissble tolerance band.
Fault value (r0949, interpret hexadecimal):
yyyyxxxx hex:
yyyy = Signal level, track B (16 bits with sign).
xxxx = Signal level, track A (16 bits with sign).
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response threshold is > 750 mV. This fault also occurs if the A/D converter is overcontrolled.
A signal level of 500 mV peak value corresponds to the numerical value of 5333 hex = 21299 dec.
Note for sensors modules for resolvers (e. g. SMC10):
The nominal signal level is at 2900 mV (2.0 Vrms). The response threshold is > 3582 mV.
A signal level of 2900 mV peak value corresponds to the numerical value of 6666 hex = 26214 dec.
Note:
The analog values of the amplitude error are not measured at the same time with the hardware fault output by the sensor module.
See also: p0491 (Motor encoder fault response ENCODER)

Remedy: - check that the encoder cables and shielding are routed in compliance with EMC.
- replace the encoder or encoder cable.

F31129 (N, A) Encoder 1: Position difference, hall sensor/track C/D and A/B too large

Message value: %1

Drive object: All objects

Reaction: A_INFEED: NONE
SERVO: ENCODER (IASC/DCBRAKE, NONE)
VECTOR: ENCODER (IASC/DCBRAKE, NONE)

Acknowledge: PULSE INHIBIT

Cause: The error for track C/D is greater than +/-15 ° mechanical or +/-60 ° electrical or the error for the Hall signals is greater than +/-60 ° electrical.
One period of track C/D corresponds to 360 ° mechanical.
One period of the Hall signal corresponds to 360 ° electrical.
The monitoring responds if, for example, Hall sensors are connected as equivalent for the C/D tracks with the incorrect rotational sense or supply values that are not accurate enough.
After the fine synchronization using one reference mark or 2 reference marks for distance-coded encoders, this fault is no longer initiated, but instead, Alarm A31429.
Fault value (r0949, interpret decimal):
For track C/D, the following applies:
Measured deviation as mechanical angle (16 bits with sign, 182 dec corresponds to 1 °).
For Hall signals, the following applies:
Measured deviation as electrical angle (16 bits with sign, 182 dec corresponds to 1 °).
See also: p0491 (Motor encoder fault response ENCODER)

Remedy: - track C or D not connected.
- correct the direction of rotation of the Hall sensor possibly connected as equivalent for track C/D.
- check that the encoder cables are routed in compliance with EMC.
- check the adjustment of the Hall sensor.

F31130 (N, A) Encoder 1: Zero mark and position error from the coarse synchronization

Message value: Angular deviation, electrical: %1, angle, mechanical: %2

Drive object: All objects

Reaction: A_INFEED: NONE
SERVO: ENCODER (IASC/DCBRAKE, NONE, OFF1, OFF2, OFF3, STOP1, STOP2)
VECTOR: ENCODER (IASC/DCBRAKE, NONE, OFF1, OFF2, OFF3, STOP1, STOP2)

Acknowledge: PULSE INHIBIT

Cause: After initializing the pole position using track C/D, Hall signals or pole position identification routine, the zero mark was detected outside the permissible range. For distance-coded encoders, the test is carried out after passing 2 zero marks. Fine synchronization was not carried out.
When initializing via track C/D (p0404) then it is checked whether the zero mark occurs in an angular range of +/-18 ° mechanical.
When initializing via Hall sensors (p0404) or pole position identification (p1982) it is checked whether the zero mark occurs in an angular range of +/-60 ° electrical.
Fault value (r0949, interpret hexadecimal):
yyyyxxxx hex
yyyy: Determined mechanical zero mark position (can only be used for track C/D).
xxxx: Deviation of the zero mark from the expected position as electrical angle.
Normalization: 32768 dec = 180 °
See also: p0491 (Motor encoder fault response ENCODER)

Remedy: - Check and, if necessary, correct p0431 (trigger via p1990 = 1 if necessary).
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
- if the Hall sensor is used as an equivalent for track C/D, check the connection.
- Check connection of track C or D.
- replace the encoder or encoder cable.

Reaction upon N: NONE

Acknowl. upon N: NONE

Reaction upon A: NONE

F31131 (N, A) Encoder 1: Deviation, position incremental/absolute too large

Message value: %1
Drive object: All objects
Reaction: A_INFEED: NONE
SERVO: ENCODER (IASC/DCBRAKE, NONE, OFF1, OFF2, OFF3, STOP1, STOP2)
VECTOR: ENCODER (IASC/DCBRAKE, NONE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowledge: PULSE INHIBIT
Cause: Absolute encoder:
When cyclically reading the absolute position, an excessively high difference to the incremental position was detected. The absolute position that was read is rejected.
Limit value for the deviation:
- EnDat encoder: Is supplied from the encoder and is a minimum of 2 quadrants (e.g. EQI 1325 > 2 quadrants, EQN 1325 > 50 quadrants).
- other encoders: 15 pulses = 60 quadrants.
Incremental encoder:
When the zero pulse is passed, a deviation in the incremental position was detected.
For equidistant zero marks, the following applies:
- The first zero mark passed supplies the reference point for all subsequent checks. The other zero marks must have n times the distance referred to the first zero mark.
For distance-coded zero marks, the following applies:
- the first zero mark pair supplies the reference point for all subsequent checks. The other zero mark pairs must have the expected distance to the first zero mark pair.
Fault value (r0949, interpret decimal):
Deviation in quadrants (1 pulse = 4 quadrants).
See also: p0491 (Motor encoder fault response ENCODER)
Remedy: - check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
- replace the encoder or encoder cable.
- check whether the coding disk is dirty or there are strong ambient magnetic fields.
- adapt the parameter for the distance between zero marks (p0425).
- if message output above speed threshold, reduce filter time if necessary (p0438).

A31400 (F, N) Encoder 1: Alarm threshold zero mark distance error

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The measured zero mark distance does not correspond to the parameterized zero mark distance.
For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system.
The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder).

Alarm value (r2124, interpret decimal):
Last measured zero mark distance in increments (4 increments = 1 encoder pulse).
The sign designates the direction of motion when detecting the zero mark distance.

Remedy: - check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
. check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the distance between zero marks (p0424, p0425).
- replace the encoder or encoder cable.

A31421 (F, N) Encoder 1: Coarse position error

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: For the actual value sensing, an error was detected. As a result of this error, it must be assumed that the actual value sensing supplies an incorrect coarse position.
Alarm value (r2124, interpret decimal):
3: The absolute position of the serial protocol and track A/B differ by half an encoder pulse. The absolute position must have its zero position in the quadrants in which both tracks are negative. In the case of a fault, the position can be incorrect by one encoder pulse.

Remedy: Re alarm value = 3:
- for a standard encoder with cable, if required, contact the manufacturer.
- correct the assignment of the tracks to the position value that is serially transferred. To do this, the two tracks must be connected, inverted, at the Sensor Module (interchange A with A* and B with B*) or, for a programmable encoder, check the zero offset of the position.

Reaction upon F: A_INFEED: NONE (OFF1, OFF2)
SERVO: NONE (ENCODER, IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

A31429 (F, N) Encoder 1: Position difference, hall sensor/track C/D and A/B too large

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The error for track C/D is greater than +/-15 ° mechanical or +/-60 ° electrical or the error for the Hall signals is greater than +/-60 ° electrical.
One period of track C/D corresponds to 360 ° mechanical.
One period of the Hall signal corresponds to 360 ° electrical.
The monitoring responds if, for example, Hall sensors are connected as equivalent for the C/D tracks with the incorrect rotational sense or supply values that are not accurate enough.
Alarm value (r2124, interpret decimal):
For track C/D, the following applies:
Measured deviation as mechanical angle (16 bits with sign, 182 dec corresponds to 1 °).

For Hall signals, the following applies:
Measured deviation as electrical angle (16 bits with sign, 182 dec corresponds to 1 °).
See also: p0491 (Motor encoder fault response ENCODER)

Remedy: - track C or D not connected.
- correct the direction of rotation of the Hall sensor possibly connected as equivalent for track C/D.
- check that the encoder cables are routed in compliance with EMC.
- check the adjustment of the Hall sensor.

A31431 (F, N) Encoder 1: Deviation, position incremental/absolute too large

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: When the zero pulse is passed, a deviation in the incremental position was detected.
For equidistant zero marks, the following applies:
- The first zero mark passed supplies the reference point for all subsequent checks. The other zero marks must have n times the distance referred to the first zero mark.
For distance-coded zero marks, the following applies:
- the first zero mark pair supplies the reference point for all subsequent checks. The other zero mark pairs must have the expected distance to the first zero mark pair.
Alarm value (r2124, interpret decimal):
Deviation in quadrants (1 pulse = 4 quadrants).
See also: p0491 (Motor encoder fault response ENCODER)

Remedy: - check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
- replace the encoder or encoder cable.
- remove any dirt from the coding disk or strong magnetic fields.

A31443 (F, N) Encoder 1: Signal level C/D unipolar outside tolerance

Message value: Fault cause: %1 bin
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The unipolar level (CP/CN or DP/DN) for encoder 1 is outside the permissible tolerance.
Alarm value (r2124, interpret binary):
Bit 0 = 1: Either CP or CN outside the tolerance.
Bit 16 = 1: Either DP or DN outside the tolerance.
The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV.
The response thresholds are < 1700 mV and > 3300 mV.
Note:
The signal level is not evaluated unless the following conditions are satisfied:
- Sensor Module properties available (r0459.31 = 1).
- Monitoring active (p0437.31 = 1).
See also: p0491 (Motor encoder fault response ENCODER)
Remedy: - check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections and contacts.
- are the C/D tracks connected correctly (have the signal lines CP and CN or DP and DN been interchanged)?
- replace the encoder cable.

F31500 (N, A) Encoder 1: Position tracking traversing range exceeded

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: For a configured linear axis without modulo correction, the drive/encoder has exceeded the maximum possible traversing range. The value should be read in p0412 and interpreted as the number of motor revolutions.
When p0411.0 = 1, the maximum traversing range for a configured linear axis is defined to be 64x (+/- 32x) the setting in p0421.
When p0411.3 = 1, the maximum traversing range for a configured linear axis is preset to the highest possible value and equals +/-p0412/2 (rounded to whole rotations). The highest possible value depends on the pulse number (p0408) and fine resolution (p0419).
Remedy: The fault should be resolved as follows:
- select encoder commissioning (p0010 = 4).
- reset the position tracking as follows (p0411.2 = 1).
- de-select encoder commissioning (p0010 = 0).
The fault should then be acknowledged and the absolute encoder adjusted.

A31811 (F, N) Encoder 1: Encoder serial number changed

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The serial number of the motor encoder of a synchronous motor has changed. The change was only checked for encoders with serial number (e.g. EnDat encoders) and build-in motors (e.g. p0300 = 401) or third-party motors (p0300 = 2).
Cause 1:
The encoder was replaced.
Cause 2:
A third-party, build-in or linear motor was re-commissioned.
Cause 3:
The motor with integrated and adjusted encoder was replaced.
Cause 4:
The firmware was updated to a version that checks the encoder serial number.
Note:
With closed-loop position control, the serial number is accepted when starting the adjustment (p2507 = 2).
When the encoder is adjusted (p2507 = 3), the serial number is checked for changes and if required, the adjustment is reset (p2507 = 1).
See also: p0491 (Motor encoder fault response ENCODER)

Remedy: Re causes 1, 2:
Carry out an automatic adjustment using the pole position identification routine. First, accept the serial number with p0440 = 1. Acknowledge the fault. Initiate the pole position identification routine with p1990 = 1. Then check that the pole position identification routine is correctly executed.
SERVO:
If a pole position identification technique is selected in p1980, and if p0301 does not contain a motor type with an encoder adjusted in the factory, then p1990 is automatically activated.
or
Set the adjustment via p0431. In this case, the new serial number is automatically accepted.
or
Mechanically adjust the encoder. Accept the new serial number with p0440 = 1.
Re causes 3, 4:
Accept the new serial number with p0440 = 1.

Cause: A DRIVE-CLiQ communication error has occurred from the Sensor Module (encoder 1) involved to the Control Unit.

Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 11 hex 17 dec:
CRC error and the receive telegram is too early.
xx = 01 hex = 01 dec:
Checksum error (CRC error).
xx = 12 hex = 18 dec:
The telegram is shorter than that specified in the length byte or in the receive list and the receive telegram is too early.
xx = 02 hex = 02 dec:
Telegram is shorter than specified in the length byte or in the receive list.
xx = 13 hex = 19 dec:
The telegram is longer than that specified in the length byte or in the receive list and the receive telegram is too early.
xx = 03 hex = 03 dec:
Telegram is longer than specified in the length byte or in the receive list.
xx = 14 hex = 20 dec:
The length of the receive telegram does not match the receive list and the receive telegram is too early.
xx = 04 hex = 04 dec:
The length of the receive telegram does not match the receive list.
xx = 15 hex = 21 dec:
The type of the receive telegram does not match the receive list and the receive telegram is too early.
xx = 05 hex = 05 dec:
The type of the receive telegram does not match the receive list.
xx = 16 hex = 22 dec:
The address of the power unit in the telegram and in the receive list does not match and the receive telegram is too early.
xx = 06 hex = 06 dec:
The address of the power unit in the telegram and in the receive list do not match.
xx = 19 hex = 25 dec:
The error bit in the receive telegram is set and the receive telegram is too early.
xx = 09 hex = 09 dec:
The error bit in the receive telegram is set.
xx = 10 hex = 16 dec:
The receive telegram is too early.

Remedy: - carry out a POWER ON.
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

F31905 (N, A) Encoder 1: Parameterization error

Message value: Parameter: %1, supplementary information: %2
Drive object: All objects
Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: ENCODER (IASC/DCBRAKE, NONE, OFF1, OFF2, OFF3, STOP1, STOP2)
VECTOR: ENCODER (IASC/DCBRAKE, NONE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY
Cause: A parameter of encoder 1 was detected as being incorrect.
It is possible that the parameterized encoder type does not match the connected encoder.

The parameter involved can be determined as follows:
- determine the parameter number using the fault value (r0949).
- determine the parameter index (p0187).
Fault value (r0949, interpret decimal):
yyyyxxxx dec: yyyy = supplementary information, xxxx = parameter
Supplementary information = 0:
No information available.
Supplementary information = 1:
The component does not support HTL level (p0405.1 = 0) combined with track monitoring A/B <> -A/B (p0405.2 = 1).
Supplementary information = 2:
A code number for an identified encoder has been entered into p0400, however, no identification was carried out.
Please start a new encoder identification.
Supplementary information = 3:
A code number for an identified encoder has been entered into p0400, however, no identification was carried out.
Please select a listed encoder in p0400 with a code number < 10000.
Supplementary information = 4:
This component does not support SSI encoders (p0404.9 = 1) without track A/B.
Supplementary information = 5:
For the SQW encoder, the value in p4686 is greater than that in p0425.
Supplementary information = 6:
The DRIVE-CLiQ encoder cannot be used with this firmware version.
See also: p0491 (Motor encoder fault response ENCODER)

Remedy: - check whether the connected encoder type matches the encoder that has been parameterized.
- correct the parameter specified by the fault value (r0949) and p0187.
- re parameter number 314: Check the pole pair number and measuring gear ratio. The quotient of the "pole pair number" divided by the "measuring gear ratio" must be less than or equal to 1000 ((r0313 * p0433) / p0432 <= 1000).

F32100 (N, A) Encoder 2: Zero mark distance error

Message value: %1

Drive object: All objects

Reaction: A_INFEED: NONE (OFF1, OFF2)
SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)

Acknowledge: PULSE INHIBIT

Cause: The measured zero mark distance does not correspond to the parameterized zero mark distance.
For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system.
The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder).
Fault value (r0949, interpret decimal):
Last measured zero mark distance in increments (4 increments = 1 encoder pulse).
The sign designates the direction of motion when detecting the zero mark distance.

Remedy: - check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
. check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the distance between zero marks (p0424, p0425).
- if message output above speed threshold, reduce filter time if necessary (p0438).
- replace the encoder or encoder cable.

F32103 (N, A) Encoder 2: Amplitude error, track R

Message value: R track: %1

Drive object: All objects

Reaction: A_INFEED: NONE
SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: The amplitude of the reference track signal (track R) does not lie within the tolerance bandwidth for encoder 2.
The fault can be initiated when the unipolar voltage range is exceeded or the differential amplitude is initiated.
Fault value (r0949, interpret hexadecimal):
xxxx hex:
xxxx = Signal level, track R (16 bits with sign).
The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV.
The response threshold is < 1700 mV and > 3300 mV.
The nominal differential signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response threshold is > 750 mV.
A signal level of 500 mV peak value corresponds to the numerical value of 5333 hex = 21299 dec.
Note:
The analog value of the amplitude error is not measured at the same time with the hardware fault output by the sensor module.
The signal level is not evaluated unless the following conditions are satisfied:
- Sensor Module properties available (r0459.30 = 1, r0459.31 = 1).
- monitoring active (p0437.30 = 1, p0437.31 = 1).

Remedy: - check the speed range, frequency characteristic (amplitude characteristic) of the measuring equipment may not be sufficient for the speed range.
- check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections and contacts.
- check whether the zero mark is connected and the signal cables RP and RN connected correctly.
- replace the encoder cable.
- if the coding disk is soiled or the lighting worn, replace the encoder.

SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)

Acknowledge: PULSE INHIBIT

Cause: Serial communication protocol transfer error between the encoder and evaluation module.
Fault value (r0949, interpret binary):
Bit 0: Alarm bit in the position protocol.
Bit 1: Incorrect quiescent level on the data line.
Bit 2: Encoder does not respond (does not supply a start bit within 50 ms).
Bit 3: CRC error: The checksum in the protocol from the encoder does not match the data.
Bit 4: Encoder acknowledgement error: The encoder incorrectly understood the task (request) or cannot execute it.
Bit 5: Internal error in the serial driver: An illegal mode command was requested.
Bit 6: Timeout when cyclically reading.
Bit 8: Protocol is too long (e.g. > 64 bits).
Bit 9: Receive buffer overflow.
Bit 10: Frame error when reading twice.
Bit 11: Parity error.
Bit 12: Data line signal level error during the monoflop time.
Bit 13: Data line incorrect.

Remedy: Re fault value, bit 0 = 1:
- encoder defective. F31111 may provide additional details.
Re fault value, bit 1 = 1:
- Incorrect encoder type / replace the encoder or encoder cable.
Re fault value, bit 2 = 1:
- Incorrect encoder type / replace the encoder or encoder cable.
Re fault value, bit 3 = 1:
- EMC / connect the cable shield, replace the encoder or encoder cable.
Re fault value, bit 4 = 1:
- EMC / connect the cable shield, replace the encoder or encoder cable, replace the Sensor Module.
Re fault value, bit 5 = 1:
- EMC / connect the cable shield, replace the encoder or encoder cable, replace the Sensor Module.
Re fault value, bit 6 = 1:
- Update the firmware for the Sensor Module.
Re fault value, bit 8 = 1:
- Check the parameterization (p0429.2).
Re fault value, bit 9 = 1:
- EMC / connect the cable shield, replace the encoder or encoder cable, replace the Sensor Module.

F32115 (N, A) Encoder 2: Amplitude error track A/B fault (A^2 + B^2)

Message value: A track: %1, B-track: %2
Drive object: All objects
Reaction: A_INFEED: NONE
SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: PULSE INHIBIT
Cause: The amplitude (root of A^2 + B^2) for encoder 2 exceeds the permissible tolerance.
Fault value (r0949, interpret hexadecimal):
yyyyxxxx hex:
yyyy = Signal level, track B (16 bits with sign).
xxxx = Signal level, track A (16 bits with sign).
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response thresholds are < 230 mV (observe the frequency response of the encoder) and > 750 mV.
A signal level of 500 mV peak value corresponds to the numerical value of 5333 hex = 21299 dec.
Note for sensors modules for resolvers (e. g. SMC10):
The nominal signal level is at 2900 mV (2.0 Vrms). The response thresholds are < 1070 mV and > 3582 mV.
A signal level of 2900 mV peak value corresponds to the numerical value of 6666 hex = 26214 dec.
Note:
The analog values of the amplitude error are not measured at the same time with the hardware fault output by the sensor module.

Remedy: - check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections.
- replace the encoder or encoder cable.
- check the Sensor Module (e.g. contacts).
- with measuring systems without their own bearing system: Adjust the scanning head and check the bearing system of the measuring wheel.
- for measuring systems with their own bearing system: Ensure that the encoder housing is not subject to any axial force.

F32116 (N, A) Encoder 2: Amplitude error track A + B

Message value: Amplitude: %1, Angle: %2
Drive object: All objects
Reaction: A_INFEED: NONE
SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The amplitude of the rectified encoder signals A and B and the amplitude from the roots of A^2 + B^2 for encoder 2 are not within the tolerance bandwidth.
Fault value (r0949, interpret hexadecimal):
yyyyxxxx hex:
yyyy = Signal level, track B (16 bits with sign).
xxxx = Signal level, track A (16 bits with sign).
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response thresholds are < 176 mV (observe the frequency response of the encoder) and > 955 mV.
A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.
Note:
The analog values of the amplitude error are not measured at the same time with the hardware fault output by the sensor module.
Remedy: - check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections.
- replace the encoder or encoder cable.
- check the Sensor Module (e.g. contacts).

F32117 (N, A) Encoder 2: Inversion error signals A and B and R

Message value: -
Drive object: All objects
Reaction: A_INFEED: NONE
SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: For a square-wave signal encoder (TTL. bipolar. double ended) the A* and B* and R* signals are not inverted with respect to signals A and B and R.
Note:
For CU310, CUA32, D410, SMC30 (only Order No. 6SL3055-0AA00-5CA0 and 6SL3055-0AA00-5CA1), the following applies:
A squarewave encoder without track R is used and the track monitoring (p0405.2 = 1) is activated.

Remedy: - check the setting of p0405: p0405.2 = 1 is only possible if the encoder is connected at X520.
- check the encoder/cable: Does the encoder supply TTL signals and the associated inverted signals?
Note:
For a squarewave encoder without track R, the following jumpers must be set at the encoder connection:
- pin 10 (reference signal R) <--> pin 7 (encoder power supply, ground)
- pin 11 (reference signal R inverted) <--> pin 4 (encoder power supply)

Reaction: A_INFEED: NONE
SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: PULSE INHIBIT
Cause: Encoder 2 power supply voltage fault.
Note:
If the encoder cables 6FX2002-2EQ00-.... and 6FX2002-2CH00-.... are interchanged, this can result in the encoder being destroyed because the pins of the operating voltage are reversed.
Fault value (r0949, interpret binary):
Bit 0: Undervoltage condition on the sense line.
Bit 1: Overcurrent condition for the encoder power supply.
Remedy: For fault value, bit 0 = 1:
- correct encoder cable connected?
- check the plug connections of the encoder cable.
- SMC30: Check the parameterization (p0404.22).
For fault value, bit 1 = 1:
- correct encoder cable connected?
- replace the encoder or encoder cable.

Cause: Fault in internal reference voltage of ASICs for encoder 2.
Fault value (r0949, interpret decimal):
1: Reference voltage error.
2: Internal undervoltage.
3: Internal overvoltage.
Remedy: Replace the motor with DRIVE-CLiQ or the appropriate Sensor Module.

F32123 (N, A) Encoder 2: Signal level A/B unipolar outside tolerance

Message value: Fault cause: %1 bin
Drive object: All objects
Reaction: A_INFEED: NONE
SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The unipolar level (AP/AN or BP/BN) for encoder 2 is outside the permissible tolerance.
Fault value (r0949, interpret binary):
Bit 0 = 1: Either AP or AN outside the tolerance.
Bit 16 = 1: Either BP or BN outside the tolerance.
The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV.
The response thresholds are < 1700 mV and > 3300 mV.
Note:
The signal level is not evaluated unless the following conditions are satisfied:
- Sensor Module properties available (r0459.31 = 1).
- Monitoring active (p0437.31 = 1).
Remedy: - make sure that the encoder cables and shielding are installed in an EMC-compliant manner.
- check the plug connections and contacts.
- check the short-circuit of a signal cable with mass or the operating voltage.
- replace the encoder cable.

SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)

Acknowledge: PULSE INHIBIT

Cause: The amplitude of track A or B for encoder 2 exceeds the permissble tolerance band.
Fault value (r0949, interpret hexadecimal):
yyyyxxxx hex:
yyyy = Signal level, track B (16 bits with sign).
xxxx = Signal level, track A (16 bits with sign).
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response threshold is > 750 mV. This fault also occurs if the A/D converter is overcontrolled.
A signal level of 500 mV peak value corresponds to the numerical value of 5333 hex = 21299 dec.
Note for sensors modules for resolvers (e. g. SMC10):
The nominal signal level is at 2900 mV (2.0 Vrms). The response threshold is > 3582 mV.
A signal level of 2900 mV peak value corresponds to the numerical value of 6666 hex = 26214 dec.
Note:
The analog values of the amplitude error are not measured at the same time with the hardware fault output by the sensor module.

Remedy: - check that the encoder cables and shielding are routed in compliance with EMC.
- replace the encoder or encoder cable.

F32129 (N, A) Encoder 2: Position difference, hall sensor/track C/D and A/B too large

Message value: %1

Drive object: All objects

Reaction: A_INFEED: NONE
SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)

Acknowledge: PULSE INHIBIT

Cause: The error for track C/D is greater than +/-15 ° mechanical or +/-60 ° electrical or the error for the Hall signals is greater than +/-60 ° electrical.
One period of track C/D corresponds to 360 ° mechanical.
One period of the Hall signal corresponds to 360 ° electrical.
The monitoring responds if, for example, Hall sensors are connected as equivalent for the C/D tracks with the incorrect rotational sense or supply values that are not accurate enough.
After the fine synchronization using one reference mark or 2 reference marks for distance-coded encoders, this fault is no longer initiated, but instead, Alarm A32429.
Fault value (r0949, interpret decimal):
For track C/D, the following applies:
Measured deviation as mechanical angle (16 bits with sign, 182 dec corresponds to 1 °).
For Hall signals, the following applies:
Measured deviation as electrical angle (16 bits with sign, 182 dec corresponds to 1 °).

Remedy: - track C or D not connected.
- correct the direction of rotation of the Hall sensor possibly connected as equivalent for track C/D.
- check that the encoder cables are routed in compliance with EMC.
- check the adjustment of the Hall sensor.

F32130 (N, A) Encoder 2: Zero mark and position error from the coarse synchronization

Message value: Angular deviation, electrical: %1, angle, mechanical: %2

Drive object: All objects

Reaction: A_INFEED: NONE
SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)

Acknowledge: PULSE INHIBIT

Cause: After initializing the pole position using track C/D, Hall signals or pole position identification routine, the zero mark was detected outside the permissible range. For distance-coded encoders, the test is carried out after passing 2 zero marks. Fine synchronization was not carried out.
When initializing via track C/D (p0404) then it is checked whether the zero mark occurs in an angular range of +/-18 ° mechanical.
When initializing via Hall sensors (p0404) or pole position identification (p1982) it is checked whether the zero mark occurs in an angular range of +/-60 ° electrical.
Fault value (r0949, interpret hexadecimal):
yyyyxxxx hex
yyyy: Determined mechanical zero mark position (can only be used for track C/D).
xxxx: Deviation of the zero mark from the expected position as electrical angle.
Normalization: 32768 dec = 180 °

Remedy: - check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
- if the Hall sensor is used as an equivalent for track C/D, check the connection.
- check the connection of track C or D.
- replace the encoder or encoder cable.

Reaction upon N: NONE

Acknowl. upon N: NONE

Reaction upon A: NONE

Acknowl. upon A: NONE

F32131 (N, A) Encoder 2: Deviation, position incremental/absolute too large

Message value: %1

Drive object: All objects

Reaction: A_INFEED: NONE
SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)

Acknowledge: PULSE INHIBIT

Cause: Absolute encoder:
When cyclically reading the absolute position, an excessively high difference to the incremental position was detected. The absolute position that was read is rejected.
Limit value for the deviation:
- EnDat encoder: Is supplied from the encoder and is a minimum of 2 quadrants (e.g. EQI 1325 > 2 quadrants, EQN 1325 > 50 quadrants).
- other encoders: 15 pulses = 60 quadrants.
Incremental encoder:
When the zero pulse is passed, a deviation in the incremental position was detected.
For equidistant zero marks, the following applies:
- The first zero mark passed supplies the reference point for all subsequent checks. The other zero marks must have n times the distance referred to the first zero mark.
For distance-coded zero marks, the following applies:
- the first zero mark pair supplies the reference point for all subsequent checks. The other zero mark pairs must have the expected distance to the first zero mark pair.
Fault value (r0949, interpret decimal):
Deviation in quadrants (1 pulse = 4 quadrants).

Remedy:
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
- replace the encoder or encoder cable.
- check whether the coding disk is dirty or there are strong ambient magnetic fields.
- adapt the parameter for the distance between zero marks (p0425).
- if message output above speed threshold, reduce filter time if necessary (p0438).

A32400 (F, N) Encoder 2: Alarm threshold zero mark distance error

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The measured zero mark distance does not correspond to the parameterized zero mark distance.
For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system.
The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder).

Alarm value (r2124, interpret decimal):
Last measured zero mark distance in increments (4 increments = 1 encoder pulse).
The sign designates the direction of motion when detecting the zero mark distance.

Remedy: - check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
. check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the distance between zero marks (p0424, p0425).
- replace the encoder or encoder cable.

A32412 (F, N) Encoder 2: Error bit set in the serial protocol

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The encoder sends a set error bit via the serial protocol.
Alarm value (r2124, interpret binary):
Bit 0: Fault bit in the position protocol.
Bit 1: Alarm bit in the position protocol.

Remedy: - carry out a POWER ON (power off/on) for all components.
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
- replace the encoder.

Reaction upon F: A_INFEED: NONE (OFF1, OFF2)
SERVO: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
VECTOR: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

A32414 (F, N) Encoder 2: Amplitude error track C or D (C^2 + D^2)

Message value: C track: %1, D track: %2

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The amplitude (C^2 + D^2) of track C or D of the encoder or from the Hall signals, is not within the tolerance bandwidth.
Alarm value (r2124, interpret hexadecimal):
yyyyxxxx hex:
yyyy = Signal level, track D (16 bits with sign).
xxxx = Signal level, track C (16 bits with sign).
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response thresholds are < 230 mV (observe the frequency response of the encoder) and > 750 mV.
A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.
Note:
If the amplitude is not within the tolerance bandwidth, then it cannot be used to initialize the start position.

Remedy: - check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
- replace the encoder or encoder cable.
- check the Sensor Module (e.g. contacts).
- check the Hall sensor box

Reaction upon F: A_INFEED: NONE (OFF1, OFF2)
SERVO: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

Reaction upon N: NONE

Acknowl. upon N: NONE

N32415 (F, A) Encoder 2: Amplitude error track A/B alarm (A^2 + B^2)

Message value: Amplitude: %1, Angle: %2

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The amplitude (root of A^2 + B^2) for encoder 2 exceeds the permissible tolerance.
Alarm value (r2124, interpret hexadecimal):
yyyyxxxx hex:
yyyy = Angle
xxxx = Amplitude, i.e. root from A^2 + B^2 (16 bits without sign)
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response threshold is < 300 mV (observe the frequency response of the encoder).
A signal level of 500 mV peak value corresponds to the numerical value 299A hex = 10650 dec.
The angle 0 ... FFFF hex corresponds to 0 ... 360 degrees of the fine position. Zero degrees is at the negative zero crossover of track B.
Note for sensors modules for resolvers (e. g. SMC10):
The nominal signal level is at 2900 mV (2.0 Vrms). The response threshold is < 1414 mV (1.0 Vrms).
A signal level of 2900 mV peak value corresponds to the numerical value of 3333 hex = 13107 dec.

Note:
The analog values of the amplitude error are not measured at the same time with the hardware fault output by the sensor module.

Remedy: - check the speed range, frequency characteristic (amplitude characteristic) of the measuring equipment is not sufficient for the speed range.
- check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections.
- replace the encoder or encoder cable.
- check the Sensor Module (e.g. contacts).
- if the coding disk is soiled or the lighting worn, replace the encoder.

A32421 (F, N) Encoder 2: Coarse position error

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: For the actual value sensing, an error was detected. As a result of this error, it must be assumed that the actual value sensing supplies an incorrect coarse position.
Alarm value (r2124, interpret decimal):
3: The absolute position of the serial protocol and track A/B differ by half an encoder pulse. The absolute position must have its zero position in the quadrants in which both tracks are negative. In the case of a fault, the position can be incorrect by one encoder pulse.

Remedy: Re alarm value = 3:
- for a standard encoder with cable, if required, contact the manufacturer.
- correct the assignment of the tracks to the position value that is serially transferred. To do this, the two tracks must be connected, inverted, at the Sensor Module (interchange A with A* and B with B*) or, for a programmable encoder, check the zero offset of the position.

Reaction upon F: A_INFEED: NONE (OFF1, OFF2)
SERVO: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

A32429 (F, N) Encoder 2: Position difference, hall sensor/track C/D and A/B too large

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The error for track C/D is greater than +/-15 ° mechanical or +/-60 ° electrical or the error for the Hall signals is greater than +/-60 ° electrical.
One period of track C/D corresponds to 360 ° mechanical.
One period of the Hall signal corresponds to 360 ° electrical.
The monitoring responds if, for example, Hall sensors are connected as equivalent for the C/D tracks with the incorrect rotational sense or supply values that are not accurate enough.
Alarm value (r2124, interpret decimal):
For track C/D, the following applies:
Measured deviation as mechanical angle (16 bits with sign, 182 dec corresponds to 1 °).
For Hall signals, the following applies:
Measured deviation as electrical angle (16 bits with sign, 182 dec corresponds to 1 °).

Remedy: - track C or D not connected.
- correct the direction of rotation of the Hall sensor possibly connected as equivalent for track C/D.
- check that the encoder cables are routed in compliance with EMC.
- check the adjustment of the Hall sensor.

A32431 (F, N) Encoder 2: Deviation, position incremental/absolute too large

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: When the zero pulse is passed, a deviation in the incremental position was detected.
For equidistant zero marks, the following applies:
- The first zero mark passed supplies the reference point for all subsequent checks. The other zero marks must have n times the distance referred to the first zero mark.
For distance-coded zero marks, the following applies:
- the first zero mark pair supplies the reference point for all subsequent checks. The other zero mark pairs must have the expected distance to the first zero mark pair.
Alarm value (r2124, interpret decimal):
Deviation in quadrants (1 pulse = 4 quadrants).
Remedy: - check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
- replace the encoder or encoder cable.
- remove any dirt from the coding disk or strong magnetic fields.

A32443 (F, N) Encoder 2: Signal level C/D unipolar outside tolerance

Message value: Fault cause: %1 bin

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The unipolar level (CP/CN or DP/DN) for encoder 2 is outside the permissible tolerance.
Alarm value (r2124, interpret binary):
Bit 0 = 1: Either CP or CN outside the tolerance.
Bit 16 = 1: Either DP or DN outside the tolerance.
The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV.
The response thresholds are < 1700 mV and > 3300 mV.
Note:
The signal level is not evaluated unless the following conditions are satisfied:
- Sensor Module properties available (r0459.31 = 1).
- Monitoring active (p0437.31 = 1).

Remedy: - check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections and contacts.
- are the C/D tracks connected correctly (have the signal lines CP and CN or DP and DN been interchanged)?
- replace the encoder cable.

F32500 (N, A) Encoder 2: Position tracking traversing range exceeded

Message value: -

Drive object: SERVO, VECTOR

Reaction: OFF1 (NONE, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: For a configured linear axis without modulo correction, the drive/encoder has exceeded the maximum possible traversing range. The value should be read in p0412 and interpreted as the number of motor revolutions.
When p0411.0 = 1, the maximum traversing range for a configured linear axis is defined to be 64x (+/- 32x) the setting in p0421.
When p0411.3 = 1, the maximum traversing range for a configured linear axis is preset to the highest possible value and equals +/-p0412/2 (rounded to whole rotations). The highest possible value depends on the pulse number (p0408) and fine resolution (p0419).

Remedy: The fault should be resolved as follows:
- select encoder commissioning (p0010 = 4).
- reset the position tracking as follows (p0411.2 = 1).
- de-select encoder commissioning (p0010 = 0).
The fault should then be acknowledged and the absolute encoder adjusted.

F32905 (N, A) Encoder 2: Parameterization error

Message value: Parameter: %1, supplementary information: %2
Drive object: All objects
Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY
Cause: A parameter of encoder 2 was detected as being incorrect.
It is possible that the parameterized encoder type does not match the connected encoder.
The parameter involved can be determined as follows:
- determine the parameter number using the fault value (r0949).
- determine the parameter index (p0187).
Fault value (r0949, interpret decimal):
yyyyxxxx dec: yyyy = supplementary information, xxxx = parameter
Supplementary information = 0:
No information available.
Supplementary information = 1:
The component does not support HTL level (p0405.1 = 0) combined with track monitoring A/B <> -A/B (p0405.2 = 1).
Supplementary information = 2:
A code number for an identified encoder has been entered into p0400, however, no identification was carried out.
Please start a new encoder identification.
Supplementary information = 3:
A code number for an identified encoder has been entered into p0400, however, no identification was carried out.
Please select a listed encoder in p0400 with a code number < 10000.
Supplementary information = 4:
This component does not support SSI encoders (p0404.9 = 1) without track A/B.
Supplementary information = 5:
For the SQW encoder, the value in p4686 is greater than that in p0425.
Supplementary information = 6:
The DRIVE-CLiQ encoder cannot be used with this firmware version.
Remedy: - check whether the connected encoder type matches the encoder that has been parameterized.
- correct the parameter specified by the fault value (r0949) and p0187.
- re parameter number 314: Check the pole pair number and measuring gear ratio. The quotient of the "pole pair number" divided by the "measuring gear ratio" must be less than or equal to 1000 ((r0313 * p0433) / p0432 <= 1000).

F33100 (N, A) Encoder 3: Zero mark distance error

Message value: %1
Drive object: All objects
Reaction: A_INFEED: NONE (OFF1, OFF2)
SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge: PULSE INHIBIT
Cause: The measured zero mark distance does not correspond to the parameterized zero mark distance.
For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system.
The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder).
Fault value (r0949, interpret decimal):
Last measured zero mark distance in increments (4 increments = 1 encoder pulse).
The sign designates the direction of motion when detecting the zero mark distance.
Remedy: - check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
. check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the distance between zero marks (p0424, p0425).
- if message output above speed threshold, reduce filter time if necessary (p0438).
- replace the encoder or encoder cable.

Reaction upon A: NONE
Acknowl. upon A: NONE

F33103 (N, A) Encoder 3: Amplitude error, track R

Message value: R track: %1

Drive object: All objects

Reaction: A_INFEED: NONE
SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: The amplitude of the reference track signal (track R) does not lie within the tolerance bandwidth for encoder 3.
The fault can be initiated when the unipolar voltage range is exceeded or the differential amplitude is initiated.
Fault value (r0949, interpret hexadecimal):
xxxx hex:
xxxx = Signal level, track R (16 bits with sign).
The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV.
The response threshold is < 1700 mV and > 3300 mV.
The nominal differential signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response threshold is > 750 mV.
A signal level of 500 mV peak value corresponds to the numerical value of 5333 hex = 21299 dec.
Note:
The analog value of the amplitude error is not measured at the same time with the hardware fault output by the sensor module.
The signal level is not evaluated unless the following conditions are satisfied:
- Sensor Module properties available (r0459.30 = 1, r0459.31 = 1).
- monitoring active (p0437.30 = 1, p0437.31 = 1).

Remedy: - check the speed range, frequency characteristic (amplitude characteristic) of the measuring equipment may not be sufficient for the speed range.
- check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections and contacts.
- check whether the zero mark is connected and the signal cables RP and RN connected correctly.
- replace the encoder cable.
- if the coding disk is soiled or the lighting worn, replace the encoder.

Bit 2: Position value incorrect.
Bit 3: Encoder power supply overvoltage condition.
Bit 4: Encoder power supply undervoltage condition.
Bit 5: Encoder power supply overcurrent condition.
Bit 6: The battery must be changed.

Remedy: Re fault value, bit 0 = 1:
Encoder is defective. Replace the encoder, where the motor encoder has a direct DRIVE-CLiQ socket: Replace the motor.
Re fault value, bit 1 = 1:
Encoder is defective. Replace the encoder, where the motor encoder has a direct DRIVE-CLiQ socket: Replace the motor.
Re fault value, bit 2 = 1:
Encoder is defective. Replace the encoder, where the motor encoder has a direct DRIVE-CLiQ socket: Replace the motor.

Re fault value, bit 3 = 1:
5 V power supply voltage fault.
When using an SMC: Check the plug-in cable between the encoder and SMC or replace the SMC.
When a motor encoder with a direct DRIVE-CLiQ connection is used: Replace the motor.
Re fault value, bit 4 = 1:
5 V power supply voltage fault.
When using an SMC: Check the plug-in cable between the encoder and SMC or replace the SMC.
When using a motor with DRIVE-CLiQ: Replace the motor.
Re fault value, bit 5 = 1:
Encoder is defective. Replace the encoder, where the motor encoder has a direct DRIVE-CLiQ socket: Replace the motor.
Re fault value, bit 6 = 1:
The battery must be changed (only for encoders with battery back-up).

F33115 (N, A) Encoder 3: Amplitude error track A/B fault (A^2 + B^2)

Message value: A track: %1, B-track: %2
Drive object: All objects
Reaction: A_INFEED: NONE
SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: PULSE INHIBIT
Cause: The amplitude (root of A^2 + B^2) for encoder 3 exceeds the permissible tolerance.
Fault value (r0949, interpret hexadecimal):
yyyyxxxx hex:
yyyy = Signal level, track B (16 bits with sign).
xxxx = Signal level, track A (16 bits with sign).
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response thresholds are < 230 mV (observe the frequency response of the encoder) and > 750 mV.
A signal level of 500 mV peak value corresponds to the numerical value of 5333 hex = 21299 dec.
Note for sensors modules for resolvers (e. g. SMC10):
The nominal signal level is at 2900 mV (2.0 Vrms). The response thresholds are < 1070 mV and > 3582 mV.
A signal level of 2900 mV peak value corresponds to the numerical value of 6666 hex = 26214 dec.
Note:
The analog values of the amplitude error are not measured at the same time with the hardware fault output by the sensor module.

Remedy: - check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections.
- replace the encoder or encoder cable.
- check the Sensor Module (e.g. contacts).
- with measuring systems without their own bearing system: Adjust the scanning head and check the bearing system of the measuring wheel.
- for measuring systems with their own bearing system: Ensure that the encoder housing is not subject to any axial force.

Reaction: A_INFEED: NONE
SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: For a square-wave signal encoder (TTL. bipolar. double ended) the A* and B* and R* signals are not inverted with respect to signals A and B and R.
Note:
For CU310, CUA32, D410, SMC30 (only Order No. 6SL3055-0AA00-5CA0 and 6SL3055-0AA00-5CA1), the following applies:
A squarewave encoder without track R is used and the track monitoring (p0405.2 = 1) is activated.

Remedy: - check the setting of p0405: p0405.2 = 1 is only possible if the encoder is connected at X520.
- check the encoder/cable: Does the encoder supply TTL signals and the associated inverted signals?
Note:
For a squarewave encoder without track R, the following jumpers must be set at the encoder connection:
- pin 10 (reference signal R) <--> pin 7 (encoder power supply, ground)
- pin 11 (reference signal R inverted) <--> pin 4 (encoder power supply)

F33129 (N, A) Encoder 3: Position difference, hall sensor/track C/D and A/B too large

Message value: %1

Drive object: All objects

Reaction: A_INFEED: NONE
SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)

Acknowledge: PULSE INHIBIT

Cause: The error for track C/D is greater than +/-15 ° mechanical or +/-60 ° electrical or the error for the Hall signals is greater than +/-60 ° electrical.
One period of track C/D corresponds to 360 ° mechanical.
One period of the Hall signal corresponds to 360 ° electrical.
The monitoring responds if, for example, Hall sensors are connected as equivalent for the C/D tracks with the incorrect rotational sense or supply values that are not accurate enough.
After the fine synchronization using one reference mark or 2 reference marks for distance-coded encoders, this fault is no longer initiated, but instead, Alarm A33429.
Fault value (r0949, interpret decimal):
For track C/D, the following applies:
Measured deviation as mechanical angle (16 bits with sign, 182 dec corresponds to 1 °).
For Hall signals, the following applies:
Measured deviation as electrical angle (16 bits with sign, 182 dec corresponds to 1 °).

Remedy: - track C or D not connected.
- correct the direction of rotation of the Hall sensor possibly connected as equivalent for track C/D.
- check that the encoder cables are routed in compliance with EMC.
- check the adjustment of the Hall sensor.

F33130 (N, A) Encoder 3: Zero mark and position error from the coarse synchronization

Message value: Angular deviation, electrical: %1, angle, mechanical: %2

Drive object: All objects

Reaction: A_INFEED: NONE
SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)

Acknowledge: PULSE INHIBIT

Cause: After initializing the pole position using track C/D, Hall signals or pole position identification routine, the zero mark was detected outside the permissible range. For distance-coded encoders, the test is carried out after passing 2 zero marks. Fine synchronization was not carried out.
When initializing via track C/D (p0404) then it is checked whether the zero mark occurs in an angular range of +/-18 ° mechanical.
When initializing via Hall sensors (p0404) or pole position identification (p1982) it is checked whether the zero mark occurs in an angular range of +/-60 ° electrical.
Fault value (r0949, interpret hexadecimal):
yyyyxxxx hex
yyyy: Determined mechanical zero mark position (can only be used for track C/D).
xxxx: Deviation of the zero mark from the expected position as electrical angle.
Normalization: 32768 dec = 180 °

Remedy: - check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
- if the Hall sensor is used as an equivalent for track C/D, check the connection.
- check the connection of track C or D.
- replace the encoder or encoder cable.

Reaction upon N: NONE

Acknowl. upon N: NONE

Reaction upon A: NONE

Acknowl. upon A: NONE

F33131 (N, A) Encoder 3: Deviation, position incremental/absolute too large

Message value: %1

Drive object: All objects

Reaction: A_INFEED: NONE
SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)

Acknowledge: PULSE INHIBIT

Cause: Absolute encoder:
When cyclically reading the absolute position, an excessively high difference to the incremental position was detected. The absolute position that was read is rejected.
Limit value for the deviation:
- EnDat encoder: Is supplied from the encoder and is a minimum of 2 quadrants (e.g. EQI 1325 > 2 quadrants, EQN 1325 > 50 quadrants).
- other encoders: 15 pulses = 60 quadrants.
Incremental encoder:
When the zero pulse is passed, a deviation in the incremental position was detected.
For equidistant zero marks, the following applies:
- The first zero mark passed supplies the reference point for all subsequent checks. The other zero marks must have n times the distance referred to the first zero mark.
For distance-coded zero marks, the following applies:
- the first zero mark pair supplies the reference point for all subsequent checks. The other zero mark pairs must have the expected distance to the first zero mark pair.
Fault value (r0949, interpret decimal):
Deviation in quadrants (1 pulse = 4 quadrants).

Remedy:
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
- replace the encoder or encoder cable.
- check whether the coding disk is dirty or there are strong ambient magnetic fields.
- adapt the parameter for the distance between zero marks (p0425).
- if message output above speed threshold, reduce filter time if necessary (p0438).

A33400 (F, N) Encoder 3: Alarm threshold zero mark distance error

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The measured zero mark distance does not correspond to the parameterized zero mark distance.
For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system.
The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder).

Alarm value (r2124, interpret decimal):
Last measured zero mark distance in increments (4 increments = 1 encoder pulse).
The sign designates the direction of motion when detecting the zero mark distance.

Remedy: - check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
. check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the distance between zero marks (p0424, p0425).
- replace the encoder or encoder cable.

A33401 (F, N) Encoder 3: Alarm threshold zero marked failed

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The 1.5 x parameterized zero mark distance was exceeded.
The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder).
Alarm value (r2124, interpret decimal):
Number of increments after POWER ON or since the last zero mark that was detected (4 increments = 1 encoder pulse).

Remedy: - check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
. check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the distance between zero marks (p0425).
- replace the encoder or encoder cable.

A33410 (F, N) Encoder 3: Serial communications

Message value: Fault cause: %1 bin

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: Serial communication protocol transfer error between the encoder and evaluation module.
Alarm value (r2124, interpret binary):
Bit 0: Alarm bit in the position protocol.
Bit 1: Incorrect quiescent level on the data line.
Bit 2: Encoder does not respond (does not supply a start bit within 50 ms).
Bit 3: CRC error: The checksum in the protocol from the encoder does not match the data.
Bit 4: Encoder acknowledgement error: The encoder incorrectly understood the task (request) or cannot execute it.
Bit 5: Internal error in the serial driver: An illegal mode command was requested.
Bit 6: Timeout when cyclically reading.
Bit 8: Protocol is too long (e.g. > 64 bits).
Bit 9: Receive buffer overflow.
Bit 10: Frame error when reading twice.
Bit 11: Parity error.
Bit 12: Data line signal level error during the monoflop time.

Remedy: - check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
- replace the encoder.

A33414 (F, N) Encoder 3: Amplitude error track C or D (C^2 + D^2)

Message value: C track: %1, D track: %2

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The amplitude (C^2 + D^2) of track C or D of the encoder or from the Hall signals, is not within the tolerance bandwidth.
Alarm value (r2124, interpret hexadecimal):
yyyyxxxx hex:
yyyy = Signal level, track D (16 bits with sign).
xxxx = Signal level, track C (16 bits with sign).
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response thresholds are < 230 mV (observe the frequency response of the encoder) and > 750 mV.
A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.
Note:
If the amplitude is not within the tolerance bandwidth, then it cannot be used to initialize the start position.

Remedy: - check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
- replace the encoder or encoder cable.
- check the Sensor Module (e.g. contacts).
- check the Hall sensor box

Reaction upon F: A_INFEED: NONE (OFF1, OFF2)

N33415 (F, A) Encoder 3: Amplitude error track A/B alarm (A^2 + B^2)

Message value: Amplitude: %1, Angle: %2

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The amplitude (root of A^2 + B^2) for encoder 3 exceeds the permissible tolerance.
Alarm value (r2124, interpret hexadecimal):
yyyyxxxx hex:
yyyy = Angle
xxxx = Amplitude, i.e. root from A^2 + B^2 (16 bits without sign)
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response threshold is < 300 mV (observe the frequency response of the encoder).
A signal level of 500 mV peak value corresponds to the numerical value 299A hex = 10650 dec.
The angle 0 ... FFFF hex corresponds to 0 ... 360 degrees of the fine position. Zero degrees is at the negative zero crossover of track B.

Note for sensors modules for resolvers (e. g. SMC10):
The nominal signal level is at 2900 mV (2.0 Vrms). The response threshold is < 1414 mV (1.0 Vrms).
A signal level of 2900 mV peak value corresponds to the numerical value of 3333 hex = 13107 dec.
Note:
The analog values of the amplitude error are not measured at the same time with the hardware fault output by the sensor module.

Remedy: - check the speed range, frequency characteristic (amplitude characteristic) of the measuring equipment is not sufficient for the speed range.
- check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections.
- replace the encoder or encoder cable.
- check the Sensor Module (e.g. contacts).
- if the coding disk is soiled or the lighting worn, replace the encoder.

A33421 (F, N) Encoder 3: Coarse position error

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: For the actual value sensing, an error was detected. As a result of this error, it must be assumed that the actual value sensing supplies an incorrect coarse position.
Alarm value (r2124, interpret decimal):
3: The absolute position of the serial protocol and track A/B differ by half an encoder pulse. The absolute position must have its zero position in the quadrants in which both tracks are negative. In the case of a fault, the position can be incorrect by one encoder pulse.

Remedy: Re alarm value = 3:
- for a standard encoder with cable, if required, contact the manufacturer.
- correct the assignment of the tracks to the position value that is serially transferred. To do this, the two tracks must be connected, inverted, at the Sensor Module (interchange A with A* and B with B*) or, for a programmable encoder, check the zero offset of the position.

Reaction upon F: A_INFEED: NONE (OFF1, OFF2)

A33429 (F, N) Encoder 3: Position difference, hall sensor/track C/D and A/B too large

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The error for track C/D is greater than +/-15 ° mechanical or +/-60 ° electrical or the error for the Hall signals is greater than +/-60 ° electrical.
One period of track C/D corresponds to 360 ° mechanical.
One period of the Hall signal corresponds to 360 ° electrical.
The monitoring responds if, for example, Hall sensors are connected as equivalent for the C/D tracks with the incorrect rotational sense or supply values that are not accurate enough.
Alarm value (r2124, interpret decimal):
For track C/D, the following applies:
Measured deviation as mechanical angle (16 bits with sign, 182 dec corresponds to 1 °).
For Hall signals, the following applies:
Measured deviation as electrical angle (16 bits with sign, 182 dec corresponds to 1 °).

Remedy: - track C or D not connected.
- correct the direction of rotation of the Hall sensor possibly connected as equivalent for track C/D.
- check that the encoder cables are routed in compliance with EMC.
- check the adjustment of the Hall sensor.

A33431 (F, N) Encoder 3: Deviation, position incremental/absolute too large

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: When the zero pulse is passed, a deviation in the incremental position was detected.
For equidistant zero marks, the following applies:
- The first zero mark passed supplies the reference point for all subsequent checks. The other zero marks must have n times the distance referred to the first zero mark.
For distance-coded zero marks, the following applies:
- the first zero mark pair supplies the reference point for all subsequent checks. The other zero mark pairs must have the expected distance to the first zero mark pair.
Alarm value (r2124, interpret decimal):
Deviation in quadrants (1 pulse = 4 quadrants).

Remedy: - check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
- replace the encoder or encoder cable.
- remove any dirt from the coding disk or strong magnetic fields.

Message value: Fault cause: %1 bin

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The unipolar level (CP/CN or DP/DN) for encoder 3 is outside the permissible tolerance.
Alarm value (r2124, interpret binary):
Bit 0 = 1: Either CP or CN outside the tolerance.
Bit 16 = 1: Either DP or DN outside the tolerance.
The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV.
The response thresholds are < 1700 mV and > 3300 mV.
Note:
The signal level is not evaluated unless the following conditions are satisfied:
- Sensor Module properties available (r0459.31 = 1).
- Monitoring active (p0437.31 = 1).

Remedy: - check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections and contacts.
- are the C/D tracks connected correctly (have the signal lines CP and CN or DP and DN been interchanged)?
- replace the encoder cable.

F33500 (N, A) Encoder 3: Position tracking traversing range exceeded

Message value: -

Drive object: SERVO, VECTOR

Reaction: OFF1 (NONE, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: For a configured linear axis without modulo correction, the drive/encoder has exceeded the maximum possible traversing range. The value should be read in p0412 and interpreted as the number of motor revolutions.
When p0411.0 = 1, the maximum traversing range for a configured linear axis is defined to be 64x (+/- 32x) the setting in p0421.
When p0411.3 = 1, the maximum traversing range for a configured linear axis is preset to the highest possible value and equals +/-p0412/2 (rounded to whole rotations). The highest possible value depends on the pulse number (p0408) and fine resolution (p0419).

Remedy: The fault should be resolved as follows:
- select encoder commissioning (p0010 = 4).
- reset the position tracking as follows (p0411.2 = 1).
- de-select encoder commissioning (p0010 = 0).
The fault should then be acknowledged and the absolute encoder adjusted.

F33905 (N, A) Encoder 3: Parameterization error

Message value: Parameter: %1, supplementary information: %2

Drive object: All objects

Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
VECTOR: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)

Acknowledge: IMMEDIATELY

Cause: A parameter of encoder 3 was detected as being incorrect.
It is possible that the parameterized encoder type does not match the connected encoder.
The parameter involved can be determined as follows:
- determine the parameter number using the fault value (r0949).
- determine the parameter index (p0187).
Fault value (r0949, interpret decimal):
yyyyxxxx dec: yyyy = supplementary information, xxxx = parameter
Supplementary information = 0:
No information available.
Supplementary information = 1:
The component does not support HTL level (p0405.1 = 0) combined with track monitoring A/B <> -A/B (p0405.2 = 1).
Supplementary information = 2:
A code number for an identified encoder has been entered into p0400, however, no identification was carried out.
Please start a new encoder identification.
Supplementary information = 3:
A code number for an identified encoder has been entered into p0400, however, no identification was carried out.
Please select a listed encoder in p0400 with a code number < 10000.
Supplementary information = 4:
This component does not support SSI encoders (p0404.9 = 1) without track A/B.
Supplementary information = 5:
For the SQW encoder, the value in p4686 is greater than that in p0425.
Supplementary information = 6:
The DRIVE-CLiQ encoder cannot be used with this firmware version.

Remedy: - check whether the connected encoder type matches the encoder that has been parameterized.
- correct the parameter specified by the fault value (r0949) and p0187.
- re parameter number 314: Check the pole pair number and measuring gear ratio. The quotient of the "pole pair number" divided by the "measuring gear ratio" must be less than or equal to 1000 ((r0313 * p0433) / p0432 <= 1000).

VECTOR: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: Time slice overflow on the Voltage Sensing Module.
Remedy: Replace the Voltage Sensing Module.

F34803 VSM: Memory test

Message value: -
Drive object: All objects
Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: NONE (OFF1, OFF2, OFF3)
VECTOR: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: An error has occurred during the memory test on the Voltage Sensing Module.
Remedy: - check whether the permissible ambient temperature for the Voltage Sensing Module is being maintained.
- replace the Voltage Sensing Module.

F34804 VSM: CRC

Message value: -
Drive object: All objects
Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: NONE (OFF1, OFF2, OFF3)
VECTOR: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: A checksum error has occurred when reading-out the program memory on the Voltage Sensing Module (VSM).
Remedy: - check whether the permissible ambient temperature for the component is maintained.
- replace the Voltage Sensing Module.

F34805 VSM: EPROM checksum error

Message value: %1
Drive object: All objects
Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: NONE (OFF1, OFF2, OFF3)
VECTOR: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: Internal parameter data is corrupted.
Fault value (r0949, interpret hexadecimal):
01: EEPROM access error.
02: Too many blocks in the EEPROM.
Remedy: - check whether the permissible ambient temperature for the component is maintained.
- replace the Voltage Sensing Module (VSM).

F34806 VSM: Initialization

Message value: -
Drive object: All objects
Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: NONE (OFF1, OFF2, OFF3)
VECTOR: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: For the Voltage Sensing Module (VSM), a fault has occurred while initializing.
Remedy: Replace the Voltage Sensing Module.

A34807 (F, N) VSM: Sequence control time monitoring

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: Error, timeout in the sequence control on the Voltage Sensing Module (VSM).
Remedy: Replace the Voltage Sensing Module.
Reaction upon F: NONE
Acknowl. upon F: IMMEDIATELY (POWER ON)
Reaction upon N: NONE
Acknowl. upon N: NONE

F34820 VSM DRIVE-CLiQ: Telegram error

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: NONE (OFF1, OFF2)
VECTOR: NONE (OFF1, OFF2)

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communications error has occurred from the Control Unit to the Voltage Sensing Module.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 01 hex:
CRC error.
xx = 02 hex:
Telegram is shorter than specified in the length byte or in the receive list.
xx = 03 hex:
Telegram is longer than specified in the length byte or in the receive list.
xx = 04 hex:
The length of the receive telegram does not match the receive list.
xx = 05 hex:
The type of the receive telegram does not match the receive list.
xx = 06 hex:
The address of the component in the telegram and in the receive list do not match.
xx = 07 hex:
A SYNC telegram is expected - but the receive telegram is not a SYNC telegram.
xx = 08 hex:
No SYNC telegram is expected - but the receive telegram is one.
xx = 09 hex:
The error bit in the receive telegram is set.
xx = 10 hex:
The receive telegram is too early.

Remedy: - carry out a POWER ON.
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F34835 VSM DRIVE-CLiQ: Cyclic data transfer error

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: NONE (OFF1, OFF2)
VECTOR: NONE (OFF1, OFF2)

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communications error has occurred from the Control Unit to the Voltage Sensing Module. The nodes do not send and receive in synchronism.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 21 hex:
The cyclic telegram has not been received.
xx = 22 hex:
Timeout in the telegram receive list.
xx = 40 hex:
Timeout in the telegram send list.

Remedy: - carry out a POWER ON.
- replace the component involved.

F34836 VSM DRIVE-CLiQ: Send error for DRIVE-CLiQ data

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: NONE (OFF1, OFF2)
VECTOR: NONE (OFF1, OFF2)

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communications error has occurred from the Control Unit to the Voltage Sensing Module. Data were not able to be sent.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 41 hex:
Telegram type does not match send list.

Remedy: Carry out a POWER ON.

F34837 VSM DRIVE-CLiQ: Component fault

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: NONE (OFF1, OFF2)
VECTOR: NONE (OFF1, OFF2)

Acknowledge: IMMEDIATELY

Cause: Fault detected on the DRIVE-CLiQ component involved. Faulty hardware cannot be excluded.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 20 hex:
Error in the telegram header.
xx = 23 hex:
Receive error: The telegram buffer memory contains an error.
xx = 42 hex:
Send error: The telegram buffer memory contains an error.
xx = 43 hex:
Send error: The telegram buffer memory contains an error.

Remedy: - check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

F34845 VSM DRIVE-CLiQ: Cyclic data transfer error

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: NONE (OFF1, OFF2)
VECTOR: NONE (OFF1, OFF2)

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communications error has occurred from the Control Unit to the Voltage Sensing Module (VSM).
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 0B hex:
Synchronization error during alternating cyclic data transfer.

Remedy: Carry out a POWER ON.
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F34850 VSM: Internal software error

Message value: %1

Drive object: All objects

Reaction: A_INFEED: OFF1 (NONE, OFF2)
SERVO: OFF1 (NONE, OFF2, OFF3)
VECTOR: OFF1 (NONE, OFF2, OFF3)

Acknowledge: POWER ON

Cause: An internal software error in the Voltage Sensing Module (VSM) has occurred.
Fault value (r0949, interpret decimal):
1: Background time slice is blocked.
2: Checksum over the code memory is not OK.

Remedy: - replace the Voltage Sensing Module (VSM).
- if required, upgrade the firmware in the Voltage Sensing Module.
- contact the Hotline.

F34851 VSM DRIVE-CLiQ (CU): Sign-of-life missing

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: NONE (OFF1, OFF2)
VECTOR: NONE (OFF1, OFF2)

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communications error has occurred from the Voltage Sensing Module (VSM) to the Control Unit.
The DRIVE-CLiQ component did not set the sign-of-life to the Control Unit.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 0A hex = 10 dec:
The sign-of-life bit in the receive telegram is not set.

Remedy: Upgrade the firmware of the component involved.

F34860 VSM DRIVE-CLiQ (CU): Telegram error

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: NONE (OFF1, OFF2)
VECTOR: NONE (OFF1, OFF2)

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communications error has occurred from the Voltage Sensing Module (VSM) to the Control Unit.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 11 hex = 17 dec:
CRC error and the receive telegram is too early.
xx = 01 hex = 01 dec:
Checksum error (CRC error).
xx = 12 hex = 18 dec:
The telegram is shorter than that specified in the length byte or in the receive list and the receive telegram is too early.
xx = 02 hex = 02 dec:
Telegram is shorter than specified in the length byte or in the receive list.
xx = 13 hex = 19 dec:
The telegram is longer than that specified in the length byte or in the receive list and the receive telegram is too early.
xx = 03 hex = 03 dec:
Telegram is longer than specified in the length byte or in the receive list.
xx = 14 hex = 20 dec:
The length of the receive telegram does not match the receive list and the receive telegram is too early.
xx = 04 hex = 04 dec:
The length of the receive telegram does not match the receive list.

xx = 15 hex = 21 dec:
The type of the receive telegram does not match the receive list and the receive telegram is too early.
xx = 05 hex = 05 dec:
The type of the receive telegram does not match the receive list.
xx = 16 hex = 22 dec:
The address of the power unit in the telegram and in the receive list does not match and the receive telegram is too early.
xx = 06 hex = 06 dec:
The address of the power unit in the telegram and in the receive list do not match.
xx = 19 hex = 25 dec:
The error bit in the receive telegram is set and the receive telegram is too early.
xx = 09 hex = 09 dec:
The error bit in the receive telegram is set.
xx = 10 hex = 16 dec:
The receive telegram is too early.

Remedy: - carry out a POWER ON.
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F34885 VSM DRIVE-CLiQ (CU): Cyclic data transfer error

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: NONE (OFF1, OFF2)
VECTOR: NONE (OFF1, OFF2)

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communications error has occurred from the Voltage Sensing Module (VSM) to the Control Unit.
The nodes do not send and receive in synchronism.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 1A hex = 26 dec:
Sign-of-life bit in the receive telegram not set and the receive telegram is too early.
xx = 21 hex = 33 dec:
The cyclic telegram has not been received.
xx = 22 hex = 34 dec:
Timeout in the telegram receive list.
xx = 40 hex = 64 dec:
Timeout in the telegram send list.
xx = 62 hex = 98 dec:
Error at the transition to cyclic operation.

Remedy: - check the power supply voltage of the component involved.
- carry out a POWER ON.
- replace the component involved.
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F34886 VSM DRIVE-CLiQ (CU): Error when sending DRIVE-CLiQ data

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: NONE (OFF1, OFF2)
VECTOR: NONE (OFF1, OFF2)

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communications error has occurred from the Voltage Sensing Module (VSM) to the Control Unit.
Data were not able to be sent.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 41 hex:
Telegram type does not match send list.

Remedy: Carry out a POWER ON.

F34887 VSM DRIVE-CLiQ (CU): Component fault

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: NONE (OFF1, OFF2)
VECTOR: NONE (OFF1, OFF2)

Acknowledge: IMMEDIATELY

Cause: Fault detected on the DRIVE-CLiQ component (Voltage Sensing Module) involved. Faulty hardware cannot be excluded.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 20 hex:
Error in the telegram header.
xx = 23 hex:
Receive error: The telegram buffer memory contains an error.
xx = 42 hex:
Send error: The telegram buffer memory contains an error.
xx = 43 hex:
Send error: The telegram buffer memory contains an error.
xx = 60 hex:
Response received too late during runtime measurement.
xx = 61 hex:
Time taken to exchange characteristic data too long.

Remedy: - check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

F34895 VSM DRIVE-CLiQ (CU): Alternating cyclic data transfer error

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: NONE (OFF1, OFF2)
VECTOR: NONE (OFF1, OFF2)

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communications error has occurred from the Voltage Sensing Module (VSM) to the Control Unit.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 0B hex:
Synchronization error during alternating cyclic data transfer.

Remedy: Carry out a POWER ON.
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F34896 VSM DRIVE-CLiQ (CU): Inconsistent component properties

Message value: Component number: %1

Drive object: All objects

Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
VECTOR: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)

Acknowledge: IMMEDIATELY

Cause: The properties of the DRIVE-CLiQ component (Voltage Sensing Module), specified by the fault value, have changed in an incompatible fashion with respect to the properties when booted. One cause can be, e.g. that a DRIVE-CLiQ cable or DRIVE-CLiQ component has been replaced.
Fault value (r0949, interpret decimal):
Component number.

Remedy: - when replacing cables, only use cables with the same length as the original cables.
- when replacing components, use the same components and firmware releases.
- carry out a POWER ON.

F34899 (N, A) VSM: Unknown fault

Message value: New message: %1

Drive object: All objects

Reaction: A_INFEED: NONE (OFF1, OFF2)
SERVO: NONE (OFF1, OFF2, OFF3)
VECTOR: NONE (OFF1, OFF2, OFF3)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: A fault occurred on the Voltage Sensing Module that cannot be interpreted by the Control Unit firmware.
This can occur if the firmware on this component is more recent than the firmware on the Control Unit.
Fault value (r0949, interpret decimal):
Fault number.
Note:
If required, the significance of this new fault can be read about in a more recent description of the Control Unit.

Remedy: - replace the firmware on the Voltage Sensing Module by an older firmware version (r0158).
- upgrade the firmware on the Control Unit (r0018).

F35000 TM54F: Sampling time invalid

Message value: %1

Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR

Reaction: NONE

Acknowledge: POWER ON

Cause: The set sampling time is invalid.
- not a multiple integer of the DP clock cycle.
Fault value (r0949, floating point):
Recommended valid sampling time.

Remedy: Adapt the sampling time (e.g. set the recommended valid sampling time).
See also: p10000 (SI sampling time)

F35001 TM54F: Parameter value invalid

Message value: %1

Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The entered value is invalid.
Fault value (r0949, interpret decimal):
Parameter number with the invalid value.

Remedy: Correct the parameter value.

F35002 TM54F: Commissioning not possible

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The commissioning mode setting was rejected because for at least one drive belonging to the TM54F, the pulses had not been suppressed.
Fault value (r0949, interpret decimal):
Drive object number of the first drive found without pulse suppression.
Remedy: Cancel the pulses for the drive specified in the fault value.

F35003 TM54F: Acknowledgement on the Control Unit is required

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: A fault on the Terminal Module 54F (TM54) was acknowledged using the safe acknowledgement (P10006).
An additional acknowledgement is also required at the Control Unit.
Remedy:

F35011 TM54F: Drive object number assignment illegal

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: A drive object number was assigned twice. Each drive object number can be assigned only once.
Remedy: Correct the assignment of the drive object numbers.
See also: p10010 (SI drive object assignment)

A35012 TM54F: Test stop active

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The test stop for the Terminal Module 54F (TM54F) is presently being executed.
F35013 is output when a error occurs during the test stop.
Remedy: The alarm disappears automatically after successfully ending or canceling (when a fault condition occurs) the test stop.

F35013 TM54F: Test stop error

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: An error was detected when carrying out the test stop on the TM54F. As fault response fail-safe input terminal signals are transferred to the motion monitoring functions.
Fault value (r0949, interpret hexadecimal):
0xaaaabbcc hex
aaaa: Specifies the DOs or F-DIs (dependent on test step cc) for which the expected state was not assumed. The number is bit-coded (bit 0 = F-DI 0 or F-DO 0; bit 3 = F-DI 3 or F-DO 3).
bb: Precise problem:
0x01 = Internal error (error state on the opposite side).
0x02 = Error when comparing the switching signals.
0x03 = Internal error (delay time in the new state has still not expired).
cc: Test step of the test stop in which the error has occurred.
Test stop step cc for slave (hexadecimal):

0x00: Action: L1+ switched out, L2+ switched in - error: Master not in initial state 0x00 and 0x0A.
0x0A: Action: L1+ switched out, L2+ switched in - error: Master not in state 0x15.
0x15: Action: L1+ switched out, L2+ switched out - error: F-DIs 0...4 of the master do not correspond to those of the slave (expected: level 0) or master not in state 0x20.
0x20: Action: L1+ switched out, L2+ switched out - error: Master not in state 0x2B.
0x2B: Action: L1+ switched in, L2+ switched in - error: F-DIs 5...9 of the master do not correspond to those of the slave (expected: level 0) or master not in state 0x36.
0x36: Action: All slave DOs at OFF - error: Master not in state 0x41.
0x41: Action: All slave DOs at OFF - error: Master not in state 0x4C.
0x4C: Action: All slave-DOs at ON - error: State of DI 20...23 does not correspond to the expected state (24V) or the master not in state 0x57.
0x57: Action: All slave DOs at ON - error: Master not in state 0x62.
0x62: Action: All slave-DOs at OFF - error: State of DI 20...23 does not correspond to the expected state (0V) or the master not in state 0x6D.
0x6D: Action: All slave DOs at OFF - error: Master not in state 0x78.
0x78: Action: All slave-DOs at ON - error: State of DI 20...23 does not correspond to the expected state (0V) or the master not in state 0x83.
0x83: Action: All slave DOs at ON - error: Master not in state 0x8E.
0x8E: Action: All slave-DOs at OFF - error: State of DI 20...23 does not correspond to the expected state (0V) or the master not in state 0x99.
0x99: Action: All slave DOs at OFF - error: Master not in state 0xA4.
0xA4: Action: All slave-DOs at OFF - error: State of DI 20...23 do not correspond to the expected state 24V) or the master not in state 0xAF.
0xAF: Action: All slave DOs at the original state - error: Master not in state 0xBA.
0xBA: Action: All slave DOs at the original state - error: Master not in state 0xC5.
0xC5: Action: Return to start state, test stop completed on the slave side. Error: Master not in state 0xD0.
Test stop step cc for master (hexadecimal):
0x0A: No actions - error: Slave not in initial state 0x00.
0x15: No actions - error: Slave not in initial state 0x0A.
0x20: No actions - error: F-DIs 0...4 of the slave do not correspond with those of the master (expected: level 0) or slave not in state 0x15.
0x2B: No actions - error: Slave not in initial state 0x20.
0x36: No actions - error: F-DIs 0...5 of the slave do not correspond with those of the master (expected: level 0) or slave not in state 0x2B.
0x41: Action: All master DOs at OFF - error: Slave not in state 0x36.
0x4C: Action: All master DOs at OFF - error: Slave not in state 0x41.
0x57: Action: All master-DOs at ON - error: State of DI 20...23 of the slave does not correspond to the expected state (24V) or the slave not in state 0x4C.
0x62: Action: All master DOs at ON - error: Slave not in initial state 0x57.
0x6D: Action: All master-DOs at ON - error: State of DI 20...23 of the slave does not correspond to the expected state (0V) or the slave not in state 0x62.
0x78: Action: All master DOs at ON - error: Slave not in state 0x6D.
0x83: Action: All master-DOs at OFF - error: State of DI 20...23 of the slave does not correspond to the expected state (0V) or the slave not in state 0x78.
0x8E: Action: All master DOs at OFF - error: Slave not in state 0x83.
0x99: Action: All master-DOs at OFF - error: State of DI 20...23 of the slave does not correspond to the expected state (0V) or the slave not in state 0x8E.
0xA4: Action: All master DOs at OFF - error: Slave not in state 0x99.
0xAF: Action: All master-DOs at OFF - error: Status of DI 20...23 of the slave does not correspond to the expected state (24V) or the slave not in state 0xA4.
0xBA: Action: All master DOs at the original state - error: Slave not in state 0xAF.
0xC5: Action: All master DOs at the original state - error: Slave not in state 0xBA.
0xD0: Wait for the end of the test stop and return to the start state
Note: A check of the switching state of the F-DIs and DIs always refers to the switching operation of the previous state. The actions in one state are always only carried out after the actual state has been checked.

Remedy: Check the wiring of the F-DIs and F-DOs and restart the test stop. The fault is withdrawn if the test stop is successfully completed.

A35014 TM54F: Test stop required

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: - after powering up the drive, a test stop has still not been carried out.
- a new test stop is required after commissioning.
- the time to carry out the forced checking procedure (test stop) has expired (p10003).
Remedy: Initiate test stop (BI: p10007).

A35015 TM54F: Communication with drive not established

Message value: Fault cause: %1 bin
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: Cyclic communication of one or several drives with the Terminal Module 54F (TM54F) is not active.
Fault value (r0949, interpret binary):
Bit 0 = 1: No communication with drive 1.
...
Bit 5 = 1: No communication with drive 6.
For fault value = 0, the following applies:
The number of drive objects specified in p10010 is not equal to the number of drives that have drive-based motion monitoring functions that have been enabled.
The drive object number for drive n is set in p10010[n-1].
When this fault is present, none of the drives that have drive-based motion monitoring functions operating with TM54F, are enabled.
Remedy: For all drive objects specified in p10010, check whether the drive-based motion monitoring functions with TM54F are enabled (p9601).

A35016 TM54F: Net data communication with drive not established

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The cyclic net data communication within the Terminal Module 54F (TM54F) is still not active.
This message is output after the TM54F master and TM54F slave have booted and is automatically withdrawn as soon as communications have been established.
If a drive does not communicate with the TM54F, then none of the drives parameterized in p10010 are enabled.
Remedy: When replacing a Motor Module, carry out the following steps:
- start the copy function for the node identifier on the TM54F (p9700 = 1D hex).
- acknowledge the hardware CRC on the TM54F (p9701 = EC hex).
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.
The following always applies:
- for all drive objects specified in p10010, check whether the drive-based motion monitoring functions with TM54F are enabled (p9601).
- check whether fault F35150 is present and if required, remove the cause of the fault.
See also: r10055 (SI TM54F communication status drive-specific)

F35040 TM54F: 24 V undervoltage

Message value: Fault cause: %1 bin
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: For the 24 V power supply for the Terminal Module 54F (TM54F) an undervoltage condition was detected.
As fault response fail-safe input terminal signals are transferred to the motion monitoring functions.

Fault value (r0949, interpret binary):
Bit 0 = 1: Power supply undervoltage at connection X524.
Bit 1 = 1: Power supply undervoltage at connection X514.

Remedy: - check the 24 V DC power supply for the TM54F.
- carry out safe acknowledgement (p10006).

F35043 TM54F: 24 V overvoltage

Message value: -

Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: For the 24 V power supply for the Terminal Module 54F (TM54F) an overvoltage condition was detected.
As fault response fail-safe input terminal signals are transferred to the motion monitoring functions.

Remedy: - check the 24 V DC power supply for the TM54F.
- carry out safe acknowledgement (p10006).

F35051 TM54F: Defect in a monitoring channel

Message value: %1

Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The Terminal Module 54F (TM54F) has identified an error in the data cross check between the two control channels.
As fault response fail-safe input terminal signals are transferred to the motion monitoring functions.
Fault value (r0949, interpret hexadecimal):
aaaabbcc hex
aaaa: A value greater than zero indicates an internal software error.
bb: Data to be cross-checked that resulted in the error.
bb = 00 hex: p10000
bb = 01 hex: p10001
bb = 02 hex: p10002
bb = 03 hex: p10006
bb = 04 hex: p10008
bb = 05 hex: p10010
bb = 06 hex: p10011
bb = 07 hex: p10020
bb = 08 hex: p10021
bb = 09 hex: p10022
bb = 0A hex: p10023
bb = 0B hex: p10024
bb = 0C hex: p10025
bb = 0D hex: p10026
bb = 0E hex: p10027
bb = 0F hex: p10028
bb = 10 hex: p10036
bb = 11 hex: p10037
bb = 12 hex: p10038
bb = 13 hex: p10039
bb = 14 hex: p10040
bb = 15 hex: p10041
bb = 16 hex: p10042
bb = 17 hex: p10043
bb = 18 hex: p10044
bb = 19 hex: p10045
bb = 1A hex: p10046
cc: Index of the data to be cross-checked that resulted in the error.

Remedy: Carry out the following steps on the TM54F:
- activate the safety commissioning mode (p0010 = 95).
- start the copy function for SI parameters (p9700 = 57 hex).
- acknowledge complete data change (p9701 = AC hex).
- exit the safety commissioning mode (p0010 = 0).
- save all parameters (p0977 = 1).
- carry out safe acknowledgement (p10006).

For an internal software error (aaaa greater than zero):
- upgrade the software on the TM54F.
- contact the Hotline.
- replace the TM54F.

F35052 (A) TM54F: Internal hardware fault

Message value: %1

Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: An internal software/hardware fault on the TM54F was identified.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.

Remedy:
- check the electrical cabinet design and cable routing for EMC compliance
- upgrade the software on the TM54F.
- contact the Hotline.
- replace the TM54F.

Reaction upon A: NONE

Acknowl. upon A: NONE

F35053 TM54F: Temperature fault threshold exceeded

Message value: %1

Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The temperature measured using the temperature sensing on the TM54F has exceeded the threshold value to initiate this fault.
As fault response fail-safe input terminal signals are transferred to the motion monitoring functions.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.

Remedy:
- allow the TM54F to cool down.
- carry out safe acknowledgement (p10006).

A35054 TM54F: Temperature alarm threshold exceeded

Message value: %1

Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The temperature measured using the temperature sensing on the TM54F has exceeded the threshold value to initiate this alarm.

Remedy:
- allow the TM54F to cool down.
- carry out safe acknowledgement (p10006).

A35075 (F) TM54F: Internal communications

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: An internal communications error has occurred in the Terminal Module 54F (TM54F).
This alarm can also occur if the TM54F exists and no safety function has yet been parameterized.
Alarm value (r2124, interpret decimal):
Only for internal Siemens diagnostics.
Remedy: For internal communication errors:
- check the electrical cabinet design and cable routing for EMC compliance
- upgrade the software on the TM54F.
- contact the Hotline.
- replace the TM54F.
If TM54F exists and no safety function has yet been parameterized:
- None necessary. The alarm disappears automatically after a safety function has been parameterized.
Reaction upon F: NONE
Acknowl. upon F: IMMEDIATELY (POWER ON)

A35080 (F) TM54F: Checksum error safety parameters

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The calculated checksum entered in r10004 over the safety-relevant parameters does not match the reference checksum saved in p10005 at the last machine acceptance.
Fault value (r0949, interpret decimal):
1: Checksum error for functional SI parameters.
2: Checksum error for SI parameters for component assignment.
Remedy: - Check the safety-relevant parameters and if required, correct.
- set the reference checksum to the actual checksum.
- acknowledge that hardware was replaced
- carry out a POWER ON.
- carry out an acceptance test.
Reaction upon F: NONE
Acknowl. upon F: IMMEDIATELY (POWER ON)

A35081 (F) TM54F: Static 1 signal at F-DI for safe acknowledgement

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: A logical "1" signal is present at the F-DI configured in p10006 for more than 10 seconds. A logical "0" signal must be statically applied at the F-DI. This prevents the output of an unintended safe acknowledgement signal (or the "Internal Event Acknowledge" signal) if a wire break occurs or one of the two digital inputs bounces.
Remedy: Set F-DI (see p10006) to logical "0" signal.
Reaction upon F: NONE
Acknowl. upon F: IMMEDIATELY

F35150 TM54F: Communication error

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)

Cause: A communication error between the TM54F master and Control Unit or between the TM54F slave and the Motor Module was detected.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.

Remedy: When replacing a Motor Module, carry out the following steps:
- start the copy function for the node identifier on the TM54F (p9700 = 1D hex).
- acknowledge the hardware CRC on the TM54F (p9701 = EC hex).
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.

The following always applies:
- check the electrical cabinet design and cable routing for EMC compliance
- upgrade the software on the TM54F.
- contact the Hotline.
- replace the TM54F.

F35151 TM54F: Discrepancy error

Message value: %1

Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The safety input terminals or output terminals show a different state longer than that parameterized in p10002.
Fault value (r0949, interpret hexadecimal):
yyyyxxxx hex
xxxx:
The safety-relevant input terminals F-DI indicate a discrepancy.
Bit 0: Discrepancy for F-DI 0
...
Bit 9: Discrepancy for F-DI 9
yyyy:
The safety-relevant output terminals F-DO indicate a discrepancy.
Bit 0: Discrepancy for F-DO 0
...
Bit 3: Discrepancy for F-DO 3
Note:
If several discrepancy errors occur consecutively, then this fault is only signaled for the first error that occurs.
The following possibilities exist of diagnosing all of the discrepancy errors:
- in the commissioning software, evaluate the input states and output states of the TM54F. All discrepancy errors are displayed here.
- compare parameters p10051 and p10052 from the TM54F master and TM54F slave for discrepancy.

Remedy: Check the wiring of the F-DI and F-DO (contact problems).
Note:
A discrepancy of the F-DO also occurs (in this special case, in conjunction with fault F35150 for the TM54F slave), if, after replacing a Motor Module, it was forgotten to acknowledge this.
When replacing a Motor Module, carry out the following steps:
- start the copy function for the node identifier on the TM54F (p9700 = 1D hex).
- acknowledge the hardware CRC on the TM54F (p9701 = EC hex).
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.

F-DI: Failsafe Digital Input
F-DO: Failsafe Digital Output
Discrepancy errors of the F-DIs can only be completely acknowledged if, after the cause of the error has been resolved, safe acknowledgement was carried out (refer to p10006). As long as safety acknowledgement was not carried out, the corresponding F-DI stays in the safe state.

A35200 (F, N) TM: Calibration data

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: An error was detected in the calibration data of the Terminal Module.
Alarm value (r2124, interpret decimal):
The hundred thousands and ten thousands location specifies the component Id of the Terminal Module where the fault occurred.
The thousands location specifies whether the analog input 0 (=0) or analog output 1 (= 1) is involved.
The hundreds location specifies the fault type:
0: No calibration data available.
1: Offset too high (> 100 mV).
The tens and ones location specifies the number of the input involved.
Remedy: Power down the unit and power up again.
If the fault is still present, replace the module/board.
Reaction upon F: NONE
Acknowl. upon F: IMMEDIATELY (POWER ON)
Reaction upon N: NONE
Acknowl. upon N: NONE

F35207 (N, A) TM: Temperature fault/alarm threshold exceeded

Message value: %1
Drive object: All objects
Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: OFF2 (NONE, OFF1, OFF3)
VECTOR: OFF2 (NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The temperature measured using the temperature sensing of the Terminal Module (TM) (r4105) has exceeded the threshold value to initiate this fault (p4102[1]) - or the temperature exceeded the alarm threshold (p4102[0]) for longer than the dead time in parameter p4103.
Please note that this fault can only be initiated if the temperature evaluation was activated (p4100 = 2 for KTY sensor or p4100 = 1 for PTC sensor).
Fault value (r0949, interpret decimal):
The hundred thousands and ten thousands location specifies the component number of the TMxx where the fault occurred.
Alarm:
Please note that Fault F35207 only causes the drive to be shut down if there is at least one BICO interconnection between the drive and TM31.
Remedy: - allow the temperature sensor to cool down.
- if required, set the fault response to NONE (p2100, p2101).
Reaction upon N: NONE
Acknowl. upon N: NONE
Reaction upon A: NONE
Acknowl. upon A: NONE

A35211 (F, N) TM: Temperature alarm threshold exceeded

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The temperature measured using the temperature sensing of the Terminal Module (TM) (r4105) has exceeded the threshold value to initiate this alarm (p4102[0]).
Alarm value (r2124, interpret decimal):
The hundred thousands and ten thousands location specifies the component number of the TMxx where the fault occurred.
Remedy: Allow the temperature sensor to cool down.

Reaction upon F: NONE
Acknowl. upon F: IMMEDIATELY (POWER ON)
Reaction upon N: NONE
Acknowl. upon N: NONE

F35220 (N, A) TM: Frequency limit reached for signal output

Message value: -
Drive object: All objects
Reaction: A_INFEED: OFF1 (NONE, OFF2)
SERVO: OFF1 (NONE, OFF2, OFF3)
VECTOR: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The signals output from the Terminal Module 41 (TM41) for tracks A/B have reached the limit frequency. The output signals are no longer in synchronism with the specified setpoint.
Remedy: SIMOTION (p4400 = 0) operating mode:
- enter a lower speed setpoint (p1155).
- reduce the encoder pulse number (p0408).
- if the TM41 is configured as technology object in SIMOTION, then this fault is generated if the A/B signals in connector X520 are short-circuited
SINAMICS (p4400 = 1) operating mode:
- the fine resolution of TM41 in p0418 does not match that of the connector input that was interconnected at P4420
- the encoder position actual value r0479 interconnected at connector input p4420 has an excessively high actual speed
Reaction upon N: NONE
Acknowl. upon N: NONE
Reaction upon A: NONE
Acknowl. upon A: NONE

F35221 (N, A) TM: Setpoint - actual value deviation, outside the tolerance range

Message value: -
Drive object: All objects
Reaction: A_INFEED: OFF1 (NONE, OFF2)
SERVO: OFF1 (NONE, OFF2, OFF3)
VECTOR: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The deviation between the setpoint and the output signals (track A/B) exceeds the tolerance of +/-3 %. Difference between internal and external measured values is too high.
Remedy: - reduce the basic clock cycle (p0110, p0111).
- replace the module.
Reaction upon N: NONE
Acknowl. upon N: NONE
Reaction upon A: NONE
Acknowl. upon A: NONE

A35222 (F, N) TM: Encoder pulse number not permissible

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The encoder pulse number entered does not match the permissible pulse number from a hardware perspective.
Fault value (r0949, interpret decimal):
1: Encoder pulse number is too high.
2: Encoder pulse number is too low.
4: Encoder pulse number is less than the zero mark offset (p4426).
Remedy: Enter the encoder pulse number in the permissible range (p0408).

Reaction upon F: A_INFEED: OFF1 (NONE, OFF2)
SERVO: OFF1 (NONE, OFF2, OFF3)
VECTOR: OFF1 (NONE, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY (POWER ON)
Reaction upon N: NONE
Acknowl. upon N: NONE

A35223 (F, N) TM: Zero mark offset not permissible

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The entered zero mark offset is not permissible.
Fault value (r0949, interpret decimal):
1: Zero mark offset is too high.
See also: p4426 (Incremental encoder emulation, pulses for zero mark)
Remedy: Enter the zero mark offset in the permissible range (p4426).
Reaction upon F: A_INFEED: OFF1 (NONE, OFF2)
SERVO: OFF1 (NONE, OFF2, OFF3)
VECTOR: OFF1 (NONE, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY (POWER ON)

A35224 (N) TM: Zero mark synchronization interrupted

Message value: %1
Drive object: TM41
Reaction: NONE
Acknowledge: NONE
Cause: The zero mark synchronization with the encoder to be emulated was interrupted.
Alarm value (r2124, interpret decimal):
0: The encoder is not in the ready state (e.g. encoder parked)
1: An absolute encoder was connected.
2: The encoder r0479[0...2] interconnected with CI: p4420 is already communicating with another TM41 (precisely one TM41 can be interconnected with a specific r0479[0...2]).
3: The BICO interconnection to Terminal Module 41 (TM41) was removed (CI: p4420 = 0 signal).
4: The encoder connected with CI: p4420 has carried out an EDS changeover (this operation is not supported, set p4420 to 0 and interconnect again).
5: The maximum number of revolutions of the encoder was exceeded.
6: Encoder in an invalid state.
7: Encoder in an invalid state.
8: Encoder in an invalid state (the encoder is not parameterized or the interconnected signal source is not in the cyclic state).
Remedy: None necessary.
- if the encoder changes into the ready state, then a synchronization operation that was previously interrupted is carried out again.
- if the synchronization was interrupted due to the maximum permissible synchronization duration, then a new synchronization is not carried out.
- for an absolute encoder, no synchronization is carried out, the zero mark is always output at the zero revolution of the TM41.
Reaction upon N: NONE
Acknowl. upon N: NONE

A35225 TM: Zero mark synchronization held - encoder not in the ready state

Message value: -
Drive object: TM41
Reaction: NONE
Acknowledge: NONE
Cause: The zero mark synchronization with the encoder to be emulated was held.
The encoder is not in the "ready" state.
Remedy: Bring the encoder into the "ready" state.

A35226 TM: Tracks A/B are de-activated

Message value: -
Drive object: TM41
Reaction: NONE
Acknowledge: NONE
Cause: The output of tracks A/B of the Terminal Module 41 (TM41) has been held (frozen).
The encoder emulation of the TM41 hardware is enabled (this is necessary so that no TRI state of the A/B tracks occurs). The hardware receives a setpoint of zero so that no motion occurs at the A/B tracks.
Reasons for this alarm:
- CI: p4420 was not interconnected (in this case, the encoder emulation of the hardware is de-activated)
- the encoder is not in the "ready" state (parking encoder or non-parameterized encoder data set).
- for TM41 there is an additional fault.
Remedy: - establish an interconnection from CI: p4420.
- bring the encoder into the "ready" state.
- remove any TM41 faults.

A35227 EDS changeover not supported

Message value: -
Drive object: TM41
Reaction: NONE
Acknowledge: NONE
Cause: The interconnected encoder has carried out an EDS changeover.
Terminal Module 41 (TM41) does not support this particular application case.
Remedy: CI: Set p4420 = 0 and re-wire.

F35228 TM: Sampling time p4099[3] invalid

Message value: -
Drive object: TM41
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The value of the cycle time for the incremental encoder emulation, specified in p4099[3] does not correspond to a valid value. The system has already changed p4099[3] to a valid value. The parameters of the TM41 in question must be saved on the memory card and a POWER ON carried out.
If necessary, the sampling time can be checked again the next time the system is switched on, taking into account any other TM41s located on the same DRIVE-CLiQ line.
The following rules must be observed when setting p4099[3]:
- if several TM41 are located on a DRIVE-CLiQ line, the same sampling time in p4099[3] must be set for all components.
- the sampling time of a TM41 in SINAMICS mode (p4400) must correspond to that of the emulated encoder. The encoder sampling time is normally the same as the parameter value p0115[0] of the drive object used to interconnect the TM41 via connector input p4420.
- it is not possible to operate two TM41s on one line if they emulate encoders with different cycles.
Remedy: None necessary.

F35229 TM time slice de-activated

Message value: %1
Drive object: TM41
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The required value of a cycle time in p4099[0...2] is invalid.
The corresponding time slice was not activated.
Alarm value (r2124, interpret decimal):
0: Digital input/outputs (p4099[0])
1: Analog inputs (p4099[1])
3: Encoder emulation (p4099[3]).
4: Encoder emulation speed setpoint (p4099[3]).
5: Encoder emulation speed setpoint (p4099[3]).
6 Internal sequence control of the TM41 (internal error)
Remedy: The sampling time p4099[0] may not be zero. Change the sampling time corresponding to the error code.

F35230 HW problem with the TM module

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, TM15DI_DO, TM31, TM41, VECTOR
Reaction: A_INFEED: OFF1 (NONE, OFF2)
SERVO: NONE
VECTOR: NONE
Acknowledge: POWER ON
Cause: The terminal module used has signaled an internal error. Signals of this module may not be evaluated and are potentially incorrect.
Remedy: The module must be replaced if no other alarms that refer to a communications error are present in the system.

A35231 TM: Master control by PLC missing

Message value: -
Drive object: TM41
Reaction: NONE
Acknowledge: NONE
Cause: The "master control by PLC" signal was missing in operation.
- interconnection of the binector input for "master control by PLC" is incorrect (p0854).
- the higher-level control has withdrawn the "master control by PLC" signal.
- data transfer via the fieldbus (master/drive) was interrupted.
Note:
This alarm is only decisive in the "SIMOTION" operating mode (p4400 = 0).
In the "SINAMICS" operating mode, the setpoints at P4420 are evaluated independent of binector input p0854.
Remedy: - check the interconnection of the binector input for "master control by PLC" (p0854).
- check the "master control by PLC" signal and, if required, switch in.
- check the data transfer via the fieldbus (master/drive).
- check the setting of parameter p2037.

A35232 TM41: Zero mark no longer synchronous and POWER ON required

Message value: -
Drive object: TM41
Reaction: NONE
Acknowledge: NONE
Cause: SINAMICS (p4400 = 1) operating mode:
When parameterizing a Terminal Module 41 (TM41) or when operating a TM41 module, an operating state was reached which required a POWER ON.
These include:
- changing the encoder pulse number (p0408).
- changing the fine resolution (p0418).
- withdrawing the DRIVE-CLiQ cable without first deactivating TM41 via p0105.

If this alarm was output, then the zero mark of the TM41 can no longer be output in synchronism to that of the encoder interconnected at p4420.
SIMOTION (p4400 = 0) operating mode:
A previously set zero mark position (p4426) no longer matches encoder position r0479 due to the change in the pulse number (p0408).

Remedy: The incremental position at output X520 of TM41 can still be evaluated independent of the zero mark.
A POWER ON must be carried out if the TM41 zero mark is evaluated.

F35233 DRIVE-CLiQ component does not support the required function

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, TM31, TM41, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: A function requested by the Control Unit is not supported by a DRIVE-CLiQ component.
Fault value (r0949, interpret decimal):
1: This Terminal Module TM31 does not support the motor overtemperature time stage.
Remedy: Upgrade the firmware of the DRIVE-CLiQ component involved.
Re fault value = 1:
If the motor overtemperature time stage is to be used, the TM31 must be replaced. The order number of the replacement module should be 6SL3055-0AA00-3AA1 with software version V2.6 or higher..

N35800 (F) TM: Group signal

Message value: -
Drive object: All objects
Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
VECTOR: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge: NONE
Cause: The Terminal Module has detected at least one fault.
Remedy: Evaluates other current messages.
Reaction upon F: A_INFEED: OFF2 (NONE, OFF1)

Reaction upon N: NONE
Acknowl. upon N: NONE

F35820 TM DRIVE-CLiQ: Telegram error

Message value: Component number: %1, fault cause: %2
Drive object: All objects
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communication error has occurred from the Terminal Module to the encoder involved.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 01 hex:
CRC error.
xx = 02 hex:
Telegram is shorter than specified in the length byte or in the receive list.
xx = 03 hex:
Telegram is longer than specified in the length byte or in the receive list.
xx = 04 hex:
The length of the receive telegram does not match the receive list.
xx = 05 hex:
The type of the receive telegram does not match the receive list.
xx = 06 hex:
The address of the component in the telegram and in the receive list do not match.
xx = 07 hex:
A SYNC telegram is expected - but the receive telegram is not a SYNC telegram.
xx = 08 hex:
No SYNC telegram is expected - but the receive telegram is one.
xx = 09 hex:
The error bit in the receive telegram is set.
xx = 10 hex:
The receive telegram is too early.
Remedy: - carry out a POWER ON.
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F35835 TM DRIVE-CLiQ: Cyclic data transfer error

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF1 (OFF2)

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communication error has occurred from the Terminal Module to the encoder involved. The nodes do not send and receive in synchronism.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 21 hex:
The cyclic telegram has not been received.
xx = 22 hex:
Timeout in the telegram receive list.
xx = 40 hex:
Timeout in the telegram send list.

Remedy: - carry out a POWER ON.
- replace the component involved.
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F35836 TM DRIVE-CLiQ: Send error for DRIVE-CLiQ data

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF1 (OFF2)

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communication error has occurred from the Terminal Module to the encoder involved. Data were not able to be sent.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 41 hex:
Telegram type does not match send list.

Remedy: Carry out a POWER ON.

F35837 PTM DRIVE-CLiQ: Component fault

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF1 (OFF2)

Acknowledge: IMMEDIATELY

Cause: Fault detected on the DRIVE-CLiQ component involved. Faulty hardware cannot be excluded.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 20 hex:
Error in the telegram header.
xx = 23 hex:
Receive error: The telegram buffer memory contains an error.
xx = 42 hex:
Send error: The telegram buffer memory contains an error.
xx = 43 hex:
Send error: The telegram buffer memory contains an error.

Remedy: - check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

F35845 TM DRIVE-CLiQ: Cyclic data transfer error

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF1 (OFF2)

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communication error has occurred from the Terminal Module (TM) to the encoder involved.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 0B hex:
Synchronization error during alternating cyclic data transfer.

Remedy: Carry out a POWER ON.
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F35850 TM: Internal software error

Message value: %1

Drive object: All objects

Reaction: A_INFEED: OFF1 (NONE, OFF2)
SERVO: OFF1 (NONE, OFF2, OFF3)
VECTOR: OFF1 (NONE, OFF2, OFF3)

Acknowledge: POWER ON

Cause: An internal software error in the Terminal Module (TM) has occurred.
Fault value (r0949, interpret decimal):
1: Background time slice is blocked.
2: Checksum over the code memory is not OK.

Remedy: - replace the Terminal Module (TM).
- if required, upgrade the firmware in the Terminal Module.
- contact the Hotline.

F35851 TM DRIVE-CLiQ (CU): Sign-of-life missing

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF1 (OFF2)

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communication error has occurred from the Terminal Module (TM) to the Control Unit involved.
The DRIVE-CLiQ component did not set the sign-of-life to the Control Unit.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 0A hex = 10 dec:
The sign-of-life bit in the receive telegram is not set.

Remedy: Upgrade the firmware of the component involved.

F35860 TM DRIVE-CLiQ (CU): Telegram error

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF1 (OFF2)

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communication error has occurred from the Terminal Module (TM) to the Control Unit involved.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 11 hex = 17 dec:
CRC error and the receive telegram is too early.
xx = 01 hex = 01 dec:
Checksum error (CRC error).
xx = 12 hex = 18 dec:
The telegram is shorter than that specified in the length byte or in the receive list and the receive telegram is too early.
xx = 02 hex = 02 dec:
Telegram is shorter than specified in the length byte or in the receive list.

xx = 13 hex = 19 dec:
The telegram is longer than that specified in the length byte or in the receive list and the receive telegram is too early.
xx = 03 hex = 03 dec:
Telegram is longer than specified in the length byte or in the receive list.
xx = 14 hex = 20 dec:
The length of the receive telegram does not match the receive list and the receive telegram is too early.
xx = 04 hex = 04 dec:
The length of the receive telegram does not match the receive list.
xx = 15 hex = 21 dec:
The type of the receive telegram does not match the receive list and the receive telegram is too early.
xx = 05 hex = 05 dec:
The type of the receive telegram does not match the receive list.
xx = 16 hex = 22 dec:
The address of the power unit in the telegram and in the receive list does not match and the receive telegram is too early.
xx = 06 hex = 06 dec:
The address of the power unit in the telegram and in the receive list do not match.
xx = 19 hex = 25 dec:
The error bit in the receive telegram is set and the receive telegram is too early.
xx = 09 hex = 09 dec:
The error bit in the receive telegram is set.
xx = 10 hex = 16 dec:
The receive telegram is too early.

Remedy: - carry out a POWER ON.
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

F35885 TM DRIVE-CLiQ (CU): Cyclic data transfer error

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF1 (OFF2)

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communication error has occurred from the Terminal Module (TM) to the Control Unit involved.
The nodes do not send and receive in synchronism.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 1A hex = 26 dec:
Sign-of-life bit in the receive telegram not set and the receive telegram is too early.
xx = 21 hex = 33 dec:
The cyclic telegram has not been received.
xx = 22 hex = 34 dec:
Timeout in the telegram receive list.
xx = 40 hex = 64 dec:
Timeout in the telegram send list.
xx = 62 hex = 98 dec:
Error at the transition to cyclic operation.

Remedy: - check the power supply voltage of the component involved.
- carry out a POWER ON.
- replace the component involved.
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F35886 TM DRIVE-CLiQ (CU): Error when sending DRIVE-CLiQ data

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF1 (OFF2)

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communication error has occurred from the Terminal Module (TM) to the Control Unit involved.
Data were not able to be sent.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 41 hex:
Telegram type does not match send list.

Remedy: Carry out a POWER ON.

F35887 TM DRIVE-CLiQ (CU): Component fault

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF1 (OFF2)

Acknowledge: IMMEDIATELY

Cause: Fault detected on the DRIVE-CLiQ component (Terminal Module) involved. Faulty hardware cannot be excluded.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 20 hex:
Error in the telegram header.
xx = 23 hex:
Receive error: The telegram buffer memory contains an error.
xx = 42 hex:
Send error: The telegram buffer memory contains an error.
xx = 43 hex:
Send error: The telegram buffer memory contains an error.
xx = 60 hex:
Response received too late during runtime measurement.
xx = 61 hex:
Time taken to exchange characteristic data too long.

Remedy: - check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

F35895 TM DRIVE-CLiQ (CU): Alternating cyclic data transfer error

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF1 (OFF2)

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communication error has occurred from the Terminal Module (TM) to the Control Unit involved.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 0B hex:
Synchronization error during alternating cyclic data transfer.

Remedy: Carry out a POWER ON.
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F35896 TM DRIVE-CLiQ (CU): Inconsistent component properties

Message value: Component number: %1

Drive object: All objects

Reaction: A_INFEED: OFF2 (NONE, OFF1)
SERVO: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
VECTOR: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)

Acknowledge: IMMEDIATELY

Cause: The properties of the DRIVE-CLiQ component (Terminal Module), specified by the fault value, have changed in an incompatible fashion with respect to the properties when booted. One cause can be, e.g. that a DRIVE-CLiQ cable or DRIVE-CLiQ component has been replaced.
Fault value (r0949, interpret decimal):
Component number.

Remedy: - when replacing cables, only use cables with the same length as the original cables.
- when replacing components, use the same components and firmware releases.
- carry out a POWER ON.

F35899 (N, A) TM: Unknown fault

Message value: New message: %1

Drive object: All objects

Reaction: A_INFEED: NONE (OFF1, OFF2)
SERVO: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
VECTOR: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: A fault has occurred on the Terminal Module that cannot be interpreted by the Control Unit firmware.
This can occur if the firmware on this component is more recent than the firmware on the Control Unit.
Fault value (r0949, interpret decimal):
Fault number.
Note:
If required, the significance of this new fault can be read about in a more recent description of the Control Unit.

Remedy: - replace the firmware on the Terminal Module by an older firmware version (r0158).
- upgrade the firmware on the Control Unit (r0018).

F36820 Hub DRIVE-CLiQ: Telegram error

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: DRIVE-CLiQ communication error from Control Unit to DRIVE-CLiQ Hub Module in question.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 01 hex = 1 dec:
Checksum error (CRC error).
xx = 02 hex = 2 dec:
Telegram is shorter than specified in the length byte or in the receive list.
xx = 03 hex = 3 dec:
Telegram is longer than specified in the length byte or in the receive list.
xx = 04 hex = 4 dec:
The length of the receive telegram does not match the receive list.
xx = 05 hex = 5 dec:
The type of the receive telegram does not match the receive list.
xx = 06 hex = 6 dec:
The address of the component in the telegram and in the receive list do not match.
xx = 07 hex = 7 dec:
A SYNC telegram is expected - but the receive telegram is not a SYNC telegram.
xx = 08 hex = 8 dec:
No SYNC telegram is expected - but the receive telegram is one.
xx = 09 hex = 9 dec:
The error bit in the receive telegram is set.
xx = 10 hex = 16 dec:
The receive telegram is too early.

Remedy: - carry out a POWER ON.
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

The type of the receive telegram does not match the receive list and the receive telegram is too early.
xx = 05 hex = 05 dec:
The type of the receive telegram does not match the receive list.
xx = 16 hex = 22 dec:
The address of the power unit in the telegram and in the receive list does not match and the receive telegram is too early.

xx = 06 hex = 06 dec:
The address of the power unit in the telegram and in the receive list do not match.
xx = 19 hex = 25 dec:
The error bit in the receive telegram is set and the receive telegram is too early.
xx = 09 hex = 09 dec:
The error bit in the receive telegram is set.
xx = 10 hex = 16 dec:
The receive telegram is too early.

Remedy: - carry out a POWER ON.
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

F36885 Hub DRIVE-CLiQ (CU): Cyclic data transfer error

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: DRIVE-CLiQ communication error from DRIVE-CLiQ Hub Module in question to Control Unit.
The nodes do not send and receive in synchronism.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 1A hex = 26 dec:
Sign-of-life bit in the receive telegram not set and the receive telegram is too early.
xx = 21 hex = 33 dec:
The cyclic telegram has not been received.
xx = 22 hex = 34 dec:
Timeout in the telegram receive list.
xx = 40 hex = 64 dec:
Timeout in the telegram send list.
xx = 62 hex = 98 dec:
Error at the transition to cyclic operation.

Remedy: - Check supply voltage of component involved.
- carry out a POWER ON.
- replace the component involved.

F36886 Hub DRIVE-CLiQ (CU): Error when sending DRIVE-CLiQ data

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: DRIVE-CLiQ communication error from DRIVE-CLiQ Hub Module in question to Control Unit.
Data were not able to be sent.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 41 hex = 65 dec:
Telegram type does not match send list.

Remedy: Carry out a POWER ON.

F36887 Hub DRIVE-CLiQ (CU): Component fault

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: Fault detected on the DRIVE-CLiQ component (DRIVE-CLiQ Hub Module) involved. Faulty hardware cannot be excluded.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 20 hex = 32 dec:
Error in the telegram header.

xx = 23 hex = 35 dec:
Receive error: The telegram buffer memory contains an error.
xx = 42 hex = 66 dec:
Send error: The telegram buffer memory contains an error.
xx = 43 hex = 67 dec:
Send error: The telegram buffer memory contains an error.
xx = 60 hex = 96 dec:
Response received too late during runtime measurement.
xx = 61 hex = 97 dec:
Time taken to exchange characteristic data too long.

Remedy: - check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

F36895 Hub DRIVE-CLiQ (CU): Alternating cyclic data transfer error

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: DRIVE-CLiQ communication error from DRIVE-CLiQ Hub Module in question to Control Unit.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 0B hex = 11 dec:
Synchronization error during alternating cyclic data transfer.

Remedy: Carry out a POWER ON.
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F36896 Hub DRIVE-CLiQ (CU): Inconsistent component properties

Message value: Component number: %1

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The properties of the DRIVE-CLiQ component (DRIVE-CLiQ Hub Module) specified by the fault value have changed in an incompatible fashion with respect to the properties when booted. One cause can be, e.g. that a DRIVE-CLiQ cable or DRIVE-CLiQ component has been replaced.
Fault value (r0949, interpret decimal):
Component number.

Remedy: - when replacing cables, only use cables with the same length as the original cables.
- when replacing components, use the same components and firmware releases.
- carry out a POWER ON.

F36899 (N, A) Hub: Unknown fault

Message value: New message: %1

Drive object: A_INF, B_INF, HUB, S_INF, SERVO, TM41, VECTOR

Reaction: A_INFEED: NONE (OFF1, OFF2)
SERVO: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
VECTOR: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: A fault occurred on the DRIVE-CLiQ Hub Module that cannot be interpreted by the Control Unit firmware.
This can occur if the firmware on this component is more recent than the firmware on the Control Unit.
Fault value (r0949, interpret decimal):
Fault number.
Note:
If required, the significance of this new fault can be read about in a more recent description of the Control Unit.

Remedy: - Replace the firmware on the DRIVE-CLiQ Hub Module with older firmware (r0158).
- upgrade the firmware on the Control Unit (r0018).

F40886 CX32 DRIVE-CLiQ (CU): Error when sending DRIVE-CLiQ data

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communications error has occurred from the controller extension involved to the Control Unit.
Data were not able to be sent.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 41 hex:
Telegram type does not match send list.

Remedy: Carry out a POWER ON.

F40887 CX32 DRIVE-CLiQ (CU): Component fault

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: Fault detected on the DRIVE-CLiQ component involved. Faulty hardware cannot be excluded.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 20 hex:
Error in the telegram header.
xx = 23 hex:
Receive error: The telegram buffer memory contains an error.
xx = 42 hex:
Send error: The telegram buffer memory contains an error.
xx = 43 hex:
Send error: The telegram buffer memory contains an error.
xx = 60 hex:
Response received too late during runtime measurement.
xx = 61 hex:
Time taken to exchange characteristic data too long.

Remedy: - check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

F40895 CX32 DRIVE-CLiQ (CU): Cyclic data transfer error

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: A DRIVE-CLiQ communications error has occurred from the controller extension involved to the Control Unit.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 0B hex:
Synchronization error during alternating cyclic data transfer.

Remedy: Carry out a POWER ON.
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F49150 Cooling system: Fault occurred

Message value: -

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: The cooling system signals a general fault.

Remedy: - check the wiring between the cooling system and the input terminal (Terminal Module).
- check the external control device for the cooling system.
See also: p0266 (Cooling system, feedback signals, signal source)

F49151 Cooling system: Conductivity has exceeded the fault threshold

Message value: -

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: The conductivity of the cooling liquid has exceeded the selected fault threshold (p0269[2]).
See also: p0261 (Cooling system, starting time 2), p0262 (Cooling system, fault conductivity delay time), p0266 (Cooling system, feedback signals, signal source)

Remedy: Check the device to de-ionize the cooling liquid.

F49152 Cooling system: ON command feedback signal missing

Message value: -

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: The feedback signal of the ON command of the cooling system is missing.
- after the ON command, the feedback signal has not been received within the selected starting time (p0260).
- the feedback signal has failed in operation.
See also: p0260 (Cooling system, starting time 1), r0267 (Cooling system status word)

Remedy: - check the wiring between the cooling system and the input terminal (Terminal Module).
- check the external control device for the cooling system.

F49153 Cooling system: Liquid flow too low

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The drive converter cooling system signals that the cooling liquid flow is too low.
- after the ON command, the feedback signal has not been received within the selected starting time (p0260).
- in operation, the feedback signal has failed for longer than the permitted failure time (p0263).
See also: p0260 (Cooling system, starting time 1), p0263 (Cooling system fault liquid flow, delay time), r0267 (Cooling system status word)
Remedy: - check the wiring between the cooling system and the input terminal (Terminal Module).
- check the external control device for the cooling system.

F49154 (A) Cooling system: Liquid leak is present

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The liquid leakage monitoring function has responded.
Caution:
Before this fault is re-parameterized as an alarm, you must ensure that the drive is shut down if cooling water is lost.
See also: r0267 (Cooling system status word)
Remedy: - check the cooling system for leaks in the cooling circuit.
- check the wiring of the input terminal (Terminal Module) used to monitor leaking fluid.
Reaction upon A: NONE
Acknowl. upon A: NONE

F49155 Cooling system: Power Stack Adapter, firmware version too old

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: POWER ON
Cause: The firmware version in the Power Stack Adapter (PSA) is too old and does not support the liquid cooling.
Remedy: Upgrade the firmware. Check EEPROM data.

F49156 Cooling system: Cooling liquid temperature has exceeded the fault threshold

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The cooling liquid intake temperature has exceeded the permanently set fault threshold.
Remedy: Check the cooling system and the ambient conditions.

A49170 Cooling system: Alarm has occurred

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The cooling system signals a general alarm.
Remedy: - check the wiring between the cooling system and the input terminal (Terminal Module).
- check the external control device for the cooling system.

A49171 Cooling system: Conductivity has exceeded the alarm threshold

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO
Reaction: NONE
Acknowledge: NONE
Cause: The conductivity of the cooling liquid has exceeded the selected alarm threshold (p0269[1]).
See also: p0261 (Cooling system, starting time 2), p0262 (Cooling system, fault conductivity delay time), p0266 (Cooling system, feedback signals, signal source)
Remedy: Check the device to de-ionize the cooling liquid.

A49171 Cooling system: Conductivity has exceeded the alarm threshold

Message value: -
Drive object: VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The conductivity monitoring of the cooling liquid is set (r0267 bit 7, from p0266 index 7).
See also: p0261 (Cooling system, starting time 2), p0262 (Cooling system, fault conductivity delay time), p0266 (Cooling system, feedback signals, signal source), r0267 (Cooling system status word)
Remedy: Check the device to de-ionize the cooling liquid.

A49172 Cooling system: Conductivity actual value is not valid

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: When monitoring the conductivity of the cooling liquid, there is a fault in the wiring or in the sensor.
Remedy: - check the wiring between the cooling system and the Power Stack Adapter (PSA).
- check the function of the sensor to measure the conductivity.

A49173 Cooling system: Cooling liquid temperature has exceeded the alarm threshold

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The cooling liquid intake temperature has exceeded the specified alarm threshold.
Remedy: Check the cooling system and the ambient conditions.

F49200 Excitation group signal fault

Message value: %1
Drive object: VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The excitation sequence control signals a fault.
Fault value (r0949, hexadecimal):
Bit 0:
When powered down or when powering down the excitation, the signal "excitation ready to be powered up feedback signal" was not received within the monitoring time.
Bit 1:
After an ON command, the signal "excitation ready feedback signal" was not received within the monitoring time.
Bit 2:
After the pulses were enabled, the signal "excitation operational feedback signal" was not received within the monitoring time.
Bit 3:
The "excitation group signal fault" signal is present.
Remedy: - check the excitation.
- check commands, feedback signals and BICO interconnections.

A49201 (F) Excitation group signal alarm

Message value: -
Drive object: VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The "excitation group signal alarm" signal is present.
Remedy: Check the excitation equipment.
Reaction upon F: NONE
Acknowl. upon F: IMMEDIATELY

A50001 (F) COMM BOARD: Alarm 1

Message value: %1
Drive object: A_INF, B_INF, CU_LINK, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: CBE20: A PROFINET controller attempts to establish a connection using an incorrect configuring telegram. The PROFINET version (V2.1/V2.2) of the project (HW Config) is not compatible with the CBE20 firmware.
Remedy: CBE20: Upgrade the PROFINET version of the project (HW Config) and/or the CBE20 firmware to make them compatible.
See also: p8835 (CBE20 firmware selection)
Reaction upon F: A_INFEED: NONE (OFF1, OFF2)
SERVO: NONE (OFF1, OFF2, OFF3)
VECTOR: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY

A.2.2 Encoder code

1FK6 encoders

Table A-5 Encoder code for 1FK6 encoders

Order number	Encoder code (p0400)	Comments
1FK6xxx-xxxxx-xAxx	2001	-
1FK6xxx-xxxxx-xExx	2051	-
1FK6xxx-xxxxx-xGxx	2052	-
1FK6xxx-xxxxx-xHxx	2053	-
1FK6xxx-xxxxx-xJxx	2054	-
1FK6xxx-xxxxx-xSxx	1002 1003 1004	4p (2-speed) 6p (3-speed) 8p (4-speed) The pole number of the resolver corresponds to the pole number of the motor (see catalog).
1FK6xxx-xxxxx-xTxx	1001	-

1FK7 encoders

Table A-6 Encoder code for 1FK7 encoders

Order number	Encoder code (p0400)	Comments
1FK7xxx-xxxxx-xAxx	2001	-
1FK7xxx-xxxxx-xExx	2051	-
1FK7xxx-xxxxx-xGxx	2052	-
1FK7xxx-xxxxx-xHxx	2053	-
1FK7xxx-xxxxx-xJxx	2054	-
1FK7xxx-xxxxx-xSxx	1002 1003 1004	4p (2-speed) 6p (3-speed) 8p (4-speed) The pole number of the resolver corresponds to the pole number of the motor (see catalog).
1FK7xxx-xxxxx-xTxx	1001	-

1FS6 encoders

Table A-7 Encoder code for 1FS6 encoders

Order number	Encoder code (p0400)	Comments
1FS6xxx-xxxxx-xAxx	2001	-
1FS6xxx-xxxxx-xExx	2051	-

1FT6 encoders

Table A-8 Encoder code for 1FT6 encoders

Order number	Encoder code (p0400)	Comments
1FT6xxx-xxxxx-xAxx	2001	-
1FT6xxx-xxxxx-xExx	2051	-
1FT6xxx-xxxxx-xHxx	2053	-
1FT6xxx-4xxxx-xSxx	1002	4p (2-speed)
1FT6xxx-6xxxx-xSxx	1003	6p (3-speed)
1FT6xxx-8xxxx-xSxx	1004	8p (4-speed)
1FT6xxx-xxxxx-xTxx	1001	-

1FW3 encoders

Table A-9 Encoder code for 1FW3 encoders

Order number	Encoder code (p0400)	Comments
1FW3xxx-xAxxx-xxxx	2001	-
1FW3xxx-xExxx-xxxx	2051	-
1FW3xxx-xGxxx-xxxx	2052	-
1FW3xxx-xSxxx-xxxx	1003	-

1PH4 encoders

Table A-10 Encoder code for 1PH4 encoders

Order number	Encoder code (p0400)	Comments
1PH4xxx-xNxxx-xxxx	2002	-

1PH7 encoders

Table A-11 Encoder code for 1PH7 encoders

Order number	Encoder code (p0400)	Comments
1PH7xxx-xExx-xxxx	2051	-
1PH7xxx-xHxx-xxxx	3002	-
1PH7xxx-xJxx-xxxx	3003	-
1PH7xxx-xMxx-xxxx	2001	-
1PH7xxx-xNxx-xxxx	2002	-
1PH7xxx-xRxx-xxxx	1001	-

1PM4 encoders

Table A-12 Encoder code for 1PM4 encoders

Order number	Encoder code (p0400)	Comments
1PM4xxx-xGxx-xxxx	2002	-
1PM4xxx-xLxx-xxxx	2003	-

1PM6 encoders

Table A-13 Encoder code for 1PM6 encoders

Order number	Encoder code (p0400)	Comments
1PM6xxx-xGxx-xxxx	2002	-
1PM6xxx-xLxx-xxxx	2003	-

2SP1 encoders

Table A-14 Encoder code for 2SP1 encoders

Order number	Encoder code (p0400)	Comments
2SP1xxx-xHxx-xxxx	2003	-

List of abbreviations

B

Note:

The following list of abbreviations contains the abbreviations and their meanings used in the entire SINAMICS user documentation.

Abbreviation	Derivation of abbreviation	Meaning
A		
A...	Alarm	Alarm
AC	Alternating Current	Alternating current
ADC	Analog Digital Converter	Analog digital converter
AI	Analog Input	Analog input
AIM	Active Interface Module	Active Interface Module
ALM	Active Line Module	Active Line Module
AO	Analog Output	Analog output
AOP	Advanced Operator Panel	Advanced Operator Panel
APC	Advanced Positioning Control	Advanced positioning control
AR	Automatic Restart	Automatic restart
ASC	Armature Short-Circuit	Armature short-circuit
ASCII	American Standard Code for Information Interchange	American Standard Code for Information Interchange
ASM	Asynchronmotor	Induction motor
B		
BERO	-	Tradename for a type of contactless proximity switch
BI	Binector Input	Binector input
BIA	Berufsgenossenschaftliches Institut für Arbeitssicherheit	German Institute for Occupational Safety
BICO	Binector Connector Technology	Binector connector technology
BLM	Basic Line Module	Basic Line Module
BO	Binector Output	Binector output
BOP	Basic Operator Panel	Basic Operator Panel
C		
C	Capacitance	Capacitance
C...	-	Safety message
CAN	Controller Area Network	Serial bus system
CBC	Communication Board CAN	CAN communication board

Abbreviation	Derivation of abbreviation	Meaning
CD	Compact Disc	Compact Disc
CDS	Command Data Set	Command data set
CF Card	CompactFlash Card	CompactFlash card
CI	Connector Input	Connector input
CLC	Clearance Control	Clearance control
CNC	Computer Numerical Control	Computer numerical control
CO	Connector Output	Connector output
CO/BO	Connector Output/Binector Output	Connector output/Binector output
COB-ID	CAN Object-Identification	CAN object identification
COM	Common contact of a change-over relay	Common contact of a change-over relay
COMM	Commissioning	Commissioning
CP	Communications Processor	Communications processor
CPU	Central Processing Unit	Central processing unit
CRC	Cyclic Redundancy Check	Cyclic redundancy check
CSM	Control Supply Module	Control Supply Module
CU	Control Unit	Control Unit
D		
DAC	Digital Analog Converter	Digital Analog Converter
DC	Direct Current	Direct current
DCB	Drive Control Block	Drive Control Block
DCC	Drive Control Chart	Drive Control Chart
DCC	Data Cross-Check	Data cross-check
DCN	Direct Current Negative	Direct current negative
DCP	Direct Current Positive	Direct current positive
DDS	Drive Data Set	Drive data set
DI	Digital Input	Digital input
DI/DO	Digital Input/Digital Output	Bidirectional digital input/digital output
DMC	DRIVE-CLiQ Hub Module Cabinet	DRIVE-CLiQ Hub Module Cabinet
DME	DRIVE-CLiQ Hub Module External	DRIVE-CLiQ Hub Module External
DO	Digital Output	Digital output
DO	Drive Object	Drive object
DP	Distributed I/Os	Distributed I/Os
DPRAM	Dual-Port Random Access Memory	Dual-Port Random Access Memory
DRAM	Dynamic Random Access Memory	Dynamic Random Access Memory
DRIVE-CLiQ	Drive Component Link with IQ	Drive Component Link with IQ
DSC	Dynamic Servo Control	Dynamic servo control
E		
EASC	External Armature Short-Circuit	External armature short-circuit
EDS	Encoder Data Set	Encoder data set
ELCB	Earth Leakage Circuit Breaker	Earth leakage circuit breaker
ELP	Earth Leakage Protection	Earth leakage protection

Abbreviation	Derivation of abbreviation	Meaning
EMC	Electromagnetic Compatibility	Electromagnetic compatibility
EMF	Electromagnetic Force	Electromagnetic force
EN	Europäische Norm	European Standard
EnDat	Encoder-Data-Interface	Encoder interface
EP	Enable Pulses	Enable Pulses
EPOS	Einfachpositionierer	Basic positioner
ES	Engineering System	Engineering system
ESB	Ersatzschaltbild	Equivalent circuit diagram
ESD	Electrostatic Sensitive Devices	Electrostatic sensitive devices
ESR	Extended Stop and Retract	Extended stop and retract
F		
F...	Fault	Fault
FAQ	Frequently Asked Questions	Frequently asked questions
FBL	Free Blocks	Free function blocks
FCC	Function Control Chart	Function Control Chart
FCC	Flux Current Control	Flux current control
FD	Function Diagram	Function diagram
F-DI	Failsafe Digital Input	Failsafe digital input
F-DO	Failsafe Digital Output	Failsafe digital output
FEM	Fremderregter Synchronmotor	Separate-field synchronous motor
FEPROM	Flash-EPROM	Non-volatile write and read memory
FG	Function Generator	Function generator
FI	-	Fault current
FO	Fiber-Optic Cable	Fiber optic cable
FPGA	Field Programmable Gate Array	Field Programmable Gate Array
FW	Firmware	Firmware
G		
GB	Gigabyte	Gigabyte
GC	Global Control	Global Control Telegram (Broadcast Telegram)
GND	Ground	Reference potential for all signal and operating voltages, usually defined with 0 V (also designated as M)
GSD	Gerätestammdatei	Device master file: describes the features of a PROFIBUS slave
GSV	Gate Supply Voltage	Gate supply voltage
GUID	Globally Unique Identifier	Globally unique identifier
H		
HF	High Frequency	High frequency
HFD	Hochfrequenzdrossel	High-frequency reactor
HMI	Human Machine Interface	Human Machine Interface
HTL	High-Threshold Logic	High-threshold logic

Abbreviation	Derivation of abbreviation	Meaning
HW	Hardware	Hardware
I		
I/O	Input/Output	Input/Output
I2C	Inter Integrated Circuit	Internal serial data bus
IASC	Internal Armature Short-Circuit	Internal armature short-circuit
ID	Identifier	Identifier
IEC	International Electrotechnical Commission	International standard in electrical engineering
IF	Interface	Interface
IGBT	Insulated Gate Bipolar Transistor	Bipolar transistor with insulated control electrode
IGCT	Integrated Gate-Controlled Thyristor	Semiconductor circuit-breaker with integrated control electrode
IL	Impulslöschung	Pulse suppression
IP	Internet Protocol	Internet Protocol
IPO	Interpolator	Interpolator
IT	Isolé Terré	Insulated three-phase supply system
IVP	Internal Voltage Protection	Internal voltage protection
J		
JOG	Jogging	Jogging
K		
KIP	Kinetische Pufferung	Kinetic buffering
Kp	-	Proportional gain
KTY	-	Special temperature sensor
L		
L	-	Formula symbol for inductance
LED	Light Emitting Diode	Light Emitting Diode
LIN	Linearmotor	Linear motor
LR	Lageregler	Position controller
LSB	Least Significant Bit	Least Significant Bit
LSC	Line-Side Converter	Line-Side Converter
LSS	Line Side Switch	Line Side Switch
LU	Length Unit	Length Unit
M		
M	-	Formula symbol for torque
M	Masse	Reference potential for all signal and operating voltages, usually defined with 0 V (also designated as GND)
MB	Megabyte	Megabyte
MCC	Motion Control Chart	Motion Control Chart
MDS	Motor Data Set	Motor data set
MLFB	Maschinenlesbare Fabrikatebezeichnung	Machine-readable product designation

Abbreviation	Derivation of abbreviation	Meaning
MMC	Man-Machine Communication	Man-Machine Communication
MMC	Micro Memory Card	Micro Memory Card
MSB	Most Significant Bit	Most Significant Bit
MSC	Motor-Side Converter	Motor-Side Converter
MSCY_C1	Master Slave Cycle Class 1	Cyclic communication between master (class 1) and slave
MT	Messtaster	Probe
N		
N. C.	Not Connected	Not connected
N...	No Report	No report or internal message
NAMUR	Normenarbeitsgemeinschaft für Mess- und Regeltechnik in der chemischen Industrie	Standardization association for measurement and control in chemical indstries
NC	Normally Closed (contact)	Normally Closed (contact)
NC	Numerical Control	Numerical control
NEMA	National Electrical Manufacturers Association	Standards association in USA
NO	Normally Open (contact)	Normally Open (contact)
O		
OA	Open Architecture	Open Architecture
OC	Operating Condition	Operating condition
OEM	Original Equipment Manufacturer	Original Equipment Manufacturer
OLP	Optical Link Plug	Optical link plug
OMI	Option Module Interface	Option Module Interface
P		
p...	-	Setting parameter
PB	PROFIBUS	PROFIBUS
PcCtrl	PC Control	Master control
PD	PROFIdrive	PROFIdrive
PDS	Power unit Data Set	Power unit data set
PE	Protective Earth	Protective Earth
PELV	Protective Extra Low Voltage	Protective Extra Low Voltage
PEM	Permanenterregter Synchronmotor	Permanent-field synchronous motor
PG	Programmiergerät	Programming device
PI	Proportional Integral	Proportional Integral
PID	Proportional Integral Differential	Proportional Integral Differential
PLC	Programmable Logic Controller	Programmable logic controller
PLL	Phase-Locked Loop	Phase-Locked Loop
PN	PROFINET	PROFINET
PNO	PROFIBUS Nutzerorganisation	PROFIBUS User Organization (PROFIBUS International)
PPI	Point to Point Interface	Point to point interface
PRBS	Pseudo Random Binary Signal	Pseudo Random Binary Signal

Abbreviation	Derivation of abbreviation	Meaning
PROFIBUS	Process Field Bus	Serial data bus
PS	Power Supply	Power supply
PSA	Power Stack Adapter	Power stack adapter
PTC	Positive Temperature Coefficient	Positive Temperature Coefficient
PTP	Point-To-Point	Point-to-point
PWM	Pulse Width Modulation	Pulse width modulation
PZD	Prozessdaten	Process data
Q		
R		
r...	-	Display parameter (read only)
RAM	Random Access Memory	Read and write memory
RCCB	Residual Current Circuit Breaker	Residual current circuit breaker
RCD	Residual Current Device	Residual current device
RFG	Ramp-Function Generator	Ramp-function generator
RJ45	Registered Jack 45	Describes an 8-pole connector system for data transfer with shielded or unshielded multicore copper cables
RKA	Rückkühlanlage	Cooling unit
RO	Read Only	Read only
RPDO	Receive Process Data Object	Receive Process Data Object
RS232	Recommended Standard 232	Interface standard for conducted serial data transfer between a transmitter and a receiver (also designated as EIA232)
RS485	Recommended Standard 485	Interface standard for a conducted differential, parallel and/or serial bus system (data transfer between several transmitters and receivers, also designated as EIA485)
RTC	Real Time Clock	Real time clock
S		
S1	-	Continuous duty
S3	-	Intermittent duty
SBC	Safe Brake Control	Safe brake control
SBH	Sicherer Betriebshalt	Safe Operating Stop
SBR	-	Safe Acceleration Monitor
SCA	Safe Cam	Safe cam
SD Card	SecureDigital Card	Secure Digital Card
SE	Sicherer Software-Endschalter	Safe software limit switch
SG	Sicher reduzierte Geschwindigkeit	Safely reduced speed
SGA	Sicherheitsgerichteter Ausgang	Safety-related output
SGE	Sicherheitsgerichteter Eingang	Safety-related input
SH	Sicherer Halt	Safe standstill
SP	Safety Integrated	Safety Integrated
SIL	Safety Integrity Level	Safety Integrity Level

Abbreviation	Derivation of abbreviation	Meaning
SLM	Smart Line Module	Smart Line Module
SLP	Safely-Limited Position	Safely-Limited Position
SLS	Safely-Limited Speed	Safely Limited Speed
SLVC	Sensorless Vector Control	Sensorless Vector Control
SM	Sensor Module	Sensor Module
SMC	Sensor Module Cabinet	Sensor Module Cabinet
SME	Sensor Module External	Sensor Module External
SN	Sicherer Software-Nocken	Safe software cam
SOS	Safe Operating Stop	Safe operating stop
SP	Service Pack	Service pack
SPC	Setpoint Channel	Setpoint channel
SPI	Serial Peripheral Interface	Serial I/O interface
SS1	Safe Stop 1	Safe Stop 1 (time-monitored, ramp-monitored)
SS2	Safe Stop 2	Safe Stop 2
SSI	Synchronous Serial Interface	Synchronous serial interface
SSM	Safe Speed Monitor	Safe feedback from speed monitor (n < nx)
SSR	Safe Stop Ramp	Safe brake ramp
STO	Safe Torque Off	Safely switched-off torque
STW	Steuerwort	Control word
SVA	Space-vector approximation	Space-vector approximation
T		
TB	Terminal Board	Terminal Board
TIA	Totally Integrated Automation	Totally Integrated Automation
TM	Terminal Module	Terminal Module
TN	Terre Neutre	Grounded three-phase supply system
Tn	-	Integral time
TPDO	Transmit Process Data Object	Transmit Process Data Object
TT	Terre Terre	Grounded three-phase supply system
TTL	Transistor-Transistor Logic	Transistor-Transistor-Logic
Tv	-	Derivative action time
U		
UL	Underwriters Laboratories Inc.	Underwriters Laboratories Inc.
UPS	Uninterruptible Power Supply	Uninterruptible power supply
V		
VC	Vector Control	Vector control
Vdc	-	DC link voltage
VdcN	-	Partial DC link voltage negative
VdcP	-	Partial DC link voltage positive
VDE	Verband Deutscher Elektrotechniker	Association of German Electrical Engineers
VDI	Verein Deutscher Ingenieure	Assocation of German Engineers

Abbreviation	Derivation of abbreviation	Meaning
VPM	Voltage Protection Module	Voltage Protection Module
Vpp	Volt peak to peak	Volt peak to peak
VSM	Voltage Sensing Module	Voltage Sensing Module
W		
WZM	Werkzeugmaschine	Machine tool
X		
XML	Extensible Markup Language	Extensible Markup Language (standard language for Web publishing and document management)
Y		
Z		
ZK	Zwischenkreis	DC link
ZM	Zero Mark	Zero mark
ZSW	Zustandswort	Status word

PROFIBUS documentation

/P1/ **PROFIBUS-DP/DPV1 IEC 61158**
Basics, tips and tricks for users
Hüthig; Manfred Popp, 2. Auflage

ISBN 3-7785-2781-9

/P2/ **PROFIBUS-DP, Getting Started**
PROFIBUS Nutzerorganisation e.V.; Manfred Popp

Ordner No.: 4.071

/P3/ **Distributed Layouts using PROFIBUS-DP**
Architecture and Fundamentals, Configuration and Use of PROFIBUS-DP with SIMATIC S7
SIEMENS; Publicis MCD Verlag; Josef Weigmann, Gerhard Kilian

Order No.: A19100-L531-B714
ISBN 3-89578-074-X

/P4/ **Manual for PROFIBUS Networks, SIEMENS**

Ordner No.: 6GK1970-5CA20-0BA0

/P5/ **PROFIBUS and PROFINET, PROFIdrive Profile Drive Technology**
PROFIBUS Nutzerorganisation e. V.
Haid-und-Neu-Straße 7, D-76131 Karlsruhe
http://www.profibus.com

Ordner No.: 3.172 Version 4.0 August 2005

/IKPI/ **Industrial Communication for Automation and Drives**
Catalog

Ordner No.: E86060-K6710-A101-B4 Edition: 2005

/PDP/ **PROFIBUS Installation Guidelines**
Installation Guideline for PROFIBUS-FMS/DP
Installation and wiring recommendation for RS 485 Transmission

Order number 2.111 (German)
2.112 (English) Version 1.0

Documentation for Safety Equipment

Note

For more information about technical documentation for Safety Integrated, visit the following address:

http://www.siemens.de/safety

The following list contains some of the safety-related documentation available.

/LV1/ **Low Voltage Switchgear SIRIUS-SENTRON-SIVACON**
Catalog
Order No.: E86060-K1002-A101-A5 Edition: 2006

/MRL/ **Directive 98/37/EG of the European Parliament and Council**
Machinery directive
Bundesanzeiger-Verlags GmbH Edition: 22.06.1998

/SISH/ **Safety Integrated**
System Manual
Order No.: 6ZB5000-0AA01-0BA1 5th edition

System Manual supplement to 5th edition
Order number: 6ZB5000-0AB01-0BA0

/SICD/ **Safety Integrated**
CD-ROM
Order number: E20001-D10-M103-X-7400 Edition: 09/2004

Comments/suggestions

Your comments and suggestions help us to improve the quality and usability of our documentation. Please complete the questionnaire and return it by mail or fax to Siemens.

Name of manual: SINAMICS S120/S150

Order No. of Manual: 6SL3097-2AP00-0BP7

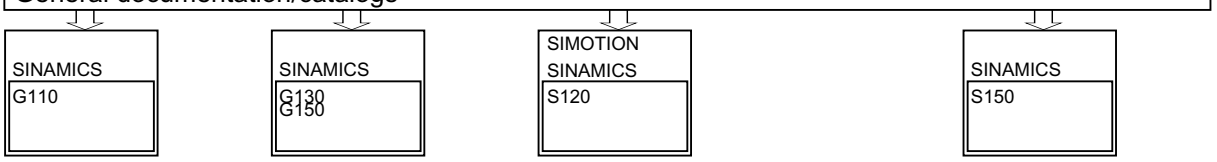
Please answer the following questions, giving each one a mark between 1 = good to 5 = poor.

1. Do the contents meet your requirements? ☐
2. Is it easy to find the information you need? ☐
3. Is the text easy to understand? ☐
4. Is the level of technical detail appropriate for your needs? ☐
5. Please rate the quality of the graphics and tables. ☐

If you encountered any specific problems, please describe these in the space provided below:

SINAMICS documentation overview (10/2008)

General documentation/catalogs



D11.1
Inverter Chassis Units
0.12 kW to 3 kW

D11
Converter Chassis Units
Converter Cabinet Units

PM 21
SIMOTION, SINAMICS S120 and
Motors for Production Machines

D21.3
Converter Cabinet Units
75 kW to 1200 kW
