Safety-related information

This manual contains information that must be observed to ensure your personal safety and to prevent property damage. Notices referring to your personal safety are highlighted in the manual by a safety alert symbol; notices referring to property damage only have no safety alert symbol, These notices shown below are graded according to the level of danger:

Danger

indicates that death or serious injury **will** result if proper precautions are not taken.

Alarm

indicates that death or serious injury **may** result if proper precautions are not taken.

Caution

with a safety alert symbol, indicates that minor personal injury **may** result if proper precautions are not taken.

Caution

without a safety alert symbol, indicates that property damage may result if proper precautions are not taken.

Notice

means an undesirable result or state can occur if the corresponding instruction is not followed.

If more than one level of danger exists, the warning notice for the highest level of danger is used. If a warning notice with a safety alert symbol is to indicate physical injury, the same warning may also contain information about damage to property.

Qualified personnel

The associated device/system may only be installed and used in conjunction with this documentation. Only **qualified personnel** should be allowed to commission and operate the device/system. For the purpose of the safety information in this documentation, a “qualified person” is someone who is authorized to energize, ground, and tag equipment, systems, and circuits in accordance with established safety procedures.

Proper use of Siemens products

Please note the following:

Alarm

Siemens products are only permitted to be used for the applications envisaged in the catalog and in the associated technical documentation. If third-party products and components are used, they must be recommended or approved by Siemens. To ensure proper and safe operation of these products, they must be correctly transported, stored, set up, mounted, installed, commissioned, operated and maintained. The permissible ambient conditions must be met. Information in the associated documentation must be observed.

Trademarks

All names identified by ® are registered trademarks of the Siemens AG. The remaining trademarks in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

Foreword

SINAMICS Documentation

The SINAMICS documentation is organized in 2 parts:

- General documentation/catalogs
- Manufacturer/service documentation

At http://www.siemens.com/motioncontrol/docu information is available on the following topics:

- Ordering documentation

  Here you will find the current overview of publications

- Downloading documentation

  Links to more information for downloading files from Service & Support

- Researching documentation online

  Information on DOConCD and direct access to the publications in DOCon-Web.

- Individually compiling documentation on the basis of Siemens contents with the My Documentation Manager (MDM), refer to

  http://www.siemens.com/mdm

  The My Documentation Manager offers you a number of features for compiling your own machine documenation

- Training and FAQs

  Information on the range of training courses and FAQs (frequently asked questions) are available via the page navigation.

Usage phases and their tools/documents (as an example)

Table Foreword-1Usage phases and the available tools/documents

Usage phase	Tools/documents
Orientation	SINAMICS S Sales Documentation
Planning/configuration	SIZER configuration tool Configuration Manuals, Motors
Decision making/ordering	SINAMICS S Catalogs
Installation/assembly	• SINAMICS S120 Equipment Manual for Control Units and Supplementary System Components • SINAMICS S120 Equipment Manual Power Units Booksize • SINAMICS S120 Equipment Manual Power Units in chassis format • SINAMICS S150 Operating Instructions
Commissioning	• STARTER parameterization and commissioning tool • SINAMICS S120 Getting Started • SINAMICS S120 Commissioning Manual • SINAMICS S120 CANopen Commissioning Manual • SINAMICS S120 Function Manual • SINAMICS S20/S150 List Manual • SINAMICS S150 Operating Instructions
Usage/operation	• SINAMICS S120 Commissioning Manual • SINAMICS S20/S150 List Manual • SINAMICS S150 Operating Instructions
Maintenance/servicing	• SINAMICS S120 Commissioning Manual • SINAMICS S20/S150 List Manual • SINAMICS S150 Operating Instructions

Target group

This documentation is aimed at machine manufacturers, commissioning engineers, and service personnel who use SINAMICS.

Benefits

This documentation contains the comprehensive information about parameters, function diagrams and faults and alarms required to commission and service the system.

This manual should be used in addition to the other manuals and tools provided for the product.

Standard version

The scope of the functionality described in this document can differ from the scope of the functionality of the drive system that is actually supplied.

- Other functions not described in this documentation might be able to be executed in the drive system. However, no claim can be made regarding the availability of these functions when the equipment is first supplied or in the event of servicing.
- Functions can be described in the documentation that are not available in a particular product version of the drive system. The functionality of the supplied drive system should only be taken from the ordering documentation.
- Extensions or changes made by the machine manufacturer must be documented by the machine manufacturer.

For reasons of clarity, this documentation does not contain all of the detailed information on all of the product types. This documentation cannot take into consideration every conceivable type of installation, operation and service/maintenance.

Search tools

The following guides are provided to help you locate information in this manual:

1. Table of contents
   - General table of contents for the complete manual (after the preface).
   - Table of contents for function diagrams (Chapter 2.1).
2. List of abbreviations
3. References
4. Index

Technical Support

If you have any questions, please contact our hotline:

	Europe/Africa
Phone	+49 (0) 180 5050 - 222
Fax	+49 (0) 180 5050 - 223
Internet	http://www.siemens.de/automation/support-request

	America
Phone	+1 423 262 2522
Fax	+1 423 262 2200
E-mail	techsupport.sea@siemens.com

	Asia/Pacific
Phone	+86 1064 757 575
Fax	+86 1064 747 474
E-mail	support.asia.automation@siemens.com

Note:

For technical support telephone numbers for different countries, go to:

http://www.siemens.com/automation/service&support

Calls are subject to charge (e.g. 0.14 €/min on the German landline network). Tariffs of other telephone service providers may vary.

Questions about the Manual

Please send any questions about the technical documentation (e.g. suggestions for improvement, corrections) to the following fax number or E-Mail address:

Fax: +49 (0) 9131 / 98 - 2176

E-mail: docu.motioncontrol@siemens.com

A fax form is at the end of this document.

Internet address for SINAMICS

http://www.siemens.com/sinamics

EC declaration of conformity

The EC Declaration of Conformity for the EMC Directive can be obtained from:

- Internet

  http://support.automation.siemens.com

  Product/Order No.: 15257461

- Branch offices

  At the relevant regional office of the I DT MC Business Unit of Siemens AG.

Table of Contents

Parameters

1

Content

1.1 Overview of parameters

1.1.1 Explanation of list of parameters

Basic structure of parameter descriptions

The data in the following example has been chosen at random. The table below shows all the information which can be included in the description of a parameter. Some of the information is optional.

The structure of the parameter list (See Section 1.2) is as follows:

- Start of example- -

pxxxx[0...n]	**BICO: Full parameter name / Abbreviated name**		
Drive object (function module)	**Changeable in:** C1(x), C2(x), U, T	**are calculated:** CALC_MOD_REG	**Access level:** 2
	Data type: Unsigned32 / Integer16	**Dynamic index:** CDS, p0170	**Function diagram:** 2080
	P group: Cl.-Ip. control	**Unit Group:** 7_1	**Unit selection:** p0505
	Not for motor type: FEM		**Expert list:** 1
	Min 0.00 [Nm]	**Max** 10.00 [Nm]	**Factory setting** 0.00 [Aeff]

Description: Text

Values:
0: Name and meaning of value 0
1: Name and meaning of value 1
2: Name and meaning of value 2
etc.

Recommendation: Text

Index:
[0] = Name and meaning of index 0
[1] = Name and meaning of index 1
[2] = Name and meaning of index 2
etc.

Bit array:

Bit	Signal name	1 signal	0 signal	FP
00	Name and meaning of bit 0	Yes	No	8010
01	Name and meaning of bit 1	Yes	No	-
02	Name and meaning of bit 2 etc.	Yes	No	8012

Depends on: Text
See also: pxxxx, rxxxx
See also: Fxxxxx, Axxxxx

Danger: **Warning:** **Caution:** Safety-related information with a safety alert symbol

Caution: **Notice:** Safety-related information without a safety alert symbol

Note: Information which might be useful.

pxxxx[0...n] Parameter number

The parameter number consists of a "p" or "r", followed by the parameter number and the index (optional).

Examples of number representation in the parameter list:

- p... Adjustable parameter (read and write parameter)
- r... Display parameter (read only)
- p0918 Adjustable parameter 918
- p0099[0...3] Adjustable parameter 99, indices 0 to 3
- p1001[0...n] Adjustable parameter 1001, indices 0 to n (n = configurable)
- r0944 Display parameter 944

Other examples of notation in the documentation:

- p1070[1] Adjustable parameter 1070, index 1
- p2098[1].3 Adjustable parameter 2098, index 1 bit 3
- r0945[2](3) Display parameter 945, index 2 of drive object 3
- p0795.4 Adjustable parameter 795, bit 4
- r2129.0...15 Display parameter 2129 with bit field (maximum 16 bit)

The following applies to adjustable parameters:

The "shipped" parameter value is specified under "Factory setting" with the relevant unit in square parenthesis. The value can be adjusted within the range defined by "Min" and "Max".

The term "linked parameterization" is used in cases where changes to adjustable parameters affect the settings of other parameters.

Linked parameterization can occur, for example, as a result of the following actions or parameters:

- Execute macros

  p0015, p0700, p1000, p1500
- Set PROFIBUS telegram (BICO interconnection)

  p0922
- Set component lists

  p0230, p0300, p0301, p0400
- Calculate and preset automatically

  p0112, p0340, p0578, p3900
- Restore factory settings

  p0970

The following applies to display parameters:

The fields "Min", "Max" and "Factory setting" are specified with a dash "-" and the relevant unit in square parenthesis.

Note:

The parameter list can contain parameters that are not visible in the expert lists of the particular commissioning software (e.g. parameters for trace functions).

BICO: Full parameter name / Abbreviated name

The following abbreviations can be placed in front of the parameter name:

- BI: Binector input
  This parameter is used for selecting the source of a digital signal.
- BO: Binector output
  This parameter is available as a digital signal for interconnection with other parameters.
- CI: Connector input
  This parameter is used for selecting the source of an analog signal.
- CO: Connector output
  This parameter is available as an "analog" signal for interconnection with other parameters.
- CO/BO: Connector/Binector Output
  This parameter is available as an "analog" and digital signal for interconnection with other parameters.

Note:

A connector input (CI) cannot be just interconnected with any connector output (CO, signal source).
When interconnecting a connector input using the commissioning software, only the corresponding possible signal sources are listed.

Drive object (function module)

A drive object (DO) is an independent, "self-contained" functional unit which possesses its own parameters and, in some cases, faults and alarms.

When carrying out commissioning using the commissioning software, you can select/deselect additional functions and their parameters by activating/deactivating function modules accordingly.

Note:

References: /FH1/ SINAMICS S120 Function Manual Drive Functions

The parameter list specifies the associated drive object and function module for each individual parameter.

Examples:

- p1070 CI: Main setpoint
  SERVO (extended setpoint), VECTOR
  The parameter is available only in association with drive object SERVO and the "Extended setpoint channel" function module or with drive object VECTOR irrespective of activated function modules.
- p1055 BI: Jog bit 0
  SERVO, VECTOR
  The parameter is available in association with drive objects SERVO and VECTOR irrespective of activated function modules, i.e. it is available with every activated function module belonging to the drive object.

A parameter can belong to either one, several, or all drive objects.

The following information relating to "Drive object" and "Function module" can be displayed under the parameter number:

Table 1-1 Data in "Drive object (function module)" field

Drive object (function module)	Type	Meaning
All objects	-	This parameter belongs to all drive objects.
A_INF	10	Active Infeed closed-loop control Closed-loop-controlled, self-commutated infeed/regenerative feedback unit for generating a constant DC-link voltage.
A_INF (parallel)	-	Active Infeed with "Parallel connection" function module (r0108.15).
A_INF (RKA)	-	Active Infeed with "Cooling system" function module (r0108.28).
A_INF (CBE)	-	Active Infeed with "CBE COMMUNICATION BOARD" function module (r0108.31).
B_INF	30	Basic Infeed closed-loop control Unregulated line infeed unit (without feedback) for rectifying the line voltage of the DC Link.
B_INF (parallel)	-	Basic Infeed with "Parallel connection" function module (r0108.15).
B_INF (RKA)	-	Basic Infeed with "Cooling system" function module (r0108.28).
B_INF (CBE)	-	Basic Infeed with "CBE COMMUNICATION BOARD" function module (r0108.31).
CU	-	Control Unit, all versions.
CU(CAN)	-	Control Unit with "CAN" function module.
CU(COMM BOARD)	-	Control Unit with "COMM BOARD" function module.
CU(PROFINET)	-	Control Unit with "PROFINET" function module.
CU_S	1	Control Unit SINAMICS S (SINAMICS S120/S150).
CU_CX32	-	Controller Extension for boosting the processing performance.
CU_LINK	254	Object for Controller Extension 32 (CX32).
CU_I	-	Control Unit SINAMICS Integrated (SIMOTION D4xx only).
HUB	150	DRIVE-CLiQ Hub Module.

Table 1-1 Data in "Drive object (function module)" field, continued

Drive object (function module)	Type	Meaning
S_INF	20	Smart Infeed control Unregulated line infeed/feedback unit for generating the DC link voltage.
S_INF (parallel)	-	Smart Infeed with "Parallel connection" function module (r0108.15).
S_INF (CBE)	-	Smart Infeed with "CBE COMMUNICATION BOARD" function module (r0108.31).
SERVO	11	Servo drive.
SERVO (extended M_ctrl)	-	Servo drive with "Extended torque control" function module (r0108.1).
SERVO (position ctrl)	-	Servo drive with "Position control" function module (r0108.3).
SERVO (EPOS)	-	Servo drive with "Basic positioner" function module (r0108.4).
SERVO (APC)	-	Servo drive with "Advanced Positioning Control (APC)" function module (r0108.7).
SERVO (extended setpoint)	-	Servo drive with "Extended setpoint channel" function module (r0108.8).
SERVO (Lin)	-	Servo drive with "Linear motor" function module (r0108.12).
SERVO (Safety red)	-	Servo drive with "Safety rotary axis" function module (r0108.13).
SERVO (ext. brake)	-	Servo drive with "Extended braking control" function module (r0108.14)
SERVO (Tech_ctrl)	-	Servo drive with "Technology controller" function module (r0108.16)
SERVO (extended reports)	-	Servo drive with "Extended messages/monitoring functions" function module (r0108.17)
SERVO (RKA)	-	Servo drive with "Cooling system" function module (r0108.28).
SERVO(CAN)	-	Servo drive with "CAN" function module (r0108.29).
SERVO (CBE)	-	Servo drive with "CBE COMMUNICATION BOARD" function module (r0108.31).
TB30	100	Terminal Board 30.
TM15	203	Terminal Module 15 (SIMOTION D4xx only).
TM15DI_DO	204	Terminal Module 15 (for SINAMICS).
TM17	202	Terminal Module 17 (SIMOTION D4xx only).
TM31	200	Terminal Module 31.
TM41	201	Terminal Module 41.

Table 1-1 Data in "Drive object (function module)" field, continued

Drive object (function module)	Type	Meaning
VECTOR	12	Vector drive.
VECTOR (n/M)	-	Vector drive with "Closed-loop speed/torque control" function module (r0108.2).
VECTOR (pos ctrl)	-	Vector drive with "Position control" function module (r0108.3).
VECTOR (EPOS)	-	Vector drive with "Basic positioner" function module (r0108.4).
VECTOR (ext. brake)	-	Vector drive with "Extended brake control" function module (r0108.14).
VECTOR (parallel)	-	Vector drive with "Parallel connection" function module (r0108.15).
VECTOR (Tech_ctrl)	-	Vector drive with "Technology controller" function module (r0108.16).
VECTOR (ext. mess.)	-	Vector drive with "Extended messages/monitoring functions" function module (r0108.17).
VECTOR (RKA)	-	Vector drive with "Cooling system" function module (r0108.28).
VECTOR(CAN)	-	Vector drive with "CAN" function module (r0108.29).
VECTOR (CBE)	-	Vector drive with "CBE COMMUNICATION BOARD" function module (r0108.31).

Note:

The drive object type is used to identify the drive objects in the drive system (e.g. r0107, r0975[1]).

Changeable in

The "-" sign indicates that the parameter can be changed in any object state and that the change will be effective immediately.

The letters "C1(x), C2(x), T, U" ((x): optional) mean that the parameter can be changed only in the specified drive object state and that the change will not take effect until the object switches to another state. This can be one or more states.

The following states may be specified:

- C1(x) Device commissioning C1: **C**ommissioning **1**

  Converter commissioning is in progress (p0009>0).

  Pulses cannot be enabled.

  The parameter can only be changed in the following device commissioning settings (p0009 > 0):

  - C1: Changeable for all settings p0009 > 0.
  - C1(x): Only changeable when p0009 = x.

  A modified parameter value does not take effect until converter commissioning mode is exited with p0009 = 0.

- C2(x) Drive object commissioning C2: **C**ommissioning **2**

  Drive commissioning is in progress (p0009 = 0 and p0010 > 0).

  Pulses cannot be enabled.

  The parameter can only be changed in the following drive commissioning settings (p0010 > 0):

  - C2: Changeable for all settings p0010 > 0.
  - C2(x): Only changeable when p0010 = x.

  A modified parameter value does not take effect until drive commissioning mode is exited with p0010 = 0.

- U Operation A: R**u**n

  Pulses are enabled.

- T Ready T: Ready **t**o run

  The pulses are not enabled and status "C1(x)" or "C2(x)" is not active.

Note:

Parameter p0009 is CU-specific (belongs to Control Unit).

Parameter p0010 is drive-specific (belongs to each drive object).

The operating status of individual drive objects is displayed in r0002.

Calculated

Specifies whether the parameter is influenced by automatic calculations.

The calculation attribute defines which activities influence the parameter.

The following attributes apply:

- CALC_MOD_ALL
  - p0340 = 1
  - Project download with commissioning software and send from p0340 = 3
- CALC_MOD_CON
  - p0340 = 1, 3, 4
- CALC_MOD_EQU
  - p0340 = 1, 2
- CALC_MOD_LIM_REF
  - p0340 = 1, 3, 5
  - p0578 = 1
- CALC_MOD_REG
  - p0340 = 1, 3

Note:

For p3900 > 0, also p0340 = 1 is automatically called.

After p1910 = 1, p0340 = 3 is automatically called.

Access level

Specifies the access level required to be able to display and change the relevant parameter. The required access level can be set via p0003.

The system uses the following access levels:

1. Standard
2. Advanced
3. Expert
4. Service
   Please contact your local Siemens office to obtain the password for parameters with access level 4 (service).
5. Macro (the parameter can only be changed via macro)

Note:

Parameter p0003 is CU-specific (belongs to Control Unit).

Data type

The information on the data type can consist of the following two pieces of information (separated by a slash):

- First information

  Data type of the parameter

- Second information (only for binector or connector input)

  Data type of the signal source to be interconnected (binector/connector output).

The possible data types of parameters are as follows:

- I8 Integer8 8-bit integer
- I16 Integer16 16-bit integer
- I32 Integer32 32-bit integer
- U8 Unsigned8 8 bits without sign
- U16 Unsigned16 16 bits without sign
- U32 Unsigned32 32 bits without sign
- Float FloatingPoint32 32-bit floating point number

Depending on the data type of the BICO input parameter (signal sink) and BICO output parameter (signal source) the following combinations are possible when creating BICO interconnections:

Table 1-2 Possible combinations of BICO interconnections

	BICO input parameter			
	CI parameter			**BI parameter**
BICO output parameter	**Unsigned32 / Integer16**	**Unsigned32 / Integer32**	**Unsigned32 / FloatingPoint32**	**Unsigned32 / Binary**
CO: Unsigned8	x	x	–	–
CO: Unsigned16	x	x	–	–
CO: Integer16	x	x	–	–
CO: Unsigned32	x	x	–	–
CO: Integer32	x	x	–	–
CO: FloatingPoint32	x	x	x[1]	–
BO: Unsigned8	–	–	–	x
BO: Unsigned16	–	–	–	x

Legend: x: BICO interconnection permitted
–: BICO interconnection not permitted

1 Exception:
BICO input parameters with data type "Unsigned32 / FloatingPoint32" can also be interconnected with the following BICO output parameters although these are not of the "FloatingPoint32" data type:
CO: r8850, CO: r8860, CO: r2050, CO: r2060

Table 1-2 Possible combinations of BICO interconnections, continued

	BICO input parameter			
	CI parameter			**BI parameter**
BICO output parameter	**Unsigned32 / Integer16**	**Unsigned32 / Integer32**	**Unsigned32 / FloatingPoint32**	**Unsigned32 / Binary**
BO: Integer16	–	–	–	x
BO: Unsigned32	–	–	–	x
BO: Integer32	–	–	–	x
BO: FloatingPoint32	–	–	–	–
Legend:	x: BICO interconnection permitted –: BICO interconnection not permitted			
1 Exception: BICO input parameters with data type "Unsigned32 / FloatingPoint32" can also be interconnected with the following BICO output parameters although these are not of the "FloatingPoint32" data type: CO: r8850, CO: r8860, CO: r2050, CO: r2060				

Dynamic index

For parameters with a dynamic index [0...n], the following information is specified here:

- Data set (if this is available).
- Parameter for the number of indices (n = number - 1).

The following information can be contained in this field:

- "CDS, p0170" (Command Data Set, CDS count)

  Example:

  p1070[0] → main setpoint [command data set 0]

  p1070[1] → main setpoint [command data set 1], etc.
- "DDS, p0180" (Drive Data Set, DDS count)
- "EDS, p0140" (Encoder Data Set, EDS count)
- "MDS, p0130" (Motor Data Set, MDS count)
- "PDS, p0120" (Power unit Data Set, PDS count)
- "p2615" (traversing blocks count)

Note:

Information on the data sets can be taken from the following references:

References: /FH1/ SINAMICS S120 Function Manual Drive Functions
Section "Data sets"

Function diagram

The parameter is included in this function diagram. The structure of the parameter function and its interrelationship with other parameters is shown in the specified function diagram.

Example:

Function diagram: 3060.3	3060:	Function diagram number
	3:	Signal path (optional)

P group (refers only to access via BOP (Basic Operator Panel))

Specifies the functional group to which the parameter belongs. The required parameter group can be set via p0004.

Note:

Parameter p0004 is CU-specific (belongs to Control Unit).

Unit, Unit Group and Unit Choice

The standard units of a parameter is specified in square brackets after the values for "Min", "Max" and "Factory setting".

For parameters where the units can be changed over, for "Unit Group" and "Unit Choice" it is specified as to which group this parameter belongs and with which parameter the units can be changed over.

Example:

Unit Group: 7_1, Unit Choice: p0505

The parameter belongs to Unit Group 7_1 and the units can be changed-over using p0505.

Note:

Detailed information on changing-over units can be taken from the following references:

References: /FH1/ SINAMICS S120 Function Manual Drive Functions

References: /BA3/ SINAMICS S150 Operating Instructions

All of the Unit Groups that may occur and the possible Unit Choice is listed below.

Table 1-3 Unit Groups (p0100)

Unit group	Unit Choice for p0100=		Reference quantity for %
	0	1	
7_4	Nm	lbf ft	-
8_4	N	lbf	-

Table 1-3 Unit Groups (p0100), continued

Unit group	Unit Choice for p0100=		Reference quantity for %
	0	1	
14_2	W	HP	-
14_6	kW	HP	-
25_1	kgm^2	lb ft^2	-
27_1	kg	lb	-
28_1	Nm/A	lbf ft/A	-
29_1	N/Arms	lbf/Arms	-
30_1	m	ft	-

Table 1-4 Unit Groups (p0349)

Unit group	Unit Choice for p0349 =		Reference quantity for %
	1	2	
15_1	mH	%	$\frac{1000 \cdot p0304}{2 \cdot \pi \cdot \sqrt{3} \cdot p0305 \cdot p0310}$
16_1	Ohms	%	$\frac{p0304}{\sqrt{3} \cdot p0305}$

Table 1-5 Unit Groups (p0505)

Unit group	Unit Choice for p0505 =				Reference quantity for %
	1	2	3	4	
2_1	Hz	%	Hz	%	p2000

Table 1-6 Unit Group (p0595)

Unit group	Unit Choice for p0595 =		Reference quantity for %
	Value	Unit	
9_1	The values that can be set and the technological units are shown in p0595 (See Section 1.2).		

Parameter values

Min	Minimum value of the parameter [unit]
Max	Maximum value of the parameter [unit]
Factory setting	Shipped value (default) [unit] A different value may be displayed for certain parameters (e.g.p1800) at the initial commissioning stage. Reason: The setting of these parameters is determined by the operating environment of the Control Unit (e.g.depending on converter type, macro, Power Module).

Note:

For SINAMICS G150/G130/S150, the macros and their settings are provided in the following documentation:

References: /BAx/ x = 1, 2, 3
SINAMICS G150/G130/S150 Operating Instructions

Not for motor type

Specifies for which motor type this parameter has no significance.

ASM: Induction motor

FEM: Separately excited synchronous motor

PEM: Permanently excited synchronous motor

REL: Reluctance motor/SIEMOSYN-Motor

Expert List

Specifies whether this parameter is available in the expert list of the specified drive objects in the commissioning software.

1: Parameter does exist in the expert list.

0: Parameter does not exist in the expert list.

Notice:

The user shall assume full responsibility for using parameters marked "Expert list: 0" (Parameter does not exist in the expert list).

These parameters and their functionalities have not been tested and no further user documentation is available for them (e.g. function description). Moreover no support is ensured for these parameters by "Technical Support" (hotline).

Description

Explanation of the function of a parameter.

Values

Lists the possible values of a parameter.

Recommendation

Information about recommended settings.

Index

The name and meaning of each individual index is specified for indexed parameters.

The following applies to the values (min, max, factory setting) of indexed setting parameters:

- Min, Max:

  The setting range and unit apply to all indices.

- Factory setting:

  When all indices have the same factory setting, index 0 is specified with unit to represent all indices.

  When the indices have different factory settings, they are all listed individually with unit.

Bit field

For parameters with bit fields, the following information is provided about each bit:

- Bit number and signal name
- Meaning with signal states 0 and 1
- Function diagram (optional)

  The signal is shown on this function diagram.

Dependency

Conditions which need to be fulfilled in connection with this parameter. Also includes special effects which can occur between this parameter and others.

See also: List of other relevant parameters.

Safety-related information

Important information which must be heeded to avoid the risk of physical injury or property damage.

Information which must be observed to avoid problems.

Information which the user or operator may find useful.

Danger

The description of this safety-related information can be found at the beginning of this manual (see **Safety-related information**).

Alarm

The description of this safety-related information can be found at the beginning of this manual (see **Safety-related information**).

Caution

The description of this safety-related information can be found at the beginning of this manual (see **Safety-related information**).

Caution

The description of this safety-related information can be found at the beginning of this manual (see **Safety-related information**).

Notice

The description of this safety-related information can be found at the beginning of this manual (see **Safety-related information**).

Note

Information which the user or operator may find useful.

1.1.2 Numerical ranges of parameters

Note:

The following numerical ranges represent an overview for all parameters in SINAMICS.

The parameters for the product described in this List Manual are described in detail in Chapter 1.2.

Parameters are grouped into the following numerical ranges:

Table 1-7 Numerical Ranges of Parameters

Range		Description
of	to	
0000	0099	Operation and visualization
0100	0199	Commissioning
0200	0299	Power unit
0300	0399	Motor
0400	0499	Encoder
0500	0599	Technology and units
0600	0699	Thermal motor monitoring and motor model, maximum current
0700	0799	Command sources and terminals on Control Unit, measuring sockets
0800	0839	CDS, DDS data sets (e.g. switch over, copy)
0840	0879	Sequencer (e.g. source for ON/OFF1)
0880	0899	Control and status words
0900	0999	PROFIBUS/PROFIdrive
1000	1199	Setpoint channel
1200	1299	Functions (e.g. motor holding brake)
1300	1399	V/f control
1400	1799	Closed-loop control
1800	1899	Gating unit
1900	1999	Power unit and motor identification
2000	2099	Communication (PROFIBUS)
2100	2199	Faults and alarms, monitoring functions
2200	2399	Technology controller
2900	2930	Fixed values (e.g. per cent, torque)
3400	3699	Infeed control (Active Line Module)
3800	3899	Friction characteristic

Table 1-7 Numerical Ranges of Parameters, continued

Range		Description
of	**to**	
3900	3999	Management parameters
4000	4199	Terminal Boards, Terminal Modules (e.g. TB30, TM31)
4200	4399	Terminal Modules (e.g. TM15, TM17)
6000	6999	SINAMICS GM/SM/GL
7000	7499	Parallel connection of power units
7800	7899	EEPROM read/write parameters
8500	8599	Data and macro management
8600	8799	CAN bus
8800	8899	Communication Board
9300	9399	Safety Integrated
9400	9499	Parameter consistency and storage
9500	9899	Safety Integrated
9900	9949	Topology
9950	9999	Diagnostics (internal)
10000	10099	Safety Integrated
20000	20999	Freie Funktionsblöcke
21000	25999	Drive Control Chart (DCC)

1.2 List of parameters

Product: SINAMICS S120/S150, Version: 2603400, Language: eng
Objects: A_INF, B_INF, CU_CX32, CU_I, CU_LINK, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR

r0002 Control Unit operating display / CU op_display

CU_CX32, CU_I, CU_S

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Integer16 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	117	-

Description: Operating display for the Control Unit (CU).

Value:
0: [00] Operation
10: [10] Ready for operation
20: [20] Wait for run-up
25: [25] Wait for automatic FW update DRIVE-CLiQ components
31: [31] Commissioning software download active
33: [33] Remove topology error / acknowledge
34: [34] Exit the commissioning mode
35: [35] Carry out first commissioning
70: [70] Initialization
80: [80] Reset active
99: [99] Internal software error
101: [101] Specify topology
111: [111] Insert drive object
112: [112] Delete drive object
113: [113] Change drive object number
114: [114] Change component number
115: [115] Download parameters
117: [117] Delete components

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002 Infeed operating display / INF op_display

A_INF, S_INF

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Integer16 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	250	-

Description: Operating display for the infeed.

Value:
0: [00] Operation - everything enabled
21: [21] Ready for operation - set "Operation enable" = "1" (p0852)
31: [31] Rdy for sw on - pre-chrg running (p0857)
32: [32] Ready for switching on - set "ON/OFF1" = "0/1" (p0840)
35: [35] Switch on inhibit - Carry out first commissioning (p0010)
41: [41] Switching on inhibited - set "ON/OFF1" = "0" (p0840)
42: [42] Switching on inhibited - set "OC/OFF2" = "1" (p0844, p0845)
44: [44] Switch on inhibit - connect 24 V to terminal EP (hardware)
45: [45] Switch on inhibit - remove fault cause, acknowledge fault
46: [46] Switching on inhibited - exit comm mode (p0009, p0010)
60: [60] Infeed de-activated/not operational
250: [250] Device signals a topology error

Dependency: Refer to: r0046

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

Note: OC: Operating condition
EP: Enable Pulses (pulse enable)
COMM: Commissioning

r0002 Drive operating display / Drv op_display

SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 1
Data type: Integer16
Dynamic index: -
Func. diagram: -
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0	250	-

Description: Operating display for the drive.

Value:
0: [00] Operation - everything enabled
10: [10] Operation - set "enable setpoint" = "1" (p1142, p1152)
11: [11] Operation - set "enable speed controller" = "1" (p0856)
12: [12] Operation - RFG frozen, set "RFG start" = "1" (p1141)
13: [13] Operation - set "enable RFG" = "1" (p1140)
14: [14] Oper. - MotID, excit. running, brake opens,Mot_chng,SS2,SOS
15: [15] Operation - open brake (p1215)
16: [16] Oper - withdraw braking w/ OFF1 using "ON/OFF1" = "1"
17: [17] Oper - braking w/ OFF3 can only be interrupted w/ OFF2
18: [18] Operation - brake on fault remove fault acknowledge
19: [19] Operat. - armature short-circ./DC brake act. (p1230, p1231)
21: [21] Ready for operation - set "Operation enable" = "1" (p0852)
22: [22] Ready for operation- de-magnetizing running (p0347)
23: [23] Ready for operation - set "infeed operation" = "1" (p0864)
31: [31] Ready for switching on - set "ON/OFF1" = "0/1" (p0840)
35: [35] Switch on inhibit - Carry out first commissioning (p0010)
41: [41] Switching on inhibited - set "ON/OFF1" = "0" (p0840)
42: [42] Switching on inhibited - set "OC/OFF2" = "1" (p0844, p0845)
43: [43] Switching on inhibited - set "OC/OFF3" = "1" (p0848, p0849)
44: [44] Switch on inhibit - connect 24 V to terminal EP (hardware)
45: [45] Switch on inhibit - remove fault, acknowledge fault, STO
46: [46] Switching on inhibited - exit comm mode (p0009, p0010)
60: [60] Infeed de-activated/not operational
250: [250] Device signals a topology error

Dependency: Refer to: r0046

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

Note: OC: Operating condition
EP: Enable Pulses (pulse enable)
RFG: Ramp-function generator
COMM: Commissioning
MotID: Motor data identification
SS2: Safe Stop 2
SOS: Safe Operating Stop
STO: Safe Torque Off

r0002 Infeed operating display / INF op_display

B_INF

Can be changed: -
Calculated: -
Access level: 1
Data type: Integer16
Dynamic index: -
Func. diagram: -
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0	250	-

Description: Operating display for the infeed.

Value:
0: [00] Operation - everything enabled
31: [31] Rdy for sw on - pre-chrg running (p0857)
32: [32] Ready for switching on - set "ON/OFF1" = "0/1" (p0840)
35: [35] Switch on inhibit - Carry out first commissioning (p0010)
41: [41] Switching on inhibited - set "ON/OFF1" = "0" (p0840)
42: [42] Switching on inhibited - set "OC/OFF2" = "1" (p0844, p0845)
44: [44] Switch on inhibit - connect 24 V to terminal EP (hardware)
45: [45] Switch on inhibit - remove fault cause, acknowledge fault
46: [46] Switching on inhibited - exit comm mode (p0009, p0010)
60: [60] Infeed de-activated/not operational
250: [250] Device signals a topology error

Dependency: Refer to: r0046

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

Note: OC: Operating condition
COMM: Commissioning

r0002 TB30 operating display / TB30 op_display

TB30

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Integer16 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	250	-

Description: Operating display for Terminal Board 30 (TB30).

Value:
0: [00] Module in cyclic operation
40: [40] Module not in cyclic operation
60: [60] Fault
70: [70] Initialization
80: [80] Reset active
120: [120] Module de-activated
250: [250] Device signals a topology error

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002 DRIVE-CLiQ Hub Module operating display / Hub op_display

HUB

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Integer16 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	250	-

Description: Operating display for the DRIVE-CLiQ Hub Module

Value:
0: [00] Module in cyclic operation
40: [40] Module not in cyclic operation
50: [50] Alarm
60: [60] Fault
70: [70] Initialization
120: [120] Module de-activated
250: [250] Device signals a topology error

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002 TM31 operating display / TM31 op_display

TM31

Can be changed: -
Calculated: -
Access level: 1
Data type: Integer16
Dynamic index: -
Func. diagram: -
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0	250	-

Description: Operating display for Terminal Module 31 (TM31).

Value:
0: [00] Module in cyclic operation
40: [40] Module not in cyclic operation
50: [50] Alarm
60: [60] Fault
70: [70] Initialization
120: [120] Module de-activated
250: [250] Device signals a topology error

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002 TM41 operating display / TM41 op_display

TM41

Can be changed: -
Calculated: -
Access level: 1
Data type: Integer16
Dynamic index: -
Func. diagram: -
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0	250	-

Description: Operating display for Terminal Module 41 (TM41).

Value:
0: [00] Operation - everything enabled
10: [10] Operation - set "setpoint enable" = "1" (p1142)
12: [12] Operation - RFG frozen, set "RFG start" = "1" (p1141)
13: [13] Operation - set "enable RFG" = "1" (p1140)
18: [18] Operation - brake on fault remove fault acknowledge
21: [21] Ready for operation - set "Operation enable" = "1" (p0852)
31: [31] Ready for switching on - set "ON/OFF1" = "0/1" (p0840)
41: [41] Switching on inhibited - set "ON/OFF1" = "1/0" (p0840)
42: [42] Switching on inhibited - set "OC/OFF2" = "1" (p0844)
43: [43] Switching on inhibited - set "OC/OFF3" = "1" (p0848)
45: [45] Switch on inhibit - remove fault cause, acknowledge fault
46: [46] Switching on inhibited - exit comm mode (p0009, p0010)
120: [120] Module de-activated
250: [250] Device signals a topology error

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

Note: OC: Operating condition
RFG: Ramp-function generator
COMM: Commissioning

r0002 TM17 operating display / TM17 op_display

TM17

Can be changed: -
Calculated: -
Access level: 1
Data type: Integer16
Dynamic index: -
Func. diagram: -
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0	250	-

Description: Operating display for Terminal Module 17 (TM17).

Value:
0: [00] Module in cyclic operation
40: [40] Module not in cyclic operation

50: [50] Alarm
60: [60] Fault
70: [70] Initialization
120: [120] Module de-activated
250: [250] Device signals a topology error

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002 TM15 operating display / TM15 op_display

TM15

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Integer16 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	250	-

Description: Operating display for Terminal Module 15 (TM15).

Value:
0: [00] Module in cyclic operation
40: [40] Module not in cyclic operation
50: [50] Alarm
60: [60] Fault
70: [70] Initialization
120: [120] Module de-activated
250: [250] Device signals a topology error

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002 TM15DI/DO operating display / TM15D op_display

TM15DI_DO

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Integer16 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	250	-

Description: Operating display for Terminal Module 15 (TM15).

Value:
0: [00] Module in cyclic operation
40: [40] Module not in cyclic operation
50: [50] Alarm
60: [60] Fault
70: [70] Initialization
120: [120] Module de-activated
250: [250] Device signals a topology error

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002 TM54F operating display / TM54F op_display

TM54F_MA, TM54F_SL

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Integer16 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	117	-

Description: Operating display for Terminal Module 54F (TM54F).

Value:
0: [00] Operation
10: [10] Ready for operation
20: [20] Wait for run-up
25: [25] Wait for automatic FW update DRIVE-CLiQ components
31: [31] Commissioning software download active
33: [33] Remove topology error / acknowledge

34: [34] Exit the commissioning mode
35: [35] Carry out first commissioning
70: [70] Initialization
80: [80] Reset active
99: [99] Internal software error
101: [101] Specify topology
111: [111] Insert drive object
112: [112] Delete drive object
113: [113] Change drive object number
114: [114] Change component number
115: [115] Download parameters
117: [117] Delete components

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

p0003 BOP access level / BOP access level

CU_CX32, CU_I, CU_S

Can be changed: C1, U, T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	4	1

Description: Sets the access level for reading and writing parameters using the Basic Operator Panel (BOP) and Advanced Operator Panel (AOP).

Value:
0: User-defined
1: Standard
2: Extended
3: Expert
4: Service

Note: Access level 0 (user-defined):
Parameters from the user-defined list (p0013). Not used as of firmware version 2.6 (p0016).
Access level 1 (standard):
Parameters for the simplest operator control possibility (e.g. p1120 = ramp-function generator, ramp-up time).
Access level 2 (extended):
Parameters to operate the basic functions of the drive unit.
Access level 3 (experts):
Expert know-how is required for these parameters (e.g. BICO parameterization).
Access level 4 (service):
For these parameters, it is necessary that authorized service personnel enter the appropriate password (p3950).

p0004 BOP display filter / BOP disp_filter

CU_CX32, CU_I, CU_S

Can be changed: C2(1), U, T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: ASM		**Expert list:** 1

Min	Max	Factory setting
0	99	0

Description: Sets the display filter for parameters for Basic Operator Panel (BOP) and Advanced Operator Panel (AOP).

Value:
0: All parameters
1: Displays, signals
2: Power unit
3: Motor
4: Encoder/pos enc
5: Technology/units
7: Digital inputs/outputs commands sequence control
8: Analog inputs/outputs
10: Setpoint channel/ramp-fct generator

12: Functions
13: V/f control
14: Control
15: Data sets
17: Basic positioner
18: Gating unit
19: Motor identification
20: Communication
21: Faults, alarms, monitoring functions
25: Closed-loop position control
28: Free function blocks
47: Trace and function generator
50: OA parameter
90: Topology
95: Safety Integrated
98: Command Data Sets (CDS)
99: Drive Data Sets (DDS)

Dependency: Refer to: p0003

Notice: The display filter via p0004 provides precise filtering and displays the corresponding parameters only when p0009 and p0010 = 0.

Note: The set access level via p0003 is also relevant for the display filter via p0004.

Examples (assumption: p0009 = p0010 = 0):

p0003 = 1, p0004 = 3

--> Only the parameters for the motor are displayed with access level 1.

p0003 = 2, p0004 = 3

--> Only the parameters for the motor are displayed with access levels 1 and 2.

p0005[0...1] BOP operating display selection / BOP op_disp sel

A_INF, B_INF, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	65535	[0] 2
		[1] 0

Description: Sets the parameter number and parameter index for display for p0006 = 2, 4 for the Basic Operator Panel (BOP).

Examples for the SERVO drive object:

p0005[0] = 21, p0005[1] = 0: Speed actual value smoothed (r0021)

p0005[0] = 25, p0005[1] = 0: Output voltage smoothed (r0025)

p0005[0] = 27, p0005[1] = 0: Absolute current actual value smoothed (r0027)

Index: [0] = Parameter number
[1] = Parameter index

Dependency: Refer to: p0006

Note: Procedure:

1.

The parameter number to be displayed should be set in index 0. Only the monitoring parameters (read-only parameters) can be set that actually exist for the current drive object.

If the set parameter number is not indexed, or if there is an index in index 1 that lies outside the valid range of the set parameter, then index 1 is automatically set to 0.

2.

The index that belongs to the parameter set in index 0 should be set in index 1. The permissible changes in index 1 always depend on the parameter number set in index 0.

p0006 BOP operating display mode / BOP op_ disp mode

CU_S, HUB, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
4	4	4

Description: Sets the mode of the operating display for the Basic Operator Panel (BOP) in the operating states "ready for operation" and "operation".

Value:
4: p0005

Dependency: Refer to: p0005

Note: Mode 0 ... 3 can only be selected if also r0020, r0021 are available on the drive object.
Mode 4 is available for all drive objects.

p0006 BOP operating display mode / BOP op_ disp mode

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	4	4

Description: Sets the mode of the operating display for the Basic Operator Panel (BOP) in the operating states "ready for operation" and "operation".

Value:
0: Operation --> r0021, otherwise r0020 <--> r0021
1: Operation --> r0021, otherwise r0020
2: Operation --> p0005, otherwise p0005 <--> r0020
3: Operation --> r0002, otherwise r0002 <--> r0020
4: p0005

Dependency: Refer to: p0005

Note: Mode 0 ... 3 can only be selected if also r0020, r0021 are available on the drive object.
Mode 4 is available for all drive objects.

p0007 BOP background lighting / BOP lighting

CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [s]	2000 [s]	0 [s]

Description: Sets the delay time until the background lighting of the Basic Operator Panel (BOP) is switched off.
If no keys are actuated, then the background lighting automatically switches itself off after this time has expired.

Note: p0007 = 0: Background lighting is always switched on (factory setting).

p0008 BOP drive object after booting / BOP DO after boot

CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1	65535	1

Description: Sets the required drive object that is active at the Basic Operator Panel (BOP) after booting.

Note: The value from p0008 initializes the display on the Basic Operator Panel (BOP) at the top left after booting.
The drive object Control Unit is selected using the value 1.

p0009 Device commissioning parameter filter / Dev comm par_filt

CU_CX32, CU_I, CU_S

Can be changed: C1, T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	117	1

Description: Sets the device and basic drive commissioning.

By appropriately setting this parameter, those parameters are filtered that can be written into in the various commissioning steps.

Value:
0: Ready
1: Device configuration
2: Defining the drive type/function module
3: Drive basis configuration
4: Data set basis configuration
29: Device download
30: Parameter reset
50: OA application configuration
55: OA application installation
101: Topology input
111: Insert drive object
112: Delete drive object
113: Change drive object number
114: Change component number
115: Parameter download
117: Delete component

Note: The drives can only be powered up outside the device commissioning (the inverter enabled). In this case, p0009 must be 0 (Ready) and the individual drive objects must have already gone into operation (p0010).

p0009 = 1: Device configuration

At the first commissioning of the device, after booting, the device is in the "device configuration" state. To start the internal automatic first commissioning of the drive unit, p0009 should be set to 0 (Ready) after the ID for the actual topology (r0098) was transferred into the ID for the target topology (p0099). To do this, it is sufficient to set a single index value of p0099[x] the same as r0098[x]. Before the device has been completely commissioned, no other parameter can be changed. After the first commissioning was carried out, in this state, when required, other basic device configuration parameters can be adapted (e.g. the basic sampling time in p0110).

p0009 = 2: Defines the drive type / function module

In this state, the drive object types and/or the function modules can be changed or selected for the individual drive objects. To do this, the drive object type can be set using p0107[0...15] and the function can be set using p0108[0...15] (refer to p0101[0...15]).

p0009 = 3: Drive basis configuration

In this state, after the device has been commissioned for the first time, basic changes can be made for the individual drive objects (e.g. sampling times in p0111, p0112, p0115 and the number of data sets in p0120, p0130, p0140, p0170, p0180).

p0009 = 4: Data set basis configuration

In this state, after the device has been commissioned for the first time, for the individual drive objects changes can be made regarding the assignment of the components (p0121, p0131, p0141, p0151, p0161) to the individual data sets and the assignment of the power unit, motor and encoder to the drive data sets (p0185, ...).

p0009 = 29: Device download

If a download is made using the commissioning software, the device is automatically brought into this state. After the download has been completed, p0009 is automatically set to 0 (ready). It is not possible to manually set p0009 to this value.

p0009 = 30: Parameter reset

In order to bring the complete unit into the "first commissioning" state or to load the parameters saved using p0977, to start, p0009 must be set to this value. p0976 can then be changed to the required value.

p0009 = 50: OEM application configuration

In this state, after the device has been commissioned for the first time, changes can be made for the individual drive objects regarding the activity (p4956) of the OEM applications.

p0009 = 55: OEM application installation

OEM applications can be installed and/or uninstalled in this state.

p0009 = 101: Topology input

In this state, the DRIVE-CLiQ target topology can be entered using p9902 and p9903.

p0009 = 111: Insert drive object

This state allows a new drive object to be inserted using p9911.

p0009 = 112: Delete drive object

This state allows existing drive objects to be deleted using p9912 after the device has been commissioned for the first time.

p0009 = 113: Change drive object number

This state allows the drive object number of existing drive objects to be changed using p9913 after the device has been commissioned for the first time.

p0009 = 114: Change component number

This state allows the component number of existing components to be changed using p9914 after the device has been commissioned for the first time.

p0009 = 115: Parameter download

This state allows the complete device and drive commissioning using the parameter services.

p0009 = 117: Delete component

This state allows components to be deleted using p9917 after the device has been commissioned for the first time.

p0010 Infeed commissioning parameter filter / INF comm par_filt

A_INF, B_INF, S_INF

Can be changed: C2(1), T | **Calculated:** - | **Access level:** 1
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	30	1

Description: Sets the parameter filter to commission an infeed unit.

Setting this parameter filters-out the parameters that can be written into in the various commissioning steps.

Value:
0: Ready
1: Quick commissioning
2: Power unit commissioning
5: Technological application/units
29: Download
30: Parameter reset

Note: The drive can only be powered up outside the drive commissioning (inverter enable). To realize this, this parameter must be set to 0.

For p3900 not equal to 0, at the end of the quick commissioning, this parameter is automatically reset to 0.

Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.

p0010 Drive commissioning parameter filter / Drv comm. par_filt

SERVO, VECTOR

Can be changed: C2(1), T | **Calculated:** - | **Access level:** 1
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** 2800, 2846
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	95	1

Description: Sets the parameter filter to commission a drive.

Setting this parameter filters-out the parameters that can be written into in the various commissioning steps.

Value:
0: Ready
1: Quick commissioning

2: Power unit commissioning
3: Motor commissioning
4: Encoder commissioning
5: Technological application/units
15: Data sets
17: Basic positioning commissioning
25: Commissioning the position control
29: Download
30: Parameter reset
95: Safety Integrated commissioning

Note: The drive can only be powered up outside the drive commissioning (inverter enable). To realize this, this parameter must be set to 0.

For p3900 not equal to 0, at the end of the quick commissioning, this parameter is automatically reset to 0.

Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.

p0010 TB30 commissioning parameter filter / TB30 comm.par_filt

TB30

Can be changed: C2(1), T | **Calculated:** - | **Access level:** 1
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	30	0

Description: Sets the parameter filter for commissioning a Terminal Board 30 (TB30).

Setting this parameter filters-out the parameters that can be written into in the various commissioning steps.

For the BOP, this setting also causes the read access operations to be filtered.

Value:
0: Ready
29: Download
30: Parameter reset

Dependency: Refer to: p0970

Note: Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.

p0010 TM31 commissioning parameter filter / TM31 comm par_filt

TM31

Can be changed: C2(1), T | **Calculated:** - | **Access level:** 1
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	30	0

Description: Sets the parameter filter for commissioning a Terminal Module 31 (TM31).

Setting this parameter filters-out the parameters that can be written into in the various commissioning steps.

For the BOP, this setting also causes the read access operations to be filtered.

Value:
0: Ready
29: Download
30: Parameter reset

Dependency: Refer to: p0970

Note: Only the following values are possible: p0010 = 0, 30

Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.

p0010 TM41 commissioning parameter filter / TM41 comm par_filt

TM41

Can be changed: C2(1), T | **Calculated:** - | **Access level:** 1
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	30	0

Description: Sets the parameter filter for commissioning a Terminal Module 41 (TM41).
Setting this parameter filters-out the parameters that can be written into in the various commissioning steps.
For the BOP, this setting also causes the read access operations to be filtered.

Value:
0: Ready
4: Encoder commissioning
5: Technological application/units
29: Download
30: Parameter reset

Dependency: Refer to: p0970

Note: Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.

p0010 TM17 commissioning parameter filter / TM17 comm par_filt

TM17

Can be changed: C2(1), T | **Calculated:** - | **Access level:** 1
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	30	0

Description: Sets the parameter filter for commissioning a Terminal Module 17 (TM17).
Setting this parameter filters-out the parameters that can be written into in the various commissioning steps.
For the BOP, this setting also causes the read access operations to be filtered.

Value:
0: Ready
29: Download
30: Parameter reset

Dependency: Refer to: p0970

Note: Only the following values are possible: p0010 = 0, 30
Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.

p0010 TM15 commissioning parameter filter / TM15 comm par_filt

TM15

Can be changed: C2(1), T | **Calculated:** - | **Access level:** 1

Min	Max	Factory setting
0	30	0

Description: Sets the parameter filter for commissioning a Terminal Module 15 (TM15).
Setting this parameter filters-out the parameters that can be written into in the various commissioning steps.
For the BOP, this setting also causes the read access operations to be filtered.

Value:
0: Ready
29: Download
30: Parameter reset

Dependency: Refer to: p0970

Note: Only the following values are possible: p0010 = 0, 30
Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.

p0010 TM54F commissioning parameter filter / TM54F com par_filt

TM54F_MA

Can be changed: C2(1), T | **Calculated:** - | **Access level:** 1
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** 2847
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	95	0

Description: Sets the parameter filter for commissioning a Terminal Module 54F (TM54F).
Setting this parameter filters-out the parameters that can be written into in the various commissioning steps.
For the BOP, this setting also causes the read access operations to be filtered.

Value:
0: Ready
29: Download
30: Parameter reset
95: Safety Integrated commissioning

Dependency: Refer to: p0970

Note: Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.

p0011 BOP password entry (p0013) / BOP passw ent p13

CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	65535	0

Description: Sets the password for the Basic Operator Panel (BOP).

Dependency: Refer to: p0012, p0013

p0012 BOP password acknowledgement (p0013) / BOP passw ackn p13

CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	65535	0

Description: Acknowledges the password for the Basic Operator Panel (BOP).

Dependency: Refer to: p0011, p0013

p0013[0...49] BOP user-defined list / BOP list

A_INF, B_INF, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	65535	0

Description: Sets the required parameters to read and write via the Basic Operator Panel (BOP).
Activation:
1. p0003 = 3 (expert).
2. p0013[0...49] = requested parameter number
3. If required, enter p0011 = password in order to prevent non-authorized de-activation.
4. p0016 = 1 --> activates the selected user-defined list.
De-activation/change:
1. p0003 = 3 (expert).
2. If required, p0012 = p0011, in order to be authorized to change or de-activate the list.
3. If required p0013[0...49] = required parameter number.
4. p0016 = 1 --> activates the modified user-defined list.
5. p0003 = 0 --> de-activates the user-defined list.

Dependency: Refer to: p0009, p0011, p0012, p0976

Note: The following parameters can be read and written on the Control Unit drive object:
- p0003 (access stage)
- p0009 (device commissioning, parameter filter)
- p0012 (BOP password acknowledgement (p0013))

The following applies for the user-defined list:
- password protection is only available on the drive object Control Unit and is valid for all of the drive objects.
- p0013 cannot be included in the user-defined list for all drive objects.
- p0003, p0009, p0011, p0012, p0976 cannot, for the drive object Control Unit, be included in the user-defined list.
- the user-defined list can be cleared and de-activated "restore factory setting".

A value of 0 means: Entry is empty.

p0015 Macro drive unit / Macro drv unit

CU_CX32, CU_I, CU_S

Can be changed: C1 | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	999999	0

Description: Runs the appropriate ACX file on the memory card card.
The selected ACX file must be located in the following directory:
... /PMACROS/DEVICE/P15/PMxxxxxx.ACX
Example:
p0015 = 6 --> the file PM000006.ACX is run.

Dependency: The ACX file to be run must be created according to the definition for ACX macros and must be saved in the appropriate directory on the memory card.
Refer to: p0700, p1000, p1500, r8570

Note: The macros in the specified directory are displayed in r8570. r8570 is not in the expert list of the commissioning software.
Macros available as standard are described in the technical documentation of the particular product.

p0015 Macro drive object / Macro DO

A_INF, B_INF, S_INF, SERVO, TM15DI_DO, TM31, VECTOR

Can be changed: C2(1) | **Calculated:** - | **Access level:** 1

07	Acknowledge fault (0 -> 1)	Yes	No	-
13	Motorized potentiometer raise	Yes	No	-
14	Motorized potentiometer lower	Yes	No	-

r0020 Velocity setpoint smoothed / v_set smth

SERVO (Lin)

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 5020, 6799
P-Group: Displays, signals
Units group: 4_1
Unit selection: p0505
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [m/min]	- [m/min]	- [m/min]

Description: Displays the currently smoothed velocity setpoint at the input of the velocity controller or V/f characteristic (after the interpolator).

Dependency: Refer to: r0060

Note: Smoothing time constant = 100 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The velocity setpoint is available smoothed (r0020) and unsmoothed (r0060).

r0020 Speed setpoint smoothed / n_set smth

SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 5020, 6799
P-Group: Displays, signals
Units group: 3_1
Unit selection: p0505
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the currently smoothed speed setpoint at the input of the speed controller or V/f characteristic (after the interpolator).

Dependency: Refer to: r0060

Note: Smoothing time constant = 100 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The speed setpoint is available smoothed (r0020) and unsmoothed (r0060).

r0021 CO: Actual velocity smoothed / v_act smooth

SERVO (Lin)

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 1580, 1680, 4710, 6799
P-Group: Displays, signals
Units group: 4_1
Unit selection: p0505
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [m/min]	- [m/min]	- [m/min]

Description: Displays the smoothed actual value of the motor velocity.

Dependency: Refer to: r0063

Note: Smoothing time constant = 100 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The value displayed in r0021 is the smoothed value of r0063.

r0021 CO: Actual speed smoothed / n_act smooth

SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 1580, 1680, 4710, 6799
P-Group: Displays, signals
Units group: 3_1
Unit selection: p0505
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the smoothed actual value of the motor speed.

Dependency: Refer to: r0063
Note: Smoothing time constant = 100 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The value displayed in r0021 is the smoothed value of r0063.

r0022 Actual velocity smoothed / v_act smooth

SERVO (Lin)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 1580, 1680, 4710, 6799
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
- [m/min]	- [m/min]	- [m/min]

Description: Displays the smoothed actual value of the motor velocity.
Dependency: Refer to: r0063
Note: Smoothing time constant = 100 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The value displayed in r0022 is the smoothed value of r0063.

r0022 Speed actual value rpm smoothed / n_ist rpm smooth

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 1580, 1680, 4710, 6799
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the smoothed actual value of the motor speed.
r0022 is identical to r0021, however, it always has units of rpm and contrary to r0021 cannot be changed over.
Dependency: Refer to: r0063
Note: Smoothing time constant = 100 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The value displayed in r0022 is the smoothed value of r0063.

r0024 CO: Line supply frequency smoothed / f_line smooth

A_INF, S_INF

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 8850, 8950
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
- [Hz]	- [Hz]	- [Hz]

Description: Displays the smoothed line supply frequency.
Dependency: Refer to: r0066
Note: Smoothing time constant = 300 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The line frequency is available smoothed (r0024) and unsmoothed (r0066).
A positive sign of the frequency is obtained when the line supply phases U, V and W are connected with the correct phase sequence.
A negative sign of the frequency is obtained when the 3 line phases are interchanged therefore designating a negative direction of the rotating field of the 3-phase line supply voltage.

r0024 Output frequency smoothed / f_outp smooth

SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 1690, 5300, 5730, 6799
P-Group: Displays, signals
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [Hz]	- [Hz]	- [Hz]

Description: Displays the smoothed converter frequency.

Dependency: Refer to: r0066

Note: Smoothing time constant = 100 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The output frequency is available smoothed (r0024) and unsmoothed (r0066).

r0025[0...3] CO: Input voltage smoothed / V_inp smooth

A_INF, S_INF

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 8850, 8950
P-Group: Displays, signals
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the smoothed actual value of the input voltage.

Index: [0] = Voltage at input terminals of power unit from line supply model
[1] = Voltage at VSM or at input terminals of the line filter
[2] = Voltage of the voltage source from the line supply model
[3] = Smoothed voltage of voltage source from line supply model

Dependency: Refer to: r0072

Note: Smoothing time constant = 300 ms
The signals are not suitable as process quantity and may only be used as display quantities.
The input voltages are available smoothed (r0025) and unsmoothed (r0072).
Re r0025[0]:
Pulsed voltage at the line supply input terminals of the power unit. The value is calculated from the modulation depth r0074 and is therefore only correct in the closed-loop controlled mode and when the pulses are enabled.
Re r0025[1]:
Absolute voltage at the input terminals of the line filter or the connection point of a VSM. The value is calculated from the VSM measured values r3661 and r3662 and is therefore equal to 0 if a VSM is not connected.
Re r0025[2]:
Estimated value for the voltage of the voltage source that is calculated in the voltage model of the line supply PLL.
Re r0025[3]:
Smoothed display value of the filtered source voltage from r0072[3].

r0025 CO: Output voltage smoothed / V_outp smooth

SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 1690, 5730, 6799
P-Group: Displays, signals
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the smoothed output voltage of the power unit.

Dependency: Refer to: r0072

Note: Smoothing time constant = 100 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The output voltage is available smoothed (r0025) and unsmoothed (r0072).

r0026 CO: DC link voltage smoothed / Vdc smooth

A_INF, B_INF, S_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 8750, 8850, 8950
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
- [V]	- [V]	- [V]

Description: Displays the smoothed actual value of the DC link voltage.
Dependency: Refer to: r0070
Notice: This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.
Note: A_INF, B_INF, S_INF: smoothing time constant = 300 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The DC link voltage is available smoothed (r0026) and unsmoothed (r0070).

r0026 CO: DC link voltage smoothed / Vdc smooth

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 5730, 6725, 6799
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
- [V]	- [V]	- [V]

Description: Displays the smoothed actual value of the DC link voltage.
Dependency: Refer to: r0070
Notice: For SINAMICS S120 AC Drive (AC/AC) the following applies:
When measuring a DC link voltage < 200 V, for the Power Module (e.g. PM340) a valid measured value is not supplied. In this case, when an external 24V power supply is connected, a value of approx. 24 V is displayed in the display parameter.
Note: SERVO, VECTOR: Smoothing time constant = 100 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The DC link voltage is available smoothed (r0026) and unsmoothed (r0070).

r0027 CO: Absolute actual current smoothed / I_act abs val smth

A_INF, S_INF, SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 5730, 6799, 8850, 8950
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the smoothed absolute actual current value.
Dependency: Refer to: r0068
Notice: This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.

Note: A_INF, S_INF, VECTOR: Smoothing time constant = 300 ms
SERVO: Smoothing time constant = 100 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The absolute current actual value is available smoothed (r0027) and unsmoothed (r0068).

r0027 CO: Absolute actual current smoothed / I_act abs val smth

B_INF

Can be changed: - **Calculated:** - **Access level:** 2
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 8750
P-Group: Displays, signals **Units group:** 6_4 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [A]	- [A]	- [A]

Description: Displays the smoothed absolute actual current value.
Dependency: Refer to: r0068
Notice: This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.
For Basic Line Modules of chassis format, the displayed value is invalid as these units do not have any current sensing.
Note: Smoothing time constant = 300 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The absolute current actual value is available smoothed (r0027) and unsmoothed (r0068).

r0028 Modulation depth smoothed / Modulat depth smth

A_INF, SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 5730, 6799, 8950
P-Group: Displays, signals **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Displays the smoothed actual value of the modulation depth.
Dependency: Refer to: r0074
Note: A_INF: Smoothing time constant = 300 ms
SERVO, VECTOR: Smoothing time constant = 100 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The modulation depth is available smoothed (r0028) and unsmoothed (r0074).

r0029 Reactive current actual value smoothed / I_react smooth

A_INF, S_INF

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 8850, 8950
P-Group: Displays, signals **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the smoothed actual value of the reactive current component.
Note: Smoothing time constant = 300 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The reactive current actual value is available smoothed (r0029) and unsmoothed (r0076).

r0029 Current actual value field-generating smoothed / Id_act smooth

SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 5730, 6799
P-Group: Displays, signals
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the smoothed field-generating actual current.

Dependency: Refer to: r0076

Note: SERVO: Smoothing time constant = 100 ms
VECTOR: Smoothing time constant = 300 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The field-generating current actual value is available smoothed (r0029) and unsmoothed (r0076).

r0030 Active current actual value smoothed / I_active smooth

A_INF, S_INF

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 8850, 8950
P-Group: Displays, signals
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the smoothed actual value of the active current components.

Dependency: Refer to: r0078

Note: Smoothing time constant = 300 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The active current actual value is available smoothed (r0030) and unsmoothed (r0078).

r0030 Current actual value force generating smoothed / Iq_act smooth

SERVO (Lin)

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 5730, 6799
P-Group: Displays, signals
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the smoothed force-generating actual current.

Dependency: Refer to: r0078

Note: SERVO: Smoothing time constant = 100 ms
VECTOR: Smoothing time constant = 300 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The following applies for SERVO:
The force-generating current actual value is available smoothed (r0030 with 100 ms, r0078[1] with p0045) and unsmoothed (r0078[0]).
For VECTOR, the following applies:
The torque-generating current actual value is available smoothed (r0030 with 300 ms) and unsmoothed (r0078).

r0030 Current actual value torque-generating smoothed / Iq_act smooth

SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 5730, 6799
P-Group: Displays, signals
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the smoothed torque-generating actual current.

Dependency: Refer to: r0078

Note: SERVO: Smoothing time constant = 100 ms
VECTOR: Smoothing time constant = 300 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The following applies for SERVO:
The torque-generating current actual value is available smoothed (r0030 with 100 ms, r0078[1] with p0045) and unsmoothed (r0078[0]).
For VECTOR, the following applies:
The torque-generating current actual value is available smoothed (r0030 with 300 ms) and unsmoothed (r0078).

r0031 Force actual value smoothed / F_act smooth

SERVO (Lin)

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 5730, 6799
P-Group: Displays, signals
Units group: 8_2
Unit selection: p0505
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [N]	- [N]	- [N]

Description: Displays the smoothed force setpoint.

Dependency: Refer to: r0080

Note: Smoothing time constant = 100 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The active current actual value is available smoothed (r0031) and unsmoothed (r0080).

r0031 Actual torque smoothed / M_act smooth

SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 5730, 6799
P-Group: Displays, signals
Units group: 7_2
Unit selection: p0505
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [Nm]	- [Nm]	- [Nm]

Description: Displays the smoothed torque actual value.

Dependency: Refer to: r0080

Note: Smoothing time constant = 100 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The active current actual value is available smoothed (r0031) and unsmoothed (r0080).

r0032 CO: Active power actual value smoothed / P_actv_act smth

A_INF, S_INF, SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 2
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 5730, 6799, 8750, 8850, 8950
P-Group: Displays, signals **Units group:** 14_10 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [kW]	- [kW]	- [kW]

Description: Displays the smoothed actual value of the active power.

Dependency: Refer to: r0082

Notice: This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.

Note: Meaning for drives:
- positive value: power output to the motor shaft
- negative value: power fed back to the DC link

Meaning for infeeds:
- positive value: power drawn from the line supply
- negative value: power fed back to the line supply (only for infeed/regenerative feedback capability)

For A_INF, B_INF and S_INF the following applies:
The active power is available smoothed (r0032 with 300 ms) and unsmoothed (r0082).
The following applies for SERVO:
The active power is available smoothed (r0032 with 100 ms, r0082[1] with p0045) and unsmoothed (r0082[0]).
For VECTOR and VECTORMV, the following applies:
The active power is available smoothed (r0032 with 100 ms) and unsmoothed (r0082).

r0032 CO: Active power actual value smoothed / P_actv_act smth

B_INF

Can be changed: - **Calculated:** - **Access level:** 2
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 5730, 6799, 8750, 8850, 8950
P-Group: Displays, signals **Units group:** 14_10 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [kW]	- [kW]	- [kW]

Description: Displays the smoothed actual value of the active power.

Dependency: Refer to: r0082

Notice: This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.
For Basic Line Modules of chassis format, the displayed value is invalid as these units do not have any current sensing.

Note: Meaning for drives:
- positive value: power output to the motor shaft
- negative value: power fed back to the DC link

Meaning for infeeds:
- positive value: power drawn from the line supply
- negative value: power fed back to the line supply (only for infeed/regenerative feedback capability)

For A_INF, B_INF and S_INF the following applies:
The active power is available smoothed (r0032 with 300 ms) and unsmoothed (r0082).
The following applies for SERVO:
The active power is available smoothed (r0032 with 100 ms, r0082[1] with p0045) and unsmoothed (r0082[0]).
For VECTOR and VECTORMV, the following applies:
The active power is available smoothed (r0032 with 100 ms) and unsmoothed (r0082).

r0033 Force utilization smoothed / F_util smooth

SERVO (Lin)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 8012
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min - [%]	**Max** - [%]	**Factory setting** - [%]

Description: Displays the smoothed force utilization as a percentage.
The force utilization is obtained from the required smoothed force referred to the force limit.

Note: Smoothing time constant = 100 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The force utilization is available smoothed (r0033) and unsmoothed (r0081).
For F_set total (r0079) > F_max offset (p1532), the following applies:
- demanded torque = F_set total - F_max offset
- current force limit = F_max upper effective (r1538) - F_max offset
For F_set total (r0079) <= F_max offset (p1532), the following applies:
- demanded force = F_max offset - F_set total
- current force limit = F_max offset - F_max lower effective (r1539)
For the current force limit = 0, the following applies: r0033 = 100 %
For the current force limit < 0, the following applies: r0033 = 0 %

r0033 Torque utilization smoothed / M_util smooth

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 8012
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min - [%]	**Max** - [%]	**Factory setting** - [%]

Description: Displays the smoothed torque utilization as a percentage.
The torque utilization is obtained from the required smoothed torque referred to the torque limit.

Note: Smoothing time constant = 100 ms
The signal is not suitable as process quantity and may only be used as display quantity.
The torque utilization is available smoothed (r0033) and unsmoothed (r0081).
For M_set total (r0079) > M_max offset (p1532), the following applies:
- demanded torque = M_set total - M_max offset
- current torque limit = M_max upper effective (r1538) - M_max offset
For M_set total (r0079) <= M_max offset (p1532), the following applies:
- demanded torque = M_max offset - M_set total
- current torque limit = M_max offset - M_max lower effective (r1539)
For the current torque limit = 0, the following applies: r0033 = 100 %
For the current torque limit < 0, the following applies: r0033 = 0 %

r0034 Motor utilization / Motor utilization

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 8017
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, REL, FEM		**Expert list:** 1
Min - [%]	**Max** - [%]	**Factory setting** - [%]

Description: Displays the motor utilization from the thermal I2t motor model.

Dependency: The motor utilization is only determined for permanent-magnet synchronous motors and if the I2t motor model is activated.

The motor utilization is formed from the ratio between the I2t motor model temperature (minus 40 Kelvin) and the reference value p0605 (motor overtemperature, fault threshold) - 40 Kelvin. If p0605 is reduced, r0034 increases and the motor temperature remains the same.

Refer to: p0611, p0612, p0615

Note: Smoothing time constant = 100 ms

The signal is not suitable as process quantity and may only be used as display quantity.

A value of r0034 = -200.0% indicates an invalid display, for example, because the thermal I2t motor model was not activated or was incorrectly parameterized.

r0035 CO: Temperature input / Temp_input

A_INF, S_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 8850, 8950
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1
Min - [°C]	**Max** - [°C]	**Factory setting** - [°C]

Description: Displays the temperature currently measured at X21 (booksize) or X41 (chassis).

When using an Active Interface Module (p0220 = 41 ... 45) a bimetallic sensor must be connected up to monitor the temperature. The temperature sensor type is indicated using p0601 and cannot be changed when an Active Interface Module is being used.

Temperature within permissible limit values: r0035 = -50°C

Temperature outside the permissible limit values: r0035 = -250°C

Dependency: Refer to: A06260, F06261, F06262

Notice: The function in r0192.11 must be available in order to obtain a correct display.

Note: For r0035 equal to -200.0 °C, the following applies:

- "no sensor" selected in p0601!

For r0035 equal to -300.0 °C, the following applies:

- a KTY84 is selected in p0601 but is not connected!
- the temperature display is not valid (temperature sensor error)!

r0035 CO: Motor temperature / Mot_temp

SERVO, VECTOR

Not for motor type: -		**Expert list:** 1
Min - [°C]	**Max** - [°C]	**Factory setting** - [°C]

Description: Displays the current temperature in the motor.

Note: For r0035 not equal to -200.0 °C, the following applies:

- this temperature display is valid.
- a KTY sensor is connected.
- for induction motors, the thermal motor model is activated (p0600 = 0 or p0601 = 0).

For r0035 equal to -200.0 °C, the following applies:

- this temperature display is not valid (temperature sensor error).
- a PTC sensor is connected.
- for synchronous motors, the thermal motor model is activated (p0600 = 0 or p0601 = 0).

r0035 CO: Temperature input / Temp_input

B_INF

- the temperature display is not valid (temperature sensor error)!

r0036 Power unit overload I2t / PU overload I2t

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 8014
P-Group: Displays, signals
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Displays the power unit overload determined using the I2t calculation.
A current reference value is defined for the I2t monitoring of the power unit. It represents the current that can be conducted by the power unit without any influence of the switching losses (e.g. the continuously permissible current of the capacitors, inductances, busbars, etc.).
If the I2t reference current of the power unit is not exceeded, then an overload (0 %) is not displayed.
In the other case, the degree of thermal overload is calculated, whereby 100% results in a trip.

Dependency: Refer to: p0290, p0294
Refer to: F30005

r0037[0...1] Control Unit temperature / CU temperature

r0047 Motor data ident. routine and speed controller optimization / MotID and n_opt

VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	300	-

Description: Displays the current status for the motor data identification (standstill measurement) and the speed/velocity controller optimization (rotating measurement).

Value:
0: No measurement
115: Measurement q leakage inductance (part 2)
120: Speed controller optimization, (vibration test)
140: Calculate speed controller setting
150: Measurement, moment of inertia
170: Measurement, magnetizing current and saturation characteristic
190: Speed encoder test
195: Measurement q leakage inductance (part 1)
200: Rotating measurement selected
210: Pole position identification selected
220: identification, leakage inductance
230: Identification, rotor time constant
240: Identification, stator inductance
270: Identification, stator resistance
290: Identification, valve lockout time
300: Standstill measurement selected

r0049[0...3] Motor data set/encoder data set effective / MDS/EDS effective

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dynamic index:** -	**Func. diagram:** 8565, 8570, 8575
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the effective Motor Data Set (MDS) and the effective Encoder Data Sets (EDS).

Index:
[0] = Motor Data Set MDS effective
[1] = Encoder1 Encoder Data Set EDS effective
[2] = Encoder 2 Encoder Data Set EDS effective
[3] = Encoder 3 Encoder Data Set EDS effective

Dependency: Refer to: p0186, p0187, p0188, p0189, r0838

Note: Value 99 means the following: No encoder assigned (not configured).

r0050.0...3 CO/BO: Command Data Set CDS effective / CDS effective

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dynamic index:** -	**Func. diagram:** 8560
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the effective Command Data Set (CDS).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	CDS eff., bit 0	On	Off	-
01	CDS eff., bit 1	On	Off	-
02	CDS eff., bit 2	On	Off	-
03	CDS eff., bit 3	On	Off	-

Dependency: Refer to: p0810, p0811, r0836

Note: The Command Data Set selected using a binector input (e.g. p0810) is displayed using r0836.

r0051.0...4 CO/BO: Drive Data Set DDS effective / DDS effective

SERVO, TM41, VECTOR

Can be changed: -
Data type: Unsigned8
P-Group: Displays, signals
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 2
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the effective Drive Data Set (DDS).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	DDS eff., bit 0	On	Off	-
01	DDS eff., bit 1	On	Off	-
02	DDS eff., bit 2	On	Off	-
03	DDS eff., bit 3	On	Off	-
04	DDS eff., bit 4	On	Off	-

Dependency: Refer to: p0820, p0821, p0822, p0823, p0824, r0837

Note: The drive data set changeover is suppressed when selecting the motor identification, during the rotating measurement, the encoder calibration and the friction characteristic record.

r0056.1...15 CO/BO: Status word, closed-loop control / ZSW cl-loop ctrl

SERVO

Can be changed: -
Data type: Unsigned16
P-Group: Displays, signals
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: 1530, 2526
Unit selection: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the status word of the closed-loop control.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
01	De-magnetizing completed	Yes	No	-
04	Magnetizing completed	Yes	No	2701
08	Field weakening active	Yes	No	-
14	Vdc_max controller active	Yes	No	-
15	Vdc_min controller active	Yes	No	-

Note: Re bit 04:

The bit is immediately set after power-on

Exception:

For an induction motor with brake (except for p1215 = 2), the bit is only set when 60% of the reference flux is reached.

r0056.0...15 CO/BO: Status word, closed-loop control / ZSW cl-loop ctrl

VECTOR

Can be changed: -
Data type: Unsigned16
P-Group: Displays, signals
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: 1530, 2526
Unit selection: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the status word of the closed-loop control.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Initialization completed	Yes	No	-
01	De-magnetizing completed	Yes	No	-
02	Pulse enable present	Yes	No	-
03	Soft starting present	Yes	No	-
04	Magnetizing completed	Yes	No	-
06	Accelerating voltage active	Yes	No	-

07	Frequency negative	Yes	No	6719
08	Field weakening active	Yes	No	-
09	Voltage limit active	Yes	No	6714
10	Slip limit active	Yes	No	6310
11	Frequency limit active	Yes	No	6719
12	Current limiting controller voltage output active	Yes	No	-
13	Current/torque limiting	Active	Inactive	6060
14	Vdc_max controller active	Yes	No	6220, 6320
15	Vdc_min controller active	Yes	No	6220, 6320

r0060 CO: Velocity setpoint before the setpoint filter / v_set before filt

SERVO (Lin)

Can be changed: - **Calculated:** - **Access level:** 3

Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 2701, 2704, 5020

P-Group: Displays, signals **Units group:** 4_1 **Unit selection:** p0505

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [m/min]	- [m/min]	- [m/min]

Description: Displays the current velocity setpoint at the input of the velocity controller or V/f characteristic (after the interpolator).

Dependency: Refer to: r0020

Note: The velocity setpoint is available smoothed (r0020) and unsmoothed (r0060).

r0060 CO: Speed setpoint before the setpoint filter / n_set before filt.

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3

Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 2701, 2704, 5020, 6030, 6799

P-Group: Displays, signals **Units group:** 3_1 **Unit selection:** p0505

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the current speed setpoint at the input of the speed controller or V/f characteristic (after the interpolator).

Dependency: Refer to: r0020

Note: The speed setpoint is available smoothed (r0020) and unsmoothed (r0060).

r0061 CO: Velocity actual value, motor encoder / v_act mot encoder

SERVO (Lin)

Can be changed: - **Calculated:** - **Access level:** 2

Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 1580, 4710, 4715

P-Group: Displays, signals **Units group:** 4_1 **Unit selection:** p0505

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [m/min]	- [m/min]	- [m/min]

Description: Displays the velocity sensed by the motor encoder (unsmoothed).

r0061 CO: Speed actual value motor encoder / n_ist mot. encoder

SERVO

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 1580, 4710, 4715
P-Group: Displays, signals
Units group: 3_1
Unit selection: p0505
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the speed sensed by the motor encoder (unsmoothed).

r0061[0...1] CO: Speed actual value motor encoder / n_ist mot. encoder

VECTOR

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 1580, 4710, 4715
P-Group: Displays, signals
Units group: 3_1
Unit selection: p0505
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the speed sensed by the motor encoder (unsmoothed).
Index: [0] = Encoder 1
[1] = Encoder 2
Note: Speed from encoder 2 is not displayed for U/f operating modes.

r0062 CO: Velocity setpoint after the filter / v_set after filter

SERVO (Lin)

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 1590, 5020, 5030, 5042, 5210
P-Group: Displays, signals
Units group: 4_1
Unit selection: p0505
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [m/min]	- [m/min]	- [m/min]

Description: Displays the current velocity setpoint after the setpoint filters.

r0062 CO: Speed setpoint after the filter / n_set after filter

SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 1590, 1700, 5020, 5030, 5042, 5210, 6030, 6031
P-Group: Displays, signals
Units group: 3_1
Unit selection: p0505
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the current speed setpoint after the setpoint filters.

r0063 CO: Actual velocity smoothed / v_act smooth

SERVO (Lin)

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 1580, 1590, 4710, 5300
P-Group: Displays, signals
Units group: 4_1
Unit selection: p0505
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [m/min]	- [m/min]	- [m/min]

Description: Displays the current smoothed velocity actual value for velocity control.
Dependency: Refer to: r0021
Note: The velocity actual value is calculated in encoderless operation. For operation with encoder, r0063 is smoothed with p1441.
The velocity actual value is available smoothed (r0021) and unsmoothed (r0063).

r0063 CO: Speed actual value after actual value smoothing / n_act smooth

SERVO

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 1580, 1590, 4710, 5300
P-Group: Displays, signals
Units group: 3_1
Unit selection: p0505
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the current smoothed actual speed for speed control.
Dependency: Refer to: r0021
Note: The speed actual value is calculated in encoderless operation. For operation with encoder, r0063 is smoothed with p1441.
The speed actual value is available smoothed (r0021) and unsmoothed (r0063).

r0063 CO: Speed actual value after actual value smoothing / n_act smooth

TM41

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: Displays, signals
Units group: 3_1
Unit selection: p0505
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the currently smoothed speed actual value.
Note: For Terminal Module 41 (TM41), this value is used to interconnect with standard telegram 3 and is always zero.

r0063[0...2] CO: Actual speed value / n_ist

VECTOR

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 1680, 4715
P-Group: Displays, signals
Units group: 3_1
Unit selection: p0505
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the current speed of the closed-loop speed control and the V/f control.
Index: [0] = Unsmoothed
[1] = Smoothed with p0045
[2] = Calculated from f_set - f_slip
Dependency: Refer to: r0021

Note: The speed actual value is calculated in encoderless operation and for V/f control. For operation with encoder, r0063 is smoothed with p1441.
The speed actual value r0063[0] is additionally displayed - smoothed with p0045 - in r0063[1].
The speed r0063[2] calculated from the output frequency and slip can only be compared with the speed actual value r0063[0] in the steady-state.

r0064 CO: Velocity controller system deviation / v_ctrl system dev

SERVO (Lin)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 5040, 5042
P-Group: Displays, signals **Units group:** 4_1 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [m/min]	- [m/min]	- [m/min]

Description: Displays the current system deviation of the velocity controller.
Note: In the servo control mode with active reference model, the system deviation to the P component of the velocity controller is displayed.

r0064 CO: Speed controller system deviation / n_ctrl system dev

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 5040, 5042, 6040
P-Group: Displays, signals **Units group:** 3_1 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the current system deviation of the speed controller.
Note: In the servo control mode with active reference model, the system deviation to the P component of the speed/velocity controller is displayed.

r0065 Slip frequency / f_Slip

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 1710, 6310, 6727, 6730, 6732
P-Group: Displays, signals **Units group:** 2_1 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [Hz]	- [Hz]	- [Hz]

Description: Displays the slip frequency for induction motors (ASM).

r0066 CO: Line frequency / f_line

A_INF, S_INF

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 8850, 8950, 8961, 8999
P-Group: Displays, signals **Units group:** 2_1 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [Hz]	- [Hz]	- [Hz]

Description: Displays the line frequency.
Dependency: Refer to: r0024
Note: The line frequency is available smoothed (r0024) and unsmoothed (r0066).
A positive sign of the frequency is obtained when the line supply phases U, V and W are connected with the correct phase sequence.

A negative sign of the frequency is obtained when the 3 line phases are interchanged therefore designating a negative direction of the rotating field of the 3-phase line supply voltage.

r0066 CO: Output frequency / f_outp

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 1690, 1710, 5300, 5730, 6730, 6731, 6732, 6799
P-Group: Displays, signals **Units group:** 2_1 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [Hz]	- [Hz]	- [Hz]

Description: Displays the Motor Module output frequency.
Dependency: Refer to: r0024
Note: The output frequency is available smoothed (r0024) and unsmoothed (r0066).

r0067[0...1] Absolute current value permissible / I_abs val perm

A_INF, S_INF

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Displays, signals **Units group:** 6_2 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the current permissible absolute line-side current.
Index: [0] = Motor mode
[1] = Regenerative mode
Dependency: The permissible current is the minimum from the maximum converter current (r0209), the parameterized current limits (p3530 to p3533) as well as the maximum permissible current of line filter (r3534).
Refer to: p3530, p3531, r3534

r0067 Output current, maximum / I_outp max

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 1690, 1700, 5722, 6300, 6640
P-Group: Displays, signals **Units group:** 6_2 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the maximum output current of the Motor Module.
Dependency: The maximum output current is determined by the parameterized current limit and the motor and converter thermal protection.
Refer to: p0290, p0640

r0068 CO: Absolute current actual value / I_act abs val

A_INF, S_INF, SERVO

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 5730, 7017, 8014, 8017, 8850, 8950
P-Group: Displays, signals **Units group:** 6_2 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays actual absolute current.

Dependency: Refer to: r0027
Notice: Bei A_INF, S_INF the following applies:
The value is updated with the current controller sampling time.
The following applies for SERVO:
The value is updated with a sampling time of 1 ms.
Note: Absolute current value = sqrt(Iq^2 + Id^2)
The absolute current actual value is available smoothed (r0027) and unsmoothed (r0068).

r0068 CO: DC current in the DC link / Idc DC link

B_INF

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 8014, 8750
P-Group: Displays, signals **Units group:** 6_4 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [A]	- [A]	- [A]

Description: Displays the DC current in the DC link.
Dependency: Refer to: r0027
Notice: For Basic Line Modules of chassis format, the displayed value is invalid as these units do not have any current sensing.
Note: The DC current in the DC link is available smoothed (r0027) and unsmoothed (r0068).

r0068[0...1] CO: Absolute current actual value / I_act abs val

VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 1690, 6714, 6799, 7017, 8014, 8017, 8018
P-Group: Displays, signals **Units group:** 6_2 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays actual absolute current.
Index: [0] = Unsmoothed
[1] = Smoothed with p0045
Dependency: Refer to: r0027
Notice: The value is updated with the current controller sampling time.
Note: Absolute current value = sqrt(Iq^2 + Id^2)
The absolute value of the current actual value is available smoothed (r0027 with 300 ms, r0068[1] with p0045) and unsmoothed (r0068[0]).

r0069[0...6] Phase current actual value / I_phase act value

A_INF, S_INF, SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 1630, 5730, 6730, 6731, 6732, 7008, 8850, 8950
P-Group: Displays, signals **Units group:** 6_5 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [A]	- [A]	- [A]

Description: Displays the measured actual phase currents as peak value.
Index: [0] = Phase U
[1] = Phase V
[2] = Phase W
[3] = Phase U offset
[4] = Phase V offset

[5] = Phase W offset
[6] = Total U, V, W

Note: In indices 3 ... 5, the offset currents of the 3 phases, which are added to correct the phase currents, are displayed.
The sum of the 3 corrected phase currents is displayed in index 6.

r0070 CO: Actual DC link voltage / Vdc_act

A_INF, B_INF, S_INF

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 1773, 1774, 1775, 8750, 8850, 8950
P-Group: Displays, signals	**Units group:** 5_2	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1
Min - [V]	**Max** - [V]	**Factory setting** - [V]

Description: Displays the measured actual value of the DC link voltage.
Dependency: Refer to: r0026
Note: The DC link voltage is available smoothed (r0026) and unsmoothed (r0070).

r0070 CO: Actual DC link voltage / Vdc_act

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 5730, 6723, 6724, 6730, 6731, 6799
P-Group: Displays, signals	**Units group:** 5_2	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1
Min - [V]	**Max** - [V]	**Factory setting** - [V]

Description: Displays the measured actual value of the DC link voltage.
Dependency: Refer to: r0026
Notice: For SINAMICS S120 AC Drive (AC/AC) the following applies:
When measuring a DC link voltage < 200 V, for the Power Module (e.g. PM340) a valid measured value is not supplied. In this case, when an external 24V power supply is connected, a value of approx. 24 V is displayed.
Note: The DC link voltage is available smoothed (r0026) and unsmoothed (r0070).

r0071 Maximum output voltage / V_output max

VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 1710, 6300, 6640, 6722, 6723, 6724, 6725, 6727
P-Group: Displays, signals	**Units group:** 5_1	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1
Min - [Vrms]	**Max** - [Vrms]	**Factory setting** - [Vrms]

Description: Displays the maximum output voltage.
Dependency: The maximum output voltage depends on the current DC link voltage (r0070) and the maximum modulation depth (p1803).
Note: As the (driven) motor load increases, the maximum output voltage drops as a result of the reduction in DC link voltage.

r0072[0...3] CO: Input voltage / V_input

A_INF, S_INF

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 8850, 8950
P-Group: Displays, signals
Units group: 5_1
Unit selection: p0505
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the current power unit input voltage (Line Module).

Index: [0] = Voltage at input terminals of power unit from line supply model
[1] = Voltage at VSM or at input terminals of the line filter
[2] = Voltage of the voltage source from the line supply model
[3] = Smoothed voltage of voltage source from line supply model

Note: The input voltages are available smoothed (r0025) and unsmoothed (r0072).

r0072[0]:

Displays the pulsed voltage at the line supply input terminals of the power unit. The value is calculated from the modulation depth (r0074) and is therefore only correct in the closed-loop controlled mode and when the pulses are enabled.

r0072[1]:

Displays the absolute voltage at the input terminals of the line filter or the connection point of a Voltage Sensing Module (VSM). The value is calculated from the VSM measured values r3661 and r3662 and is therefore equal to 0 if a VSM is not connected.

r0072[2]:

Displays the estimated value for the voltage of the voltage source that is calculated in the voltage model of the line supply PLL. (input quantities of the model are the measured values of the line currents and the DC link voltage as well as the characteristics of the line filter p0225, p0226 as well as the line inductance p3424).

r0072[3]:

Displays the smoothed value for the source voltage in r0072[2]. The PT1 smoothing time constant is set in p3472.

r0072 CO: Output voltage / V_output

SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 1630, 5730, 6730, 6731, 6799

Units group: 5_1
Unit selection: p0505
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the current power unit output voltage (Motor Module).

Dependency: Refer to: r0025

Note: The output voltage is available smoothed (r0025) and unsmoothed (r0072).

r0073 Maximum modulation depth / Modulat_depth max

VECTOR

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 6724
P-Group: Modulation
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Displays the maximum modulation depth.

Dependency: Refer to: p1803

r0074 CO: Modulat_depth / Modulat_depth

A_INF, SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 1710, 5730, 6730, 6731, 6732, 6799, 8940, 8950
P-Group: Displays, signals
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Displays the current modulation depth.

Dependency: Refer to: r0028

Note: For space vector modulation, 100% corresponds to the maximum output voltage without overcontrol.
Values above 100 % indicate an overcontrol condition - values below 100% have no overcontrol.
The phase voltage (phase-to-phase, rms) is calculated as follows:(r0074 * r0070) / (sqrt(2) * 100 %).
The modulation depth is available smoothed (r0028) and unsmoothed (r0074).

r0075 CO: Reactive current setpoint / I_react_set

A_INF

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 8946

Units group: 6_2
Unit selection: p0505
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the reactive current setoint.

Dependency: Refer to: r3471, p3610

Note: The reactive current requirement of a line filter should be covered by the controlled infeed/regenerative feedback so that the converter always operates with a power factor of 1 compared to the line. Setpoint r0075 includes the reactive current for a line filter that depends on the current operating point (r3471).
If the line phases are reversed and the line voltage therefore has a negative orientation (r0066 < 0), it should be noted that the sign of the reactive current is reversed.

r0075 CO: Current setpoint field-generating / Id_set

SERVO, VECTOR

Description: Displays the actual torque value.
Index: [0] = Unsmoothed
[1] = Smoothed with p0045
Dependency: Refer to: r0031
Note: The torque actual value is available smoothed (r0031 with 100 ms, r0080[1] with p0045) and unsmoothed (r0080[0]).

r0081 CO: Force utilization / F_utilization

SERVO (Lin)

Can be changed: -
Data type: FloatingPoint32
P-Group: Displays, signals
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: 8012
Unit selection: -
Expert list: 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Displays the force utilization as a percentage.
The force utilization is obtained from the required smoothed force referred to the force limit.
Dependency: Refer to: r0033
Note: The force utilization is available smoothed (r0033) and unsmoothed (r0081).
The calculation of the force utilization depends on the selected smoothing time constant (p0045).

r0081 CO: Torque utilization / M_Utilization

SERVO, VECTOR

Can be changed: -
Data type: FloatingPoint32
P-Group: Displays, signals
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: 8012
Unit selection: -
Expert list: 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Displays the torque utilization as a percentage.
The torque utilization is obtained from the required smoothed torque referred to the torque limit.
Dependency: Refer to: r0033
Note: The torque utilization is available smoothed (r0033) and unsmoothed (r0081).

The torque utilization is obtained from the required torque referred to the torque limit as follows:
- Positive torque: r0081 = ((r0079 + p1532) / (r1538 - p1532)) * 100 %
- Negative torque: r0081 = ((-r0079 + p1532) / (-r1539 + p1532)) * 100 %

For SERVO, the following applies:
The calculation of the torque utilization depends on the selected smoothing time constant (p0045).

r0082 CO: Active power actual value / P_act

A_INF, S_INF

Can be changed: - | **Calculated:** - | **Access level:** 3

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Setting to pre-assign/check the sampling times for the internal controller clock cycles for clock-synchronous PROFIBUS operation.

p0092 = 1:

The controller clock cycles are set so that clock synchronous PROFIBUS operation is possible. If it is not possible to change the controller clock cycles of the clock-cycle synchronous PROFIBUS operation, then an appropriate message is output.

The pre-setting of the controller clock cycles can result in a de-rating of the Motor Module (e.g. p0115[0] = 400 µs -> 375 µs).

p0092 = 0:

The controller clock cycles are set without any restrictions by the clock-cycle PROFIBUS operation (as for up to version V2.3).

Dependency: Refer to: r0110, p0115

Refer to: A01223, A01224

p0092 Clock synchronous operation pre-assignment/check / Clock sync op

CU_CX32, CU_I

Can be changed: C1(1) **Calculated:** - **Access level:** 1
Data type: Integer16 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	1	1

Description: Setting to pre-assign/check the sampling times for the internal controller clock cycles for clock-synchronous PROFIBUS operation.

p0092 = 1:

The controller clock cycles are set so that clock synchronous PROFIBUS operation is possible. If it is not possible to change the controller clock cycles of the clock-cycle synchronous PROFIBUS operation, then an appropriate message is output.

The pre-setting of the controller clock cycles can result in a de-rating of the Motor Module (e.g. p0115[0] = 400 µs -> 375 µs).

p0092 = 0:

The controller clock cycles are set without any restrictions by the clock-cycle PROFIBUS operation (as for up to version V2.3).

Dependency: Refer to: r0110, p0115

Refer to: A01223, A01224

r0093 CO: Pole position angle electrically normalized / Pole pos el norm

SERVO

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Displays, signals **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [°]	- [°]	- [°]

Description: Displays the normalized electrical pole position angle.

Dependency: Refer to: r0094, p0431, r1778

Notice: When the pole position angle (r0093) is output via test socket Tx (x = 0, 1, 2) to adjust the encoder (to determine the angular commutation offset) the test socket being used must be parameterized as follows:
p0771[x] = r0093
p0777[x] = 0 %
p0778[x] = 0 V
p0779[x] = 400 %
p0780[x] = 4 V
p0783[x] = 0 V
p0784[x] = 0
For p1821 = 1 (counter-clockwise direction of rotation) the following applies:
In order to adjust the encoder using the EMF method, the value, determined using the oscilloscope, must be inverted and then entered in p0431.

Note: For operation with encoder and pulse suppression, the following applies:
- the value is generated from r0094 + 180 °.
- this angle can be used to adjust the encoders of synchronous motors.
For pulse enable, the following applies:
- the value indicates the transformation angle used by the control + 180 °.
- this value is, contrary to r0094, also applicable (provides information) for encoderless operation and after a pole position identification routine.

r0094 CO: Transformation angle / Transformat_angle

A_INF, S_INF

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 8850, 8950
P-Group: Displays, signals **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [°]	- [°]	- [°]

Description: Displays the transformation angle.
Note: The transformation angle corresponds to the line supply angle.

r0094 CO: Transformation angle / Transformat_angle

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 1580, 1680, 1690, 4710, 6714, 6730, 6731, 6732
P-Group: Displays, signals **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [°]	- [°]	- [°]

Description: Displays the transformation angle.
Dependency: Refer to: r0093, p0431, r1778
Note: The transformation angle corresponds to the electrical commutation angle.
If no pole position identification is carried out (p1982), and the encoder is adjusted, the following applies:
The encoder supplies the value and indicates the electrical angle of the flux position (d axis).

p0097 Select drive object type / Select DO type

CU_CX32, CU_I, CU_S

Can be changed: C1(1) | **Calculated:** - | **Access level:** 1
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Topology | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	17	0

Description: Executes an automatic device configuration.
In so doing, p0099, p0107 and p0108 are appropriately set.

Value:
0: No selection
1: Drive object type SERVO
2: Drive object type VECTOR
3: SINAMICS GM (DFEMV & VECTORMV)
4: SINAMICS SM (AFEMV & VECTORMV)
5: SINAMICS GL (VECTORGL)
6: SINAMICS SL (VECTORSL)
12: Drive object type VECTOR parallel circuit
13: Drive object type VECTORMV - GM parallel circuit
14: Drive object type VECTORMV - SM parallel circuit
15: Drive object type SIMOREGplus
16: Drive object type SERVO HMI
17: Drive object type VECTOR HMI

Dependency: Refer to: r0098, p0099
Refer to: A01330

Note: For p0097 = 0, p0099 is automatically set to the factor setting.
The setting p0097 = 1 is not possible for chassis-type power units as well as for SINAMICS G or SINAMICS GM.
The setting p0097 = 12 is not possible for booksize power units.

r0098[0...5] Actual device topology / Device_act topo

CU_CX32, CU_I, CU_S

Can be changed: - | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Topology | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the automatically detected actual device topology in coded form.

Index:
[0] = DRIVE-CLiQ socket X100
[1] = DRIVE-CLiQ socket X101
[2] = DRIVE-CLiQ socket X102
[3] = DRIVE-CLiQ socket X103
[4] = DRIVE-CLiQ socket X104
[5] = DRIVE-CLiQ socket X105

Dependency: Refer to: p0097, p0099

Note: Topology coding: abcd efgh hex
a = number of Active Line Modules
b = number of Motor Modules
c = number of motors
d = number of encoders (or the line supply voltage sensing for Active Line Modules)
e = number of additional encoders (or the line supply voltage sensing for Active Line Modules)
f = number of Terminal Modules
g = number of Terminal Boards
h = reserved
if the value 0 is displayed in all indices, then components are not detected via DRIVE-CLiQ.
If a value F hex occurs at a position of the coding (abcd efgh hex), then an overflow has occurred.

p0099[0...5] Device target topology / Device_target topo

CU_CX32, CU_I, CU_S

Can be changed: C1(1) | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Topology | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Sets the device target topology in coded form (refer to r0098). The setting is made during commissioning.
Deactivated or non-available components are also counted

Index: [0] = DRIVE-CLiQ socket X100
[1] = DRIVE-CLiQ socket X101
[2] = DRIVE-CLiQ socket X102
[3] = DRIVE-CLiQ socket X103
[4] = DRIVE-CLiQ socket X104
[5] = DRIVE-CLiQ socket X105

Dependency: The parameter can only be written into for p0097 = 0.
To perform an automatic device configuration run, an index of the device target topology must be set to the value of the device actual topology in r0098 for acknowledgement. An index of the device actual topology with a value other than 0 must be selected.
Refer to: p0097, r0098
Refer to: A01330

Note: The parameter can only be set to the values 0, the value of the actual device topology, the value of the actual device target topology and FFFFFFFF hex.
If the value 0 is displayed in all of the indices, then the system has still not been commissioned.
The value FFFFFFFF hex indicates that the topology was not generated by the automatic device configuration but was commissioned using the commissioning software (e.g. using parameter download).

p0100 IEC/NEMA mot stds / IEC/NEMA mot stds

SERVO

Can be changed: C2(1) | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: FEM | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Defines whether the motor and drive converter power settings (e.g. rated motor power - p0307) are expressed in [kW] or [hp].
Depending on the selection, the rated motor frequency (p0310) is either set to 50 Hz or 60 Hz.
The following applies for IEC drives: The power factor (p0308) should be parameterized.
The following applies for NEMA drives: The efficiency (p0309) should be parameterized.

Value: 0: IEC-Motor (50 Hz, SI units)
1: NEMA motor (60 Hz, US units)

Dependency: If p0100 is changed, all of the rated motor parameters are reset. Only then are possible unit changeovers made.
The units of all motor parameters are changed that are involved in the selection of IEC or NEMA (e.g. r0206, p0307, p0316, r0333, r0334, p0341, p0344, r1493, r1969).
Refer to: r0206, p0210, p0300, p0304, p0305, p0307, p0308, p0309, p0310, p0311, p0312, p0314, p0320, p0322, p0323, p0335, r0336, r0337, p0338, p1800

Note: The parameter can only be changed for vector control (p0107).
The parameter value is not reset when the factory setting is restored (p0010 = 30, p0970).

p0100 IEC/NEMA mot stds / IEC/NEMA mot stds

VECTOR

Can be changed: C2(1) **Calculated:** - **Access level:** 1
Data type: Integer16 **Dynamic index:** - **Func. diagram:** -
P-Group: Converter **Units group:** - **Unit selection:** -
Not for motor type: FEM **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Defines whether the motor and drive converter power settings (e.g. rated motor power - p0307) are expressed in [kW] or [hp].
Depending on the selection, the rated motor frequency (p0310) is either set to 50 Hz or 60 Hz.
The following applies for IEC drives: The power factor (p0308) should be parameterized.
The following applies for NEMA drives: The efficiency (p0309) should be parameterized.

Value:
0: IEC-Motor (50 Hz, SI units)
1: NEMA motor (60 Hz, US units)

Dependency: If p0100 is changed, all of the rated motor parameters are reset. Only then are possible unit changeovers made.
The units of all motor parameters are changed that are involved in the selection of IEC or NEMA (e.g. r0206, p0307, p0316, r0333, r0334, p0341, p0344, r1493, r1969).
Refer to: r0206, p0210, p0300, p0304, p0305, p0307, p0308, p0309, p0310, p0311, p0312, p0314, p0320, p0322, p0323, p0335, r0336, r0337, p0338, p1800

Note: The parameter can only be changed for vector control (p0107).
The parameter value is not reset when the factory setting is restored (p0010 = 30, p0970).

p0101[0...15] Drive object numbers / DO numbers

CU_CX32, CU_I, CU_S

Can be changed: C1(1) **Calculated:** - **Access level:** 2
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** -
P-Group: Topology **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	62	0

Description: The parameter contains the object number via which every drive object can be addressed.
The number of an existing drive object is entered into each index.
The numbers are automatically assigned once and can no longer be changed as long as the object has not been deleted.
In the commissioning software, this object number cannot be entered using the expert list, but is automatically assigned when inserting an object.

Index:
[0] = Drive object number Control Unit
[1] = Drive object number object 1
[2] = Drive object number object 2
[3] = Drive object number object 3
[4] = Drive object number object 4
[5] = Drive object number object 5
[6] = Drive object number object 6
[7] = Drive object number object 7
[8] = Drive object number object 8
[9] = Drive object number object 9
[10] = Drive object number object 10
[11] = Drive object number object 11
[12] = Drive object number object 12
[13] = Drive object number object 13
[14] = Drive object number object 14
[15] = Drive object number object 15

Note: Value = 0: No drive object is defined.

r0102[0...1] Number of drive objects / DO count

CU_CX32, CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Topology	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the number of existing or existing and prepared drive objects.

Index: [0] = Existing drive objects
[1] = Existing and prepared drive objects

Dependency: Refer to: p0101

Note: The numbers of the drive objects are in p0101.
Index 0:
Displays the number of drive objects that have already been set up.
Index 1:
Displays the number of drive objects that have already been set up and, in addition, the drive objects that still have to be set up.

p0103[0...15] Application-specific view / Appl_spec view

CU_CX32, CU_I, CU_S

Can be changed: C1(2)	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0	999	0

Description: The application-specific view of an existing drive object is entered into each index.
The parameter cannot be changed.

Dependency: Refer to: p0107, r0107
Refer to: F01051

Note: The application-specific views are defined in files on the memory card with the following structure:
PDxxxyyy.ACX
xxx: Application-specific view (p0103)
yyy: Type of drive object (p0107)
Example:
PD052011.ACX
--> "011" stands for the drive object, type SERVO
--> "052" is the number of the view for this drive object

r0103 Application-specific view / Appl_spec view

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	-

Description: Displays the application-specific view of the individual drive object.

Dependency: Refer to: p0107, r0107
Refer to: F01051

p0105 Activate/de-activate drive object / DO act/de-act

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	1

Description: Setting to activate/de-activate a drive object.

Value:
0: De-activate drive object
1: Activate drive object

Dependency: Refer to: r0106

Notice: The following applies when activating:
If components are inserted for the first time and the appropriate drive object is activated, then the drive system is automatically booted. To do this, the pulses of all of the drive objects must be suppressed.

p0105 Activate/de-activate drive object / DO act/de-act

A_INF, B_INF, CU_LINK, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	2	1

Description: Setting to activate/de-activate a drive object.

Value:
0: De-activate drive object
1: Activate drive object
2: Drive object, de-activate and not present

Recommend.: After inserting all of the components of a drive object, before activating, first wait for Alarm A01316.

Dependency: Refer to: r0106
Refer to: A01316

Caution: It is not permissible to de-activate drive objects with safety functions enabled.

Notice: The following applies when activating:
If components are inserted for the first time and the appropriate drive object is activated, then the drive system is automatically booted. To do this, the pulses of all of the drive objects must be suppressed.

Note: Setting a drive object to de-activate principally corresponds to the "parking axis" function. however, here, all of the DRIVE-CLiQ components, assigned to the drive object, are in involved.

p0105 Activate/de-activate drive object / DO act/de-act

TM54F_MA, TM54F_SL

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	2	1

Description: Setting to activate/de-activate a drive object.

Value:
0: De-activate drive object
1: Activate drive object
2: Drive object, de-activate and not present

Recommend.: After inserting all of the components of a drive object, before activating, first wait for Alarm A01316.

Dependency: Refer to: r0106
Refer to: A01316

Caution: It is not permissible to de-activate drive objects with safety functions enabled:
TM54F can only be de-activated if all of the axes connected to it via P10010 have been de-activated or are not enabled on the connected safety axes.

Notice: The following applies when activating:
If components are inserted for the first time and the appropriate drive object is activated, then the drive system is automatically booted. To do this, the pulses of all of the drive objects must be suppressed.

Note: Setting a drive object to de-activate principally corresponds to the "parking axis" function. however, here, all of the DRIVE-CLiQ components, assigned to the drive object, are in involved.

r0106 Drive object active/inactive / DO act/inact

A_INF, B_INF, CU_CX32, CU_I, CU_LINK, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR

Can be changed: -

Description: Displays the selected basic sampling time for this drive object.

Dependency: Refer to: r0110

Note: For TB30 and the Terminal Module, this parameter has no significance. For TB30 and certain Terminal Modules, the sampling times can be set using P4099[]. For more information, please read the description of P4099[] of the module involved.

p0112 Sampling times pre-setting p0115 / t_sample for p0115

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	5	3

Description: Pre-assignment of the sampling times in p0115.

The clock cycles for the current controller / speed controller / flux controller / setpoint channel / position controller / positioning / technology controller are pre-assigned as follows:

SINAMICS S, servo drive:

p0112 = 1: 250 / 250 / 250 / 4000 / 2000 / 8000 / 4000 µs (for chassis drive units)

p0112 = 2: 125 / 250 / 250 / 4000 / 2000 / 8000 / 4000 µs

p0112 = 3: 125 / 125 / 125 / 4000 / 1000 / 4000 / 4000 µs

p0112 = 4: 62.5 / 62.5 / 62.5 / 1000 / 1000 / 2000 / 1000 µs

p0112 = 5: Not possible

SINAMICS S, Active Infeed (p0112 = 1 not for p0092 = 1):

p0112 = 1: 400 / - / - / 1600 µs (pre-setting for the rated pulse frequency = 2.5 kHz)

p0112 = 2: 250 / - / - / 2000 µs (pre-setting for the rated pulse frequency = 4.0 kHz)

p0112 = 3: 125 / - / - / 2000 µs

p0112 = 4: 125 / - / - / 1000 µs

p0112 = 5: 125 / - / - / 500 µs

SINAMICS S, Smart Infeed (p0112 = 1 not for p0092 = 1):

p0112 = 1: 400 / - / - / 1600 µs (pre-setting for the rated pulse frequency = 2.5 kHz)

p0112 = 2: 250 / - / - / 2000 µs (pre-setting for the rated pulse frequency = 4.0 kHz)

p0112 = 3: 250 / - / - / 2000 µs

p0112 = 4: 250 / - / - / 1000 µs

p0112 = 5: Not possible

SINAMICS S, Basic Infeed, booksize:

p0112 = 4: 250 / - / - / 2000 µs

SINAMICS S, Basic Infeed, chassis:

p0112 = 1: 2000 / - / - / 2000 µs

p0112 = 2: 2000 / - / - / 2000 µs (pre-setting)

p0112 = 3: 2000 / - / - / 2000 µs

p0112 = 4: Not possible

p0112 = 5: Not possible

SINAMICS S/G, vector drive (p0112 = 1 not for p0092 = 1 and not for PM340):
p0112 = 1: 400 / 1600 / 1600 / 1600 / 3200 / 3200 / 3200 µs (for rated pulse frequency = 1.25, 2.5 kHz)
p0112 = 2: 250 / 1000 / 2000 / 1000 / 2000 / 4000 / 4000 µs
p0112 = 3: 250 / 1000 / 1000 / 1000 / 2000 / 4000 / 4000 µs (for rated pulse frequency = 2.0, 4.0 kHz)
SINAMICS S, vector drive:
p0112 = 4: 250 / 500 / 1000 / 500 / 1000 / 2000 / 2000 µs
p0112 = 5: 250 / 250 / 1000 / 250 / 1000 / 2000 / 1000 µs

Value:
0: Expert
1: xLow
2: Low
3: Standard
4: High
5: xHigh

Recommend.: When changing the sampling times of the current and speed controllers (also refer to p0115), then we recommend that after exiting commissioning (p0009 = 0) the controller settings are re-calculated using p0340 = 4.

Dependency: It is prohibited to select a parameter value from p0112 if the associated current controller clock cycle cannot set (e.g. p0112 = 1 is not possible for a vector drive and PM340 power unit).
Refer to: p0092

Note: For p0112 = 0 (expert) the individual sampling times in p0115 can be adjusted.
p0112 = 1 cannot be set for a power unit type PM340 (refer to r0203) for vector drives.

p0113 Minimum pulse frequency, selection / F_puls min sel

SERVO

Can be changed: C1(3) | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
2.000 [kHz]	4.000 [kHz]	4.000 [kHz]

Description: The current controller sampling time (p0115[0]) is pre-assigned by selecting the minimum pulse frequency.

Dependency: The parameter can only be changed with p0112 = 0 (expert). For isochronous operation (p0092 = 1) the parameter can only be set so that a current controller clock cycle of 125 µs is obtained as an integer number.
The required pulse frequency can be set in p1800 after commissioning (p0009 = p0010 = 0).
Refer to: p0112, r0114, p0115, p1800

Note: The current controller sampling time (p0115[0]) is set to the inverse value of twice the minimum pulse frequency. For p0113 = 2.0 kHz, p0115[0] = 250 µs is set, for p0113 = 4.0 kHz, p0115[0] = 125 µs is set. The current controller sampling time (p0115[0]), calculated from the pulse frequency, is set in a grid of 1.25 µs.
For a power unit type PM340 (refer to r0203), only the values 2.0 and 4.0 kHz can be set.

p0113 Minimum pulse frequency, selection / F_puls min sel

VECTOR

Can be changed: C1(3) | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
1.000 [kHz]	2.000 [kHz]	2.000 [kHz]

Description: The current controller sampling time (p0115[0]) is pre-assigned by selecting the minimum pulse frequency.

Dependency: The parameter can only be changed with p0112 = 0 (expert). For isochronous operation (p0092 = 1) the parameter can only be set so that a current controller clock cycle of 125 µs is obtained as an integer number.
The required pulse frequency can be set in p1800 after commissioning (p0009 = p0010 = 0).
Refer to: p0112, r0114, p0115, p1800

Note: The current controller sampling time (p0115[0]) is set to the inverse value of twice the minimum pulse frequency. For p0113 = 1.0 kHz, p0115[0] = 500 µs is set, for p0113 = 2.0 kHz, p0115[0] = 250 µs is set. The current controller sampling time (p0115[0]), calculated from the pulse frequency, is set in a grid of 1.25 µs.

For a power unit type PM340 (refer to r0203), only the values 1.0 and 2.0 kHz can be set. 1.0 kHz can be set in order to achieve a current controller clock cycle of 500µs. However, in this case, the minimum pulse frequency p1800 is limited to 2 kHz.

r0114[0...9] Minimum pulse frequency, recommended / F_puls min recom

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [kHz]	- [kHz]	- [kHz]

Description: Displays the recommended values (indices 0 and 1) for the minimum pulse frequency (p0113). If the system rejects a change to p0113 because the value to be used lies outside the permitted value range, then instead the recommended value from r0114 can be used.

Index: [0] = If only the current drive is changed
[1] = If all drives connected to the DRIVE-CLiQ line are changed
[2] = 2. possible pulse frequency
[3] = 3. possible pulse frequency
[4] = 4. possible pulse frequency
[5] = 5. possible pulse frequency
[6] = 6. possible pulse frequency
[7] = 7. possible pulse frequency
[8] = 8. possible pulse frequency
[9] = 9. possible pulse frequency

Dependency: Refer to: p0113

Note: After exiting commissioning (p0009 = p0010 = 0), the pulse frequencies calculated from the sampling time p115[0] are displayed in indices 1 to 9. If additional restrictions do not apply (e.g. due to having selected an output filter), these can be entered into p1800. The maximum pulse frequency of the power units was already taken into account in r0114.

A value of 0 kHz does not define a recommended pulse frequency.

p0115[0...0] Sampling time for supplementary functions / t_sample suppl fct

CU_CX32, CU_I, CU_S

Can be changed: C1(3) **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	16000.00 [µs]	4000.00 [µs]

Description: Sets the basic sampling time for supplementary functions (DCC, free function blocks) on this object. Only setting values that are an integer multiple of 125µs are permissible.

Index: [0] = Basic sampl. time

p0115[0...0] Sampling time for supplementary functions / t_sample suppl fct

TB30, TM15DI_DO, TM31

Can be changed: C1(3) **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	16000.00 [µs]	4000.00 [µs]

Description: Sets the sampling times for supplementary functions (DCC, free function blocks) on this object. Only setting values that are an integer multiple of 125µs are permissible.

Index: [0] = Basic sampl. time

Note: This parameter only applies to set the sampling times of possible supplementary functions.

The sampling times for inputs/outputs must be set in p4099.

p0115[0...0] Sampling time for supplementary functions / t_sample suppl fct

TM41

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	16000.00 [µs]	4000.00 [µs]

Description: Sets the sampling times for supplementary functions (DCC, free function blocks) on this object. Only setting values that are an integer multiple of 125µs are permissible.

Index: [0] = Basic sampl. time

Note: This parameter only applies to set the sampling times of possible supplementary functions.

The sampling times for inputs/outputs or encoder emulation must be set in p4099.

p0115[0...6] Sampling times for internal control loops / t_sample int ctrl

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	16000.00 [µs]	[0] 125.00 [µs]
		[1] 125.00 [µs]
		[2] 125.00 [µs]
		[3] 4000.00 [µs]
		[4] 1000.00 [µs]
		[5] 4000.00 [µs]
		[6] 4000.00 [µs]

Description: Sets the sampling times for the control loops.

The default setting is made using p0112 and can only be individually changed for p0112 = 0 (expert).

Recommend.: When changing the sampling times of the current and speed controllers (also refer to p0115), then we recommend that after exiting commissioning (p0009 = 0) the controller settings are re-calculated using p0340 = 4.

Index: [0] = Current controller
[1] = Speed controller
[2] = Flux controller
[3] = Setpoint channel
[4] = Pos controller
[5] = Positioning
[6] = Technology controller

Dependency: The sampling times can only be separately set if p0112 is 0 (expert). If a sampling time is modified in the expert mode, then all of the sampling times with higher indices are automatically changed in the same ratio as the sampling time itself was changed. Slower time slices are only taken if the calculated sampling time is also permitted. Upper limit is 8 ms.

Higher-level controls must be calculated in integral ratios to lower-level controls (e.g. p0115[1] = N * p0115[0]; where N is a whole number). The sampling time of the speed controller p0115[1] can have as a maximum a value of 800% of the current controller sampling time p0115[0].

For servo drives, the maximum sampling time of the current controller is 250 µs and for vector drives, 500 µs.

The sampling times for the setpoint channel p0115[3], position controller p0115[4], positioning p0115[5] and the technology controller p0115[6] must have at least 2x the value of the current controller sampling time p0115[0].

Refer to: r0110, r0111, p0112

Note: For function modules that can be activated (e.g. technology controller), the parameters values are pre-assigned.

For the Active Line Module (ALM) and Smart Line Module (SLM), the current and DC link voltage controllers operate with the same sampling time. For ALM/SLM the maximum current controller clock cycle is 400 µs.

For the Basic Line Module (BLM), the DC link voltage measurement operates in the current controller sampling time.

For BLM booksize, only the current controller sampling time of 250µs is permitted. For BLM chassis, only the current controller sampling time of 2000µs is permitted.

For a power unit type PM340 (refer to r0203), only current controller sampling times of 62.5 µs, 125 µs, 250µs and 500µs can be set. The minimum current controller clock cycle for vector drives and the maximum current controller clock cycle for servo drives is 250 µs.

If sampling times in p0115 are individually changed for p0112 = 0 (expert) then it must always be observed that the selected sampling times of the setpoint channel p0115[3], position controller p0115[4], positioning p0115[5] and technology controller p0115[6] are always greater than or equal to twice the current controller sampling time p0115[0].

p0115[0...6] Sampling times for internal control loops / t_sample int ctrl

SERVO (Lin)

Can be changed: C1(3) | **Calculated:** - | **Access level:** 3

Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -

P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	16000.00 [µs]	[0] 125.00 [µs]
		[1] 125.00 [µs]
		[2] 125.00 [µs]
		[3] 4000.00 [µs]
		[4] 1000.00 [µs]
		[5] 4000.00 [µs]
		[6] 4000.00 [µs]

Description: Sets the sampling times for the control loops.

The default setting is made using p0112 and can only be individually changed for p0112 = 0 (expert).

Recommend.: When changing the sampling times of the current and velocity controllers (also refer to p0115), then we recommend that after exiting commissioning (p0009 = 0) the controller settings are re-calculated using p0340 = 4.

Index:
[0] = Current controller
[1] = Speed controller
[2] = Flux controller
[3] = Setpoint channel
[4] = Pos controller
[5] = Positioning
[6] = Technology controller

Dependency: The sampling times can only be separately set if p0112 is 0 (expert). If a sampling time is modified in the expert mode, then all of the sampling times with higher indices are automatically changed in the same ratio as the sampling time itself was changed. Slower time slices are only taken if the calculated sampling time is also permitted. Upper limit is 8 ms.

Higher-level controls must be calculated in integral ratios to lower-level controls (e.g. p0115[1] = N * p0115[0]; where N is a whole number). The sampling time of the velocity controller p0115[1] can have as a maximum a value of 800% of the current controller sampling time p0115[0].

For servo drives, the maximum sampling time of the current controller is 250 µs and for vector drives, 500 µs.

Refer to: r0110, r0111, p0112

Note: For function modules that can be activated (e.g. technology controller), the parameters values are pre-assigned.

For the Active Line Module (ALM) and Smart Line Module (SLM), the current and DC link voltage controllers operate with the same sampling time. For ALM/SLM the maximum current controller clock cycle is 400 µs.

For the Basic Line Module (BLM), the DC link voltage measurement operates in the current controller sampling time.

For BLM booksize, only the current controller sampling time of 250µs is permitted. For BLM chassis, only the current controller sampling time of 2000µs is permitted.

For a power unit type PM340 (refer to r0203), only current controller sampling times of 62.5 µs, 125 µs, 250µs and 500µs can be set. The minimum current controller clock cycle for vector drives and the maximum current controller clock cycle for servo drives is 250 µs.

If sampling times in p0115 are individually changed for p0112 = 0 (expert) then it must always be observed that the selected sampling times of the setpoint channel p0115[3], position controller p0115[4], positioning p0115[5] and technology controller p0115[6] are always greater than or equal to twice the current controller sampling time p0115[0].

r0116[0...1] Drive object clock cycle recommended / DO_clock recom

A_INF, B_INF, CU_CX32, CU_I, CU_S, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR

Can be changed: -
Data type: FloatingPoint32

Expert list: 1

Min	Max	Factory setting
- [µs]	- [µs]	- [µs]

Description: Displays the recommended sampling time for the drive objects.
r00116[0] = recommended sampling time:
Recommended value which would then make the complete system operational.
r00116[1] = recommended sampling time:
Recommended value, which after changing other clock cycles on the DRIVE-CLiQ line, would result in an operational system.

Index: [0] = Change, only for the current drive object
[1] = Changing all objects on the DRIVE-CLiQ line

Dependency: Refer to: p0115

p0117 Current controller computing dead time mode / I_ctrl t_dead mode

CU_CX32, CU_I, CU_S

Can be changed: U, T
Data type: Integer16
P-Group: Closed-loop control
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 4
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
0	6	6

Description: Sets the mode for the computing dead time of the current controller.
0: Offset (shifted) clocking, minimum computing dead time of each drive, automatic setting
1: Clocking at the same time, the dead time aligns itself to the dead time of the latest drive, automatic setting
2: Manual setting of the computing dead time, early transfer
3: Manual setting of the computing dead time, late transfer
4-6: As for 0-2, however, no early transfers are set for vectors

Dependency: Refer to: p0118
Refer to: A02100

Note: Re p0117 = 0:
The times when the setpoints become effective for the individual controls is automatically and individually determined. Another computing dead time is set for each control (closed-loop) (p0118). Current is impressed for the individual controls without any offset with respect to time (improved EMC compatibility).
Re p0117 = 1:
The latest closed-loop control determines when the setpoints for each of the individual controls become active. The same computing dead time is set for each control (p0118). Current is impressed (flows) for the individual controls without any offset with respect to time.
Re p0117 = 2:
The computing dead time is manually set. The user must optimize the value in p0118.
Re p0117 = 3:
Only for internal Siemens use.
Re p0117 = 4 ... 6:
Behavior as for p0117 = 0 ... 2, however for vectors, the earliest times are not determined.
The modified computing dead time mode is not effective until the drive unit is powered up again.

p0118 Current controller computing dead time / I_ctrl t_dead

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	2000.00 [µs]	0.00 [µs]

Description: This parameter is preset as a function of the current controller sampling time (p0115[0]) and normally does not have to be changed.

Dependency: Refer to: p0117
Refer to: A02100

Note: For p0118 <= 0.005 µs, the current controller output is delayed by a complete current controller clock cycle (p0115[0]).
After p0118 has been changed, we recommend that the current controller is adapted (p1715).

p0120 Number of Power unit Data Sets (PDS) / PDS count

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: C1(3) | **Calculated:** - | **Access level:** 2
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Data sets | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
1	8	1

Description: Sets the number of Power unit Data Sets (PDS).
The value corresponds to the number of power units connected together for a parallel circuit configuration.

Dependency: Refer to: p0107, r0107

Note: This parameter is only significant for drive objects A_INFEED and VECTOR with a parallel circuit configuration.

p0121[0...n] Power unit component number / PU comp_no

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: C1(4) | **Calculated:** - | **Access level:** 3
Data type: Unsigned8 | **Dynamic index:** PDS, p0120 | **Func. diagram:** -
P-Group: Data sets | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0	199	0

Description: The power unit data set is assigned to a power unit using this parameter.
This unique component number is assigned when parameterizing the topology.
Only component numbers can be entered into this parameter that correspond to a power unit.

Dependency: Refer to: p0107, r0107

Note: For parallel circuit configurations, the parameter index is assigned to a power unit.

p0124[0...15] Detection of main components using LED / Detection LED

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Detects the main components of the drive object selected via the index.

p0124[0...n] Power unit detection via LED / PU detection LED

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: Unsigned8 | **Dynamic index:** PDS, p0120 | **Func. diagram:** -
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Detects the power unit assigned to this drive and data set.

Note: While p0124 = 1, the READY LED flashes green/orange or red/orange with 2 Hz at the appropriate power unit.
For parallel circuit configurations, the parameter index is assigned to a power unit.

p0125[0...n] Activate/de-activate power unit components / PU_comp act/de-act

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: C1(4), T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** PDS, p0120 | **Func. diagram:** -
P-Group: Data sets | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	2	1

Description: Setting to activate/de-activate a power unit component.

Value:
0: De-activate component
1: Activate component
2: Component, de-activate and not present

Recommend.: After inserting a component, before activating, first wait for Alarm A01317.

Dependency: Refer to: r0126
Refer to: A01317

Caution: It is not permissible to de-activate drive objects with safety functions enabled.

Note: The activation of a component can be rejected if the component was inserted for the first time.
In this case, it is only possible to activate the component when the pulses for all of the drive objects are inhibited.
For units connected in parallel, when one of the power units is de-activated, then the enable in p7001 is withdrawn.

r0126[0...n] Power unit components active/inactive / PU comp act/inact

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: - | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** PDS, p0120 | **Func. diagram:** -
P-Group: Data sets | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	-

Description: Displays the "active/inactive" state of a power unit component.

Value:
0: Component inactive
1: Component active

Dependency: Refer to: p0105, p0125, p0897

r0127[0...n] Power unit version EPROM data / PU EPROM version

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** PDS, p0120 | **Func. diagram:** -
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the version of the EPROM data of the power unit.

Dependency: Refer to: r0147, r0157

Note: For parallel circuit configurations, the parameter index is assigned to a power unit.

r0128[0...n] Power unit, firmware version / PU FW version

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: -
Data type: Unsigned32
P-Group: Converter
Not for motor type: -
Calculated: -
Dynamic index: PDS, p0120
Units group: -
Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the firmware version of the power unit.
Dependency: Refer to: r0018, r0148, r0158, r0197, r0198
Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.
For parallel circuit configurations, the parameter index is assigned to a power unit.

p0130 Number of Motor Data Sets (MDS) / MDS count

SERVO, VECTOR

Can be changed: C1(3)
Data type: Unsigned8
P-Group: Data sets
Not for motor type: -
Calculated: -
Dynamic index: -
Units group: -
Access level: 2
Func. diagram: 8575
Unit selection: -
Expert list: 1

Min	Max	Factory setting
1	16	1

Description: Sets the number of Motor Data Sets (MDS).

p0131[0...n] Motor component number / Mot comp_no

SERVO, VECTOR

Can be changed: C1(4)
Data type: Unsigned8
P-Group: Data sets
Not for motor type: -
Calculated: -
Dynamic index: MDS, p0130
Units group: -
Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
0	199	0

Description: The motor data set is assigned to a motor using this parameter.
This unique component number is assigned when parameterizing the topology.
Only component numbers can be entered into this parameter that correspond to a motor.

p0139[0...2] Copy Motor Data Set MDS / Copy MDS

SERVO, VECTOR

Can be changed: C2(15)
Data type: Unsigned8
P-Group: Data sets
Not for motor type: -
Calculated: -
Dynamic index: -
Units group: -
Access level: 2
Func. diagram: 8575
Unit selection: -
Expert list: 1

Min	Max	Factory setting
0	31	0

Description: Copying a Motor Data Set (MDS) into another.
Index: [0] = Source motor data set
[1] = Target motor data set
[2] = Start copying
Note: Procedure:
1. In Index 0, enter which motor data set should be copied.
2. In Index 1, enter the motor data set data that is to be copied into.
3. Start copying: Set index 2 from 0 to 1.
p0139[2] is automatically set to 0 when copying is completed.

When copying, p0131 is not taken into account.

p0140 Number of Encoder Data Sets (EDS) / EDS count

SERVO, VECTOR

Can be changed: C1(3) | **Calculated:** - | **Access level:** 2
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** 8570
P-Group: Data sets | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1	16	1

Description: Sets the number of Encoder Data Sets (EDS).

Note: When parameterizing the drive with "no encoder" there must be at least one encoder data set (p0140 >= 1).

p0141[0...n] Encoder interface (Sensor Module) component number / Enc_interf comp_no

SERVO, VECTOR

Can be changed: C1(4) | **Calculated:** - | **Access level:** 3
Data type: Unsigned8 | **Dynamic index:** EDS | **Func. diagram:** 4704, 8570
P-Group: Data sets | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	199	0

Description: This parameter is used to assign the encoder data set to an encoder evaluation (e.g. SMC).
This unique component number is assigned when parameterizing the topology.
Only component numbers can be entered into this parameter that correspond to an encoder evaluation.

Note: If the encoder evaluation and encoder are integrated (motor with DRIVE-CLiQ), then their component numbers are identical.
For an SMC, different component numbers are assigned for the SMC (p0141) and the (actual) encoder (p0142).

p0142[0...n] Encoder component number / Encoder comp_no

SERVO, VECTOR

Can be changed: C1(4) | **Calculated:** - | **Access level:** 3
Data type: Unsigned8 | **Dynamic index:** EDS | **Func. diagram:** 4704
P-Group: Data sets | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	199	0

Description: This parameter is used to assign the encoder data set to an encoder.
This assignment is made using the unique component number that was assigned when parameterizing the topology.
Only component numbers can be entered into this parameter that correspond to an encoder.

Note: If the encoder evaluation and encoder are integrated (motor with DRIVE-CLiQ), then their component numbers are identical.
For an SMC, different component numbers are assigned for the SMC (p0141) and the (actual) encoder (p0142).

p0144[0...n] Voltage sensing module detection via LED / VSM detection LED

A_INF, S_INF

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Encoder | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Detects the Voltage Sensing Module (VSM) module assigned to this infeed.

p0144[0...n] Sensor Module detection via LED / SM detection LED

SERVO, VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned8	**Dynamic index:** EDS	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	0

Description: Detects the Sensor Module assigned to this drive and data set.

Note: While p0144 = 1, the READY LED flashes green/orange or red/orange with 2 Hz at the appropriate Sensor Module.

p0145[0...n] Voltage Sensing Module, activate/de-activate / VSM act/deact

A_INF, S_INF	**Can be changed:** C1(4), T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Data sets	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	2	1

Description: Setting to activate/de-activate a Voltage Sensing Module (VSM).

Value:
0: De-activate component
1: Activate component
2: Component, de-activate and not present

Recommend.: After inserting a component, before activating, first wait for Alarm A01317.

Dependency: Refer to: r0146
Refer to: A01317

Note: For chassis infeeds, it is not possible to activate/de-activate the Voltage Sensing Module (VSM) via p0145. The VSM can only be activated/de-activated in the group with the appropriate infeed via p0125[0...n].
The activation of a component can be rejected if the component was inserted for the first time.
In this case, it is only possible to activate the component when the pulses for all of the drive objects are inhibited.

p0145[0...n] Activate/de-activate encoder interface / Enc_intf act/deact

SERVO, VECTOR	**Can be changed:** C1(4), U, T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dynamic index:** EDS	**Func. diagram:** -
	P-Group: Data sets	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	2	1

Description: Setting to activate/de-activate an encoder interface (Sensor Module).

Value:
0: De-activate component
1: Activate component
2: Component, de-activate and not present

Recommend.: After inserting a component, before activating, first wait for Alarm A01317.

Dependency: Refer to: r0146
Refer to: A01317

Note: The de-activation of an encoder interface corresponds to the"parking encoder" function and has the same effect.
The activation of a component can be rejected if the component was inserted for the first time.
In this case, it is only possible to activate the component when the pulses for all of the drive objects are inhibited.

r0146[0...n] Voltage Sensing Module, active/inactive / VSM act/inact

A_INF, S_INF

Can be changed: -
Calculated: -
Access level: 2
Data type: Integer16
Dynamic index: -
Func. diagram: -
P-Group: Data sets
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0	1	-

Description: Displays the "active" or "inactive" state of a Voltage Sensing Module (VSM).

Value:
0: Component inactive
1: Component active

Dependency: Refer to: p0105, p0145

r0146[0...n] Encoder interface active/inactive / Enc_intf act/inact

SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 2
Data type: Integer16
Dynamic index: EDS
Func. diagram: -
P-Group: Data sets
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0	1	-

Description: Displays the "active" or "inactive" state of an encoder interface (Sensor Module).

Value:
0: Component inactive
1: Component active

Dependency: Refer to: p0105, p0145, p0480, p0897

r0147[0...n] Voltage sensing module, EPROM data version / VSM EEPROM version

A_INF, S_INF

Can be changed: -
Calculated: -
Access level: 3
Data type: Unsigned32
Dynamic index: -
Func. diagram: -
P-Group: Encoder
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the version of the EPROM data of the Voltage Sensing Module (VSM).

r0147[0...n] Sensor Module EPROM data version / SM EEPROM version

SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 3
Data type: Unsigned32
Dynamic index: EDS
Func. diagram: -
P-Group: Encoder
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the version of the EPROM data of the Sensor Module.

Dependency: Refer to: r0127, r0157

r0148[0...n] Voltage Sensing Module firmware version / VSM FW version

A_INF, S_INF

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the firmware version of the Voltage Sensing Module (VSM).
Dependency: Refer to: r0018, r0128, r0158, r0197, r0198
Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r0148[0...n] Sensor Module firmware version / SM FW version

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** EDS	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the firmware version of the Sensor Module.
Dependency: Refer to: r0018, r0128, r0158, r0197, r0198
Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

p0150 Number of VSM data sets / VSM count

VECTOR

Can be changed: C1(3)	**Calculated:** -	**Access level:** 4
Data type: Unsigned8	**Dynamic index:** -	**Func. diagram:** -
P-Group: Data sets	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
1	2	1

Description: Sets the number of VSM data sets

p0151[0...n] Voltage Sensing Module component number / VSM comp_no

VECTOR

Can be changed: C1(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dynamic index:** -	**Func. diagram:** -
P-Group: Data sets	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0	199	0

Description: The VSM data set is assigned to a VSM evaluation using this parameter.

p0151[0...1] DRIVE-CLiQ Hub Module component number / Hub comp_no

HUB

Can be changed: C1(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dynamic index:** -	**Func. diagram:** -
P-Group: Data sets	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0	199	0

Description: Using this parameter, the data set is assigned to a DRIVE-CLiQ Hub Module.

This unique component number is assigned when parameterizing the topology.
Only the numbers of components operated as hubs can be entered in these parameters.
[0] = DRIVE-CLiQ node 1
[1] = DRIVE-CLiQ node 2

p0151 Terminal Module component number / TM comp_no

TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL

Can be changed: C1(4) | **Calculated:** - | **Access level:** 3
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Data sets | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	199	0

Description: Sets the component number for the Terminal Module.
This unique component number is assigned when parameterizing the topology.
Only component numbers can be entered into this parameter that correspond to a Terminal Module.

p0154 DRIVE-CLiQ Hub Module detection via LED / Hub detection LED

HUB

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Encoder | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Detecting any assigned DRIVE-CLiQ Hub Module.

p0154 Terminal Module detection via LED / TM detection LED

TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Terminals | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Detects the Terminal Module assigned to this drive and data set.
Note: While p0154 = 1, the READY LED flashes green/orange or red/orange with 2 Hz at the appropriate Terminal Module.

p0155[0...n] Voltage Sensing Module, activate/de-activate / VSM act/deact

VECTOR

Can be changed: C1(4), T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Data sets | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	2	1

Description: Setting to activate/de-activate a Voltage Sensing Module (VSM).
Value:
0: De-activate component
1: Activate component
2: Component, de-activate and not present
Recommend.: After inserting a component, before activating, first wait for Alarm A01317.
Dependency: Refer to: r0156
Refer to: A01317

r0156[0...n] Voltage Sensing Module, active/inactive / VSM act/inact

VECTOR

Can be changed: -
Data type: Integer16
P-Group: Data sets
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 2
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
0	1	-

Description: Displays the "active" or "inactive" state of a Voltage Sensing Module (VSM).

Value:
0: Component inactive
1: Component active

Dependency: Refer to: p0155

r0157[0...n] Voltage sensing module, EPROM data version / VSM EPROM version

VECTOR

Can be changed: -
Data type: Unsigned32
P-Group: Encoder
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the version of the EPROM data of the Voltage Sensing Module (VSM).

r0157 DRIVE-CLiQ Hub Module EPROM data version / Hub EPROM version

HUB

Can be changed: -
Data type: Unsigned32
P-Group: Terminals
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the version of the EPROM data of the DRIVE-CLiQ Hub Module.

r0157 Terminal Module EPROM data version / TM EPROM version

TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL

Can be changed: -
Data type: Unsigned32
P-Group: Terminals
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the version of the EPROM data of the Terminal Module.

Dependency: Refer to: r0127, r0147

r0158[0...n] Voltage Sensing Module firmware version / VSM FW version

VECTOR

Can be changed: -
Data type: Unsigned32
P-Group: Encoder
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the firmware version of the Voltage Sensing Module (VSM).

Dependency: Refer to: r0018, r0128, r0197, r0198

Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r0158 DRIVE-CLiQ Hub Module, firmware version / Hub FW version

HUB

Can be changed: -
Data type: Unsigned32
P-Group: Terminals
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the firmware version of the DRIVE-CLiQ Hub Module.

r0158 Terminal Module Firmware Version / TM FW version

TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL

Can be changed: -
Data type: Unsigned32
P-Group: Terminals
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the firmware version of the Terminal Module.
Dependency: Refer to: r0018, r0128, r0148, r0197, r0198
Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

p0161 Option board, component number / OptBoard comp_no

TB30

Can be changed: C1(4)
Data type: Unsigned8
P-Group: Data sets
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 4
Func. diagram: 9100
Unit selection: -
Expert list: 1

Min	Max	Factory setting
0	199	0

Description: Sets the component number for the option board (e.g. Terminal Board 30).
This unique component number is assigned when parameterizing the topology.
Only component numbers can be entered into this parameter that correspond to an option board.

p0162 CU-Link slave component number / CX32 comp_no

CU_LINK

Can be changed: C1(4)
Data type: Unsigned8
P-Group: Terminals
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
0	199	0

p0170 Number of Command Data Sets (CDS) / CDS count

A_INF, B_INF, S_INF, TM41

Can be changed: C1(3) | **Calculated:** - | **Access level:** 2
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Commands | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1	1	1

Description: Sets the number of Command Data Sets (CDS).
Note: It is possible to toggle between command parameters (BICO parameters) using this data set changeover.

p0170 Number of Command Data Sets (CDS) / CDS count

SERVO

Can be changed: C1(3) | **Calculated:** - | **Access level:** 2
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Commands | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1	2	1

Description: Sets the number of Command Data Sets (CDS).
Note: It is possible to toggle between command parameters (BICO parameters) using this data set changeover.

p0170 Number of Command Data Sets (CDS) / CDS count

VECTOR

Can be changed: C1(3) | **Calculated:** - | **Access level:** 2
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Commands | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
2	4	2

Description: Sets the number of Command Data Sets (CDS).
Note: It is possible to toggle between command parameters (BICO parameters) using this data set changeover.

p0180 Number of Drive Data Sets (DDS) / DDS count

SERVO, TM41, VECTOR

Can be changed: C1(3) | **Calculated:** - | **Access level:** 2
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** 8565
P-Group: Data sets | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1	32	1

Description: Sets the number of Drive Data Sets (DDS).

p0186[0...n] Motor Data Sets (MDS) number / MDS number

SERVO, VECTOR

Can be changed: C1(4) | **Calculated:** - | **Access level:** 3
Data type: Unsigned8 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 8575
P-Group: Data sets | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	15	0

Description: Using the parameter, each Drive Data Set (= index) is assigned the associated Motor Data Set (MDS).
The parameter value therefore corresponds to the number of the assigned motor data set.

p0187[0...n] Encoder 1 encoder data set number / Enc 1 EDS number

SERVO, VECTOR

Can be changed: C1(4) **Calculated:** - **Access level:** 3
Data type: Unsigned8 **Dynamic index:** DDS, p0180 **Func. diagram:** 1580, 8570
P-Group: Data sets **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	99	99

Description: Using the parameter, each Drive Data Set (= index) is assigned the associated Encoder Data Set (EDS) for encoder 1.
The parameter value therefore corresponds to the number of the assigned encoder data set.
Example:
Encoder data set 0 should be assigned to encoder 1 in drive data set 2.
--> p0187[2] = 0

Note: A value of 99 means that no encoder has been assigned to this drive data set (not configured).

p0188[0...n] Encoder 2 encoder data set number / Enc 2 EDS number

SERVO, VECTOR

Can be changed: C1(4) **Calculated:** - **Access level:** 3
Data type: Unsigned8 **Dynamic index:** DDS, p0180 **Func. diagram:** 1580, 8570
P-Group: Data sets **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	99	99

Description: Using the parameter, each Drive Data Set (= index) is assigned the associated Encoder Data Set (EDS) for encoder 2.
The parameter value therefore corresponds to the number of the assigned encoder data set.

Note: A value of 99 means that no encoder has been assigned to this drive data set (not configured).

p0189[0...n] Encoder 3 encoder data set number / Enc 3 EDS number

SERVO, VECTOR

Can be changed: C1(4) **Calculated:** - **Access level:** 3
Data type: Unsigned8 **Dynamic index:** DDS, p0180 **Func. diagram:** 1580, 8570
P-Group: Data sets **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	99	99

Description: Using the parameter, each Drive Data Set (= index) is assigned the associated Encoder Data Set (EDS) for encoder 3.
The parameter value therefore corresponds to the number of the assigned encoder data set.

Note: A value of 99 means that no encoder has been assigned to this drive data set (not configured).

r0192 Power unit firmware properties / PU FW property

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** -
P-Group: Converter **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the properties supported by the power unit firmware.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Edge modulation possible	Yes	No	-
01	Free telegram can be selected	Yes	No	-
02	Smart mode possible for Active Line Module	Yes	No	-

03	Safety Integrated possible for VECTOR	Yes	No	-
06	Liquid cooling	Yes	No	-
07	SERVO pulse frequency changeover, DDS-dependent	Yes	No	-
08	Simulation mode possible	Yes	No	-
09	Internal armature short-circuit possible	Yes	No	-
10	Autonomous internal armature short-circuit possible	Yes	No	-
11	Infeed temperature inputs X21.1/2	Yes	No	-
12	Integral normalized to half the gating unit clock cycle freq.	Yes	No	-
13	Filtering thermal power unit current limit possible	Yes	No	-
14	DC link compensation possible in power unit	Yes	No	-
15	PT100 temperature evaluation possible	Yes	No	-
18	Extended voltage range possible	Yes	No	-
20	Component status possible	Yes	No	-
21	Temperature evaluation via Motor Module / CU terminals possible	Yes	No	-

Notice: This information represents the characteristics/features of the power unit firmware. It does not provide information/data about the characteristics/features of the hardware (e.g. bit 06 = 1 means that although the firmware supports "liquid cooling", a power unit with liquid cooling does not have to be used).

Note: Re bit 09:

The Motor Module supports the internal armature short-circuit. The function is internally required for voltage protection (p1231 = 3).

Re bit 10:

The Motor Module supports the autonomous internal voltage protection. If the voltage protection function is internally activated (p1231 = 3) the Motor Module decides autonomously - using the DC link voltage - as to whether the short-circuit is activated.

r0194[0...n] VSM properties / VSM properties

A_INF, S_INF, VECTOR

Can be changed: - **Calculated:** - **Access level:** 4
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** -
P-Group: Encoder **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the properties supported by the Voltage Sensing Module (VSM).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Reserved	Yes	No	-

r0196[0...254] DRIVE-CLiQ component status / DLQ comp status

CU_CX32, CU_I, CU_S

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the status of DRIVE-CLiQ components.

r0196[0...1]: Not used

r0196[2]: Status of DRIVE-DRIVE-CLiQ components with component number 2

...

r0196[255]: Status of DRIVE-DRIVE-CLiQ components with component number 255

Note: Structure of status value: Bits 31 ... 8, 7, 6 ... 4, 3 ... 0
Re Bit 31 ... 8: Reserved
Re Bit 7: 1: Part of set topology, 0: Only in actual topology
Re Bit 6 ... 4: 1: Active, 0: Inactive or parked
Re Bit 3 ... 0:
0: Component data not available.
1: Power-up, acyclic DRIVE-CLiQ communication (LED = orange).
2: Ready for operation, cyclic DRIVE-CLiQ communication (LED = green).
3: Warning (LED = green).
4: Fault (LED = red).
5: Detection via LED and ready for operation (LED = green/orange).
6: Detection via LED and alarm (LED = green/orange).
7: Detection via LED and fault (LED = red/orange).
8: Downloading firmware (LED = green/red at 0.5 Hz).
9: Firmware downloading completed, Waiting for POWER ON (LED = green/red at 2.0 Hz).

r0197 Loader 1 version / Loader 1 version

CU_CX32, CU_I, CU_S

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** -
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the version of loader 1 (first level loader).
Dependency: Refer to: r0018, r0128, r0148, r0158, r0198
Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r0198 Loader 2 version / Loader 2 version

CU_CX32, CU_I, CU_S

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** -
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the version of loader 2 (second level loader).
Dependency: Refer to: r0018, r0128, r0148, r0158, r0197
Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

p0199[0...24] Drive object name / DO name

All objects

Can be changed: C1 **Calculated:** - **Access level:** 2
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	65535	0

Description: Freely assignable name for a drive object.
In the commissioning software, this name cannot be entered using the expert list, but is specified in the configuration assistant. The object name can be subsequently modified in the Project Navigator using standard Windows resources.

r0200[0...n] Power unit current code number / PU code no. act

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dynamic index:** PDS, p0120	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the unique code number of the power unit.

Note: r0200 = 0: No power unit found

For parallel circuit configurations, the parameter index is assigned to a power unit.

p0201[0...n] Power unit code number / PU code no.

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: C2(2)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dynamic index:** PDS, p0120	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	0

Description: Sets the current code number from r0200 to acknowledge the power unit being used.

When commissioned for the first time, the code number is automatically transferred from r0200 into p0201.

Dependency: Refer to: F07815

Note: The parameter is used to identify when the drive is being commissioned for the first time.

The power unit commissioning can only be exited (p0201 = r0200), if the current and acknowledged code numbers are identical (p0010 = 2).

For SERVO and VECTOR, the following applies:

If the comparator in p9906 or p9908 is at 2 (low) or 3 (minimum), the power unit commissioning is automatically set to p0201 = r0200 upon exiting.

When the code number is changed, the supply voltage (p0210) is checked and, if necessary, adapted.

For VECTOR, the following applies:

For parallel circuit configurations, the parameter index is assigned to a power unit.

r0203[0...15] Memory card name / Mem_card name

CU_CX32, CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned8	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the name of the memory card in ASCII code.

r0203[0]: Name character 1

...

r0203[15]: Name character 16

For the commissioning software, the ASCII characters are displayed uncoded.

Notice: An ASCII table (excerpt) can be found, for example, in the following List Manual:

r0203[0...n] Current power unit type / PU current type

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 3
Data type: Integer16
Dynamic index: PDS, p0120
Func. diagram: -
P-Group: Converter
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
2	350	-

Description: Displays the type of power unit found.

Value:

2: MICROMASTER 440
3: MICROMASTER 411
4: MICROMASTER 410
5: MICROMASTER 436
6: MICROMASTER 440 PX
7: MICROMASTER 430
100: SINAMICS S
101: SINAMICS S (value)
120: PM340 (SINAMICS S120)
150: SINAMICS G
200: SINAMICS GM
250: SINAMICS SM
300: SINAMICS GL
350: SINAMICS SL

Note: For parallel circuit configurations, the parameter index is assigned to a power unit.

r0204[0...n] Power unit hardware properties / PU HW property

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 3
Data type: Unsigned32
Dynamic index: PDS, p0120
Func. diagram: -
P-Group: Converter
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the properties supported by the power unit hardware.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Device type	DC/AC device	AC/AC device	-
01	RFI filter available	Yes	No	-
02	Active Line Module available	Yes	No	-
03	Smart Line Module available	Yes	No	-
04	Basic Line Module available with thyristor bridge	Yes	No	-
05	Basic Line Module available with diode bridge	Yes	No	-
06	Liquid cooling with cooling system (chassis PU)	Yes	No	-
08	Internal Braking Module	Yes	No	-
09	Different cooling type supported	Yes	No	-
12	Safe Brake Control (SBC) supported	No	Yes	-
13	Safety Integrated supported	Yes	No	-

Note: For parallel circuit configurations, the parameter index is assigned to a power unit.

p0205 Power unit application / PU application

VECTOR

Can be changed: C2(1) | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	7	6

Description: Overloading the load duty cycles applies under the prerequisite that before and after the overload, the drive converter is operated with its base load current - in this case, a load duty cycle of 300 s is used as basis.

For booksize drive units, the following applies:

Only the setting p0205 = 0 can be selected. In this particular case, the base load current has a load duty cycle of 150 % for 60 s and 176 % for 30 s.

For chassis drive units, the following applies:

The base load current for a slight overload condition is based on a load duty cycle 110 % for 60 s and 150 % for 10 s.

The base load current for a high overload condition is based on a load duty cycle 150 % for 60 s and 160 % for 10 s.

Value:
0: Load duty cycle with high overload for vector drives
1: Load duty cycle with low overload for vector drives
6: S1 duty cycle for servo drives (feed drive)
7: S6 duty cycle for servo drives (spindle drive)

Note: When the parameter is changed, all of the motor parameters and the control mode are pre-assigned according to the selected application. The parameter has not influence when calculating the thermal overload.

p0205 can only be changed to the settings that are saved in the power unit EEPROM.

Its value is not reset when factory values are restored (see p0010 = 30, p0970).

r0206[0...4] Rated power unit power / PU P_rated

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: - | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Converter | **Units group:** 14_6 | **Unit selection:** p0100
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
- [kW]	- [kW]	- [kW]

Description: Displays the rated power unit power for various load duty cycles.

Index:
[0] = Rating plate
[1] = Load duty cycle with low overload
[2] = Load duty cycle with high overload
[3] = S1 continuous duty cycle
[4] = S6 load duty cycle

Dependency: The value is displayed in [kW] or [hp].

Refer to: p0100, p0205

r0207[0...4] Rated power unit current / PU PI_rated

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: - | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 8014
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the rated power unit power for various load duty cycles.

Index:
[0] = Rating plate
[1] = Load duty cycle with low overload
[2] = Load duty cycle with high overload
[3] = S1 continuous duty cycle

[4] = S6 load duty cycle

Dependency: Refer to: p0205

r0208 Rated power unit line supply voltage / PU V_rated

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 2
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: Converter **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the rated line supply voltage of the power unit.
r0208 = 400: 380 - 480 V +/-10 %
r0208 = 500: 500 - 600 V +/-10 %
r0208 = 690: 660 - 690 V +/-10 %
For the Basic Line Module (BLM) the following applies:
r0208 = 690 : 500 - 690 V +/-10 %

r0209[0...4] Power unit, maximum current / PU I_max

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 2
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 8750, 8850, 8950
P-Group: Converter **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the maximum output current of the power unit.
Index: [0] = Catalog
[1] = Load duty cycle with high overload
[2] = Load duty cycle with low overload
[3] = S1 load duty cycle
[4] = S6 load duty cycle
Dependency: Refer to: p0205

p0210 Drive unit line supply voltage / Supply voltage

A_INF, S_INF

Can be changed: C2(1) **Calculated:** - **Access level:** 1
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 8860, 8960
P-Group: Converter **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
100 [Vrms]	1000 [Vrms]	400 [Vrms]

Description: Sets the drive unit supply voltage (3-ph. AC).
The value corresponds to the rms value of the phase-to-phase rated line supply voltage.
Dependency: Refer to: p3400
Warning: If the infeed is continually in the controlled mode with high DC link voltages (p3510 > 660 V), depending on the particular application, this can damage the connected motors that have not been specified for these high voltages.
Before an active infeed with a line supply voltage p0210 > 415 V goes into pulsed operation it must be ensured that all of the components connected to the DC link can be permanently operated with DC link voltages exceeding 660 V.
Controlled operation of booksize power units for p0210 > 415 V is possible if the maximum steady-state DC link voltage (p0280) is increased as follows: p0280 >= 1.5 * p0210 and p0280 > 660 V.
In this case, the setpoint of the DC link voltage p3510 is not automatically adapted. We recommend p3510 = 1.5 * p0210. Closed-loop voltage controlled operation is active with p3400.0 = 0 and p3400.3 = 1.

Notice: For p0210 > 415 V for booksize power units with a supply voltage of 3-ph. 380 ... 480 V, the smart mode is automatically activated (p3400.0 = 1). In this case, the smart mode cannot be de-activated. This is because in the voltage controlled mode, the maximum steady-state DC link voltage (p0280) would be exceeded.
For booksize power units with supply voltage of 3-ph. 380 ... 480 V AC, the following applies:
380 V <= p0210 <= 400 V --> Pre-assignment, setpoint for the DC link voltage: p3510 = 600 V
401 V <= p0210 <= 415 V --> Pre-assignment, setpoint for the DC link voltage: p3510 = 625 V
416 V <= p0210 <= 480 V --> Smart Mode with non-regulated DC link voltage: p3510 = 1.35 * p0210

Note: When pre-assigning the setpoint for the DC link voltage (p3510), the following is generally valid:
p3510 = 1.5 * p0210
The voltage range for the supply voltage depends on the type and the voltage class of the power unit.
For booksize drive units, the following applies:
Active Line Module, 400 V unit: 180 V <= p0210 <= 480 V
Smart Line Module, 400 V unit: 180 V <= p0210 <= 480 V
For chassis drive units, the following applies:
Active Line Module, 400 V unit: 180 V <= p0210 <= 480 V
Active Line Module, 690 V unit: 660 V <= p0210 <= 690 V
Active Line Module, 500/690 V unit: 380 V <= p0210 <= 690 V
Smart Line Module, 400 V unit: 380 V <= p0210 <= 480 V
Smart Line Module, 690 V unit: 500 V <= p0210 <= 690 V

p0210 Drive unit line supply voltage / Supply voltage

SERVO, VECTOR

Can be changed: C2(2), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** 6220, 6320
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
1 [V]	63000 [V]	600 [V]

Description: Sets the drive unit supply voltage.
AC/AC unit: The rms value of the phase-to-phase line supply voltage should be entered.
DC/AC unit: The rated DC voltage of the connection busbar should be entered.

Dependency: Set p1254, p1294 (automatic detection of the Vdc switch-on levels) = 0.
The switch-in thresholds of the Vdc_max controller are then directly determined using p0210.

Caution: If the line supply voltage is higher than the entered value, the Vdc controller may be automatically de-activated in some cases to prevent the motor from accelerating. In this case, an appropriate alarm is output.

Note: Setting ranges for p0210 as a function of the rated power unit voltage:
V_rated = 230 V:
- p0210 = 200 ... 240 V (AC/AC)
V_rated = 400 V:
- p0210 = 380 ... 480 V (AC/AC), 510 ... 720 V (DC/AC)
V_rated = 400 V (booksize):
- p0210 = 380 ... 480 V (AC/AC), 510 ... 720 V, 270 ... 360 V (DC/AC)
V_rated = 500 V:
- p0210 = 500 ... 600 V (AC/AC), 675 ... 900 V (DC/AC)
V_rated = 690 V:
- p0210 = 660 ... 690 V (AC/AC), 890 ... 1035 V (DC/AC)
The pre-charging switch-in threshold for the DC link voltage (Vdc) is calculated from p0210:
Vdc_pre = p0210 * 0.82 * 1.35 (AC/AC)
Vdc_pre = p0210 * 0.82 (DC/AC)
The undervoltage thresholds for the DC link voltage (Vdc) are calculated from p0210 as a function of the rated power unit voltage:
V_rated = 400 V:
- V_min = p0210 * 0.78 (AC/AC), p0210 * 0.60 (DC/AC)

V_rated = 500 V:
- V_min = p0210 * 0.76 (AC/AC)
V_rated = 690 V:
- V_min = p0210 * 0.74 (AC/AC), p0210 * 0.57 (DC/AC)

p0210 Drive unit line supply voltage / Supply voltage

B_INF

Can be changed: C2(1)	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 8760
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
200 [Vrms]	1000 [Vrms]	400 [Vrms]

Description: Sets the drive unit supply voltage (3-ph. AC).

The value corresponds to the rms value of the phase-to-phase rated line supply voltage.

Caution: If the line supply voltage is higher than the entered value, the Vdc controller may be automatically de-activated in some cases to prevent the motor from accelerating. In this case, an appropriate alarm is output.

Notice: When connected to 3-ph. 230 V AC (only booksize units) the following must be observed:

- the undervoltage and overvoltage limits change (r0296, r0297).

- when using the internal braking chopper from the Basic Line Modules (20 or 40 kW) the threshold when the braking chopper becomes active is reduced to 385 V. When using an external braking chopper, it must be ensured that a suitable activation threshold is used.

- all of the components connected to this DC link must also be adapted to the low line supply voltage. It is especially important that the rated DC voltage of all of the drives connected to this DC link is set with p0210 (e.g. p0210(SERVO) = 1.35 * p0210(B_INF) = 310 V).

- it is not possible to use a Control Supply Module (CSM) to generate a 24 V supply from the DC link, as the minimum continuous DC link voltage should not be below 430 V.

Note: The supply voltage range depends on the voltage class of the power unit.

400 V chassis units: 380 V <= p0210 <= 480 V

690 V chassis units: 500 V <= p0210 <= 690 V

400 V booksize units can also be connected to 3-ph. 230 V AC:

400 V booksize units: 180 V <= p0210 <= 480 V

p0211 Rated line freq / Rated line freq

A_INF, S_INF

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 8864, 8964

Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
10 [Hz]	100 [Hz]	50 [Hz]

Description: Sets the rated line frequency for the infeed.

Dependency: Refer to: p3409

Notice: For p3409 = 1, the following applies:

After operation has been enabled, the rated line supply frequency (p0211) is automatically set to a value of 50 Hz or 60 Hz corresponding to the currently measured frequency. This means that the parameter value of p0211 is, under certain circumstances, changed.

For p3409 = 0, the following applies:

The system does not change parameter p0211.

p0220[0...1] Infeed line filter type / INF line filt type

A_INF

Can be changed: C2(1) **Calculated:** - **Access level:** 3
Data type: Integer16 **Dynamic index:** - **Func. diagram:** 8950
P-Group: Converter **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	45	0

Description: Sets the line filter type for the Active Line Module (ALM).

Using the line filter type, filter capacitance (p0221), filter resistance (p0222) and inductance (p0223) and resistance (p0224) of the reactor are pre-assigned.

For an Active Line Module (ALM), the power is automatically selected corresponding to the Active Interface Module (AIM) and the line filter type (p0220) pre-set as follows:

- "booksize" format: p0220 = 41 ... 45
- "chassis" format: p0220 = 10 ... 19

Value:

0: No line filter
1: Wideband Line Filter booksize 400 V 16 kW (6SL3000-0BE21-6AA0)
2: Wideband Line Filter booksize 400 V 36 kW (6SL3000-0BE23-6AA0)
3: Wideband Line Filter booksize 400 V 55 kW (6SL3000-0BE25-5AA0)
4: Wideband Line Filter booksize 400 V 80 kW (6SL3000-0BE28-0AA0)
5: Wideband Line Filter booksize 400 V 120 kW (6SL3000-0BE31-2AA0)
10: AIM F 400 V 132 kW 160 kW (6SL3300-7TE32-6Ax0)
11: AIM G 400 V 235 kW (6SL3300-7TE33-8Ax0)
12: AIM G 400 V 300 kW (6SL3300-7TE35-0Ax0)
13: AIM H 400 V 380 kW 500 kW (6SL3300-7TE38-4Ax0)
14: AIM J 400 V 630 kW 900 kW (6SL3300-7TE41-4Ax0)
15: AIM F 690 V 150 kW (6SL3300-7TH31-4Ax0)
16: AIM G 690 V 330 kW (6SL3300-7TH33-1Ax0)
17: AIM H 690 V 560 kW (6SL3300-7TH35-8Ax0)
18: AIM J 690 V 800 kW (6SL3300-7TH37-4Ax0)
19: AIM J 690 V 1100 kW 1400 kW (6SL3300-7TH41-3Ax0)
31: Basic Line Filter booksize 400 V 16 kW (6SL3000-0BE21-6DA0)
32: Basic Line Filter booksize 400 V 36 kW (6SL3000-0BE23-6DA0)
33: Basic Line Filter booksize 400 V 55 kW (6SL3000-0BE25-5DA0)
34: Basic Line Filter Booksize 400 V 80 kW (6SL3000-0BE28-0DAx)
35: Basic Line Filter Booksize 400 V 120 kW (6SL3000-0BE31-2DAx)
41: AIM 400 V 16 kW (6SL3100-0BE21-6AB0)
42: AIM 400 V 36 kW (6SL3100-0BE23-6AB0)
43: AIM 400 V 55 kW (6SL3100-0BE25-5AB0)
44: AIM 400 V 80 kW (6SL3100-0BE28-0AB0)
45: AIM 400 V 120 kW (6SL3100-0BE31-2AB0)

Index: [0] = Line filter
[1] = Line filter, optional

Notice: "Booksize" format: When using an Active Interface Module (AIM), it is absolutely necessary that the terminals for the temperature switch between the Active Interface Module (X121.1/2) and the Active Line Module (X21.1/2) are connected.

Note: For booksize units, when using an Active Interface Module in p0220[0] it is also possible to use a Basic Filter that is parameterized in p0220[1].

The setting of the filter capacitance (p0221) and filter resistance (p0222) - derived from p0220[0, 1] - are required in the closed-loop voltage controlled mode to automatically compensate the filter reactive current.

For two power ratings, the same line filter is used for both power ratings.

AIM: Active Interface Module

p0221[0...1] Infeed filter capacitance / INF C_filter

A_INF

Can be changed: C2(1) | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 8950
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [µF]	100000.00 [µF]	0.00 [µF]

Description: Sets the filter capacitance of the line filter (connected in a delta configuration).

Index: [0] = Line filter
[1] = Line filter, optional

Note: When a Siemens line filter is used (p0220) this parameter is automatically preset with the correct value.
For a parallel circuit, the value corresponds to the capacitance of a power unit.
Index 0 refers to the first line filter from p0220[0].
Index 1 refers to the optional second line filter from p0220[1].

p0222[0...1] Infeed filter resistance / INF R_filter

A_INF

Can be changed: C2(1) | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00000 [Ohm]	100.00000 [Ohm]	0.00000 [Ohm]

Description: Sets the filter resistance in series with the filter capacitance.

Index: [0] = Line filter
[1] = Line filter, optional

Note: When a Siemens line filter is used (p0220) this parameter is automatically preset with the correct value.
For a parallel circuit, the value corresponds to the resistance of a power unit.
Index 0 refers to the first line filter from p0220[0].
Index 1 refers to the optional second line filter from p0220[1].

p0223 Infeed inductance between filter and power unit / INF L filter/PU

A_INF, S_INF

Can be changed: C2(1) | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 8850, 8950
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.001 [mH]	1000.000 [mH]	2.100 [mH]

Description: Sets the inductance between the filter and power unit.

Note: The parameter is automatically pre-assigned depending on the power unit being used and matches the specified Siemens commutating reactors.
For a parallel circuit, the value corresponds to the inductance of a power unit.

p0224 Infeed resistance between filter and power unit / INF R filter/PU

A_INF, S_INF

Can be changed: C2(1) | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 8850, 8950
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00000 [Ohm]	100.00000 [Ohm]	0.00100 [Ohm]

Description: Sets the resistance between the filter and power unit

Note: The parameter is automatically pre-assigned depending on the power unit being used and matches the specified Siemens commutating reactors.
For a parallel circuit, the value corresponds to the resistance of a power unit.

p0225 Infeed inductance between line supply and filter / INF L line/filter

A_INF, S_INF

Can be changed: C2(1) **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 8850, 8950
P-Group: Converter **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0.001 [mH]	1000.000 [mH]	0.001 [mH]

Description: Sets the inductance between line supply and filter.
Note: The value must be, for example, appropriately increased if an additional inductance (reactor or transformer is installed in front of the filter).

p0226 Infeed resistance between line supply and filter / INF R line/filter

A_INF, S_INF

Can be changed: C2(1) **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 8850, 8950
P-Group: Converter **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0.00 [Ohm]	100.00 [Ohm]	0.00 [Ohm]

Description: Sets the resistance between the line supply and filter.
Note: The value must be, for example, appropriately increased if an additional resistor is installed in front of the filter.

p0227 Infeed, DC link capacitance, power unit / INF C

A_INF, S_INF

Can be changed: C2(1) **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 8850, 8950
P-Group: Converter **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0.20 [mF]	1000.00 [mF]	1.00 [mF]

Description: Sets the total DC link capacitance.
Note: The total DC link capacitance of a DC link group comprises the sum of the sub-capacitances of all motor/infeed modules and the additional DC link capacitors.

p0230 Drive filter type, motor side / Drv filt type mot

VECTOR

Can be changed: C2(1, 2) **Calculated:** - **Access level:** 1
Data type: Integer16 **Dynamic index:** - **Func. diagram:** -
P-Group: Converter **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	4	0

Description: Sets the type of the filter at the motor side.
Value:
0: No filter
1: Motor reactor
2: dv/dt filter
3: Sine-wave filter, Siemens
4: Sine-wave filter, third-party

Dependency: The following parameters are influenced using p0230:
p0230 = 1:
--> p0233 (power unit, motor reactor) = filter inductance

p0230 = 3:
--> p0233 (power unit, motor reactor) = filter inductance
--> p0234 (power unit sine-wave filter capacitance) = filter capacitance
--> p0290 (power unit overload response) = inhibit pulse frequency reduction
--> p1082 (maximum speed) = Fmax filter / pole pair number
--> p1800 (pulse frequency) >= nominal pulse frequency of the filter
--> p1802 (modulator modes) = space vector modulation without overcontrol
--> p1909 (motor data identification, control word) = only Rs measurement
p0230 = 4:
--> p0290 (power unit overload response) = inhibit pulse frequency reduction
--> p1802 (modulator modes) = space vector modulation without overcontrol
--> p1909 (motor data identification, control word) = only Rs measurement
The user must set the following parameters according to the data sheet of the sine-wave filter and also the user must check whether they are permitted.
--> p0233 (power unit, motor reactor) = filter inductance
--> p0234 (power unit sine-wave filter capacitance) = filter capacitance
--> p1082 (maximum speed) = Fmax filter / pole pair number
--> p1800 (pulse frequency) >= nominal pulse frequency of the filter
Refer to: p0233, p0234, p0290, p1082, p1800, p1802

Note: if a filter type cannot be selected, then this filter type is not permitted for the Motor Module.
p0230 = 2:
Chassis-type power units with dv/dt filter, depending on the rated pulse frequency, may only be operated with a maximum pulse frequency of p1800 = 2.5 kHz or 4 kHz. The output frequency is limited to 150 Hz.
p0230 = 3:
Sine-wave filters with a rated pulse frequency of 1.25 or 2.5 kHz should only be operated with a current controller sampling rate p0115[0] = 400 µs, sine-wave filters with a rated pulses frequency of 2 or 4 kHz with p0115[0] = 250 µs.
The sine-wave filter cannot be selected if the current controller sampling rate hasn't been appropriately set.

p0233 Power unit motor reactor / PU mot reactor

VECTOR

Can be changed: C2(2), U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [mH]	1000.000 [mH]	0.000 [mH]

Description: Enter the inductance of a filter connected at the power unit output.

Dependency: The parameter is automatically pre-assigned when selecting a filter via p0230 if a SIEMENS filter is defined for the power unit.
Refer to: p0230

Note: When exiting the quick commissioning using p3900 = 1, the parameter value is set to the value of the defined SIEMENS filter or to zero. For this reason, the parameter value of a third-party filter only has to be entered outside the commissioning phase (p0010 = 0) and then the controller calculation (p0340 = 3) is carried out.

p0234 Power unit sine-wave filter capacitance / PU sine filter C

VECTOR

Can be changed: C2(2), U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [µF]	1000.000 [µF]	0.000 [µF]

Description: Enters the capacitance of a sine-wave filter connected at the power unit output.

Dependency: The parameter is automatically pre-assigned when selecting a filter via p0230 if a SIEMENS filter is defined for the power unit.
Refer to: p0230

Note: The parameter value includes the sum of all of the capacitances of a phase connected in series (phase - ground).
When exiting the quick commissioning using p3900 = 1, the parameter value is set to the value of the defined SIEMENS filter or to zero. For this reason, the parameter value of a third-party filter only has to be entered outside the commissioning phase (p0010 = 0).

p0235 Number of reactors connected in series / Qty L in series

VECTOR

Can be changed: C2(1, 2) | **Calculated:** - | **Access level:** 1
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1	3	1

Description: Number of reactors connected at the power unit output.

Dependency: Refer to: p0230

Caution: If the number of motor reactors connected in series does not correspond to the parameter value, then this can result in an unfavorable control behavior.

Note: The parameter cannot be changed for chassis drive units and for p0230 = 1.

p0249 Power unit cooling type / PU cool type

S_INF, SERVO, VECTOR

Can be changed: C2(1, 2) | **Calculated:** - | **Access level:** 4
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Sets the cooling type for booksize compact power units.
This therefore defines whether for these power units, the internal air cooling is shut down and instead, the "Cold-Plate" cooling type is used.

Value:
0: Air cooling int
1: Cold-Plate

Note: For booksize compact power units, there is a 4 at the 5th position in the Order No.
The parameter is irrelevant for all other power unit types.

p0251[0...n] Operating hours counter power unit fan / PU fan t_oper

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** PDS, p0120 | **Func. diagram:** -
P-Group: Modulation | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [h]	4294967295 [h]	0 [h]

Description: Displays the power unit fan operating hours.
The number of hours operated can only be reset to 0 in this parameter (e.g. after a fan has been replaced).

Dependency: Refer to: p0252

p0252 Maximum operating time power unit fan / PU fan t_oper max

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 4
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Modulation | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [h]	50000 [h]	40000 [h]

Description: Sets the maximum operating time of the power unit fan.
The pre-alarm (warning) is output 500 hours before this set value.
The monitoring is de-activated with p0252 = 0.

Dependency: Refer to: p0251

Note: For chassis units, the maximum operating time in the power unit parameter is set to 50000 via the factory setting.

p0260 Cooling system, starting time 1 / RKA start time 1

A_INF (Cooling system), B_INF (Cooling system), S_INF (Cooling system), SERVO (Cooling system), VECTOR (Cooling system)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 9795
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [s]	60.0 [s]	5.0 [s]

Description: Sets starting time 1 to monitor the cooling system after power on command.
After powering up, the following signals must be present within starting time 1:
- "RKA powered up"
- "RKA liquid flow OK"

When a fault occurs, an appropriate message is output.

Dependency: Refer to: F49152, F49153

Note: RKA: Cooling system

p0261 Cooling system, starting time 2 / RKA start time 2

A_INF (Cooling system), B_INF (Cooling system), S_INF (Cooling system), SERVO (Cooling system), VECTOR (Cooling system)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 9795
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [s]	1200.0 [s]	180.0 [s]

Description: Sets starting time 2 to monitor the cooling system after power-on command.
After powering up, the following signals must be present within starting time 2:
- "RKA conductivity, no fault"
- "RKA conductivity, no alarm"

When a fault occurs, an appropriate message is output.

Dependency: Refer to: p0266
Refer to: F49151, A49171

p0262 Cooling system, fault conductivity delay time / RKA cond t_del

A_INF (Cooling system), B_INF (Cooling system), S_INF (Cooling system), SERVO (Cooling system), VECTOR (Cooling system)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 9795
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [s]	30.0 [s]	0.0 [s]

Description: Sets the delay time for the fault "RKA: Conductive limit value exceeded" during operation.
The fault is only output if, during operation, the conductivity exceeds the permissible fault value and the value remains for a longer time than is set in this parameter.

Dependency: Refer to: F49151

p0263 Cooling system fault liquid flow, delay time / RKA flow t_del

A_INF (Cooling system), B_INF (Cooling system), S_INF (Cooling system), SERVO (Cooling system), VECTOR (Cooling system)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 9795
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [s]	20.0 [s]	3.0 [s]

Description: Sets the delay time for the fault "RKA: Liquid flow too low".
The fault is only output if the cause is present for a time longer than is set in this parameter.

Dependency: Refer to: F49153

p0264 Cooling system, run-on time / RKA run-on time

A_INF (Cooling system), B_INF (Cooling system), S_INF (Cooling system), SERVO (Cooling system), VECTOR (Cooling system)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 9795
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [s]	180.0 [s]	30.0 [s]

Description: Sets the run-up time of the cooling system after a power-off command.

r0265.0...3 BO: Cooling system, control word / RKA CTW

A_INF (Cooling system), B_INF (Cooling system), S_INF (Cooling system), SERVO (Cooling system), VECTOR (Cooling system)

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Commands | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the control word for the cooling system.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Power up cooling system	Power-up	Deactivating	-
01	Message converter off	Off	On	-

02	Acknowledge faults	Acknowledgement	No acknowledgement	-
03	Leakage sensing OK	No leaked liquid	Leaked liquid	-

p0266[0...7] BI: Cooling system, feedback signals, signal source / RKA fdbk S_src

A_INF (Cooling system), B_INF (Cooling system), S_INF (Cooling system), SERVO (Cooling system), VECTOR (Cooling system)

Can be changed: U, T | **Calculated:** - | **Access level:** 3

Dependency: Refer to: p0266

p0278 DC link voltage undervoltage threshold reduction / Vdc V_under red

SERVO, VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-80 [V]	0 [V]	0 [V]

Description: Sets the absolute value by which the threshold to initiate the undervoltage fault (F30003) is reduced.

Dependency: Refer to: p0210, r0296
Refer to: F30003

Notice: When using a Control Supply Module (CSM) for 24 V supply from the DC link, the minimum continuous DC link voltage may not lie below 430 V. DC link voltages in the range 300 ... 430 V are permissible up to a duration of 1 min.

Note: The resulting shutdown threshold can be read in r0296 and is dependent on the selected rated voltage (p0210) and the power unit being used.

p0279 DC link voltage offset alarm threshold / Vdc offs A thresh

A_INF, B_INF, S_INF

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 8760, 8864, 8964
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0 [V]	500 [V]	0 [V]

Description: Sets the voltage threshold to initiate alarm A06810.

The value represents an offset so that the alarm threshold is obtained from the total of r0296 and p0279.

Dependency: Refer to: p0210, r0296

Refer to: A06810

Note: The absolute value of the undervoltage threshold r0296 depends on the selected unit supply voltage (p0210).

p0280 DC link voltage maximum steady-state / Vdc_max stat

A_INF

Can be changed: C2(1), T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 8940, 8964
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
270 [V]	1500 [V]	660 [V]

Description: Sets the maximum steady-state DC link voltage. When the DC link voltage setpoint reaches the threshold, alarm A06800 is output.

The setpoint for the DC link voltage in p3510 is limited to the value in p0280.

The voltage can be increased (boosted) using the modulation depth reserve controller. The modulation depth reserve (p3480) can be too low if p0210 (drive unit supply voltage) was incorrectly parameterized, a line overvoltage condition is present or a high reactive current is required.

Dependency: Refer to: p0210

Refer to: A06800

Warning: Before increasing the voltage limit for pulsed operation of a controlled booksize infeed with line supply voltages p0210 > 415 V it should be checked whether the motors connected to the DC link are specified for the higher motor voltages.

The warning information associated with p0210 must be carefully observed.

Caution: All motors connected to the DC link must be rated for the maximum DC link voltage set in this parameter.

Notice: For chassis power units, for the extended line supply voltage range from 500 V to 690 V, the value in p0280 is automatically adapted if the line supply voltage in p0210 is changed. The individual parameter setting for p0280 is then lost and if necessary must be re-entered.

Note: A brief dynamic increase of the DC link voltage does not result in an alarm.

Pre-setting values:

380 ... 480 V booksize units: 660 V

380 ... 480 V chassis units: 750 V

500 ... 690 V chassis units: 0.875 * p0210 + 502 V

Maximum values:

380 ... 480 V booksize units: 785 V

380 ... 480 V chassis units: 785 V

500 ... 690 V chassis units: 1130 V

p0281 Line supply overvoltage, alarm threshold / V_l_over A thresh

A_INF, S_INF

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 8860, 8960
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
100 [%]	200 [%]	110 [%]

Description: Sets the alarm threshold for a line supply overvoltage condition.
The setting is made as a percentage of the drive unit supply voltage (p0210).

Dependency: Refer to: p0211, p0221, p0222, p0223, p0224, p0225, p0226

Note: If synchronizing voltages are not detected, the line supply voltage is estimated using a model. It is therefore important to ensure that drive unit data is correctly specified.

p0282 Line supply undervoltage, alarm threshold / V_l_under A thresh

A_INF, S_INF

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 8860, 8960
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
10 [%]	100 [%]	85 [%]

Description: Sets the alarm threshold for a line undervoltage condition.
The setting is made as a percentage of the drive unit supply voltage (p0210).

Dependency: Refer to: p0222, p0224, p0225, p0226, p3421, p3422
Refer to: A06105

Note: If synchronizing voltages are not detected, the line supply voltage is estimated using a model. It is therefore important to ensure that drive unit data is correctly specified.

p0283 Line supply undervoltage, shutdown (trip) threshold / V_l_under tr_thrsh

A_INF, S_INF

Can be changed: C2(1), T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 8860, 8960
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
10 [%]	100 [%]	75 [%]

Description: Sets the shutdown threshold for the line supply undervoltage.
The setting is made as a percentage of the drive unit supply voltage (p0210).

Dependency: Refer to: p0282
Refer to: F06100

Notice: For booksize Active Line Modules, the following applies:
When operated without Active Interface Module (p0220 = 41 ... 45), the minimum shutdown threshold is 75 %.

p0284 Line supply frequency exceeded, alarm threshold / f_l_exc A thresh

A_INF, S_INF

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 8864, 8964
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
100.0 [%]	300.0 [%]	110.0 [%]

Description: Sets the alarm threshold for an excessively high line frequency.

Dependency: Set as a percentage of the rated line frequency.
Refer to: p0211

p0285 Line supply frequency undershot, alarm threshold / f_l_under A thresh

A_INF, S_INF

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 8864, 8964
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	100.0 [%]	90.0 [%]

Description: Sets the alarm threshold for an excessively low line frequency.
Dependency: Set as a percentage of the rated line frequency.
Refer to: p0211

p0287[0...1] Ground fault monitoring thresholds / Grnd flt thresh

A_INF, S_INF, SERVO, VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	100.0 [%]	[0] 6.0 [%] [1] 16.0 [%]

Description: Sets the shutdown thresholds for the ground fault monitoring.
The setting is made as a percentage of the maximum power unit current (r0209).
Index: [0] = Threshold for pulse inhibit
[1] = Threshold for pulse enable
Dependency: Refer to: F30021
Note: De-activating the ground fault monitoring:
- Sequence: --> p0287[1] = 0 --> p0287[0] = 0
- irrespective of the firmware version of the power unit.
Sets the thresholds:
- the prerequisite is at least firmware version 2.2 of the power unit.

r0289 Maximum power unit output current / PU I_outp max

SERVO, VECTOR

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Displays, signals | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the current maximum output current of the power unit taking into account de-rating factors.

p0290 Power unit overload response / PU overld response

SERVO, VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** 8014
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	3	0

Description: Sets the response to a thermal overload condition of the power unit.

The following quantities can result in a response to thermal overload:
- heat sink temperature (r0037.0)
- chip temperature (r0037.1)
- power unit overload I2T (r0036)

Possible measures to avoid thermal overload:
- reduce the output current (closed-loop speed/velocity or torque/force control) or the output frequency (V/f control).
- reduce the pulse frequency (only for vector control).

A reduction, if parameterized, is always realized after an appropriate alarm is output.

Value:
0: Reduce output current or output frequency
1: No reduction, shutdown when overload threshold is reached
2: Reduce I_output or f_output and f_pulse (not using I2t)
3: Reduce the pulse frequency (not using I2t)

Dependency: If a sine-wave filter is parameterized as output filter (p0230 = 3, 4), then only responses can be selected without pulse frequency reduction (p0290 = 0, 1).

If a fault or alarm is present, then r2135.13 or r2135.15 is set.

Refer to: r0036, r0037, p0108, r0108, p0230, r2135

Refer to: A05000, A05001, A07805

Caution: If the thermal overload of the power unit is not sufficiently reduced by the actions taken, the drive is always shut down. This means that the power unit is always protected irrespective of the setting of this parameter.

Note: The setting p0290 = 0, 2 is only practical if the load decreases with decreasing speed (e.g. for applications with variable torque such as for pumps and fans).

Under overload conditions, the current and torque limit are reduced, and therefore the motor is braked and forbidden speed ranges (e.g. minimum speed p1080 and suppression [skip] speeds p1091 ... p1094) can be passed through.

For p0290 = 2, 3, the I2t overload detection of the power unit does not influence the responses.

With servo and vector drives, p290 cannot be modified when identification of motor data is selected.

r0293 CO: Power unit alarm threshold model temperature / PU Tmodel_A_thresh

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
- [°C]	- [°C]	- [°C]

Description: Temperature alarm threshold for the difference from the chip and heat sink temperature in the thermal model.

Dependency: Refer to: r0037

Refer to: F30024

Note: The parameter is only relevant for chassis power units.

p0294 Power unit alarm with I2t overload / PU I2t alrm thresh

A_INF, S_INF, SERVO, VECTOR

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 8014
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
10.0 [%]	100.0 [%]	95.0 [%]

Description: Sets the alarm threshold for the I2t power unit overload.

Drive:

If this threshold is exceeded, an overload alarm is generated and the system responds as parameterized in p0290.

Infeed:

When the threshold value is exceeded, only an overload alarm is output.

Dependency: Refer to: r0036, p0290

Refer to: A07805

Note: The I2t fault threshold is 100 %. If this value is exceeded, fault F30005 is output.

p0294 Power unit alarm with I2t overload / PU I2t alrm thresh

B_INF

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 8014
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
10.0 [%]	100.0 [%]	95.0 [%]

Description: Sets the alarm threshold for the I2t power unit overload.

Dependency: Refer to: r0036
Refer to: A07805

Note: The parameter is only relevant for booksize units!

p0295 Fan run-on time / Fan run-on time

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [s]	600 [s]	0 [s]

Description: Sets the fan run-on time after the pulses for the power unit have been canceled.

Note: Under certain circumstances, the fan can continue to run for longer than was set (e.g. as a result of the excessively high heat sink temperature).
For values less than 1 s, a 1 s run on time for the fan is effective.

r0296 DC link voltage undervoltage threshold / Vdc V_lower_thresh

A_INF, B_INF, S_INF

Can be changed: - | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** 8750, 8760, 8850, 8864, 8950, 8964
P-Group: Converter | **Units group:** - | **Unit selection:** -

Expert list: 1

Min	Max	Factory setting
- [V]	- [V]	- [V]

Description: If the DC link voltage exceeds the threshold specified here, the drive unit is tripped due to DC link overvoltage.

Dependency: Refer to: F30002

p0300[0...n] Motor type selection / Mot type sel

SERVO

Can be changed: C2(1, 3)
Data type: Integer16
P-Group: Motor
Not for motor type: -

Calculated: -
Dynamic index: MDS, p0130
Units group: -

Access level: 1
Func. diagram: 6310
Unit selection: -
Expert list: 1

Min	Max	Factory setting
0	10001	0

Description: Selects the motor type or start to read in the motor parameters for a motor with DRIVE-CLiQ (p0300 = 10000).

The following applies for p0300 < 10000: The first digit of the parameter value always defines the general motor type and corresponds to the unlisted motor belonging to a motor list:

1 = Rotating induction motor

2 = Rotating synchronous motor

3 = Linear induction motor (reserved)

4 = Linear synchronous motor

The type information must be entered to filter motor-specific parameters and to optimize the operating characteristics and behavior. For example, for synchronous motors, power factor (p0308) is neither used nor displayed (in the BOP/AOP).

Value:

0: No motor
1: Induction motor (rotating)
2: Synchronous motor (rotating, permanent-magnet)
4: Synchronous motor (linear, permanent-magnet)
102: 1PH2 induction motor
104: 1PH4 induction motor
107: 1PH7 induction motor
108: 1PH8 induction motor
134: 1PM4 induction motor
136: 1PM6 induction motor
166: 1PL6 induction motor
200: 1PH8 synchronous motor
206: 1FT6 synchronous motor
207: 1FT7 synchronous motor
236: 1FK6 synchronous motor
237: 1FK7 synchronous motor
261: 1FE1 synchronous motor
276: 1FS6 synchronous motor
283: 1FW3 synchronous motor
286: 1FW6 synchronous motor
291: 2SP1 synchronous motor
401: 1FN1 synchronous motor (linear)
403: 1FN3 synchronous motor (linear)
10000: Motor with DRIVE-CLiQ
10001: Motor with DRIVE-CLiQ 2nd data set

Dependency: When the motor type is changed, the code number in p0301 may be reset to 0.

If p0300 is changed during quick commissioning (p0010 = 1), then the matching technological application (p0500) is automatically pre-assigned. This does not occur when commissioning the motor (p0010 = 3). If 10000 is written to p0300 for a parameter download, then p0500 is pre-assigned with DRIVE-CLiQ corresponding to the motor type.

Refer to: p0301

Caution: If a catalog motor is selected (p0300 >= 100) and an associated motor code number (p0301), then the parameters,that are associated with this list cannot be changed (write protection). The write protection is canceled if the motor type p0300 is set to a non-Siemens motor that matches p0301 (e.g. p0300 = 2 for p0301 = 2xxxx).

Notice: The list for motor codes /encoder codes can be found in the following literature:

SINAMICS S120/S150 List Manual

Note: With p0300 = 10000, for a motor with DRIVE-CLiQ, the motor parameters are automatically downloaded, with p0300 = 10001, the motor parameters of a second data set (if available).

If a motor type has not been selected (p0300 = 0), then the drive commissioning routine cannot be exited.

A motor type with a value above p0300 >= 100 describes motors for which a motor parameter list exists.

Motor types with a value below p0300 < 100 correspond to the selection of an unlisted motor. When appropriately selected, this means that the motor parameters are pre-assigned the settings for an unlisted motor.

This also applies for parameters for a motor with DRIVE-CLiQ. In this case p0300 can only be set to p0300 = 10000 or 10001 (read motor parameters) or to the corresponding non-Siemens motor (first digit of the motor code number) in order to be able to cancel the write protection.

p0300[0...n] Motor type selection / Mot type sel

VECTOR

Can be changed: C2(1, 3)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dynamic index:** MDS, p0130	**Func. diagram:** 6310
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	10001	0

Description: Selects the motor type or starts to read in the motor parameters for a motor with DRIVE-CLiQ (p0300 = 10000 or 10001, if there is a second data set).

The following applies for p0300 < 10000: The first digit of the parameter value always defines the general motor type and corresponds to the unlisted motor belonging to a motor list:

1 = Rotating induction motor

2 = Rotating synchronous motor

3 = Linear induction motor (reserved)

4 = Linear synchronous motor

5 = Synchronous motor separately-excited

7 = SIEMOSYN motor

8 = Reluctance motor

The type information must be entered to filter motor-specific parameters and to optimize the operating characteristics and behavior. For example, for synchronous motors, power factor (p0308) is neither used nor displayed (in the BOP/AOP).

Value:

0: No motor
1: Induction motor (rotating)
2: Synchronous motor (rotating, permanent-magnet)
5: Synchronous motor (separately excited)
7: SIEMOSYN motor
8: Reluctance motor
11: 1LA1 standard induction motor
12: 1LE2 standard induction motor (NEMA)
15: 1LA5 standard induction motor
16: 1LA6 standard induction motor
17: 1LA7 standard induction motor
18: 1LA8 / 1PQ8 standard induction motor
102: 1PH2 induction motor
104: 1PH4 induction motor
107: 1PH7 induction motor
108: 1PH8 induction motor

134: 1PM4 induction motor
136: 1PM6 induction motor
166: 1PL6 induction motor
283: 1FW3 synchronous motor
10000: Motor with DRIVE-CLiQ
10001: Motor with DRIVE-CLiQ 2nd data set

Dependency: Motors, selection 206, 236, 237 cannot be operated (also not as motor with DRIVE-CLiQ).

p0300 = 5 cannot be selected with SINAMICS G.

When the motor type is changed, the code number in p0301 may be reset to 0.

p0300 = 12 can only be selected for p0100 = 1 (NEMA).

When selecting a motor type from the 1LA5 and 1LA7 series, parameters p0335, p0626, p0627 and p0628 of the thermal motor model are pre-assigned as a function of p0307 and p0311.

Refer to: p0301

Caution: A permanent-magnet synchronous motor cannot be operated with an SSI encoder without HTL/TTL track.

A separately-excited synchronous motor can only be operated with an SSI encoder if this is used as the second encoder and an HTL/TTL encoder is used as the first encoder.

Caution: If a catalog motor is selected (p0300 >= 100) and an associated motor code number (p0301), then the parameters,that are associated with this list cannot be changed (write protection). The write protection is canceled if the motor type p0300 is set to a non-Siemens motor that matches p0301 (e.g. p0300 = 2 for p0301 = 2xxxx).

Notice: The list for motor codes /encoder codes can be found in the following literature:

SINAMICS S120/S150 List Manual

For 1PQ8 motors (p0300 = 18) the fan type p0335 should be set to 5.

Note: With p0300 = 10000, for a motor with DRIVE-CLiQ, the motor parameters are automatically downloaded, with p0300 = 10001, the motor parameters of a second data set (if available).

If a motor type has not been selected (p0300 = 0), then the drive commissioning routine cannot be exited.

A motor type with a value above p0300 >= 100 describes motors for which a motor parameter list exists.

Motor types with a value below p0300 < 100 correspond to the selection of an unlisted motor. When appropriately selected, this means that the motor parameters are pre-assigned the settings for an unlisted motor.

This also applies for parameters for a motor with DRIVE-CLiQ. In this case p0300 can only be set to p0300 = 10000 or 10001 (read motor parameters) or to the corresponding non-Siemens motor (first digit of the motor code number) in order to be able to cancel the write protection.

0	65535	0

Description: The parameter is used to select a motor from a motor parameter list.

When changing the code number (with the exception to the value 0), all of the motor parameters are pre-assigned from the internally available parameter lists.

Dependency: Only code numbers for motor types can be selected that correspond to the motor type selected in p0300.

Refer to: p0300

Notice: The list for motor codes /encoder codes can be found in the following literature:

SINAMICS S120/S150 List Manual

Note: The motor code number can only be changed if the matching list motor was first selected in p0300.

When selecting a list motor (p0300 >= 100), drive commissioning can only be exited if a code number is selected.

p0301[0...n] Motor code number selection / Mot code No. sel

SERVO

Can be changed: C2(1, 3), U | **Calculated:** - | **Access level:** 1
Data type: Unsigned16 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: FEM | | **Expert list:** 1

Min	Max	Factory setting
0	65535	0

Description: The parameter is used to select a motor from a motor parameter list.

When changing the code number (with the exception to the value 0), all of the motor parameters are pre-assigned from the internally available parameter lists.

Dependency: Only code numbers for motor types can be selected that correspond to the motor type selected in p0300. For 1PH2, 1PH4, 1PH7, 1PM4, 1PM6, 1FT6 motors, code numbers are also possible, whose fourth decimal position is greater by a value of 1 or 2 than the matching motor type in p0300. For 1FE1 motors, the third decimal position can be higher by a value of 1.

Refer to: p0300

Notice: The list for motor codes /encoder codes can be found in the following literature:

SINAMICS S120/S150 List Manual

Note: The motor code number can only be changed if the matching list motor was first selected in p0300.

For a motor with DRIVE-CLiQ, p0301 cannot be changed. In this case, p0301 is automatically written to the code number of the motor parameter read-in (r0302) if p0300 is set to 10000.

When selecting a list motor (p0300 >= 100), drive commissioning can only be exited if a code number is selected.

If, for direct drives, the motor code number (p0301) is changed, this does not automatically result in the angular commutation offset being determined (p0431).

Expert list: 1

Min	Max	Factory setting
0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the rated motor current (rating plate).

Dependency: Refer to: p0349

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Notice: If p0305 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is appropriately preassigned. This is not the case when commissioning the motor (p0010 = 3).

Note: When the parameter value is entered the connection type of the motor (star/delta) must be taken into account.
When the induction motor is commissioned for the first time, the parameter is preassigned a value that matches the power unit and corresponds the setting in p0100.

p0305[0...n] Rated motor current / Mot I_rated

VECTOR

Can be changed: C2(1, 3)	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** 6300
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the rated motor current (rating plate).

Dependency: Refer to: p0349

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Notice: If p0305 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is appropriately preassigned. This is not the case when commissioning the motor (p0010 = 3).
If the rated motor current exceeds twice the maximum drive converter current (r0209), then the maximum current is reduced due to the current harmonics that increase overproportionally (r0067).

Note: When the parameter value is entered the connection type of the motor (star/delta) must be taken into account.
When the induction motor is commissioned for the first time, the parameter is preassigned a value that matches the power unit and corresponds the setting in p0100.

p0306[0...n] Number of motors connected in parallel / Motor qty

SERVO

Can be changed: C2(1, 3)	**Calculated:** -	**Access level:** 1
Data type: Unsigned8	**Dynamic index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
1	10	1

Description: Number of motors that can be operated in parallel using one motor data set.
Internally, an equivalent motor is calculated depending on the number of motors entered.
The following should be carefully observed for motors connected in series:
The following rating plate data should only be entered for one motor:
- resistances and inductances: p0350, p0352, p0353, p0354, p0356, p0357, p0358, p0360
- currents: p0305, p0318, p0320, p0323, p0325, p0329, p0338, p0391, p0392
- torques/forces: p0312, p0319
- power ratings: p0307
- masses/moments of inertia: p0341, p0344

All other parameters take into account the replacement/equivalent motor (e.g. r0331, r0370, r0373, r0374).

Dependency: Refer to: r0331, r0370, r0373, r0374, r0376, r0377, r0382

Caution: The motors to be connected in parallel must be of the same type and size (same order no. (MLFB)).

The mounting regulations when connecting motors in parallel must be carefully maintained! Especially for synchronous motors, the pole position of motors that are rigidly coupled with one another (mechanically) must be identical.
The number of motors set must correspond to the number of motors that are actually connected in parallel.
After changing p0306, it is imperative that the control parameters are adapted (e.g. using automatic calculation with p0340 = 1).

Notice: If p0306 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is appropriately preassigned. This is not the case when commissioning the motor (p0010 = 3).

p0306[0...n] Number of motors connected in parallel / Motor qty

VECTOR

Can be changed: C2(1, 3) **Calculated:** - **Access level:** 1
Data type: Unsigned8 **Dynamic index:** MDS, p0130 **Func. diagram:** -
P-Group: Motor **Units group:** - **Unit selection:** -
Not for motor type: FEM **Expert list:** 1

Min	Max	Factory setting
1	20	1

Description: Number of motors that can be operated in parallel using one motor data set.
Internally, an equivalent motor is calculated depending on the number of motors entered.
The following should be carefully observed for motors connected in series:
The following rating plate data should only be entered for one motor:
- resistances and inductances: p0350 ... p0361
- currents: p0305, p0320, p0323, p0325, p0329, p0389, p0390, p0391, p0392
- power ratings: p0307
- masses/moments of inertia: p0341, p0344

All other parameters take into account the replacement/equivalent motor (e.g. r0331, r0333).

Dependency: Refer to: r0331

Caution: The motors to be connected in parallel must be of the same type and size (same order no. (MLFB)).

The mounting regulations when connecting motors in parallel must be carefully maintained! Especially for synchronous motors, the pole position of motors that are rigidly coupled with one another (mechanically) must be identical.
The number of motors set must correspond to the number of motors that are actually connected in parallel.
After changing p0306, it is imperative that the control parameters are adapted (e.g. using automatic calculation with p0340 = 1).

Caution: It is not permissible to connect permanent-magnet or separately-excited synchronous motors or reluctance motors in parallel. Synchronous and reluctance motors that are not coupled with one another, align themselves when the pulses are switched in. If the motors have different load levels, then equalization currents flow between the motors.

Notice: If p0306 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is appropriately preassigned. This is not the case when commissioning the motor (p0010 = 3).

Note: Only operation with V/f characteristic makes sense if more than 10 identical motors are connected in parallel.

p0307[0...n] Rated motor power / Mot P_rated

SERVO

Can be changed: C2(1, 3) **Calculated:** - **Access level:** 1
Data type: FloatingPoint32 **Dynamic index:** MDS, p0130 **Func. diagram:** -

	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** 14_6	**Unit selection:** p0100
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-100000.00 [kW]	100000.00 [kW]	0.00 [kW]

Description: Sets the rated motor power (rating plate).

Dependency: IECdrives (p0100 = 0): Units kW

NEMA drives (p0100 = 1): Units hp

Refer to: p0100

Caution: This parameter is automatically preset for motors from the motor list (p0301).

When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: When the induction motor is commissioned for the first time, the parameter is preassigned a value that matches the power unit and corresponds the setting in p0100.

For generators, a negative rated power should be entered.

p0308[0...n] Rated motor power factor / Mot cos_phi_rated

SERVO, VECTOR	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000	1.000	0.000

Description: Sets the rated motor power factor (cos phi, rating plate).

For a parameter value of 0.000, the power factor is internally calculated and displayed in r0332.

Dependency: This parameter is only available for IEC motors (p0100 = 0).

Refer to: p0100, p0309, r0332

Caution: This parameter is automatically preset for motors from the motor list (p0301).

When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

When the induction motor is commissioned for the first time, the parameter is preassigned a value that matches the power unit and corresponds the setting in p0100.

p0309[0...n] Rated motor efficiency / Mot eta_rated

VECTOR	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [%]	99.9 [%]	0.0 [%]

Description: Sets the rated motor efficiency (rating plate).

For a parameter value of 0.0, the power factor is internally calculated and displayed in r0332.

Dependency: This parameter is only available for NEMA motors (p0100 = 1).

Refer to: p0100, p0308, r0332

Caution: This parameter is automatically preset for motors from the motor list (p0301).

When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

When the induction motor is commissioned for the first time, the parameter is preassigned a value that matches the power unit and corresponds the setting in p0100.

p0310[0...n] Rated motor frequency / Mot f_rated

SERVO

Can be changed: C2(1, 3) **Calculated:** - **Access level:** 1

Data type: FloatingPoint32 **Dynamic index:** MDS, p0130 **Func. diagram:** -

P-Group: Motor **Units group:** - **Unit selection:** -

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0.00 [Hz]	3000.00 [Hz]	0.00 [Hz]

Description: Sets the rated motor frequency (rating plate).

Dependency: The number of pole pairs (r0313) is automatically re-calculated when the parameter is changed (together with p0311), if p0314 = 0.

If p0311 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is appropriately pre-assigned.

Refer to: p0311, r0313, p0314

Caution: This parameter is automatically preset for motors from the motor list (p0301).

When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Notice: If p0310 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is appropriately pre-assigned. This is not the case when commissioning the motor (p0010 = 3).

Note: When the induction motor is commissioned for the first time, the parameter is preassigned a value that matches the power unit and corresponds the setting in p0100.

The parameter is automatically pre-assigned for induction motors from the motor list (p0301).

For synchronous motors, the parameter is not required and must therefore be pre-assigned zero. For p0310 = 0, it is not possible to calculate the pole pair; instead, it must be entered in p0314.

p0310[0...n] Rated motor frequency / Mot f_rated

VECTOR

Can be changed: C2(1, 3) **Calculated:** - **Access level:** 1

Data type: FloatingPoint32 **Dynamic index:** MDS, p0130 **Func. diagram:** 6300

P-Group: Motor **Units group:** - **Unit selection:** -

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0.00 [Hz]	3000.00 [Hz]	0.00 [Hz]

Description: Sets the rated motor frequency (rating plate).

Dependency: The number of pole pairs (r0313) is automatically re-calculated when the parameter is changed (together with p0311), if p0314 = 0.

The rated frequency is restricted to values between 1.00 Hz and 650.00 Hz.

Refer to: p0311, r0313, p0314

Caution: This parameter is automatically preset for motors from the motor list (p0301).

When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Notice: If p0310 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is appropriately pre-assigned. This is not the case when commissioning the motor (p0010 = 3).

Note: When the induction motor is commissioned for the first time, the parameter is preassigned a value that matches the power unit and corresponds the setting in p0100.

p0311[0...n] Rated motor velocity / Mot v_rated

SERVO (Lin)	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min 0.0 [m/min]	**Max** 6000.0 [m/min]	**Factory setting** 0.0 [m/min]

Description: Sets the rated motor velocity (rating plate).

Dependency: The pole pair width is set in p0315.
Refer to: p0310, r0313, p0314

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Notice: If p0311 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is appropriately pre-assigned. This is not the case when commissioning the motor (p0010 = 3).

Note: When the induction motor is commissioned for the first time, the parameter is preassigned a value that matches the power unit and corresponds the setting in p0100.

p0311[0...n] Rated motor speed / Mot n_rated

SERVO, VECTOR	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min 0.0 [rev/min]	**Max** 210000.0 [rev/min]	**Factory setting** 0.0 [rev/min]

Description: Sets the rated motor speed (rating plate).
For VECTOR the following applies (p0107):
For p0311 = 0, the rated motor slip of induction motors is internally calculated and displayed in r0330.
It is especially important to correctly enter the rated motor speed for vector control and slip compensation for V/f control.

Dependency: If p0311 is changed and for p0314 = 0, the pole pair (r0313) is re-calculated automatically.
Refer to: p0310, r0313, p0314

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Notice: If p0311 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is appropriately pre-assigned. This is not the case when commissioning the motor (p0010 = 3).

Note: When the induction motor is commissioned for the first time, the parameter is preassigned a value that matches the power unit and corresponds the setting in p0100.

r0313 = 1: 2-pole motor
r0313 = 2: 4-pole motor
etc.

Dependency: For p0314 > 0, the entered value is displayed in r0313.
For p0314 = 0, the pole pair number (r0313) is automatically calculated from the rated power (p0307), rated frequency (p0310) and rated speed (p0311).
Refer to: p0307, p0310, p0311, p0314

Note: For the automatic calculation, the pole pair number is set to the value of 2 if the rated speed or the rated frequency is zero.

p0314[0...n] Motor pole pair number / Mot pole pair No.

SERVO

Can be changed: C2(1, 3) | **Calculated:** - | **Access level:** 1
Data type: Unsigned8 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	255	0

Description: Sets the motor pole pair number.
Values:
p0314 = 1: 2-pole motor
p0314 = 2: 4-pole motor
etc.

Dependency: For p0314 = 0, the pole pair number is automatically calculated from the rated frequency (p0310) and the rated speed (p0311) and displayed in r0313.

Notice: If p0314 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is appropriately pre-assigned. This is not the case when commissioning the motor (p0010 = 3).
For induction motors, the value need only be input if the rated data of a generator is entered therefore resulting in a negative rated slip. In this case, the number of pole pairs in r0313 is too low by 1 and must be manually corrected.

p0314[0...n] Motor pole pair number / Mot pole pair No.

VECTOR

Can be changed: C2(1, 3) | **Calculated:** - | **Access level:** 2
Data type: Unsigned8 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	255	0

Description: Sets the motor pole pair number.
Values:
p0314 = 1: 2-pole motor
p0314 = 2: 4-pole motor
etc.

Dependency: For p0314 = 0, the pole pair number is automatically calculated from the rated frequency (p0310) and the rated speed (p0311) and displayed in r0313.

Notice: If p0314 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is appropriately pre-assigned. This is not the case when commissioning the motor (p0010 = 3).
For induction motors, the value need only be input if the rated data of a generator is entered therefore resulting in a negative rated slip. In this case, the number of pole pairs in r0313 is too low by 1 and must be manually corrected.

p0315[0...n] Motor pole pair width / MotPolePair width

SERVO (Lin)

Can be changed: C2(1, 3) | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1.00 [mm]	1000.00 [mm]	30.00 [mm]

Description: Sets the pole pair width of the linear motor.

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

p0316[0...n] Motor force constant / Mot kT

SERVO (Lin)

Can be changed: C2(1, 3), U, T | **Calculated:** - | **Access level:** 1
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -
P-Group: Motor | **Units group:** 29_1 | **Unit selection:** p0100
Not for motor type: ASM, REL, FEM | | **Expert list:** 1

Min	Max	Factory setting
0.00 [N/Arms]	1000.00 [N/Arms]	0.00 [N/Arms]

Description: Sets the force constant of the synchronous motor.
p0316 = 0: The force constant is calculated from the motor data.
p0316 > 0: The selected value is used as force constant.

Dependency: Refer to: r0334, r1937

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: This parameter is not used for induction motors (p0300 = 1xx).

p0316[0...n] Motor torque constant / Mot kT

SERVO

Can be changed: C2(1, 3), U, T | **Calculated:** - | **Access level:** 1
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -

	Min	**Max**	**Factory setting**
	0.00 [N]	100000.00 [N]	0.00 [N]

Description: Sets the standstill (stall) force for linear synchronous motors (p0300 = 4xx).

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: This parameter value is not evaluated from a control-related perspective.

p0319[0...n] Motor stall torque / Mot M_standstill

SERVO	**Can be changed:** C2(3)	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** 7_4	**Unit selection:** p0100
	Not for motor type: ASM, REL, FEM		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [Nm]	100000.00 [Nm]	0.00 [Nm]

Description: Sets the standstill (stall) torque for rotating synchronous motors (p0300 = 2xx).

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: This parameter is not used for induction motors (p0300 = 1xx).
This parameter value is not evaluated from a control-related perspective.

p0320[0...n] Motor rated magnetizing current/short-circuit current / Mot I_mag_rated

SERVO, VECTOR	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** 5722
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: REL, FEM		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000 [Arms]	5000.000 [Arms]	0.000 [Arms]

Description: Induction motors:
Sets the rated motor magnetizing current.
For p0320 = 0.000 the magnetizing current is internally calculated and displayed in r0331.

Synchronous motors:

Sets the rated motor short-circuit current.

Caution: This parameter is automatically preset for motors from the motor list (p0301).

When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: The magnetization current p0320 for induction motors (not for catalog motors) is reset when quick commissioning is exited with p3900 > 0.

VECTOR: If, for induction motors, the magnetizing current p0320 is changed outside the commissioning phase (p0010 > 0), then the magnetizing inductance p0360 is changed so that the EMF r0337 remains constant.

p0322[0...n] Motor maximum velocity / Mot v_max

SERVO (Lin)

Can be changed: C2(1, 3) **Calculated:** - **Access level:** 1

Data type: FloatingPoint32 **Dynamic index:** MDS, p0130 **Func. diagram:** -

P-Group: Motor **Units group:** - **Unit selection:** -

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0.0 [m/min]	1000.0 [m/min]	0.0 [m/min]

Description: Sets the maximum motor velocity.

Dependency: Refer to: p1082

Caution: This parameter is automatically preset for motors from the motor list (p0301).

When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Notice: If p0322 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is appropriately pre-assigned. This is not the case when commissioning the motor (p0010 = 3).

p0322[0...n] Maximum motor speed / Mot n_max

SERVO

Can be changed: C2(1, 3) **Calculated:** - **Access level:** 1

Data type: FloatingPoint32 **Dynamic index:** MDS, p0130 **Func. diagram:** -

P-Group: Motor **Units group:** - **Unit selection:** -

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0.0 [rev/min]	210000.0 [rev/min]	0.0 [rev/min]

Description: Sets the maximum motor speed.

Dependency: Refer to: p1082

Caution: This parameter is automatically preset for motors from the motor list (p0301).

When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Notice: If p0322 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is appropriately pre-assigned. This is not the case when commissioning the motor (p0010 = 3).

p0322[0...n] Maximum motor speed / Mot n_max

VECTOR

Can be changed: C2(1, 3) **Calculated:** - **Access level:** 2

Data type: FloatingPoint32 **Dynamic index:** MDS, p0130 **Func. diagram:** -

P-Group: Motor **Units group:** - **Unit selection:** -

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0.0 [rev/min]	210000.0 [rev/min]	0.0 [rev/min]

Description: Sets the maximum motor speed.

Dependency: Refer to: p1082

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Notice: If p0322 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is appropriately pre-assigned. This is not the case when commissioning the motor (p0010 = 3).

p0323[0...n] Maximum motor current / Mot I_max

SERVO

Can be changed: C2(1, 3) **Calculated:** - **Access level:** 1
Data type: FloatingPoint32 **Dynamic index:** MDS, p0130 **Func. diagram:** 5722
P-Group: Motor **Units group:** - **Unit selection:** -
Not for motor type: ASM, FEM **Expert list:** 1

Min	Max	Factory setting
0.00 [Arms]	20000.00 [Arms]	0.00 [Arms]

Description: Set the maximum permissible motor current (e.g. de-magnetizing current for synchronous motors).

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Notice: If p0323 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is appropriately pre-assigned. This is not the case when commissioning the motor (p0010 = 3).

Note: The parameter has no effect for induction motors.
For synchronous motors, a value must always be entered for the maximum motor current.
p0323 is a motor data. The user-selectable current limit is entered into p0640.

p0323[0...n] Maximum motor current / Mot I_max

VECTOR

Can be changed: C2(1, 3) **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** MDS, p0130 **Func. diagram:** 5722
P-Group: Motor **Units group:** - **Unit selection:** -
Not for motor type: ASM, FEM **Expert list:** 1

Min	Max	Factory setting
0.00 [Arms]	20000.00 [Arms]	0.00 [Arms]

Description: Set the maximum permissible motor current (e.g. de-magnetizing current for synchronous motors).

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Notice: If p0323 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is appropriately pre-assigned. This is not the case when commissioning the motor (p0010 = 3).

Note: The parameter has no effect for induction motors.
The parameter has not effect for synchronous motors if a value of 0.0 is entered. The user-selectable current limit is entered into p0640.

p0325[0...n] Motor pole position identification current, 1st phase / Mot PolID I 1st ph

SERVO, VECTOR

Can be changed: U, T **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** MDS, p0130 **Func. diagram:** -
P-Group: Motor **Units group:** - **Unit selection:** -
Not for motor type: ASM, REL, FEM **Expert list:** 1

Min	Max	Factory setting
0.000 [Arms]	10000.000 [Arms]	0.000 [Arms]

Description: Sets the current for the 1st phase of the two-stage technique for pole position identification routine.
The current of the 2nd phase is set in p0329.
The two-stage technique is selected with p1980 = 4.

Dependency: Refer to: p0329, p1980, p1981, p1982, p1983, r1984, r1985, r1987, p1990
Refer to: F07995

Notice: When the motor code (p0301) is changed, it is possible that p0325 is not pre-assigned.
p0325 can be pre-assigned using p0340 = 3.

Note: The value is automatically pre-assigned for the following events:
- For p0325 = 0 and automatic calculation of the closed-loop control parameters (p0340 = 1, 2, 3).
- for quick commissioning (p3900 = 1, 2, 3).

p0326[0...n] Motor stall force correction factor / Mot F_stall_corr

SERVO (Lin)

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: REL, FEM | **Expert list:** 1

Min	Max	Factory setting
5 [%]	300 [%]	60 [%]

Description: Sets the correction factor for the stall force at a 600 V DC link voltage.

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

p0326[0...n] Motor stall torque correction factor / Mot M_stall_corr

SERVO

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: REL, FEM | **Expert list:** 1

Min	Max	Factory setting
5 [%]	300 [%]	60 [%]

Description: Sets the correction factor for the stall torque/force at a 600 V DC link voltage.

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

p0327[0...n] Optimum motor load angle / Mot phi_load opt

SERVO, VECTOR

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 5722, 6721
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: ASM, REL, FEM | **Expert list:** 1

Min	Max	Factory setting
0.0 [°]	135.0 [°]	90.0 [°]

Description: Sets the optimum load angle for synchronous motors with reluctance torque (e.g. 1FE ... motors).
This parameter has no significance for induction motors.
SERVO: The load angle is measured at 150% rated motor current.
VECTOR: The load angle is measured at the rated motor current.

Dependency: Refer to: r1947

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: For synchronous motors without reluctance torque, a angle of 90 degrees must be set.

p0328[0...n] Motor reluctance force constant / Mot kT_reluctance

SERVO (Lin)	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** 6721
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, REL, FEM		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-1000.00 [mH]	1000.00 [mH]	0.00 [mH]

Description: Sets the reluctance force constant for synchronous motors with reluctance force (e.g. 1FE ... motors).

Dependency: Refer to: r1939

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: For synchronous motors without reluctance torque, the value 0 must be set.

p0328[0...n] Motor reluctance torque constant / Mot kT_reluctance

SERVO, VECTOR	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** 6721
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, REL, FEM		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-1000.00 [mH]	1000.00 [mH]	0.00 [mH]

Description: Sets the reluctance torque constant for synchronous motors with reluctance torque (e.g. 1FE ... motors).

Dependency: Refer to: r1939

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: For synchronous motors without reluctance torque, the value 0 must be set.

p0329[0...n] Motor pole position identification current / Mot PolID current

SERVO, VECTOR	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, REL, FEM		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the current for the pole position identification routine.
For a two-stage technique, the current is set for the second phase.

Dependency: Refer to: p0325, p1980, p1981, p1982, p1983, r1984, r1985, r1987, p1990
Refer to: F07995

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

r0330[0...n] Rated motor slip / Mot slip_rated

SERVO, VECTOR	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: PEM, REL, FEM		**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Hz]	- [Hz]	- [Hz]

Description: Displays the rated motor slip.

Dependency: The rated slip is calculated from the rated frequency, rated speed and number of pole pairs.
Refer to: p0310, p0311, r0313
Note: The parameter is not used for synchronous motors (p0300 = 2xx).

r0331[0...n] Current motor magnetizing current/short-circuit current / Mot I_mag_rtd cur

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** MDS, p0130 **Func. diagram:** 5722, 6722, 6724
P-Group: Motor **Units group:** - **Unit selection:** -
Not for motor type: REL, FEM **Expert list:** 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Induction motor:
Displays the rated magnetizing current from p0320.
For p0320 = 0, the internally calculated magnetizing current is displayed.
Synchronous motor:
Displays the rated short-circuit current from p0320.
Dependency: If p0320 was not entered, then the parameter is calculated from the rating plate parameters.
Note: In the case of multi-motor operation r0331 is increased by the factor p0306 compared to p0320.

r0332[0...n] Rated motor power factor / Mot cos_phi_rated

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** MDS, p0130 **Func. diagram:** -
P-Group: Motor **Units group:** - **Unit selection:** -
Not for motor type: PEM, REL **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the rated power factor for induction motors.
For IEC motors, the following applies (p0100 = 0):
For p0308 = 0, the internally-calculated power factor is displayed.
For p0308 > 0, this value is displayed.
For NEMA motors, the following applies (p0100 = 1):
For p0309 = 0, the internally-calculated power factor is displayed.
For p0309 > 0, this value is converted into the power factor and displayed.
Dependency: If p0308 is not entered, the parameter is calculated from the rating plate parameters.
Note: The parameter is not used for synchronous motors (p0300 = 2xx).

r0333[0...n] Rated motor force / Mot F_rated

SERVO (Lin)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** MDS, p0130 **Func. diagram:** -
P-Group: Motor **Units group:** 8_4 **Unit selection:** p0100
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [N]	- [N]	- [N]

Description: Displays the rated motor force.
Note: For synchronous motors, r0333 is calculated from p0305, p0316, p0327 and p0328. The result can deviate from the input in p0312. If p0316 = 0, then r0333 = p0312 is displayed.

r0333[0...n] Rated motor torque / Mot M_rated

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** 7_4	**Unit selection:** p0100
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
- [Nm]	- [Nm]	- [Nm]

Description: Displays the rated motor torque.

Note: For induction and reluctance motors, r0333 is calculated from p0307 and p0311.

For synchronous motors, r0333 is calculated from p0305, p0316, p0327 and p0328. The result can deviate from the input in p0312. If p0316 = 0, then r0333 = p0312 is displayed.

In the case of multi-motor operation r0333 is increased by the factor p0306 compared to the rated torque of an individual motor.

r0334[0...n] Current motor force constant / Mot kT cur

SERVO (Lin)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** 29_1	**Unit selection:** p0100
Not for motor type: ASM, REL, FEM		**Expert list:** 1

Min	Max	Factory setting
- [N/Arms]	- [N/Arms]	- [N/Arms]

Description: Displays the force constant of the synchronous motor used.

Dependency: Refer to: p0316

Note: For synchronous motors, parameter r0334 = p0316 is displayed. if p0316 = 0, r0334 is calculated from p0305 and p0312.

r0334[0...n] Current motor-torque constant / Mot kT cur

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** 28_1	**Unit selection:** p0100
Not for motor type: ASM, REL, FEM		**Expert list:** 1

Min	Max	Factory setting
- [Nm/A]	- [Nm/A]	- [Nm/A]

Description: Displays the torque constant of the synchronous motor used.

Dependency: Refer to: p0316

Note: This parameter is not used for induction motors (p0300 = 1xx).

For synchronous motors, parameter r0334 = p0316 is displayed. if p0316 = 0, r0334 is calculated from p0305 and p0312.

p0335[0...n] Motor cooling type / Motor cooling type

SERVO, VECTOR

Can be changed: C2(1, 3), T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dynamic index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL, FEM		**Expert list:** 1

Min	Max	Factory setting
0	128	0

Description: Sets the motor cooling system used.

Value:
0: Non-ventilated
1: Forced cooling
2: Liquid cooling
4: Non-ventilated and internal fan

5: Forced cooling and internal fan
6: Liquid cooling and internal fan
128: No fan

Dependency: For 1LA5 and 1LA7 motors (refer to p0300), the parameter is pre-set as a function of p0307 and p0311.

Caution: This parameter is automatically preset for motors from the motor list (p0301).

When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: The parameter influences the thermal 3-mass motor model.

1LA1 and 1LA8 motors are characterized by the fact that they have an internal rotor fan. This "internal cooling" lies within the motor frame and is not visible. Air is not directly exchanged with the motor ambient air. For 1PQ8 motors, p0335 should be set to 5 as these motors are force-ventilated motors.

1LA7 motors, frame size 56 are operated without fan.

r0336[0...n] Current rated motor frequency / Mot f_rated cur

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** MDS, p0130 **Func. diagram:** -
P-Group: Motor **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [Hz]	- [Hz]	- [Hz]

Description: Displays the rated frequency of the motor.

For p0310 > 0, this value is displayed.

Dependency: Refer to: p0311, p0314

Note: For p0310 = 0 or for synchronous motors, the rated motor frequency r0336 is calculated from the rated speed and the pole pair number.

For p0310 > 0, this value is displayed (not for synchronous motors).

r0337[0...n] Rated motor EMF / Mot EMF_rated

SERVO (Lin)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** MDS, p0130 **Func. diagram:** -
P-Group: Motor **Units group:** - **Unit selection:** -
Not for motor type: REL **Expert list:** 1

Min	Max	Factory setting
- [Vrms s/m]	- [Vrms s/m]	- [Vrms s/m]

Description: Displays the rated EMF of the motor.

Note: EMF: Electromagnetic force

r0337[0...n] Rated motor EMF / Mot EMF_rated

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** MDS, p0130 **Func. diagram:** -
P-Group: Motor **Units group:** - **Unit selection:** -
Not for motor type: REL **Expert list:** 1

Min	Max	Factory setting
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the rated EMF of the motor.

Note: EMF: Electromagnetic force

p0338[0...n] Motor limit current / Mot I_limit

SERVO	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, REL, FEM		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the motor limit current for synchronous motors (for a 600 V DC link voltage).
Using this current, the maximum torque is achieved at the rated speed (voltage limit characteristic).

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Notice: If p0338 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is appropriately pre-assigned. This is not the case when commissioning the motor (p0010 = 3).

r0339[0...n] Rated motor voltage / Mot V_rated

SERVO, VECTOR	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the rated motor voltage

Note: For induction motors (p0300 = 1xx) the parameter is set to p0304.
For synchronous motors, parameter r0339 = p0304 is displayed. If p0304 = 0, then r0339 is calculated from p0305 and p0316.

p0340 Automatic calculation, control parameters / Calc auto par

A_INF, S_INF	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	2	0

Description: Setting to reset and automatically calculate filter and control (closed-loop) parameters.

Value:
0: No calculation
1: Complete re-calculation. of control parameters with COMM data
2: Reset control parameters

Notice: The following parameters are influenced using p0340:
p0340 = 1:
--> All of the parameters influenced for p0340 = 2
--> p3421 = p0223, p0225
--> p3422 = p0227
--> p3424 = p0225
--> p3415, p3425, p3555, p3614, p3620, p3622 are reset to the factory setting dependent on the particular unit.
p0340 = 2:
--> p3560, p3562, p3564, p3603, p3615 and p3617 are reset to the factory setting. For S_INF, these control parameters are not available

Note: When existing the quick commissioning using p3900 > 0, p0340 is automatically set to 1.
At the end of the calculations, p0340 is automatically set to 0.

p0340[0...n] Automatic calculation, motor/control parameters / Calc auto par

SERVO, VECTOR	**Can be changed:** C2(3), T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	5	0

Description: Setting to automatically calculate motor parameters and V/f open-loop and closed-loop control parameters from the rating plate data.

Value:
0: No calculation
1: Complete calculation
2: Calculation of equivalent circuit diagram parameters
3: Calculation of closed-loop control parameters
4: Calculation of controller parameters
5: Calculation of technological limits and threshold values

Notice: The following parameters are influenced using p0340:

The parameters designated with (*) are, for list motors (p0300 > 100) not overwritten.

SERVO:

p0340 = 1:

--> All of the parameters influenced for p0340 = 2, 3, 4, 5

--> p0341 (*)

--> p0342, p0344, p0600, p0640, p1082, p2000, p2001, p2002, p2003

p0340 = 2:

--> p0350 (*), p0354 (*), p0356 (*), p0358 (*), p0360 (*)

--> p0625 (matching p0350)

p0340 = 3:

--> All of the parameters influenced for p0340 = 4, 5

--> p0325 (is only calculated for p0325 = 0)

--> p0348 (*) (is only calculated for p0348 = 0)

--> p0441, p0442, p0443, p0444, p0445 (only for 1FT6, 1FK6, 1FK7 motors)

--> p0492, p1082, p1980, p1319, p1326, p1327, p1612, p1752, p1755

p0340 = 4:

--> p1441, p1460, p1462, p1463, p1464, p1465, p1470, p1472, p1590, p1592, p1656, p1657, p1658, p1659, p1715, p1717

--> p1461 (for p0348 > p0322, p1461 is set to 100 %)

--> p1463 (for p0348 > p0322, p1463 is set to 400 %)

p0340 = 5:

--> p1037, p1038, p1520, p1521, p1530, p1531, p2140 ... p2142, p2148, p2150, p2155, p2161, p2162, p2163, p2164, p2175, p2177, p2194, p3820 ... p3829

VECTOR:

p0340 = 1:

--> All of the parameters influenced for p0340 = 2, 3, 4, 5

--> p0341 (*)

--> p0342, p0344, p0600, p0640, p1082, p1231, p1232, p1349, p1441, p1442, p1576, p1577, p1609, p1619, p1620, p1621, p1654, p1726, p1825, p1828 ... p1832, p1909, p1959, p2000, p2001, p2002, p2003, p3927, p3928

p0340 = 2:

--> p0350 (*), p0354 ... p0361 (*), p0652 ... p0660

--> p0625 (matching p0350)

p0340 = 3:

--> All of the parameters influenced for p0340 = 4, 5

--> p0346, p0347, p0492, p0622, p1262, p1320 ... p1327, p1582, p1584, p1616, p1744, p1755, p1756, p2178

p0340 = 4:

--> p1290, p1292, p1293, p1299, p1338, p1339, p1340, p1341, p1345, p1346, p1460, p1461, p1462, p1463, p1464, p1465, p1470, p1472, p1590, p1592, p1600, p1628, p1629, p1630, p1643, p1703, p1715, p1717, p1740, p1756, p1757, p1760, p1761, p1764, p1767, p1781, p1783, p1785, p1786, p1795, p7036, p7037, p7038

p0340 = 5:

--> p260 ... p264, p1037, p1038, p1520, p1521, p1530, p1531, p1574, p1750, p1802, p1803, p2140, p2142, p2148, p2150, p2161, p2162, p2163, p2164, p2175, p2177, p2194, p3207, p3208, p3815, p3820 ... p3829

Note: p0340 = 1 contains the calculations of p0340 = 2, 3, 4, 5 without overwriting the motor parameters from the Siemens motor lists (p0301 > 0).

p0340 = 2 calculates the motor parameters (p0350 ... p0360), but only if it does involve a Siemens catalog motor (p0301 = 0).

p0340 = 3 contains the calculations of p0340 = 4, 5.

p0340 = 4 only calculates the controller parameters.

p0340 = 5 only calculates the controller limits.

When existing the quick commissioning using p3900 > 0, p0340 is automatically set to 1.

At the end of the calculations, p0340 is automatically set to 0.

If the STARTER commissioning software (start-up tool) writes a 3 into p0340 when "downloading to the target device", then this corresponds to a "complete calculation of the motor/control parameters without equivalent circuit diagram data". The same calculations are carried out as for p0340 = 1, however, without the equivalent circuit diagram parameters of the motor (p0340 = 2), the motor moment of inertia (p0341) and the motor weight (p0344).

For third-party linear synchronous motors (p0300 = 4) equivalent circuit diagram data are not calculated (p0340 = 2).

p0341[0...n] Motor weight / Mot weight

SERVO (Lin)

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** 5042, 5210

Description: Sets the ratio between the total moment of inertia/mass (load + motor) and the intrinsic motor moment of inertia/mass (no load).

Dependency: This means that together with p0341, the rated starting (accelerating time) of the motor is calculated for a vector drive.
Refer to: p0341, r0345, p1498

Note: SERVO:
p0341 * p0342 + p1498 influence the speed/torque pre-control in encoderless operation.
VECTOR:
The product p0341 * p0342 is taken into account when automatically calculating the speed controller (p0340 = 4).

p0344[0...n] Motor weight (for the thermal motor model) / Mot weight th mod

SERVO, VECTOR

Can be changed: C2(3), T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -
P-Group: Motor | **Units group:** 27_1 | **Unit selection:** p0100
Not for motor type: PEM, REL, FEM | **Expert list:** 1

Min	Max	Factory setting
0.0 [kg]	50000.0 [kg]	0.0 [kg]

Description: Sets the motor weight.

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: The parameter influences the thermal 3 mass model of the induction motor.
The parameter is not used for synchronous motors (p0300 = 2xx).

r0345[0...n] Nominal motor starting time / Mot t_start_rated

VECTOR	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: REL		**Expert list:** 1
	Min - [s]	**Max** - [s]	**Factory setting** - [s]

Description: Displays the rated motor starting time. This time corresponds to the time from standstill up to reaching the motor rated speed and the acceleration with motor rated torque (r0333).

Dependency: Refer to: r0313, r0333, r0336, p0341, p0342

p0346[0...n] Motor excitation build-up time / Mot t_excitation

VECTOR	**Can be changed:** C2(3), U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** 6721, 6722, 6725
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min 0.000 [s]	**Max** 20.000 [s]	**Factory setting** 0.000 [s]

Description: Sets the excitation build-up time of the motor.

This involves the delay time between enabling the pulses and enabling the ramp-function generator. The induction motor is magnetized during this time.

Caution: For insufficient magnetizing under load or if the acceleration rate is too high, then an induction motor can stall (refer to the note). This is especially true for sensorless vector control or V/f control.

Notice: If the parameter is set to 0 s for separately-excited synchronous motors (p0300 = 5), then an excitation current setpoint is generated even if the drive is powered down. In the base speed range, this is the no-load excitation current (p0389). In the field-weakening range, the value is reduced with the inverse value of the current speed. An excitation current setpoint is not generated during de-magnetizing (p0347) and if an encoder fault is detected.

Note: The parameter is calculated using p0340 = 1, 3.

For induction motors, the result depends on the rotor time constant (r0384). If this time is excessively reduced, this can result in an inadequate magnetizing of the induction motor. This is the case if the current limit is reached while building up magnetizing. For induction motors, the parameter cannot be set to 0 s (internal limit: 0.1 * r0384).

For permanent-magnet synchronous motors and vector control, the value depends on the stator time constant (r0386). Here, it defines the time to establish the current for encoderless operation immediately after the pulses have been enabled.

p0347[0...n] Motor de-excitation time / Mot t_de-excitat.

SERVO	**Can be changed:** C2(3), U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min 0.000 [s]	**Max** 20.000 [s]	**Factory setting** 0.000 [s]

Description: Sets the de-magnetizing time (for induction motors) after the inverter pulses have been inhibited.

The inverter pulses cannot be switched in (enabled) within this delay time.

For SERVO, the de-excitation time is only used for the DC current brake.

Note: The parameter is calculated using p0340 = 1, 3.

For induction motors, the result depends on the rotor time constant (r0384).

if this time is shortened too much, then this can result in an inadequate de-magnetizing of the induction motor and in an overcurrent condition when the pulses are subsequently enabled (only when the flying restart function is activated and the motor is rotating).

p0347[0...n] Motor de-excitation time / Mot t_de-excitat.

VECTOR

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	20.000 [s]	0.000 [s]

Description: Sets the de-magnetizing time (for induction motors) after the inverter pulses have been inhibited.
The inverter pulses cannot be switched in (enabled) within this delay time.

Note: The parameter is calculated using p0340 = 1, 3.
For induction motors, the result depends on the rotor time constant (r0384).
if this time is shortened too much, then this can result in an inadequate de-magnetizing of the induction motor and in an overcurrent condition when the pulses are subsequently enabled (only when the flying restart function is activated and the motor is rotating).

p0348[0...n] Velocity at the start of field weakening Vdc = 600 V / Mot v_field weaken

SERVO (Lin)

Can be changed: C2(3), U, T | **Calculated:** CALC_MOD_REG | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 5722
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [m/min]	1000.0 [m/min]	0.0 [m/min]

Description: Sets the velocity at the start of field weakening for a DC link voltage of 600 V.

Dependency: Refer to: p0320, r0331

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

p0348[0...n] Speed at the start of field weakening Vdc = 600 V / Mot n_field weaken

SERVO

Can be changed: C2(3), U, T | **Calculated:** CALC_MOD_REG | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 5722
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [rev/min]	210000.0 [rev/min]	0.0 [rev/min]

Description: Sets the speed at the start of field weakening for a DC link voltage of 600 V.

Dependency: Refer to: p0320, r0331

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

p0349 System of units, motor equivalent circuit diagram data / Unit_sys mot ESB

SERVO, VECTOR

Can be changed: C2(3) | **Calculated:** - | **Access level:** 1
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1	2	1

Description: Sets the current system of units for motor equivalent circuit diagram data.

Value:
1: System of units, physical
2: System of units, referred

Dependency: Refer to: p0304, p0305, p0310

Note: The reference parameter for resistances of the rated motor impedance Z = p0304 / (1.732 * p0305) is in the % units system.

Inductances are converted into a resistance using the factor 2 * Pi * p0310.

If a reference parameter (p0304, p305, p0310) is zero, then it is not possible to make a changeover to "referred" values (per unit values).

p0350[0...n] Motor stator resistance, cold / Mot R_stator cold

SERVO, VECTOR

Can be changed: C2(3), U, T | **Calculated:** CALC_MOD_EQU | **Access level:** 2

Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -

P-Group: Motor | **Units group:** 16_1 | **Unit selection:** p0349

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00000 [Ohm]	2000.00000 [Ohm]	0.00000 [Ohm]

Description: Sets the stator resistance of the motor at ambient temperature p0625.

Dependency: Refer to: p0625, r1912

Caution: This parameter is automatically preset for motors from the motor list (p0301).

When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: The motor identification routine determines the stator resistance from the total stator resistance minus the cable resistance (p0352).

p0352[0...n] Cable resistance / Mot R_cable cold

SERVO

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 3

Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -

P-Group: Motor | **Units group:** 16_1 | **Unit selection:** p0349

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00000 [Ohm]	120.00000 [Ohm]	0.00000 [Ohm]

Description: Resistance of the power cable between the Motor Module and motor.

Note: The parameter influences the temperature adaptation of the stator resistance.

The motor identification routine does not change the cable resistance. This is subtracted from the total measured stator resistance in order to calculate the stator resistance (p0350, p0352).

The cable resistance is reset when quick commissioning is exited with p3900 > 0.

p0352[0...n] Cable resistance / Mot R_cable cold

VECTOR

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 3

Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -

P-Group: Motor | **Units group:** 16_1 | **Unit selection:** p0349

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00000 [Ohm]	120.00000 [Ohm]	0.00000 [Ohm]

Description: Resistance of the power cable between the Motor Module and motor.

Dependency: Refer to: p7003

Notice: Parallel circuits with one winding system (p7003 = 0):

p0352 includes the feeder cable resistance of an individual Motor Module. The total feeder cable resistance is obtained from p0352 divided by the number of activated Motor Modules (refer to r0395).

Parallel circuits with multi-winding system (p7003 = 1):

p0352 includes the complete feeder cable resistance and is directly added to the stator resistance (refer to r0395).

Note: The parameter influences the temperature adaptation of the stator resistance.

The motor identification sets the cable resistance to 20% of the measured total resistance if p0352 is zero at the time that the measurement is made. If p0352 is not zero, then the value is subtracted from the measured total stator resistance to calculate stator resistance p0350. In this case, p0350 is a minimum of 10% of the measured value.

Exception:

For parallel circuit configurations with one winding system (p07003 = 0), the cable resistance is directly measured. It is important to note that only the component of an individual Motor Module is entered into p0352.

The cable resistance is reset when quick commissioning is exited with p3900 > 0.

p0353[0...n] Motor series inductance / Mot L_series

SERVO, VECTOR

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 2

Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -

P-Group: Motor | **Units group:** 15_1 | **Unit selection:** p0349

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.000 [mH]	1000000.000 [mH]	0.000 [mH]

Description: Sets the series inductance.

Note: For the automatic calculation with p0340 = 1 or 3, the calculation of p0348 is influenced by p0353 if p0348 was 0.

For the automatic calculation with p0340 = 1, 3 or 4, the calculation of p1715 is influenced by p0353.

p0354[0...n] Motor rotor resistance cold / damping resistance d axis / Mot R_r cold / RDd

SERVO, VECTOR

Can be changed: C2(3), U, T | **Calculated:** CALC_MOD_EQU | **Access level:** 3

Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -

P-Group: Motor | **Units group:** 16_1 | **Unit selection:** p0349

Not for motor type: PEM, REL | **Expert list:** 1

Min	Max	Factory setting
0.00000 [Ohm]	300.00000 [Ohm]	0.00000 [Ohm]

Description: Sets the rotor/secondary section resistance of the motor at the ambient temperature p0625.

For separately-excited synchronous motors: Sets the damping resistance in the rotor direction (d-axis).

This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910) (not for separately-excited synchronous motors).

Dependency: Refer to: p0625

Caution: This parameter is automatically preset for motors from the motor list (p0301).

When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

p0355[0...n] Motor damping resistance, q axis / Mot R_damp q

VECTOR

Can be changed: C2(3), U, T | **Calculated:** CALC_MOD_EQU | **Access level:** 3

Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -

P-Group: Motor | **Units group:** 16_1 | **Unit selection:** p0349

Not for motor type: ASM, PEM, REL | **Expert list:** 1

Min	Max	Factory setting
0.00000 [Ohm]	300.00000 [Ohm]	0.00000 [Ohm]

Description: Sets the damping resistance of the separately-excited synchronous motor quadrature to the rotor direction (q axis).

This parameter value is automatically calculated using the motor model (p0340 = 1, 2).

p0356[0...n] Motor stator leakage inductance / Mot L_stator leak.

SERVO	**Can be changed:** C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00000 [mH]	1000.00000 [mH]	0.00000 [mH]

Description: Induction motor, separately-excited synchronous motor: Sets the rotor leakage inductance of the motor.
Synchronous motor: Sets the stator quadrature axis inductance of the motor.
This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910).

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

p0356[0...n] Motor stator leakage inductance / Mot L_stator leak.

VECTOR	**Can be changed:** C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00000 [mH]	1000.00000 [mH]	0.00000 [mH]

Description: Induction motor, separately-excited synchronous motor: Sets the rotor leakage inductance of the motor.
Synchronous motor: Sets the stator quadrature axis inductance of the motor.
This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910).

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: If the stator leakage inductance (p0356) for induction motors is changed outside the commissioning phase (p0010 > 0), then the magnetizing inductance (p0360) is automatically adapted to the new EMF (r0337). After this, we recommend that the saturation characteristic measurement is repeated (p1960).
For permanent-magnet synchronous motors (p0300 = 2), this is the non-saturated value and is therefore ideally applicable for a low current.

p0357[0...n] Motor stator inductance, d axis / Mot L_stator d

VECTOR	**Can be changed:** C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
	Not for motor type: ASM, REL, FEM		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00000 [mH]	1000.00000 [mH]	0.00000 [mH]

Description: Sets the stator direct-axis inductance of the synchronous motor.
This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910).

Note: The parameter is not used for separately-excited synchronous motors (p0300 = 5).
For permanent-magnet synchronous motors (p0300 = 2), this is the non-saturated value and is ideal for a low current.

p0358[0...n] Motor rotor leakage inductance / damping inductance, d axis / Mot L_r leak / LDd

SERVO, VECTOR	**Can be changed:** C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349

	Min	**Max**	**Factory setting**
	0.00000 [mH]	10000.00000 [mH]	0.00000 [mH]

Description: Sets the magnetizing inductance of the motor.

For separately-excited synchronous motors: Sets the saturated magnetizing inductance in the rotor direction (d-axis).

This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910) (not for separately-excited synchronous motors).

Caution: This parameter is automatically preset for motors from the motor list (p0301).

When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

p0361[0...n] Motor magnetizing inductance q axis, saturated / Mot L_magn q sat

VECTOR	**Can be changed:** C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
	Not for motor type: ASM, PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00000 [mH]	10000.00000 [mH]	0.00000 [mH]

Description: Sets the saturated magnetizing inductance of the separately-excited synchronous motor quadrature to the rotor direction (q axis).
This parameter value is automatically calculated using the motor model (p0340 = 1, 2).

p0362[0...n] Saturation characteristic flux 1 / Mot saturat.flux 1

VECTOR	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: PEM		**Expert list:** 1
	Min	**Max**	**Factory setting**
	10.0 [%]	300.0 [%]	60.0 [%]

Description: The saturation characteristics (flux as a function of the magnetizing current) is defined using 4 points.
This parameter specifies the y coordinate (flux) for the 1st value pair of the characteristic.
Sets the first flux value of the saturation characteristic as a [%] referred to the rated motor flux (100 %).

Dependency: The following applies for the flux values:
p0362 < p0363 < p0364 < p0365
Refer to: p0366

Note: For induction motors, p0362 = 100 % corresponds to the rated motor flux.
For separately-excited synchronous motors p0362 = 100% corresponds to an induced terminal voltage with the magnitude of the rated motor voltage (under no-load conditions at the synchronous speed).

p0363[0...n] Saturation characteristic flux 2 / Mot saturat.flux 2

VECTOR	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: PEM		**Expert list:** 1
	Min	**Max**	**Factory setting**
	10.0 [%]	300.0 [%]	85.0 [%]

Description: The saturation characteristics (flux as a function of the magnetizing current) is defined using 4 points.
This parameter specifies the y coordinate (flux) for the 2nd value pair of the characteristic.
Sets the second flux value of the saturation characteristic as a [%] referred to the rated motor flux (100 %).

Dependency: The following applies for the flux values:
p0362 < p0363 < p0364 < p0365
Refer to: p0367

Note: For induction motors, p0363 = 100 % corresponds to the rated motor flux.
For separately-excited synchronous motors p0363 = 100% corresponds to an induced terminal voltage with the magnitude of the rated motor voltage (under no-load conditions at the synchronous speed).

p0364[0...n] Saturation characteristic flux 3 / Mot saturat.flux 3

VECTOR

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: PEM | **Expert list:** 1

Min	Max	Factory setting
10.0 [%]	300.0 [%]	115.0 [%]

Description: The saturation characteristics (flux as a function of the magnetizing current) is defined using 4 points.
This parameter specifies the y coordinate (flux) for the 3rd value pair of the characteristic.
Sets the third flux value of the saturation characteristic as a [%] referred to the rated motor flux (100 %).

Dependency: The following applies for the flux values:
p0362 < p0363 < p0364 < p0365
Refer to: p0368

Note: For induction motors, p0364 = 100 % corresponds to the rated motor flux.
For separately-excited synchronous motors p0364 = 100% corresponds to an induced terminal voltage with the magnitude of the rated motor voltage (under no-load conditions at the synchronous speed).

p0365[0...n] Saturation characteristic flux 4 / Mot saturat.flux 4

VECTOR

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 3

This parameter specifies the x coordinate (magnetizing current) for the 4th value pair of the characteristic.
Sets the fourth magnetizing current of the saturation characteristic as a [%] referred to the rated magnetizing current (r0331), for separately-excited synchronous motors referred to the no-load excitation current.

Dependency: The following applies for the magnetizing currents:
p0366 < p0367 < p0368 < p0369
Refer to: p0365

r0370[0...n] Motor stator resistance, cold / Mot R_stator cold

SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 4
Data type: FloatingPoint32
Dynamic index: MDS, p0130
Func. diagram: -
P-Group: Motor
Units group: 16_1
Unit selection: p0349
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [Ohm]	- [Ohm]	- [Ohm]

Description: Displays the motor stator resistance at an ambient temperature p0625. The value does not include the cable resistance.

Dependency: Refer to: p0625

r0372[0...n] Cable resistance / Mot R_cable

VECTOR

Can be changed: -
Calculated: -
Access level: 4
Data type: FloatingPoint32
Dynamic index: MDS, p0130
Func. diagram: -
P-Group: Motor
Units group: 16_1
Unit selection: p0349
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [Ohm]	- [Ohm]	- [Ohm]

Description: Displays the cable resistance between the Motor Module and motor.

Dependency: Refer to: p0352

r0373[0...n] Motor rated stator resistance / Mot R_stator rated

SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 4
Data type: FloatingPoint32
Dynamic index: MDS, p0130
Func. diagram: -
P-Group: Motor
Units group: 16_1
Unit selection: p0349
Not for motor type: PEM, REL, FEM
Expert list: 1

Min	Max	Factory setting
- [Ohm]	- [Ohm]	- [Ohm]

Description: Displays the rated motor stator resistance at rated temperature (total of p0625 and p0627).

Dependency: Refer to: p0627

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

r0374[0...n] Motor rotor resistance cold / damping resistance d axis / Mot R_r cold / RDd

SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 4
Data type: FloatingPoint32
Dynamic index: MDS, p0130
Func. diagram: -
P-Group: Motor
Units group: 16_1
Unit selection: p0349
Not for motor type: PEM, REL
Expert list: 1

Min	Max	Factory setting
- [Ohm]	- [Ohm]	- [Ohm]

Description: Displays the rotor/secondary section resistance of the motor for the ambient temperature p0625.
For separately-excited synchronous motors: Displays the damping resistance in the rotor direction (d-axis).

Dependency: Refer to: p0625

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

r0375[0...n] Motor damping resistance, q axis / Mot R_damp q

VECTOR	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** 16_1	**Unit selection:** p0349
	Not for motor type: ASM, PEM, REL		**Expert list:** 1
	Min - [Ohm]	**Max** - [Ohm]	**Factory setting** - [Ohm]

Description: Displays the damping resistance of the separately-excited synchronous motor quadrature to the rotor direction (q axis).

r0376[0...n] Rated motor rotor resistance / Mot R_rotor rated

SERVO, VECTOR	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** 16_1	**Unit selection:** p0349
	Not for motor type: PEM, REL, FEM		**Expert list:** 1
	Min - [Ohm]	**Max** - [Ohm]	**Factory setting** - [Ohm]

Description: Displays the rated (nominal) rotor/secondary section resistance of the motor at the rated temperature (total of p0625 and p0628).

Dependency: Refer to: p0628

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

r0377[0...n] Motor leakage inductance, total / Mot L_leak total

SERVO, VECTOR	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** 6640, 6714, 6721
	P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
	Not for motor type: -		**Expert list:** 1
	Min - [mH]	**Max** - [mH]	**Factory setting** - [mH]

Description: Induction motor, separately-excited synchronous motor:

Displays the stator leakage inductance of the motor including the series inductance (p0353) for servo drives and the motor reactor (p0233) for vector drives.

Synchronous motor:

Displays the stator quadrature axis inductance including the series inductance (p0353) for servo drives and the motor reactor (p0233) for vector drives.

r0378[0...n] Motor stator inductance, d axis / Mot L_stator_d

VECTOR	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** 6640, 6714, 6721
	P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
	Not for motor type: ASM, REL, FEM		**Expert list:** 1
	Min - [mH]	**Max** - [mH]	**Factory setting** - [mH]

Description: Displays the stator longitudinal inductance of the synchronous motor including the series inductance (p0353) and the motor reactor (p0233).

Note: The parameter is not used for separately-excited synchronous motors (p0300 = 5).

r0380[0...n] Motor damping inductance, d axis / Mot L_damping_d

VECTOR	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
	Not for motor type: ASM, PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [mH]	- [mH]	- [mH]

Description: Displays the damping inductance of the separately-excited synchronous motor in the rotor direction (d-axis).

r0381[0...n] Motor damping inductance, q axis / Mot L_damping_q

VECTOR	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
	Not for motor type: ASM, PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [mH]	- [mH]	- [mH]

Description: Displays the damping inductance of a separately-excited synchronous motor quadrature to the rotor direction (q axis).

r0382[0...n] Motor magnetizing inductance transformed / Lh d axis saturated / Mot L_m tr/Lhd sat

SERVO, VECTOR	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** 5722
	P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
	Not for motor type: PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [mH]	- [mH]	- [mH]

Description: Displays the magnetizing inductance of the motor.

For separately-excited synchronous motors: Displays the saturated magnetizing inductance in the rotor direction (d-axis).

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

r0383[0...n] Motor magnetizing inductance q axis, saturated / Mot L_magn q sat

VECTOR	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
	Not for motor type: ASM, PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [mH]	- [mH]	- [mH]

Description: Displays the saturated magnetizing inductance of a separately-excited synchronous motor quadrature to the rotor direction (q axis).

r0384[0...n] Motor rotor time constant / damping time constant d axis / Mot T_rotor/T_Dd

SERVO, VECTOR	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** 6722
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [ms]	- [ms]	- [ms]

Description: Displays the rotor time constant.

For separately-excited synchronous motors: Displays the damping time constant in the rotor direction (d-axis).

Note: The parameter is not used for synchronous motors.
The value is calculated from the total of the inductances on the rotor side (p0358, p0360) divided by the rotor/damping resistance (p0354). The temperature adaptation of the rotor resistance for induction motors is not taken into account.

r0385[0...n] Motor damping time constant, q axis / Mot T_Dq

VECTOR

Can be changed: - **Calculated:** - **Access level:** 4
Data type: FloatingPoint32 **Dynamic index:** MDS, p0130 **Func. diagram:** -
P-Group: Motor **Units group:** - **Unit selection:** -
Not for motor type: ASM, PEM, REL **Expert list:** 1

Min	Max	Factory setting
- [ms]	- [ms]	- [ms]

Description: Displays the damping time constant of a separately-excited synchronous motor quadrature to the rotor direction (q axis).

Note: The value is calculated from the total of the inductances on the damping side (p0359, p0361) divided by the damping resistance (p0355).

r0386[0...n] Motor stator leakage time constant / Mot T_stator leak

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 4
Data type: FloatingPoint32 **Dynamic index:** MDS, p0130 **Func. diagram:** -
P-Group: Motor **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [ms]	- [ms]	- [ms]

Description: Displays the stator leakage time constant.

Note: The value is calculated from the total of all leakage inductances (p0233*, p0353, p0356, p0358) divided by the total of all motor resistances (p0350, p0352, p0354). The temperature adaptation of the resistances is not taken into account.
* only applies for VECTOR (r0107).

r0387[0...n] Motor stator leakage time constant, q axis / Mot T_Sleak /T_Sq

VECTOR

Can be changed: - **Calculated:** - **Access level:** 4
Data type: FloatingPoint32 **Dynamic index:** MDS, p0130 **Func. diagram:** -
P-Group: Motor **Units group:** - **Unit selection:** -
Not for motor type: ASM, REL, FEM **Expert list:** 1

Min	Max	Factory setting
- [ms]	- [ms]	- [ms]

Description: Displays the stator leakage time constant quadrature to the rotor direction (q axis).

Note: The value is calculated from the total of all leakage inductances (p0233, p0356, p0359) divided by the total of all motor resistances (p0350, p0352, p0355).
The temperature adaptation of the resistances is not taken into account.

p0389[0...n] Excitation rated no-load current / Exc I_noload_rated

VECTOR

Can be changed: C2(1, 3) **Calculated:** - **Access level:** 1
Data type: FloatingPoint32 **Dynamic index:** MDS, p0130 **Func. diagram:** 6727
P-Group: Motor **Units group:** - **Unit selection:** -
Not for motor type: ASM, PEM, REL **Expert list:** 1

Min	Max	Factory setting
0.00 [A]	10000.00 [A]	0.00 [A]

Description: Sets the rated no-load current (I_F0) for the excitation.

p0390[0...n] Rated excitation current / Exc I_rated

VECTOR	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** 6727
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [A]	10000.00 [A]	0.00 [A]

Description: Setting the rated current (I_F) of the controlled excitation rectifier (DC master).

p0391[0...n] Current controller adaptation, starting point KP / I_adapt pt KP

SERVO	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** 5714
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [Arms]	6000.00 [Arms]	0.00 [Arms]

Description: Sets the starting point of the current-dependent current controller adaptation where the current controller gain p1715 is effective.

Dependency: Refer to: p0392, p0393, p1402, p1715

Caution: This parameter is automatically preset for motors from the motor list (p0301).

When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: For p0393 = 100 % or p1402 bit 2 = 0, the current controller adaptation is disabled and p1715 is effective over the entire range.

p0391[0...n] Current controller adaptation, starting point KP / I_adapt pt KP

VECTOR	**Can be changed:** C2(3), U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** 6714
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [Arms]	6000.00 [Arms]	0.00 [Arms]

Description: Sets the starting point of the current-dependent current controller adaptation where the current controller gain p1715 is effective.

Dependency: Refer to: p0392, p0393, p1402, p1715

Caution: This parameter is automatically preset for motors from the motor list (p0301).

When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

p0392[0...n] Current controller adaptation, starting point KP adapted / I_adapt pt KP adap

SERVO	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** 5714
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [Arms]	6000.00 [Arms]	0.00 [Arms]

Description: Sets the starting point of the current-dependent current controller adaptation where the adapted current controller gain p1715 * p0393 is effective.

Dependency: Refer to: p0391, p0393, p1402, p1715

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: For p0393 = 100 % or p1402 bit 2 = 0, the current controller adaptation is disabled and p1715 is effective over the entire range.

p0392[0...n] Current controller adaptation, starting point KP adapted / I_adapt pt KP adap

VECTOR

Can be changed: C2(3), U, T | **Calculated:** CALC_MOD_REG | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 6714
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [Arms]	6000.00 [Arms]	0.00 [Arms]

Description: Sets the starting point of the current-dependent current controller adaptation where the adapted current controller gain p1715 * p0393 is effective.

Dependency: Refer to: p0391, p0393, p1402, p1715

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

p0393[0...n] Current controller adaptation p gain adaptation / I_adapt Kp adapt

SERVO

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 5714
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [%]	1000.00 [%]	100.00 [%]

Description: Sets the factor for the current controller P gain in the adaptation range (current greater than p0392). The value is referred to p1715.

Dependency: Refer to: p0391, p0392, p1402, p1715

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: For p0393 = 100 % or p1402 bit 2 = 0, the current controller adaptation is disabled and p1715 is effective over the entire range.

p0393[0...n] Current controller adaptation P gain scaling / I_adapt Kp scal

VECTOR

Can be changed: C2(3), U, T | **Calculated:** CALC_MOD_REG | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 6714
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [%]	1000.00 [%]	100.00 [%]

Description: Sets the factor for the current controller P gain in the adaptation range (e.g. r0078 > p0392, if p0392 > p0391).
The value is referred to p1715.

Dependency: Refer to: p0391, p0392, p1402, p1715

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: For p0393 = 100 % or p1402 bit 2 = 0, the current controller adaptation is disabled and p1715 is effective over the entire range.

r0395[0...n] Current stator resistance / R_stator cur

SERVO, VECTOR	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** 6300, 6730, 6731, 6732
	P-Group: Motor	**Units group:** 16_1	**Unit selection:** p0349
	Not for motor type: -		**Expert list:** 1
	Min - [Ohm]	**Max** - [Ohm]	**Factory setting** - [Ohm]

Description: Displays the current stator resistance (phase value).
The parameter is influenced by the temperature model and includes the temperature-independent cable resistance.

Dependency: Refer to: p0350, p0352, p0620

r0396[0...n] Current rotor resistance / R_rotor cur

SERVO, VECTOR	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** 6730
	P-Group: Motor	**Units group:** 16_1	**Unit selection:** p0349
	Not for motor type: PEM, REL, FEM		**Expert list:** 1
	Min - [Ohm]	**Max** - [Ohm]	**Factory setting** - [Ohm]

Description: Displays the current rotor/secondary section resistance (phase value).
The parameter is influenced by the temperature model.

Dependency: Refer to: p0354, p0620

Note: This parameter is not used for synchronous motors (p0300 = 2xx).

p0400[0...n] Encoder type selection / Enc_typ sel

SERVO, VECTOR	**Can be changed:** C2(1, 4)	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dynamic index:** EDS	**Func. diagram:** 1580, 4704
	P-Group: Encoder	**Units group:** -	**Unit selection:** -

3003: 2048 HTL A/B R
3005: 1024 HTL A/B
3006: 1024 TTL A/B
3007: 2048 HTL A/B
3008: 2048 TTL A/B
3009: 1024 HTL A/B unipolar
3011: 2048 HTL A/B unipolar
3020: 2048 TTL A/B R, with sense
3081: SSI, singleturn, 24 V
3082: SSI, multiturn 4096, 24 V
3090: 4096, HTL, A/B, SSI, singleturn
9999: User-defined
10000: Identify encoder
10050: Encoder with EnDat interface identified
10051: DRIVE-CLiQ encoder identified
10100: Identify encoder (waiting)

Caution: An encoder type with p0400 < 9999 defines an encoder for which there is an encoder parameter list. When selecting a catalog encoder (p0400 < 9999) the parameters from the encoder parameter list cannot be changed (write protection). To remove write protection, the encoder type should be set to an unlisted encoder (p0400 = 9999).

Notice: The list for motor codes /encoder codes can be found in the following literature:

SINAMICS S120/S150 List Manual

Note: The connected encoder can be identified by p0400 = 10000. This means that the encoder must support this and is possible in the following cases: Motor with DRIVE-CLiQ, encoder with EnDat interface.

If an identification is not possible, then p0400 is set to 0.

The encoder data (e.g. pulse number p0408) can only be changed when p0400 = 9999.

When using an encoder with track A/B and zero pulse, as standard, fine synchronization is not set using the zero mark. If, for a synchronous motor, the fine synchronization is to be realized using a zero mark, then the following must be executed:

- set p0400 to 9999

- set p0404.15 to 1

Prerequisite:

Coarse synchronization must be selected (e.g. pole position identification) and the zero pulse of the encoder must either be mechanically or electronically (p0431) adjusted to the pole position.

p0401[0...n] Encoder type, OEM selection / Enc type OEM sel

SERVO, VECTOR

Can be changed: C2(1, 4)	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dynamic index:** EDS	**Func. diagram:** 1580, 4704
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	32767	0

Description: Selects the encoder from the list of encoder types that the OEM supports.

Note: The connected encoder can be identified by p0400 = 10000. This means that the encoder must support this and is possible in the following cases: Motor with DRIVE-CLiQ, encoder with EnDat interface.

If an identification is not possible, then p0400 is set to 0.

The encoder data (e.g. pulse number p0408) can only be changed when p0400 = 9999.

Using p0400 = 20000, the encoder type can be selected from the list of OEM encoders using p0401.

p0402[0...n] Gearbox type selection / Gearbox type sel

SERVO, VECTOR	**Can be changed:** C2(1, 4)	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dynamic index:** EDS	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	1	10100	9999

Description: Selects the gearbox type to pre-set the inversion and the gearbox factor.
Measuring gear factor = motor or load revolutions / encoder revolutions.

Value:
1: Gearbox 1:1 not inverted
2: Gearbox 2:7 inverted
3: Gearbox 4:17 inverted
9999: Gearbox, user-defined
10000: Identify gearbox
10100: Identify gearbox

Dependency: Refer to: p0410, p0432, p0433

Note:
Re p0402 = 1:
Automatic setting of p0410 = 0000 bin, p0432 = 1, p0433 = 1.
Re p0402 = 2:
Automatic setting of p0410 = 0011 bin, p0432 = 7, p0433 = 2.
Re p0402 = 3:
Automatic setting of p0410 = 0011 bin, p0432 = 17, p0433 = 4.
Re p0402 = 9999:
No automatic setting of p0410, p0432, p0433. The parameters should be manually set.
Re p0402 = 10000:
It is only possible to identify the gearbox type for a motor with DRIVE-CLiQ. Parameters p0410, p0432 and p0433 are set corresponding to the identified gearbox. If an identification is not possible, then p0402 is set to 9999.

p0404[0...n] Encoder configuration effective / Enc_config eff

SERVO, VECTOR	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dynamic index:** EDS	**Func. diagram:** 4010, 4704
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0000 bin

Description: Settings for the basic encoder properties.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Linear encoder	Yes	No	-
01	Abs value encoder	Yes	No	-
02	Multiturn encoder	Yes	No	-
03	Track A/B sq-wave	Yes	No	-
04	Track A/B sinus	Yes	No	-
05	Track C/D	Yes	No	-
06	Hall sensor	Yes	No	-
08	EnDat encoder	Yes	No	-
09	SSI encoder	Yes	No	-
10	DRIVE-CLiQ encoder	Yes	No	-
12	Equidistant zero mark	Yes	No	-
13	Irregular zero mark	Yes	No	-
14	Distance-coded zero mark	Yes	No	-
15	Commutation with zero mark	Yes	No	-
16	Acceleration	Yes	No	-
20	Voltage level 5 V	Yes	No	-
21	Voltage level 24 V	Yes	No	-

22	Remote sense (only SMC30)	Yes	No	-
23	Resolver excit.	Yes	No	-

Caution: This parameter is automatically preset for encoders from the encoder list (p0400).

When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: ZM: Zero mark

SMC: Sensor Module Cabinet

If a technique to determine the commutation information/data has not been selected (e.g. track C/D, Hall sensor), and the encoder pulse number is an integer multiple of the pole number, then the following applies:

The track A/B is adjusted to match the magnetic position of the motor.

Re bit 1, 2 (absolute encoder, multiturn encoder):

These bits can only be selected for EnDat encoders, SSI encoders or DRIVE-CLiQ encoders.

Re bit 10 (DRIVE-CLiQ encoder):

This bit is only used for the large-scale integrated DRIVE-CLiQ encoders that provide their encoder data directly in DRIVE-CLiQ format without converting this data. This bit is not, therefore, set for first-generation DRIVE-CLiQ encoders.

Re bit 12 (equidistant zero mark):

The zero marks occur at regular intervals (e.g. rotary encoder with 1 zero mark per revolution). The bit activates the monitoring of the zero mark distance (p0425).

Re bit 13 (irregular zero mark):

The zero marks occur at irregular intervals (e.g. a linear scale with only 1 zero mark in the traversing range). The zero mark distanceis not monitored.

Re bit 14 (distance-coded zero mark):

The distance (clearance) between two or several consecutive zero marks allows the absolute position to be calculated.

Re bit 15 (commutation with zero mark):

For distance-coded zero marks, the following applies:

The phase sequence of the C/D track (if available) must be the same as the phase sequence of the encoder (A/B track).

The phase sequence of the Hall signal (if available) must be the same as the phase sequence of the motor. Further, the position of the Hall sensor must be mechanically adjusted to the motor EMF.

The fine synchronization is only started after two zero marks have been passed.

p0405[0...n] Square-wave encoder track A/B / Sq-wave enc A/B

SERVO, VECTOR

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** EDS	**Func. diagram:** 4704
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	**Max**	**Factory setting**
-	-	1111 bin

Description: Settings for the track A/B of a square-wave encoder. For square-wave encoders, p0404.3 must also be 1.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Signal	Bipolar	Unipolar	-
01	Level	TTL	HTL	-
02	Track monitoring	A/B <> -A/B	None	-
03	Zero pulse	Same as A/B track	24 V unipolar	-
04	Switching threshold	High	Low	-

Caution: This parameter is automatically preset for encoders from the encoder list (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

p0407[0...n] Linear encoder grid division / Enc grid div

SERVO, VECTOR	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dynamic index:** EDS	**Func. diagram:** 4010, 4704
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0 [nm]	250000000 [nm]	16000 [nm]

Description: Sets the grid division for a linear encoder.

Caution: This parameter is automatically preset for encoders from the encoder list (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: The lowest permissible value is 250 nm.

p0408[0...n] Rotary encoder pulse No. / Rot enc pulse No.

SERVO, VECTOR	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dynamic index:** EDS	**Func. diagram:** 4010, 4704
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	16777215	2048

Description: Sets the number of pulses for a rotary encoder.

Caution: This parameter is automatically preset for encoders from the encoder list (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: The number of pole pairs for a resolver is entered here.

The smallest permissible value is 1 pulse.

p0408 Rotary encoder pulse No. / Rot enc pulse No.

TM41	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** 9674, 9676
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	1000	16384	2048

Description: Sets the number of pulses for a rotary encoder.

Danger: In the SINAMICS operating mode (p4400 = 1) the following applies:

The number of pulses per encoder revolution of the TM41 (p0408) must always precisely correspond to the number of pulses per encoder revolution of the encoder interconnected at connector input p4420. If this condition is not taken into account, then the TM41 zero mark is not in synchronism with the interconnected encoder.

The following applies for TM41 SAC:

- Every time the pulse number is changed, a POWER ON must be carried out for CU and TM41.
- Min. value: 1000
- Max. value: 8192

Note: TM41 SAC: order no. = 6SL3055-0AA00-3PA0

TM41 DAC: order no. = 6SL3055-0AA00-3PA1

p0410[0...n] Encoder inversion actual value / Enc inv act value

SERVO (Lin)

Can be changed: C2(4) **Calculated:** - **Access level:** 3
Data type: Unsigned16 **Dynamic index:** EDS **Func. diagram:** -
P-Group: Encoder **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Setting to invert actual values.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Invert velocity actual value	Yes	No	4710, 4715
01	Invert position actual value	Yes	No	4704

Note: The inversion influences the following parameters:
Bit 00: r0061, r0063 (exception: encoderless control), r0094
Bit 01: r0482, r0483

p0410[0...n] Encoder inversion actual value / Enc inv act value

SERVO, VECTOR

Can be changed: C2(4) **Calculated:** - **Access level:** 3
Data type: Unsigned16 **Dynamic index:** EDS **Func. diagram:** -
P-Group: Encoder **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Setting to invert actual values.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Invert speed actual value	Yes	No	4710, 4715
01	Invert position actual value	Yes	No	4704

Note: The inversion influences the following parameters:
Bit 00: r0061, r0063 (exception: encoderless control), r0094
Bit 01: r0482, r0483

p0411[0...n] Measuring gear, configuration / Meas gear config

SERVO, VECTOR

Can be changed: C2(4) **Calculated:** - **Access level:** 1
Data type: Unsigned32 **Dynamic index:** EDS **Func. diagram:** -
P-Group: Encoder **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the configuration for position tracking of a measuring gear.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Measuring gear, activate position tracking	Yes	No	-
01	Axis type	Linear axis	Rotary axis	-
02	Measuring gear, reset position	Yes	No	-
03	Meas. gear, activate pos. tracking for incremental encoders	Yes	No	-

Notice: For p0411.3 = 1 the following applies:
If position tracking is activated for incremental encoders, only the position actual value is stored. Axis or encoder motion is not detected when deactivated! Any tolerance window entered in p0413 has no effect.

Note: For the following events, the non-volatile, saved position values are automatically reset:
- when an encoder replacement has been identified.
- when changing the configuration of the Encoder Data Set (EDS).

p0412[0...n] Measuring gear, rotary absolute gearbox, revolutions, virtual / Abs rot rev

SERVO, VECTOR

Can be changed: C2(4) | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 | **Dynamic index:** EDS | **Func. diagram:** -
P-Group: Encoder | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	4194303	0

Description: Sets the number of rotations that can be resolved for a rotary encoder with activated position tracking of the measuring gear.

Dependency: This parameter is only of significance for an absolute encoder (p0404.1 = 1) with activated position tracking (p0411.0 = 1) and for an incremental encoder with activated position tracking (p0411.3 = 1).

Note: The resolution that is set must be able to be represented using r0483.

For rotary axes/modulo axes, the following applies:

p0411.0 = 1:

This parameter is preset with p0421 and can be changed.

p0411.3 = 1:

The parameter is preset to the highest possible value. The highest possible value depends on the pulse number (p0408) and fine resolution (p0419).

For linear axes, the following applies:

p0411.0 = 1:

This parameter is pre-assigned with p0421, expanded by 6 bits for multiturn information (maximum number of overflows) and cannot be changed.

p0411.3 = 1:

The parameter is preset to the highest possible value. The highest possible value depends on the pulse number (p0408) and fine resolution (p0419).

p0413[0...n] Measuring gear, position tracking tolerance window / Pos track window

SERVO, VECTOR

Can be changed: C2(4) | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** EDS | **Func. diagram:** -
P-Group: Encoder | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00	4294967300.00	0.00

Description: Sets a tolerance window for position tracking.

After the system is powered up, the difference between the saved position and the current position is determined, and depending on this, the following is initiated:

Difference within the tolerance window --> The position is reproduced as a result of the encoder actual value.

Difference outside the tolerance window --> An appropriate message is output.

Dependency: Refer to: F31501, F32501, F33501

Caution: Rotation, e.g. through a complete encoder range is not detected.

Note: The value is entered in integer (complete) encoder pulses.

For p0411.0 = 1, the value is automatically pre-assigned quarter of the encoder range.

Example:

Quarter of the encoder range = (p0408 * p0421) / 4

It is possible that the tolerance window may not be able to be precisely set due to the data type (floating point number with 23 bit mantissa).

p0414[0...n] Redundant coarse position value relevant bits (identified) / Relevant bits

SERVO, VECTOR	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dynamic index:** EDS	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	16	16

Description: Sets the number of relevant bits for the redundant coarse position value.

p0415[0...n] Gx_XIST1 Coarse position safe most significant bit (identified) / Gx_XIST1 safe MSB

SERVO, VECTOR	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dynamic index:** EDS	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	31	14

Description: Sets the bit number for the safe most significant bit (MSB) of the Gx_XIST1 coarse position.

Note: MSB: Most Significant Bit

p0418[0...n] Fine resolution Gx_XIST1 (in bits) / Enc fine Gx_XIST1

SERVO, VECTOR	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned8	**Dynamic index:** EDS	**Func. diagram:** 4010, 4704
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	2	18	11

Description: Sets the fine resolution in bits of the incremental position actual values.

Note: The parameter applies for the following process data:

- Gx_XIST1
- Gx_XIST2 for reference mark or flying measurement

The fine resolution specifies the fraction between two encoder pulses. Depending on the physical measurement principle, an encoder pulse can be broken down into a different number of fractions (e.g. squarewave encoder: 2 bit = resolution 4, sin/cos encoder: Typical 11 bit = resolution 2048).

For a squarewave encoder, with the factory setting, the least significant bits have the value zero, i.e. they do not supply any useful information.

For especially high quality measuring systems, the fine resolution must be increased corresponding to the available accuracy.

p0418 Fine resolution Gx_XIST1 (in bits) / Enc fine Gx_XIST1

TM41	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned8	**Dynamic index:** -	**Func. diagram:** 9674, 9676
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	2	18	11

Description: Sets the fine resolution in bits of the incremental position actual values.

Danger:

In the SINAMICS operating mode (p4400 = 1) the following applies:

The fine resolution of the TM41 (p0418) must always precisely correspond to the fine resolution of the encoder interconnected at connector input p4420. If this condition is not taken into account, then the TM41 zero mark is not in synchronism with the interconnected encoder. Further, in this case, the frequency of the pulses for the encoder emulation differs from the pulse frequency of the leading encoder.

For TM41 SAC (order no. = 6SL3055-0AA00-3PA0), the following applies:

Every time the fine resolution has been changed, a POWER ON must be performed for the CU and TM41.

p0419[0...n] Fine resolution absolute value Gx_XIST2 (in bits) / Enc fine Gx_XIST2

SERVO, VECTOR

Can be changed: C2(4) **Calculated:** - **Access level:** 3
Data type: Unsigned8 **Dynamic index:** EDS **Func. diagram:** 4704, 4710
P-Group: Encoder **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
2	18	9

Description: Sets the fine resolution in bits of the absolute position actual values.
Dependency: Refer to: p0418
Note: This parameter applies to process data Gx_XIST2 when reading the absolute value.

p0420[0...n] Encoder connection / Encoder connection

SERVO, VECTOR

Can be changed: C2(4) **Calculated:** - **Access level:** 4
Data type: Unsigned16 **Dynamic index:** EDS **Func. diagram:** -
P-Group: Encoder **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Selecting the encoder connection.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	SUB-D	Yes	No	-
01	Terminal	Yes	No	-

p0421[0...n] Absolute encoder rotary multiturn resolution / Enc abs multiturn

SERVO, VECTOR

Can be changed: C2(4) **Calculated:** - **Access level:** 3

Min	Max	Factory setting
-	-	1110 0000 0000 1000 0000 0000 0000 0000 bin

Description: Sets the configuration of the Sensor Module.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
17	Burst oversampling	Yes	No	-
19	Safety position actual value sensing	Yes	No	-
20	Speed calculation mode (only SMC30)	Incremental diff	Flank time meas	-
21	Zero mark tol	Yes	No	-
22	Rot pos adapt	Yes	No	-
27	Extrapolation SSI position value	Yes	No	-
29	Phase correction	Yes	No	-
30	Amplitude correction	Yes	No	-
31	Offset correction	Yes	No	-

p0431[0...n] Angular commutation offset / Ang_com offset

SERVO, VECTOR

Can be changed: C2(4) | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** EDS | **Func. diagram:** -
P-Group: Encoder | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-180.00 [°]	180.00 [°]	0.00 [°]

Description: Sets the angular commutation offset.

Dependency: The value is taken into account in r0094.
Refer to: r0094, r1778

Caution: When the firmware is upgraded from V2.3 to V2.4 or higher, the value must be reduced by 60° if all the following conditions are fulfilled:
- The motor is a synchronous motor (p0300 = 2, 2xx, 4, 4xx).
- The encoder is a resolver (p0404.23 = 1).
- The actual speed value is inverted (p0410.0 = 1).

Notice: The angular commutation offset cannot be generally taken from other drive systems. As a minimum - the sign of the offset determined for SIMODRIVE 611 digital and SIMODRIVE 611 universal must be reversed for SINAMICS (p0431 (SINAMICS) = -p1016 (SIMODRIVE)).

Note: For p0404.5 = 1 (track C/D) the following applies:
The angular offset in p0431 acts on track A/B, the zero mark on track C/D.
For p0404.6 = 1 (Hall sensor) the following applies:
The angular offset in p0431 acts on track A/B and the zero mark.

p0432[0...n] Gearbox factor, encoder path / Grbx_fact enc_path

SERVO (Lin)

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** EDS	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
1	10000	1

Description: Sets the gearbox factor of the encoder evaluation.
The gearbox factor specifies the ratio between the encoder shaft and motor shaft (for motor encoders) or between the encoder shaft and the load.

Dependency: This parameter can only be set for p0402 = 9999.
Refer to: p0402, p0410, p0433

Note: Negative gearbox factors should be implemented with p0410.

p0432[0...n] Gearbox factor, encoder revolutions / Grbx_fact enc_rev

SERVO, VECTOR

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** EDS	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
1	10000	1

Description: Sets the encoder revolutions for the gearbox factor of the encoder evaluation.
The gearbox factor specifies the ratio between the encoder shaft and motor shaft (for motor encoders) or between the encoder shaft and the load.

Dependency: This parameter can only be set for p0402 = 9999.
Refer to: p0402, p0410, p0433

Note: Negative gearbox factors should be implemented with p0410.

p0433[0...n] Gearbox factor, motor/load path / Grbx_fact mot_path

SERVO (Lin)

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** EDS	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
1	10000	1

Description: Sets the motor and load path for the gearbox factor of the encoder evaluation.
The gearbox factor specifies the ratio between the encoder shaft and motor shaft (for motor encoders) or between the encoder shaft and the load.

Dependency: This parameter can only be set for p0402 = 9999.
Refer to: p0402, p0410, p0432

Note: Negative gearbox factors should be implemented with p0410.

p0433[0...n] Gearbox factor, motor/load revolutions / Grbx_fact mot_rev

SERVO, VECTOR	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dynamic index:** EDS	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	1	10000	1

Description: Sets the motor and load revolutions for the gearbox factor of the encoder evaluation.
The gearbox factor specifies the ratio between the encoder shaft and motor shaft (for motor encoders) or between the encoder shaft and the load.

Dependency: This parameter can only be set for p0402 = 9999.
Refer to: p0402, p0410, p0432

Note: Negative gearbox factors should be implemented with p0410.

p0434[0...n] Encoder SSI error bit / Enc SSI error bit

SERVO, VECTOR	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dynamic index:** EDS	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	65535	0

Description: Sets the position and level of the error bit in the SSI protocol.

Notice: The bit may only be positioned before (p0446) or after (p0448) the absolute value in the SSI protocol.

Note: Value = dcba
ba: Position of the error bit in the protocol (0 ... 63).
c: Level (0: Low level, 1: High level).
d: Status of the evaluation (0: Off, 1: On with 1 error bit, 2: On with 2 error bits ... 9: On with 9 error bits).
For several error error bits, the following applies:
- the position specified under ba and the additional bits are assigned increasing consecutively.
- the level set under c applies to all error bits.
Example:
p0434 = 1013
--> The evaluation is switched in and the error bit is at position 13 with a low level.
p0434 = 1113
--> The evaluation is switched in and the error bit is at position 13 with a high level.

p0435[0...n] Encoder SSI alarm bit / Enc SSI alarm bit

SERVO, VECTOR	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dynamic index:** EDS	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	65535	0

Description: Sets the position and level of the alarm bit in the SSI protocol.

Notice: The bit may only be positioned before (p0446) or after (p0448) the absolute value in the SSI protocol.

Note: Value = dcba
ba: Position of the alarm bit in protocol (0 ... 63).
c: Level (0: Low level, 1: High level).
d: State of the evaluation (0: Off, 1: On).

Example:
p0435 = 1014
--> The evaluation is switched in and the alarm bit is at position 14 with a low level.
p0435 = 1114
--> The evaluation is switched in and the alarm bit is at position 14 with a high level.

p0436[0...n] Encoder SSI parity bit / Enc SSI parity bit

SERVO, VECTOR

Can be changed: C2(4) **Calculated:** - **Access level:** 3
Data type: Unsigned16 **Dynamic index:** EDS **Func. diagram:** -
P-Group: Encoder **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	65535	0

Description: Sets the position and parity of the parity bit in the SSI protocol.

Notice: The bit may only be positioned before (p0446) or after (p0448) the absolute value in the SSI protocol.

Note: Value = dcba
ba: Position of the parity bit in the protocol (0 ... 63).
c: Parity (0: even, 1: uneven).
d: State of the evaluation (0: Off, 1: On).
Example:
p0436 = 1015
--> The evaluation is switched in and the parity bit is at position 15 with even parity.
p0436 = 1115
--> The evaluation is switched in and the parity bit is at position 15 with uneven parity.

p0437[0...n] Sensor Module configuration extended / SM config ext

SERVO (Lin)

Can be changed: C2(4) **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** EDS **Func. diagram:** -
P-Group: Encoder **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	0011 0000 0000 0000 0000 0000 0000 0000 bin

Description: Sets the extended configuration of the Sensor Module.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Activating the data logger	Yes	No	-
01	Zero mark edge detection	Yes	No	-
04	Edge evaluation bit 0	Yes	No	-
05	Edge evaluation bit 1	Yes	No	-
06	Freeze the velocity actual value for dn/dt errors	Yes	No	-
28	EnDat linear encoder monitoring incremental/absolute	Yes	No	-
29	EnDat encoder initialization with high accuracy	Yes	No	-
31	Analog unipolar track monitoring	Yes	No	-

Dependency: Refer to: p0430, r0459

Note: A value of zero is displayed if an encoder is not present.
Re bit 00:
When the data logger (trace) is activated, in the case of a fault, data before and after the event are recorded (traced) and saved in files on the non-volatile memory medium. Experts can then evaluate this data.

Re bit 01:

For bit = 0, the zero mark is evaluated by ANDing tracks A and B.

For bit = 1, the zero mark is evaluated depending on the direction detected. For a positive direction, the positive edge of the zero mark is considered and for a negative direction, the negative edge of the zero mark.

Re Bit 04 and Bit 05:

Bit 5/4 = 0/0: Signal evaluation per period, 4x.

Bit 5/4 = 1/0: Signal evaluation per period, 2x.

Bit 5/4 = 0/1: Signal evaluation per period, 1x.

Bit 5/4 = 1/1: Illegal setting.

Re bit 06:

When the function is activated, when the dn/dt monitoring responds, the velocity actual value is internally frozen for a specific time. The actual value is then re-enabled after this time has expired.

Re bit 29:

When the bit is set, the EnDat encoder is initialized under a certain velocity and, therefore, with high accuracy. If initialization at a higher velocity is requested, fault F31151, F32151, or F33151 is output.

Re bit 31:

When monitoring is active, the levels of the individual track signals and the corresponding inverted track signals are monitored separately.

p0437[0...n] Sensor Module configuration extended / SM config ext

SERVO, VECTOR

Can be changed: C2(4) | **Calculated:** - | **Access level:** 3

Data type: Unsigned32 | **Dynamic index:** EDS | **Func. diagram:** -

P-Group: Encoder | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0011 0000 0000 0000 0000 0000 0000 0000 bin

Description: Sets the extended configuration of the Sensor Module.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Activating the data logger	Yes	No	-
01	Zero mark edge detection	Yes	No	-
04	Edge evaluation bit 0	Yes	No	-
05	Edge evaluation bit 1	Yes	No	-
06	Freeze the speed actual value for dn/dt errors	Yes	No	-
28	EnDat linear encoder monitoring incremental/absolute	Yes	No	-
29	EnDat encoder initialization with high accuracy	Yes	No	-
31	Analog unipolar track monitoring	Yes	No	-

Dependency: Refer to: p0430, r0459

Note: A value of zero is displayed if an encoder is not present.

Re bit 00:

When the data logger (trace) is activated, in the case of a fault, data before and after the event are recorded (traced) and saved in files on the non-volatile memory medium. Experts can then evaluate this data.

Re bit 01:

For bit = 0, the zero mark is evaluated by ANDing tracks A and B.

For bit = 1, the zero mark is evaluated depending on the direction of rotation detected. For a positive direction of rotation, the positive edge of the zero mark is considered and for a negative direction of rotation, the negative edge of the zero mark.

Re Bit 04 and Bit 05:

Bit 5/4 = 0/0: Signal evaluation per period, 4x.

Bit 5/4 = 1/0: Signal evaluation per period, 2x.

Bit 5/4 = 0/1: Signal evaluation per period, 1x.

Bit 5/4 = 1/1: Illegal setting.

Re bit 06:

When the function is activated, when the dn/dt monitoring responds, the speed actual value is internally frozen for a specific time. The actual value is then re-enabled after this time has expired.

Re bit 29:

When the bit is set, the EnDat encoder is initialized under a certain speed and, therefore, with high accuracy. If initialization at a higher speed is requested, fault F31151, F32151, or F33151 is output.

Re bit 31:

When monitoring is active, the levels of the individual track signals and the corresponding inverted track signals are monitored separately.

p0438[0...n] Squarewave encoder filter time / Enc t_filt

SERVO, VECTOR

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** EDS	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	100.00 [µs]	0.64 [µs]

Description: Sets the filter time for a squarewave encoder.

The hardware of the squarewave encoder only supports the following values:

0: No filtering

0.04 µs

0.64 µs

2.56 µs

10.24 µs

20.48 µs

Dependency: Refer to: r0452

Notice: If the filter time is too long, the track signals A/B/R may be suppressed and the appropriate messages output.

Note: The most suitable filter time depends on the number of pulses and maximum speed of the square-wave encoder.

The filter time is automatically corrected to the next value when entering a non-specified value. In this case, no message is output.

The effective filter time is displayed in r0452.

p0440[0...n] Copy encoder serial number / Copy enc ser_no

SERVO, VECTOR

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** EDS	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Copies the current serial number of the encoder belong to this encoder data set to p0441 ... p0445.

Example:

For p0440[0] = 1, the serial number of the encoder belonging EDS0 is copied to p0441[0] ... p0445[0].

Value:
0: No action
1: Transfer serial number

Dependency: Refer to: p0441, p0442, p0443, p0444, p0445, r0460, r0461, r0462, r0463, r0464, p1990

Note: For encoders with serial number, encoder replacement is monitored in order to request angular commutation calibration (adjustment) for motor encoders and absolute calibration for direct measuring systems with absolute value data. The serial number, which from then onwards is used for monitoring purposes, can be transferred using p0440.

In the following cases, copying is automatically started in the following cases:
1.) When commissioning 1FT6, 1FK6, 1FK7 motors.
2.) When writing into p0431.
3.) For p1990 = 1.
p0440 is automatically set to 0 when the copying has been completed.
In order to permanently accept the copied values, it is necessary to save in a non-volatile fashion (p0977).

p0441[0...n] Encoder commissioning serial number part 1 / Enc comm ser_no 1

SERVO, VECTOR

Can be changed: C2(4) | **Calculated:** CALC_MOD_ALL | **Access level:** 4

P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the bit number for the safe most significant bit (MSB) of the Gx_XIST1 coarse position.

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Note: MSB: Most Significant Bit

r0477[0...2] CO: Measuring gear, position difference / Meas gear pos diff

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the position difference before the measuring gear between powering down and powering up.

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: Refer to: F31501, F32501, F33501

Note: The increments are displayed in the format the same as r0483. The position difference should be read in encoder increments.

r0479[0...2] CO: Diagnostics encoder position actual value Gn_XIST1 / Diag Gn_XIST1

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the encoder actual position value Gn_XIST1 according to PROFIdrive for diagnostics. In contrast to p0482, the value is updated in each DRIVE-CLiQ basic clock cycle and displayed with sign.

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Caution: After booting or after a data set changeover, under certain circumstances, the new value is only available at BICO sinks - that are interconnected to BICO source CO:r0479 - only after several 100ms as the connections must be updated in the background (contrary to other BICO sources, e.g. CO:r0482).
The value is immediately available when non-cyclically reading r0479 (e.g. via the expert list).

r0479 CO: Diagnostics encoder position actual value Gn_XIST1 / Diag Gn_XIST1

TM41

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dynamic index:** -	**Func. diagram:** 9674
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the encoder actual position value Gn_XIST1 according to PROFIdrive for diagnostics. In contrast to p0482, the value is updated in each DRIVE-CLiQ basic clock cycle and displayed with sign.

p0480[0...2] CI: Signal source for encoder control word Gn_STW / Enc S_src Gn_STW

SERVO, VECTOR

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Integer16	**Dynamic index:** -	**Func. diagram:** 1580, 4720
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the encoder control word Gn_STW according to PROFIdrive.

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Note: When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established:
CI: p0480[0] = r2520[0], CI: p0480[1] = r2520[1] and CI: p0480[2] = r2520[2]

r0481[0...2] CO: Encoder status word Gn_ZSW / Enc Gn_ZSW

SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 3
Data type: Unsigned16
Dynamic index: -
Func. diagram: 4010, 4704, 4730
P-Group: Encoder
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the encoder status word Gn_ZSW according to PROFIdrive.

Index:
[0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Function 1 active	Yes	No	-
01	Function 2 active	Yes	No	-
02	Function 3 active	Yes	No	-
03	Function 4 active	Yes	No	-
04	Value 1	Displayed in r0483	Not present	-
05	Value 2	Displayed in r0483	Not present	-
06	Value 3	Displayed in r0483	Not present	-
07	Value 4	Displayed in r0483	Not present	-
08	Measuring probe 1 deflected	Yes	No	-
09	Measuring probe 2 deflected	Yes	No	-
11	Encoder fault acknowledge active	Yes	No	9676
13	Absolute value cyclically	Displayed in r0483	No	-
14	Parking encoder active	Yes	No	-
15	Encoder fault	Displayed in r0483	None	-

Notice: Information on Gn_STW/Gn_ZSW can, e.g. be found in the following literature:
SINAMICS S120 Function Manual Drive Functions

Note: Re bit 14:
Displays the acknowledgement for "activate parking encoder" (Gn_STW.14 = 1) or encoder position actual value (Gn_XIST1) invalid.
Re bit 14, 15:
r0481.14 = 1 and r0481.15 = 0 can have one of the following causes:
- the encoder is parked.
- the encoder is de-activated.
- the encoder is being commissioned.
- no parameterized encoder available.
- encoder data set is being changed over.

r0481.14 = 1 and r0481.15 = 1 has the following significance:
An encoder error has occurred and the encoder position actual value (Gn_XIST1) is invalid.

r0481 CO: Encoder status word Gn_ZSW / Enc Gn_ZSW

TM41

Can be changed: -
Calculated: -
Access level: 3
Data type: Unsigned16
Dynamic index: -
Func. diagram: -

07	Value 4	Displayed in r0483	Not present	-
08	Measuring probe 1 deflected	Yes	No	-
09	Measuring probe 2 deflected	Yes	No	-
11	Encoder fault acknowledge active	Yes	No	9676
13	Absolute value cyclically	Displayed in r0483	No	-
14	Parking encoder active	Yes	No	-
15	Encoder fault	Displayed in r0483	None	-

Notice: Information on Gn_STW/Gn_ZSW can, e.g. be found in the following literature:
SINAMICS S120 Function Manual Drive Functions

Note: For p4401 = 0, the following applies:
For Terminal Module 41 (TM41), this value is used to interconnect with standard telegram 3 and is always zero.
For p4401 = 1, the following applies:
r0481.0 indicates as to whether the zero mark synchronization is active.
r0481.4 indicates whether the zero mark of the incremental encoder was found.
r0481.14 indicates whether the output of track A/B is activated.

r0482[0...2] CO: Encoder actual position value Gn_XIST1 / Enc Gn_XIST1

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** 1580, 2450, 4010, 4704, 4735, 4740
P-Group: Encoder **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the encoder actual position value Gn_XIST1 according to PROFIdrive.

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Note: - this value is reset when de-selecting the function "parking axis".
- in this value, the measuring gear (p0432, p0433) is only taken into account when the position tracking is activated (p0411.0 = 1).

r0482 CO: Encoder actual position value Gn_XIST1 / Enc Gn_XIST1

TM41

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** 9674
P-Group: Encoder **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the encoder actual position value Gn_XIST1 according to PROFIdrive.

r0483[0...2] CO: Encoder actual position value Gn_XIST2 / Enc Gn_XIST2

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dynamic index:** - **Func. diagram:** 1580, 2450, 4010, 4704
P-Group: Encoder **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the encoder actual position value Gn_XIST2 according to PROFIdrive.

Recommend.: Possible causes of the error codes:
Error code 4097 and 4098: Defective Control Unit hardware.
Error codes 4099 and 4100: Too many measuring pulses have occurred.

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Notice: The encoder position actual value must be requested using the encoder control word Gn_STW.13.

Note: - in this value, the measuring gear (p0432, p0433) is only taken into account when the position tracking is activated (p0411.0 = 1).
- if GxZSW.15 = 1 (r0481), then an error code with the following significance is located in Gx_XIST2 (r0483):
1: Encoder fault.
2: Possible position shift in Gx_XIST1.
3: Reserved.
4: Abort, reference mark search.
5: Abort, retrieve reference value.
6: Abort, flying measurement.
7: Abort, retrieve measured value.
8: Abort, absolute value transfer.
3841: Function not supported.
4097: Abort, reference mark search due to an initialization error.
4098: Abort, flying measurement due to an initialization error.
4099: Abort, reference mark search due to a measuring error.
4100: Abort, flying measurement due to a measuring error.

r0483 CO: Encoder actual position value Gn_XIST2 / Enc Gn_XIST2

TM41

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the encoder actual position value Gn_XIST2 according to PROFIdrive.

Notice: The encoder position actual value must be requested using the encoder control word Gn_STW.13.

Note: SIMOTION (p4400 = 0) operating mode:
For Terminal Module 41 (TM41), this value is used to interconnect with standard telegram 3 and is always zero.
SINAMICS (p4400 = 1) operating mode:
As soon as the automatic zero mark synchronization has been completed, this parameter indicates the zero mark of the leading encoder that was interconnected to connector input p4420.

r0484[0...2] CO: Redundant coarse encoder position + CRC Gn_XIST1 / Enc red pos+CRC

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the redundant coarse encoder position including CRC (Cyclic Redundancy Check).
Upper 16 bits:
CRC over the redundant coarse encoder position.
Lower 16 bits:
Redundant coarse encoder position. The count direction is opposite to r0482 (encoder position actual value Gn_XIST1). The value contains 2 bit fine resolution.

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: The values are valid when the safety position actual value sensing is activated (p0430.19 = 1).
Refer to: p0430

Note: This absolute value does not change, contrary to r0482, when de-selecting the function "parking axis".

r0485[0...2] CO: Measuring gear, encoder raw value incremental / Enc raw val incr

SERVO, VECTOR

07	Mode flying measurement / search for reference	Flying measurement	Reference marks	-
13	Request absolute value cyclic	Yes	No	-

14	Request parking encoder	Yes	No	-
15	Request acknowledge encoder fault	Yes	No	-

Notice: Information on Gn_STW/Gn_ZSW can, e.g. be found in the following literature:
SINAMICS S120 Function Manual Drive Functions

Note: The signal source for the encoder control word is set with p0480.

p0488[0...2] Measuring probe 1 input terminal / Meas probe 1 inp

SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** 4740
P-Group: Encoder | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	6	0

Description: Sets the input terminal to connect probe 1.

Value:
0: No measuring probe
1: DI/DO 9 (X122.8/X121.8)
2: DI/DO 10 (X122.10/X121.10)
3: DI/DO 11 (X122.11/X121.11)
4: DI/DO 13 (X132.8)
5: DI/DO 14 (X132.10)
6: DI/DO 15 (X132.11)

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: Refer to: p0489, p0490, p0728

Notice: To the terminal designation:
The first designation is valid for CU320, the second for CU310.
To select the values:
For CU310, CX32, NX10 and NX15, only DI/DO 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

Note: DI/DO: Bidirectional Digital Input/Output
The terminal must be set as input (p0728).
Refer to the encoder interface for PROFIdrive.
If parameterization is rejected, check whether the terminal is already being used in p0580, p0680, p2517 or p2518.

p0489[0...2] Measuring probe 2 input terminal / Meas probe 2 inp

SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** 4740
P-Group: Encoder | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	6	0

Description: Sets the input terminal to connect probe 2.

Value:
0: No measuring probe
1: DI/DO 9 (X122.8/X121.8)
2: DI/DO 10 (X122.10/X121.10)
3: DI/DO 11 (X122.11/X121.11)
4: DI/DO 13 (X132.8)
5: DI/DO 14 (X132.10)
6: DI/DO 15 (X132.11)

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: Refer to: p0488, p0490, p0728

Notice: To the terminal designation:
The first designation is valid for CU320, the second for CU310.
To select the values:
For CU310, CX32, NX10 and NX15, only DI/DO 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

Note: DI/DO: Bidirectional Digital Input/Output
The terminal must be set as input (p0728).
Refer to the encoder interface for PROFIdrive.
If parameterization is rejected, check whether the terminal is already being used in p0580, p0680, p2517 or p2518.

p0490 Invert measuring probe or equivalent zero mark / Meas. probe invert

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 4740
P-Group: Encoder | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Setting to invert the digital input signals to connect a measuring probe or an equivalent zero mark.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
09	DI/DO 9 (X122.8/X121.8)	Inverted	Not inverted	-
10	DI/DO 10 (X122.10/X121.10)	Inverted	Not inverted	-
11	DI/DO 11 (X122.11/X121.11)	Inverted	Not inverted	-
13	DI/DO 13 (X132.8)	Inverted	Not inverted	-
14	DI/DO 14 (X132.10)	Inverted	Not inverted	-
15	DI/DO 15 (X132.11)	Inverted	Not inverted	-

Dependency: Refer to: p0488, p0489, p0495, p0728

Notice: To the terminal designation:
The second designation is only applicable for CU310.

Note: The terminal must be set as input.
When the measuring probe or the equivalent zero mark is inverted, this has no effect on the status displays of the digital inputs (r0721, r0722, r0723).
DI: Digital input, DO: Digital output

p0490 Invert measuring probe or equivalent zero mark / Meas. probe invert

CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 4740
P-Group: Encoder | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Setting to invert the digital input signals to connect a measuring probe or an equivalent zero mark.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
09	DI/DO 9 (X122.8/X121.8)	Inverted	Not inverted	-
10	DI/DO 10 (X122.10/X121.10)	Inverted	Not inverted	-
11	DI/DO 11 (X122.11/X121.11)	Inverted	Not inverted	-

Dependency: Refer to: p0488, p0489, p0495, p0728

Notice: To the terminal designation:
The second designation is only applicable for CU310.

Note: The terminal must be set as input.
When the measuring probe or the equivalent zero mark is inverted, this has no effect on the status displays of the digital inputs (r0721, r0722, r0723).
DI: Digital input, DO: Digital output

p0491 Motor encoder fault response ENCODER / Fault resp ENCODER

SERVO

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	4	0

Description: Sets the behavior for the ENCODER fault response (motor encoder).

This means, for example, if an encoder fault occurs, encoderless operation can be automatically selected with a shutdown behavior that can be selected.

Value:
0: Encoder fault results in OFF2
1: Enc fault results in encoderless oper. and oper. continues
2: Encoder fault results in encoderless operation and OFF1
3: Encoder fault results in encoderless operation and OFF3
4: Encoder fault results in an armature short-cct/DC brake

Dependency: The following parameters are relevant for encoderless operation.

Refer to: p0341, p0342, p1470, p1472, p1517, p1612, p1755

Refer to: F07575

Caution: For p0491 = 1, the following must be carefully observed:

In spite of the motor encoder fault that has occurred, the motor is still operated.

Note: For a value = 1, 2, 3, the following applies:

Encoderless operation must have been commissioned.

Refer to the status signal "encoderless operation due to a fault" (BO: r1407.13).

If, when setting r1407.13, a different drive data set is selected (e.g. interconnection from p0820), then the open-loop or closed-loop control type p1300 of this data set must match the original data set (e.g. p1300 = 21). Encoderless closed-loop controlled operation is kept when changing over.

For value = 4, the following applies:

For synchronous motors, an armature short-circuit is initiated for an encoder fault. The conditions for p1231 = 4 must be maintained.

For induction motors, DC braking is initiated for an encoder fault. The DC brake must be commissioned (p1232, p1233, p1234).

For encoderless operation (p1404 = 0 or p1300 = 20), the following applies:

- The following condition must be fulfilled: p1800 >= n / (2 * p0115[0]), n = 1, 2, ...
- For motors with a small power rating (< 300 W) we recommend to set n >= 2.

p0491 Motor encoder fault response ENCODER / Fault resp ENCODER

VECTOR

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	4	0

Description: Sets the behavior for the ENCODER fault response (motor encoder).

This means, for example, if an encoder fault occurs, encoderless operation can be automatically selected with a shutdown behavior that can be selected.

Value:
0: Encoder fault results in OFF2
1: Enc fault results in encoderless oper. and oper. continues
2: Encoder fault results in encoderless operation and OFF1
3: Encoder fault results in encoderless operation and OFF3
4: Encoder fault results in an armature short-cct/DC brake

Dependency: The following parameters are relevant for encoderless operation.
Refer to: p0341, p0342, p1470, p1472, p1517, p1612, p1755
Refer to: F07575

Caution: For p0491 = 1, the following must be carefully observed:

In spite of the motor encoder fault that has occurred, the motor is still operated.

Note: For a value 1, 2, 3, the following applies:
Encoderless operation must have been commissioned.
Refer to the status signal "encoderless operation due to a fault" (BO: r1407.13).
Not possible for separately excited synchronous motors (p0300 = 5).

p0492 Square-wave encoder, max. velocity difference per sampling cycle / v_dif max/samp_cyc

SERVO (Lin)

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.0 [m/min]	1000.0 [m/min]	0.0 [m/min]

Description: Sets the maximum permissible velocity difference between two computing cycles when square-wave encoders are evaluated.
When the value is exceeded, depending on p0491, either an encoderless closed-loop velocity/force control is selected or the drive is powered down.

Dependency: Refer to: F31118, A31418, F32118, A32418, F33118, A33418

Note: For a value of 0.0, the velocity change monitoring is disabled.
When half of the parameter value is exceeded, an alarm is already generated and the velocity change is limited to this.

p0492 Square-wave encoder, maximum speed difference per sampling cycle / n_dif max/samp_cyc

SERVO, VECTOR

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.0 [rev/min]	210000.0 [rev/min]	0.0 [rev/min]

Description: Sets the maximum permissible speed difference within the current controller sampling time for squarewave encoders.
When the value is exceeded, depending on p0491, either encoderless closed-loop speed/torque control is selected or the drive is powered down.

Dependency: Refer to: F31118, A31418, F32118, A32418, F33118, A33418

Note: For a value of 0.0, the speed change monitoring is disabled.
if the set maximum speed difference is only exceeded for one sampling time of the current controller, then an appropriate alarm is output. However, if the maximum speed difference is exceeded over several sampling times, then a corresponding fault is output.
For VECTOR, the following applies:
The parameter is only pre-assigned when selecting p0340 = 1, 3.
The following applies for SERVO, VECTORMV:
The speed actual value used for the monitoring is a floating average between p0115[0] and p0115[1].

p0495[0...2] Equivalent zero mark, input terminal / Zero mark inp

SERVO, VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dynamic index:** -	**Func. diagram:** 4735
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	6	0

Description: Selects the input terminal for connecting an equivalent zero mark (external encoder zero mark).

Value:
0: No equivalent zero mark (evaluation of the encoder zero mark)
1: DI/DO 9 (X122.8/X121.8)
2: DI/DO 10 (X122.10/X121.10)
3: DI/DO 11 (X122.11/X121.11)
4: DI/DO 13 (X132.8)
5: DI/DO 14 (X132.10)
6: DI/DO 15 (X132.11)

Index:
[0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: Refer to: p0490

Notice:
To the terminal designation:
The first designation is valid for CU320, the second for CU310.
For CU310, CX32, NX10 and NX15, only DI/DO 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

Note:
Refer to the encoder interface for PROFIdrive.
The terminal must be set as input.
For p0495 = 0 (factory setting), the encoder zero mark is evaluated as zero mark.
For p0495 > 0, the following applies:
Depending on the direction of motion, the positive or negative edge at the appropriate input is evaluated.
- increasing position actual values (r0482) --> the 0/1 edge is evaluated.
- decreasing position actual values (r0482) --> the 1/0 edge is evaluated.
Only one zero mark is supported. If function 2, 3 or 4 is selected, this results in an error message in Gn_ZSW.
The inversion of the inputs via p0490 affects the function "referencing with equivalent zero mark". This is the reason that the edge evaluation is interchanged as a function of the direction of motion.
An input can only be assigned to one encoder as measuring probe 1, 2 or equivalent zero mark. Exception: The same encoder can be simultaneously used as measuring probe and equivalent zero mark as both functions cannot be simultaneously requested.

p0496[0...2] Encoder diagnostic signal selection / Enc diag selection

SERVO, VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -

[2] = Encoder 3

p0500 Technology application / Tec application

SERVO	**Can be changed:** C2(1, 5), T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Applications	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	100	102	100

Description: Sets the technology application.

The parameter influences the calculation of open-loop and closed-loop control parameters that is e.g. initiated using p0578.

Value:
100: Standard drive (SERVO)
101: Feed drive (limit current limitation)
102: Spindle drive (rated current limitation)

Dependency: Refer to: p1520, p1521, p1530, p1531, p2000, p2175, p2177

Caution:

After changing over the technological application and then calculating the open-loop and closed-loop parameters, the behavior of the motor can have changed very significantly (e.g. the same setpoint results in a higher speed due to a different reference speed). For this reason extreme caution must be taken when the motor is started for the first time.

Note: The calculation of parameters dependent on the technology application can be called up as follows:

- when exiting the quick commissioning using p3900 > 0
- when writing p0340 = 1, 3, 5
- when writing p0578 = 1

For p0500 = 100 and the calculation is initiated, the following parameters are set:

- p1520/p1521 = rated motor torque (r0333)
- p1530/p1531= 2*pi*r0333*p0311 (rotary) or r0333*p0311 (linear)
- p2000 = rated motor speed (p0311)
- p2175 = factory setting
- p2177 = factory setting

For p0500 = 101 and the calculation is initiated, the following parameters are set:
- p1520/p1521 = torque at the maximum motor current (p0323)
- p1530/p1531= power at the maximum motor current (p0323) and rated motor speed (p0311)
- p2000 = rated motor speed (p0311)
- p2175 = maximum value
- p2177 = 0.2 s

For p0500 = 102 and the calculation is initiated, the following parameters are set:
- p1520/p1521 = rated motor torque (r0333)
- p1530/p1531= 2*pi*r0333*p0311 (rotary) or r0333*p0311 (linear)
- p2000 = maximum motor speed (p0322) if p0322 is not equal to 0, otherwise rated motor speed (p0311)
- p2175 = factory setting
- p2177 = factory setting

p0500 Technology application / Tec application

VECTOR

Can be changed: C2(1, 5), T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Applications	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	2	1

Description: Sets the technology application.

The parameter influences the calculation of open-loop and closed-loop control parameters that is e.g. initiated using p0578.

Value:
0: Standard drive (VECTOR)
1: Pumps and fans
2: Passive loads (for sensorless closed-loop control down to f = 0)

Dependency: Refer to: p2175, p2177

Note: The calculation of parameters dependent on the technology application can be called up as follows:
- when exiting the quick commissioning using p3900 > 0
- when writing p0340 = 1, 3, 5
- when writing p0578 = 1

For p0500 = 0 and the calculation is initiated, the following parameters are set:
p1574 = 10 V (for separately-excited synchronous motors: 20 V)
p1750 bit 2 = 0
p1802 = 4 (SVM/FLB without overcontrol)
p1803 = 106 %

For p0500 = 1 and the calculation is initiated, the following parameters are set:
p1574 = 2 V (for separately-excited synchronous motors: 4 V)
p1750 bit 2 = 0
p1802 = 9 (edge modulation), if r0192 bit 0 = 1
p1802 = 4, if r0192 bit 0 = 0 or parallel circuit configuration with single-winding system (p7003)
p1803 = 106 %

For p0500 = 2 and the calculation is initiated, the following parameters are set:
p1574 = 2 V (for separately-excited synchronous motors: 4 V)
p1750 bit 2 = 1: Sensorless closed-loop control of induction motors effective up to a frequency of zero.
This operating mode is possible for passive loads. These include applications where the load does not generate regenerative torque when breaking away and the motor comes to a standstill (zero speed) itself when the pulses are inhibited.
p1802 = 4 (SVM/FLB without overcontrol)
p1803 = 106%
The setting of p1750 is only relevant for induction motors.
p1802 and p1803 are only changed, in all cases, if a sine-wave output filter (p0230 = 3, 4) has not been selected.

p0505 Selecting the system of units / Select unit sys

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: C2(5) | **Calculated:** - | **Access level:** 1
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Applications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1	4	1

Description: Setting parameter of the current system of units.

Value:
1: System of units SI
2: System of units, referred/SI
3: US system of units
4: System of units, referred/US

Dependency: The parameter cannot be changed if the master control was fetched.

Caution: If a per unit representation is selected and if reference parameters (e.g. p2000) are subsequently changed, then the physical significance of some closed-loop control parameters will also be adapted where as a result, the closed-loop control behavior can change (refer to p1576, p1621, p1744, p1752, p1755 and p1609, p1612, p1619, p1620).

Note: Reference parameter for the unit system % are, for example, p2000 ... p2004. Depending on what has been selected, these are displayed using either SI or US units.

p0528 Controller gain, system of units / Ctrl_gain unit_sys

SERVO, TM41

Can be changed: C2(5) | **Calculated:** - | **Access level:** 4
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Applications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Sets the system of units for the controller gains.

Value:
0: Representation, physical/% (p0505)
1: Representation, no dimensions (referred)

Note: For p0528 = 0 (physical/%), the following applies:
Using p0505, the dependent parameters can be changed over between physical and % representation.
For SERVO (r0107) the following applies:
The parameter is pre-assigned a value of 0 and cannot be changed.

p0528 Controller gain, system of units / Ctrl_gain unit_sys

VECTOR

Can be changed: C2(5) | **Calculated:** - | **Access level:** 4
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Applications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	1

Description: Sets the system of units for the controller gains.

Value:
0: Representation, physical/% (p0505)
1: Representation, no dimensions (referred)

Note: For VECTOR (r0107) the following applies:
The parameter is pre-assigned a value of 1 and cannot be changed.

p0570 Inhibit list: Number of effective values / Inhib list: Qty

SERVO, VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned8	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Applications	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	50	0

Description: Number of parameters in the inhibit list p0571 that should be withdrawn from the automatic motor and closed-loop control parameter calculation (refer to p0340, p0578), starting from index 0.

Note: Defines the number of entries in p0571 that should be taken into account. This means that a value of 0 de-activates the complete list.

p0571[0...49] Inhibit list, motor/closed-loop control parameter calculation / Inhib list calc

SERVO, VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Applications	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	2142	0

Description: The inhibit list contains parameters that should be withdrawn from the automatic motor and closed-loop control parameter calculation (p0340, p0578).

Value:
0: No parameter
348: Speed at the start of field weakening Vdc = 600 V
640: Current limit
1082: Maximum speed
1441: Actual speed smoothing time
1460: Speed controller P gain
1462: Speed controller integral action time
1470: Speed controller P gain, encoderless
1472: Speed controller integral action time encoderless
1520: Torque limit upper/motoring
1521: Torque limit lower/regenerative
1530: Power limit motoring
1531: Power limit regenerating
1590: Flux controller P gain
1592: Flux controller integral.action time
1656: Activates current setpoint filter
2141: Speed threshold 1
2142: Hysteresis speed 1

Note: p0570 defines the number of entries (starting at index 0) for which the inhibit should apply. p0572 can be used to define for which drive data sets the inhibit list should apply.

If a motor data set is entered into a parameter number, then this is not overwritten as soon as only one drive data set refers to the motor data set (p0186).

p0572[0...n] Activate inhibit list / Act inhib list

SERVO, VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Applications	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	0

Description: Enable ID as to whether the parameters of the inhibit list p0571 should be overwritten when calculating the motor and closed-loop control parameters for the particular drive data set (index = DDS).

Value:
0: No
1: Yes

Note: 0: The automatic calculation (p0340, p0578) also overwrites the parameters of list p0571.
1: The automatic calculation (p0340, p0578) does not overwrite the parameters of list p0571.

p0573 Inhibit automatic reference value calculation / Inhibit calc

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Applications	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Inhibits the calculation of reference parameters (e.g. p2000) when automatically calculating the motor and control parameters (p0340, p3900).

Value:
0: No
1: Yes

Note: 0: The automatic calculation (p0340, p3900) overwrites the reference parameters.
1: The automatic calculation (p0340, p3900) does not overwrite the reference parameters.

p0578[0...n] Calculate parameters that are dependent on the technology/units / Calc tec par

SERVO, VECTOR

Can be changed: C2(5), T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dynamic index:** DDS, p0180	**Func. diagram:** -
P-Group: Applications	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: This parameter is used to calculate all parameters that depend on the technology of the application (p0500).
All of the parameters are calculated that can also be determined using p0340 = 5.

Value:
0: No calculation
1: Complete parameterization

Note: At the end of the calculations, p0578 is automatically set to 0.

p0580 Measuring probe, input terminal / MT input terminal

SERVO

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	6	0

Description: Sets the input terminal for the measuring probe for speed actual value measurement.

Value:
0: No meas probe
1: DI/DO 9 (X122.8/X121.8)
2: DI/DO 10 (X122.10/X121.10)
3: DI/DO 11 (X122.11/X121.11)
4: DI/DO 13 (X132.8)
5: DI/DO 14 (X132.10)
6: DI/DO 15 (X132.11)

Dependency: Refer to: p0581, p0728
Refer to: A07498

Notice: To the terminal designation:
The first designation is valid for CU320, the second for CU310.
To select the values:
For CU310, CX32, NX10 and NX15, only DI/DO 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

Note: DI/DO: Bidirectional Digital Input/Output
The terminal must be set as input (p0728).
If a parameter change is rejected, it should be checked whether the input terminal is already being used in p0488, p0489, p0495, p0680, p2517 or p2518.

p0581 Meas probe, edge / MT edge

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Encoder | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Sets the edge to evaluate the measuring probe signal for speed actual value measurement.
0: 0/1 edge
1: 1/0 edge

Dependency: Refer to: p0580

p0582 Measuring probe, pulses per revolution / MT pulses per rev

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Encoder | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1	12	1

Description: Sets the number of pulses per revolution (e.g. for disks with holes).

p0583 Measuring probe, maximum measuring time / MT t_meas max

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Encoder | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.040 [s]	10.000 [s]	10.000 [s]

Description: Sets the maximum measuring time for the measuring probe.
If a new pulse is not received before the maximum measuring time has expired, then the speed actual value in r0586 is set to zero. This timer is re-started with the next pulse.

Dependency: Refer to: r0586

r0586 CO: Measuring probe, velocity actual value / MT v_act

SERVO (Lin)

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Displays, signals | **Units group:** 4_1 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
- [m/min]	- [m/min]	- [m/min]

Description: Displays the velocity actual value measured using the BERO.

Dependency: Refer to: p0580, p0583

Note: For p0580 = 0 (no measuring probe), a value of zero is displayed here.

r0586 CO: Measuring probe, speed actual value / MT n_act

SERVO

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the speed actual value measured using the BERO.

Dependency: Refer to: p0580, p0583

Note: For p0580 = 0 (no measuring probe), a value of zero is displayed here.

r0587 CO: Measuring probe, measuring time measured / MT t_meas measured

SERVO

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the time between the last two BERO pulses.

The measuring time is specified as 32-bit value with a resolution of 1/48 µs.

If a new pulse is not received before the maximum measured time in p0583 expires, then r0587 is set to the maximum measuring time.

Dependency: Refer to: p0580

Note: For p0580 = 0 (no measuring probe), a value of zero is displayed here.

r0588 CO: Measuring probe, pulse counter / MT pulse counter

SERVO

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the number of measuring pulses that have occurred (been received) up until now.

Dependency: Refer to: p0580

Note: After reaching 4294967295 (2^32 - 1), the counter starts again at 0.

r0589 Measuring probe, delay time / MT t_delay

SERVO

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the time since the last measuring pulse was detected.

The delay time is specified as 32-bit value with a resolution of 1/48 µs.

When a measuring pulse occurs (is received) the delay time is reset and is limited to the maximum measuring time in p0583.

Dependency: Refer to: p0580

Note: For p0580 = 0 (no measuring probe), a value of zero is displayed here.

p0595 Selecting technological units / Select tech units

SERVO (Tech_ctrl), VECTOR (Tech_ctrl)

Can be changed: C2(5) | **Calculated:** - | **Access level:** 1
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Applications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1	32	1

Description: Selects the units for the parameters of the technology controller.

Value:

1:	%
2:	1 referred, no dimensions
3:	Bar
4:	°C
5:	Pa
6:	ltr/s
7:	m³/s
8:	ltr/min
9:	m³/min
10:	ltr/h
11:	m³/h
12:	kg/s
13:	kg/min
14:	kg/h
15:	t/min
16:	t/h
17:	N
18:	kN
19:	Nm
20:	psi
21:	°F
22:	gallon/s
23:	inch³/s
24:	gallon/min
25:	inch³/min
26:	gallon/h
27:	inch³/h
28:	lb/s
29:	lb/min
30:	lb/h
31:	lbf
32:	lbf ft

Dependency: Only units of parameters with unit group 9_1 can be changed over using this parameter.
Refer to: p0596

p0596 Reference quantity, technological units / Ref tech units

SERVO (Tech_ctrl), VECTOR (Tech_ctrl)

Can be changed: T | **Calculated:** - | **Access level:** 1
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.01	340.28235E36	1.00

Description: Sets the reference quantity for the technological units. When changing over using changeover parameter 595 to absolute units, all of the parameters involved refer to the reference quantity.

Dependency: Refer to: p0595

p0600[0...n] Motor temperature sensor for monitoring / Mot temp_sensor

SERVO

Can be changed: C2(3), U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 2
Data type: Integer16 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 8016
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	11	1

Description: Sets the sensor to monitor the motor temperature.

Value:
0: No sensor
1: Temperature sensor via encoder 1
2: Temperature sensor via encoder 2
3: Temperature sensor via encoder 3
10: Temperature sensor via a BICO interconnection
11: Temperature sensor via Motor Module / CU terminals

Dependency: Refer to: r0458, p0601, p0603

Caution: If, for a selected temperature sensor (p0600 > 0), the motor temperature sensor is not connected but another encoder, then the temperature adaptation of the motor resistances must be switched out. Otherwise, in controlled-loop operation, torque errors will occur that will mean that the drive will not be able to be stopped.

Notice: The parameter is calculated in the drive using p0340 and is inhibited for p0340 > 0.

Note: Re p0600 = 1, 2, 3:
Bimetallic switch (p0601 = 4) and PT100 temperature sensor (p0601 = 5) are not supported.
Re p0600 = 10:
The BICO interconnection should be executed via connector input CI: p0603.
Re p0600 = 11:
For SINAMICS S120 AC Drive (AC/AC) and using the Control Unit Adapter CUA31, the temperature sensor is connected at the adapter (X210).

p0600[0...n] Motor temperature sensor for monitoring / Mot temp_sensor

VECTOR

Can be changed: C2(3), U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 2
Data type: Integer16 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 8016
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	11	0

Description: Sets the sensor to monitor the motor temperature.

Value:
0: No sensor
1: Temperature sensor via encoder 1
2: Temperature sensor via encoder 2
3: Temperature sensor via encoder 3
10: Temperature sensor via a BICO interconnection
11: Temperature sensor via Motor Module / CU terminals

Dependency: Refer to: r0458, p0601, p0603

Caution: If, for a selected temperature sensor (p0600 > 0), the motor temperature sensor is not connected but another encoder, then the temperature adaptation of the motor resistances must be switched out. Otherwise, in controlled-loop operation, torque errors will occur that will mean that the drive will not be able to be stopped.

Notice: The parameter is calculated in the drive using p0340 and is inhibited for p0340 > 0.

Note: Re p0600 = 1, 2, 3:
Bimetallic switch (p0601 = 4) and PT100 temperature sensor (p0601 = 5) are not supported.
Re p0600 = 10:
The BICO interconnection should be executed via connector input CI: p0603.
Re p0600 = 11:
For SINAMICS S120 AC Drive (AC/AC) and using the Control Unit Adapter CUA31, the temperature sensor is connected at the adapter (X210).

p0601 Temperature sensor, sensor type / Temp_sens type

A_INF, B_INF, S_INF

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	4	0

Description: Sets the sensor type for the temperature measurement at input X21 (booksize) or X41 (chassis).
The measured value is displayed in r0035.

Value:
0: No sensor
1: PTC alarm & timer
2: KTY84
4: Bimetallic NC contact alarm & timer

Dependency: Refer to: r0035

Note: The measured value display depends on the selected sensor type.
Re p0601 = 0 (no sensor):
--> r0035 = -200 °C
Re p0601 = 1 (PTC alarm & timer):
Tripping resistance = 1650 Ohm (lower resistance --> r0035 = -50 °C, higher resistance --> r0035 = 250 °C).
Re p0601 = 2 (KTY84):
Displays the temperature in °C.
Re p0601 = 4 (bimetallic NC contact alarm & timer):
r0035 = -50 °C
--> The tripping resistance is less than 100 Ohm (bimetallic NC contact is closed or has a short-circuit).
r0035 = 250 °C
--> The tripping resistance is greater than 100 Ohm (bimetallic NC contact is open, not connected or has a wire breakage).
When using the following components, a value of 4 is set as the factory setting and can no longer be changed:
- Basic Line Module (BLM) with internal Braking Module.
- Active Line Module (ALM) with line filter Active Interface Module (AIM, p0220[0] = 41 ... 45).
In these cases, in addition to the temperature display, the temperature is also monitored.

p0601[0...n] Motor temperature sensor type / Mot_temp_sens type

SERVO, VECTOR

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 8016
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	10	2

Description: Sets the sensor type for the motor temperature monitoring.

Value:
0: No sensor
1: PTC alarm & timer
2: KTY84
3: KTY84 and PTC (only for motors with DRIVE-CLiQ):
4: Bimetallic NC contact alarm & timer (only for temp_eval via MM)
5: PT100
10: Evaluation via several temperature channels

Dependency: Refer to: r0458, p0600

Note: The temperature sensor for the temperature evaluation is set in p0600.
For p0600 = 10 (temperature sensor via a BICO interconnection), the setting in p0601 has no significance.

Information on using temperature sensors is provided in the following literature:
- hardware description of the appropriate components
- SINAMICS S120 Commissioning Manual

Re p0601 = 1 (PTC alarm & timer):
Tripping resistance = 1650 Ohm.
After the tripping resistance has been exceeded, an appropriate alarm is output and after the delay time set in p0606 has expired, an appropriate fault is output.

Re p0601 = 3 (KTY84 and PTC (only for motors with DRIVE-CLiQ)):
For motors with DRIVE-CLiQ and 2 temperature sensors, the value is automatically set.

Re p0601 = 4 (bimetallic NC contact alarm & timer (only for temperature evaluation via the Motor Module)):
r0035 = -200 °C
--> The tripping resistance is less than 100 Ohm (bimetallic NC contact is closed or has a short-circuit).
r0035 = 250 °C
--> The tripping resistance is greater than 100 Ohm (bimetallic NC contact is open, not connected or has a wire breakage).
After tripping, an appropriate alarm is output and after the delay time set in p0606 has expired, an appropriate fault is output.

Re p0601 = 5 (PT100):
It is only possible to evaluate a PT100 for p0600 = 11 and r0192 bit 15 = 1.

Re p0601 = 10 (evaluation through several temperature channels):
Not permitted for p0600 = 0, 10, 11.
For r0458.8 = 1, a temperature evaluation is supported through several temperature channels.
Examples:
When evaluating using SME120 or SME125, 4 temperature channels are available (parameterized using p4600, p4601, p4602, p4603).
When evaluating using CU310 and CUA32, 2 temperature channels are available (encoder interface, parameterization via p4600 / terminal strip, parameterization via p4601).

p0602 Par_circuit power unit number, temperature sensor / PU_No temp_sensor

VECTOR (Parallel)

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	10	0

Description: Sets the power unit number to which the temperature sensor is connected. The value corresponds to the Power unit Data Set number (PDS) of the power unit. The number of power unit data sets is defined in p0120.

p0603 CI: Motor temperature signal source / Mot temp S_src

SERVO, VECTOR

Can be changed: C2(3), T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 8016
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to evaluate the motor temperature via a BICO interconnection.
Dependency: Refer to: p0600
Note: Temperature sensor KTY: Valid temperature range -48 °C ... 248 °C.
PTC temperature sensor:
For the -50 °C, the following applies: Motor temperature < nominal response temperature of the PTC.
For the 250 °C, the following applies: Motor temperature >= nominal response temperature of the PTC.

Note:
When using a Terminal Module 31 (TM31), the following applies:
- the sensor type used is set using p4100.
- the temperature signal is interconnected using CO: r4105.

p0604[0...n] Motor overtemperature alarm threshold / Mot TempAlrmThresh

SERVO

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 8016
P-Group: Motor | **Units group:** 21_1 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [°C]	200.0 [°C]	120.0 [°C]

Description: Sets the alarm threshold for monitoring the motor temperature.
Dependency: Refer to: p0606

p0604[0...n] Motor overtemperature alarm threshold / Mot TempAlrmThresh

VECTOR

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 8016
P-Group: Motor | **Units group:** 21_1 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [°C]	200.0 [°C]	130.0 [°C]

Description: Sets the alarm threshold for monitoring the motor temperature.
Dependency: Refer to: p0606

p0605[0...n] Motor overtemperature fault threshold / MotTempFaultThresh

SERVO, VECTOR

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 8016, 8017
P-Group: Motor | **Units group:** 21_1 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [°C]	200.0 [°C]	145.0 [°C]

Description: Sets the fault threshold to monitor the motor temperature.
Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.
Note: The parameter is also used as alarm threshold for the thermal I2t motor model (refer to p0611) for permanent-magnet synchronous motors. When the I2t model identifies that the alarm threshold has been reached, then this is displayed using a motor utilization level of r0034 = 100%.

p0606[0...n] Motor overtemperature timer / Mot TempTimeStage

SERVO

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 8016
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	600.000 [s]	240.000 [s]

Description: Sets the timer for the alarm threshold for the motor temperature monitoring function.
This timer is started when the temperature alarm threshold (p0604) is exceeded.
If the timer expires before the temperature in the meantime falls below the alarm threshold, the fault F07011 is output.

If the temperature fault threshold (p0605) is prematurely exceeded before the timer has expired, then fault F07011 is immediately output.

As long as the motor temperature has still not exceeded the fault threshold and the alarm thresholds have again been undershot, the fault can be acknowledged.

Dependency: Refer to: p0604, p0605

Refer to: F07011, A07910

Note: With p0606 = 0 s, the timer is de-activated and only the fault threshold is effective.

KTY sensor: When setting the minimum value, the timer is disabled and a fault is not output until p0605 is exceeded.

PTC sensor: The timer minimum value has no particular significance.

p0606[0...n] Motor overtemperature timer / Mot TempTimeStage

VECTOR

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 2

Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 8016

P-Group: Motor | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	600.000 [s]	0.000 [s]

Description: Sets the timer for the alarm threshold for the motor temperature monitoring function.

This timer is started when the temperature alarm threshold (p0604) is exceeded.

If the timer expires before the temperature in the meantime falls below the alarm threshold, the fault F07011 is output.

If the temperature fault threshold (p0605) is prematurely exceeded before the timer has expired, then fault F07011 is immediately output.

As long as the motor temperature has still not exceeded the fault threshold and the alarm thresholds have again been undershot, the fault can be acknowledged.

Dependency: Refer to: p0604, p0605

Refer to: F07011, A07910

Note: With p0606 = 0 s, the timer is de-activated and only the fault threshold is effective.

KTY sensor: When setting the minimum value, the timer is disabled and a fault is not output until p0605 is exceeded.

PTC sensor: The timer minimum value has no particular significance.

p0607[0...n] Temperature sensor fault timer / Sensor fault time

SERVO, VECTOR

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 2

Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -

P-Group: Motor | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	600.000 [s]	0.100 [s]

Description: Sets the timer between the output of alarm and fault for a temperature sensor fault.

If there is a sensor fault, this timer is started. If the sensor fault is still present after the timer has expired, a corresponding fault message is output.

Note: If the motor is an induction motor, the timer is switched off when setting the minimum value and no alarm is output. Temperature monitoring is then based on the thermal model.

p0610[0...n] Motor overtemperature response / Mot temp response

VECTOR

Can be changed: C2(3), T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 8016
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	2	1

Description: Sets the system response when the motor temperature reaches the alarm threshold.

Value:
0: No response only alarm no reduction of I_max
1: Alarm with reduction of I_max and fault
2: Alarm and fault no reduction of I_max

Dependency: Refer to: p0601, p0604, p0605
Refer to: F07011, A07910

Note: the I_max reduction is not executed for PTC (p0601 = 1).
The I_max reduction results in a lower output frequency.

p0611[0...n] I2t motor model thermal time constant / I2t mot_mod T

SERVO, VECTOR

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 8017
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: ASM, REL, FEM | **Expert list:** 1

Min	Max	Factory setting
0 [s]	20000 [s]	0 [s]

Description: Sets the winding time constant.
The time constant specifies the warm-up time of the cold stator winding when loaded with the motor standstill current up until 63% of the continuously permissible winding temperature has been reached.

Dependency: This parameter is only used for synchronous motors (p0300 = 2xx).
Refer to: r0034, p0612, p0615
Refer to: F07011, A07012, A07910

Caution: This parameter is automatically preset from the motor database for motors from the motor list (p0301). When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

Note: When parameter p0611 is reset to 0, then this switches out the thermal I2t motor model (also refer to p0612).
If there is no temperature sensor (refer to p0600, p0601), then the ambient temperature for the thermal motor model is referred to p0625.

p0612[0...n] Thermal motor model configuration / Therm Mot_mod conf

SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 8017
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: REL, FEM | **Expert list:** 1

Min	Max	Factory setting
-	-	0010 bin

Description: Sets the configuration for the thermal motor model.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Activate I2t motor model	Yes	No	-
01	Activate motor temperature model	Yes	No	-

Dependency: Bit 0 is only used for permanent-magnet synchronous motors (p0300 = 2xx). It is only possible to switch in the thermal I2t monitoring if time constant p0611 is not zero.
Bit 1 is used to activate/deactivate the thermal motor model for induction motors.
Refer to: r0034, p0611, p0615

p0615[0...n] I2t motor model fault threshold / I2t mot_mod thresh

SERVO, VECTOR	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** 8017
	P-Group: Motor	**Units group:** 21_1	**Unit selection:** p0505
	Not for motor type: ASM, REL, FEM		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [°C]	220.0 [°C]	180.0 [°C]

Description: Sets the fault threshold for monitoring using the thermal I2t motor model.

Dependency: The parameter is only used for permanent-magnet synchronous motors (p0300 = 2xx).
Refer to: r0034, p0611, p0612
Refer to: F07011, A07012

Caution: This parameter is automatically preset for motors from the motor list (p0301).
When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

p0616[0...n] Motor overtemperature alarm threshold 1 / Mot temp alarm 1

SERVO	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** 8016
	P-Group: Motor	**Units group:** 21_1	**Unit selection:** p0505
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [°C]	200.0 [°C]	195.0 [°C]

Description: Sets the alarm threshold 1 for monitoring the motor temperature.

Note: The alarm threshold is not, as for p0604, coupled to the timer p0606.

p0616[0...n] Motor overtemperature alarm threshold 1 / Mot temp alarm 1

VECTOR	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** 8016
	P-Group: Motor	**Units group:** 21_1	**Unit selection:** p0505
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [°C]	200.0 [°C]	130.0 [°C]

Description: Sets the alarm threshold 1 for monitoring the motor temperature.

Note: The alarm threshold is not, as for p0604, coupled to the timer p0606.

p0620[0...n] Thermal adaptation, stator and rotor resistance / Mot therm_adapt R

SERVO	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dynamic index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	2	2

Description: Sets the thermal adaptation of the stator/primary section resistance and rotor/secondary section resistance according to r0395 and r0396.

Value:
0: No thermal adaptation of stator and rotor resistances
1: Resistances adapted to the temperatures of the thermal model
2: Resistances adapted to the measured stator winding temperature

Note: For p0620 = 1, the following applies:
The stator resistance is adapted using the temperature in r0035 and the rotor resistance together with the model temperature in r0633.

For p0620 = 2, the following applies:

The stator resistance is adapted using the temperature in r0035. The rotor temperature to adapt the rotor resistance is calculated as follows from the stator temperature (r0035).

theta_R = (r0628 + r0625) / (r0627 + r0625) * r0035

p0620[0...n] Thermal adaptation, stator and rotor resistance / Mot therm_adapt R

VECTOR

Can be changed: C2(3), U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 2

Data type: Integer16 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -

P-Group: Motor | **Units group:** - | **Unit selection:** -

Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0	2	1

Description: Sets the thermal adaptation of the stator/primary section resistance and rotor/secondary section resistance according to r0395 and r0396.

Value:
0: No thermal adaptation of stator and rotor resistances
1: Resistances adapted to the temperatures of the thermal model
2: Resistances adapted to the measured stator winding temperature

Note: For p0620 = 1, the following applies:

The stator resistance is adapted using the temperature in r0035 and the rotor resistance together with the model temperature in r0633.

For p0620 = 2, the following applies:

The stator resistance is adapted using the temperature in r0035. The rotor temperature to adapt the rotor resistance is calculated as follows from the stator temperature (r0035).

theta_R = (r0628 + r0625) / (r0627 + r0625) * r0035

p0621[0...n] Identification stator resistance after restart / Rst_ident Restart

VECTOR (n/M)

Can be changed: C2(3), T | **Calculated:** - | **Access level:** 2

Data type: Integer16 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -

P-Group: Motor | **Units group:** - | **Unit selection:** -

Not for motor type: PEM, REL, FEM | | **Expert list:** 1

Min	Max	Factory setting
0	2	0

Description: Selects the identification of the stator resistance after booting the Control Unit.

The identification is used to measure the current stator resistance and from the ratio of the result of motor data identification (p0350) to the matching ambient temperature (p0625) the current mean temperature of the stator winding is calculated. The result is used to initialize the thermal motor model.

p0621 = 1:

Identification of the stator resistance only when the drive is powered up for the first time (pulse enable) after booting the Control Unit.

p0621 = 2:

Identification of the stator resistance every time the drive is powered up (pulse enable).

Value:
0: No temperature identification
1: Temperature identification after restart
2: Temperature identification after each power-up

Dependency:
- perform motor data identification (see p1910) with cold motor.
- enter ambient temperature at time of motor data identification in p0625.

Refer to: p0622, r0623

Note: The measurement is only carried out for induction motors, and only where no temperature sensor is connected. As the measurement is only possible at standstill it is not carried out on a rotating motor or after a flying restart of the rotating motor.

The calculated stator temperature can only be compared with the measured value of a temperature sensor to a certain extent, as the sensor is usually the warmest point of the stator winding, whereas the measured value of identification reflects the mean value of the stator winding.

Furthermore this is a short-time measurement with limited accuracy that is performed during the magnetizing phase of the induction motor.

If identification is activated, the magnetizing time is determined via p0622 and not via p0346. Quick magnetizing (p1401.6) is de-energized internally and alarm A07416 is displayed.

p0622[0...n] Motor excitation time for Rs_ident after powering up again / t_excit Rs_id

VECTOR (n/M)

Can be changed: C2(3), U, T | **Calculated:** CALC_MOD_REG | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: PEM, REL, FEM | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	20.000 [s]	0.000 [s]

Description: Sets the excitation time of the motor for the stator resistance identification after powering up again (restart).
Dependency: Refer to: p0621, r0623

r0623 Stator resistance of Rs identification after powering up again / R_Stator Reset_Id

VECTOR (n/M)

Can be changed: - | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Motor identification | **Units group:** - | **Unit selection:** -
Not for motor type: PEM, REL, FEM | **Expert list:** 1

Min	Max	Factory setting
- [Ohm]	- [Ohm]	- [Ohm]

Description: Displays the identified stator resistance after the Rs identification after powering up again.
Dependency: Refer to: p0621, p0622
Note: The parameter is internally limited to the magnetizing time p0346.

p0624[0...n] Motor Temperature Offset PT100 / Mot T_offset PT100

SERVO, VECTOR

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 8016
P-Group: Motor | **Units group:** 21_2 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-100.0 [K]	100.0 [K]	0.0 [K]

Description: Differential temperature to the offset compensation of the PT100 measured value.
Dependency: Refer to: p0600, p0601, p0602
Note: The parameter only has an influence if the temperature sensor of the power unit is detected (p0600 = 11) and PT100 was selected as sensor type (p0601 = 5).

p0625[0...n] Motor ambient temperature / Mot T_ambient

SERVO, VECTOR

Can be changed: C2(3), U, T | **Calculated:** CALC_MOD_EQU | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 8016
P-Group: Motor | **Units group:** 21_1 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-40 [°C]	80 [°C]	20 [°C]

Description: Defines the ambient temperature of the motor to calculate the temperature model.
Note: The parameters for stator and rotor resistance (p0350, p0354) refer to this temperature.
If the thermal I2t motor model is activated for permanent-magnet synchronous motors (refer to p0611), then p0625 is included in the model calculation if a temperature sensor is not being used (refer to p0600, p0601).

p0626[0...n] Motor overtemperature, stator core / Mot T_over core

SERVO, VECTOR

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 8016
P-Group: Motor | **Units group:** 21_2 | **Unit selection:** p0505
Not for motor type: PEM, REL, FEM | **Expert list:** 1

Min	Max	Factory setting
20 [K]	200 [K]	50 [K]

Description: Defines the rated overtemperature of the stator core referred to the ambient temperature.
Dependency: For 1LA5 and 1LA7 motors (refer to p0300), the parameter is pre-set as a function of p0307 and p0311.
Refer to: p0625

p0627[0...n] Motor overtemperature, stator winding / Mot T_over stator

SERVO, VECTOR

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 8016
P-Group: Motor | **Units group:** 21_2 | **Unit selection:** p0505
Not for motor type: PEM, REL, FEM | **Expert list:** 1

Min	Max	Factory setting
20 [K]	200 [K]	80 [K]

Description: Defines the rated overtemperature of the stator winding referred to the ambient temperature.
Dependency: For 1LA5 and 1LA7 motors (refer to p0300), the parameter is pre-set as a function of p0307 and p0311.
Refer to: p0625

p0628[0...n] Motor overtemperature rotor winding / Mot T_over rotor

SERVO, VECTOR

Can be changed: C2(3), U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 8016

	Min - [°C]	**Max** - [°C]	**Factory setting** - [°C]

Description: Displays the stator winding temperature of the motor temperature model.

r0633[0...n] Motor temperature model, rotor temperature / MotTMod T_rotor

SERVO, VECTOR	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** 8016
	P-Group: Motor	**Units group:** 21_1	**Unit selection:** p0505
	Not for motor type: PEM, REL, FEM		**Expert list:** 1
	Min - [°C]	**Max** - [°C]	**Factory setting** - [°C]

Description: Displays the rotor temperature of the motor temperature model.

p0640[0...n] Current limit / Current limit

SERVO, VECTOR	**Can be changed:** C2(1, 3), U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 1690, 1700, 5722, 6640
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min 0.00 [Arms]	**Max** 10000.00 [Arms]	**Factory setting** 0.00 [Arms]

Description: Sets the current limit.

Dependency: Refer to: r0209, p0323

Note: The parameter is part of the quick commissioning (p0010 = 1); this means that it is appropriately pre-assigned when changing p0305, p0323 and p0338.

The current limit p0640 is limited to r0209 and p0323. The limit to p0323 is not realized if a value of zero is entered there.

The resulting current limit is displayed in r0067 and if required, r0067 is reduced by the thermal model of the Motor Module.

The torque and power limits (p1520, p1521, p1530, p1531) matching the current limit are automatically calculated when exiting the quick commissioning using p3900 > 0 or using the automatic parameterization with p0340 = 3, 5.

For VECTOR the following applies (p0107):

p0640 is limited to 4.0 * p0305.

p0640 is pre-assigned for the automatic self commissioning routine (e.g.to 1.5 * p0305, with p0305 = r0207[1]).

p0640 must be entered when commissioning the system. This is the reason that p0640 is not calculated by the automatic parameterization when exiting the quick commissioning (p3900 > 0).

For SERVO the following applies (p0107):

p0640 is pre-assigned as follows using the automatic parameterization (p0340 = 1, p3900 > 0) taking into account the limits r0209 and r0323:

- for induction motors: p0640 = 1.5 * p0305
- for synchronous motors: p0640 = p0338

p0642[0...n] Encoderless operation current reduction / Encoderl op I_red

SERVO

Can be changed: C2(1, 3), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.00 [%]	100.00 [%]	100.00 [%]

Description: Sets the reduction for the current limit in encoderless operation.

The value is referred to p0640.

Dependency: Refer to: r0209, p0323, p0491, p0640, p1300, p1404

Note: If the motor is operated both with encoder as well as without encoder (e.g. p0491 is not equal to 0 or p1404 < p1082) then the maximum current can be reduced in encoderless operation. This reduces disturbing saturation-related motor data changes in encoderless operation.

p0643[0...n] Overvoltage protection for synchronous motors / Overvolt_protect

SERVO

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Sets the overvoltage protection for synchronous motors in the field-weakening range.

Value:
0: No measure
1: Voltage Protection Module (VPM)

Dependency: Refer to: p0316, p1082, p1231, p9601, p9801

Refer to: F07432, F07906, F07907

Notice: When the speed limiting is removed, the user is responsible for implementing a suitable overvoltage protection.

Note: In the field-weakening range, synchronous motors can, when a fault condition exists, generate high DC link voltages. The following possibilities exist to protect the drive system from being destroyed due to overvoltage:

- limit the maximum speed (p1082) without any additional protection.

The maximum speed without protection is calculated as follows:

Rotary motors: p1082 [rpm] <= 11.695 * p0297/p0316 [Nm/A]

Linear motors: p1082 [m/min] <= 73.484 *p0297/0316 [N/A]

- use a Voltage Protection Module (VPM) in conjunction with the function "Safe Torque Off" (p9601, p9801).

When a fault condition exists, the VPM short-circuits the motors. During the short-circuit, the pulses must be suppressed - this means that the terminals for the function "Safe Torque Off" must be connected to the VPM.

- activating the internal voltage protection (IVP) with p1231 = 3.

p0643[0...n] Overvoltage protection for synchronous motors / Overvolt_protect

VECTOR (n/M)

Can be changed: C2(3)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Sets the overvoltage protection for synchronous motors in the field-weakening range.

Value:
0: No measure
1: Voltage Protection Module (VPM)

Dependency: Refer to: p0316, p1082, p1231, p9601, p9801

Refer to: F07432, F07906, F07907

Notice: When the speed limiting is removed, the user is responsible for implementing a suitable overvoltage protection.

Note: In the field-weakening range, synchronous motors can, when a fault condition exists, generate high DC link voltages. The following possibilities exist to protect the drive system from being destroyed due to overvoltage:
- limit the maximum speed (p1082) without any additional protection.
The maximum speed without protection is calculated as follows:
Rotary motors: p1082 [rpm] <= 11.695 * p0297/p0316 [Nm/A]
Linear motors: p1082 [m/min] <= 73.484 *p0297/0316 [N/A]
- use a Voltage Protection Module (VPM) in conjunction with the function "Safe Torque Off" (p9601, p9801).
When a fault condition exists, the VPM short-circuits the motors. During the short-circuit, the pulses must be suppressed - this means that the terminals for the function "Safe Torque Off" must be connected to the VPM.
- activating the internal voltage protection (IVP) with p1231 = 3.

p0645[0...n] Motor kT characteristic kT1 / Mot kT char kT1

SERVO (Exp M_ctrl, Lin)

Can be changed: C2(1, 3), U, T | **Calculated:** - | **Access level:** 1
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: ASM, REL, FEM | **Expert list:** 1

Min	Max	Factory setting
0.00 [N/Arms]	200.00 [N/Arms]	0.00 [N/Arms]

Description: Sets the constant kT1 for the kT characteristic.
kT(iq) = kT1 + kT3 * iq^2 + kT5 * iq^4 + kT7 * iq^6

Dependency: Refer to: p0316, p0646, p0647, p0648, p1780

Note: For the standard setting, the value in p0316 is effective.
The value in p0316 is ignored and the kT characteristic is effective, if the following conditions are fulfilled:
- the function module "expanded torque control" has been activated (r0108 = 1).
- the kT characteristic has been activated (p1780.9 = 1).

p0645[0...n] Motor kT characteristic kT1 / Mot kT char kT1

SERVO (Exp M_ctrl)

Can be changed: C2(1, 3), U, T | **Calculated:** - | **Access level:** 1

P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: ASM, REL, FEM | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Sets the constant kT7 for the kT characteristic.
kT(iq) = kT1 + kT3 * iq^2 + kT5 * iq^4 + kT7 * iq^6
Dependency: Refer to: p0316, p0645, p0646, p0647, p1780
Note: For the standard setting, the value in p0316 is effective.
The value in p0316 is ignored and the kT characteristic is effective, if the following conditions are fulfilled:
- the function module "expanded torque control" has been activated (r0108 = 1).
- the kT characteristic has been activated (p1780.9 = 1).

p0650[0...n] Actual motor operating hours / Mot t_oper act

SERVO, VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [h]	4294967295 [h]	0 [h]

Description: Displays the operating hours for the corresponding motor.
The motor operating time counter continues to run when the pulses are enabled. When the pulse enable is withdrawn, the counter is held and the value saved.
Dependency: The following prerequisites must be fulfilled in order to be able to save the operating hours counter in a non-volatile fashion:
- firmware with V2.2 or higher.
- Control Unit 320 (CU320) with hardware version C or higher (module with NVRAM).
Refer to: p0651
Refer to: A01590

Note: The operating hours counter in p0650 can only be reset to 0. In this case, p0651 is automatically set to 0.
For p0651 = 0, the operating hours counter is disabled.
The operating hours counter only runs for MDS0 and MDS1 (Motor Data Set).

p0651[0...n] Motor operating hours maintenance interval / Mot t_op maint

SERVO, VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [h]	99999 [h]	0 [h]

Description: Sets the service/maintenance intervals in hours for the appropriate motor.
An appropriate fault is output when the operating hours set here are reached.
Dependency: Refer to: p0650
Refer to: A01590
Note: For p0651 = 0, the operating hours counter is disabled.
The operating hours counter only runs for MDS0 and MDS1 (Motor Data Set).

p0700[0...n] Macro Binector Input (BI) / Macro BI

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: C2(1), T | **Calculated:** - | **Access level:** 1

Data type: Unsigned32 | **Dynamic index:** CDS, p0170 | **Func. diagram:** -

P-Group: Commands | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	999999	0

Description: Runs the appropriate ACX file on the memory card card.

The binector inputs (BI) of the appropriate Command Data Set (CDS) are appropriately interconnected.

The selected ACX file must be located in the following directory:

... /PMACROS/<drive object>/P700/PMxxxxxx.ACX

Example:

p0700 = 6 --> the file PM000006.ACX is run.

Dependency: The ACX file to be run must be created according to the definition for ACX macros and must be saved in the appropriate directory on the memory card.

Refer to: p0015, p1000, p1500, r8571

Notice: No errors were issued during quick commissioning (p3900 = 1) when writing to parameters of the QUICK_IBN group!

Note: The macros in the specified directory are displayed in r8571. r8571 is not in the expert list of the commissioning software.

Macros available as standard are described in the technical documentation of the particular product.

BI: Binector input

r0721 CU digital inputs, terminal actual value / CU DI actual value

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-100000.00 [%]	427.9E9 [%]	100.00 [%]

Description: The normalization characteristic for the test sockets is defined using two points. This parameter specifies the x coordinate (percentage) of the second point on the characteristic.

Index:
[0] = T0
[1] = T1
[2] = T2

Dependency: Can only be set when p0776 = 99.
Refer to: p0777, p0778, p0780, r0786

Note: The value 100.00 % corresponds to 4.98 V.

p0780[0...2] Test socket characteristic value y2 / Test skt char y2

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 8134
P-Group: Terminals | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [V]	4.98 [V]	4.98 [V]

Description: The normalization characteristic for the test sockets is defined using two points. This parameter specifies the y coordinate (output voltage) of the second point on the characteristic.

Index: [0] = T0
[1] = T1
[2] = T2

Dependency: Can only be set when p0776 = 99.
Refer to: p0777, p0778, p0779, r0786

p0783[0...2] Test sockets offset / Test skt offset

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 8134
P-Group: Terminals | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-4.98 [V]	4.98 [V]	0.00 [V]

Description: Sets an additional offset for the test sockets.

Index: [0] = T0
[1] = T1
[2] = T2

p0784[0...2] Test socket limit on/off / TestSktLim on/off

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** 8134
P-Group: Terminals | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Sets the limit for a signal to be output via test sockets.

Value: 0: Limiting off
1: Limiting on

Index: [0] = T0
[1] = T1
[2] = T2

Note: Limiting on:
If signals are output outside the permissible measuring range, the signal is limited to 4.98 V or to 0 V.
Limiting off:
If signals are output outside the permissible measuring range, this causes signal overflow. In the case of signal overflow, the signal jumps from 0 V to 4.98 V or from 4.98 V to 0 V.

r0786[0...2] Test socket normalization per volt / TestSktNorm/Volt

CU_CX32, CU_I, CU_S

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 8134
P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the normalization of the signal to be output. A change in the output voltage by 1 volt corresponds to the value in this parameter. The units are determined by the interconnected test signal.

Index: [0] = T0
[1] = T1
[2] = T2

Dependency: Refer to: p0771, r0772, r0774, p0777, p0778, p0779, p0780, p0783, p0784

Note: Example:
r0786[0] = 1500.0 and the measuring signal is r0063 (CO: Speed actual value smoothed [RPM]).
A change of 1 V at the output of test socket T0 corresponds to 1500.0 [RPM].

p0788[0...2] Test sockets physical address / Test skt PhyAddr

CU_CX32, CU_I, CU_S

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0000 bin	1111 1111 1111 1111 1111 1111 1111 1111 bin	0000 bin

Description: Sets the physical address to output signals via the test sockets.

Index: [0] = T0
[1] = T1
[2] = T2

Dependency: Changes only become effective if p0776 does not equal 99.
Refer to: p0789, r0790

p0789[0...2] Test sockets physical address gain / TestSktPhyAddrGain

CU_CX32, CU_I, CU_S

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-340.28235E36	340.28235E36	1.00000

Description: Sets the gain of a signal output of a physical address via test sockets.

Index: [0] = T0
[1] = T1
[2] = T2

Dependency: Changes only become effective if p0776 does not equal 99.
Refer to: p0788

r0790[0...2] Test sockets physical address signal value / TestSktsPhyAddrVal

CU_CX32, CU_I, CU_S

Can be changed: -
Calculated: -
Access level: 4
Data type: Unsigned32
Dynamic index: -
Func. diagram: -
P-Group: Terminals
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the actual value of a signal determined via a physical address.

Index:
[0] = T0
[1] = T1
[2] = T2

Dependency: Only effective when p0776 = 97 or p0776 = 96.
Refer to: p0788

p0795 CU digital inputs simulation mode / CU DI simulation

CU_I, CU_S

Can be changed: U, T
Calculated: -
Access level: 2
Data type: Unsigned32
Dynamic index: -
Func. diagram: 1510, 2020, 2030, 2031, 2100, 2120, 2130, 2131, 2132, 2133
P-Group: Commands
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the simulation mode for digital inputs.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	DI 0 (X122.1/X121.1)	Simulation	Terminal eval.	-
01	DI 1 (X122.2/X121.2)	Simulation	Terminal eval.	-
02	DI 2 (X122.3/x121.3)	Simulation	Terminal eval.	-
03	DI 3 (X122.4/X121.4)	Simulation	Terminal eval.	-
04	DI 4 (X132.1)	Simulation	Terminal eval.	-
05	DI 5 (X132.2)	Simulation	Terminal eval.	-
06	DI 6 (X132.3)	Simulation	Terminal eval.	-
07	DI 7 (X132.4)	Simulation	Terminal eval.	-
08	DI/DO 8 (X122.7/X121.7)	Simulation	Terminal eval.	-
09	DI/DO 9 (X122.8/X121.8)	Simulation	Terminal eval.	-
10	DI/DO 10 (X122.10/X121.10)	Simulation	Terminal eval.	-
11	DI/DO 11 (X122.11/X121.11)	Simulation	Terminal eval.	-
12	DI/DO 12 (X132.7)	Simulation	Terminal eval.	-
13	DI/DO 13 (X132.8)	Simulation	Terminal eval.	-
14	DI/DO 14 (X132.10)	Simulation	Terminal eval.	-
15	DI/DO 15 (X132.11)	Simulation	Terminal eval.	-

Dependency: The setpoint for the input signals is specified using p0796.
Refer to: p0796, p9620

Notice: If a digital input is used as signal source for the function "STO" (BI: p9620) then it is not permissible to select the simulation mode and this is rejected.
To the terminal designation:
The first designation is valid for CU320, the second for CU310.

Note: This parameter is not saved when data is backed-up (p0971, p0977).
DI: Digital input
DI/DO: Bidirectional Digital Input/Output

p0795 CX digital inputs, simulation mode / CX DI simulation

CU_CX32

Can be changed: U, T | **Calculated:** - | **Access level:** 2

Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 2220, 2230, 2231

P-Group: Commands | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the simulation mode for digital inputs.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	DI 0 (X122.1)	Simulation	Terminal eval.	-
01	DI 1 (X122.2)	Simulation	Terminal eval.	-
02	DI 2 (X122.3)	Simulation	Terminal eval.	-

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [µs]	5000.00 [µs]	4000.00 [µs]

Description: Sets the sampling time for the inputs and outputs.

p0806 BI: Inhibit master control / PcCtrl inhibit

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** -
P-Group: Commands | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to block the master control.

Dependency: Refer to: r0807

Note: The master control is used from the commissioning software (drive control panel) and from the Advanced Operator Panel (AOP, LOCAL mode).

r0807.0 BO: Master control active / PcCtrl active

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: - | **Calculated:** - | **Access level:** 2
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Displays, signals | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays what has the master control.

The drive can be controlled via the BICO interconnection or from external (e.g. the commissioning software).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Master control active	Yes	No	3030, 5030, 6031

Dependency: Refer to: p0806

Notice: The master control only influences control word 1 and speed setpoint 1. Other control words/setpoints can be transferred from another automation device.

Note: Bit 0 = 0: BICO interconnection active

Bit 0 = 1: Master control for PC/AOP

The master control is used from the commissioning software (drive control panel) and from the Advanced Operator Panel (AOP, LOCAL mode).

p0809[0...2] Copy Command Data Set CDS / Copy CDS

SERVO, VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 2

Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to select the Drive Data Set, bit 4 (DDS, bit 4).

Dependency: Refer to: r0051, r0837

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p0826[0...n] Motor changeover, motor number / Mot_chng mot No.

SERVO

Can be changed: C2(3), U	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dynamic index:** MDS, p0130	**Func. diagram:** 8575
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0	15	0

Description: Sets the freely-assignable motor number for the motor changeover.

Dependency: Refer to: p0827

Caution: When changing over motor data sets with the same motor number (e.g. star/delta changeover) and for a motor with brake, the motor brake remains open during the changeover.

Note: When the motor data sets are changed over, the following applies:
The same motor number signifies the same thermal model.

p0826[0...n] Motor changeover, motor number / Mot_chng mot No.

VECTOR

Can be changed: C2(3), U	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dynamic index:** MDS, p0130	**Func. diagram:** 8575
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0	15	0

Description: Sets the freely-assignable motor number for the motor changeover.

Dependency: Refer to: p0827

Caution: When changing over motor data sets with the same motor number (e.g. star/delta changeover) and for a motor with brake, the motor brake remains open during the changeover.

Note: When the motor data sets are changed over, the following applies:
The same motor number signifies the same thermal model.
When the motor number is the same, the corrective values of the Rs, Lh or kT adaptation are transferred between motor data sets (see r1782, r1787, r1797).

p0827[0...n] Motor changeover status word bit number / Mot_chg ZSW bitNo.

SERVO, VECTOR

Can be changed: C2(3), U | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dynamic index:** MDS, p0130 | **Func. diagram:** 8575
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	15	0

Description: Sets the bit number for every motor data set.
Example:
p0827[0] = 0: For MDS0, r0830.0 is switched.
p0827[1] = 5: For MDS1, r0830.5 is switched.

Dependency: Refer to: p0826, r0830

Note: A motor is only changed over (a new motor selected) after the pulses have been suppressed.
When the motor data sets are changed over, the following applies:
Bit numbers that are not identical, signify that the motor must be changed over.

p0828[0...n] BI: Motor changeover, feedback signal / Mot_chng fdbk sig

SERVO, VECTOR

Can be changed: C2(3), T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** CDS, p0170 | **Func. diagram:** 8575
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the feedback signal when changing over the motor.
For p0833.0 = 1 the following applies:
This feedback signal (0/1 edge) is required after a motor changeover to enable the pulses.

Dependency: Refer to: p0833

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

r0830.0...15 CO/BO: Motor changeover, status word / Mot_chngov ZSW

Dependency: Refer to: p0827

p0831[0...15] BI: Motor changeover, contactor feedback / Mot_chg cont fdbk

SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** 8575
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the feedback signal of the contactors when changing over motors.

There is a fixed inter-relationship between energizing the contactor and the feedback signal.

Example:

A changeover is to be made between MDS0 (motor 0) and MDS1 (motor 1). The contactors should be switched using bit 4 (contactor 0) and 5 (contactor 1). The changeover should be made with an interconnection of the feedback signal.

Implementation:

MDS0: p0827[0] = 4, interconnect output to switch contactor 0 to r0830.4, p0831[4] = "input, feedback signal, contactor 0"

MDS1: p0827[1] = 5, interconnect output to switch contactor 1 to r0830.5, p0831[5] = "input, feedback signal, contactor 1"

The following sequence applies when changing over from MDS0 to MDS1:

1. The status bit r0830.4 is deleted. When the feedback signal (p0831[4]) is connected, the system waits until the feedback signal "contactor open" is displayed. If the feedback signal is not connected, then the system waits for the switch-off interlocking time of 320 ms.

2. The status bit r0830.5 is set. If the feedback signal (p0831[5]) is connected, the system waits until the feedback signal "contactor closed" is displayed. If the feedback signal is not connected, then the system waits for the switch-on interlocking time of 160 ms.

Index:
[0] = Feedback signal contactor 0
[1] = Feedback signal contactor 1

P-Group: Data sets | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the configuration for the motor and encoder changeover.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Contactor changeover from the application/drive	application	Drive	-
	01	Pulse suppression by application/drive	application	Drive	-
	02	Suppress drive parking for EDS changeover	Yes	No	-

Note: For VECTOR, the following applies:

The "flying restart" function should be activated (p1200) when changing over to a motor that is already running.

Re bit 00:

When the bit is set and the motor has to be changed over, then p0827 must be set differently in the appropriate motor data sets.

Re bit 02:

The bit defines whether, for an EDS changeover, the status signal Gn_ZSW.14 is suppressed (parking encoder active).

P-Group: Displays, signals **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the status word for the motor data set changeover.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Motor changeover active	Active	Not active	8575

Note: Re bit 00:
The signal is only influenced when a motor changeover is set via p0827 (unequal bit numbers).

r0836.0...3 CO/BO: Command Data Set CDS selected / CDS selected

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: - **Calculated:** - **Access level:** 2
Data type: Unsigned8 **Dynamic index:** - **Func. diagram:** 1530, 8560
P-Group: Displays, signals **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the command data set (CDS) selected via the binector input.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	CDS select. bit 0	On	Off	-
01	CDS select. bit 1	On	Off	-
02	CDS select. bit 2	On	Off	-
03	CDS select. bit 3	On	Off	-

Dependency: Refer to: r0050, p0810, p0811

Note: Command data sets are selected via binector input p0810 and following.
The currently effective Command Data Set is displayed in r0050.

r0837.0...4 CO/BO: Drive Data Set DDS selected / DDS selected

SERVO, TM41, VECTOR

Can be changed: - **Calculated:** - **Access level:** 2
Data type: Unsigned8 **Dynamic index:** - **Func. diagram:** 8565
P-Group: Displays, signals **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the drive data set (DDS) selected via the binector input.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	DDS select. bit 0	On	Off	-
01	DDS select. bit 1	On	Off	-
02	DDS select. bit 2	On	Off	-
03	DDS select. bit 3	On	Off	-
04	DDS select. bit 4	On	Off	-

Dependency: Refer to: r0051, p0820, p0821, p0822, p0823, p0824
Note: Drive data sets are selected via binector input p0820 and following.
The currently effective drive data set is displayed in r0051.
If there is only one data set, then a value of 0 is displayed in this parameter and not the selection via binector inputs.

r0838[0...3] Motor/Encoder Data Set selected / MDS/EDS selected

SERVO, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dynamic index:** -	**Func. diagram:** 8565, 8570, 8575
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the selected Motor Data Set (MDS) and the selected Encoder Data Sets (EDS).
Index: [0] = Motor Data Set MDS selected
[1] = Encoder 1 Encoder Data Set EDS selected
[2] = Encoder 2 Encoder Data Set EDS selected
[3] = Encoder 3 Encoder Data Set EDS selected
Dependency: Refer to: r0049, p0186, p0187, p0188, p0189
Note: Value 99 means the following: No encoder assigned (not configured).

p0839 Motor changeover contactor control delay time / Mot_chg ctrl t_del

SERVO, VECTOR

Can be changed: C2(3), U	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	500 [ms]	0 [ms]

Description: Sets the delay time for the contactor control for the motor changeover.
The delay time is taken into account in the following cases:
- for feedback signal, previous contactor "Open". The new motor contactor is controlled (energized) after the delay time has expired.
- for the feedback signal, new motor contactor "Closed". The pulses are enabled after the delay time has expired.

p0840[0...n] BI: ON/OFF1 / ON/OFF1

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** CDS, p0170	**Func. diagram:** 2501, 2610, 8720, 8820, 8920
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for control word 1 bit 0 (ON/OFF1).
Recommend.: When the setting for this binector input is changed, the motor can only be switched on by means of an appropriate signal change of the source.
Dependency: Refer to: p1055, p1056
Notice: For BI: p0840 = 0 signal, the motor can be moved, jogging using BI: p1055 or BI: p1056.
The command "ON/OFF1" can be issued using BI: p0840 or using BI: p1055/p1056.
Only the signal source that originally powered up can also power down again.
The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: For drives with closed-loop speed control (p1300 = 20, 21), the following applies:
Bit 0 = 0: OFF1 (braking with the ramp-function generator, then pulse csuppression and switching on inhibited)

For drives with closed-loop torque control (p1300 = 22, 23), the following applies:
Bit 0 = 0: Immediate pulse suppression
For drives with closed-loop torque control (activated using p1501), the following applies:
Bit 0 = 0: No dedicated braking response, but pulse suppression when standstill is detected (p1226, p1227)
For drives with closed-loop speed/torque control, the following applies:
Bit 0 = 0/1: ON (pulses can be enabled)
For active infeeds (Active Line Module and Smart Line Module) the following applies:
Bit 0 = 0: OFF1 (reduce Vdc along the ramp, then pulse suppression and pre-charging contactor/line contactor open)
Bit 0 = 0/1: ON (pre-charging contactor/line contactor closed, pulses can be enabled)
For passive infeeds (Basic Line Module) the following applies:
Bit 0 = 0: OFF1 (pre-charging contactor/line contactor open)
Bit 0 = 0/1: ON (pre-charging contactor/line contactor closed)
r0863.1 of a drive can also be selected as signal source.

p0840 BI: ON/OFF1 / ON/OFF1

TM41

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 9677
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for control word 1 bit 0 (ON/OFF1).

Recommend.: When the setting for this binector input is changed, the motor can only be switched on by means of an appropriate signal change of the source.

Dependency: Refer to: p1055, p1056

Notice: Only the signal source that originally powered up can also power down again.
The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: Bit 0 = 0: OFF1 (pulse suppression and switching on inhibited)
Bit 0 = 0/1: ON (pulses can be enabled)
This parameter has no function in the "SINAMICS" operating mode (p4400 = 1).

p0844[0...n] BI: 1. OFF2 / 1. OFF2

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: T	**Calculated:** -	**Access level:** 3

-	-	1

Description: Sets the signal source for the 2nd OC/OFF3.
The AND logic operation of the 1st OC/OFF3 and 2nd OC/OFF3 results in control word 1, bit 2 (OC/OFF3).
Note: Bit 2 = 0: OFF3 (braking along the OFF3 ramp (p1135), then pulse suppression and switching on inhibited)
Bit 2 = 1: No OFF3 (enable is possible)
OC: Operating condition

p0852[0...n] BI: Operation enable / Operation enable

A_INF, S_INF, SERVO, VECTOR

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** CDS, p0170	**Func. diagram:** 2501, 8820, 8920
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for control word 1 bit 3 (enable operation)
Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: Bit 3 = 0: Inhibit operation (cancel pulses)
Bit 3 = 1: Enable operation (pulses can be enabled)

p0852 BI: Operation enable / Operation enable

TM41

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 9677
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for control word 1 bit 3 (enable operation)

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: Bit 3 = 0: Inhibit operation (cancel pulses)

Bit 3 = 1: Enable operation (pulses can be enabled)

This parameter has no function in the "SINAMICS" operating mode (p4400 = 1).

p0854[0...n] BI: Master control by PLC / Master ctrl by PLC

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** CDS, p0170	**Func. diagram:** 2501, 8720, 8820, 8920
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for control word 1 bit 10 (master control by PLC).

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: Bit 10 = 0: No master control by PLC

Bit 10 = 1: Master control by PLC

This bit is used to initiate a response for the drives when the control fails (F07220). If there is no control available, then BI: p0854 should be set to a 1 signal.

p0854 BI: Master control by PLC / Master ctrl by PLC

TM41

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 9677, 9678
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for control word 1 bit 10 (master control by PLC).

Dependency: Refer to: p1155

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: Bit 10 = 0: No master control by PLC

Bit 10 = 1: Master control by PLC

For the TM41, a response can be initiated using this bit if the control fails.

The parameter is only effective in the "SIMOTION" operating mode (p4400 = 0).

In the "SINAMICS" operating mode, the setpoints at CI: p4420 are evaluated independently of p0854.

Further, the setting of p2037 should be observed.

p0855[0...n] BI: Unconditionally release holding brake / Uncond open brake

SERVO, VECTOR	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dynamic index:** CDS, p0170	**Func. diagram:** 2501, 2701, 2707
	P-Group: Commands	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source for the command "unconditionally open holding brake".

Dependency: Refer to: p0858

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: The signal via BI: p0858 (unconditionally close holding brake) has a higher priority than via BI: p0855 (unconditionally open holding brake).

p0856[0...n] BI: Velocity controller enable / v_ctrl enable

SERVO (Lin)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dynamic index:** CDS, p0170	**Func. diagram:** 2501, 2701, 2707
	P-Group: Commands	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	1

Description: Sets the signal source for the command "enable speed controller" (r0898.12).
0 signal: Set the I component and speed controller output to zero.
1 signal: Enable speed controller.

Dependency: Refer to: r0898

Note: If "enable speed controller" is withdrawn, then an existing brake will be closed.
If "speed controller enable" is withdrawn, the pulses are not suppressed.

p0856[0...n] BI: Speed controller enable / n_ctrl enable

SERVO, VECTOR	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dynamic index:** CDS, p0170	**Func. diagram:** 2501, 2701, 2707
	P-Group: Commands	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	1

Description: Sets the signal source for the command "enable speed controller" (r0898.12).
0 signal: Set the I component and speed controller output to zero.
1 signal: Enable speed controller.

Dependency: Refer to: r0898

Note: If "enable speed controller" is withdrawn, then an existing brake will be closed.
If "speed controller enable" is withdrawn, the pulses are not suppressed.

p0857 Power unit monitoring time / PU t_monit

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 8760, 8864, 8964
P-Group: Commands | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
100.0 [ms]	60000.0 [ms]	6000.0 [ms]

Description: Sets the monitoring time for the power unit.
The following applies for infeeds and drives:
The monitoring time is started after an 0/1 edge of the ON/OFF1 command. If the power unit does not return a READY signal within the monitoring time, then fault F06000 (infeeds) or F07802 (drives) is output.
For drives, the following also applies:
After the pulse enable (operation enabled, p0852), the monitoring time is re-started. If the infeed does not signal ready to the drive within the monitoring time (using BI: p0864 of the drive), fault F07840 is initiated.

Dependency: Refer to: F06000, F07802, F07840, F30027

Notice: The maximum time to pre-charge the DC link is monitored in the power unit and cannot be changed. The maximum duration of the pre-charging depends on the power class and the power unit design.
The monitoring time for the pre-charging is started after the ON command (BI: p0840 = 0/1 signal). Fault F30027 is output when the maximum pre-charging duration is exceeded.

Note: The factory setting for p0857 depends on the power class and the design of the power unit.
The monitoring time for the ready signal of the power unit includes the time to pre-charge the DC link and, if relevant, the de-bounce time of the contactors.
If an excessively low value is entered into p0857, then after enable, this results in the corresponding fault.

p0858[0...n] BI: Unconditionally close holding brake / Uncond close brake

SERVO

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: Unsigned32 / Binary | **Dynamic index:** CDS, p0170 | **Func. diagram:** 2501, 2701, 2707
P-Group: Commands | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	9719.13

Description: Sets the signal source for the command "unconditionally close holding brake".

Dependency: Refer to: p0855

Note: The signal via BI: p0858 (unconditionally close holding brake) has a higher priority than via BI: p0855 (unconditionally open holding brake).
For a 1 signal via BI: p0858, the command "unconditionally close the holding brake" is executed and internally a zero setpoint is entered.

p0858[0...n] BI: Unconditionally close holding brake / Uncond close brake

VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: Unsigned32 / Binary | **Dynamic index:** CDS, p0170 | **Func. diagram:** 2501, 2701, 2707
P-Group: Commands | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the command "unconditionally close holding brake".

Dependency: Refer to: p0855

Note: The signal via BI: p0858 (unconditionally close holding brake) has a higher priority than via BI: p0855 (unconditionally open holding brake).
For a 1 signal via BI: p0858, the command "unconditionally close the holding brake" is executed and internally a zero setpoint is entered.

p0860 BI: Line cont. fdbk sig / Line contact feedb

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 2634, 8734, 8834, 8934
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	863.1

Description: Sets the signal source for the feedback signal from the line contactor.
Recommend.: When the monitoring is activated (BI: p0860 not equal to r0863.1), then to control the line contactor, signal BO: r0863.1 of its own drive object should be used.
Dependency: Refer to: p0861, r0863
Refer to: F07300
Notice: The line contactor monitoring is de-activated if the control signal of the particular drive object is set as the signal source for the feedback signal of the line contactor (BI: p0860 = r0863.1).
Note: The state of the line contactor is monitored depending on signal BO: r0863.1.
When the monitoring is activated (BI: p0860 not equal to r0863.1), fault F07300 is then also output if the contactor is closed before it is controlled using r0863.1.

p0861 Line contactor monitoring time / LineContact t_mon

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 2634, 8734, 8834, 8934
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	5000 [ms]	100 [ms]

Description: Sets the monitoring time of the line contactor.
This time starts each time that the line contactor switches (r0863.1). If a feedback signal is not received from the line contactor within the time, a message is output.
Dependency: Refer to: p0860, r0863
Refer to: F07300
Note: The monitoring function is disabled for the factory setting of p0860.

p0862 Power unit ON delay / PU t_on

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 2610, 8732, 8832, 8932
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	65000 [ms]	0 [ms]

Description: Sets the delay time for the control command of the power unit and a line contactor, if used.
Note: This means that it is possible to realize a shifted (delayed) pre-charging or power-on using a single ON command.
When the infeed units are active, before the line contactor is closed, an offset adjustment of the current measurement is carried out for a duration of 120 ms (p3491).

r0863.0...2 CO/BO: Drive coupling status word/control word / CoupleZSW/STW

A_INF, B_INF, S_INF, SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 2
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** -
P-Group: Commands **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the status and control words of the drive coupling.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Closed-loop control operation	Yes	No	2610, 6495, 8732, 8832, 8932, 9794
01	Energize contactor	Yes	No	2610, 2634, 8732, 8734, 8832, 8834, 8932, 8934
02	Infeed line supply failure	Yes	No	-

Dependency: Refer to: p0864

Note: Re bit 00:

Bit 0 signals that the infeed is ready.

When the operating signal is transferred via BO: r0863.0 this allows several drives to start (run-up) staggered over time when they are simultaneously powered up.

To realize this, the following connections/interconnections are required:

Drive 1: Internconnect BI: p0864 with BO: r0863.0 of the infeed

Drive 2: Internconnect BI: p0864 with BO: r0863.0 of drive 1

Drive 3: Internconnect BI: p0864 with BO: r0863.0 of drive 2, etc.

The first drive only transfers the operating signal to the next drive after it has reached its ready for operation condition.

Re bit 01:

Bit 1 is used to control an external line contactor.

Re bit 02:

This bit only signals line supply failure for Active Infeed (A_INF) and Smart Infeed (S_INF).

p0864 BI: Infeed operation / INF operation

SERVO, VECTOR

Can be changed: T **Calculated:** - **Access level:** 2
Data type: Unsigned32 / Binary **Dynamic index:** - **Func. diagram:** 1773, 1774, 2610
P-Group: Commands **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the operating signal of the infeed (e.g. BO: r0863.0).

Dependency: Refer to: r0863

Note: The sequence control of a servo/vector drive requires this signal.

The following applies for an infeed without DRIVE-CLiQ:

For these infeeds, the "ready" message is available via an output terminal. This signal must be connected to a digital input. The drives supplied from this infeed must use this signal as ready signal (BI: p0864 = digital input).

r0873 CO/BO: Infeed, total operation / INF total oper

B_INF, S_INF

Can be changed: -
Calculated: -
Access level: 2

r0899.0...15 CO/BO: Status word sequence control / ZSW seq_ctrl

SERVO, VECTOR

Can be changed: - **Calculated:** - **Access level:** 2
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** 1530, 2503
P-Group: Displays, signals **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the status word of the sequence control.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Ready for switching on	Yes	No	-
	01	Ready for operation	Yes	No	-
	02	Operation enabled	Yes	No	-
	03	Jog active	Yes	No	-
	04	No coasting active	OFF2 inactive	OFF2 active	-
	05	No Quick Stop active	OFF3 inactive	OFF3 active	-
	06	Switching on inhibited active	Yes	No	-
	07	Drive ready	Yes	No	-
	08	Controller enable	Yes	No	-
	09	Control requested	Yes	No	-
	11	Pulses enabled	Yes	No	-
	12	Holding brake open	Yes	No	-
	13	Command close holding brake	Yes	No	-
	14	Pulse enable from the brake control	Yes	No	-
	15	Setpoint enable from the brake control	Yes	No	-

Note: Re bits 00, 01, 02, 04, 05, 06, 09:
For PROFIdrive, these signals are used for status word 1.
Re bit 13:
When the "Safe Brake Control" (SBC) is activated and selected, the brake is no longer controlled using this signal.
Re bit 14, 15:
These signals are only of significance when the "extended brake control" function module is activated (r0108.14 = 1).

Min	Max	Factory setting
1	126	126

Description: Displays or sets the PROFIBUS address for PROFIBUS interface (X126) on the Control Unit.
The address can be set as follows:
1) Using the DIP switch on the Control Unit.
--> p0918 can then only be read and displays the selected address.
--> A change only becomes effective after a POWER ON.
2) Using p0918
--> only if all of the DIP switches - from S1 to S7 - are either set to ON or OFF.
--> The address is saved in a non-volatile fashion using the function "copy from RAM to ROM".
--> A change only becomes effective after a POWER ON.

Note: Permissible PROFIBUS addresses: 1 ... 126
Address 126 is used for commissioning.
Every PROFIBUS address change only becomes effective after a POWER ON.

P-Group: Setpoints **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the operating mode.
1: Closed-loop speed controlled operation with ramp-function generator
2: Closed-loop position controlled operation
3: Closed-loop speed controlled operation without ramp-function generator

r0944 CO: Counter for fault buffer changes / Fault buff change

All objects

Can be changed: - **Calculated:** - **Access level:** 2
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** 8060
P-Group: Messages **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays fault buffer changes. This counter is incremented every time the fault buffer changes.
Recommend.: Used to check whether the fault buffer has been read out consistently.
Dependency: Refer to: r0945, r0947, r0948, r0949, r2109

r0945[0...63] Fault code / Fault code

All objects

Can be changed: - **Calculated:** - **Access level:** 2
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** 1750, 8060
P-Group: Messages **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the numbers of faults that have occurred.
Dependency: Refer to: r0947, r0948, r0949, r2109, r2130, r2133, r2136
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
Fault buffer structure (general principle):
r0945[0], r0949[0], r0948[0], r2109[0], r3115[0] --> current fault case, fault 1
. . .
r0945[7], r0949[7], r0948[7], r2109[7], r3115[7] --> current fault case, fault 8
r0945[8], r0949[8], r0948[8], r2109[8], r3115[8] --> 1st acknowledged fault case, fault 1
. . .
r0945[15], r0949[15], r0948[15], r2109[15], r3115[15] --> 1st acknowledged fault case, fault 8
. . .
r0945[56], r0949[56], r0948[56], r2109[56], r3115[56] --> 7th acknowledged fault case, fault 1
. . .
r0945[63], r0949[63], r0948[63], r2109[63], r3115[63] --> 7th acknowledged fault case, fault 8

r0946[0...65534] Fault code list / Fault code list

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** 8060
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 0
	Min	**Max**	**Factory setting**
	-	-	-

Description: Lists the fault codes stored in the drive unit.
The indices can only be accessed with a valid fault code.

Dependency: The parameter assigned to the fault code is entered in r0951 under the same index.

r0947[0...63] Fault number / Fault number

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** 1750, 8060
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: This parameter is identical to r0945.

r0948[0...63] Fault time received in milliseconds / t_fault recv ms

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** 1750, 8060
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [ms]	- [ms]	- [ms]

Description: Displays the system runtime in milliseconds when the fault occurred.

Dependency: Refer to: r0945, r0947, r0949, r2109, r2114, r2130, r2133, r2136, r3115

Notice: The time comprises r2130 (days) and r0948 (milliseconds).

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the fault buffer and the assignment of the indices is shown in r0945.
When the parameter is read via PROFIdrive, the TimeDifference data type applies.

r0949[0...63] Fault value / Fault value

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Integer32	**Dynamic index:** -	**Func. diagram:** 1750, 8060
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays additional information about the fault that occurred (as integer number).

Dependency: Refer to: r0945, r0947, r0948, r2109, r2130, r2133, r2136, r3115

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the fault buffer and the assignment of the indices is shown in r0945.

p0952 Fault cases, counter / Fault cases qty

All objects

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** 1710, 8060
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	65535	0

Description: Number of fault situations that have occurred since the last reset.

Dependency: The fault buffer is deleted (cleared) by setting p0952 to 0.
Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136

r0963 PROFIBUS baud rate / PB baud rate

CU_S

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	255	-

Value:

0: 9.6 kbit/s
1: 19.2 kbit/s
2: 93.75 kbit/s
3: 187.5 kbit/s
4: 500 kbit/s
6: 1.5 Mbit/s
7: 3 Mbit/s
8: 6 Mbit/s
9: 12 Mbit/s
10: 31.25 kbit/s
11: 45.45 kbit/s
255: Unknown

r0964[0...6] Device identification / Device ident.

CU_CX32, CU_I, CU_S

Can be changed: - | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the device identification.

Index:
[0] = Company (Siemens = 42)
[1] = Device type
[2] = Firmware version
[3] = Firmware date (year)
[4] = Firmware date (day/month)
[5] = Number of drive objects
[6] = Firmware patch/hot fix

Note: Example:
r0964[0] = 42 --> SIEMENS
r0964[1] = 5000 --> SINAMICS S CU320
r0964[1] = 5200 --> SINAMICS G CU320
r0964[2] = 102 --> first part of the firmware version V01.02 (second part, refer to index 6)
r0964[3] = 2003 --> year 2003
r0964[4] = 1401 --> 14th of January
r0964[5] = 4 --> 4 drive objects

r0964[6] = 600 --> second part, firmware version (complete version: V01.02.06.00)

r0965 PROFIdrive profile number / PD profile number

CU_CX32, CU_I, CU_S

Can be changed: -
Calculated: -
Access level: 3
Data type: Unsigned16
Dynamic index: -
Func. diagram: -
P-Group: Communications
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the PROFIdrive profile number and profile version. Constant value = 0329 hex.
Byte 1: Profile number = 03 hex = PROFIdrive profile
Byte 2: Profile version = 29 hex = Version 4.1

Note: When the parameter is read via PROFIdrive, the Octet String 2 data type applies.

p0969 System runtime relative / t_System relative

CU_CX32, CU_I, CU_S

Can be changed: T
Calculated: -
Access level: 3
Data type: Unsigned32
Dynamic index: -
Func. diagram: 1750, 8060
P-Group: Displays, signals
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0 [ms]	4294967295 [ms]	0 [ms]

Description: Displays the system runtime in ms since the last POWER ON.

Note: The value in p0969 can only be reset to 0.
The value overflows after approx. 49 days.
When the parameter is read via PROFIdrive, the TimeDifference data type applies.

p0970 Reset infeed parameter / INF par reset

A_INF, B_INF, S_INF

Can be changed: C2(30)
Calculated: -
Access level: 2
Data type: Unsigned16
Dynamic index: -
Func. diagram: -
P-Group: Factory settings
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0	100	0

Description: The parameter is used to initiate a reset of the parameters of an individual infeed unit.
The parameters of the basic commissioning (refer to p0009) are in this case not reset (p0107, p0108, p0121, p0170). These can only be reset using the factory setting of the complete drive unit (p0976).
The sampling times (p0111, p0112, p0115) are only not reset if this results in a conflict with the basic clock cycle (p0110).

Value:
0: Inactive
1: Starts a parameter reset
100: Starts a BICO interconnection reset

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.

p0970 Reset drive parameters / Drive par reset

SERVO, VECTOR

Can be changed: C2(30)
Calculated: -
Access level: 2
Data type: Unsigned16
Dynamic index: -
Func. diagram: -
P-Group: Factory settings
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0	100	0

Description: The parameter is used to initiate the reset of the parameters of an individual drive unit.

Parameters p0100, p0205 (only for VECTOR) and the parameters of the basic drive commissioning (p0009) are not reset (p0107, p0108, p0111, p0112, p0115, p0121, p0130, p0131, p0140, p0141, p0142, p0170, p0186 ... p0189). These can only be reset using the factory setting of the complete drive unit (p0976).

Value:
0: Inactive
1: Starts a parameter reset
100: Starts a BICO interconnection reset

Note:
A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.

p0970 TB30 reset parameters / TB30 par reset

TB30

Can be changed: C2(30) | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Factory settings | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	100	0

Description:
The parameter is used to initiate a reset of the parameters on Terminal Board 30 (TB30).
The sampling time p4099 is not reset if in so doing a conflict occurs with the basic clock cycle.
Parameter p0161 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).

Value:
0: Inactive
1: Starts a parameter reset
100: Starts a BICO interconnection reset

Note:
A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.

p0970 TM31 reset parameters / TM31 par reset

TM31

Can be changed: C2(30) | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Factory settings | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	100	0

Description:
The parameter is used to initiate a reset of the parameters on Terminal Module 31 (TM31).
The sampling time p4099 is not reset if in so doing a conflict occurs with the basic clock cycle.
Parameter p0151 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).

Value:
0: Inactive
1: Starts a parameter reset
100: Starts a BICO interconnection reset

Dependency:
Refer to: p0010

Note:
A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.

p0970 TM41 reset parameters / TM41 par reset

TM41

Can be changed: C2(30) | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Factory settings | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	100	0

Description:
The parameter is used to initiate a reset of the parameters on Terminal Module 41 (TM41).
Parameter p0151 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).

Value: 0: Inactive
1: Starts a parameter reset
100: Starts a BICO interconnection reset

Dependency: Refer to: p0010

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.

p0970 TM17 reset parameter / TM17 par reset

TM17

Can be changed: C2(30) **Calculated:** - **Access level:** 2
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** -
P-Group: Factory settings **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	100	0

Description: The parameter is used to initiate a reset of the parameters on Terminal Module 17 (TM17).
Parameter p0151 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).

Value: 0: Inactive
1: Starts a parameter reset
100: Starts a BICO interconnection reset

Dependency: Refer to: p0010

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.

p0970 TM15 reset parameter / TM15 par reset

TM15

Can be changed: C2(30) **Calculated:** - **Access level:** 2
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** -
P-Group: Factory settings **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	100	0

Description: The parameter is used to initiate a reset of the parameters on Terminal Module 15 (TM15).
Parameter p0151 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).

Value: 0: Inactive
1: Starts a parameter reset
100: Starts a BICO interconnection reset

Dependency: Refer to: p0010

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.

p0970 TM15DI/DO reset parameter / TM15D par reset

TM15DI_DO

Can be changed: C2(30) **Calculated:** - **Access level:** 2
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** -
P-Group: Factory settings **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	100	0

Description: The parameter is used to initiate a reset of the parameters on Terminal Module 15 (TM15).
The sampling time p4099 is not reset if in so doing a conflict occurs with the basic clock cycle.
Parameter p0151 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).

Value: 0: Inactive
1: Starts a parameter reset
100: Starts a BICO interconnection reset

Dependency: Refer to: p0010

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.

p0970 TM54F reset parameters / TM54F par reset

TM54F_MA

Can be changed: C2(30) | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Factory settings | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	100	0

Description: The parameter is used to initiate a reset of the parameters on Terminal Module 54F (TM54F).
Parameter p0151 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).

Value:
0: Inactive
1: Starts a parameter reset
100: Starts a BICO interconnection reset

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.

p0971 Save drive object parameters / Drv_obj par save

All objects

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Factory settings | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Setting to save the parameter of the particular drive object in the non-volatile memory.

Value:
0: Inactive
1: Save drive object

Dependency: Refer to: p0977, p1960, p3845, r3996

Caution: The Control Unit power supply may only be powered down after data has been saved (i.e. after data save has been started, wait until the parameter again has the value 0).

Notice: Writing to parameters is inhibited while saving.
The progress while saving is displayed in r3996.

Note: Starting from the particular drive object, the following parameters are saved:
CU3xx: Device-specific parameters and PROFIBUS device parameters.
Other objects: Parameters of the current object and PROFIBUS device parameters.
Prerequisite:
In order that the parameter of a drive object, saved with p0971 = 1, is read the next time that the Control Unit is booted, then all parameters must, as a minimum, have first been saved once with p0977 = 1.

p0972 Drive unit reset / Drv_unit reset

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	3	0

Description: Sets the required procedure to execute a hardware reset for the drive unit.

Value:
0: Inactive
1: Hardware-Reset immediate
2: Hardware reset preparation
3: Hardware reset after cyclic communication has failed

Danger: It must be absolutely ensured that the system is in a safe condition.

The memory card of the Control Unit must not be accessed.

Notice: For SIMOTION or SINUMERIK with integrated SINAMICS, the hardware reset acts on the complete system and depends on the state of the control.

Note: Re value = 1:

Reset is immediately executed and communications interrupted.

After communications have been established, check the reset operation (refer below).

Re value = 2:

Help to check the reset operation.

Firstly, set p0972 = 2 and then read back. Secondly, set p0972 = 1 (it is possible that this request is possibly no longer acknowledged). The communication is then interrupted.

After communications have been established, check the reset operation (refer below).

Re value = 3:

The reset is executed after interrupting cyclic communication. This setting is used to implement a synchronized reset by a control for several drive units.

If the cyclic communication is active for both PROFIdrive interfaces, then the reset is executed after completing both cycle communications.

After communications have been established, check the reset operation (refer below).

To check the reset operation:

After the drive unit has been restarted and communications have been established, read p0972 and check the following:

p0972 = 0? --> The reset was successfully executed.

p0972 > 0? --> The reset was not executed.

r0975[0...10] Drive object identification / DO identification

All objects

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the identification of the drive object.

Index:
[0] = Company (Siemens = 42)
[1] = Drive object type
[2] = Firmware version
[3] = Firmware date (year)
[4] = Firmware date (day/month)
[5] = PROFIdrive drive object, type class
[6] = PROFIdrive drive object, sub-type Class 1
[7] = Drive object number
[8] = Reserved
[9] = Reserved
[10] = Firmware patch/hot fix

Note: Example:

r0975[0] = 42 --> SIEMENS

r0975[1] = 11 --> SERVO drive object type

r0975[2] = 102 --> first part, firmware version V01.02 (second part, refer to index 10)

r0975[3] = 2003 --> year 2003

r0975[4] = 1401 --> 14th of January

r0975[5] = 1 --> PROFIdrive drive object, type class

r0975[6] = 9 --> PROFIdrive drive object sub-type class 1

r0975[7] = 2 --> drive object number = 2

r0975[8] = 0 (reserved)

r0975[9] = 0 (reserved)

r0975[10] = 600 --> second part, firmware version (complete version: V01.02.06.00)

p0976 Reset and load all parameters / Reset load all par

CU_CX32, CU_I, CU_S

Can be changed: C1(30) | **Calculated:** - | **Access level:** 1
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Factory settings | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1013	0

Description: Resets or downloads all parameters of the drive system.

Value:
0: Inactive
1: Starts to reset all parameters to factory setting
2: Starts to download param. saved in non-volatile way w/ p0977 = 1
3: Start to download the volatile parameters from RAM
10: Starts to download param. saved in non-volatile way w/ p0977=10
11: Starts to download param. saved in non-volatile way w/ p0977=11
12: Starts to download param. saved in non-volatile way w/ p0977=12
20: Starts to download Siemens internal setting 20
21: Starts to download Siemens internal setting 21
22: Starts to download Siemens internal setting 22
23: Starts to download Siemens internal setting 23
24: Starts to download Siemens internal setting 24
25: Starts to download Siemens internal setting 25
26: Starts to download Siemens internal setting 26
100: Starts to reset all BICO interconnections
1011: Starts to download param. saved in volatile way w/ p0977 = 1011
1012: Starts to download param. saved in volatile way w/ p0977 = 1012
1013: Starts to download param. saved in volatile way w/ p0977 = 1013

Note: After all of the parameters have been reset to their factory setting, the system must be commissioned for the first time again.

Resetting or loading is realized in the non-volatile memory.

Procedure:

1. Set p0009 = 30 (parameter reset).
2. Set p0976 to "required value". The system is rebooted.

p0976 is automatically set to 0 and p0009 is automatically set to 1 after this has been carried out.

p0977 Save all parameters / Save all par

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Factory settings | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1013	0

Description: Saves all parameters of the drive system to the non-volatile memory.

Value:
0: Inactive
1: Save in non-volatile fashion - downloaded at POWER ON
10: Save as opt. in non-vol. fashion - downloaded w/ p0976=10
11: Save as opt. in non-vol. fashion - downloaded w/ p0976=11
12: Save as opt. in non-vol. fashion - downloaded w/ p0976=12
20: Save in a non-volatile fashion as setting 20 (reserved)
21: Save in a non-volatile fashion as setting 21 (reserved)
22: Save in a non-volatile fashion as setting 22 (reserved)
23: Save in a non-volatile fashion as setting 23 (reserved)
24: Save in a non-volatile fashion as setting 24 (reserved)
25: Save in a non-volatile fashion as setting 25 (reserved)
26: Save in a non-volatile fashion as setting 26 (reserved)
1011: Save in volatile fashion, loaded with p0976=1011

1012: Save in volatile fashion, loaded with p0976=1012
1013: Save in volatile fashion, loaded with p0976=1013

Dependency: Refer to: p0976, p1960, p3845, r3996

Caution: The Control Unit power supply may only be powered down after data has been saved (i.e. after data save has been started, wait until the parameter again has the value 0).

Notice: Writing to parameters is inhibited while saving.
The progress while saving is displayed in r3996.

Note: Parameters saved with p0977 = 10, 11 or 12 can be downloaded again with p0976 = 10, 11 or 12.

p0978[0...16] List of drive objects / List of the DO

CU_CX32, CU_I, CU_S

Can be changed: C1(1) **Calculated:** - **Access level:** 2
Data type: Unsigned8 **Dynamic index:** - **Func. diagram:** -
P-Group: Topology **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	255	[0] 1
		[1] 0
		[2] 0
		[3] 0
		[4] 0
		[5] 0
		[6] 0
		[7] 0
		[8] 0
		[9] 0
		[10] 0
		[11] 0
		[12] 0
		[13] 0
		[14] 0
		[15] 0
		[16] 0

Description: This parameter is an image of p0101 in conformance with PROFIdrive.
Parameters p0101 and p0978 contain the following information:
1) The same number of drive objects
2) The same drive objects
In this sense, they are consistent.
Difference between p0101 and p0978:
p0978 can be re-sorted and a zero inserted in order to identify those drive objects that participate in the process data exchange and to define their sequence in the process data exchange. Drive objects that are listed after the first zero, are excluded from the process data exchange.
For p0978, in addition, the value 255 can be inserted a multiple number of times.
p0978[n] = 255 means: The drive object is visible for the PROFIBUS master and is empty (without any actual process data exchange). This allows cyclic communications of a PROFIBUS master with unchanged configuring to the drive units with a lower number of drive objects.

Dependency: Refer to: p0101, p0971, p0977

Note: p0978 cannot be changed when the drive system is first commissioned. The reason for this is that at this time the actual topology has still not been acknowledged (p0099 is still not equal to r0098 and p0009 is set to 0).

r0979[0...30] PROFIdrive encoder format / PD encoder format

SERVO, VECTOR	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** 4010, 4704
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1

Description: Displays those parameters with a value other than the factory setting for this drive.

Dependency: Refer to: r0990, r0991

Note: Modified parameters are displayed in indices 0 to 98. If an index contains the value 0, then the list ends here.

This list completely comprises the following parameters:

r0990[0...99], r0991[0...99] ... r0999[0...99]

The parameters in this list are not displayed in the expert list of the commissioning software. However, they can be read from a higher-level control system (e.g. PROFIBUS master).

p1000[0...n] Macro Connector Inputs (CI) for velocity setpoints / Macro CI v_set

SERVO (Lin)

Can be changed: C2(1), T | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 | **Dynamic index:** CDS, p0170 | **Func. diagram:** -
P-Group: Commands | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	999999	0

Description: Runs the appropriate ACX file on the CompactFlash card.
The Connector Inputs (CI) for the velocity setpoints of the appropriate Command Data Set (CDS) are appropriately interconnected.
The selected ACX file must be located in the following directory:
... /PMACROS/<drive object>/P1000/PMxxxxxx.ACX
Example:
p1000 = 6 --> the file PM000006.ACX is run.

Dependency: The ACX file to be run must be created according to the definition for ACX macros and must be saved in the directory intended on the CompactFlash card.
Refer to: p0015, p0700, p1500, r8572

Notice: No errors were issued during quick commissioning (p3900 = 1) when writing to parameters of the QUICK_IBN group!

Note: The macros in the specified directory are displayed in r8572. r8572 is not in the expert list of the commissioning software.
Macros available as standard are described in the technical documentation of the particular product.
CI: Connector Input

Description: Displays the selected and effective fixed speed setpoint.

This setpoint is the output value for the fixed speed setpoints and must be appropriately interconnected (e.g. with the main setpoint).

Recommend.: Interconnect the signal with main setpoint (p1070).

Dependency: Selects the required fixed speed setpoint using p1020 ... p1023.

Displays the number of the current fixed speed setpoint in r1197.

Sets a value for the fixed speed setpoints 1 ... 15 using p1001 ... p1015.

Refer to: p1070, r1197

Note: If a fixed speed setpoint has not been selected (p1020 ... p1023 = 0, r1197 = 0), then r1024 = 0 (setpoint = 0).

p1030[0...n] Motorized potentiometer configuration / Mop configuration

SERVO (Extended setp), VECTOR

Can be changed: U, T
Calculated: -
Access level: 3
Data type: Unsigned16
Dynamic index: DDS, p0180
Func. diagram: 3020
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	0110 bin

Description: Sets the configuration for the motorized potentiometer.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Data save active	Yes	No	-
01	Automatic mode, ramp-function generator active	Yes	No	-
02	Initial rounding-off active	Yes	No	-
03	Save in NVRAM active	Yes	No	-

Note: Re bit 00:

0: The setpoint for the motorized potentiometer is not saved and after ON is entered using p1040.

1: The setpoint for the motorized potentiometer is saved after OFF and after ON set to the saved value. In order to save in a non-volatile fashion, bit 03 should be set to 1.

Re bit 01:

0: Without ramp-function generator in the automatic mode (ramp-up/ramp-down time = 0).

1: With ramp-function generator in the automatic mode.

For manual operation (0 signal via BI: p1041), the ramp-function generator is always active.

Re bit 02:

0: Without initial rounding-off

1: With initial rounding-off. The selected ramp-up/down time is correspondingly exceeded. The initial rounding-off is a sensitive way of specifying small changes (progressive reaction when keys are pressed).

The jerk for the initial rounding-off is independent of the ramp-up time and only depends on the selected maximum speed (p1082). It is calculated as follows:

r = 0.01 % * p1082 [1/s] / 0.13^2 [s^2]

The jerk acts up until the maximum acceleration is reached (a_max = p1082 [1/s] / p1047 [s]), and then the drive continues to run linearly with a constant rate of acceleration. The higher the maximum acceleration (the lower that p1047 is), the longer the ramp-up time increases with respect to the set ramp-up time.

Re bit 03:
0: Non-volatile data save de-activated.
1: The setpoint for the motorized potentiometer is saved in a non-volatile fashion (for bit 00 = 1).
The following prerequisites must be fulfilled in order to be able to save the setpoint in a non-volatile fashion:
- Firmware with V2.3 or higher.
- Control Unit 320 (CU320) with hardware version C or higher (module with NVRAM).

p1035[0...n] BI: Motorized potentiometer setpoint raise / Mop raise

SERVO (Extended setp), VECTOR

Can be changed: T	**Calculated:** -	**Access level:** 3

Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Sets the effective setpoint in front of the internal motorized potentiometer ramp-function generator.

p1047[0...n] Motorized potentiometer ramp-up time / Mop ramp-up time

SERVO (Extended setp), VECTOR

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 3020
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.000 [s]	1000.000 [s]	10.000 [s]

Description: Sets the ramp-up time for the internal ramp-function generator for the motorized potentiometer.

The setpoint is changed from zero up to the speed/velocity limit (p1082) within this time (if no initial rounding-off has been activated).

Dependency: Refer to: p1030, p1048, p1082
Note: When the initial rounding-off is activated (p1030.2) the ramp-up time is correspondingly extended.

p1048[0...n] Motorized potentiometer ramp-down time / Mop ramp-down time

SERVO (Extended setp), VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 3020
P-Group: Setpoints | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	1000.000 [s]	10.000 [s]

Description: Sets the ramp-down time for the internal ramp-function generator for the motorized potentiometer.
The setpoint is changed from the speed/velocity limit (p1082) to zero within this time (if no initial rounding-off has been activated).
Dependency: Refer to: p1030, p1047, p1082
Note: The deceleration time is extended corresponding to the activated initial rounding-off (p1030.2).

r1050 CO: Motor. potentiometer setpoint after the ramp-function generator / Mop setp after RFG

SERVO (Extended setp, Lin)

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 1550, 3020
P-Group: Setpoints | **Units group:** 4_1 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
- [m/min]	- [m/min]	- [m/min]

Description: Sets the effective setpoint after the internal motorized potentiometer ramp-function generator.
This setpoint is the output value of the motorized potentiometer and must be appropriately interconnected onwards (e.g. with the main setpoint).
Recommend.: Interconnect the signal with main setpoint (p1070).
Dependency: Refer to: p1070
Note: For "With ramp-function generator", after an OFF1, OFF2, OFF3 or for a 0 signal via BI: p0852 (inhibit operation, cancel pulses) the ramp-function generator output (r1050) is set to the starting value (configuration via p1030.0).

r1050 CO: Motor. potentiometer setpoint after the ramp-function generator / Mop setp after RFG

SERVO (Extended setp), VECTOR

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 1550, 3020

Description: Sets the lowest possible speed/velocity. This value is not undershot in operation.

Note: The parameter value applies for both motor directions of rotation.

In exceptional cases, the motor can operate below this value (e.g. when reversing).

p1082[0...n] Maximum velocity / Maximum speed

SERVO (Lin)

Can be changed: C2(1), T	**Calculated:** CALC_MOD_ALL	**Access level:** 1
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 3020, 3050, 3060, 3070, 3095, 5300
P-Group: Setpoints	**Units group:** 4_1	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [m/min]	1000.000 [m/min]	1000.000 [m/min]

Description: Sets the highest possible velocity.

Dependency: Refer to: p0115, p0322

Note: The parameter applies for both motor directions. The parameter has a limiting effect and is the reference quantity for all ramp-up and ramp-down times (e.g. down ramps, ramp-function generator, motor potentiometer).

The parameter is part of the quick commissioning (p0010 = 1); this means that it is appropriately pre-assigned when changing p0311 and p0322.

The following limits are always effective for p1082:

p1082 <= p0322, if p0322 > 0

p1082 <= 60 / (10.5 * p0115[0] * r0313)

p1082 <= 60 * Maximum power unit pulse frequency / (5.3 * r0313)

For the automatic calculation (p0340 = 1) the value of the parameter is pre-assigned the maximum motor speed (p0322). If p0322 = 0, the rated motor speed (p0311) is used as default (pre-assignment) value. For induction motors that are not catalog motors (p0301 = 0), the synchronous no-load speed is used as default (pre-assignment) value (p0310 * 60 / r0313).

For synchronous motors, the following additionally applies:

In the automatic calculation (p0340 = 1), p1082 is limited to speeds for which the steady-state maximum current of the power unit is not sufficient as field current: p1082 < p0348 / (1 - r0207 / r0331). On the other hand, an additional limit is effective, which prevents the EMF from exceeding the maximum DC link voltage.

The effective assignment of the motor data set parameter (e.g. p0311) to the drive data set parameter p1082 when pre-assigning should be taken from p0186.

p1082 is also available in the quick commissioning (p0010 = 1); this means that when exiting via p3900 > 0, the value is not changed.

p1082[0...n] Maximum speed / Maximum speed

SERVO

Can be changed: C2(1), T	**Calculated:** CALC_MOD_ALL	**Access level:** 1
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 3020, 3050, 3060, 3070, 3095, 5300
P-Group: Setpoints	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1
Min 0.000 [rev/min]	**Max** 210000.000 [rev/min]	**Factory setting** 1500.000 [rev/min]

Description: Sets the highest possible speed.

Dependency: Refer to: p0115, p0322

Note: The parameter applies for both motor directions. The parameter has a limiting effect and is the reference quantity for all ramp-up and ramp-down times (e.g. down ramps, ramp-function generator, motor potentiometer).

The parameter is part of the quick commissioning (p0010 = 1); this means that it is appropriately pre-assigned when changing p0311 and p0322.

The following limits are always effective for p1082:

p1082 <= p0322, if p0322 > 0

p1082 <= 60 / (10.5 * p0115[0] * r0313)

p1082 <= 60 * Maximum power unit pulse frequency / (5.3 * r0313)

For the automatic calculation (p0340 = 1) the value of the parameter is pre-assigned the maximum motor speed (p0322). If p0322 = 0, the rated motor speed (p0311) is used as default (pre-assignment) value. For induction motors that are not catalog motors (p0301 = 0), the synchronous no-load speed is used as default (pre-assignment) value (p0310 * 60 / r0313).

For synchronous motors, the following additionally applies:

In the automatic calculation (p0340 = 1), p1082 is limited to speeds for which the steady-state maximum current of the power unit is not sufficient as field current: p1082 < p0348 / (1 - r0207 / r0331). On the other hand, an additional limit is effective, which prevents the EMF from exceeding the maximum DC link voltage.

The effective assignment of the motor data set parameter (e.g. p0311) to the drive data set parameter p1082 when pre-assigning should be taken from p0186.

p1082 is also available in the quick commissioning (p0010 = 1); this means that when exiting via p3900 > 0, the value is not changed.

p1082[0...n] Maximum speed / Maximum speed

VECTOR

Can be changed: C2(1), T	**Calculated:** CALC_MOD_ALL	**Access level:** 1
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 3020, 3050, 3060, 3070, 3095, 6732
P-Group: Setpoints	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1
Min 0.000 [rev/min]	**Max** 210000.000 [rev/min]	**Factory setting** 1500.000 [rev/min]

Description: Sets the highest possible speed.

Dependency: Refer to: p0115, p0230, r0313, p0322, r0336

Note: The parameter applies for both motor directions. The parameter has a limiting effect and is the reference quantity for all ramp-up and ramp-down times (e.g. down ramps, ramp-function generator, motor potentiometer).

The parameter is part of the quick commissioning (p0010 = 1); this means that it is appropriately pre-assigned when changing p0311 and p0322.

The following limits are always effective for p1082:

p1082 <= p0322, if p0322 > 0

p01082 <= 60 * Minimum (15 * r0336, 650 Hz) / r0313

p01082 <= 60 * Maximum power unit pulse frequency / (k * r0313)

k = 12 for vector control (r0108.2 = 1), k = 6.5 for V/f control (r0108.2 = 0)

If a sine-wave filter (p0230 = 3) is parameterized as output filter, then the maximum speed is limited corresponding to the maximum permissible filter output frequency (refer to the filter data sheet). For reactors and dv/dt filters, it is limited to 150 Hz / r0313 (for chassis power units) or 120 Hz / r0313 (for booksize power units).

For the automatic calculation (p0340 = 1) the value of the parameter is pre-assigned the maximum motor speed (p0322). If p0322 = 0, the rated motor speed (p0311) is used as default (pre-assignment) value. For induction motors that are not catalog motors (p0301 = 0), the synchronous no-load speed is used as default (pre-assignment) value (p0310 * 60 / r0313).

For synchronous motors, the following additionally applies:

In the automatic calculation (p0340), p1082 is limited to speeds where the EMF does not exceed the DC link voltage.

The effective assignment of the motor data set parameter (e.g. p0311) to the drive data set parameter p1082 when pre-assigning should be taken from p0186.

p1082 is also available in the quick commissioning (p0010 = 1); this means that when exiting via p3900 > 0, the value is not changed.

For vector control (p1300 = 20 ... 23) the maximum speed is limited to 60.0 / (8.333 * p0115[0] * r0313). This can be identified by a reduction in r1084. p1082 is not changed in this process due to the fact that the operating mode p1300 can be changed over.

p1083[0...n] CO: Velocity limit positive direction / v_limit pos

p1101[0...n] Skip velocity bandwidth / v_skip bandwidth

SERVO (Extended setp, Lin)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 3050
P-Group: Setpoints	**Units group:** 4_1	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [m/min]	1000.000 [m/min]	0.000 [m/min]

Description: Sets the bandwidth for the skip velocities 1 to 4.

Dependency: Refer to: p1091, p1092, p1093, p1094

Note: The setpoint velocities are skipped (suppressed) in the range of the skip velocity +/-p1101.

Steady-state operation is not possible in the skipped (suppressed) velocity range. The skip (suppression) range is skipped.

Example:

p1091 = 600 and p1101 = 20

--> setpoint velocities between 580 and 620 [rpm] are skipped.

For the skip bandwidths, the following hysteresis behavior applies:

For a setpoint velocity coming from below, the following applies:

r1170 < 580 [m/min] and 580 [m/min] <= r1114 <= 620 [m/min] --> r1119 = 580 [m/min]

For a setpoint velocity coming from above, the following applies:

r1170 > 620 [m/min] and 580 [m/min] <= r1114 <= 620 [m/min] --> r1119 = 620 [m/min]

p1101[0...n] Skip speed bandwidth / n_skip bandwidth

SERVO (Extended setp), VECTOR

Can be changed: U, T	**Calculated:** -	**Access level:** 3

SERVO (Extended setp)

Can be changed: C2(1), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 3060, 3070
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min 0.000 [s]	**Max** 999999.000 [s]	**Factory setting** 10.000 [s]

Description: The ramp-function generator ramps-up the speed setpoint from standstill (setpoint = 0) up to the maximum speed (p1082) in this time.

Dependency: Refer to: p1082

p1120[0...n] Ramp-function generator ramp-up time / RFG ramp-up time

VECTOR

Can be changed: C2(1), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 3060, 3070
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min 0.000 [s]	**Max** 999999.000 [s]	**Factory setting** 10.000 [s]

Description: The ramp-function generator ramps-up the speed setpoint from standstill (setpoint = 0) up to the maximum speed (p1082) in this time.

Dependency: Refer to: p1082

Note: The parameter is adapted during the rotating measurement (p1960 > 0). This is the reason that during the rotating measurement, the motor can accelerate faster than was originally parameterized.

p1121[0...n] Ramp-function generator ramp-down time / RFG ramp-down time

SERVO (Lin)

Can be changed: C2(1), U, T | **Calculated:** - | **Access level:** 1
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 3060, 3070
P-Group: Setpoints | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	999999.000 [s]	0.000 [s]

Description: The drive is decelerated from the maximum velocity (p1082) down to standstill (setpoint = 0) in this time.
Dependency: Refer to: p1082
Note: The following applies for SERVO:
The ramp-function generator is only available when the function module "extended setpoint channel" is active (r0108.8 = 1).

p1121[0...n] Ramp-function generator ramp-down time / RFG ramp-down time

SERVO, VECTOR

Can be changed: C2(1), U, T | **Calculated:** - | **Access level:** 1
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 3060, 3070
P-Group: Setpoints | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	999999.000 [s]	10.000 [s]

Description: The ramp-function generator ramps-down the speed setpoint from the maximum speed (p1082) down to standstill (setpoint = 0) in this time. Further, the ramp-down time is always effective for OFF1.
Dependency: Refer to: p1082
Note: The following applies for SERVO:
The ramp-function generator is only available when the function module "extended setpoint channel" is active (r0108.8 = 1).

p1122[0...n] BI: Bypass ramp-function generator / Bypass RFG

SERVO (Extended setp), VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** CDS, p0170 | **Func. diagram:** 2505
P-Group: Setpoints | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for bypassing the ramp generator (ramp-up and ramp-down times = 0).
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: For VECTOR in encoderless operation, it is not permissible that the ramp-function generator is bypassed.

p1130[0...n] Ramp-function generator initial rounding-off time / RFG t_start_round

SERVO (Extended setp), VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 3070
P-Group: Setpoints | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	30.000 [s]	0.000 [s]

Description: Sets the initial rounding-off time for the extended ramp generator. The value applies to ramp-up and ramp-down.
Note: Rounding-off times avoid an abrupt response and prevent damage to the mechanical system.

p1131[0...n] Ramp-function generator final rounding-off time / RFG t_end_delay

SERVO (Extended setp), VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 3070
P-Group: Setpoints | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	30.000 [s]	0.000 [s]

Description: Sets the final rounding-off time for the extended ramp generator. The value applies to ramp-up and ramp-down.

Note: Rounding-off times avoid an abrupt response and prevent damage to the mechanical system.

p1134[0...n] Ramp-function generator rounding-off type / RFG round-off type

SERVO (Extended setp), VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 3070
P-Group: Setpoints | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Sets the smoothed response to the OFF1 command or the reduced setpoint for the extended ramp-function generator.

Value:
0: Cont. smoothing
1: Discont smoothing

Dependency: No effect up to initial rounding-off time (p1130) > 0 s.

Note: p1134 = 0 (continuous smoothing)

If the setpoint is reduced while ramping-up, initially a final rounding-off is carried out and then the ramp-up completed. During the final rounding-off, the output of the ramp-function generator continues to go in the direction of the previous setpoint (overshoot). After the final rounding-off has been completed, the output goes toward the new setpoint.

p1134 = 1 (discontinuous smoothing)

If the setpoint is reduced while ramping-up, then the output goes immediately in the direction of the new setpoint. For the setpoint change there is no rounding-off.

p1135[0...n] OFF3 ramp-down time / RFG OFF3 t_ramp-dn

SERVO (Lin)

Can be changed: C2(1), U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 3060, 3070
P-Group: Setpoints | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	600.000 [s]	0.000 [s]

Description: Sets the ramp-down time from the maximum velocity down to zero speed for the OFF3 command.

Note: This time can be exceeded if the DC link voltage reaches its maximum value.

p1135[0...n] OFF3 ramp-down time / RFG OFF3 t_ramp-dn

SERVO

Can be changed: C2(1), U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 3060, 3070
P-Group: Setpoints | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	600.000 [s]	0.000 [s]

Description: Sets the ramp-down time from the maximum speed down to zero speed for the OFF3 command.

Note: This time can be exceeded if the DC link voltage reaches its maximum value.

p1135[0...n] OFF3 ramp-down time / RFG OFF3 t_ramp-dn

VECTOR	**Can be changed:** C2(1), U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 3060, 3070
	P-Group: Setpoints	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000 [s]	600.000 [s]	3.000 [s]

Description: Sets the ramp-down time from the maximum speed down to zero speed for the OFF3 command.
Note: This time can be exceeded if the DC link voltage reaches its maximum value.

p1136[0...n] OFF3 initial rounding-off time / RFGOFF3 t_strt_rnd

SERVO (Extended setp), VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 3070, 3080
	P-Group: Setpoints	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000 [s]	30.000 [s]	0.000 [s]

Description: Sets the initial rounding-off time for OFF3 for the extended ramp generator.

p1137[0...n] OFF3 final rounding-off time / RFG OFF3 t_end_del

SERVO (Extended setp), VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 3070
	P-Group: Setpoints	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000 [s]	30.000 [s]	0.000 [s]

Description: Sets the final rounding-off time for OFF3 for the extended ramp generator.

p1140[0...n] BI: Ramp-function generator enable / RFG enable

SERVO, VECTOR	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dynamic index:** CDS, p0170	**Func. diagram:** 2442, 2443, 2501
	P-Group: Setpoints	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	1

Description: Sets the signal source for control word 1 bit 4 (operating condition/disable ramp-function generator).
Dependency: Refer to: p1141, p1142
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: Bit 4 = 0: Inhibits the ramp-function generator (the ramp-function generator output is set to zero)
Bit 4 = 1: Operating condition (the ramp-function generator can be enabled)

p1140 BI: Ramp-function generator enable / RFG enable

TM41	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 9677
	P-Group: Setpoints	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	1

Description: Sets the signal source for control word 1 bit 4 (operating condition/disable ramp-function generator).

Dependency: Refer to: p1141, p1142
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: Bit 4 = 0: Inhibits the ramp-function generator (the ramp-function generator output is set to zero)
Bit 4 = 1: Operating condition (the ramp-function generator can be enabled)
This parameter has no function in the "SINAMICS" operating mode (p4400 = 1).

p1141[0...n] BI: Start ramp-function generator / Start RFG

SERVO, VECTOR

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** CDS, p0170	**Func. diagram:** 2442, 2443, 2501
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for control word 1 bit 5 (enables ramp-function generator/stops ramp-function generator)
Dependency: Refer to: p1140, p1142
Notice: The ramp-function generator is, independent of the state of the signal source, active in the following cases:
- OFF1/OFF3.
- ramp-function generator output within the suppression bandwidth.
- ramp-function generator output below the minimum speed.

Note: Bit 5 = 0: Stop the ramp-function generator (the ramp-function generator output is frozen)
Bit 5 = 1: Enable ramp-function generator

p1141 BI: Start ramp-function generator / Start RFG

TM41

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 9677
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for control word 1 bit 5 (enables ramp-function generator/stops ramp-function generator)
Dependency: Refer to: p1140, p1142
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: Bit 5 = 0: Stop the ramp-function generator (the ramp-function generator output is frozen)
Bit 5 = 1: Enable ramp-function generator
This parameter has no function in the "SINAMICS" operating mode (p4400 = 1).

p1142[0...n] BI: Velocity setpoint enable / v_set enable

SERVO (Lin)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** CDS, p0170	**Func. diagram:** 2441, 2442, 2443, 2501, 2711
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for control word 1 bit 6 (enable setpoint/disable setpoint).
Dependency: Refer to: p1140, p1141
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: Bit 6 = 0: Inhibits the setpoint (the ramp-function generator input is set to zero)
Bit 6 = 1: Enable setpoint

p1142[0...n] BI: Speed setpoint enable / n_set enable

SERVO, VECTOR

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** CDS, p0170	**Func. diagram:** 2441, 2442, 2443, 2501, 2711
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for control word 1 bit 6 (enable setpoint/disable setpoint).
Dependency: Refer to: p1140, p1141
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: Bit 6 = 0: Inhibits the setpoint (the ramp-function generator input is set to zero)
Bit 6 = 1: Enable setpoint

p1142 BI: Speed setpoint enable / n_set enable

TM41

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 9674, 9677
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for control word 1 bit 6 (enable setpoint/disable setpoint).
Dependency: Refer to: p1140, p1141
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: Bit 6 = 0: Inhibits the setpoint (the ramp-function generator input is set to zero)
Bit 6 = 1: Enable setpoint
This parameter has no function in the "SINAMICS" operating mode (p4400 = 1).

p1143[0...n] BI: Ramp-function generator, accept setting value / Accept RFG set val

SERVO (Extended setp), VECTOR

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** CDS, p0170	**Func. diagram:** 3060, 3070
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for accepting the setting value of the ramp-function generator.
Dependency: The signal source for the ramp-function generator setting value is set using parameters.
Refer to: p1144
Note: 0/1 signal:
The ramp-function generator output is immediately (without delay) set to the setting value of the ramp-function generator.
1 signal:
The setting value of the ramp-function generator is effective.
1/0 signal:
The input value of the ramp-function generator is effective. The ramp-function generator output is adapted to the input value using the ramp-up time or the ramp-down time.
0 signal:
The input value of the ramp-function generator is effective.

p1144[0...n] CI: Ramp-function generator setting value / RFG setting value

SERVO (Extended setp), VECTOR

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dynamic index:** CDS, p0170	**Func. diagram:** 3060, 3070
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the ramp-function generator setting value.

Dependency: The signal source for accepting the setting value is set using parameters.
Refer to: p1143

p1145[0...n] Ramp-function generator tracking intensity. / RFG track intens

SERVO (Extended setp), VECTOR

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 3080
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.0	50.0	1.3

Description: Sets the ramp-function generator tracking.
The output value of the ramp-function generator is tracked (corrected) corresponding to the maximum possible drive acceleration. The reference value is the deviation at the speed/velocity controller input that is necessary to ensure that the motor accelerates at the torque/force limit.

Recommend.: p1145 = 0.0:
This value de-activates the ramp-function generator tracking.
p1145 = 0.0 ... 1.0:
Generally, these values are not practical. They cause the motor to accelerate below its torque limit. The lower the selected value, the greater the margin between the controller and torque limit when accelerating.
p1145 > 1.0:
The greater the value, the higher the permissible deviation between the speed setpoint and speed actual value.

Note: In the V/f mode, the ramp-function generator tracking is not active.
For SERVO with V/f operation, the following applies:
The complete ramp-function generator is not active, i.e. ramp-up and ramp-down time = 0.

p1148[0...n] Ramp-function gen., tolerance for ramp-up and ramp-down active / RFG tol HL/RL act

SERVO (Extended setp, Lin)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 3060, 3070
P-Group: Setpoints	**Units group:** 4_1	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.00 [m/min]	10.00 [m/min]	0.20 [m/min]

Description: Sets the tolerance value for the status of the ramp-function generator (ramp-up active, ramp-down active).
If the input of the ramp-function generator does not change in comparison to the output by more than the entered tolerance time, then the status bits "ramp-up active" and "ramp-down active" are not influenced.

Dependency: Refer to: r1199

p1148[0...n] Ramp-function gen., tolerance for ramp-up and ramp-down active / RFG tol HL/RL act

SERVO (Extended setp), VECTOR

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 3060, 3070
P-Group: Setpoints	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.00 [rev/min]	1000.00 [rev/min]	19.80 [rev/min]

Description: Sets the tolerance value for the status of the ramp-function generator (ramp-up active, ramp-down active).
If the input of the ramp-function generator does not change in comparison to the output by more than the entered tolerance time, then the status bits "ramp-up active" and "ramp-down active" are not influenced.

Dependency: Refer to: r1199

r1149 CO: Ramp-function generator, acceleration / RFG acceleration

SERVO (Extended setp, Lin)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 3060, 3070
P-Group: Setpoints	**Units group:** 22_2	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
- [m/s²]	- [m/s²]	- [m/s²]

Description: Displays the acceleration of the ramp-function generator.

r1149 CO: Ramp-function generator, acceleration / RFG acceleration

SERVO (Extended setp), VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 3060, 3070

Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
- [rev/s²]	- [rev/s²]	- [rev/s²]

Description: Displays the acceleration of the ramp-function generator.

r1150 CO: Ramp-function generator velocity setpoint at the output / RFG n_set at outp

SERVO (Extended setp, Lin)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 1550, 3060, 3070, 3080
P-Group: Setpoints	**Units group:** 4_1	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
- [m/min]	- [m/min]	- [m/min]

Description: Displays the setpoint at the output of the ramp-function generator.

r1150 CO: Ramp-function generator speed setpoint at the output / RFG n_set at outp

SERVO (Extended setp), VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 1550, 3060, 3070, 3080
P-Group: Setpoints	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the setpoint at the output of the ramp-function generator.

p1151[0...n] Ramp-function generator configuration / RFG config

SERVO (Extended setp), VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 3070
P-Group: Setpoints | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the configuration for the extended ramp-function generator.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Disable rounding-off at the zero cross-over	Yes	No	3070

Caution: Re bit 00 = 1:
If the ramp-up time is longer than the ramp-down time (p1120 > p1121), then there is an acceleration step at the zero crossover. This can have a negative impact on the mechanical system.

Note: Re bit 00 = 1:
When the direction change is changed there is no rounding-off before and after the zero crossover.

p1152 BI: Setpoint 2 enable / Setp 2 enab

SERVO (Extended brk), VECTOR (Extended brk)

Can be changed: T | **Calculated:** - | **Access level:** 3

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for speed setpoint 1 of the speed controller.
Dependency: The effectiveness of this setpoint depends on, e.g. STW1.4 and STW1.6.
Refer to: r0002, p0840, p0844, p0848, p0852, p0854, r0898, p1140, p1142, p1160, r1170, p1189, p1412, p1414, p1417, p1418

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p1155 CI: TM41 incremental encoder emulation speed setpoint 1 / Enc_emulat n_set 1

TM41

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 9674
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for speed setpoint 1 of the incremental encoder emulation.
The speed setpoint is processed corresponding to the sequencer of the TM41.

Dependency: The effectiveness of this setpoint depends on control word 1 (STW1).
Refer to: r0898

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: This parameter has no function in the SINAMICS operating mode (p4400 = 1) of the TM41.

p1160[0...n] CI: Velocity controller, velocity setpoint 2 / v_ctrl n_set 2

SERVO (Lin)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dynamic index:** CDS, p0170	**Func. diagram:** 1550, 3080, 6031
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for velocity setpoint 2 of the velocity controller.

Dependency: Refer to: p1155, r1170

Note: For OFF1/OFF3, the ramp-function generator ramp is effective.
The ramp-function generator is set to the actual value and stops the drive corresponding to the ramp-downtime (p1121 or p1135). While stopping via the ramp-function generator, STW1.4 is effective (enable ramp-function generator).
For the function module "position control" (r0108.3 = 1), this connector input is interconnected as follows as standard:
CI: p1160 = r2562

p1160[0...n] CI: Speed controller speed setpoint 2 / n_ctrl n_set 2

SERVO, VECTOR

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dynamic index:** CDS, p0170	**Func. diagram:** 1550, 3080, 6031

Min	Max	Factory setting
-	-	0010 bin

Description: Sets the configuration for the incremental encoder emulation.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
01	Interpol. op-loop ctrl /speed controller active	Yes	No	9674

Note: Re bit 01:
The interpolator is only effective for clock-cycle synchronous PROFIBUS operation and when the master receives a sign-of-life (STW 2.12 ... STW 2.15).
This parameter has no function in the SINAMICS operating mode (p4400 = 1) of the TM41.

p1190 CI: DSC position deviation XERR / DSC XERR

SERVO

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Integer32	**Dynamic index:** -	**Func. diagram:** 1550, 3090
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the position deviation XERR for DSC (position controller output of the higher-level control).

Dependency: Clock cycle synchronous operation must be activated for DSC.
The position controller gain factor (KPC), the position deviation (XERR) and the speed setpoint (N_SOLL_B) must be included in the setpoint telegram.
At least the encoder interface (Gx_XIST1) must be included in the actual value telegram.
The position actual value used for the internal position controller can be selected using p1192.
Refer to: p1191, p1192

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: DSC: Dynamic Servo Control

p1191 CI: DSC position controller gain KPC / DSC KPC

SERVO

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 1550, 3090
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the position controller gain KPC for DSC.

Dependency: Clock cycle synchronous operation must be activated for DSC.
Refer to: p1190

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: DSC: Dynamic Servo Control

p1192[0...n] DSC enc selection / DSC enc selection

SERVO

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** DDS, p0180	**Func. diagram:** 3090
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
1	3	1

Description: Sets the number of the encoder used for DSC.

Value:
1: Encoder 1 (motor encoder)
2: Encoder 2
3: Encoder 3

Note: DSC: Dynamic Servo Control
Value 1 corresponds to encoder 1 (motor encoder); the encoder data set is assigned via p0187.
Value 2 corresponds to encoder 2; the encoder data set is assigned via p0188.
Value 3 corresponds to encoder 3; the encoder data set is assigned via p0189.

p1193[0...n] DSC encoder adaptation factor / DSC encodAdaptFact

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 3090
P-Group: Setpoints | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0.000	1000000.000	1.000

Description: Sets the factor to adapt the encoder when using either encoder 2 or 3 for DSC.
The factor sets the ratio of the pulse difference between the motor encoder and the selected encoder for the same distance moved through. This factor takes into account gear ratios, differences in the number of encoder pulses, etc.

Dependency: Refer to: p1192

Note: Example:
Encoder 1: Motor encoder with 2048 pulses/revolution, ballscrew with 10 mm/revolution pitch
Encoder 2: Linear scale with 20 µm grid division as direct measuring system
p1193 = number of pulses, encoder 1 per motor revolution / number of pulses, encoder 2 per motor revolution
p1193 = 2048 / (10 mm / 20 µm) = 4.096

r1197 Fixed velocity setpoint, current number / n_set_fixed No act

SERVO (Extended setp, Lin)

Can be changed: - | **Calculated:** - | **Access level:** 3

04	Ramp-function generator held	Yes	No	-
05	Ramp-function generator tracking active	Yes	No	-
06	Maximum limit active	Yes	No	-

Note: Re bit 02:
The bit is an OR logic operation - bit 00 and bit 01.

p1200[0...n] FlyRest oper mode / FlyRest op_mode

VECTOR

Can be changed: U, T
Calculated: -
Access level: 2
Data type: Integer16
Dynamic index: DDS, p0180
Func. diagram: 1690
P-Group: Functions
Units group: -
Unit selection: -
Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
0	6	0

Description: Sets the operating mode for flying restart.
The flying restart allows the drive converter to be powered up while the motor is still rotating. In so doing, the drive converter output frequency is changed until the current motor speed/velocity is found.. The motor then accelerates up to the setpoint at the ramp-function generator setting.

Value:
0: Flying restart inactive
1: Flying restart always active (start in setpoint direction)
2: FlyRestart active after on fault OFF2 (start in setp. dir.)
3: FlyRestart active after fault OFF2 (start in setp. direction)
4: Flying restart always active (start only in setpoint direction)
5: FlyRestart active after on fault OFF2 (start only in setp_dir)
6: FlyRestart active after fault OFF2 (start only in setp. dir.)

Dependency: A differentiation is made between flying restart for V/f control and for vector control (p1300).
Flying restart, V/f control: p1202, p1203, r1204
Flying restart for vector control: p1202, p1203, r1205

Notice: The "flying restart" function must be used in cases where the motor is possibly still running (e.g. after a brief line supply interruption) or is being driven by the load. The system might otherwise shut down as a result of overcurrent.
It does not make sense to use "flying restart" together with the "motor holding brake function" (p1215 > 0) because then the flying restart will always be realized with the motor stationary.

Note: For p1200 = 1, 4, the following applies:
Flying restart is active after faults, OFF1, OFF2, OFF3.
For p1200 = 2, 5, the following applies:
The "power-on" is the first power-on operation after the drive system has been booted. This is practical for motors with a high-inertia load.
For p1200 = 1, 2, 3, the following applies: The search is made in both directions.
For p1200 = 4, 5, 6, the following applies: The search is only made in the setpoint direction.
For operation with encoder, the following applies:
p1200 = 1, 4 as well as p1200 = 2, 5 and p1200 = 3, 6 have the same meaning.
For V/f control (p1300 < 20), the following applies:
The speed can only be sensed for values above approx. 5% of the rated motor speed. For lower speeds, it is assumed that the motor is at a standstill.
If p1200 is changed while commissioning (p0009, p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1200 have been changed by a parameter that was set when the drive was commissioned (e.g. p0300).

p1202[0...n] FlyRest srch curr / FlyRest srch curr

VECTOR

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL		**Expert list:** 1

Min	Max	Factory setting
10 [%]	400 [%]	100 [%]

Description: Sets the search current for the "flying restart" function. The value is referred to the motor magnetizing current.

Dependency: Refer to: r0331

Caution: An unfavorable parameter value can result in the motor behaving in an uncontrollable fashion.

Note: Reducing the search current can improve the flying restart performance (if the system moment of inertia is not very high).

p1203[0...n] Flying restart search rate factor / FlyRst v_Srch Fact

VECTOR

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL		**Expert list:** 1

Min	Max	Factory setting
10 [%]	4000 [%]	100 [%]

Description: The value influences the rate at which the output frequency is changed during a flying restart . A higher value results in a longer search time.

Caution: An unfavorable parameter value can result in the motor behaving in an uncontrollable fashion.
For vector control, a value that is too low or too high can cause flying restart to become unstable.

Note: The parameter factory setting is selected so that standard induction motors that are rotating can be found and restarted as quickly as possible (fast flying restart). With this pre-setting, the motor is not found, e.g. for motors that are accelerated as a result of active loads we recommend that the search rate is reduced (by increasing p1203).

r1204.0...13 CO/BO: Flying restart, V/f control status / FlyRestrt Vf stat

VECTOR

Can be changed: -

12	Current impressed	Yes	No	-
13	Search interrupted	Yes	No	-
14	Deviation of the speed adaptation circuit = 0	Yes	No	-
15	Speed control activated	Yes	No	-

Note: Bits 0..9: Used by the control in internal sequences during the flying restart.
Depending on the machine type (p0300), the number of active bits differs.
Bits 10..15: Are used to monitor the flying restart sequence.
For PEM, only bits 10, 11 and 15 are supported.

p1207 BI: AR connection following drive object / AR connection DO

A_INF, B_INF, S_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Modifies the pre-charging monitoring of the infeed.

The active automatic restart (AR) of the following drive object can be interconnected using this binector input (BI: p1207 = r1214.2).

This means that when the automatic restart is operational, the pre-charging monitoring of the infeed is de-activated and is only re-activated under the following conditions:

- the absolute current in the DC link is greater than 2 % of the maximum current (r0209) of the infeed to provide protection against short-circuit in the DC link.

- if a Voltage Sensing Module (VSM) is being used, the line supply voltage amplitude is greater than 3 % of the parameterized unit supply voltage (p0210) to protect the pre-charging resistors against continuous filter current when the line supply partially returns.

Dependency: Refer to: r0209, p0210, r1214

p1208[0...1] BI: AR modification infeed / AR modification

SERVO, VECTOR

Can be changed: U, T	**Calculated:** -	**Access level:** 3

Description: Sets the automatic restart mode (AR).

Value:
0: Disables automatic restart
1: Acknowledges all faults without restarting
4: Restart after power failure without additional start attempts
6: Restart after fault with additional start attempts

Dependency: The automatic restart requires an active ON command, e.g. that is available at a digital input.
If, for p1210 > 1, there is no active ON command, then the automatic restart is interrupted.
When using an Advanced Operator Panel (AOP) in the LOCAL Mode, then there is no automatic restart.
Refer to: p0840, p0857, p1267
Refer to: F30003

Danger: If the automatic restart is activated (p1210 > 1) if there is an ON command (refer to p0840), the drive is powered up as soon as any fault messages that are present can be acknowledged. This also occurs after the line supply returns or the Control Unit boots if the DC link voltage is again present or the feedback of the line supply infeed (refer to p0864) is again available. This automatic power-up sequence can only be interrupted by withdrawing the ON command.

Caution: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).
For p1210 > 1, the infeed is automatically started.

Note: p1210 = 4:
An automatic restart is only executed if fault F06200 has occurred. If additional faults are present, then these faults are also acknowledged and when successful, starting continues. If the 24 V Control Unit power supply fails, then this is interpreted as a line supply failure.
p1210 = 6:
An automatic restart is carried out if any fault has occurred.
p1210 = 1:
Faults that are present are automatically acknowledged. If new faults occur after a successful fault acknowledgement, then these are also automatically acknowledged again. A minimum time of p1212 + 1 s must expire between a successful fault acknowledgement and a fault re-occurring if the signal ON/OFF1 (control word 1 bit 0) is at a HIGH signal level. If the signal ON/OFF1 is at a LOW signal level, then the time between a successful fault acknowledgement and a new fault must be at least 1 s.
For p1210 = 1, fault F07320 is not generated if the acknowledgement attempt was not successful, for example, due to frequently occurring faults.

p1210 Automatic restart, mode / AR mode

SERVO, VECTOR

Min	Max	Factory setting
0	6	0

Description: Sets the automatic restart mode (AR).

Value:
0: Disables automatic restart
1: Acknowledges all faults without restarting
4: Restart after power failure without additional start attempts
6: Restart after fault with additional start attempts

Dependency: The automatic restart requires an active ON command, e.g. that is available at a digital input.
If, for p1210 > 1, there is no active ON command, then the automatic restart is interrupted.
When using an Advanced Operator Panel (AOP) in the LOCAL Mode, then there is no automatic restart.
Refer to: p0840, p0857, p1267
Refer to: F30003

Danger: If the automatic restart is activated (p1210 > 1) if there is an ON command (refer to p0840), the drive is powered up as soon as any fault messages that are present can be acknowledged. This also occurs after the line supply returns or the Control Unit boots if the DC link voltage is again present or the feedback of the line supply infeed (refer to p0864) is again available. This automatic power-up sequence can only be interrupted by withdrawing the ON command.

Caution: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).
For p1210 > 1, the motor is automatically started.

Note: For brief line supply failures, the motor shaft can still be rotating when restarting. In order to restart while the motor shaft is still rotating, the "flying restart" function should be activated using p1200.

p1210 = 4:

An automatic restart is only carried out if fault F30003 occurred at the Motor Module or a high signal is present at the binector input p1208[1]. If additional faults are present, then these faults are also acknowledged and when successful, starting continues. If the 24 V Control Unit power supply fails, then this is interpreted as a line supply failure.

p1210 = 6:

An automatic restart is carried out if any fault has occurred or there is a high signal at binector input p1208[0].

p1210 = 1:

Faults that are present are automatically acknowledged. If new faults occur after a successful fault acknowledgement, then these are also automatically acknowledged again. A minimum time of p1212 + 1 s must expire between a successful fault acknowledgement and a fault re-occurring if the signal ON/OFF1 (control word 1 bit 0) is at a HIGH signal level. If the signal ON/OFF1 is at a LOW signal level, then the time between a successful fault acknowledgement and a new fault must be at least 1 s.

For p1210 = 1, fault F07320 is not generated if the acknowledgement attempt was not successful, for example, due to frequently occurring faults.

p1211 Automatic restart, start attempts / AR start attempts

A_INF, B_INF, S_INF

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0	10	3

Description: Sets the absolute number of start attempts for the automatic restart function when any faults are automatically acknowledged (p1210 = 6).

Dependency: The setting of this parameter is always effective for p1210 = 6. For p1210 = 4, the parameter only has an influence if an additional line phase failure (F6200) occurs at the start attempt.

Refer to: p1210, r1214

Refer to: F07320

Caution: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).

Notice: After fault F07320 occurs, the power-on command must be withdrawn and all of the faults acknowledged so that the automatic restart function is re-activated. After a complete blackout the start counter always starts with the starting value p1211 when the power is restored.

Note: A start attempt starts immediately when a fault occurs. The restart attempt is considered to have been completed if the infeed is powered up and an additional delay time of 1 s has expired.

As long as a fault is present, an acknowledge command is generated in the time intervals of p1212 / 2. When successfully acknowledged, the start counter is decremented. If, after this, a fault re-occurs before a restart has been completed, then acknowledgement starts again from the beginning.

Fault F07320 is output if, after several faults occur, the number of parameterized start attempts has been reached. After a successful start attempt (i.e. a fault/error has no longer occurred up to the end of the power-up operation) the start counter is again reset to the parameter value after 1 s. If faults re-occur, the parameterized number of start attempts is again available.

At least one start attempt is always carried out.

After a line supply failure, acknowledgement is immediate and when the line supply returns, the system is powered up. If, between successfully acknowledging the line fault and the line supply returning, another fault occurs, then its acknowledgement also causes the start counter to be decremented.

p1211 Automatic restart, start attempts / AR start attempts

SERVO, VECTOR

P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.1 [s]	600.0 [s]	1.0 [s]

Description: Sets the delay time up to restart.

Dependency: This parameter setting is active for p1210 = 4, 6.
For p1210 = 1, the following applies: Faults are only acknowledged, no restart.
Refer to: p1210, r1214

Caution: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).

Note: The faults are automatically acknowledged and the system is powered up again after half of the waiting time has expired and after the full waiting time has expired.

p1212 Automatic restart, delay time start attempts / AR t_wait start

SERVO, VECTOR

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.1 [s]	600.0 [s]	1.0 [s]

Description: Sets the delay time up to restart.

Dependency: This parameter setting is active for p1210 = 4, 6.
For p1210 = 1, the following applies: Faults are only automatically acknowledged in half of the waiting time, no restart.
Refer to: p1210, r1214

Caution: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).

Note: The faults are automatically acknowledged after half of the waiting time has expired and the full waiting time.
If the cause of a fault is not removed in the first half of the delay time, then it is no longer possible to acknowledge in the waiting time.

p1213 Automatic restart, monitoring time line supply return / AR t_mon line sup

A_INF, B_INF, S_INF

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [s]	1999.0 [s]	0.0 [s]

Description: Sets the monitoring time of the automatic restart (AR).

Dependency: Refer to: p1210, r1214

Caution: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).

Notice: After fault F07320 occurs, the power-on command must be withdrawn and all of the faults acknowledged so that the automatic restart function is re-activated.

Note: The monitoring time starts when the faults are detected. If the automatic acknowledgements are not successful, the monitoring time runs again. After fault F07320 occurs, the power-on command must be withdrawn and all of the faults acknowledged so that the automatic restart can be re-activated.

The monitoring is de-activated with p1213 = 0. If the time in p1213 is set lower than in p1212, then fault F07320 is also generated at each restart.

The monitoring time must be extended if the faults that occur cannot be immediately and successfully acknowledged (e.g. for faults that are permanently present).

p1213 Automatic restart, monitoring time line supply return / AR t_mon line sup

SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [s]	1999.0 [s]	0.0 [s]

Description: Sets the monitoring time of the automatic restart (AR).

Dependency: Refer to: p1210, r1214

Caution: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).

Notice: After fault F07320 occurs, the power-on command must be withdrawn and all of the faults acknowledged so that the automatic restart function is re-activated.

Note: The monitoring time starts when the faults are detected. If the automatic acknowledgements are not successful, the monitoring time runs again. If, after the monitoring time has expired, the drive has still not successfully started again (flying restart and magnetizing of the motor must have been completed: r0056.4 = 1), then fault F07320 is output.

The monitoring is de-activated with p1213 = 0. If p1213 is set lower than the sum of p1212, the magnetizing time p0346 and the additional delay time due to the flying restart, then fault F07320 is generated at each restart. If, for p1210 = 1, the time in p1213 is set lower than in p1212, then fault F07320 is also generated at each restart.

The monitoring time must be extended if the faults that occur cannot be immediately and successfully acknowledged (e.g. for faults that are permanently present).

r1214.0...15 CO/BO: Automatic restart, status / AR status

A_INF, B_INF, S_INF

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the status of the automatic restart (AR).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Initialization	Yes	No	-
01	Wait for alarm	Yes	No	-
02	Auto restart active	Yes	No	-

03	Setting the acknowledgement command	Yes	No	-
04	Acknowledge alarms	Yes	No	-
05	Restart	Yes	No	-
06	Delay time running after automatic power-up	Yes	No	-
07	Fault	Yes	No	-
12	Start count. bit 0	On	Off	-
13	Start count. bit 1	On	Off	-
14	Start count. bit 2	On	Off	-
15	Start count. bit 3	On	Off	-

Note:

Re bit 00:

State to display the single initialization after POWER ON.

Re bit 01:

State in which the automatic restart function waits for faults (initial state).

Re bit 02:

General display that a fault has been identified and that the restart or acknowledgement has been initiated.

Re bit 03:

Displays the acknowledge command within the "acknowledge alarms" state (bit 4 = 1). For bit 5 = 1 or bit 6 = 1, the acknowledge command is continually displayed.

Re bit 04:

State in which the faults that are present are acknowledged. The state is exited again after successful acknowledgement. A change is only made into the next state if it is signaled that a fault is no longer present after an acknowledgement command (bit 3 = 1).

Re bit 05:

State in which the drive is automatically powered up (only for p1210 = 4, 6).

Re bit 06:

State in which the system waits after having been powered up, to the end of the start attempt.

For p1210 = 1, this signal is directly set after the faults have been successfully acknowledged.

Re bit 07:

State which is assumed after a fault occurs within the automatic restart function.

Re bits 12 ... 15:

Current state of the start counter (binary coded).

State in which the drive is automatically powered up (only for p1210 = 4, 6).

Re bit 06:

State in which the system waits after having been powered up, to the end of the start attempt (to the end of the magnetizing process).

For p1210 = 1, this signal is directly set after the faults have been successfully acknowledged.

Re bit 07:

State which is assumed after a fault occurs within the automatic restart function.

Re bits 12 ... 15:

Current state of the start counter (binary coded).

p1215 Motor holding brake configuration / Brake config

SERVO, VECTOR

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** 2701, 2707, 2711
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	3	0

Description: Sets the holding brake configuration.

Value:
0: No motor holding brake being used
1: Motor holding brake acc. to sequence control
2: Motor holding brake always open
3: Motor holding brake like sequence control, connection via BICO

Dependency: Refer to: p1216, p1217, p1226, p1227, p1228, p1278

Caution: For the setting p1215 = 0, if a brake is used, it remains closed. If the motor moves, this will destroy the brake.

Notice: If p1215 was set to 1 or if p1215 was set to 3, then when the pulses are suppressed, the brake is closed even if the motor is still rotating. Pulse suppression can either be caused by a 0 signal at p0844, p0845 or p0852 or as a result of a fault with OFF2 response. If this is not desirable (e.g. for a flying restart), then the brake can be kept open using a 1 signal at p0855.

Note: If the configuration is set to "no holding brake present" when booting, then the motor holding brake will be automatically identified. If a motor holding brake is detected, the configuration is set to "motor holding brake as for sequence control".

If a holding brake integrated in the motor is used, then it is not permissible that p1215 is set to 3.

if an external motor holding brake is being used, then p1215 should be set to 3 and r0899.12 should be interconnected as control signal.

When the function module "extended brake control" is activated (r0108.14 = 1), r1229.1 should be interconnected as control signal.

The parameter can only be set to zero when the pulses are inhibited.

The parameterization "no motor holding brake available" and "Safe Brake Control" enabled (p1215 = 0, p9602 = 1, p9802 = 1) is not practical if there is no motor holding brake.

The parameterization "motor holding brake the same as sequence control, connection via BICO" and "Safe Brake Control" enabled (p1215 = 3, p9602 = 1, p9802 = 1) is not practical.

p1216 Motor holding brake, opening time / Brake t_open

SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 2701, 2711
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0 [ms]	10000 [ms]	100 [ms]

Description: Sets the time to open the motor holding brake.
After controlling the holding brake (opens), the speed/velocity setpoint remains at zero for this time. After this, the speed/velocity setpoint is enabled.

Recommend.: This time should be set longer than the actual opening time of the brake. This ensures that the drive cannot accelerate when the brake is applied.

Dependency: Refer to: p1215, p1217

p1217 Motor holding brake closing time / Brake t_close

SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 2701, 2711
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0 [ms]	10000 [ms]	100 [ms]

Description: Sets the time to apply the motor holding brake.
After OFF1 or OFF3 and the holding brake is controlled (the brake closes), then the drive remains closed-loop controlled for this time stationary with a speed setpoint/velocity setpoint of zero. The pulses are suppressed when the time expires.

Recommend.: This time should be set longer than the actual closing time of the brake. This ensures that the pulses are only suppressed after the brake has closed.

Dependency: Refer to: p1215, p1216

Notice: If the selected closing time is too short with respect to the actual closing time of the brake, then the load can sag.
If the closing time is selected to be too long with respect to the actual closing time of the brake, the control works against the brake and therefore reduces its lifetime.

-	-	0

Description: Sets the signal source for close brake at standstill.

Dependency: Refer to: p1275

Note: [0]: Signal, close brake at standstill, inversion via p1275.2
[1]: Signal, close brake at standstill, inversion via p1275.3
[2]: Signal, close brake at standstill
[3]: Signal, close brake at standstill
These four signals form an OR logic operation.

p1225 CI: Standstill detection, threshold value / Standstill thresh

SERVO (Extended brk), VECTOR (Extended brk)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 2704
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	63[0]

Description: Sets the signal source "threshold value" for the standstill identification.

Dependency: Refer to: p1226, p1228, r1229

p1226 Standstill detection, velocity threshold / v_standst v_thresh

SERVO (Lin)

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 2701, 2704
P-Group: Functions | **Units group:** 4_1 | **Unit selection:** p0505
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0.0 [m/min]	1000.0 [m/min]	0.2 [m/min]

Description: Sets the velocity threshold for the standstill identification.
Acts on the actual value and setpoint monitoring.
When braking with OFF1 or OFF3, when the threshold is undershot, standstill is identified.
The following applies when the brake control is activated:
When the threshold is undershot, the brake control is started and the system waits for the brake closing time in p1217. The pulses are then suppressed.
if the brake control is not activated, the following applies:
When the threshold is undershot, the pulses are suppressed and the drive coasts down.

Dependency: Refer to: p1215, p1216, p1217, p1227

Note: Standstill is detected if the actual velocity drops below the velocity threshold in p1226 or if the monitoring time (p1227) - started when the velocity setpoint <= velocity threshold (p1226) - has expired.
The actual value sensing is subject to measuring noise. For this reason, standstill cannot be detected if the velocity threshold is too low.

p1226 Threshold for zero speed detection / n_standst n_thresh

SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 2701, 2704
P-Group: Functions | **Units group:** 3_1 | **Unit selection:** p0505
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0.0 [rev/min]	210000.0 [rev/min]	20.0 [rev/min]

Description: Sets the speed threshold for the standstill identification.
Acts on the actual value and setpoint monitoring.
When braking with OFF1 or OFF3, when the threshold is undershot, standstill is identified.
The following applies when the brake control is activated:
When the threshold is undershot, the brake control is started and the system waits for the brake closing time in p1217. The pulses are then suppressed.
if the brake control is not activated, the following applies:
When the threshold is undershot, the pulses are suppressed and the drive coasts down.

Dependency: Refer to: p1215, p1216, p1217, p1227

Note: Standstill is detected if the actual speed drops below the speed threshold in p1226 or if the monitoring time (p1227) - started when speed setpoint <= speed threshold (p1226) - has expired.
The actual value sensing is subject to measuring noise. For this reason, standstill cannot be detected if the speed threshold is too low.

p1227 Zero speed detection monitoring time / n_standst t_monit

SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 2701, 2704
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	300.000 [s]	4.000 [s]

Description: Sets the monitoring time for the standstill identification.
When braking with OFF1 or OFF3, standstill is identified after this time has expired, after the setpoint speed has fallen below p1226 (also refer to p1145).

After this, the brake control is started, the system waits for the closing time in p1217 and then the pulses are suppressed.

Dependency: Refer to: p1215, p1216, p1217, p1226

Notice: For p1145 > 0.0, the setpoint is not equal to zero dependent on the selected value. This can therefore cause the monitoring time in p1227 to be exceeded. In this case, for a driven motor, the pulses are not suppressed.

Note: Standstill (zero speed) is detected if, during the complete monitoring time (p1227), the speed setpoint falls below the speed threshold (p1226).

For p1227 = 300.000 s, the following applies:

The monitoring is de-activated.

For p1227 = 0.000 s, the following applies:

With OFF1 or OFF3 and a ramp-down time = 0, the pulses are immediately suppressed and the motor "coasts" down.

p1228 Pulse suppression delay time / Pulse supp t_del

SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 2

Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 2701, 2704

P-Group: Functions | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	10.000 [s]	0.000 [s]

Description: Sets the delay time for pulse suppression.

After OFF1 or OFF3 and zero speed detection, the system waits for this time to expire and the pulses are then suppressed.

Dependency: Refer to: p1226, p1227

Note: Standstill (zero speed) is detected if, during the complete delay time (p1228), the speed actual value falls below the speed threshold (p1226).

r1229.1...11 CO/BO: Motor holding brake status word / Brake ZSW

	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	4	0

Description: Setting to activate the various types for armature short-circuit / DC brake.

Value:
0: No function
1: External armature short-circuit with contactor feedback signal
2: Ext. armature short-circuit without contactor feedback signal
3: Internal voltage protection
4: Internal armature short-circuit / DC brake

Dependency: Refer to: p0300, p1230, p1232, p1233, p1234, p1235, p1236, p1237, r1238, r1239

Danger:

Re p1231 = 1, 2:

- only short-circuit proof motors may be used and suitable resistors must be used to short-circuit the motor.

Re p1231 = 3:

- when the internal voltage protection is active, after pulse suppression, all of the motor terminals are at half of the DC link voltage (without an internal voltage protection, the motor terminals are at zero potential)!
- it is only permissible to use motors that are short-circuit proof (p0320 < p0323).
- the Motor Module must be able to conduct 180% short-circuit current (r0320) of the motor (r0209).
- the internal voltage protection cannot be interrupted due to a fault response. If an overcurrent condition occurs during the active, internal voltage protection, then this can destroy the Motor Module and/or the motor.
- if the Motor Module does not support the autonomous, internal voltage protection (r0192.10 = 0), in order to ensure safe, reliable functioning when the line supply fails, an external 24 V power supply (UPS) must be used for the components.
- if the Motor Module does support the autonomous, internal voltage protection (r0192.10 = 1), in order to ensure safe, reliable functioning when the line supply fails, the 24 V power supply for the components must be provided through a Control Supply Module.
- if the internal voltage protection is active, it is not permissible that the motor is driven by the load for a longer period of time (e.g. as a result of loads that move the motor or another coupled motor).

Re p1231 = 4 and synchronous motor:

- when armature short-circuit is active, all of the motor terminals are at half of the DC link potential.
- it is only permissible to use motors that are short-circuit proof (p0320 < p0323).
- the Motor Module must be able to conduct 180% short-circuit current (r0320) of the motor (r0209).

Note: Re p1231 = 1, 2:

The external armature short-circuit can only be selected for synchronous motors (p0300). In this case, control bit BO: r1239.0 must be interconnected to control the external contactor (e.g. to a digital input).

Re p1231 = 3:

The internal voltage protection (using an internal armature short-circuit) can only be selected for synchronous motors (p0300) and Motor Modules in booksize format. Further, it is not permissible for Safety to be active (i.e. p9501 = 0 and p9601 = 0). The internal voltage protection prevents the DC link capacitance from being charged if there is no possibility of regenerating the EMF of a motor operated in the field-weakening mode. The Motor Module must support this function (r0192.9 = 1).

a) If the Motor Module does not support the autonomous, internal armature short-circuit (r0192.10 = 0), the armature short-circuit is activated as soon as the activation criterion is fulfilled (refer below):

b) If the Motor Module supports the autonomous internal voltage protection (r0192.10 = 1), then the Motor Module itself decides - using the DC link voltage - as to whether the short-circuit should be activated. In this case, protection is also provided even if the DRIVE-CLiQ connection between the Control Unit and Motor Module was interrupted. The short circuit is activated if the DC link voltage exceeds 800 V. If the DC link voltage falls below 450 V, then the short-circuit is withdrawn. This therefore ensures that the required input voltage for the Control Supply Module is maintained.

Re p1231 = 4:

The function is activated as soon as the activation criterion is fulfilled.

- the function can be initiated by OFF2.

a) For synchronous motors (p0300 = 2xx, 4xx), the internal armature short-circuit is initiated.

- the Motor Module must support this function (r0192.9 = 1).

b) For induction motors (p0300 = 1xx), the DC brake is initiated.

Activation criterion (one of the following criteria is fulfilled):

- 1 signal via binector input p1230 (DC brake activation).
- the drive is not in the state "S4: Operation" or in S5x (refer to function diagram 2610).
- the internal pulse enable is missing (r0046.19 = 0).

Note:

ASC: Armature Short-Circuit

IVP: Internal Voltage Protection

UPS: Uninterruptible Power Supply

CSM: Control Supply Module

Min	Max	Factory setting
0 [ms]	1000 [ms]	200 [ms]

Description: Sets the monitoring time of the contactor feedback signal for the external armature short-circuit configuration.

If the contactor feedback signal (p1235) is parameterized, then the appropriate feedback signal (r1239.1) is expected within this monitoring time after either opening or closing the contactor.

Dependency: Refer to: p1230, p1231, p1235, p1237, r1239

Refer to: A07904, F07905

p1237[0...n] External armature short-circuit, waiting time when opening / ASC ext t_wait

SERVO, VECTOR

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0 [ms]	1000 [ms]	200 [ms]

Description: Sets the delay time when opening the contactor of the external armature short-circuit.

If no contactor feedback signal has been selected (p1235), then the system waits for this time before the pulses are switched in.

Dependency: Refer to: p1230, p1231, p1235, p1236, r1239

Notice: This delay time must be at least long enough so that the contactor contacts reliably open before the pulses are switched in. The delay time must be greater than the contactor response time. The Motor Module can be damaged if the delay time is too short.

r1238 CO: Armature short-circuit, external state / EASC state

SERVO, VECTOR	**Can be changed:** -	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dynamic index:** -	**Func. diagram:** 2610
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	6	-

Description: Displays the state for the external armature short-circuit.

Value:
0: Powered down
1: Ready
2: Active
3: Active - feedback signal "Closed" OK
4: Active - feedback signal "Closed" missing
5: Prompt to remove the armature short-circuit
6: Active - feedback signal "Open" missing

Dependency: Refer to: p1230, p1231, p1235, p1236, p1237, r1239
Refer to: A07904, F07905

Note: Activation criterion (one of the following criteria is fulfilled):
- the signal at BI: p1230 (armature short-circuit activation) is 0.
- the drive is not in the state "S4: Operation" or in S5x (refer to function diagram 2610).
- the internal pulse enable is missing (r0046.19 = 0).

Re state "switched out" (r1238 = 0):
- the external armature short-circuit can be selected with p1231 = 1.

Re state "ready" (r1238 = 1):
- as soon as the activation criterion is fulfilled, then a transition is made into the state "active" (r1238 = 2).

Regarding the state "active" (r1238 = 2), "active - feedback signal "Closed" OK" (r1238 = 3)", "active - feedback signal "Closed" missing" (r1238 = 4)":
- the control signal to close contactor r1239.0 is set to "1" (closed) and the pulses are suppressed.
- if a contactor feedback signal is not connected (BI: p1235 = 0 signal), then a transition is immediately made into state 3.
- if a contactor feedback signal is connected, then a transition is made into state 3 if the feedback signal at BI: p1235 goes to "1" (closed) within the monitoring time (p1236).
- otherwise, a transition is made into state 4.

Re state "prompt to remove the armature short-circuit" (r1238 = 5):
- the activation criterion is no longer fulfilled. An attempt is made to again remove the armature short circuit.
- the control signal to close the contactor r1239.0 is set to "0" (open) and the pulses remain suppressed.
- if a contactor feedback signal is not connected (BI: p1235 = 0 signal), the system waits for the delay time (p1237) to expire until a transition is made into state 1.
- if a contactor feedback signal is connected, the system waits until the feedback signal at BI:p1235 goes to "0" (open) until a transition is made into state 1. If this does not occur within the monitoring time (p1236), then a transition is made into state 6.

Re state "active - feedback signal "Open" missing" (r1238 = 6):
- this error state can be exited by de-selecting the external armature short-circuit (p1231 = 0).

r1239.0...10 CO/BO: Armature short-circuit / DC brake status word / ASC ZSW

	-	-	-

Description: Displays the status word for armature short-circuit.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	External armature short-circuit	Active	Inactive	-
	01	External armature short-circuit, contactor feedback signal	Closed	Open	-
	02	External armature short-circuit ready	Yes	No	-
	03	External armature short-circuit with contactor feedback signal	Yes	No	-
	04	Internal armature short-circuit	Active	Inactive	-
	05	Int. armature short-circuit, feedback signal from power unit	Active	Inactive	-
	06	Internal armature short-circuit ready	Yes	No	-
	08	DC brake active	Active	Inactive	7017
	10	DC brake ready	Yes	No	7017

Dependency: Refer to: p1230, p1231, p1232, p1233, p1234, p1235, p1236, p1237

Note: External armature short-circuit (bits 0 ... 3):

Re bit 00:

Using this signal, the motor is short-circuited through an external contactor circuit. This means that this BO: p1239.0 must be interconnected e.g. to a digital output.

Re bit 01:

This signal indicates the state of the contactor to establish the armature short-circuit. To do this, BI: p1235 must be interconnected to a digital input.

Re bit 02:

The external armature short-circuit configuration is ready and is activated as soon as the activation criterion is fulfilled.

Re bit 03:

1: A feedback signal from an external contactor was parameterized in BI: p1235.

Internal voltage protection / internal armature short-circuit (bits 4 ... 6):

Re bit 04:

a) Internal voltage protection (p1231 = 3) was selected and the Motor Module does not support the autonomous internal voltage protection (r0192.10 = 0).

The Control Unit issues the command to the Motor Module to short-circuit the motor through the power semiconductors.

a) Internal voltage protection (p1231 = 3) was selected and the Motor Module supports the autonomous internal voltage protection (r0192.10 = 1).

The Motor Module decides autonomously whether the armature short-circuit is activated. In this case, the following applies: r1239.4 = r1239.5.

c) Internal armature short-circuit (p1231 = 4) was selected.

The Control Unit issues the command to the Motor Module to short-circuit the motor through the power semiconductors.

Re bit 05:

The Motor Module signals that the motor is short-circuited in the Motor Module through the power semiconductors.

Re bit 06:

a) Internal voltage protection (p1231 = 3) was selected and the Motor Module does not support the autonomous internal voltage protection (r0192.10 = 0).

The internal voltage protection is ready and is activated as soon as the activation criterion is fulfilled.

a) Internal voltage protection (p1231 = 3) was selected and the Motor Module supports the autonomous internal voltage protection (r0192.10 = 1).

The internal voltage protection is ready and the Motor Module decides autonomously - using the DC link voltage - whether the short-circuit is activated. In this case, protection is also provided even if the DRIVE-CLiQ connection between the Control Unit and Motor Module was interrupted. The short-circuit is activated if the DC link voltage exceeds 800 V. If the DC link voltage falls below 450 V, then the short-circuit is withdrawn.

c) Internal armature short-circuit (p1231 = 4) was selected.

The internal armature short-circuit is ready and is activated as soon as the activation criterion is fulfilled.

Activation criterion (one of the following criteria is fulfilled):

- the signal at BI: p1230 (armature short-circuit activation) is 1.
- the drive is not in the state "S4: Operation" or in S5x (refer to function diagram 2610).
- the internal pulse enable is missing (r0046.19 = 0).

p1240[0...n] Vdc controller or Vdc monitoring configuration / Vdc_ctrl config

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5650
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0	9	0

Description: Sets the configuration of the controller or monitoring for the DC link voltage (Vdc).

Value:
0: Inhib Vdc ctrl
1: Vdc_max controller enable
2: Vdc_min controller (kinetic buffering) enable
3: Vdc_min controller and Vdc_max controller enable
4: Activates Vdc_max monitoring
5: Activates Vdc_min monitoring
6: Activates Vdc_min monitoring and Vdc_max monitoring
7: Vdc_max controller without accelerating enable
8: Vdc_min controller without braking enable
9: Vdc_min and Vdc_max controller w/o braking/accelerating enable

Dependency: Refer to: p1244, p1248, p1250, p1532

Notice: During a few steps of the rotating measurement (p1960 = 1) the Vdc_min controller and/or Vdc_max controller is disabled.

Note: p1240 = 1, 3:

When the upper DC link voltage threshold is reached (p1244), then the following applies:

- the Vdc_max controller limits the regenerative energy in order that the DC link voltage is kept below the maximum DC link voltage when braking.

- when other drives regenerate into the DC link, then the Vdc_max controller causes the motor to accelerate.

p1240 = 2, 3:

When the lower DC link voltage threshold is reached (p1248), the following applies:

- the Vdc_min controller limits the energy taken from the DC link in order to keep the DC link voltage above the minimum DC link voltage when accelerating.

- the motor is braked in order to use its kinetic energy to buffer the DC link.

p1240 = 4, 5, 6:

When the threshold in p1244 or p1248 is reached, the DC link voltage monitoring initiates a fault with a response and therefore reduces additional negative effects on the DC link voltage.

p1240 = 7, 9:

As for p1240 = 1, 3. However, the motor is prevented from accelerating due to the fact that other drives are regenerating. The effective lower torque limit cannot exceed the offset of the torque limit (p1532).

p1240 = 8, 9:

As for p1240 = 2, 3. However, the motor is prevented from braking due to the fact that the DC link voltage has been lowered. The effective upper torque limit cannot be less than the offset of the torque limit (p1532).

p1240[0...n] Vdc controller or Vdc monitoring configuration / Vdc_ctrl config

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6220
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0	6	1

Description: Sets the controller configuration of the DC link voltage (Vdc controller) in the closed-loop control mode.

Value:
0: Inhib Vdc ctrl
1: Vdc_max controller enable
2: Vdc_min controller (kinetic buffering) enable
3: Vdc_min controller and Vdc_max controller enable
4: Activates Vdc_max monitoring

5: Activates Vdc_min monitoring
6: Activates Vdc_min monitoring and Vdc_max monitoring

Dependency: Refer to: p1245
Refer to: A07400, A07401, A07402, F07403, F07404, F07405, F07406

Notice: An excessively high value in p1245 can possibly negatively influence the normal operation of the drive.

Note: p1240 = 1, 3:
When the DC link voltage limit specified for the Motor Module is reached the following applies:
- the Vdc_max controller limits the regenerative energy in order that the DC link voltage is kept below the maximum DC link voltage when braking.
- the ramp-down times are automatically increased.

p1240 = 2, 3:
When the switch-in threshold of the Vdc_min controller is reached (p1245), the following applies:
- the Vdc_min controller limits the energy taken from the DC link in order to keep the DC link voltage above the minimum DC link voltage when accelerating.
- the motor is braked in order to use its kinetic energy to buffer the DC link.

p1240 = 4, 5, 6:
When the threshold in r1242 or r1246 is reached, the DC link voltage monitoring initiates a fault (F07403 or F07404) with a response and therefore reduces additional negative effects on the DC link voltage.

r1242 Vdc_max controller switch-in level / Vdc_max on_level

VECTOR (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 6220
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1

Min	Max	Factory setting
- [V]	- [V]	- [V]

Description: Displays the switch-in level for the Vdc_max controller.
If p1254 = 0 (automatic sensing of the switch-in level = off), then the following applies:
AC/AC device: r1242 = 1.15 * sqrt(2) * V_mains = 1.15 * sqrt(2) * p0210 (supply voltage)
DC/AC device: r1242 = 1.15 * Udc = 1.15 * p0210 (supply voltage)
If p1254 = 1 (automatic sensing of the switch-in level = on), then the following applies:
r1242 = Vdc_max - 50.0 V (Vdc_max: Overvoltage threshold of the power unit)

p1243[0...n] Vdc_max controller dynamic factor / Vdc_max dyn_factor

VECTOR (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 6220
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1

Min	Max	Factory setting
1 [%]	10000 [%]	100 [%]

Description: Sets the dynamic factor for the DC link voltage controller (Vdc_max controller).
100 % means that p1250, p1251 and p1252 (gain, integral time and rate time) are used corresponding to their basic settings and based on a theoretical controller optimization.
If subsequent optimization is required, then this can be realized using the dynamic factor. In this case p1250, p1251, p1252 are weighted with the dynamic factor p1243.
If several modules are connected to the DC link, then the dynamic factor must be increased corresponding to the ratio of the additional capacitances to the capacitance of the module involved.

Note: The pre-setting of the dynamic factor is based on the power units connected at DRIVE-CLiQ. It is assumed that the power unit connected via DRIVE-CLiQ is also electrically connected to the DC link. If this is not the case, then the dynamic factor must be optimized manually.

p1244[0...n] DC link voltage threshold upper / Vdc upper thresh

SERVO

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5650
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
165 [V]	1200 [V]	750 [V]

Description: Sets the upper threshold for the DC link voltage.
For p1240 = 1, 3, 7, 9, this threshold is used as limit setpoint for the Vdc_max controller.
For p1240 = 4, 6, for DC link voltages above this threshold, an appropriate fault is output.

Dependency: Refer to: p1240, p1248, p1250

Note: For p1244 < 1.07 * "parameterized DC link voltage" input of values is rejected.
For p0204.0 = 1, the following applies:
"Parameterized DC link voltage" = p0210
For p0204.0 = 0, the following applies:
"Parameterized DC link voltage" = p0210 * 1.4142

p1245[0...n] Vdc_min controller switch-in level (kinetic buffering) / Vdc_min on_level

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6220
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
65 [%]	150 [%]	76 [%]

Description: Sets the switch-in level for the Vdc-min controller (kinetic buffering).
The value is obtained as follows:
AC/AC device: r1246[V] = p1245[%] * sqrt(2) * p0210
DC/AC device: r1246[V] = p1245[%] * p0210

Dependency: Refer to: p0210

Warning: An excessively large value may adversely influence normal drive operation. The values up to 150 % are intended for operating modes p1240 = 5, 6.

r1246 Vdc_min controller switch-in level (kinetic buffering) / Vdc_min on_level

VECTOR (n/M)

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 6220
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
- [V]	- [V]	- [V]

Description: Displays the switch-in level for the Vdc_min controller (kinetic buffering).

p1247[0...n] Vdc_min controller dynamic factor (kinetic buffering) / Vdc_min dyn_factor

VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6220
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
1 [%]	10000 [%]	100 [%]

Description: Sets the dynamic factor for the Vdc-min controller (kinetic buffering).

100 % means that p1250, p1251 and p1252 (gain, integral time and rate time) are used corresponding to their basic settings and based on a theoretical controller optimization.

If subsequent optimization is required, then this can be realized using the dynamic factor. In this case p1250, p1251, p1252 are weighted with the dynamic factor p1247.

If several modules are connected to the DC link, then the dynamic factor must be increased corresponding to the ratio of the additional capacitances to the capacitance of the module involved.

Note: The pre-setting of the dynamic factor is based on the power units connected at DRIVE-CLiQ. It is assumed that the power unit connected via DRIVE-CLiQ is also electrically connected to the DC link. If this is not the case, then the dynamic factor must be optimized manually.

p1248[0...n] DC link voltage threshold lower / Vdc lower thresh

SERVO

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 5650
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1
Min	**Max**	**Factory setting**
100 [V]	1000 [V]	450 [V]

Description: Sets the lower threshold for the DC link voltage.

For p1240 = 2, 3, 8, 9, this threshold is used as limit setpoint for the Vdc_min controller.

For p1240 = 5, 6, for DC link voltages below this threshold, an appropriate fault is output.

Dependency: Refer to: p1240, p1244, p1250

Note: For p1248 > 0.93 * "parameterized DC link voltage" input of values is rejected.

For p0204.0 = 1, the following applies:

"Parameterized DC link voltage" = p0210

For p0204.0 = 0, the following applies:

"Parameterized DC link voltage" = p0210 * 1.4142

p1249[0...n] Vdc_max controller speed threshold / Vdc_max n_thresh

VECTOR (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
P-Group: Functions	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: REL		**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [rev/min]	210000.0 [rev/min]	10.0 [rev/min]

Description: Sets the lower speed threshold for the Vdc_max controller. When this speed threshold is undershot, the Vdc_max control is switched out and the speed is controlled using the ramp-function generator.

Note: For fast braking where the ramp-function generator tracking was active, it is possible to prevent the drive rotating in the opposite direction by increasing the speed threshold and setting a final rounding-off time in the ramp-function generator (p1131). This is supported using a dynamic setting of the speed controller.

p1250[0...n] Vdc controller proportional gain / Vdc_ctrl Kp

SERVO

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 5650
P-Group: Functions	**Units group:** 19_1	**Unit selection:** p0505
Not for motor type: REL		**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [A/V]	10.00 [A/V]	1.00 [A/V]

Description: Sets the proportional gain for the Vdc controller (DC link voltage controller).

Dependency: Refer to: p1240, p1244, p1248

p1250[0...n] Vdc controller proportional gain / Vdc_ctrl Kp

VECTOR (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 6220
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00	100.00	1.00

Description: Sets the proportional gain for the Vdc controller (DC link voltage controller).

Dependency: The effective proportional gain is obtained taking into account p1243 (Vdc_max controller dynamic factor).

Note: The gain factor is proportional to the capacitance of the DC link. The parameter is preset to a value that is optimally adapted to the capacitance of the individual Motor Module. The capacitances of the other power units, which are connected to the DC link, can be taken into account using the dynamic factor (p1247 or p1243).

p1251[0...n] Vdc controller integral time / Vdc_ctrl Tn

VECTOR (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 6220
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0 [ms]	10000 [ms]	0 [ms]

Description: Sets the integral time for the Vdc controller (DC link voltage controller).

Dependency: The effective integral time is obtained taking into account p1243 (Vdc_max controller dynamic factor).

Note: An integral time is normally not required for single axis drives. For multi-axis drives on the other hand, it may be possible to compensate for interference from other axes using the integral time (integral component) . An integral time of 0 (default) de-activates the controller.

p1252[0...n] Vdc controller rate time / Vdc_ctrl t_rate

VECTOR (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 6220
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0 [ms]	1000 [ms]	0 [ms]

Description: Sets the rate time constant for the Vdc controller (DC link voltage controller).

Dependency: The effective rate time is obtained taking into account p1243 (Vdc_max controller dynamic factor).

Note: During controlled operation this parameter has no effect.

p1254 Vdc_max controller automatic ON level detection / Vdc_max SenseOnLev

VECTOR (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dynamic index:** -	**Func. diagram:** 6220
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	1

Description: Activates/de-activates the automatic sensing of the switch-in level for the Vdc_max controller.

Value:
0: Automatic detection inhibited
1: Automatic detection enabled

p1255[0...n] Vdc_min controller time threshold / Vdc_min t_thresh

VECTOR (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000 [s]	10000.000 [s]	0.000 [s]

Description: Sets the time threshold for the Vdc_min controller (kinetic buffering). If this value is exceeded a fault is output; the required response can be parameterized.
Prerequisite: p1256 = 1.

Dependency: Refer to: F07406

p1256[0...n] Vdc_min controller response (kinetic buffering) / Vdc_min response

VECTOR (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	0

Description: Sets the response for the Vdc_min controller (kinetic buffering).

Value:
0: Buffer Vdc until undervoltage, n<p1257 -> F07405
1: Buff. Vdc until undervolt., n<p1257 -> F07405, t>p1255 -> F07406

Dependency: Refer to: F07405, F07406

p1257[0...n] Vdc_min controller speed threshold / Vdc_min n_thresh

VECTOR (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Functions	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [rev/min]	210000.0 [rev/min]	50.0 [rev/min]

Description: Sets the speed threshold for the Vdc-min controller (kinetic buffering). If this value is exceeded a fault is output; the required response can be parameterized .

r1258 CO: Vdc controller output / Vdc_ctrl output

VECTOR (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 6220
	P-Group: Functions	**Units group:** 6_2	**Unit selection:** p0505
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Arms]	- [Arms]	- [Arms]

Description: Displays the current output of the Vdc controller (DC link voltage controller)

Note: The regenerative power limit p1531 is used for vector control to pre-control the Vdc_max controller. The lower the power limit is set, the lower the correction signals of the controller when the voltage limit is reached.

p1260 Bypass configuration / Bypass config

VECTOR (Tech_ctrl)

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	3	0

Description: Selecting the bypass functionality.

Value:
0: Bypass deact
1: Bypass with synchronization and overlap
2: Bypass with synchronization without overlap
3: Bypass without synchronization

Dependency: The bypass functionality is enabled together with the function module "technology controller" (r0108.16).

For p1260 = 2 (bypass with synchronization without overlap) and p1260 = 3 (bypass without synchronization), then the "flying restart" function must be activated (p1200).

Note: If the bypass function is selected ((p1260 > 0), then when the power unit restarts after POWER OFF, the state of the bypass switch is evaluated. This means that after the ramp-up, it is possible to directly change into the standby mode. This is only possible for p1267 = 0 (bypass using the control signal) and if the control command after the system has been motor is still available (p1266). This function has a higher priority than the automatic restart function (p1210).

The "bypass" function can only be switched out again (p1260 = 0) if the bypass is not active or the bypass function has a fault.

r1261.0...9 CO/BO: Bypass control/status word / Bypass STW / ZSW

VECTOR (Tech_ctrl)

Can be changed: - | **Calculated:** - | **Access level:** 2
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Control and feedback signals of the bypass switch.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Command switch motor - drive	Close	Open	-
01	Command switch motor - line supply	Close	Open	-
02	Synchronization requested	Yes	No	-
03	Staging status	Active	Not active	-
05	Feedback signal switch motor - drive	Closed	Opened	-
06	Feedback signal switch motor - line supply	Closed	Opened	-
07	Bypass command (from p1266)	Yes	No	-
08	Feedback signal synchronization completed (from p1268)	Yes	No	-
09	Staging requested (from p2369)	Yes	No	-

Dependency: Refer to: p2369

Note: Control bits 0 and 1 should be interconnected to the signal outputs via which the switches in the motor feeder cables should be controlled. These should be selected/dimensioned for switching under load.

p1262[0...n] Bypass dead time / Bypass t_dead

VECTOR (Tech_ctrl)

Can be changed: U, T | **Calculated:** CALC_MOD_REG | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	20.000 [s]	1.000 [s]

Description: Sets the dead time for non-synchronized bypass.

Note: This parameter is used to define the changeover time of the contactors. It should not be shorter than the de-magnetizing time of the motor (p0347).

p1263 Debypass delay time / Debypass t_del

VECTOR (Tech_ctrl)

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	300.000 [s]	1.000 [s]

Description: Sets the delay time to switch back to converter operation for a non-synchronized bypass.

p1264 Bypass delay time / Bypass t_del

VECTOR (Tech_ctrl)

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	300.000 [s]	1.000 [s]

Description: Sets the delay time for switching to line operation for a non-synchronized bypass.

p1265 Bypass speed threshold / Bypass n_thresh

VECTOR (Tech_ctrl)

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** 3_1 | **Unit selection:** p0505
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0 [rev/min]	210000 [rev/min]	1480 [rev/min]

Description: Sets the speed threshold to activate the bypass.
Note: When selecting p1260 = 3 and p1267.1 = 1, the bypass is automatically activated when this speed is reached.

p1266 BI: Bypass, control command / Bypass command

VECTOR (Tech_ctrl)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the command to bypass.

p1267 Bypass changeover source configuration / Chngov_src config

VECTOR (Tech_ctrl)

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the cause that should initiate the bypass.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Bypass via signal (BI: p1266)	Yes	No	-
01	Bypass via reaching the speed threshold	Yes	No	-

Note: The parameter only has an effect for a non-synchronized bypass.
p1267 bit 0 = 1:
The bypass is initiated by setting a binary signal. When the command is reset, after the debypass delay time (p1263) has expired, operation at the Motor Module is re-selected.
p1267 bit 1 = 1:
When the speed threshold entered in p1265 is reached, the bypass is switched in. The system only switches back when the speed setpoint again falls below the threshold value.

p1268 BI: Bypass, feedback synchronization completed / FdbkSig sync compl

VECTOR (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	3819.2

Description: Input for the feedback signal that synchronization was successfully completed.
Dependency: Refer to: r3819

p1269[0...1] BI: Bypass switch feedback signal / Bypass FS

VECTOR (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the feedback signal of the bypass switch.
Index: [0] = Switch motor - drive
[1] = Switch motor - line supply

p1272 Simulation mode / Simulation mode

VECTOR

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: In the simulation mode, the closed-loop control or V/f control can be operated without motor.
The simulation mode is used to test the power unit. Even though the DC link voltage is missing, the pulses are enabled when powering up. The DC link pre-charging is bypassed and the undervoltage detection is disabled.
Closed-loop speed control with an encoder is possible if the torque setpoint (r0079) is used in order to operate a second drive in the closed-loop torque controlled mode.
Value: 0: Off
1: On
Dependency: The following functions are de-activated in the simulation mode:
- motor data identification routine
- motor data identification routine, rotating without encoder
- pole position identification routine
For V/f control and sensorless vector control, flying restart is not carried out (refer to p1200).
Refer to: r0192, p1900, p1910, p1960, p1990
Refer to: A07825, F07826

Note: Simulation mode is only possible for DC link voltages below 40 V. In order that the closed-loop control can be calculated, the displayed DC link voltage (r0026, r0070) is set to the rated DC link voltage (refer to p0210). Closed-loop current control and motor model are switched out (disabled) - the same is true for the speed controller for encoderless closed-loop speed control.

When fault messages occur, the parameter is not automatically reset. This function is not implemented for SINAMICS GM.

p1274[0...1] Bypass switch monitoring time / Switch t_monit

VECTOR (Tech_ctrl)

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [ms]	5000 [ms]	1000 [ms]

Description: Sets the bypass switch monitoring time.

Index: [0] = Switch motor - drive
[1] = Switch motor - line supply

Note: The monitoring is de-activated with p1274 = 0 ms.

p1275 Motor holding brake control word / Brake STW

SERVO (Extended brk), VECTOR (Extended brk)

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the control word for the motor holding brake.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Inverting BI: 1219[0]	Yes	No	2707
01	Inverting BI: 1219[1]	Yes	No	2707
02	Inverting BI: 1224[0]	Yes	No	2704
03	Inverting BI: 1224[1]	Yes	No	2704
05	Brake with feedback	Yes	No	2711

p1276 Motor holding brake, standstill detection, bypass / Brk standst bypass

SERVO (Extended brk), VECTOR (Extended brk)

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 2704
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	300.000 [s]	300.000 [s]

Description: Sets the delay time for closing the brake at standstill.

After this time has expired, if the "close brake at standstill" or OFF1/OFF3 is present, the brake is closed and the pulses are suppressed.

For p1276 = 300.000 s, the timer is de-activated - this means that the timer output is always zero.

p1277 Motor holding brake, braking threshold delay exceeded / Del thresh exceed.

SERVO (Extended brk), VECTOR (Extended brk)

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 2707
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0.000 [s]	300.000 [s]	0.000 [s]

Description: Sets the delay time for the signal "braking threshold exceeded" (BO: r1229.6).

Dependency: Refer to: p1220, p1221, r1229

p1278 Brake control, diagnostics evaluation / Brake diagnostics

SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Sets the brake control type (with or without diagnostics evaluation).
Example for brake control with diagnostics evaluation.
- brake control in the Motor Modules in booksize format
- Safe Brake Relay for AC Drive

Example for brake control without diagnostics evaluation.
- Brake Relay for AC Drive

Value:
0: Brake control with diagnostics evaluation
1: Brake control without diagnostics evaluation

Note: If the configuration of the motor holding brake (p1215) is set to "no holding brake present" when booting, then an automatic identification of the motor holding brake will be carried out. If a brake control is detected without diagnostics evaluation (e.g. Brake Relay for AC Drive), then the parameter is set to "brake control without diagnostics evaluation".

It is not permissible to parameterize "brake control without diagnostics evaluation" and also enable "safe brake control" (p1278 = 1, p9602 = 1, p9802 = 1).

p1279[0...3] BI: Motor holding brake, OR/AND logic operation / Brake OR AND

SERVO (Extended brk), VECTOR (Extended brk)

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** 2707
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the OR/AND logic operation.

Dependency: Refer to: r1229

Note: [0]: OR logic operation, input 1 --> the result is displayed in r1229.10.
[1]: OR logic operation, input 2 --> the result is displayed in r1229.10.
[2]: AND logic operation, input 1 --> the result is displayed in r1229.11.
[3]: AND logic operation, input 2 --> the result is displayed in r1229.11.

p1280[0...n] Vdc controller or Vdc monitoring configuration (V/f) / Vdc_ctr config V/f

VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 1690, 6320
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	6	1

Description: Sets the configuration of the controller for the DC link voltage (Vdc controller) in the V/f operating mode.

Value:
0: Inhib Vdc ctrl
1: Vdc_max controller enable
2: Vdc_min controller (kinetic buffering) enable
3: Vdc_min controller and Vdc_max controller enable
4: Activates Vdc_max monitoring
5: Activates Vdc_min monitoring
6: Activates Vdc_min monitoring and Vdc_max monitoring

Note: p1240 = 4, 5, 6:

When the threshold in r1282 or r1286 is reached, the DC link voltage monitoring initiates a fault (F07403 or F07404) with a response and therefore reduces additional negative effects on the DC link voltage.

r1282 Vdc_max controller switch-in level (V/f) / Vdc_max on_level

VECTOR

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 6320
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
- [V]	- [V]	- [V]

Description: Displays the switch-in level for the Vdc_max controller.

If p1294 = 0 (automatic sensing of the switch-in level = off), then the following applies:

AC/AC device: r1282 = 1.15 * sqrt(2) * V_mains = 1.15 * sqrt(2) * p0210 (supply voltage)

DC/AC device: r1282 = 1.15 * Vdc = 1.15 * p0210 (supply voltage)

If p1294 = 1 (automatic sensing of the switch-in level = on), then the following applies:

r1282 = Vdc_max - 50.0 V (Vdc_max: Overvoltage threshold of the power unit)

p1283[0...n] Vdc_max controller dynamic factor (V/f) / Vdc_max dyn_factor

VECTOR

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1 [%]	10000 [%]	100 [%]

Description: Sets the dynamic factor for the DC link voltage controller (Vdc_max controller).

100 % means that p1290, p1291 and p1292 (gain, integral time and rate time) are used corresponding to their basic settings and based on a theoretical controller optimization.

If subsequent optimization is required, then this can be realized using the dynamic factor. In this case p1290, p1291, p1292 are weighted with the dynamic factor p1283.

If several modules are connected to the DC link, then the dynamic factor must be increased corresponding to the ratio of the additional capacitances to the capacitance of the module involved.

Note: The pre-setting of the dynamic factor is based on the power units connected at DRIVE-CLiQ. It is assumed that the power unit connected via DRIVE-CLiQ is also electrically connected to the DC link. If this is not the case, then the dynamic factor must be optimized manually.

p1285[0...n] Vdc_min controller switch-in level (kinetic buffering) (V/f) / Vdc_min on_level

VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	65 [%]	150 [%]	76 [%]

Description: Sets the switch-in level for the Vdc-min controller (kinetic buffering).

The value is obtained as follows:

AC/AC unit: p1286[V] = p1285[%] * sqrt(2) * p0210

DC/AC unit: p1286[V] = p1285[%] * p0210

Warning: An excessively large value may adversely influence normal drive operation. The values up to 150 % are intended for operating modes p1240 = 5, 6.

r1286 Vdc_min controller switch-in level (kinetic buffering) (V/f) / Vdc_min on_level

VECTOR	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 6320
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [V]	- [V]	- [V]

Description: Displays the switch-in level for the Vdc_min controller (kinetic buffering).

p1287[0...n] Vdc_min controller dynamic factor (kinetic buffering) (V/f) / Vdc_min dyn_factor

VECTOR	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	1 [%]	10000 [%]	100 [%]

Description: Sets the dynamic factor for the Vdc-min controller (kinetic buffering).

100 % means that p1290, p1291 and p1292 (gain, integral time and rate time) are used corresponding to their basic settings and based on a theoretical controller optimization.

If subsequent optimization is required, then this can be realized using the dynamic factor. In this case p1290, p1291, p1292 are weighted with the dynamic factor p1287.

If several modules are connected to the DC link, then the dynamic factor must be increased corresponding to the ratio of the additional capacitances to the capacitance of the module involved.

Note: The pre-setting of the dynamic factor is based on the power units connected at DRIVE-CLiQ. It is assumed that the power unit connected via DRIVE-CLiQ is also electrically connected to the DC link. If this is not the case, then the dynamic factor must be optimized manually.

p1288[0...n] Vdc_max controller feedback coupling factor ramp-fct. gen. (V/f) / Vdc_max factor RFG

VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0	100.0	0.5

Description: Sets the feedback factor for the ramp-function generator. Its ramp times are decelerated relative to the output signal of the Vdc_max controller.

Note: For values p1288 = 0.0 to 0.5, the control dynamics are automatically adapted internally.

p1289[0...n] Vdc_max controller speed threshold (V/f) / Vdc_max n_thresh

VECTOR

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Functions | **Units group:** 3_1 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [rev/min]	210000.0 [rev/min]	10.0 [rev/min]

Description: Sets the lower speed threshold for the Vdc_max controller. When this speed threshold is undershot, the Vdc_max control is switched out and the speed is controlled using the ramp-function generator.

p1290[0...n] Vdc controller proportional gain (V/f) / Vdc_ctrl Kp

VECTOR

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6320
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00	100.00	1.00

Description: Sets the proportional gain for the Vdc controller (DC link voltage controller).

Note: The gain factor is proportional to the capacitance of the DC link. The parameter is preset to a value that is optimally adapted to the capacitance of the individual Motor Module. The capacitances of the other power units which are connected to the DC link can be taken into account using the dynamic factor (p1287 or p1283).

p1291[0...n] Vdc controller integral time (V/f) / Vdc_ctrl Tn

VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6320
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [ms]	10000 [ms]	40 [ms]

Description: Sets the integral time for the Vdc controller (DC link voltage controller).

p1292[0...n] Vdc controller rate time (V/f) / Vdc_ctrl t_rate

VECTOR	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 6320
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0 [ms]	1000 [ms]	10 [ms]

Description: Sets the rate time constant for the Vdc controller (DC link voltage controller).

p1293[0...n] Vdc controller output limit (V/f) / Vdc_ctrl outp_lim

VECTOR	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 6320
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [Hz]	600.0 [Hz]	10.0 [Hz]

Description: Sets the output limit for the Vdc controller (DC link voltage controller).

p1294 Vdc_max controller automatic detection ON signal level (V/f) / Vdc_max SenseOnLev

VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	0

Description: Activates/de-activates the automatic sensing of the switch-in level for the Vdc_max controller.

When detection is de-activated, the activation threshold r1282 for the Vdc_max controller is determined from the parameterized supply voltage p0210.

Value:
0: Automatic detection inhibited
1: Automatic detection enabled

p1295[0...n] Vdc_min controller time threshold (V/f) / Vdc_min t_thresh

VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000 [s]	10000.000 [s]	0.000 [s]

Description: Sets the time threshold for the Vdc_min controller (kinetic buffering). If this value is exceeded a fault is output; the required response can be parameterized.

Prerequisite: p1296 = 1.

p1296[0...n] Vdc_min controller response (kinetic buffering) (V/f / Vdc_min response

VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	0

Description: Sets the response for the Vdc_min controller (kinetic buffering).

Value: 0: Buffer Vdc until undervoltage, n<p1297 -> F07405
1: Buff. Vdc until undervolt., n<p1297 -> F07405, t>p1295 -> F07406

p1297[0...n] Vdc_min controller speed threshold (V/f) / Vdc_min n_thresh

VECTOR

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Functions | **Units group:** 3_1 | **Unit selection:** p0505
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0.0 [rev/min]	210000.0 [rev/min]	50.0 [rev/min]

Description: Sets the speed threshold for the Vdc-min controller (kinetic buffering). If this value is exceeded a fault is output; the required response can be parameterized .

r1298 CO: Vdc controller output (V/f) / Vdc_ctrl output

VECTOR

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 6320
P-Group: Functions | **Units group:** 3_1 | **Unit selection:** p0505
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the current output of the Vdc controller (DC link voltage controller)

p1300[0...n] Open-loop/closed-loop control operating mode / Op/cl-lp ctrl_mode

SERVO

Can be changed: C2(1), T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 1590, 4710, 5060, 8012
P-Group: V/f open-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
20	23	21

Description: Sets the open and closed loop control mode of a drive.

Value:
20: Speed control (encoderless)
21: Speed control (with encoder)
23: Torque control (with encoder)

Dependency: Closed-loop speed or torque control (with encoder) cannot be selected if the encoder type is not entered (p0400).
Refer to: p0108, r0108, p0300, p0311, p0400, p1501

Note: The closed-loop torque control can only be changed over in operation (p1300 = 20, 21) by selecting the closed-loop speed control (p1501). At the changeover, the setting of p1300 does not change. In this case, the current state is displayed in r1407, bit 2 and bit 3.
For encoderless operation (p1404 = 0 or p1300 = 20), the following applies:
- The following condition must be fulfilled: p1800 >= n / (2 * p0115[0]), n = 1, 2, ...
- For motors with a small power rating (< 300 W) we recommend to set n >= 2.

p1300[0...n] Open-loop/closed-loop control operating mode / Op/cl-lp ctrl_mode

VECTOR (n/M)

Can be changed: C2(1), T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 1690, 1700, 6300, 8012
P-Group: V/f open-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0	23	20

Description: Sets the open and closed loop control mode of a drive.

Value:
0: V/f control with linear characteristic
1: V/f control with linear characteristic and FCC
2: V/f control with parabolic characteristic
3: V/f control with parameterizable characteristic
5: V/f control for drives requiring a precise freq. (e.g. textiles)
6: V/f control for drives requiring a precise frequency with FCC
18: I/f control with fixed current
19: V/f control with independent voltage setpoint
20: Speed control (encoderless)
21: Speed control (with encoder)
22: Torque control (encoderless)
23: Torque control (with encoder)

Dependency: Closed-loop speed or torque control (with encoder) cannot be selected if the encoder type is not entered (p0400).

Closed-loop speed or torque control can be selected if the closed-loop speed/torque control was selected as operating mode (r0108.2).

Only operation with V/f characteristic is possible if the rated motor speed is not entered (p0311).

A reluctance motor can only be operated in a V/f control mode (p1300 < 20).

Refer to: p0108, r0108, p0300, p0311, p0400, p1501

Note: The closed-loop torque control can only be changed over in operation (p1300 = 20, 21) by selecting the closed-loop speed control (p1501). At the changeover, the setting of p1300 does not change. In this case, the current state is displayed in r1407, bit 2 and bit 3.

For the open-loop control modes p1300 = 5 and 6, the slip compensation p1335 and the resonance damping p1338 are internally switched out (disabled) in order to be able to precisely set the output frequency.

Separately-excited synchronous motors can only be operated in the modes p1300 = 21 and 23 - or for diagnostic purposes in the modes p1300 = 0, 3 and 18. For I/f control (p1300 = 18), the current amplitude can be set using p1609. Both for V/f control as well as for I/f control, only a small load may be applied to the separately-excited synchronous motor because the excitation current is not calculated as a function of the load.

During operation (the pulses enabled) the open-loop/closed-loop control mode cannot be changed by changing over drive data sets.

p1300 is pre-assigned depending on r0108.2 and p0187.

p1300[0...n] Open-loop/closed-loop control operating mode / Op/cl-lp ctrl_mode

VECTOR

Can be changed: C2(1), T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dynamic index:** DDS, p0180	**Func. diagram:** 1690, 6300, 6310, 6320
P-Group: V/f open-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	19	0

Description: Sets the V/f control mode of the drive.

Value:
0: V/f control with linear characteristic
1: V/f control with linear characteristic and FCC
2: V/f control with parabolic characteristic
3: V/f control with parameterizable characteristic
5: V/f control for drives requiring a precise freq. (e.g. textiles)
6: V/f control for drives requiring a precise frequency with FCC
19: V/f control with independent voltage setpoint

Note: For the open-loop control modes p1300 = 5 and 6, the slip compensation p1335 and the resonance damping p1338 are internally switched out (disabled) in order to be able to precisely set the output frequency.

During operation (the pulses enabled) the open-loop control mode cannot be changed by changing over drive data sets.

p1310[0...n] Voltage boost permanent / V_boost perm

VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 1690, 6300
P-Group: V/f open-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	250.0 [%]	50.0 [%]

Description: Defines the voltage boost as a [%] referred to the rated motor current (p0305).

The magnitude of the permanent voltage boost is reduced with increasing frequency so that at the rated motor frequency, the rated motor voltage is present.

The magnitude of the boost in Volt at a frequency of zero is defined as follows:

Voltage boost [V] = p0305 (rated motor current [A]) x p0350 (stator/primary section resistance [ohm]) x p1310 (permanent voltage boost [%]) / 100 %

At low output frequencies, there is only a low output voltage in order to maintain the motor flux. However, the output voltage can be too low in order to achieve the following:

- magnetize the induction motor.
- hold the load.
- compensate for losses in the system.

This is the reason that the output voltage can be increased using p1310.

The voltage boost can be used for both linear as well as square-law V/f characteristics and is calculated as follows:

Voltage boost = p0305 (rated motor current x p0350 (stator/primary section resistance) x p1310 (permanent voltage boost)

Dependency: Setting in p0640 (motor overload factor [%]) limits the boost.

For vector control, the permanent voltage boost (p1310) has no effect as the drive converter automatically sets the optimum operating conditions.

Refer to: p1300, p1311, r1315

Notice: The voltage boost increases the motor temperature (particularly at zero speed).

Note: The voltage boost is only effective for V/f control (p1300).

The boost values are combined with one another if the permanent voltage boost (p1310) is used in conjunction with other boost parameters (acceleration boost (p1311)).

However, these parameters are assigned the following priorities: p1310 > p1311

p1311[0...n] Voltage boost at acceleration / V_boost accelerate

VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 1690, 6300
P-Group: V/f open-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	250.0 [%]	0.0 [%]

Description: p1311 only results in a voltage boost when accelerating and generates a supplementary torque/force to accelerate the load.

The voltage boost becomes effective for a positive setpoint increase and disappears as soon as the setpoint has been reached.

The magnitude of the boost in Volt at a frequency of zero is defined as follows:

Voltage boost [V] = p0305 (rated motor current [A]) x p0350 (stator/primary section resistance [ohm]) x p1310 (permanent voltage boost [%]) / 100 %

Dependency: Setting in p0640 (motor overload factor [%]) limits the boost.

Refer to: p1300, p1310, r1315

Notice: The voltage boost results in a higher motor temperature increase.

Note: The voltage boost when accelerating can improve the response to small, positive setpoint changes.

Assigning priorities for the voltage boosts: refer to p1310

r1315 Voltage boost total / V_boost total

	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [Hz]	10000.00 [Hz]	0.00 [Hz]

Description: In the servo control mode the following applies:
The linear characteristic for the V/f control is defined by 0 Hz / p1319 and p1326 / p1327.
For vector control, the following applies:
The programmable characteristic for the V/f control is defined using 4 points and 0 Hz/p1310.
This parameter specifies the voltage of the fourth point along the characteristic.

Dependency: In the servo control mode the following applies:
Activates the V/f control using p1317.

For vector control, the following applies:
Selects the freely programmable characteristic using p1300 = 3.
The following applies to the frequency values: p1320 <= p1322 <= p1324 <= p1326. Otherwise, a standard characteristic is used that contains the rated motor operating point.
Refer to: p1310, p1311, p1317, p1319, p1320, p1321, p1322, p1323, p1324, p1325, p1327

Note: In the servo control mode the following applies:
Linear interpolation is carried out between the points 0 Hz / p1319 and p1326 / p1327.
For vector control, the following applies:
Linear interpolation is carried out between the points 0 Hz / p1310, p1320 / p1321 ... p1326 / p1327. For output frequencies above p1326, the characteristic is extrapolated with the gradient between the characteristic points p1324/p1325 and p1326/p1327.
The voltage boost when accelerating (p1311) is also applied to the freely programmable V/f characteristic.

p1327[0...n] V/f control programmable characteristic voltage 4 / Vf char U4

SERVO, VECTOR

-	-	0

Description: Sets the signal source for the voltage setpoint for V/f control with an independent voltage setpoint (p1300 = 19).

Dependency: Selects the V/f control with independent voltage setpoint via p1300 = 19.
Refer to: p1300

p1335[0...n] Slip compensation, scaling / Slip comp scal

VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 1690, 6310
	P-Group: V/f open-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [%]	600.0 [%]	0.0 [%]

Description: Sets the setpoint for slip compensation in [%] referred to r0330 (motor rated slip).

p1335 = 0.0 %: Slip compensation de-activated.

p1335 = 100.0 %: The slip is completely compensated.

Dependency: Prerequisite for a precise slip compensation for p1335 = 100 % are the precise motor parameters (p0350 ... p0360).

If the parameters are not precisely known, a precise compensation can be achieved by varying p1335.

Note: The purpose of slip compensation is to maintain a constant motor speed regardless of the applied load. The fact that the motor speed decreases with increasing load is a typical characteristic of induction motors.

For synchronous motors, this effect does not occur and the parameter has no effect in this case.

For the open-loop control modes p1300 = 5 and 6 (textile sector), the slip compensation is internally disabled in order to be able to precisely set the output frequency.

If p1335 is changed while commissioning (p0009, p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1335 have been changed by a parameter that was set when the drive was commissioned (e.g. p0300).

p1336[0...n] Slip compensation limit value / Slip comp lim val

VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2

Dependency: Refer to: p1300, p1338, p1349

p1340[0...n] I_max frequency controller proportional gain / I_max_ctrl Kp

VECTOR

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 1690
P-Group: V/f open-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.000	0.500	0.000

Description: Sets the proportional gain of the I_max voltage controller.

The I_max controller reduces the drive converter/inverter output current if the maximum current (r0067) is exceeded.

In the V/f operating modes (p1300) for the I_max control, one controller is used that acts on the output frequency and one controller that acts on the output voltage. The frequency controller reduces the current by decreasing the converter output frequency. The frequency is reduced down to a minimum value (equaling twice rated slip). If the overcurrent condition cannot be successfully resolved using this measure, then the drive converter output voltage is reduced using the I_max voltage controller. Once the overcurrent condition has been resolved, the drive is accelerated along the ramp set in p1120 (ramp-up time).

Dependency: In the V/f modes (p1300) for textile applications and for external voltage setpoints, only the I_max voltage controller is used.

Notice: When de-activating the I_max controller, the following must be carefully observed:

When the maximum current (r0067) is exceeded, the output current is no longer reduced, however, overcurrent alarm messages are generated. The drive is shut down if the overcurrent limit (r0209) is exceeded.

Note: The I_max limiting controller becomes ineffective if the ramp-function generator is de-activated with p1122 = 1.

p1341 = 0: I_max frequency controller de-activated and I_max voltage controller activated over the complete speed range.

Description: Displays the effective frequency limit.
Dependency: Refer to: p1340

r1344 I_max controller voltage output / I_max_ctrl V_outp

VECTOR

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 1690
P-Group: V/f open-loop control
Units group: 5_1
Unit selection: p0505
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the amount by which the converter output voltage is reduced.
Dependency: Refer to: p1340

p1345[0...n] I_max voltage controller proportional gain / I_max_V_ctrl Kp

VECTOR

Can be changed: U, T
Calculated: CALC_MOD_CON
Access level: 3
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: 1690
P-Group: V/f open-loop control
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0.000	100000.000	0.000

Description: Sets the proportional gain for the I_max voltage controller.
Dependency: Refer to: p1340
Note: The controller settings are also used in the current controller of the DC brake (refer to p1232).

p1346[0...n] I_max voltage controller integral time / I_max_V_ctrl Tn

VECTOR

Can be changed: U, T
Calculated: CALC_MOD_CON
Access level: 3
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: 1690
P-Group: V/f open-loop control
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0.000 [s]	50.000 [s]	0.030 [s]

Description: Sets the integral time for the I_max voltage controller.
Dependency: Refer to: p1340
Note: p1346 = 0: Integral time of the I_max voltage controller de-activated.
The controller settings are also used in the current controller of the DC brake (refer to p1232).

p1349[0...n] V/f mode resonance damping maximum frequency / Vf res_damp F_max

VECTOR	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 6310
	P-Group: V/f open-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [Hz]	3000.00 [Hz]	0.00 [Hz]

Description: Sets the maximum output frequency above which the resonance damping for V/f control is de-activated.

Dependency: Refer to: p1338, p1339

Note: For p1349 = 0, the changeover limit is automatically set to 95 % of the rated motor frequency - however, to a max. of 45 Hz.

p1350[0...n] Soft starting / Soft starting

VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dynamic index:** DDS, p0180	**Func. diagram:** 1690
	P-Group: V/f open-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	0

Description: Sets whether the voltage is continuously increased during the magnetizing phase (p1350 = 1, On) or whether it jumps directly to the voltage boost (p1350 = 0, Off).

Value:
0: Off
1: On

Note: The settings for this parameter have the following advantages and disadvantages:
0 = off (jump directly to voltage boost)
Advantage: Flux is established quickly -> torque is quickly available
Disadvantage: The motor can move while it is being magnetized
1 = on (voltage is continually established)
Advantage: The motor is unlikely to rotate
Disadvantage: The flux is established slower -> torque is available later

p1356[0...n] CI: V/f control, angular setpoint / Vf ang setpoint

VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dynamic index:** CDS, p0170	**Func. diagram:** -
	P-Group: V/f open-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source for the differential angular generation for V/f control.

p1358[0...n] Angular difference, symmetrizing, actual angle / Sym act angle

VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: V/f open-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	0

Description: Sets the dead time for the symmetrizing of the actual angle value for the differential angular generation.
The selected multiplier refers to the current controller clock cycle (dead time= p1358 * p0115[0]).

r1359 CO: Angular difference / Angular difference

VECTOR

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: V/f open-loop control
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [°]	- [°]	- [°]

Description: Displays the output of the differential angular generation.

Note: The difference between the setpoint angle, read-in in p1356 and the actual value of the V/f control delayed with p1358 is displayed.

p1400[0...n] Velocity control, configuration / v_ctrl config

SERVO (Lin)

Can be changed: U, T
Calculated: -
Access level: 2
Data type: Unsigned16
Dynamic index: DDS, p0180
Func. diagram: 1590, 5490
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
-	-	0000 0011 1010 0000 bin

Description: Sets the configuration for the closed-loop velocity control.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
03	Reference model velocity setpoint I component	On	Off	5030
04	Force limiting active in motoring/regenerating mode	Yes	No	1610, 5640
05	Kp/Tn adaptation active	Yes	No	5040, 5042, 5210
07	Interpolation velocity controller pre-control active	Yes	No	5020
08	Interpolation force setpoint active	Yes	No	5610
09	Damping for encoderless open-loop controlled oper.	Yes	No	-
10	Velocity pre-control	For balancing	For setp_filter 2	5020
11	Encoderless oper. velocity actual value starting value	Setpoint	0.0	5210
12	Encoderless operation changeover	Steady-state	When accelerating	-
13	Motoring/regenerating depending on	Speed setpoint	Actual speed value	-

Note: Re bit 07:

The interpolator is only effective for clock-cycle synchronous PROFIBUS operation and when the master receives a sign-of-life (STW 2.12 ... STW 2.15). Further, for active Dynamic Servo Control (DSC) an additional dead time of one velocity controller clock cycle is obtained.

Re bit 11:

If the motor rotates when the pulses are enabled, then we recommend p1400.11 = 1 (starting value = setpoint) with the matching sign.

If the motor remains stationary (zero speed) when the pulses are enabled, the we recommend p1400.11 = 0 (starting value = 0.0).

Re bit 12:

If a changeover is made from operation with encoder to encoderless operation while accelerating (with the threshold from p1404), then we recommend p1400.12 = 0.

If the changeover is made from operation with encoder to encoderless at constant speed/velocity (e.g. with a DDS changeover or if there is an encoder fault via p0491) then we recommend p1400.12 = 1.

p1400[0...n] Speed control configuration / n_ctrl config

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 1590, 5490
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
-	-	0000 0011 1010 0000 bin

Description: Sets the configuration for the closed-loop speed control.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
03	Reference model speed setpoint, I component	On	Off	5030
04	Torque limiting active in motoring/regenerating mode	Yes	No	1610, 5640
05	Kp/Tn adaptation active	Yes	No	5040, 5042, 5210
07	Interpolation speed pre-control active	Yes	No	5020
08	Interpolation torque setpoint active	Yes	No	5610
09	Damping for encoderless open-loop controlled oper.	Yes	No	-
10	Speed pre-control	For balancing	For setp_filter 2	5020
11	Encoderless oper. speed actual value starting value	Setpoint	0.0	5210
12	Encoderless operation changeover	Steady-state	When accelerating	-
13	Motoring/regenerating depending on	Speed setpoint	Actual speed value	-

Note:

Re bit 07:

The interpolator is only effective for clock-cycle synchronous PROFIBUS operation and when the master receives a sign-of-life (STW 2.12 ... STW 2.15). Further, for active Dynamic Servo Control (DSC) an additional dead time of one speed controller clock cycle is obtained.

Re bit 11:

If the motor rotates when the pulses are enabled, then we recommend p1400.11 = 1 (starting value = setpoint) with the matching sign.

If the motor remains stationary (zero speed) when the pulses are enabled, the we recommend p1400.11 = 0 (starting value = 0.0).

Re bit 12:

If a changeover is made from operation with encoder to encoderless operation while accelerating (with the threshold from p1404), then we recommend p1400.12 = 0.

If the changeover is made from operation with encoder to encoderless at constant speed/velocity (e.g. with a DDS changeover or if there is an encoder fault via p0491) then we recommend p1400.12 = 1.

p1400[0...n] Speed control configuration / n_ctrl config

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6490
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
-	-	1000 0000 0010 0001 bin

Description: Sets the configuration for the closed-loop speed control.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Automatic Kp/Tn adaptation active	Yes	No	-
01	Sensorless vector control freeze I comp	Yes	No	-
02	Acceleration pre-control source	External (p1495)	Internal (n_set)	6031
03	Reference model speed setpoint, I component	On	Off	1700, 6031
05	Kp/Tn adaptation active	Yes	No	6040

06	Free Tn adaptation active	Yes	No	-
14	Torque pre-control	Always active	For n_ctrl enab	-
15	Sensorless vector control, speed pre-control	Yes	No	-

Note: Re bit 01:

When the bit is set, the I component of the speed controller is kept when changing into the open-loop controlled mode.

p1401[0...n] Flux control configuration / Flux ctrl config

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3

Data type: Unsigned16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6491, 6722, 6723

P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -

Not for motor type: PEM, REL | **Expert list:** 1

Min	Max	Factory setting
-	-	1110 bin

Description: Sets the configuration for flux setpoint control

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Flux setpoint soft starting active	Yes	No	-
01	Flux setpoint differentiation active	Yes	No	-
02	Flux build-up control active	Yes	No	-
03	Flux characteristic, load-dependent	Yes	No	-
04	Flux controller (ASM with encoder)	Yes	No	-
05	Flux impression (ASM with encoder)	with model chngov	From 30 % n_rated	-
06	Quick magnetizing	Yes	No	-

Note: Re bit 00 (not for permanent-magnet synchronous motors):

Initially, the flux is only established with a low rate of rise when magnetizing the induction motor. The flux setpoint p1570 is reached again at the end of the magnetizing time p0346.

Re bit 01 (not for permanent-magnet synchronous motors):

Initially, the flux is only established with a low rate of rise when magnetizing the induction motor. The flux setpoint p1570 is reached again at the end of the magnetizing time p0346. When quick magnetizing (p1401.6 = 1) is selected, smooth starting is internally de-activated and alarm A07416 is displayed.

The flux differentiation can be switched out if a significant ripple occurs in the field-generating current setpoint (r0075) when entering the field weakening range. However, this is not suitable for fast acceleration operations because then, the flux decays more slowly and the voltage limiting responds.

Re bit 02 (not for permanent-magnet synchronous motors):

The flux build-up control operates during the magnetizing phase p0346 of the induction motor. If it is switched out, a constant current setpoint is impressed and the flux is built-up corresponding to the rotor time constant. When quick magnetizing (p1401.6 = 1) is selected and when flux build-up control is de-energized alarm A07416 is displayed.

Re bit 03:

The load-dependent calculation of the flux characteristic is only available for separately-excited synchronous motors.

Re bit 04 (only for vector control with encoder):

The flux controller does not operate in the range of the current model and not in the range of the flux impression (refer to p1750.4).

Re bit 05 (only for vector control with encoder):

Extremely rugged control operation is possible by directly toggling between the current model and flux impression. We therefore recommend that, in addition, the time-controlled model change is switched in (p1750.4 = 1) or the model changeover limits are significantly increased (p1752 > 0.35 * p0311; p1753 = 5 %).

Re bit 06 (not for induction motors):

Magnetizing is performed with maximum current (0.9 * r0067). After the reference flux is reached the current is reduced via smoothing p1616 (maximum 32 * p0115[2]). With active identification of the stator resistance (see p0621) quick magnetizing is internally de-activated and alarm A07416 is displayed. During a flying restart of a rotating motor (see p1200) no quick magnetizing takes place.

p1402[0...n] Closed-loop current control and motor model configuration / I_ctrl config

SERVO (Lin)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0100 bin

Description: Sets the configuration for the closed-loop control and the motor model.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
01	Park encoder for v_act > p1404	Yes	No	-
02	Current controller adaptation active	Yes	No	5714
04	Force-velocity pre-control with encoder	Yes	No	5060

Note: Re bit 01:

When the bit is set, the encoder is parked as soon as the actual velocity is greater than the changeover velocity (p1404). The encoder state is displayed in r0487.14.

Re bit 02:

The current controller adaptation (p0391 ... p0393) is only calculated when the bit is set.

p1402[0...n] Closed-loop current control and motor model configuration / I_ctrl config

Bit	Signal name	1 signal	0 signal	FP
00	Speed-following error correction active	Yes	No	-
02	Current controller adaptation active	Yes	No	6714

Note: Re bit 00:

When the bit is set, the speed following error is compensated that is obtained as a result of the smoothing time constant in p1441.

Re bit 02:

The current controller adaptation (p0391 ... p0393) is only calculated when the bit is set.

p1404[0...n] Encoderless operation changeover velocity / Encoderl op v_chg

SERVO (Lin)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 1590, 5060
P-Group: Closed-loop control | **Units group:** 4_1 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [m/min]	1000.0 [m/min]	1000.0 [m/min]

Description: Sets the velocity to change over between operation with and without encoder.
Above this velocity, the drive system is automatically operated in encoderless mode.

Note: The changeover speed applies when changing over between operation with and without encoder.
Separate speed controllers should be set when operating with and without encoder.
Operation with encoder: p1460 (Kp), p1462 (Tn), p1461, p1463, p1457, p1458 (parameters for speed controller adaptation)
Operation without encoder: p1470 (Kp), p1472 (Tn)
For encoderless operation (p1404 = 0 or p1300 = 20), the following applies:
- The condition must be fulfilled: p1800 >= n / (2 * p0115[0]), n = 1, 2, ...
- For motors with a small power rating (< 300 W) we recommend to set n >= 2.
For encoderless operation (p1404 = 0 or p1300 = 20), the following applies:
- The condition must be fulfilled: p1800 >= n / (2 * p0115[0]), n = 1, 2, ...
- For motors with a small power rating (< 300 W) we recommend to set n >= 2.

09	Lower force limit active	Yes	No	5610
11	Velocity setpoint limited	Yes	No	5030, 5042, 5210
13	Encoderless operation due to a fault	Yes	No	-

Note: Re bit 04:
The following conditions must be fulfilled to set to 1:
- CI: p1190 and CI: p1191 must be interconnected with a signal source that is not equal to zero.
- it is not permissible that OFF1, OFF3 or STOP2 are active.
- it is not permissible that the motor data identification is active.
- Master control must not be active.

The following conditions can mean that the DSC function is not active in spite of the fact that the bit is set:
- clock-cycle synchronous operation is not selected (r2054 not equal to 4).
- the PROFIBUS is not clock-cycle synchronous (r2064[0] not equal to 1).
- DSC is not switched in on the control side; this means that KPC = 0 is transferred as value at CI: p1191.

08	Upper torque limit active	Yes	No	5610
09	Lower torque limit active	Yes	No	5610
11	Speed setpoint limited	Yes	No	5030, 5042, 5210
13	Encoderless operation due to a fault	Yes	No	-

Note: Re bit 04:
The following conditions must be fulfilled to set to 1:
- CI: p1190 and CI: p1191 must be interconnected with a signal source that is not equal to zero.
- it is not permissible that OFF1, OFF3 or STOP2 are active.
- it is not permissible that the motor data identification is active.
- Master control must not be active.

The following conditions can mean that the DSC function is not active in spite of the fact that the bit is set:
- clock-cycle synchronous operation is not selected (r2054 not equal to 4).
- the PROFIBUS is not clock-cycle synchronous (r2064[0] not equal to 1).
- DSC is not switched in on the control side; this means that KPC = 0 is transferred as value at CI: p1191.

r1407.0...14 CO/BO: Status word speed controller / ZSW n_ctrl

VECTOR (n/M)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** 1530, 2522
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: REL **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the status word of the speed controller.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	V/f control active	Yes	No	-
01	Encoderless operation active	Yes	No	4715
02	Torque control active	Yes	No	6030, 6060, 8010
03	Speed control active	Yes	No	6040
05	Speed controller I component frozen	Yes	No	6040
06	Speed controller I component set	Yes	No	6040
07	Torque limit reached	Yes	No	3080, 6040, 6060, 8012
08	Upper torque limit active	Yes	No	6060
09	Lower torque limit active	Yes	No	6060
10	Droop enabled	Yes	No	6030
11	Speed setpoint limited	Yes	No	6030
12	Ramp-function generator set	Yes	No	-
13	Encoderless operation due to a fault	Yes	No	-
14	I/f control active	Yes	No	-

r1408.0...9 CO/BO: Status word closed-loop current control / ZSW curr ctrl

SERVO

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** 1530, 2530
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: REL **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the status word of the closed-loop current control.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Cl-loop curr ctrl	Active	Not active	-
04	Vd limit	Active	Not active	-
05	Vq limit	Active	Not active	5042
06	Positive Iq limiting	Active	Not active	5714
07	Negative Iq limiting	Active	Not active	5714
08	Limit iq_set	Active	Not active	5714
09	Limit id_set	Active	Not active	5722

Note: The selected current limit is taken into account by the upstream torque limiting; this is the reason that bits 6, 7 and 8 are only set for overshoots due to the current setpoint filter.

r1408.0...12 CO/BO: Status word closed-loop current control / ZSW curr ctrl

VECTOR (n/M)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** 1530, 2530

Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0	2	0

Description: Sets the type for speed setpoint filter 1.

Value:
0: Low pass: PT1
1: Low pass: PT2
2: General 2nd-order filter

Dependency: PT1 low pass: p1416
PT2 low pass: p1417, p1418
General filter: p1417 ... p1420

p1416[0...n] Velocity setpoint filter 1 time constant / v_set_filt 1 T

SERVO (Lin)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 5020
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	5000.00 [ms]	0.00 [ms]

Description: Sets the time constant for the velocity setpoint filter 1 (PT1).
Dependency: Refer to: p1414, p1415
Note: This parameter is only effective if the velocity filter is set as a PT1 low pass.

p1416[0...n] Speed setpoint filter 1 time constant / n_set_filt 1 T

SERVO

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 5020
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	5000.00 [ms]	0.00 [ms]

Description: Sets the time constant for the speed setpoint filter 1 (PT1).
Dependency: Refer to: p1414, p1415
Note: For SERVO (p0107) the following applies:
This parameter is only effective if the speed filter is set as a PT1 low pass.

p1416[0...n] Speed setpoint filter 1 time constant / n_set_filt 1 T

VECTOR (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 1700, 6030
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	5000.00 [ms]	0.00 [ms]

Description: Sets the time constant for the speed setpoint filter 1 (PT1).
Note: For SERVO (p0107) the following applies:
This parameter is only effective if the speed filter is set as a PT1 low pass.

p1417[0...n] Velocity setpoint filter 1 denominator natural frequency / v_set_filt 1 fn_d

SERVO (Lin)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 5020
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1

Min	Max	Factory setting
0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]

Description: Sets the denominator natural frequency for velocity setpoint filter 1 (PT2, general filter).
Dependency: Refer to: p1414, p1415
Note: This parameter is only effective if the velocity filter is parameterized as a PT2 low pass or as general filter.
The filter is only effective if the natural frequency is less than half of the sampling frequency.

p1417[0...n] Speed setpoint filter 1 denominator natural frequency / n_set_filt 1 fn_d

SERVO

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 5020
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1

Min	Max	Factory setting
0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]

Description: Sets the denominator natural frequency for the speed setpoint filter 1 (PT2, general filter).
Dependency: Refer to: p1414, p1415
Note: This parameter is only effective if the speed filter is parameterized as a PT2 low pass or as general filter.
The filter is only effective if the natural frequency is less than half of the sampling frequency.

p1417[0...n] Speed setpoint filter 1 denominator natural frequency / n_set_filt 1 fn_d

TM41

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 9674
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1

Min	Max	Factory setting
0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]

Description: Sets the denominator natural frequency for the speed setpoint filter 1 (PT2) of the incremental encoder emulation.
Dependency: Refer to: p1414
Note: This parameter is only effective if the speed setpoint filter in p1414 is activated.
The filter is only effective if the natural frequency is less than half of the sampling frequency.
This parameter has no function in the SINAMICS operating mode (p4400 = 1) of the TM41.

p1418[0...n] Velocity setpoint filter 1 denominator damping / v_set_filt 1 D_d

SERVO (Lin)

0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]

Description: Sets the numerator natural frequency for speed setpoint filter 2 (general filter).
Dependency: Refer to: p1414, p1421
Note: This parameter is only effective if the speed filter is set as a general filter.
The filter is only effective if the natural frequency is less than half of the sampling frequency.

p1426[0...n] Velocity setpoint filter 2 numerator damping / v_set_filt 2 D_n

SERVO (Lin)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5020
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.000	10.000	0.700

Description: Sets the numerator damping for velocity setpoint filter 2 (general filter).
Dependency: Refer to: p1414, p1421
Note: This parameter is only effective if the velocity filter is set as a general filter.

p1426[0...n] Speed setpoint filter 2 numerator damping / n_set_filt 2 D_n

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5020
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.000	10.000	0.700

Description: Sets the numerator damping for speed setpoint filter 2 (general filter).
Dependency: Refer to: p1414, p1421
Note: This parameter is only effective if the speed filter is set as a general filter.

p1428[0...n] Velocity pre-control balancing dead time / n_prectrBal t_dead

SERVO (Lin)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5030, 5042, 5210
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.0	2.0	0.0

Description: Sets the dead time to symmetrize the velocity setpoint for active force pre-control.
The selected multiplier refers to the velocity controller clock cycle (dead time= p1428 * p0115[1]).
Dependency: In conjunction with p1429, this parameter can emulate the characteristics of how the force is established (dynamic response of closed current control loop).
Refer to: p1429, p1511

p1428[0...n] Speed pre-control balancing dead time / n_prectrBal t_dead

SERVO, VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5030, 5042, 5210, 6031
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.0	2.0	0.0

Description: Sets the dead time to symmetrize the speed setpoint for active torque pre-control.
The selected multiplier refers to the speed controller clock cycle (dead time= p1428 * p0115[1]).
Dependency: In conjunction with p1429, this parameter can emulate the characteristics of how the torque is established (dynamic response of closed current control loop).
For VECTOR (r0107) the following applies:
The parameter is only effective if the acceleration model is supplied using external acceleration signals (p1400.2 = 1). For p1400.2 = 0, a fixed dead time is used.
Refer to: p1429, p1511

p1429[0...n] Velocity pre-control balancing time constant / n_prectr bal T

SERVO (Lin)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5030, 5042, 5210
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	10000.00 [ms]	0.00 [ms]

Description: Sets the time constant (PT1) for symmetrizing the velocity setpoint for active force pre-control.

Dependency: In conjunction with p1428, this parameter can emulate the characteristics of how the force is established (dynamic response of closed current control loop).
Refer to: p1428, p1511

p1429[0...n] Speed pre-control balancing time constant / n_prectr bal T

SERVO, VECTOR (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 5030, 5042, 5210, 6031
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [ms]	10000.00 [ms]	0.00 [ms]

Description: Sets the time constant (PT1) for symmetrizing the speed setpoint for active torque pre-control.
Dependency: In conjunction with p1428, this parameter can emulate the characteristics of how torque is established (dynamic response of the closed current control loop).
For VECTOR (r0107) the following applies:
The parameter is only effective if the acceleration model is supplied using external acceleration signals (p1400.2 = 1). For p1400.2 = 0, time constant p1442 (or p1452 for sensorless vector control) is used.
Refer to: p1428, p1511

p1430[0...n] CI: Velocity pre-control / v_prectrl

SERVO (Lin)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dynamic index:** CDS, p0170	**Func. diagram:** 1550, 1590, 3090, 5020, 5030
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the velocity pre-control channel (velocity pre-control or force pre-control).
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p1430[0...n] CI: Speed pre-control / n_prectrl

SERVO

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dynamic index:** CDS, p0170	**Func. diagram:** 1550, 1590, 3090, 5020, 5030
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1
Min	**Max**	**Factory setting**

Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the speed pre-control value after symmetrizing for the torque build-up (emulates the closed current control loop).

Dependency: Symmetrizing can be parameterized with p1428 and/or p1429.

p1433[0...n] Velocity controller reference model natural frequency / v_ctrl RefMod fn

SERVO (Lin)

Can be changed: U, T
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: 5030, 6031
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
0.0 [Hz]	8000.0 [Hz]	0.0 [Hz]

Description: Sets the natural frequency of a PT2 element for the reference model of the velocity controller.

Recommend.: The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (actual velocity value) are virtually identical when the I-component of the velocity controller is disabled.

Dependency: Together with p1434 and p1435, the characteristics (in the time domain) of the closed-loop velocity control (P) can be emulated.

Refer to: p1434, p1435

p1433[0...n] Speed controller reference model natural frequency / n_ctrl RefMod fn

SERVO, VECTOR (n/M)

Can be changed: U, T
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: 5030, 6031
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
0.0 [Hz]	8000.0 [Hz]	0.0 [Hz]

Description: Sets the natural frequency of a PT2 element for the reference model of the speed controller.

Recommend.: The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (actual speed value) are virtually identical when the I-component of the speed controller is disabled.

Dependency: Together with p1434 and p1435, the characteristics (in the time domain) of the closed-loop speed control (P) can be emulated.

For VECTOR (r0107) the following applies:

The reference model is activated with p1400.3 = 1. For sensorless vector control (p1300 = 20) the reference model is disabled in open-loop speed controlled operation (refer to p1755).

Refer to: p1434, p1435

p1434[0...n] Velocity controller reference model damping / v_ctrl RefMod D

SERVO (Lin)

Can be changed: U, T
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: 5030, 6031
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
0.000	5.000	1.000

Description: Sets the damping of a PT2 element for the reference model of the velocity controller.

Recommend.: The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (actual velocity value) are virtually identical when the I-component of the velocity controller is disabled.

Dependency: Together with p1433 and p1435, the characteristics (in the time domain) of the P-controlled velocity control loop can be emulated.
Refer to: p1433, p1435

p1434[0...n] Speed controller reference model damping / n_ctrl RefMod D

SERVO, VECTOR (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 5030, 6031
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1

Min	Max	Factory setting
0.000	5.000	1.000

Description: Sets the damping of a PT2 element for the reference model of the speed controller.

Recommend.: The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (actual speed value) are virtually identical when the I-component of the speed controller is disabled.

Dependency: In conjunction with p1433 and p1435, the characteristics (in time) of the P-controlled speed control loop can be emulated.
For VECTOR (r0107) the following applies:
The reference model is activated with p1400.3 = 1.
Refer to: p1433, p1435

p1435[0...n] Velocity controller reference model dead time / v_ctrRefMod t_dead

SERVO (Lin)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 5030, 6031
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1

Min	Max	Factory setting
0.00	2.00	0.00

Description: Sets the "fractional" dead time for the reference model of the velocity controller.
This parameter emulates the computing dead time of the proportionally controlled velocity control loop.
The selected multiplier refers to the velocity controller clock cycle (dead time= p1435 * p0115[1]).

Recommend.: The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (actual velocity value) are virtually identical when the I-component of the velocity controller is disabled.

Dependency: Together with p1433 and p1434, the characteristics (in the time domain) of the P-controlled velocity control loop can be emulated.
Refer to: p0115, p1433, p1434

p1435[0...n] Speed controller reference model dead time / n_ctrRefMod t_dead

SERVO, VECTOR (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 5030, 6031
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1

Min	Max	Factory setting
0.00	2.00	0.00

Description: Sets the "fractional" dead time for the reference model of the speed controller.
This parameter emulates the computing dead time of the proportionally controlled speed control loop.
The selected multiplier refers to the speed controller clock cycle (dead time= p1435 * p0115[1]).

Recommend.: The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (actual speed value) are virtually identical when the I-component of the speed controller is disabled.

Dependency: In conjunction with p1433 and p1434, the characteristics (in time) of the P-controlled speed control loop can be emulated.
For VECTOR (r0107) the following applies:
The reference model is activated with p1400.3 = 1.
Refer to: p0115, p1433, p1434

r1436 CO: Velocity controller, reference model velocity_setpoint output / RefMod v_set outp

SERVO (Lin)

Can be changed: -	**Calculated:** -	**Access level:** 3

Min	Max	Factory setting
- [m/min]	- [m/min]	- [m/min]

Description: Displays the velocity setpoint for the I component of the velocity controller (output of the reference model after the setpoint limiting).

Dependency: Refer to: r1438

Note: In the standard state (the reference model is de-activated), r1438 = r1439.

r1439 Speed setpoint, I component / n_set I_comp

SERVO, VECTOR (n/M)

Can be changed: - **Calculated:** - **Access level:** 3

Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 1700, 5030, 5040, 6031, 6040

P-Group: Closed-loop control **Units group:** 3_1 **Unit selection:** p0505

Not for motor type: REL **Expert list:** 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the speed setpoint for the I component of the speed controller (output of the reference model after the setpoint limiting).

Dependency: Refer to: r1438

Note: In the standard state (the reference model is de-activated), r1438 = r1439.

p1441[0...n] Actual velocity smoothing time / v_act T_smooth

SERVO (Lin)

Can be changed: U, T **Calculated:** CALC_MOD_CON **Access level:** 3

Data type: FloatingPoint32 **Dynamic index:** DDS, p0180 **Func. diagram:** 4710, 4715

P-Group: Closed-loop control **Units group:** - **Unit selection:** -

Not for motor type: REL **Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	50.00 [ms]	0.00 [ms]

Description: Sets the smoothing time constant (PT1) for the velocity actual value.

Dependency: Refer to: r0063

Note: The velocity actual value should be smoothed for encoders with a low pulse number or for resolvers.
After this parameter has been changed, we recommend that the velocity controller is adapted and/or the velocity controller settings checked Kp (p1460) and Tn (p1462).

p1441[0...n] Actual speed smoothing time / n_act T_smooth

SERVO

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 4710, 4715
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	50.00 [ms]	0.00 [ms]

Description: Sets the smoothing time constant (PT1) for the speed actual value.
Dependency: Refer to: r0063
Note: The speed actual value should be smoothed for encoders with a low pulse number or for resolvers.
After this parameter has been changed, we recommend that the speed controller is adapted and/or the speed controller settings checked Kp (p1460) and Tn (p1462).

p1441[0...n] Actual speed smoothing time / n_act T_smooth

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 4710, 4715
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	1000.00 [ms]	0.00 [ms]

Description: Sets the smoothing time constant (PT1) for the speed actual value.
Dependency: Refer to: r0063
Notice: Smoothing times above 20 ms are only possible if the drive is accelerated or braked with the appropriately long ramp-up/ramp-down times. Otherwise, significant torque errors can occur and there is the danger that the drive is powered down (tripped) with F07902 (motor stalled).
Note: The speed actual value should be smoothed for encoders with a low pulse number or for resolvers.
After this parameter has been changed, we recommend that the speed controller is adapted and/or the speed controller settings checked Kp (p1460) and Tn (p1462).

p1442[0...n] Speed controller speed actual value smoothing time / n_ctr n_act T_smth

VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6040
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	32000.00 [ms]	4.00 [ms]

Description: Sets the smoothing time for the actual speed value of the speed controller for closed-loop control with encoder.
Note: The smoothing must be increased if there is gear backlash. For longer smoothing times, the integral time of the speed controller must also be increased (e.g. using p0340 = 4).

r1444 Velocity controller, velocity setpoint, total / v_ctrl v_set stat

SERVO (Lin)

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 5030

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6040
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	32000.00 [ms]	10.00 [ms]

Description: Sets the smoothing time for the actual speed of the speed controller for encoderless closed-loop speed control.

Note: The smoothing must be increased if there is gear backlash. For longer smoothing times, the integral time of the speed controller must also be increased (e.g. using p0340 = 4).

r1454 CO: Velocity controller system deviation I component / v_ctrl sys dev Tn

SERVO (Lin)

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 5040, 5042
P-Group: Closed-loop control
Units group: 4_1
Unit selection: p0505
Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
- [m/min]	- [m/min]	- [m/min]

Description: Displays the system deviation of the I component of the velocity controller.
When the reference model is inactive (p1433 = 0 Hz), this parameter corresponds to the system deviation of the complete PI controller (r1454 = r0064).

r1454 CO: Speed controller system deviation I component / n_ctrl sys dev Tn

SERVO, VECTOR (n/M)

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 5040, 5042, 6040
P-Group: Closed-loop control
Units group: 3_1
Unit selection: p0505
Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the system deviation of the I component of the speed controller.
When the reference model is inactive (p1433 = 0 Hz), this parameter corresponds to the system deviation of the complete PI controller (r1454 = r0064).

p1455[0...n] CI: Velocity controller, P gain adaptation signal / v_ctrl Adpt_sig Kp

SERVO (Lin)

Can be changed: T
Calculated: -
Access level: 3
Data type: Unsigned32 / FloatingPoint32
Dynamic index: CDS, p0170
Func. diagram: 5050
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
-	-	0

Description: Sets the source for the adaptation signal to additionally adapt the P gain of the velocity controller.
Dependency: Refer to: p1456, p1457, p1458, p1459

p1455[0...n] CI: Speed controller P gain adaptation signal / n_ctrl Adpt_sig Kp

SERVO

Can be changed: T
Calculated: -
Access level: 3
Data type: Unsigned32 / FloatingPoint32
Dynamic index: CDS, p0170
Func. diagram: 5050
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
-	-	0

Description: Sets the source for the adaptation signal to additionally adapt the P gain of the speed controller.
Dependency: Refer to: p1456, p1457, p1458, p1459

p1455[0...n] CI: Speed controller P gain adaptation signal / n_ctrl Adpt_sig Kp

VECTOR (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dynamic index:** CDS, p0170	**Func. diagram:** 6050
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the source for the adaptation signal to additionally adapt the P gain of the speed controller.

Dependency: Refer to: p1456, p1457, p1458, p1459

p1456[0...n] Velocity controller P gain adaptation, lower starting point / v_ctrl AdaptKpLow

SERVO (Lin)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 5050
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [%]	400.00 [%]	0.00 [%]

Description: Sets the lower starting point of the adaptation range for the additional adaptation of the P gain of the velocity controller.

The values are in % and refer to the set source of the adaptation signal.

Dependency: Refer to: p1455, p1457, p1458, p1459

p1456[0...n] Speed controller P gain adaptation lower starting point / n_ctrl AdaptKpLow

SERVO	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 5050
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [%]	400.00 [%]	0.00 [%]

Description: Sets the lower starting point of the adaptation range for the additional adaptation of the P gain of the speed controller.

The values are in % and refer to the set source of the adaptation signal.

Dependency: Refer to: p1455, p1457, p1458, p1459

p1456[0...n] Speed controller P gain adaptation lower starting point / n_ctrl AdaptKpLow

VECTOR (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 6050
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [%]	400.00 [%]	0.00 [%]

Description: Sets the lower starting point of the adaptation range for the additional adaptation of the P gain of the speed controller.

The values are in % and refer to the set source of the adaptation signal.

Dependency: Refer to: p1455, p1457, p1458, p1459

Note: If the upper transition point p1457 of the speed controller adaptation is set to lower values than the lower transition p1456, then the controller gain below p1457 is adapted with p1459 and above p1456, with p1458.

p1457[0...n] Velocity controller P gain adaptation upper starting point / v_ctrl AdaptKp up

SERVO (Lin)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5050

Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [%]	400.00 [%]	0.00 [%]

Description: Sets the upper starting point of the adaptation range for the additional adaptation of the P gain of the velocity controller.
The values are in % and refer to the set source of the adaptation signal.

Dependency: Refer to: p1455, p1456, p1458, p1459

p1457[0...n] Speed controller P gain adaptation upper starting point / n_ctrl AdaptKp up

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5050
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [%]	400.00 [%]	0.00 [%]

Description: Sets the upper starting point of the adaptation range for the additional adaptation of the P gain of the speed controller.
The values are in % and refer to the set source of the adaptation signal.

Dependency: Refer to: p1455, p1456, p1458, p1459

p1457[0...n] Speed controller P gain adaptation upper starting point / n_ctrl AdaptKp up

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6050
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [%]	400.00 [%]	0.00 [%]

Description: Sets the upper starting point of the adaptation range for the additional adaptation of the P gain of the speed controller.
The values are in % and refer to the set source of the adaptation signal.

Dependency: Refer to: p1455, p1456, p1458, p1459

Note: If the upper transition point p1457 of the speed controller adaptation is set to lower values than the lower transition p1456, then the controller gain below p1457 is adapted with p1459 and above p1456, with p1458.

p1458[0...n] Adaptation factor, lower / Adapt_factor lower

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5050
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	200000.0 [%]	100.0 [%]

Description: Sets the adaptation factor before the adaptation range (0 % ... p1456) to additionally adapt the P gain of the speed/velocity controller.

Dependency: Refer to: p1455, p1456, p1457, p1459

p1458[0...n] Adaptation factor, lower / Adapt_factor lower

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6050
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	200000.0 [%]	100.0 [%]

Description: Sets the adaptation factor before the adaptation range (0 % ... p1456) to additionally adapt the P gain of the speed/velocity controller.

Dependency: Refer to: p1455, p1456, p1457, p1459

Note: If the upper transition point p1457 of the speed controller adaptation is set to lower values than the lower transition p1456, then the controller gain below p1457 is adapted with p1459 and above p1456, with p1458.

p1459[0...n] Adaptation factor, upper / Adapt_factor upper

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5050
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	200000.0 [%]	100.0 [%]

Description: Sets the adaptation factor after the adaptation range (> p1457) to additionally adapt the P gain of the speed/velocity controller.

Dependency: Refer to: p1455, p1456, p1457, p1458

p1459[0...n] Adaptation factor, upper / Adapt_factor upper

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6050
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	200000.0 [%]	100.0 [%]

Description: Sets the adaptation factor after the adaptation range (> p1457) to additionally adapt the P gain of the speed/velocity controller.

Dependency: Refer to: p1455, p1456, p1457, p1458

Note: If the upper transition point p1457 of the speed controller adaptation is set to lower values than the lower transition p1456, then the controller gain below p1457 is adapted with p1459 and above p1456, with p1458.

p1460[0...n] Velocity controller, P gain adaptation velocity, lower / v_ctrl Kp n lower

SERVO (Lin)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5040, 5042, 5050
P-Group: Closed-loop control | **Units group:** 24_2 | **Unit selection:** p0505
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.000 [Ns/m]	999999.000 [Ns/m]	10.000 [Ns/m]

Description: Sets the P gain of the velocity controller before the adaptation velocity range (0 ... p1464). This value corresponds to the basic setting of the P gain of the velocity controller without adaptation (p1461 = 100 %).

Dependency: Refer to: p1461, p1464, p1465

Note: When automatically calculating the velocity controller, only the motor inertia is taken into account (p0341). For higher inertias (p0342 > 1 or p1498 > 0) we recommend that the velocity controller gain is checked.

p1460[0...n] Speed controller P gain adaptation speed, lower / n_ctrl Kp n lower

SERVO

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5040, 5042, 5050
P-Group: Closed-loop control | **Units group:** 17_1 | **Unit selection:** p0505
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.000 [Nms/rad]	999999.000 [Nms/rad]	0.300 [Nms/rad]

Description: Sets the P gain of the speed controller before the adaptation speed range (0 ... p1464). This value corresponds to the basic setting of the P gain of the speed controller without adaptation (p1461 = 100 %).

Dependency: Refer to: p1461, p1464, p1465

Note: When automatically calculating the speed controller, only the motor moment of inertia is taken into account (p0341). For higher load moments of inertia (p0342 > 1 or p1498 > 0) we recommend that the speed controller gain is checked.

p1460[0...n] Speed controller P gain adaptation speed, lower / n_ctrl Kp n lower

VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 1700, 6040
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.000	999999.000	0.300

Description: Sets the P gain of the speed controller before the adaptation speed range (0 ... p1464). This value corresponds to the basic setting of the P gain of the speed controller without adaptation (p1461 = 100 %).

Dependency: For p0528 = 1, the speed controller gain is represented without any dimensions.
Refer to: p1461, p1464, p1465

p1461[0...n] Velocity controller, P gain adaptation velocity, upper / v_ctrl Kp n upper

SERVO (Lin)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5050
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	200000.0 [%]	100.0 [%]

Description: Sets the P gain of the velocity controller for the upper adaptation velocity range (> p1465). The entry is made referred to the P gain for the lower adaptation velocity range of the velocity controller (% referred to p1460).

Dependency: Refer to: p1460, p1464, p1465

Note: When automatically calculating the velocity controller, only the motor inertia is taken into account (p0341). For higher inertias (p0342 > 1 or p1498 > 0) we recommend that the velocity controller gain is checked.

p1461[0...n] Speed controller Kp adaptation speed, upper scaling / n_ctrl Kp n upper

SERVO

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5050
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	200000.0 [%]	100.0 [%]

Description: Sets the P gain of the speed controller for the upper adaptation speed range (> p1465). The entry is made referred to the P gain for the lower adaptation speed range of the speed controller (% referred to p1460).

Dependency: Refer to: p1460, p1464, p1465

Note: When automatically calculating the speed controller, only the motor moment of inertia is taken into account (p0341). For higher load moments of inertia (p0342 > 1 or p1498 > 0) we recommend that the speed controller gain is checked.

p1461[0...n] Speed controller Kp adaptation speed, upper scaling / n_ctrl Kp n upper

VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6050
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	200000.0 [%]	100.0 [%]

Description: Sets the P gain of the speed controller for the upper adaptation speed range (> p1465). The entry is made referred to the P gain for the lower adaptation speed range of the speed controller (% referred to p1460).

Dependency: Refer to: p1460, p1464, p1465

Note: If the upper transition point p1465 of the speed controller adaptation is set to lower values than the lower transition p1464, then the controller gain below p1465 is adapted with p1461. This means that an adaptation can be implemented for low speeds without having to change the controller parameters.

p1462[0...n] Velocity contr. integral act. time adaptation velocity lower / v_ctrl Tn n lower

SERVO (Lin)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5040, 5042, 5050
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	100000.00 [ms]	20.00 [ms]

Description: Sets the integration time of the velocity controller before the adaptation velocity range (0 ... p1464). This value corresponds to the basic setting of the integral time of the velocity controller without adaptation (p1461 = 100 %).

Dependency: Refer to: p1463, p1464, p1465

p1462[0...n] Speed controller integral time adaptation speed lower / n_ctrl Tn n lower

SERVO, VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 1700, 5040, 5050, 5042, 6040, 6050
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	100000.00 [ms]	20.00 [ms]

Description: Sets the integration time of the speed controller before the adaptation speed range (0 ... p1464). This value corresponds to the basic setting of the integral time of the speed controller without adaptation (p1461 = 100 %).

Dependency: Refer to: p1463, p1464, p1465

p1463[0...n] Velocity contr. integral act. time adaptation velocity upper / v_ctrl Tn n upper

SERVO (Lin)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5050
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	200000.0 [%]	100.0 [%]

Description: Sets the integral time of the velocity controller after the adaptation velocity range (> p1465). The entry is made referred to the integral time for the lower adaptation velocity range of the velocity controller (% referred to p1462).

Dependency: Refer to: p1462, p1464, p1465

p1463[0...n] Speed controller Tn adaptation speed, upper scaling / n_ctrl Tn n upper

SERVO

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5050
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	200000.0 [%]	100.0 [%]

Description: Sets the integral time of the speed controller after the adaptation speed range (> p1465). The entry is made referred to the integral time for the lower adaptation speed range of the speed controller (% referred to p1462).

Dependency: Refer to: p1462, p1464, p1465

p1463[0...n] Speed controller Tn adaptation speed, upper scaling / n_ctrl Tn n upper

VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6050
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	200000.0 [%]	100.0 [%]

Description: Sets the integral time of the speed controller after the adaptation speed range (> p1465). The entry is made referred to the integral time for the lower adaptation speed range of the speed controller (% referred to p1462).

Dependency: Refer to: p1462, p1464, p1465

Note: If the upper transition point p1465 of the speed controller adaptation is set to lower values than the lower transition point p1464, then the controller integral time below p1465 is adapted with p1463. This means that an adaptation can be implemented for low speeds without having to change the controller parameters.

p1464[0...n] Velocity controller adaptation velocity, lower / v_ctrl n lower

SERVO (Lin)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5050
P-Group: Closed-loop control | **Units group:** 4_1 | **Unit selection:** p0505
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [m/min]	1000.00 [m/min]	0.00 [m/min]

Description: Sets the lower adaptation velocity of the velocity controller. No adaptation is effective below this velocity.

Dependency: Refer to: p1460, p1461, p1462, p1463, p1465

p1464[0...n] Speed controller adaptation speed, lower / n_ctrl n lower

SERVO

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5050
P-Group: Closed-loop control | **Units group:** 3_1 | **Unit selection:** p0505
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [rev/min]	210000.00 [rev/min]	0.00 [rev/min]

Description: Sets the lower adaptation speed of the speed controller. No adaptation is effective below this speed.

Dependency: Refer to: p1460, p1461, p1462, p1463, p1465

p1464[0...n] Speed controller adaptation speed, lower / n_ctrl n lower

VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6050
P-Group: Closed-loop control | **Units group:** 3_1 | **Unit selection:** p0505
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [rev/min]	210000.00 [rev/min]	0.00 [rev/min]

Description: Sets the lower adaptation speed of the speed controller. No adaptation is effective below this speed.
Dependency: Refer to: p1460, p1461, p1462, p1463, p1465
Note: If the upper transition point p1465 of the speed controller adaptation is set to values less than the lower transition point p1464, then the controller below p1465 is adapted with p1461 or p1463. This means that an adaptation can be implemented for low speeds without having to change the controller parameters.

p1465[0...n] Velocity controller adaptation velocity, upper / v_ctrl n upper

SERVO (Lin)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5050

P-Group: Closed-loop control | **Units group:** 3_1 | **Unit selection:** p0505
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [rev/min]	210000.00 [rev/min]	210000.00 [rev/min]

Description: Sets the upper adaptation speed of the speed controller. No adaptation is effective above this speed.
For P gain, p1460 * p1461 is effective. For the integral time, p1462 * p1463 is effective.
Dependency: Refer to: p1460, p1461, p1462, p1463, p1464

p1465[0...n] Speed controller adaptation speed, upper / n_ctrl n upper

VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6050
P-Group: Closed-loop control | **Units group:** 3_1 | **Unit selection:** p0505
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [rev/min]	210000.00 [rev/min]	210000.00 [rev/min]

Description: Sets the upper adaptation speed of the speed controller. No adaptation is effective above this speed.
For P gain, p1460 * p1461 is effective. For the integral time, p1462 * p1463 is effective.
Dependency: Refer to: p1460, p1461, p1462, p1463, p1464
Note: If the upper transition point p1465 of the speed controller adaptation is set to values less than the lower transition point p1464, then the controller below p1465 is adapted with p1461 or p1463. This means that an adaptation can be implemented for low speeds without having to change the controller parameters.

p1466[0...n] CI: Velocity controller P gain scaling / v_ctrl Kp scal

SERVO (Lin)

Can be changed: T	**Calculated:** -	**Access level:** 3

-	-	0

Description: Sets the signal source for the integrator setting value for the velocity controller.
The signal to set this integrator setting value is interconnected via p1477.

Dependency: Refer to: p1477, p1479

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: For the interface mode "SIMODRIVE 611 universal" (p2038 = 1), p1477 and p1478 are used for the signal STW2.6 (integrator inhibit, speed controller).

p1478[0...n] CI: Speed controller integrator setting value / n_ctr integ_setVal

VECTOR (n/M)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / FloatingPoint32 | **Dynamic index:** CDS, p0170 | **Func. diagram:** 6040
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the integrator setting value for the velocity controller.
The signal to set this integrator setting value is interconnected via p1477.

Dependency: The setting value of the speed controller integrator is weighted with the scaling factor of the signal source in p1479.
If p1478 is interconnected to the integral output of the speed controller (r1482), then after the magnetizing time (r0346) and if the speed controller is enabled, the integral component of the controller is set to the last value before the pulse inhibit. This value is set if no setting command (p1477) is interconnected or, at the instant that the pulses were inhibited, a setting command is available, which is not de-activated up to the next time that the pulses are inhibited. For sensorless vector control, in addition p1400.1 should be set to 1 so that when the drive is stopped, the integral component of the speed controller is not controlled down to zero.
In order that when setting the integrator output, only the static torque is detected, we recommend that the accelerating torque is completely pre-controlled (e.g. p1496).
If p1478 is interconnected to another output other than r1482, then after magnetizing and speed controller enable, the integral output is set once if the setting command is not interconnected (p1477 = 0).
Refer to: p1477, p1479

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p1479[0...n] CI: Speed controller integrator setting value scaling / n_ctrl I_val scal

VECTOR (n/M)

Can be changed: T | **Calculated:** - | **Access level:** 3

Unit selection: -
Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
0.000	0.500	0.050

Description: Sets the scaling for the droop feedback

Dependency: Refer to: p1488, r1490, p1492
Note: Example:
A value of 0.05 means that for a torque equal to the rated motor torque, the rated motor speed is reduced by 5 %.

r1490 CO: Droop feedback speed reduction / Droop n_reduction

VECTOR (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 6030
P-Group: Closed-loop control	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: REL		**Expert list:** 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the output signal of the droop calculation. The droop feedback result is subtracted from the speed setpoint when activated (p1492).
Dependency: Refer to: p1488, p1489, p1492

p1492[0...n] BI: Droop feedback enable / Droop enable

VECTOR (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** CDS, p0170	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Enables the droop to be applied to the speed/velocity setpoint.
Dependency: Refer to: p1488, p1489, r1490
Note: Even when not enabled, the droop speed is calculated but not subtracted from the setpoint speed. This makes it possible to subtract the result of this calculation from the speed of another drive.

r1493 CO: Load mass / Load mass

SERVO (Lin)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 5042, 5210
P-Group: Closed-loop control	**Units group:** 27_1	**Unit selection:** p0100
Not for motor type: FEM		**Expert list:** 1

Min	Max	Factory setting
- [kg]	- [kg]	- [kg]

Description: Displays the parameterized total weight ((p0341 * p0342) + p1498) without evaluation by the scaling via p1497.
Dependency: Refer to: p1300, p1402, p1404, p1497
Note: The parameterized total weight, taking into account p1497, influences the force-velocity pre-control in encoderless operation or when activated, force-velocity pre-control with encoder (p1402.4).

r1493 CO: Moment of inertia, total / M_inertia total

SERVO

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 5042, 5210
P-Group: Closed-loop control	**Units group:** 25_1	**Unit selection:** p0100
Not for motor type: FEM		**Expert list:** 1

Min	Max	Factory setting
- [kgm²]	- [kgm²]	- [kgm²]

Description: Displays the parameterized total moment of inertia ((p0341 * p0342) + p1498) without evaluation by the scaling via p1497.
Dependency: Refer to: p1300, p1402, p1404, p1497
Note: The parameterized total moment of inertia, taking into account p1497, influences the torque pre-control.
In encoderless operation or when the torque-speed pre-control with encoder (p1402.4 = 1) is activated, then torque-speed pre-control is activated.

r1493 CO: Moment of inertia, total / M_inertia total

VECTOR (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 6031
P-Group: Closed-loop control	**Units group:** 25_1	**Unit selection:** p0100
Not for motor type: FEM		**Expert list:** 1

Min	Max	Factory setting
- [kgm²]	- [kgm²]	- [kgm²]

Description: Displays the parameterized total moment of inertia ((p0341 * p0342) + p1496) without evaluation by the scaling via p1497.

p1494[0...n] Velocity controller integrator feedback time constant / v_ctr integ_fdbk T

SERVO (Lin)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 5040, 5042, 5210
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	1000.00 [ms]	0.00 [ms]

Description: Sets the time constant of the PT1 filter for integrator feedback.

The integrator of the speed/velocity controller is re-parameterized to become a PT1 filter through a feedback element (1st Order low pass filter characteristics).

The following applies:

p1494 < 0.25 (2 * p0115[1]) --> the PT1 filter is not active - the pure integrator is effective.

p1494 >= 0.25 (2 * p0115[1]) --> the PT1 filter is active and has replaced the pure integrator.

Note: Applications:

Motion at zero setpoint and dominant stiction can be suppressed but this has a negative impact on the remaining setpoint-actual value difference. This can be used, for example, to avoid oscillation of a position-controlled axis at standstill (stick-slip effect) or overshoot when traversing (moving) in micrometer steps.

Also prevents tension/stressing for axes that are mechanically and rigidly coupled with one another (e.g. for synchronous spindles, master - slave axes).

p1494[0...n] Speed controller integrator feedback time constant / n_ctr integ_fdbk T

SERVO

Can be changed: U, T	**Calculated:** -	**Access level:** 2

Not for motor type: REL		**Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	1000.00 [ms]	0.00 [ms]

Description: Sets the time constant of the PT1 filter for integrator feedback.

The integrator of the speed/velocity controller is re-parameterized to become a PT1 filter through a feedback element (1st Order low pass filter characteristics).

The following applies:

p1494 < 0.25 (2 * p0115[1]) --> the PT1 filter is not active - the pure integrator is effective.

p1494 >= 0.25 (2 * p0115[1]) --> the PT1 filter is active and has replaced the pure integrator.

Note: Applications:

Motion at zero setpoint and dominant stiction can be suppressed but this has a negative impact on the remaining setpoint-actual value difference. This can be used, for example, to avoid oscillation of a position-controlled axis at standstill (stick-slip effect) or overshoot when traversing (moving) in micrometer steps.

Also prevents tension/stressing for axes that are mechanically and rigidly coupled with one another (e.g. for synchronous spindles, master - slave axes).

p1495[0...n] CI: Acceleration pre-control / a_prectrl

VECTOR (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dynamic index:** CDS, p0170	**Func. diagram:** 6031
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the acceleration pre-control.

Dependency: The signal source for the acceleration is activated with p1400.2 = 1.
For p1400.2 = 0, the acceleration pre-control is calculated from the speed setpoint change from r0062.
For p1400.2 = 0 and activate reference model (p1400.3 = 1) the acceleration pre-control is switched out.
Refer to: p1400, p1496

Note: If the acceleration is entered as external signal, then the accelerating torque is calculated as follows (r1518):
r1518 = acceleration (% of p2007) / 100 % * (p2007 * 60 s) / p0311 * r0345 / 1 s * r0333

p1496[0...n] Acceleration pre-control scaling / a_prectrl scal

VECTOR (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 6031
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1

Min	Max	Factory setting
0.0 [%]	10000.0 [%]	0.0 [%]

Description: Sets the scaling for the acceleration pre-control of the speed/velocity controller.

Dependency: When the reference model is activated (p1400.3 = 1) and for an internal acceleration pre-control (p1400.2 = 0), the acceleration pre-control is switched out (disabled). The reference model (p1400.3 = 1) and external acceleration pre-control (p1400.2 = 1) can be operated together.
Refer to: p0341, p0342

Note: The parameter is set to 100% by the rotating measurement (refer to p1960).
The acceleration pre-control may not be used if the speed setpoint manifests significant ripple (e.g. analog setpoint) and the rounding-off in the speed ramp-function generator is disabled.
We also recommend that the pre-control mode is not used if there is gearbox backlash.

Min	Max	Factory setting
0	999999	0

Description: Runs the appropriate ACX file on the CompactFlash card.
The Connector Inputs (CI) for the torque setpoints of the appropriate Command Data Set (CDS) are appropriately interconnected.
The selected ACX file must be located in the following directory:
... /PMACROS/<drive object>/P1500/PMxxxxxx.ACX
Example:
p1500 = 6 --> the file PM000006.ACX is run.
Dependency: The ACX file to be run must be created according to the definition for ACX macros and must be saved in the directory intended on the CompactFlash card.
Refer to: p0015, p0700, p1000, r8573
Notice: No errors were issued during quick commissioning (p3900 = 1) when writing to parameters of the QUICK_IBN group!

Note: The macros in the specified directory are displayed in r8573. r8573 is not in the expert list of the commissioning software.
Macros available as standard are described in the technical documentation of the particular product.
CI: Connector Input

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 5620, 5630
P-Group: Closed-loop control	**Units group:** 8_1	**Unit selection:** p0505
Not for motor type: REL		**Expert list:** 1
Min	**Max**	**Factory setting**
-1000000.00 [N]	20000000.00 [N]	0.00 [N]

Description: Sets the fixed upper or force limit when motoring.

Dependency: p1400 bit 4 = 0: Upper / lower

p1400 bit 4 = 1: Motoring / generating

Refer to: p0500, p1521, p1522, p1523, p1532, r1538, r1539

Danger: For p1400.4 = 0 (torque limiting, upper/lower) the following applies:

Negative values when setting the upper torque limit (p1520 < 0) can result in the motor accelerating in an uncontrollable fashion.

Notice: A BICO interconnection to a parameter that belongs to a drive object always acts on the effective data set.

Note: For VECTOR the following applies (p0107):

The torque limit is limited to 400% of the rated motor torque. When automatically calculating the motor/closed-loop control parameters (p0340), the torque limit is set to match the current limit (p0640).

p1520[0...n] CO: Torque limit upper/motoring / M_max upper/mot

Min	**Max**	**Factory setting**
-	-	1525[0]

Description: Sets the signal source for the scaling of the lower force limit or the regenerative force limit in p1523.

Dependency: p1400 bit 4 = 0: Upper / lower

p1400 bit 4 = 1: Motoring / generating

Danger: For p1400.4 = 0 (torque limiting, upper/lower) the following applies:

Positive values that are obtained as a result of the signal source and the scaling can cause the motor to accelerate in an uncontrollable fashion.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p1529[0...n] CI: Torque limit lower/regenerating scaling / M_max low/gen scal

Description: Displays the maximum limit for the torque-generating current component.

r1537 Current limit minimum torque-generating current / Isq_min

VECTOR (n/M)

Can be changed: -
Calculated: -
Access level: 4
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 6640, 6710
P-Group: Closed-loop control
Units group: 6_2
Unit selection: p0505
Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the minimum limit for the torque-generating current component.

r1538 CO: Upper force limit effective / F_max upper eff

SERVO (Lin)

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 1610, 1750, 5060, 5610, 5650, 5714, 7010, 8012
P-Group: Closed-loop control
Units group: 8_1
Unit selection: p0505
Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
- [N]	- [N]	- [N]

Description: Displays the currently effective upper force limit.
Note: The effective, upper force limit is reduced with respect to the selected upper force limit p1520 if the current limit p0640 is reduced.
The force limit p1520 can be re-calculated using p0340 = 1, 3 or 5.

r1538 CO: Upper effective torque limit / M_max upper eff

SERVO, VECTOR (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 1610, 1700, 1750, 5060, 5610, 5650, 5714, 6040, 6060, 6640, 6721, 7010, 8012
P-Group: Closed-loop control	**Units group:** 7_1	**Unit selection:** p0505
Not for motor type: REL		**Expert list:** 1
Min - [Nm]	**Max** - [Nm]	**Factory setting** - [Nm]

Description: Displays the currently effective upper torque limit.

Note: The effective upper torque limit is reduced with respect to the upper torque limit p1520, if the current limit p0640 is reduced or the rated magnetizing current of the induction motor p0320 is increased.

For vector drives (refer to p0107), this is possibly the case for rotating measurements (refer to p1960).

The torque limit p1520 can be re-calculated using p0340 = 1, 3 or 5.

r1539 CO: Lower force limit effective / F_max lower eff

SERVO (Lin)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 1610, 1750, 5060, 5610, 5650, 5714, 7010, 8012
P-Group: Closed-loop control	**Units group:** 8_1	**Unit selection:** p0505
Not for motor type: REL		**Expert list:** 1
Min - [N]	**Max** - [N]	**Factory setting** - [N]

Description: Displays the currently effective lower force limit.

Note: The effective lower force limit is reduced with respect to the selected lower force limit p1521 if the current limit p0640 is reduced.

The force limit p1520 can be re-calculated using p0340 = 1, 3 or 5.

r1539 CO: Lower effective torque limit / M_max lower eff

SERVO, VECTOR (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 1610, 1700, 1750, 5060, 5610, 5650, 5714, 6040, 6060, 6640, 6721, 7010, 8012

Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 5610
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Displays the internally converted factor to interconnect to the scaling of the torque/force limits.
Dependency: Refer to: p1528, p1529, p1542, p1544, p1545

p1544 Travel to fixed stop evaluation force reduction / TfS F_red eval

SERVO (Lin)

Can be changed: U, T **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 5610
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0 [%]	65535 [%]	100 [%]

Description: Sets the evaluation for the torque/force reduction when traversing to a fixed stop.
Dependency: Refer to: p1528, p1529, p1542, r1543, p1545
Note: 4000 hex (16384 dec) in the MOMRED control word corresponds to a reduction by the percentage specified in this parameter.

p1544 Travel to fixed stop evaluation torque reduction / TfS M_red eval

SERVO

Can be changed: U, T **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 5610
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0 [%]	65535 [%]	100 [%]

Description: Sets the evaluation for the torque/force reduction when traversing to a fixed stop.
Dependency: Refer to: p1528, p1529, p1542, r1543, p1545
Note: 4000 hex (16384 dec) in the MOMRED control word corresponds to a reduction by the percentage specified in this parameter.

p1545[0...n] BI: Activates travel to a fixed stop / TfS activation

SERVO

Can be changed: T **Calculated:** - **Access level:** 3
Data type: Unsigned32 / Binary **Dynamic index:** CDS, p0170 **Func. diagram:** 2520, 3617, 8012
P-Group: Commands **Units group:** - **Unit selection:** -
Not for motor type: REL **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to activate/de-activate the "travel to fixed stop" function
1: Travel to fixed stop is active
0: Travel to fixed stop is inactive
Dependency: Refer to: p1542, r1543, p1544
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: When traveling to fixed stop, the fault F07900 "motor locked" is suppressed.
When the function module "basic positioner" (r0108.4 = 1) is activated, this binector input is interconnected as follows as standard:
BI: p1545 = r2683.14

p1545[0...n] BI: Activates travel to a fixed stop / TfS activation

VECTOR (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** CDS, p0170	**Func. diagram:** 2520, 3617, 8012
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to activate/de-activate the "travel to fixed stop" function
1: Travel to fixed stop is active
0: Travel to fixed stop is inactive

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: When traveling to fixed stop, the fault F07900 "motor locked" is suppressed.
When the function module "basic positioner" (r0108.4 = 1) is activated, this binector input is interconnected as follows as standard:
BI: p1545 = r2683.14

p1546 Velocity threshold motoring/regenerating / v_thresh mot/regen

SERVO (Lin)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** 4_1	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [m/min]	1000.0 [m/min]	0.2 [m/min]

Description: Sets the velocity threshold for the motoring/regenerating limit.
For velocities where the absolute value is less than p1546, then the following applies:
- For p1400.13 = 0: Motoring limit (velocity threshold is compared to the velocity actual value).
- For p1400.13 = 1: Regenerative limiting (velocity threshold is compared to the velocity setpoint).

p1546 Speed threshold motoring/regenerating / n_thresh mot/regen

SERVO

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [rev/min]	210000.0 [rev/min]	20.0 [rev/min]

Description: Sets the speed threshold for the motoring/regenerating limit.
For speeds where the absolute value is less than p1546, then the following applies:
- For p1400.13 = 0: Motoring limit (speed threshold is compared to the speed actual value).
- For p1400.13 = 1: Regenerative limiting (speed threshold is compared to the speed setpoint).

r1547[0...1] CO: Torque limit for speed controller output / M_max outp n_ctrl

VECTOR (n/M)

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32

p1550[0...n] BI: Transfer current force as force offset / Accept act force

SERVO (Lin)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / Binary	**Dynamic index:** CDS, p0170	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	9718.23

Description: For a positive edge, the current force (r0079[0]) at this instant in time is used instead of the force offset from p1532 as long as p1550 remains at 1.

p1550[0...n] BI: Transfer current torque as torque offset / Accept act torque

SERVO

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / Binary	**Dynamic index:** CDS, p0170	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	9718.23

Description: For a positive edge, the current torque (r0079[0]) at this instant in time is used instead of the torque offset from p1532 as long as p1550 remains at 1.

p1551[0...n] BI: Force limit variable/fixed signal source / F_lim var/fixS_src

SERVO (Lin)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** CDS, p0170	**Func. diagram:** 5060, 5620, 5630
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source to change over the force limits between variable and fixed force limit.
1 signal from BI: p1551:
The variable force limit applies (fixed force limit + scaling).
0 signal from BI: p1551:
The fixed force limit applies.
Example:
In order that for a Quick Stop (OFF3) the fixed force limit is effective, BI: p1551 must be interconnected to r0899.5.

p1551[0...n] BI: Torque limit variable/fixed signal source / M_lim var/fixS_src

SERVO, VECTOR (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** CDS, p0170	**Func. diagram:** 5060, 5620, 5630, 6060, 6630
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source to change over the torque limits between variable and fixed torque limit.
1 signal from BI: p1551:
The variable torque limit applies (fixed torque limit + scaling).
0 signal from BI: p1551:
The fixed torque limit applies.
Example:
In order that for a Quick Stop (OFF3) the fixed torque limit is effective, BI: p1551 must be interconnected to r0899.5.

p1552[0...n] CI: Force limit upper scaling without offset / F_max up offs scal

SERVO (Lin)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / FloatingPoint32 | **Dynamic index:** CDS, p0170 | **Func. diagram:** 5060, 6060
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for the scaling of the upper force limiting to limit the velocity controller output without taking into account the current and power limits.

p1552[0...n] CI: Torque limit upper scaling without offset / M_max up w/o offs

SERVO, VECTOR (n/M)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / FloatingPoint32 | **Dynamic index:** CDS, p0170 | **Func. diagram:** 5060, 6060
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for the scaling of the upper torque limiting to limit the speed controller output without taking into account the current and power limits.

p1554[0...n] CI: Force limit lower scaling without offset / M_max low w/o offs

SERVO (Lin)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / FloatingPoint32 | **Dynamic index:** CDS, p0170 | **Func. diagram:** 5060, 6060
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for the scaling of the lower force limiting to limit the velocity controller output without taking into account the current and power limits.

p1554[0...n] CI: Torque limit lower scaling without offset / M_max low w/o offs

SERVO, VECTOR (n/M)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / FloatingPoint32 | **Dynamic index:** CDS, p0170 | **Func. diagram:** 5060, 6060
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for the scaling of the lower torque limiting to limit the speed controller output without taking into account the current and power limits.

p1555[0...n] CI: Power limit / P_max

VECTOR (n/M)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / FloatingPoint32 | **Dynamic index:** CDS, p0170 | **Func. diagram:** 6640
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for the motoring and negative regenerative power limit.
Dependency: Refer to: p1530, p1531

Note: The resulting power limit when motoring is the minimum from p1530 and the signal that is read in, the resulting regenerative power limit is the maximum from p1531 and the negative signal that is read in.

p1556[0...n] Power limit scaling / P_max_scale

VECTOR (n/M)

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6640
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.00	340.28235E36	0.00

Description: Sets the scaling of the signal source for the motoring and negative regenerative power limit.
0 signifies no power limiting.

p1569[0...n] CI: Supplementary force 3 / F_suppl 3

SERVO (Lin)

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: Unsigned32 / FloatingPoint32 | **Dynamic index:** CDS, p0170 | **Func. diagram:** 5610, 5650, 7010
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
-	-	3841[0]

Description: Sets the signal source for supplementary force 3.
Dependency: Refer to: p3842
Notice: The signal input is after the force limit (r1538, r1539). For vector drives, the signals that are entered are only limited by the current and power limits.
Note: The signal input is preferably used to enter the friction characteristic. The friction compensation is also effective if the velocity controller output reaches its force limits, but the current limits have still not been reached (this only applies to vector drives).

p1569[0...n] CI: Supplementary torque 3 / M_suppl 3

SERVO, VECTOR (n/M)

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: Unsigned32 / FloatingPoint32 | **Dynamic index:** CDS, p0170 | **Func. diagram:** 5610, 5650, 6710, 7010
P-Group: Functions | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
-	-	3841[0]

Description: Sets the signal source for supplementary torque 3.
Dependency: Refer to: p3842
Notice: The signal input is after the torque limit (r1538, r1539). For vector drives, the signals that are entered are only limited by the current and power limits.
Note: The signal input is preferably used to enter the friction characteristic. The friction compensation is also effective if the speed controller output reaches its torque limits, but the current limits have still not been reached (this only applies to vector drives).

p1570[0...n] CO: Flux setpoint / Flux setpoint

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6722
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: PEM, REL | **Expert list:** 1

Min	Max	Factory setting
50.0 [%]	200.0 [%]	100.0 [%]

Description: Sets the flux setpoint referred to rated motor flux.

Notice: A BICO interconnection to a parameter that belongs to a drive object always acts on the effective data set.

Note: For p1570 > 100 %, the flux setpoint increases as a function of the load from 100 % (no-load operation) to the setting in p1570 (above rated motor torque).

p1571[0...n] CI: Supplementary flux setpoint / Suppl flux setp

VECTOR (n/M)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / FloatingPoint32 | **Dynamic index:** CDS, p0170 | **Func. diagram:** 6725
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: ASM, PEM, REL | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the supplementary flux setpoint.

Notice: Low flux setpoints can cause the drive to stall at higher loads. This is the reason that the flux setpoint should only be adapted for slow load changes.

Note: The supplementary flux setpoint is limited to +/- 50 %.

p1572[0...n] Supplementary flux setpoint / Suppl flux setp

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: ASM, PEM, REL | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	100.0 [%]	0.0 [%]

Description: Sets the supplementary flux setpoint for the flux controller. The value is referred to the rated motor flux.

Notice: The parameter should be set back to 0% again for normal closed-loop control operation.

Note: The parameter is used to optimize the flux controller. The current model is not influenced by the setting.

p1573[0...n] Flux threshold value magnetizing / Flux thresh mag

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6722
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: PEM, REL | **Expert list:** 1

Min	Max	Factory setting
10.0 [%]	200.0 [%]	100.0 [%]

Description: Sets the flux threshold value for enabling the speed setpoint and the end of the magnetizing display r0056.4.

Note: The parameter only has an influence if the flux actual value reaches the threshold value p1573 more quickly during magnetizing than the time set in p0346.
During flying restart (refer to p1200) the parameter has no influence.

p1574[0...n] Voltage reserve dynamic / V_reserve dyn

VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_LIM_REF | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6723, 6724
P-Group: Closed-loop control | **Units group:** 5_1 | **Unit selection:** p0505
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.0 [Vrms]	150.0 [Vrms]	10.0 [Vrms]

Description: Sets a dynamic voltage reserve.

Note: In the field weakening range, it must be expected that the control dynamic performance is somewhat restricted due to the limited possibilities of controlling/adjusting the voltage. This can be improved by increasing the voltage margin (reserve). Increasing the reserve reduces the steady-state maximum output voltage (r0071).

p1576[0...n] Flux boost, adaptation speed, lower / Flux boost n lower

VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** 3_1 | **Unit selection:** p0505
Not for motor type: ASM, PEM, REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [rev/min]	210000.00 [rev/min]	0.00 [rev/min]

Description: Sets the lower adaptation speed of the flux boost. Below this speed, p1570 is set as reference (setpoint) flux.

p1577[0...n] Flux boost adaptation speed, upper / Flux boost n upper

VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: ASM, PEM, REL | **Expert list:** 1

Min	Max	Factory setting
1.0 [%]	10000.0 [%]	200.0 [%]

Description: Sets the upper adaptation speed of the flux boost. Above this speed, the rated motor flux (100%) is set as reference (setpoint) flux.

Dependency: The parameter value refers to the lower adaptation speed of the flux boost.
Refer to: p1576

p1578[0...n] Flux reduction flux decrease smoothing time / Flux red dec t_sm

SERVO

Can be changed: U, T | **Calculated:** CALC_MOD_REG | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5722
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: PEM, REL, FEM | **Expert list:** 1

Min	Max	Factory setting
20 [ms]	5000 [ms]	200 [ms]

Description: Sets the smoothing time for the flux setpoint when decreasing the flux due to flux reduction (p1581 < 100 %).

Dependency: Refer to: p1579, p1581

p1579[0...n] Flux reduction flux build-up smoothing time / Flux red up t_sm

SERVO

Can be changed: U, T | **Calculated:** CALC_MOD_REG | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5722
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: PEM, REL, FEM | **Expert list:** 1

Min	Max	Factory setting
0 [ms]	5000 [ms]	4 [ms]

Description: Sets the smoothing time for the flux setpoint for the flux build-up due to flux reduction (p1581 < 100 %).

Dependency: Refer to: p1578, p1581

Note: An excessively long smoothing time extends the time until the maximum torque is reached from the no-load phase.

p1580[0...n] Efficiency optimization / Efficiency opt.

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6722
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: PEM, REL, FEM | **Expert list:** 1

Min	Max	Factory setting
0 [%]	100 [%]	0 [%]

Description: Sets the efficiency optimization. When optimizing the efficiency, the flux setpoint of the closed-loop control is adapted as a function of the load.

For p1580 = 100 %, under no-load operating conditions, the flux setpoint is reduced to 50 % of the rated motor flux.

Note: It only makes sense to activate this function if the dynamic response requirements of the speed controller are low. In order to avoid oscillations, if required, the speed controller parameters should be adapted (increase Tn, reduce Kp).

Further, the smoothing time of the flux setpoint filter (p1582) should be increased.

p1581[0...n] Flux reduction factor / Flux red factor

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5722
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: PEM, REL, FEM | **Expert list:** 1

Min	Max	Factory setting
20 [%]	100 [%]	100 [%]

Description: Sets the factor to which the flux is reduced under no-load conditions. For a value of 100%, the flux reduction is switched out.

This parameter refers to the flux saved in the field weakening characteristic.

By reducing the flux, the losses in induction motors can be reduced under no-load conditions or at low torques. However, the time it takes to reach the maximum torque is extended.

Recommend.: For induction motors with closed rotor slots, we recommend that the integral time of the current controller (p1717) is e.g. increased to three times the value.

For stable operation, the maximum field-weakening factor in operation with an encoder must be less than 16 and in operation without an encoder must be less than 4. Lower field weakening factors are recommended. The field weakening factor is calculated as follows:

(p1082 * 100 % * 600 V) / (p0348 * p1581 * p0070)

In order to reduce losses due to magnetizing and de-magnetizing, we recommend that the smoothing times are adapted for flux decrease (p1578) and flux build-up (p1579).

In order to reduce the losses as a result of building-up and reducing the torque, we recommend that the torque setpoint is smoothed (current setpoint filter (p1656 ...) or speed actual value filter (p1441)).

Dependency: Refer to: p1578, p1579

Note: It only makes sense to activate this function if there are low dynamic requirements placed on the speed controller and there are frequent phases with a low load.

In order to avoid oscillations, if required, the speed controller parameters should be adapted (decrease Kp (p1460, p1470), increase Tn (p1462, p1472)).

When used without an encoder, flux reduction is not possible for induction motors with closed rotor slots.

p1582[0...n] Flux setpoint smoothing time / Flux setp T_smth

VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_REG | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6722
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
4 [ms]	5000 [ms]	15 [ms]

Description: Sets the smoothing time for the flux setpoint.

r1583 Flux setpoint smoothed / Flux setp smooth

VECTOR (n/M)

Can be changed: -
Calculated: -
Access level: 4
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 6722, 6723
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Displays the smoothed flux setpoint. The value is referred to the rated motor flux.

p1584[0...n] Field weakening operation, flux setpoint smoothing time / Field weak T_smth

VECTOR (n/M)

Can be changed: U, T
Calculated: CALC_MOD_REG
Access level: 3
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: 6722
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: PEM, REL
Expert list: 1

Min	Max	Factory setting
0 [ms]	20000 [ms]	0 [ms]

Description: Sets the smoothing time for the flux setpoint in the field-weakening range

Recommend.: Smoothing should be especially used if there is no regenerative feedback into the line supply. This means that the DC link voltage can quickly increase in regenerative operation

Note: Only the flux setpoint rise is smoothed

p1585[0...n] Flux actual value, smoothing time / Flux actVal T_smth

SERVO

Can be changed: U, T
Calculated: CALC_MOD_CON
Access level: 3
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: PEM, REL
Expert list: 1

Min	Max	Factory setting
0 [ms]	1000 [ms]	0 [ms]

Description: Sets the smoothing time for the flux actual value.

p1585[0...n] Flux actual value, smoothing time / Flux actVal T_smth

VECTOR (n/M)

Can be changed: U, T
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: ASM, PEM, REL
Expert list: 1

Min	Max	Factory setting
0 [ms]	1000 [ms]	0 [ms]

Description: Sets the smoothing time for the flux actual value.

p1586[0...n] Field weakening characteristic, scaling / Field weak scal

VECTOR (n/M)

Can be changed: U, T
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: REL, FEM
Expert list: 1

Min	Max	Factory setting
80.0 [%]	120.0 [%]	100.0 [%]

Description: Sets the scaling of the pre-control characteristic for the start of field weakening.
For values above 100% and for partial load situations, the field weakening starts at higher speeds.

Note: If the start of field weakening is shifted to lower speeds, then the voltage reserve is increased for partial load situations.
If the start of field weakening is shifted to higher speeds, the voltage reserve is appropriately reduced so that for fast load changes, it can be expected that this will have a negative impact on the dynamic performance.

r1589 Field-weakening current, pre-control value / FieldWkCurrPrectrl

VECTOR (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 6724

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the output of the field weakening controller (synchronous motor) or the output of the flux controller (separately-excited synchronous motor, induction motor).

Index: [0] = PI output
[1] = I output

p1594[0...n] Field-weakening controller, P gain / Field_ctrl Kp

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6724
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: ASM, REL, FEM | **Expert list:** 1

Min	Max	Factory setting
0.00	1000.00	0.00

Description: Sets the P gain of the field-weakening controller.

p1596[0...n] Field weakening controller integral-action time / Field_ctrl Tn

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6723, 6724
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
10 [ms]	10000 [ms]	50 [ms]

Description: Sets the integral-action time of the field-weakening controller.

r1597 CO: Field weakening controller output / Field_ctrl output

VECTOR (n/M)

Can be changed: - | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 6723
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: PEM, REL | **Expert list:** 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Displays the output of the field weakening controller. The value is referred to the rated motor flux.

r1598 CO: Total flux setpoint / Flux setp total

VECTOR (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 6714, 6723, 6724, 6725, 6726, 8018
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [%]	- [%]	- [%]

Description: Displays the effective flux setpoint.
The value is referred to the rated motor flux.

p1599[0...n] Flux controller, excitation current difference / Flux ctr I_exc_dif

VECTOR (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [%]	100.0 [%]	3.0 [%]

Description: Sets the permissible difference between the actual excitation current and the excitation current setpoint. The excitation current flux controller is active within this difference.
If the difference lies outside the specified limit value, then the I component of the excitation current flux controller is kept. Instead of this, for the flux controller of the field-generating current, an additional I controller is switched in (integral time according to p1592).
If the difference again lies within the bandwidth, the I component of the excitation current flux controller is re-activated and the I component of the flux controller of the field-generating current is reduced as an exponential function with respect to time. The reduction of the I component over time depends on the rotor time constant (r0384).

p1600[0...n] P flux controller, P gain / P flux ctrl Kp

VECTOR (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0	999999.0	10.0

Description: Sets the proportional gain of the P flux controller for separately-excited synchronous motors.
Note: The value is automatically pre-assigned dependent on the motor when the drive system is first commissioned.
When calculating controller parameter (p0340 = 4), this value is re-calculated.

r1602 CO: Flux controller P output / Flux ctrl P outp

VECTOR (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** 6_2	**Unit selection:** p0505
	Not for motor type: ASM, PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Arms]	- [Arms]	- [Arms]

Description: Displays the output of the P flux controller for separately-excited synchronous motors (FEM).

p1609[0...n] Current setpoint for I/f operation / I_set I/f oper

VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6727
P-Group: Closed-loop control | **Units group:** 6_2 | **Unit selection:** p0505
Not for motor type: ASM, PEM, REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the stator current setpoint for operation of separately-excited synchronous motors (FEM) in the operating mode I/f (p1300 = 18).

p1610[0...n] Torque setpoint static (SLVC) / M_set static

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 1710, 6721, 6722
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL, FEM | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	200.0 [%]	50.0 [%]

Description: Sets the static torque setpoint for sensorless vector control (SLVC). This parameter is entered as a percentage referred to the rated motor torque (r0333).

For sensorless vector control, when the motor model is shut down, an absolute current is impressed. p1610 represents the maximum load that occurs at a constant setpoint speed.

Notice: p1610 should always be set to at least 10 % higher than the maximum steady-state load that can occur.

Note: For p1610 = 0%, a current setpoint is calculated that corresponds to the no-load case (rated magnetizing current).

For p1610 = 100 %, a current setpoint is calculated that corresponds to the rated motor torque.

p1611[0...n] Supplementary accelerating torque (SLVC) / M_suppl_accel

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 1710, 6721, 6722
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL, FEM | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	200.0 [%]	0.0 [%]

Description: Enters the dynamic torque setpoint for the low-speed range for sensorless vector control (SLVC). This parameter is entered as a percentage referred to the rated motor torque (r0333).

Note: When accelerating and braking p1611 is added to p1610 and the resulting total torque is converted into an appropriate current setpoint and controlled.

For pure accelerating torques, it is always favorable to use the torque pre-control of the speed controller (p1496).

p1612[0...n] Current setpoint, open-loop control, encoderless / I_setCtrEncoderl

SERVO

Can be changed: U, T | **Calculated:** CALC_MOD_REG | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** 6_2 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the current setpoint for controlled (open-loop) encoderless operation.

Note: The value is effective at speeds less than p1755 and represents a reserve for a possibly existing load torque or torque error in the moment of inertia.

p1616[0...n] Current setpoint smoothing time / I_set T_smooth

VECTOR (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 6721, 6722
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL, FEM		**Expert list:** 1
	Min	**Max**	**Factory setting**
	4 [ms]	10000 [ms]	40 [ms]

Description: Sets the smoothing time for the current setpoint.
The current setpoint is generated from p1610 and p1611.

Note: This parameter is only effective in the range where current is impressed for sensorless vector control.

r1618 Current model controller, pre-control / I_mod_ctrl prectrl

VECTOR (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** 6_2	**Unit selection:** p0505
	Not for motor type: ASM, PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Arms]	- [Arms]	- [Arms]

Description: Displays the pre-control value of the current model controller. It involves a magnetizing current in the d-direction.

p1619[0...n] Setpoint/actual value tracking threshold / SetAct track thrsh

VECTOR (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 6727
	P-Group: Closed-loop control	**Units group:** 6_2	**Unit selection:** p0505
	Not for motor type: ASM, PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Threshold for setpoint - actual value tracking of the stator current in the q direction of the current model.

p1620[0...n] Stator current, minimum / I_stator min

VECTOR (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 6727
	P-Group: Closed-loop control	**Units group:** 6_2	**Unit selection:** p0505
	Not for motor type: ASM, PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-10000.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the minimum stator current for separately-excited synchronous motors (FEM).
A negative value means that the field-generating stator current (d-axis) has a negative sign. The valid value is internally limited to 50% of the rated motor current (p0305).

p1621[0...n] Changeover speed, inner cos phi = 1 / n_chngov cos phi=1

VECTOR (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 6727
	P-Group: Closed-loop control	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: ASM, PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [rev/min]	210000.00 [rev/min]	0.00 [rev/min]

Description: Sets the speed where a change is made from the inner to the outer cos phi = 1.
If the value that is entered exceeds the rated speed, then a change is made to the inner cos phi = 1 over the complete speed range.

p1622[0...n] Field-generating current setpoint smoothing time constant / Id_setp T_smth

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6727
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: ASM, PEM, REL | **Expert list:** 1

Min	Max	Factory setting
0.1 [ms]	200.0 [ms]	20.0 [ms]

Description: Sets the smoothing time constant for the setpoint of the field-generating current components.
The current filtered in this way is included in the calculation of the cos phi.

r1623 Field-generating current setpoint (steady-state) / Id_set stationary

VECTOR (n/M)

Can be changed: - | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 6723
P-Group: Displays, signals | **Units group:** 6_2 | **Unit selection:** p0505
Not for motor type: PEM, REL | **Expert list:** 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the steady-state field generating current setpoint (Id_set).

r1624 Field-generating current setpoint, total / Id_setp total

VECTOR (n/M)

Can be changed: - | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 6640, 6721, 6723, 6727
P-Group: Displays, signals | **Units group:** 6_2 | **Unit selection:** p0505
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the limited field-generating current setpoint (Id_set).
This value comprises the steady-state field-generating current setpoint r1623 and a dynamic component that is only set when changes are made to the flux setpoint.

p1625[0...n] Excitation current setpoint calibration / I_exc_setp cal

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6727
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: ASM, PEM, REL | **Expert list:** 1

Min	Max	Factory setting
10.0 [%]	200.0 [%]	100.0 [%]

Description: Gain factor to weight the excitation current setpoint.

r1626 CO: Excitation current setpoint / I_exc_setp

VECTOR (n/M)

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 6727
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: ASM, PEM, REL | **Expert list:** 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Displays the calculated excitation current setpoint.
Dependency: Refer to: p0390

r1627 CO: Current model load angle / I_mod load angle

VECTOR (n/M)

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 6727
P-Group: Closed-loop control
Units group: -

Not for motor type: ASM, PEM, REL
Expert list: 1

Min	Max	Factory setting
- [°]	- [°]	- [°]

Description: Displays the load angle of the current model.

p1628[0...n] Current model controller, dynamic factor / I_mod_ctr dyn_fact

VECTOR (n/M)

Can be changed: U, T
Calculated: CALC_MOD_CON
Access level: 3
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: 6727
P-Group: Functions
Units group: -
Unit selection: -
Not for motor type: ASM, PEM, REL
Expert list: 1

Min	Max	Factory setting
1 [%]	400 [%]	50 [%]

Description: Dynamic factor of the model controller in the current model

p1629[0...n] Current model controller P gain / I_mod_ctrl Kp

VECTOR (n/M)

Can be changed: U, T
Calculated: CALC_MOD_CON
Access level: 4
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: 6727
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: ASM, PEM, REL
Expert list: 1

Min	Max	Factory setting
0.000	100000.000	0.000

Description: Sets the proportional gain of the current model controller. This value is automatically preset using p3900 or p0340 when commissioning has been completed.

p1630[0...n] Current model controller integral time / I_ctrl Tn

VECTOR (n/M)

Can be changed: U, T
Calculated: CALC_MOD_CON
Access level: 4
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: 6727
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: ASM, PEM, REL
Expert list: 1

Min	Max	Factory setting
0.00 [ms]	10000.00 [ms]	0.00 [ms]

Description: Sets the proportional gain of the current model controller. This value is automatically preset using p3900 or p0340 when commissioning has been completed.

r1631 Current model controller, P gain effective / I_mod ctrl Kp eff

VECTOR (n/M)

P-Group: Commands | **Units group:** - | **Unit selection:** -
Not for motor type: ASM, PEM, REL | **Expert list:** 1

Min	Max	Factory setting
2.0 [s]	1300.0 [s]	20.0 [s]

Description: Sets the monitoring time of the excitation.
After an ON command, the feedback signal must be received within this monitoring time.

Note: After the on command for the excitation (r1648.0 = 1), its feedback signal must be available at r1649.1 within this monitoring time (BI: p1645[1]).
The same monitoring time is effective after the excitation is enabled for operation (r1648.3 = 1) up to the feedback signal "excitation operational" (r1649.2 = 1, BI: p1645[2]).

p1647 Excitation switch-off delay time / Exc t_off

VECTOR (n/M)

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 6495
P-Group: Commands | **Units group:** - | **Unit selection:** -
Not for motor type: ASM, PEM, REL | **Expert list:** 1

Min	Max	Factory setting
0.5 [s]	5.0 [s]	0.8 [s]

Description: Sets the switch-off delay time to shut down the excitation equipment.

Note: The delay time starts if, when powering down, r0863.0 = 0.
r1648.0 and r1648.3 are reset at the end of the delay time.

r1648.0...11 CO/BO: Excitation, control word / Excitation STW

VECTOR (n/M)

Can be changed: - | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** 6495
P-Group: Displays, signals | **Units group:** - | **Unit selection:** -
Not for motor type: ASM, PEM, REL | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the control word for the excitation equipment.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Power up excitation	Yes	No	-
01	Excitation no OFF2	Yes	No	-
02	Excitation no OFF3	Yes	No	-
03	Excitation operation enable	Yes	No	-
07	Excitation acknowledge fault	Yes	No	-
10	Master control by excitation equipment	Yes	No	-
11	ccw rotating field excitation invert excitation current setpoint	Yes	No	-

r1649.0...7 CO/BO: Excitation status word / Excitation ZSW

VECTOR (n/M)

Can be changed: - | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** 6495
P-Group: Displays, signals | **Units group:** - | **Unit selection:** -
Not for motor type: ASM, PEM, REL | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the status word of the excitation equipment.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Excitation ready to be powered up feedback signal	Yes	No	-
	01	Excitation ready feedback signal	Yes	No	-
	02	Excitation operational feedback signal	Yes	No	-
	03	Excitation group signal fault	Yes	No	-
	07	Excitation group signal alarm	Yes	No	-

Dependency: Refer to: p1645

r1650 Current setpoint force-generating before filter / Iq_set before filt

SERVO (Lin)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 5710
P-Group: Closed-loop control **Units group:** 6_2 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the force generating current setpoint Iq_set after the force limits and the clock cycle interpolation is ahead of the current setpoint filters.

r1650 Current setpoint torque-generating before filter / Iq_set before filt

SERVO, VECTOR (n/M)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 5710, 6710
P-Group: Closed-loop control **Units group:** 6_2 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the torque generating current setpoint Iq_set after the torque limits and the clock cycle interpolation is ahead of the current setpoint filters.

r1651 CO: Force setpoint, function generator / F_set FG

SERVO (Lin)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 5710
P-Group: Closed-loop control **Units group:** 8_1 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [N]	- [N]	- [N]

Description: Displays the force setpoint of the function generator.

r1651 CO: Torque setpoint, function generator / M_set FG

SERVO, VECTOR (n/M)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 5710
P-Group: Closed-loop control **Units group:** 7_1 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [Nm]	- [Nm]	- [Nm]

Description: Displays the torque setpoint of the function generator.

p1653[0...n] Current setpoint torque-generating smoothing time minimum / Isq_s T_smth min

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6710
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: PEM, REL | **Expert list:** 1

Min	Max	Factory setting
0.1 [ms]	20.0 [ms]	0.1 [ms]

Description: Sets the minimum smoothing time constant for the setpoint of the torque-generating current components.

p1654[0...n] Curr. setpoint torque-gen. smoothing time field weakening range / Isq_s T_smth FW

VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6710
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: PEM, REL | **Expert list:** 1

Min	Max	Factory setting
0.1 [ms]	50.0 [ms]	4.8 [ms]

Description: Sets the smoothing time constant for the setpoint of the torque-generating current components.
Note: The smoothing time does not become effective until the field-weakening range is reached.

p1655[0...1] CI: Current setpoint filter natural frequency tuning / I_set_filt f_n

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 1710, 6710
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for tuning the natural frequency of the current setpoint filter.
Index: [0] = Filter 1
[1] = Filter 2

p1656[0...n] Activates current setpoint filter / I_setp_filt act

SERVO

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5710
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0001 bin

Description: Setting for activating/de-activating the current setpoint filter.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Filter 1	Active	Inactive	-
01	Filter 2	Active	Inactive	-
02	Filter 3	Active	Inactive	-
03	Filter 4	Active	Inactive	-

Dependency: The individual current setpoint filters are parameterized as of p1657.
Note: If not all of the filters are required, then the filters should be used consecutively starting from filter 1.

p1656[0...n] Activates current setpoint filter / I_setp_filt act

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6710
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
-	-	0001 bin

Description: Setting for activating/de-activating the current setpoint filter.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Filter 1	Active	Inactive	-
01	Filter 2	Active	Inactive	-

Dependency: The individual current setpoint filters are parameterized as of p1657.

Note: If not all of the filters are required, then the filters should be used consecutively starting from filter 1.

p1657[0...n] Current setpoint filter 1 type / I_set_filt 1 Typ

SERVO, VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: Integer16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5710, 6710
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
1	2	1

Description: Sets the current setpoint filter 1 as low pass (PT2) or as extended general 2nd-order filter.

Value:
1: Low pass: PT2
2: General 2nd-order filter

Dependency: Current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.

Note: For an extended general 2nd-order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed.

The denominator damping can be determined from the equation for the 3 dB bandwidth:

f_3dB bandwidth = 2 * D_denominator * f_bandstop frequency

p1658[0...n] Current setpoint filter 1 denominator natural frequency / I_set_filt 1 fn_n

SERVO, VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5710, 6710
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.5 [Hz]	16000.0 [Hz]	1999.0 [Hz]

Description: Sets the denominator natural frequency for current setpoint filter 1 (PT2, general filter).

Dependency: Current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.

p1659[0...n] Current setpoint filter 1 denominator damping / I_set_filt 1 D_n

SERVO, VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5710, 6710
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.001	10.000	0.700

Description: Sets the denominator damping for current setpoint filter 1.

Dependency: Current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.

p1660[0...n] Current setpoint filter 1 numerator natural frequency / I_set_filt 1 fn_z

SERVO, VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5710, 6710
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.5 [Hz]	16000.0 [Hz]	1999.0 [Hz]

Description: Sets the numerator natural frequency for current setpoint filter 1 (general filter).
Dependency: Current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.

p1661[0...n] Current setpoint filter 1 numerator damping / I_set_filt 1 D_z

SERVO, VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5710, 6710
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.000	10.000	0.700

Description: Sets the numerator damping for current setpoint filter 1.
Dependency: Current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.

p1662[0...n] Current setpoint filter 2 type / I_set_filt 2 Typ

SERVO, VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5710, 6710
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
1	2	1

Description: Sets the current setpoint filter 2 as low pass (PT2) or as extended general 2nd-order filter.
Value:
1: Low pass: PT2
2: General 2nd-order filter
Dependency: Current setpoint filter 2 is activated via p1656.1 and parameterized via p1662 ... p1666.
Note: For an extended general 2nd-order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed.
The denominator damping can be determined from the equation for the 3 dB bandwidth:
f_3dB bandwidth = 2 * D_denominator * f_bandstop frequency

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.000	10.000	0.700

Description: Sets the numerator damping for current setpoint filter 4.
Dependency: Current setpoint filter 4 is activated via p1656.3 and parameterized via p1672 ... p1676.

p1699 Filter data acceptance / Filt data accept

SERVO, VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Activates data acceptance for parameter changes for the filter.
p1699 = 0:
The new filter data are immediately accepted.

p1699 = 1:
The new filter data are only accepted when this parameter is reset.

Dependency: Refer to: p1414, p1415, p1416, p1417, p1418, p1419, p1420, p1421, p1422, p1423, p1424, p1425, p1426, p1656, p1657, p1658, p1659, p1660, p1661, p1662, p1663, p1664, p1665, p1666, p1667, p1668, p1669, p1670, p1671, p1672, p1673, p1674, p1675, p1676

p1701[0...n] Current controller reference model dead time / I_ctrRefMod t_dead

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5714
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0	1.0	1.0

Description: Sets the fractional dead time for the current controller reference model.
This parameter emulates the computing dead time of the proportionally controlled current control loop.

Note: Dead time = p1701 * p0115[0]

p1702[0...n] Isd current controller pre-control scaling / Isd_ctr_prectrScal

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6714
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: ASM, REL | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	200.0 [%]	70.0 [%]

Description: Sets the scaling of the dynamic current controller pre-control for the flux-generating current component Isd.

Note: The parameter is effective for permanent and separately-excited synchronous motors.

p1703[0...n] Isq current controller pre-control scaling / Isq_ctr_prectrScal

VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6714
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	200.0 [%]	70.0 [%]

Description: Sets the scaling of the dynamic current controller pre-control for the torque/force-generating current component Isq.

p1704[0...n] Isq current controller pre-control EMF scaling / Isq_ctrl EMF scal

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6714, 6726
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: ASM, PEM, REL | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	200.0 [%]	100.0 [%]

Description: Sets the scaling of the EMF pre-control for the Isq current controller.

p1705[0...n] Isq controller setpoint/actual value tracking threshold / Isq ctrl trk thrsh

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6714, 6726

Not for motor type: ASM, PEM, REL | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	100.0 [%]	100.0 [%]

Description: Sets the threshold for the setpoint/actual value tracking of the EMF pre-control of the Isq current controller.

p1715[0...n] Current controller P gain / I_ctrl Kp

SERVO

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 5714, 7017
P-Group: Closed-loop control | **Units group:** 18_1 | **Unit selection:** p0505
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.000 [V/A]	100000.000 [V/A]	0.000 [V/A]

Description: Sets the proportional gain of the current controller for the lower adaptation current range.
This value is automatically preset using p3900 or p0340 when commissioning has been completed.
Dependency: Refer to: p0391, p0392, p0393
Note: For p0393 = 100 %, the current controller adaptation is disabled and p1715 is effective over the entire range.

p1715[0...n] Current controller P gain / I_ctrl Kp

VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 1710, 6714, 7017
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.000	100000.000	0.000

Description: Sets the proportional gain of the current controller for the lower adaptation current range.
This value is automatically preset using p3900 or p0340 when commissioning has been completed.
Dependency: Refer to: p0391, p0392, p0393
Note: For p0393 = 100 %, the current controller adaptation is disabled and p1715 is effective over the entire range.

p1717[0...n] Current controller integral-action time / I_ctrl Tn

SERVO, VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 1710, 5714, 6714, 7017
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	1000.00 [ms]	2.00 [ms]

Description: Sets the integral-action time of the current controller.
Dependency: Refer to: p1715

r1718 CO: Isq controller output / Isq_ctrl outp

VECTOR (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 6714

	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the current output of the Isq current controller (torque/force generating current, PI controller).
The value contains the proportional and integral components of the PI controller.

r1719 Isq controller integral component / Isq_ctrl I_comp

VECTOR (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 6714
	P-Group: Closed-loop control	**Units group:** 5_1	**Unit selection:** p0505
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the integral component of the Isq current controller (torque/force-generating current, PI controller).

r1723 CO: Isd controller output / Isd_ctrl outp

VECTOR (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 6714
	P-Group: Closed-loop control	**Units group:** 5_1	**Unit selection:** p0505
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the current output of the Isd current controller (flux-generating current, PI controller).
The value contains the proportional and integral components of the PI controller.

r1724 Isd controller integral component / Isd_ctrl I_comp

VECTOR (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 6714
	P-Group: Closed-loop control	**Units group:** 5_1	**Unit selection:** p0505
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the integral component of the Isd current controller (flux-generating current, PI controller).

r1725 Isd controller integral component limit / Isd_ctrl I_limit

VECTOR (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 6714
	P-Group: Closed-loop control	**Units group:** 5_1	**Unit selection:** p0505
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the limit value for the integral component of the Isd current controller.

p1726[0...n] Quadrature arm decoupling, scaling / Transv_decpl scal

VECTOR (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6714
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	200.0 [%]	75.0 [%]

Description: Sets the scaling of the quadrature arm decoupling

Note: This parameter is ineffective for sensorless vector control. In this case, p1727 is always used. If p1726 is set to 0, then the quadrature de-coupling is de-activated. The integral component of the Isd current controller remains effective in the complete speed control range.

For the closed-loop control of synchronous motors, this parameter is used to scale the current controller de-coupling.

p1727[0...n] Quadrature arm decoupling at voltage limit scaling / TrnsvDecplVmaxScal

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6714
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.0 [%]	200.0 [%]	50.0 [%]

Description: Sets the scaling of quadrature arm decoupling when the voltage limit is reached.

r1728 De-coupling voltage, in-line axis / V_dir-axis_decoupl

VECTOR (n/M)

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 6714
P-Group: Closed-loop control | **Units group:** 5_1 | **Unit selection:** p0505
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the current output of the quadrature channel de-coupling for the d axis.

r1729 De-coupling voltage, quadrature axis / V_quad_decoupl

VECTOR (n/M)

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 6714
P-Group: Closed-loop control | **Units group:** 5_1 | **Unit selection:** p0505
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the current output of the quadrature channel de-coupling for the q axis.

r1732 CO: Direct-axis voltage setpoint / Direct V set

SERVO, VECTOR (n/M)

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 1590, 1630, 5714, 5730, 6714, 6731
P-Group: Closed-loop control | **Units group:** 5_1 | **Unit selection:** p0505
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the direct-axis voltage setpoint Ud.

r1733 CO: Quadrature-axis voltage setpoint / Quad V set

SERVO, VECTOR (n/M)

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 1590, 1630, 5714, 5730, 6714, 6731
P-Group: Closed-loop control
Units group: 5_1
Unit selection: p0505
Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the quadrature-axis component of voltage setpoint Uq.

p1740[0...n] Gain resonance damping for encoderless closed loop control / Gain res_damp

VECTOR (n/M)

Can be changed: U, T
Calculated: CALC_MOD_CON
Access level: 3
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: REL, FEM
Expert list: 1

Min	Max	Factory setting
0.000	10.000	0.025

Description: Defines the gain of the controller for resonance damping for operation with sensorless vector control in the range that current is impressed.

p1744[0...n] Motor model speed threshold stall detection / MotMod n_thr stall

VECTOR (n/M)

Can be changed: U, T
Calculated: CALC_MOD_REG
Access level: 3
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: -
P-Group: Closed-loop control
Units group: 3_1
Unit selection: p0505
Not for motor type: REL, FEM
Expert list: 1

Min	Max	Factory setting
0.00 [rev/min]	210000.00 [rev/min]	100.00 [rev/min]

Description: Sets the speed threshold value to detect a stalled motor.
If the adaptation controller output exceeds the parameterized speed difference, then bit 11 in status word p1408 is set.

Dependency: If a stalled drive is detected (p1408.11 set), fault 7902 is output after the delay time in p2178.
Refer to: p2178

Note: Speed monitoring is only effective in operation with a speed encoder (refer to p1300).

p1745[0...n] Motor model error threshold stall detection / MotMod ThreshStall

VECTOR (n/M)

Can be changed: U, T
Calculated: CALC_MOD_REG
Access level: 3
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0.0 [%]	1000.0 [%]	5.0 [%]

Description: Sets the fault threshold in order to detect a motor that has stalled.
If the error signal (r1746) exceeds the parameterized error threshold, then bit 12 in status word p1408 is set.

Dependency: If a stalled drive is detected (p1408.12 set), fault 7902 is output after the delay time set in p2178.
Refer to: p2178

Note: Monitoring is only effective in the low-speed range (below p1755 * (100% - p1756)).

r1746 Motor model error signal stall detection / MotMod sig stall

VECTOR (n/M)

Can be changed: -
Calculated: -
Access level: 4
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Signal to initiate stall detection

Note: The signal is not calculated while magnetizing and only in the low speed range (below p1755 * (100 % - p1756)).

p1750[0...n] Motor model configuration / MotMod config

VECTOR (n/M)

Can be changed: U, T
Calculated: CALC_MOD_LIM_REF
Access level: 3
Data type: Unsigned8
Dynamic index: DDS, p0180
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: PEM, REL, FEM
Expert list: 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the configuration for the motor model.

Bit 0 = 1: Forces open-loop speed controlled starting.

Bit 1 = 1: Forces the system to pass through frequency zero, open-loop controlled.

Bit 2 = 1: Drive remains in full closed-loop control mode, even at zero frequency.

Bit 3 = 1: Motor model evaluates the saturation characteristic.

Bit 4 = 1: Time-controlled change between the current and observer model.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Controlled start	Yes	No	-
01	Controlled through 0 Hz	Yes	No	-
02	Closed-loop ctrl oper. down to zero freq. for passive loads	Yes	No	-
03	Motor model Lh_pre = f(PsiEst)	Yes	No	-
04	Model changeover	Time controlled	Freq. controlled	-

Note: Bit 0 ... Bit 2 only have influence for sensorless vector control, bit 4 only for vector control with encoder. Bit 2 is pre-assigned depending on p0500.

Re bit 02 = 1:

The sensorless vector control is effective down to zero frequency. A change is not made into the open-loop speed controlled mode.

This operating mode is possible for passive loads. These include applications where the load itself does not generate any active torque and therefore only acts reactively to the drive torque of the induction motor.

If bit 2 is set to 1, then bit 3 is also automatically activated. Manual de-selection is possible and can make sense if, for third-party motors, the saturation characteristic (p1960) was not carried out. Generally, for standard SIEMENS motors, the already pre-assigned (default value) saturation characteristic is adequate.

For bit 2 = 1, the selection of bits 0 and 1 is ignored.

r1751 Motor model status / MotMod status

VECTOR (n/M)

Can be changed: -
Calculated: -
Access level: 3
Data type: Unsigned16
Dynamic index: -
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: PEM, REL, FEM
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the status of the motor model.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Controlled operation	Active	Inactive	6721
	01	Set ramp-function generator	Active	Inactive	-
	02	Stop RsLh adaptation	Yes	No	-
	03	Feedback	Active	Inactive	-
	04	Encoder operation	Active	Inactive	-
	05	Holding angle	Yes	No	-
	06	Acceleration criteria	Active	Inactive	-
	07	Set angular integrator PEM	No	Yes	-
	08	Stop Kt adaptation PEM	No	Yes	-
	09	PolID active PEM SLVC	No	Yes	-
	10	I injection PEM	No	Yes	-
	11	Speed controller output cannot be set to zero	Yes	No	-
	12	Rs adapt waits	Yes	No	-
	13	Motor operation	Yes	No	-
	14	Stator frequency sign	Positive	Negative	-
	15	Torque sign	Motor mode	Regenerative mode	-

p1752[0...n] Motor model with encoder changeover velocity / MotMod v_chgov enc

SERVO (Lin)

Can be changed: U, T | **Calculated:** CALC_MOD_REG | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** 4_1 | **Unit selection:** p0505
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.0 [m/min]	1000.0 [m/min]	1000.0 [m/min]

Description: Sets the velocity to change over the motor model for operation with encoder.
Dependency: Refer to: p1756
Note: Induction motor (ASM):
The motor model is influenced for speeds/velocities greater than p1752.
Synchronous motor (SRM):
A monitoring (F07412) is activated for speeds/velocities greater than p1752.
The motor model is additionally influenced when kT adaptation is activated (p1780.3 = 1).

p1752[0...n] Motor model changeover speed operation with encoder / MotMod n_chgov enc

SERVO

Can be changed: U, T | **Calculated:** CALC_MOD_REG | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** 3_1 | **Unit selection:** p0505
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0.0 [rev/min]	210000.0 [rev/min]	210000.0 [rev/min]

Description: Sets the speed to change over the motor model for operation with encoder.
Dependency: Refer to: p1756
Note: Induction motor (ASM):
The motor model is influenced for speeds/velocities greater than p1752.
Synchronous motor (SRM):
A monitoring (F07412) is activated for speeds/velocities greater than p1752.
The motor model is additionally influenced when kT adaptation is activated (p1780.3 = 1).

p1752[0...n] Motor model changeover speed operation with encoder / MotMod n_chgov enc

VECTOR	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [rev/min]	210000.0 [rev/min]	210000.0 [rev/min]

Description: Sets the speed to change over the motor model for operation with encoder.
Dependency: Refer to: p1756

p1753[0...n] Motor model changeover speed hysteresis operation with encoder / MotMod n_chgovHysE

VECTOR (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [%]	90.0 [%]	0.0 [%]

Description: Sets the hysteresis for the changeover speed of the motor model for operation with speed encoder.
Dependency: Refer to: p1752
Note: The value refers to p1752.

p1754[0...n] Flux angle difference smoothing time / Angle diff T_smth

VECTOR (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.1 [ms]	100.0 [ms]	5.0 [ms]

Description: Sets the smoothing time constant to filter the main flux angle difference from the voltage and current models. The filtered value is included in the calculation of the total flux angle.

p1755[0...n] Motor model changeover velocity encoderless operation / MotMod v_chgSnsorl

SERVO (Lin)	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** 4_1	**Unit selection:** p0505
	Not for motor type: REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [m/min]	1000.0 [m/min]	1000.0 [m/min]

Description: Sets the velocity to change over the motor model to encoderless operation.
Dependency: Refer to: p1756
Note: The changeover velocity applies for the changeover between open-loop and closed-loop control mode.

p1755[0...n] Motor model changeover speed encoderless operation / MotMod n_chgSnsorl

SERVO

Can be changed: U, T | **Calculated:** CALC_MOD_REG | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** 3_1 | **Unit selection:** p0505
Not for motor type: REL | | **Expert list:** 1

Min	Max	Factory setting
0.0 [rev/min]	210000.0 [rev/min]	210000.0 [rev/min]

Description: Sets the speed to change over the motor model to encoderless operation.
Dependency: Refer to: p1756
Note: The changeover speed applies for the changeover between open-loop and closed-loop control mode.

p1755[0...n] Motor model changeover speed encoderless operation / MotMod n_chgSnsorl

VECTOR

Can be changed: U, T | **Calculated:** CALC_MOD_REG | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** 3_1 | **Unit selection:** p0505
Not for motor type: REL, FEM | | **Expert list:** 1

Min	Max	Factory setting
0.0 [rev/min]	210000.0 [rev/min]	210000.0 [rev/min]

Description: Sets the speed to change over the motor model to encoderless operation.
Dependency: Refer to: p1756
Notice: The changeover speed represents the steady-state minimum speed up to which the motor model can be used in steady-state operation without encoder..
If the stability is not adequate close to the changeover speed, it may make sense to increase the parameter value.
Note: The changeover speed applies for the changeover between open-loop and closed-loop control mode.

p1756 Motor model changeover velocity hysteresis / MotMod v_chgov hys

SERVO (Lin)

Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL, FEM | **Expert list:** 1

Min	Max	Factory setting
0.01	10.00	0.70

Description: Sets the gain of the transient response controller when the motor model changes over from open-loop controlled operation to closed-loop controlled operation.
Note: Only for ASM and PSM in encoderless operation:
The settling range starts at 0.5 * p1755 * p1756.
For ASM it ends at p1755 * p1756 or at p1755, if p1759 is at the maximum value.
For PSM it always ends at p1755 * p1756.

p1758[0...n] Motor model changeover delay time closed/open-loop control / MotMod t cl_op

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: PEM, REL, FEM | **Expert list:** 1

Min	Max	Factory setting
100 [ms]	10000 [ms]	1000 [ms]

Description: Sets the minimum time for falling below the changeover speed when changing from closed-loop controlled operation to open-loop controlled operation.
Dependency: Refer to: p1755, p1756

p1759[0...n] Motor model changeover delay time open/closed loop control / MotMod t op_cl

VECTOR (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: PEM, REL, FEM | **Expert list:** 1

Min	Max	Factory setting
0 [ms]	2000 [ms]	0 [ms]

Description: Sets the minimum time for exceeding the changeover speed when changing from open-loop controlled operation to closed-loop controlled operation.
Dependency: Refer to: p1755, p1756

p1760[0...n] Motor model with encoder speed adaptation Kp / MotMod wE n_ada Kp

VECTOR (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL, FEM		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000	100000.000	1000.000

Description: Sets the proportional gain of the controller for speed adaptation with encoder

p1761[0...n] Motor model with encoder speed adaptation Tn / MotMod wE n_ada Tn

VECTOR (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL, FEM		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0 [ms]	1000 [ms]	4 [ms]

Description: Sets the integral-action time of the controller for speed adaptation with encoder

r1762 Motor model deviation component 1 / MotMod dev comp 1

VECTOR (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 6721, 6730, 6731

Description: Displays the P component of the controller for speed adaptation.

r1771 Motor model speed adaptation I comp. / MotMod n_adapt Tn

VECTOR (n/M)

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 6730
P-Group: Closed-loop control
Units group: 3_1
Unit selection: p0505
Not for motor type: REL, FEM
Expert list: 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the I component of the controller for speed adaptation.

r1773[0...1] Motor model slip speed / MotMod slip

VECTOR (n/M)

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: Closed-loop control
Units group: 3_1
Unit selection: p0505
Not for motor type: REL, FEM
Expert list: 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays estimated (speed) signals of the motor model:
r1773.0: Displays the estimated (mechanical) slip of the motor model.
r1773.1: Displays the estimated input speed of the motor model.

Index: [0] = Estimated slip speed
[1] = Estimated speed

p1774[0...n] Motor model, offset voltage compensation alpha / MotMod offs comp A

VECTOR (n/M)

Can be changed: U, T
Calculated: -
Access level: 4
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: PEM, REL, FEM
Expert list: 1

Min	Max	Factory setting
-5.000 [V]	5.000 [V]	0.000 [V]

Description: Sets the offset voltage in the alpha direction; this compensates the offset voltages of the drive converter/inverter at low speeds. The value is valid for the rated (nominal) pulse frequency of the Motor Module.

Note: The value is pre-set during the rotating measurement.

p1775[0...n] Motor model, offset voltage compensation beta / MotMod offs comp B

VECTOR (n/M)

Can be changed: U, T
Calculated: -
Access level: 4
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: PEM, REL, FEM
Expert list: 1

Min	Max	Factory setting
-5.000 [V]	5.000 [V]	0.000 [V]

Description: Sets the offset voltage in the beta direction; this compensates the offset voltages of the drive converter/inverter at low speeds. The value is valid for the rated (nominal) pulse frequency of the Motor Module.

Note: The value is pre-set during the rotating measurement.

r1776[0...2] Motor model status signals / MotMod status sig

VECTOR (n/M)

Can be changed: -
Calculated: -
Access level: 4
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: REL, FEM
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the internal status signals of the motor model:
r1776.0: Status, transition I/f operation in the closed-loop controlled mode.
r1776.1: Status, activation state feedback.
r1776.2: Status, frequency is zero.

Index: [0] = rampTrans
[1] = rampFB
[2] = rampFZero

r1778 Motor model flux angle difference / MotMod ang. diff.

SERVO

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
- [°]	- [°]	- [°]

Description: Induction motor (ASM):
Displays the difference between the motor model flux angle and the transformation angle.
Permanent magnet synchronous motor (PEM):
Displays the difference between the motor model angle and the encoder angle.

Notice: The display only makes sense for corrected actual value inversion, encoder pulse number and pole pair number.
Example:
Moving in encoderless operation at a speed not equal to zero and without load.
--> Check the sign of r0061 and r0063. If the sign is not equal, then change p0410.0.
--> Check the stationary value of r0061 and r0063. If the value is not equal, change the encoder pulse number (p0408) or pole pair number (p0314).

r1778 Motor model flux angle difference / MotMod ang. diff.

VECTOR (n/M)

Can be changed: -
Calculated: -
Access level: 4
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
- [°]	- [°]	- [°]

Description: Induction motor (ASM):
Displays the difference between the motor model flux angle and the transformation angle.
Permanent magnet synchronous motor (PEM):
Displays the difference between the motor model angle and the encoder angle.

r1779 Motor model absolute flux / MotMod abs flux

VECTOR (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: PEM, REL, FEM		**Expert list:** 1
	Min - [%]	**Max** - [%]	**Factory setting** - [%]

Description: Displays the absolute value of the flux of the motor model.

p1780[0...n] Motor/converter model adaptation configuration / MotMod adapt conf

SERVO (Exp M_ctrl)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL		**Expert list:** 1
	Min -	**Max** -	**Factory setting** 0000 0001 0010 1000 bin

Description: Sets the configuration for the adaptation circuit of the motor model.

Induction motor (ASM): Rs, Rr (only for operation with encoder), Lh and offset compensation.

Permanent magnet synchronous motor (PEM): kT

Bit field:

Bit	Signal name	1 signal	0 signal	FP
03	Select motor model PEM kT adaptation	Yes	No	-
05	Select ASM Rr adaptation (only with encoder)	Yes	No	-
07	Select T(valve) with Rs adaptation	Yes	No	-
08	Compensation voltage emulation error in the drive converter	Yes	No	-
09	kT(iq) characteristic active	Yes	No	-

Caution:

For the PEM kT adaptation (p1780.3) as well as the compensation of the voltage emulation error (p1780.8) and for the kT(iq) characteristic (p1780.9), the function module "Extended torque control" (r0108.1) should be activated.

Note:

ASM: Induction motor

PEM: Permanent magnet synchronous motor

The kT adaptation and the kT characteristic can be simultaneously selected.

Re kT adaptation (p1780.3 = 1):

- the kT adaptation is only active at a speed greater than the changeover speed with encoder (p1752).
- beforehand, an identification of the voltage emulation error must be started (p1909.14 = 1).
- If the electrical configuration (e.g. Motor Module, cable routing) or the pulse frequency (p1800) changes, then a new identification run must be carried out.
- To identify the voltage emulation error the Motor Module should still be warm.
- the motor temperature (r0035) should not change significantly (i.e. it should not be identified immediately after a load duty cycle).

Re kT(iq) characteristic (p1780.9 = 1):

- for the kT(iq) characteristic kT(iq) = kT + kT3 * iq^2 + kT5 * iq^4 + kT7 * iq^6 the parameters must first be identified (p1959.6 = 1) (kT: p0316, kT3: p0646, kT5: p0647, kT7: p0647).

p1780[0...n] Motor model adaptation configuration / MotMod adapt conf

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | | **Expert list:** 1

Min	Max	Factory setting
-	-	0010 0000 bin

Description: Sets the configuration for the adaptation circuit of the motor model.

Induction motor (ASM): Rs, Rr (only for operation with encoder), Lh and offset compensation.

Permanent magnet synchronous motor (PEM): kT

Bit field:

Bit	Signal name	1 signal	0 signal	FP
03	Select motor model PEM kT adaptation	Yes	No	-
05	Select ASM Rr adaptation (only with encoder)	Yes	No	-
07	Select T(valve) with Rs adaptation	Yes	No	-
08	Compensation voltage emulation error in the drive converter	Yes	No	-
09	kT(iq) characteristic active	Yes	No	-

Caution: For the PEM kT adaptation (p1780.3) as well as the compensation of the voltage emulation error (p1780.8) and for the kT(iq) characteristic (p1780.9), the function module "Extended torque control" (r0108.1) should be activated.

Note: ASM: Induction motor

PEM: Permanent magnet synchronous motor

The kT adaptation is only active at a speed greater than the changeover speed with encoder (p1752). Near the current limit when strongly saturating motors are operated.

p1780[0...n] Motor model adaptation configuration / MotMod adapt conf

VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | | **Expert list:** 1

Min	Max	Factory setting
-	-	0111 1100 bin

Description: Sets the configuration for the adaptation circuit of the motor model.

Induction motor (ASM): Rs, Rr (only for operation with encoder), Lh and offset compensation.

Permanent magnet synchronous motor (PEM): kT

Bit field:

Bit	Signal name	1 signal	0 signal	FP
01	Select motor model ASM Rs adaptation	Yes	No	-
02	Select motor model ASM Lh adaptation	Yes	No	-
03	Select motor model PEM kT adaptation	Yes	No	-
04	Select motor model, offset adaptation	Yes	No	-
05	Select ASM Rr adaptation (only with encoder)	Yes	No	-
06	Select pole wheel identification PEM encoderless	Yes	No	-
07	Select T(valve) with Rs adaptation	Yes	No	-

Note: ASM: Induction motor

PEM: Permanent magnet synchronous motor

When selecting the compensation of the valve interlocking via Rs (bit 7), the compensation in the gating unit is deactivated and is instead taken into account in the motor model.

In order to ensure that the corrective values of the Rs, Lh and kT adaptation (selected with bits 0 to 2) are correctly transferred on drive data set changeover, a separate motor number for each different motor must be entered in p0826.

Description: Displays the corrective value of the kT adaptation of the motor model for a permanent-magnet synchronous motor (PEM).

Dependency: Refer to: p1780, p1795

r1797[0...n] Motor model kT adaptation corrective value / MotMod kT corr

VECTOR (n/M)

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: 6731
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: ASM, REL, FEM
Expert list: 1

Min	Max	Factory setting
- [Nm/A]	- [Nm/A]	- [Nm/A]

Description: Displays the corrective value of the kT adaptation of the motor model for a permanent-magnet synchronous motor (PEM).

Dependency: Refer to: p0826, p1780

Note: The display of inactive data sets is refreshed only when data sets are changed over.

p1800[0...n] Pulse frequency / Pulse frequency

SERVO

Can be changed: U, T
Calculated: CALC_MOD_ALL
Access level: 2
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: -
P-Group: Modulation
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
1.000 [kHz]	32.000 [kHz]	4.000 [kHz]

Description: Sets the drive converter switching frequency.

This parameter is preset to the rated converter value when the drive is first commissioned.

Dependency: The pulse frequency can, depending on the current controller sampling time (p0115[0]) assume the following values.

a) p1800 = 1000 / (p0115[0] * n) with n = 2, 3, 4

b) p1800 = 1000 * n / p0115[0] with n = 1, 2, 3, 4, ...

Example:

p0115[0] = 125 µs --> p1800 = 2, 2.6, 4 kHz (from equation a)

p0115[0] = 125 µs --> p1800 = 8, 16 kHz (from equation b)

Possible setting values can be taken from r0114 (if p0009 = p0010 = 0).

Refer to: r0110, r0111, p0112, p0113, r0114, p0115, p0230, p1817

Note: The maximum possible pulse frequency is also determined by the power unit being used.

When the pulse frequency is increased, depending on the particular power unit, the maximum output current can be reduced (de-rating, refer to r0067).

If p1800 is changed while commissioning (p0009, p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1800 have been changed by a parameter that was set when the drive was commissioned (e.g. p1082).

For encoderless operation (p1404 = 0 or p1300 = 20), the following conditions apply:

p1800 = 1 / (2 * p0115[0]) or

p1800 >= n / p0115[0], n = 1, 2, ...

For motors with a low power rating (< 300 W) we recommend that p1800 is set acc. to the second condition.

p1800[0...n] Pulse frequency / Pulse frequency

VECTOR

Can be changed: U, T
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: -
P-Group: Modulation
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
1.000 [kHz]	16.000 [kHz]	4.000 [kHz]

Description: Sets the drive converter switching frequency.

This parameter is preset to the rated converter value when the drive is first commissioned.

Dependency: The pulse frequency can, depending on the current controller sampling time (p0115[0]) assume the following values.

a) p1800 = 1000 / (p0115[0] * 2) and

b) p1800 = 1000 * n / p0115[0] with n = 1, 2, 3, ...

Example:

p0115[0] = 250 µs --> p1800 = 2, 4, 8, 12, 16 kHz

Possible setting values can be taken from r0114 (if p0009 = p0010 = 0).

If wobbulation is selected via parameter P1810.2, while the pulses are being enabled, the pulse frequency can only be changed to values that correspond to the following ratio: a) p1800 <= 1000 / p0115[0] for p1811 > 0% b) p1800 <= 1000 * 2 / p0115[0] for p 1811 = 0% under pulse inhibit p1800 > 1000 / p0115[0] -> p1811 = 0 p1800 > 1000 * 2 / p0115[0] -> 1810.2 = 0 and p1811 = 0 (this is valid for all indices)

Refer to: r0110, r0111, p0112, p0113, r0114, p0115, p0230, p1817

Note: The maximum possible pulse frequency is also determined by the power unit being used.

When the pulse frequency is increased, depending on the particular power unit, the maximum output current can be reduced (de-rating, refer to r0067).

If a sine-wave filter is parameterized as output filter (p0230 = 3), then the pulse frequency cannot be changed below the minimum value required for the filter.

If p1800 is changed while commissioning (p0009, p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1800 have been changed by a parameter that was set when the drive was commissioned (e.g. p1082).

r1801 Current pulse frequency / Pulse freq current

VECTOR

Can be changed: - | **Calculated:** - | **Access level:** 3

Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -

P-Group: Displays, signals | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
- [kHz]	- [kHz]	- [kHz]

Description: Displays the current converter switching frequency.

Note: The selected pulse frequency (p1800) may be reduced if the drive converter has overload condition (p0290).

The following applies for vector drives (p0107):

The pulse frequency can also be reduced when changing over the modulator to an optimized pulse pattern. This is used to avoid overdriving.

p1802[0...n] Modulator mode / Modulator mode

VECTOR

Can be changed: T | **Calculated:** CALC_MOD_LIM_REF | **Access level:** 3

Data type: Integer16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -

P-Group: Modulation | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	9	0

Description: Sets the modulator mode.

Value:

0: Automatic changeover SVM/FLB
1: Flat top modulation (FLB)
2: Space vector modulation (SVM)
3: SVM without overmodulation
4: SVM/FLB without overcontrol
5: SVM with pulse frequency reduction
6: SVM/FLB with pulse frequency reduction
7: No edge modulation up to 100 Hz
8: No edge modulation up to 60 Hz
9: Edge modulation

Dependency: If a sine-wave filter is parameterized as output filter (p0230 = 3, 4), or if the power unit firmware is not able to calculate edge modulation (r0192 bit0 = 0), then only space vector modulation without overcontrol can be set as modulation type (p1802 = 3).

p1802 > 6: Wobbulation is de-activated, p1810.2 = 0 and p1811 = 0 (is valid for all indices)

Refer to: r0192, p0230, p7003

Notice: If the edge modulation is enabled (p1802 > 6), then the current actual value correction should be activated (p1840.0 = 0), if the Motor Module is connected to a controlled (regulated) DC link (Active Infeed).

Note: When modulation modes are enabled that could lead to overmodulation (p1802 = 0, 1, 2, 5, 6), the modulation depth must be limited using p1803 (pre-assignment, p1803 = 98%). The higher the overmodulation, the greater the current ripple and torque ripple.

When changing p1802[x], the values for all of the other existing indices are also changed.

p1802 = 7, 8 should be used if the drive is operated below 100 Hz or 60 Hz, and it is necessary to avoid changing over to edge modulation. Above these output frequencies, the modulation depth remains limited so that there the full output voltage of the edge modulation is not reached.

p1803[0...n] Maximum modulation depth / Modulat depth max

VECTOR

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 6723
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
20.0 [%]	150.0 [%]	100.0 [%]

Description: Defines the maximum modulation depth.

Note: p1803 = 100 % is the overcontrol limit for space vector modulation (or an ideal drive converter without any switching delay).

If an optimized pulse pattern is enabled (edge modulation), then the modulation depth is limited to below the output frequency of 28 Hz as there is no optimized pulse pattern in this range.

p1804[0...n] Filter time constant smoothed modulation index / T_filt mod_idxSmth

VECTOR

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -

Dynamic index: -
Func. diagram: -
P-Group: Modulation
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
1	8	-

Description: Displays the effective modulator mode.
Value:
1: Flat top modulation (FLB)
2: Space vector modulation (SVM)
3: Edge modulation from 28 Hz; 23:3
4: Edge modulation from 28 Hz; 19:1
5: Edge modulation from 60 Hz; 17:3
6: Edge modulation from 60 Hz; 17:1
7: Edge modulation from 100 Hz; 9:2
8: Edge modulation from 100 Hz; 9:1

p1810 Modulator configuration / Modulator conf

VECTOR

Can be changed: U, T
Calculated: -
Access level: 3
Data type: Unsigned16
Dynamic index: -
Func. diagram: -
P-Group: Modulation
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	0010 bin

Description: Configuration of the modulator.
Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Aver filter for voltage limit. (only for Vdc comp. in modulator)	Yes	No	-
01	DC link voltage compensation in the current control	Yes	No	-
02	Wobbulation activated	Yes	No	-

Dependency: If a 0 is written to bit 2 instead of a 1, P1811 is set to 0.

Notice: Bit 1 = 0 can only be set under a pulse inhibit and with r0192 bit 14 = 1.
Bit 2 = 1 is only possible if the following is fulfilled:
- p1800 (pulse frequency) <= 2* 1000/p115[0]
- p1802 (modulator mode) <= 6 (no optimized pulse pattern)
- no parallel circuit configuration
- under pulse inhibit
- r0192 Bit 16 = 1.

Note: Bit 0 = 0:
Voltage limitation from the minimum of the DC link voltage (lower ripples in output current, reduced output voltage).
Bit 0 = 1:
Voltage limitation from averaged DC link voltage (higher output voltage with increased ripple in the output current).
The selection is only valid if the DC link compensation is not performed in the CU (bit 1 = 0).
Bit 1 = 0:
DC link voltage compensation in the modulator.
Bit 1 = 1:
DC link voltage compensation in the current control.
Bit2 = 0:
A gating unit that does not permit wobbulation is used
Bit2 = 1:
A gating unit that permits wobbulation is used.
For a wobbulation amplitude (p1811) == 0, the maximum possible pulse frequency (P1800) == 2*current controller clock cycle (p115[0]),
For a wobbulation amplitude (p1811) > 0, the maximum possible pulse frequency (P1800) == current controller clock cycle (p115[0]).

p1811[0...n] Pulse frequency wobbulation amplitude / f_Puls_wob Ampl

VECTOR

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0 [%]	20 [%]	0 [%]

Description: Sets the amplitude of the steady-state wobbulation signal with which the pulse frequency is varied in order to generate a more pleasant noise.

Note: It is only possible to modify the parameter when wobbulation (p1810.2 = 1) is active.
If an amplitude greater than 0 is entered and the pulse frequency (p1800) is greater than 1/current controller clock cycle (1/p0115[0]), then the pulse frequency is automatically reduced.
If a sine-wave filter is selected, wobbulation is decitvated.

p1817 Minimum ratio, pulse frequency to the output frequency / Min f_puls / f_max

VECTOR

Can be changed: C2(2)	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
8.3	15.0	12.0

Description: Sets the minimum ratio between the pulse frequency and the output frequency.

Notice: If the ratio between the pulse frequency and the output frequency is reduced, then oscillations can occur in the output current that can result in significant levels of current ripple with the appropriate negative effects.

Note: When the maximum speed is changed, the pulse frequency p1800 is automatically limited to this minimum ratio. It is not permissible to reduce the pulse frequency if this would result in this ratio being undershot.

p1818 Phase for PWM generation configuration / Ph for PWM config

CU_CX32, CU_I, CU_S

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Modulation | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	1

Description: Sets the phase shift for "offset clocking".
For the first active power unit, it is specified whether clocking is to start at 0 ° (value = 0) or 180 ° (value = 1). All other active power units are clocked alternately according to the setting made here.

Note: A change only becomes effective after a POWER ON.

p1820[0...n] Reverse the output phase sequence / Outp_ph_seq rev

VECTOR

Can be changed: C2(3) | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 6732
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Sets the phase sequence reversal for the motor.
If the motor does not rotate in the required direction, then the output phase sequence can be reversed using this parameter. This means that with the same setpoint, the motor direction is reversed without reversing the encoder actual value.
When a speed encoder is being used, it may be necessary to also invert the encoder actual value (p0410).

Value:
0: Off
1: On

Dependency: Refer to: p1821

Note: This setting can only be changed when the pulses are inhibited.
p1821 can be used to reverse the phase sequence and encoder actual value.

p1821[0...n] Direction / Direction

SERVO (Lin)

Can be changed: C2(3) | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 4704, 4710, 4711, 4715, 5730, 6730, 6731, 6732
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Setting to change the direction.
If the parameter is changed, it reverses the direction of the motor and the encoder actual value without changing the setpoint.

Value:
0: Clockwise
1: Counter-clockwise

Dependency: Refer to: F07434

Notice: For a drive data set changeover with differently set direction and pulse enable, an appropriate fault is output.

Note: For operation with the phase sequence U/V/W, the direction is defined when viewing the face side of the motor output shaft.
When changing the direction, the field direction of the current controller is reversed. The velocity actual value (e.g. r0063) is also reversed so that the control sense is kept and internally causing the direction to be reversed with the same setpoint. Further, the position actual values of the current encoder are reversed (e.g. r0482[0...2]).

For VECTOR, the following applies:
p1820 can be used to reverse the direction of the motor without reversing the encoder actual value.

p1821[0...n] Dir of rot / Dir of rot

SERVO, VECTOR

Can be changed: C2(3) | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 4704, 4710, 4711, 4715, 5730, 6730, 6731, 6732
P-Group: Motor | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Setting to change the direction of rotation.
If the parameter is changed, it reverses the direction of the motor and the encoder actual value without changing the setpoint.

Value:
0: Clockwise
1: Counter-clockwise

Dependency: Refer to: F07434

Notice: An appropriate fault is output for a drive data set changeover where the direction of rotation changes and the pulses are enabled.

Note: For operation with the phase sequence U/V/W, the direction of rotation is defined when viewing the face side of the motor output shaft.
When changing the direction of rotation, the rotating field direction of the current controller is reversed. The speed actual value (e.g. r0063) is also reversed so that the control sense is kept and internally causing the direction of rotation to be reversed with the same setpoint. Further, the position actual values of the current encoder are reversed (e.g. r0482[0...2]).
For VECTOR, the following applies:
p1820 can be used to reverse the direction of the motor without reversing the encoder actual value.

p1825 Converter valve threshold voltage / Threshold voltage

VECTOR

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Modulation | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [Vrms]	100.0 [Vrms]	0.6 [Vrms]

Description: Sets the threshold voltage drop of the valves (power semiconductor devices) to be compensated.

Note: The value is automatically calculated in the motor data identification routine.

p1827 Infeed compensation valve lockout time operating mode / INFcomp t_lockMode

A_INF, S_INF

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Modulation | **Units group:** - | **Unit selection:** -
Not for motor type: PEM, REL | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Sets the operating mode for the compensation of the valve lockout time.

Value:
0: Compensation valve lockout time de-activated
1: Compensation valve lockout time activated

Note: The compensation is always active, independent of the value of this parameter if the closed-loop control is activated to suppress circulating currents (p7035) for power units connected in parallel.

p1828 Compensation valve lockout time phase U / Comp t_lock ph U

VECTOR	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Modulation	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [µs]	1000000.00 [µs]	0.00 [µs]

Description: Sets the valve lockout time to compensate for phase U.

Note: The value is automatically calculated in the motor data identification routine.
For type PM340 power units, the parameter is limited to 3.98 µs.

p1829 Compensation valve lockout time phase V / Comp t_lock ph V

VECTOR	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Modulation	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [µs]	1000000.00 [µs]	0.00 [µs]

Description: Sets the valve lockout time to compensate for phase V.

Note: For type PM340 power units, the parameter is limited to 3.98 µs.

p1830 Compensation valve lockout time phase W / Comp t_lock ph W

VECTOR	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Modulation	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [µs]	1000000.00 [µs]	0.00 [µs]

Description: Sets the valve lockout time to compensate for phase W.

Note: For type PM340 power units, the parameter is limited to 3.98 µs.

p1832 Dead time compensation current level / t_dead_comp I_lev

VECTOR	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Modulation	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [Arms]	10000.0 [Arms]	0.0 [Arms]

Description: Above the current level, the dead time - resulting from the converter switching delays - is compensated by a previously calculated constant value. If the relevant phase current setpoint falls below the absolute value defined by p1832, the corrective value for this phase is continuously reduced.

Dependency: The factor setting of p1832 is automatically set to 0.02 * rated drive converter current (r0207).

r1837 Gating unit configuration / Gating unit config

VECTOR

Can be changed: -
Calculated: -

p1900 Motor data identification and rotating measurement / MotID and rot meas

VECTOR (n/M)

Can be changed: C2(1), T | **Calculated:** - | **Access level:** 1
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Motor identification | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0	2	2

Description: Sets the motor data identification and speed controller optimization.

p1900 = 0:

Function inhibited.

p1900 = 2:

Induction motors --> set p1910 = 1 and p1960 = 0

Permanent-magnet or separately-excited synchronous motors --> set p1910 = 1, p1990 = 1 and p1960 = 0

When the drive enable signals are present, a motor data identification routine is carried out at standstill with the next power-on command. Current flows through the motor which means that it can align itself by up to a quarter of a revolution.

For permanent-magnet or separately-excited synchronous motors, the encoder is adjusted with the next power-on command. The motor must be free to rotate and rotates through 1.5 revolutions of the motor encoder.

Value:
0: Inhibited
1: Motor data identification for rotating motor
2: Motor data identification at standstill

Dependency: In the simulation mode, the parameter cannot be written into. When selecting the motor data identification routine, the drive data set changeover is suppressed.

Refer to: p1272, p1300, p1910, p1990

Refer to: F07990, A07991

Notice: In order to permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

Note: An appropriate alarm is output when the parameter is set.

The power-on command must remain set during a measurement and after the measurement has been completed, the drive automatically resets it.

The duration of the measurements can lie between 0.3 s and several minutes. This time is, for example, influenced by the motor size and the mechanical conditions.

p1900 is automatically set to 0 after the motor data identification routine has been completed.

P-Group: Motor identification | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the configuration of the motor data identification.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Stator inductance estimate no measurement	Yes	No	-
	01	Cl.-loop current control w/ dead-beat controller	Yes	No	-
	02	Rotor time constant estimate no measurement	Yes	No	-
	03	Leakage inductance estimate no measurement	Yes	No	-
	04	Activates the identification dynamic leakage inductance	Yes	No	-
	05	Determine Tr and Lsig evaluation in the time range	Yes	No	-
	06	Activate vibration damping	Yes	No	-
	07	De-activate vibration detection	Yes	No	-
	11	De-activate pulse measurement Lq Ld	Yes	No	-
	12	De-activate rotor resistance Rr measurement	Yes	No	-
	14	De-activate valve interlocking time measurement	Yes	No	-
	15	Only measure stator resistance and valve voltage error	Yes	No	-

Note: Note for PEM:

Without de-selection in bit 11, in the closed-loop control mode, the direct inductance LD and the quadrature inductance Lq are measured at a low current.

When de-selecting with bit 11 or in the V/f mode, the stator inductance is measured at half the rated motor current.

If the stator is inductance is not measured but is to be estimated, then bit 0 should be set and bit 11 should be de-selected.

p1910 Motor data identification routine, stationary (standstill) / MotID standstill

SERVO

Can be changed: T | **Calculated:** - | **Access level:** 2

Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -

P-Group: Motor identification | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-3	1	0

Description: Setting to control the motor data identification with the motor stationary.

Value:
- -3: Accept identified parameters
- -2: Acknowledge encoder inversion actual value (F07993)
- -1: Start motor data identification without acceptance
- 0: Inactive/inhibit
- 1: Start motor data identification with acceptance

Recommend.: For motors with brakes, the brake should be opened before carrying out the stationary motor data identification routine (p1215 = 2) as long as this can be done without incurring any danger. The commutation angle and the direction of rotation are also determined.

Dependency: Refer to: p1909, r1912, r1913, r1915, r1925, r1927, r1932, r1933, r1934, r1935, r1936, r1950, r1951, p1952, p1953

Refer to: F07990, A07991, F07993

Caution: For motors without brake or with the brake open (p1215 = 2), for the stationary (zero speed) measurement, the motor may rotate slightly.

Note: Motor data identification can only be selected when the pulses of all of the drive objects of the Control Unit have been suppressed. After selection, all of the other drive objects of the Control Unit are interlocked so that they cannot be powered up until the motor data identification has been completed or de-selected.

After a started motor identification is ended, the parameter is automatically reset to 0.

A motor data identification that is presently being carried out can be terminated with p1910 = 0.

p1910 Motor data identification selection / MotID selection

VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Motor identification | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	20	1

Description: Sets the motor data identification routine.

The motor data identification routine is carried out after the next power-on command.

p1910 = 1:

All motor data and the drive converter characteristics are identified and then transferred to the following parameters:

p0350, p0354, p0356, p0357, p0358, p0360, p1825, p1828, p1829, p1830

After this, the control parameter p0340 = 3 is automatically calculated.

Value:
0: Inhibited
1: Complete identification (ID) and acceptance of motor data
2: Complete identification (ID) of motor data without acceptance
3: ID of the saturation characteristic and acceptance
4: ID of the saturation characteristic without acceptance
5: ID of dynamic leakage inductance Lsig (r1920) without acceptance
6: ID of lockout time (r1926) without acceptance
7: ID of stator resistance Rs (r1912) without acceptance
8: ID of stator inductance Ls (r1915) and Rr (r1927) w/o acceptance
9: ID of rotor time constant Tr (r1913) without acceptance
10: ID of static leakage inductance Lsig (r1914) without acceptance
20: Voltage vector input

Dependency: "Quick commissioning" must be carried out (p0010 = 1) before executing the motor data identification routine!

In the simulation mode, the parameter cannot be written into. When selecting the motor data identification routine, the drive data set changeover is suppressed.

Refer to: p1272, p1900

Caution: After the motor data identification (p1910 > 0) has been selected, alarm A07991 is output and a motor data identification routine is carried out as follows at the next power-on command:

- current flows through the motor and a voltage is present at the drive converter output terminals.
- during the identification routine, the motor shaft can rotate through a maximum of half a revolution.
- however, no torque torque is generated.

Notice: In order to permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

Note: When setting p1910, the following should be observed:

1. "With transfer" means:

The parameters specified in the description are overwritten with the identified values and therefore have an influence on the controller setting.

2. "Without transfer" means:

The identified parameters are only displayed in the range r1912 ... r1926. The controller settings remain unchanged.

3. p1910 = 3, 4, 5 can only be selected for induction motors.

Min	Max	Factory setting
0.000 [V]	100.000 [V]	0.000 [V]

Description: Sets the final value to compensate the voltage emulation error.
Dependency: Refer to: p1953

Note: The voltage emulation error is calculated and compensated for every phase according to the following formula:
u_error = u0 * i / (abs(i) + i0)
u0: This is set in p1952.
i0: This is set in p1953.
i: Phase current to which the emulation error u_error belongs.

p1953[0...n] Voltage emulation error current offset / V_error I_offset

SERVO (Exp M_ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
P-Group: Motor identification	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [A]	100.000 [A]	0.000 [A]

Description: Sets the current offset to compensate the voltage emulation error.
Dependency: Refer to: p1952
Note: The voltage emulation error is calculated and compensated for every phase according to the following formula:
u_error = u0 * i / (abs(i) + i0)
u0: This is set in p1952.
i0: This is set in p1953.
i: Phase current to which the emulation error u_error belongs.

p1958[0...n] Moving measurement ramp-up/ramp-down time / Mov meas t_r up/dn

SERVO (Lin)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor identification	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-1.00 [s]	999999.00 [s]	-1.00 [s]

Description: Sets the ramp-up/ramp-down time for the moving measurement.
The following applies for negative values:
When the function module "extended setpoint channel" is activated (r0108.8 = 1), the maximum of the ramp-up/ramp-down time of the setpoint channel becomes effective. When this function module is inactive, then no ramp-up/ramp-down time is effective.
The following applies for positive values:
The selected ramp-up/ramp-down time becomes effective.
Recommend.: A ramp-up/ramp-down time should not be activated for the motor data identification (p1958 = 0) as long as this can be safely done without incurring any danger. This means that the identification is complete and more accurate. When the ramp-up/ramp-down time is activated, the following steps of the moving motor data identification are not executed:
- p1959.5 (identifying the q inductance)
- p1959.7 (identifying the reluctance force constant)

Dependency: Refer to: p1959, p1960

p1958[0...n] Rotating measurement ramp-up/ramp-down time / Rot meas t_r up/dn

SERVO

Can be changed: T	**Calculated:** -	**Access level:** 2

Not for motor type: REL		**Expert list:** 1

Min	Max	Factory setting
-	-	0000 1110 1110 0110 bin

Description: Sets the configuration of the moving measurement.

Recommend.: A direction inhibit should not be activated for the moving measurement (p1959.14 = 1 and p1959.15 = 1) as long as this can be done without incurring any danger. This means that the identification is complete and more accurate. When the direction inhibit is activated, the reluctance force constant (p1959.7) is not identified and the angular commutation offset (p1959.10, p0431) is inaccurately determined. The reluctance force constant (p1959.7) is also not identified in encoderless operation.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
01	Identifying the saturation characteristic	Yes	No	-
02	Identifying the force of inertia	Yes	No	-
05	Identifying the q inductance	Yes	No	-
06	Identifying the force constant	Yes	No	-
07	Identifying the reluctance force constant	Yes	No	-
08	Identifying the q inductance at the test stand	Yes	No	-
09	Identifying the magnetizing current / magnetizing inductance	Yes	No	-
10	Identify the commutation angle and direction	Yes	No	-
11	Identify rotor resistance	Yes	No	-
14	Positive direction permitted	Yes	No	-
15	Negative direction permitted	Yes	No	-

Dependency: Refer to: p1958, p1960

Notice: The step p1959.8 (identify q inductance on the test stand) may only be selected if the drive can be kept at zero speed or at a fixed velocity either using a test stand or other mechanical measures.

During steps p1959.2 (identifying the moment of inertia) and p1959.6 (identifying the force constant) the Vdc_min controller is disabled (p1240).

During step p1959.7 (identifying the reluctance force constant) the Vdc_min controller and Vdc_max controller are disabled (p1240).

Note: For an induction motor (ASM), the following bits are effective: 1, 2, 5, 8, 9, 10, 14, 15

For a synchronous motor (SRM), the following bits are effective: 2, 5, 6, 7, 8, 10, 14, 15

Re bit 05:

For "motor holding brake the same as sequence control" (p1215 = 1 or 3), the Lq characteristic is only measured up to approximately the rated motor current (p0305) instead of up to the current limit (p0640). Before carrying out the rotation measurement for motors with brake, the brake should be opened (p1215 = 2) - as long as this can be done without incurring any danger.

Re bit 10:

If the motor holding brake is set just the same as the sequence control (p1215 = 1 or 3), the commutation angle and the direction of rotation are not measured. Before carrying out the rotation measurement for motors with brake, the brake should be opened (p1215 = 2) - as long as this can be done without incurring any danger.

Re bit 14 and 15:

The following applies for bit 14 and 15 = 0:

When the function module "extended setpoint channel" is activated (r0108.8 = 1), the direction inhibit of the setpoint channel becomes effective. No direction of inhibit is effective if the function module is inactive.

The following applies for minimum bit 14 = 1 or bit 15 = 1:

The direction inhibit set in p1959 becomes effective.

p1959[0...n] Rotating measurement configuration / Rot meas config

SERVO	**Can be changed:** T	**Calculated:** CALC_MOD_ALL	**Access level:** 3

Description: Sets the configuration of the rotating measurement.

Recommend.: A direction inhibit should not be activated for the rotating measurement (p1959.14 = 1 and p1959.15 = 1) as long as this can be done without incurring any danger. This means that the identification is complete and more accurate. When the direction inhibit is activated, the reluctance torque constant (p1959.7) is not identified and the angular commutation offset (p1959.10, p0431) is inaccurately determined. The reluctance torque constant (p1959.7) is also not identified in encoderless operation.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
01	Identifying the saturation characteristic	Yes	No	-
02	Identifying the moment of inertia	Yes	No	-
05	Identifying the q inductance	Yes	No	-
06	Identifying the torque constant	Yes	No	-
07	Identifying the reluctance torque constant	Yes	No	-
08	Identifying the q inductance at the test stand	Yes	No	-
09	Identifying the magnetizing current / magnetizing inductance	Yes	No	-
10	Identifying the commutation angle and direction of rotation	Yes	No	-
11	Identify rotor resistance	Yes	No	-
14	Positive direction permitted	Yes	No	-
15	Negative direction permitted	Yes	No	-

Dependency: Refer to: p1958, p1960

Notice: The step p1959.8 (identify q inductance on the test stand) may only be selected if the drive can be kept at zero speed or at a fixed speed either using a test stand or other mechanical measures.

During steps p1959.2 (identifying the moment of inertia) and p1959.6 (identifying the torque constant) the Vdc_min controller is disabled (p1240).

During step p1959.7 (identifying the reluctance torque constant) the Vdc_min controller and Vdc_max controller are disabled (p1240).

Note: For an induction motor (ASM), the following bits are effective: 1, 2, 5, 8, 9, 10, 14, 15

For a synchronous motor (SRM), the following bits are effective: 2, 5, 6, 7, 8, 10, 14, 15

Re bit 05:

For "motor holding brake the same as sequence control" (p1215 = 1 or 3), the Lq characteristic is only measured up to approximately the rated motor current (p0305) instead of up to the current limit (p0640). Before carrying out the rotation measurement for motors with brake, the brake should be opened (p1215 = 2) - as long as this can be done without incurring any danger.

Re bit 10:

If the motor holding brake is set just the same as the sequence control (p1215 = 1 or 3), the commutation angle and the direction of rotation are not measured. Before carrying out the rotation measurement for motors with brake, the brake should be opened (p1215 = 2) - as long as this can be done without incurring any danger.

Re bit 14 and 15:

The following applies for bit 14 and 15 = 0:

When the function module "extended setpoint channel" is activated (r0108.8 = 1), the direction inhibit of the setpoint channel becomes effective. No direction of inhibit is effective if the function module is inactive.

The following applies for minimum bit 14 = 1 or bit 15 = 1:

The direction inhibit set in p1959 becomes effective.

p1959[0...n] Rotating measurement configuration / Rot meas config

VECTOR (n/M)

Can be changed: T | **Calculated:** CALC_MOD_ALL | **Access level:** 2
Data type: Unsigned16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** -
P-Group: Motor identification | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
-	-	0001 1111 bin

Description: Sets the configuration of the rotating measurement.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Encoder test active	Yes	No	-
01	Saturation characteristic identification	Yes	No	-
02	Moment of inertia identification	Yes	No	-
03	Recalculates the speed controller parameters	Yes	No	-
04	Speed controller optimization, (vibration test)	Yes	No	-
05	q leakage inductance ident. (for current controller adaptation)	Yes	No	-

Dependency: Refer to: F07988

Note: The encoder is only tested if the rotating measurement with encoder is selected (p1960 = 2).

The following parameters are influenced for the individual optimization steps:

Bit 00: None

Bit 01: p0320, p0360, p0362 ... p0369

Bit 02: p0341, p0342

Bit 03: p1400.0, p1458, p1459, p1460, p1462, p1463, p1470, p1472, p1496

Bit 04: Dependent on p1960

Bit 05: p0391, p0392, p0393, p1402.2 only for induction motors

p1960 = 1, 3: p1400.0, p1458, p1459, p1470, p1472, p1496

p1960 = 2, 4: p1458, p1459, p1460, p1461, p1462, p1463, p1496

The identification of the q leakage inductance can only be carried out for unloaded or motors with a low load (load approx. 30% below the rated motor torque). Only then is a current controller adaptation (p0391 ... p0393) parameterized if the q-leakage inductance under no-load conditions is at least 30 % higher than the total leakage inductance (p0356, p0358).

p1960 Moving measurement selection / Mov meas sel

SERVO (Lin)

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Motor identification | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
-3	1	0

Description: Activates the moving measurement.

Value:

-3: Accept identified parameters
-2: Acknowledge encoder inversion actual value (F07993)
-1: Start motor data identification without acceptance
0: Inactive/inhibit
1: Start motor data identification with acceptance

Recommend.: Before carrying out the moving measurement for motors with brake, the brake should be opened (p1215 = 2) - as long as this can be done without incurring any danger. The commutation angle and the direction of rotation are also determined.

Dependency: Refer to: r1934, r1935, r1936, r1937, r1938, r1939, r1947, r1948, p1958, p1959, r1962, r1963, r1969

Refer to: F07990, A07991, F07993

Danger: For the moving measurement, the motor is accelerated up to the maximum velocity. Only the parameterized current limit (p0640) and the maximum velocity (p1082) are effective.

The behavior of the motor can be influenced using the direction inhibit (p1959.14, p1959.15) and the ramp-up/ramp-down time (p1958).

Notice: In order to permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

Note: The moving measurement can only be selected when the pulses of all of the drive objects of the Control Unit have been suppressed. After selection, all of the other drive objects of the Control Unit are interlocked so that they cannot be powered up until the moving measurement has been completed or de-selected.

When the moving measurement is activated (p1960 = 1), it is not possible to save the parameters (p0971, p0977).

p1960 Rotating measurement selection / Rot meas sel

VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 2

Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -

P-Group: Motor identification | **Units group:** - | **Unit selection:** -

Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
0	4	0

Description: Sets the rotating measurement.

The rotating measurement is carried out after the next power-on command.

The setting possibilities of the parameter depend on the open-loop/closed-loop control mode (p1300).

p1300 < 20 (V/f open-loop control):
It is not possible to select rotating measurement or speed controller optimization.
p1300 = 20, 22 (encoderless operation):
Only rotating measurement or speed controller optimization can be selected in the encoderless mode.
p1300 = 21, 23 (operation with encoder):
Both versions (encoderless and with encoder) of the rotating measurement and speed controller optimization can be selected.

Value:
0: Inhibited
1: Rotating measurement in encoderless operation
2: Rotating measurement with encoder
3: Speed controller optimization for encoderless operation
4: Speed controller optimization with encoder

Dependency: Before the rotating measurement is carried out, the motor data identification routine (p1900, p1910, r3925) should have already been done.
In the simulation mode, a value of 1 cannot be written into the parameter.
When selecting the rotating measurement, the drive data set changeover is suppressed.
Refer to: p1272, p1300, p1900, p1959
Refer to: A07987

Danger: For drives with a mechanical system that limits the distance moved, it must be ensured that this is not reached during the rotating measurement. If this is not the case, then it is not permissible that the measurement is carried out.

Notice: In order to permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

Note: When the rotating measurement is activated, it is not possible to save the parameters (p0971, p0977).
Parameter changes are automatically made for the rotating measurement (e.g. p1120); this is the reason that up to the end of the measurement, and if no faults are present, no manual changes should be made.
The ramp-up and ramp-down times (p1120, p1121) are limited, for the rotating measurement, to 900 s.
For speed controller optimization with encoder (p1960 = 2, 4), the speed controller for encoderless operation is also pre-assigned (p1470, p1472).
Depending on whether the speed controller optimization is carried out with or without encoder, different Kp/Tn adaptations of the speed controller are set (p1464, p1465). If the drive should be controlled with as well as without speed encoder, then we recommend the use of two drive data sets (p0180). These can then be executed with different speed controller adaptations.

p1961 Saturation characteristic speed to determine / Sat_char n determ

Can be changed: U, T
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: Motor identification
Units group: -
Unit selection: -
Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
10 [%]	75 [%]	40 [%]

Description: Sets the speed for the identification of the moment of inertia and the vibration test.
Induction motor:
The percentage value is referred to p0310 (rated motor frequency).
Synchronous motor:
The percentage value is referred to the minimum from p0310 (rated motor frequency) and p1082 (maximum speed).

Dependency: Refer to: p0310, p1959
Refer to: F07984, F07985

Note: In order to calculate the inertia, sudden speed changes are carried out - the specified value corresponds to the lower speed setpoint. This value is increased by 20 % for the upper speed value. The q leakage inductance (refer to p1959 bit 5) is determined at zero speed and at 50% of p1965 - however, with a maximum output frequency of 15 Hz and at a minimum of 10% of the rated motor speed.

p1967 Speed_ctrl_opt dynamic factor / n_opt dyn_factor

Linear motors: Identified grid division in nm.

Index: [0] = Rotating motor encoder pulse number
[1] = Linear motor, grid division in nm

Notice: Due to the measuring accuracy (approx. 5%) only the approximate value is shown in p1973 and may not be directly transferred into p0407 or p0408. An incorrect pole pair number (r0313, p0314) or pole pair width (p0315) results in an incorrect value in p1973.

Note: A negative signal indicates an incorrect polarity of the encoder signal.

r1973 Rotating measurement, encoder test pulse number determined / n_opt pulse No.

p1980[0...n] Pole position identification technique / PolID technique

SERVO

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: Integer16	**Dynamic index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor identification	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	99	99

Description: Sets the pole position identification technique.

Value:
0: Saturation-based 1st + 2nd harmonics
1: Saturation-based 1st harmonics
4: Saturation-based, 2-stage
10: Motion-based

99: No technique selected

Dependency: Refer to: p0325, p0329, p1981, p1982, p1983, r1984, r1985, r1987

Notice: If the incorrect technique is applied, this can cause the motor to accelerate in an uncontrolled fashion.

Note: When commissioning a catalog motor, the technique is automatically selected depending on the motor type being used.

The following applies for 1FN3 motors:

A technique with 2nd harmonic may not be used (do not use p1980 = 0, 4).

For 1FN7 motors, the following applies:

A two-stage technique may not be used (do not use p1980 = 4).

The automatically set value in p0329 may not be changed.

p1980[0...n] Pole position identification technique / PolID technique

VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 3

Data type: Integer16 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -

P-Group: Motor identification | **Units group:** - | **Unit selection:** -

Not for motor type: ASM | **Expert list:** 1

Min	Max	Factory setting
1	10	4

Description: Sets the pole position identification technique.

Value:
1: Voltage pulsing, first harmonic
4: Voltage pulsing, 2-stage
10: DC current impression

Dependency: In the simulation mode, the parameter cannot be written into.

Refer to: p1272

Note: Voltage pulse technique (p1980 = 1, 4) cannot be applied to separately-excited synchronous motors (p0300 = 5) and for for operation with sine-wave output filters (p0230).

p1981[0...n] Pole position identification maximum distance / PolID distance max

SERVO

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 3

Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -

P-Group: Motor identification | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [°]	180 [°]	10 [°]

Description: Sets the maximum distance (electrical angle) when carrying out the pole position identification routine. If this distance (travel) is exceeded, an appropriate fault is output.

Dependency: Refer to: p0325, p0329, p1980, p1982, p1983, r1984, r1985, r1987, p1990

Refer to: F07995

Notice: The value 180° de-activates distance monitoring.

p1982[0...n] Pole position identification selection / PolID selection

SERVO

Can be changed: T | **Calculated:** - | **Access level:** 3

Data type: Integer16 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -

P-Group: Motor identification | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	2	0

Description: Activates the pole position identification routine to determine the commutation angle and to carry out a plausibility check.

Value:
0: Pole position identification off
1: Pole position identification for commutation
2: Pole position identification for plausibility check

Recommend.: Re p1982 = 1:
This is used for synchronous motors with motor encoder without absolute data.
The information/data regarding the absolute commutation angle is supplied via a track C/D, Hall sensors, an absolute encoder or from the pole position identification routine.
Re p1982 = 2:
This is used for synchronous motor with motor encoder with absolute data to check this data.

Dependency: Refer to: p0325, p0329, p1980, p1981, p1983, r1984, r1985, r1987, p1990

p1982[0...n] Pole position identification selection / PolID selection

VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -
P-Group: Motor identification | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	2	0

Description: Activates the pole position identification routine to determine the commutation angle and to carry out a plausibility check.

Value:
0: Pole position identification off
1: Pole position identification for commutation
2: Pole position identification for plausibility check

Recommend.: Re p1982 = 1:
This is used for synchronous motors with motor encoder without absolute data.
The information/data regarding the absolute commutation angle is supplied via a track C/D, Hall sensors, an absolute encoder or from the pole position identification routine.
Re p1982 = 2:
This is used for synchronous motor with motor encoder with absolute data to check this data.
For VECTOR, the following applies:
With p1982 = 2, each time the pulses are enabled it is checked whether the absolute position supplied from the encoder does not exceed a deviation of 45 degrees to the identified pole wheel position.
With separately excited synchronous motors (p0300 = 5), pole position identification cannot be selected if an encoder exists with position information (e.g. SSI encoder).

Dependency: Refer to: p0325, p0329, p1980, p1981, p1983, r1984, r1985, r1987, p1990

Note: For encoderless operation, the pole position identification routine is selected with p1780.6

p1983 Pole position identification, test / PolID test

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Motor identification | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Starts the pole position identification routine for test purposes.
p1983 = 1: Start - is automatically set to zero after being carried out.

Dependency: Refer to: p0325, p0329, p1980, p1981, p1982, r1984, r1985, r1987, p1990

Notice: For p1983 = 1 and if the pulses are not enabled, then the function is only executed the next time that the pulses are enabled.

Note: When this test is executed, it does not influence the commutation angle.

r1984 Pole position identification, angular difference / PolID ang diff

SERVO, VECTOR (n/M)

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: Motor identification
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [°]	- [°]	- [°]

Description: Displays the angular difference between the current electrical commutation angle and the angle determined by the pole position identification.

Dependency: Refer to: p0325, p0329, p1980, p1981, p1982, p1983, r1985, r1987, p1990

Note: When the pole position identification routine is executed several times using p1983, the spread of the measured values can be determined using this value. At the same position, the spread should be less than 2 degrees electrical.

r1985 Pole position identification, saturation characteristic / PolID sat_char

SERVO, VECTOR (n/M)

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: Motor identification
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the saturation characteristic of the pole position identification routine.

The values for the characteristic of the last saturation-based pole position identification routine are output every 1 ms in order to record signals (e.g. trace).

Dependency: Refer to: p0325, p0329, p1980, p1981, p1982, p1983, r1984, r1987, p1990

r1987 Pole position identification trigger characteristic / PolID trig_char

SERVO, VECTOR (n/M)

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: Motor identification
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Displays the trigger characteristic of the pole position identification routine.

The values for the characteristic of the last pole position identification routine are output every 1 ms in order to record signals (e.g. trace).

The values for the trigger characteristic and the saturation characteristic are always output in synchronism from a time perspective.

Dependency: Refer to: p0325, p0329, p1980, p1981, p1982, p1983, r1984, r1985

Note: The following information and data can be taken from the trigger characteristic.

- the value -100% marks the angle at the start of the measurement.
- the value +100 % marks the commutation angle determined from the pole position identification routine.

p1990 Encoder adjustment, determine angular commutation offset / Enc_adj det ang

SERVO

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Motor identification	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: This function is only required for synchronous motors and can be started when commissioning for the first time or after replacing an encoder. The function acts on the active motor data set.

When adjusting the encoder, the angular commutation offset is determined and transferred into p0431. Alarm A07971 is output while the angular commutation offset is being determined. p1990 is automatically set to 0 after the angular commutation offset has been determined.

p1990 = 0: De-activated

p1990 = 1: Activated with transfer

Dependency: Refer to: p0325, p0329, p0431, p1980, p1981, p1982, p1983, r1984, r1985, r1987, p1999

Refer to: A07971

Caution: In order to prevent an incorrect orientation of the electrical pole position (uncontrolled motor movement), the automatically determined angular commutation offset (p0431) should, for reasons of safety, be checked using one of the following recommendations:

Recommendation 1:

Set encoderless operation (p1300 = 20 or p1404 = 0), deselect pole position identification (p1982 = 0), operate under no-load conditions with a speed > p1755, correct the actual value inversion (p0410.0) (e.g. r0061 = r0063), read the angular error in r1778; the result in r1778 should be approximately 0, for |r1778| > 2 degrees, add the value to p0431 - taking into account the sign - and enter in p0431.

Recommendation 2:

Set the current limit to 0 (p0640 = 0), activate travel to fixed stop (p1545 = 1), record r0089[0] (phase voltage) and r0093 (electrically normalized pole position) (e.g. trace) while the motor is externally moved; in this case, the rising zero crossover of the phase voltage must coincide with the 360 ° --> 0 ° step (jump) from r0093.

Recommendation 3:

Measure the phase voltage V (measure phase U with respect to the virtual star point using 3 resistors) and r0093 (electrically normalized pole position); the rising zero crossover of the phase voltage must coincide with the 360 ° --> 0 ° step (jump) of r0093.

Recommendation 4:

Determine the average value from several results of a pole position identification routine executed as test (p1983) at various electrical angles and add the value to p0431 - taking into account the sign and enter into p0431.

Notice: For p1990 = 1 and with the pulses not enabled, the function is only executed the next time that the pulses are enabled.

Note: If fault F07414 is present, the following applies:

First set p1990 to 1, then acknowledge the fault and then issue the enable signals.

p1990 Encoder adjustment, determine angular commutation offset / Enc_adj det ang

VECTOR

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** -
P-Group: Motor identification	**Units group:** -	**Unit selection:** -
Not for motor type: ASM		**Expert list:** 1

Min	Max	Factory setting
0	2	0

Description: This function is only required for synchronous motors and can be started when commissioning for the first time or after replacing an encoder. The function acts on the active motor data set.

Alarm A07971 is output while the angular commutation offset is being determined. p1990 is automatically set to 0 after the angular commutation offset has been determined.

For p1990 = 1 (encoder adjustment with transfer), the following applies:
The angular commutation offset is determined and transferred into p0431.
For p1990 = 2 (encoder adjustment for checking), the following applies:
The angular commutation offset is determined and is not transferred into p0431. For a deviation of more than 6 ° electrical, fault F07413 is output.

Value:
0: De-activated
1: Activated with transfer
2: Activated for checking

Dependency: In the simulation mode, the parameter cannot be written into.
When selecting the encoder adjustment, the changeover of the drive data sets is suppressed.
Refer to: p0325, p0329, p0431, p1272, p1900

Caution: When the encoder is being adjusted, the motor must be operated without a load - and if a motor holding brake is being used, this must be opened.

p1991[0...n] Motor changeover, angular commutation correction / Ang_com corr

SERVO, VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-180 [°]	180 [°]	0 [°]

Description: Sets the angle that is added to the commutating angle.

Caution: If the angular correction is not correctly set, when changing over and with closed-loop torque control, the motor can accelerate to high speeds in spite of the fact that a setpoint of zero has been entered.

r1992 Pole position identification diagnostics / PolID diag

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.10 [Hz]	1000.00 [Hz]	50.00 [Hz]

Description: Sets the reference quantity for the frequency.
All frequencies specified as relative value are referred to this reference quantity.
The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.
The following applies: Reference frequency (in Hz)

p2000 Reference velocity, reference frequency / Ref_v Ref_f

SERVO (Lin)

Can be changed: T | **Calculated:** CALC_MOD_ALL | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.60 [m/min]	600.00 [m/min]	120.00 [m/min]

Description: Sets the reference quantity for velocity and frequency.
All velocities or frequencies specified as relative value are referred to this reference quantity.
The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.
The following applies: Reference frequency (in Hz) = reference velocity (in (m/min) / 60)

Dependency: Refer to: p0500, p2001, p2002, p2003, r2004

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is at the factory setting.
If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.
Example 1:
The signal of an analog input (e.g. r4055[0]) is connected to a velocity setpoint (e.g. p1070[0]). The current percentage input value is cyclically converted into the absolute velocity setpoint using the reference velocity (p2000).
Example 2:
The setpoint from PROFIBUS (r2050[1]) is connected to a velocity setpoint (e.g. p1070[0]). The current input value is cyclically converted into a percentage value via the pre-specified normalization 4000 hex. This percentage value is converted to the absolute velocity setpoint via reference velocity (p2000).

p2000 Reference speed reference frequency / Ref_n Ref_f

SERVO

Can be changed: T | **Calculated:** CALC_MOD_ALL | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
6.00 [rev/min]	210000.00 [rev/min]	3000.00 [rev/min]

Description: Sets the reference quantity for speed and frequency.
All speeds or frequencies specified as relative value are referred to this reference quantity.
The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.
The following applies: Reference frequency (in Hz) = reference speed (in (RPM) / 60)

Dependency: Refer to: p0500, p2001, p2002, p2003, r2004

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.
If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

Example 1:

The signal of an analog input (e.g. r4055[0]) is connected to a speed setpoint (e.g. p1070[0]). The current percentage input value is cyclically converted into the absolute speed setpoint using the reference speed (p2000).

Example 2:

The setpoint from PROFIBUS (r2050[1]) is connected to a speed setpoint (e.g. p1070[0]). The current input value is cyclically converted into a percentage value via the pre-specified normalization 4000 hex. This percentage value is converted to the absolute speed setpoint via reference speed (p2000).

p2000 Reference speed reference frequency / Ref_n Ref_f

VECTOR	**Can be changed:** T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
	Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
	P-Group: Communications	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	6.00 [rev/min]	210000.00 [rev/min]	3000.00 [rev/min]

Description: Sets the reference quantity for speed and frequency.

All speeds or frequencies specified as relative value are referred to this reference quantity.

The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.

The following applies: Reference frequency (in Hz) = reference speed (in (RPM) / 60)

Dependency: Refer to: p2001, p2002, p2003, r2004

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

Example 1:

The signal of an analog input (e.g. r4055[0]) is connected to a speed setpoint (e.g. p1070[0]). The current percentage input value is cyclically converted into the absolute speed setpoint using the reference speed (p2000).

Example 2:

The setpoint from PROFIBUS (r2050[1]) is connected to a speed setpoint (e.g. p1070[0]). The current input value is cyclically converted into a percentage value via the pre-specified normalization 4000 hex. This percentage value is converted to the absolute speed setpoint via reference speed (p2000).

	6.00 [rev/min]	210000.00 [rev/min]	3000.00 [rev/min]

Description: Sets the reference quantity for speed and frequency.

All speeds or frequencies specified as relative value are referred to this reference quantity.

The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.

The following applies: Reference frequency (in Hz) = reference speed (in (RPM) / 60)

Dependency: Refer to: p2001, p2002, p2003, r2004

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

Example 1:

The signal of an analog input (e.g. r4055[0]) is connected to a speed setpoint (e.g. p1070[0]). The current percentage input value is cyclically converted into the absolute speed setpoint using the reference speed (p2000).

Example 2:

The setpoint from PROFIBUS (r2050[1]) is connected to a speed setpoint (e.g. p1070[0]). The current input value is cyclically converted into a percentage value via the pre-specified normalization 4000 hex. This percentage value is converted to the absolute speed setpoint via reference speed (p2000).

p2001 Reference voltage / Reference voltage

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
10 [Vrms]	100000 [Vrms]	1000 [Vrms]

Description: Sets the reference quantity for voltages.

All voltages specified as relative value are referred to this reference quantity.

The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

For infeed units, the parameterized device supply voltage (p0210) is pre-assigned as the reference quantity.

Example:

The actual value of the DC link voltage (r0070) is connected to a test socket (e.g. p0771[0]). The current voltage value is cyclically converted into a percentage of the reference voltage (p2001) and output according to the parameterized scaling.

p2002 Reference current / Reference current

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.10 [Arms]	100000.00 [Arms]	100.00 [Arms]

Description: Sets the reference quantity for currents.

All currents specified as relative value are referred to this reference quantity.

The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.

Notice: If various DDS are used with different motor data, then the reference quantities remain the same as these are not changed over with the DDS. The resulting conversion factor should be taken into account (e.g. for trace records).

Example:

p2002 = 100 A

Reference quantity 100 A corresponds to 100 %

p305[0] = 100 A

Rated motor current 100 A for MDS0 in DDS0 --> 100 % corresponds to 100 % of the rated motor current

p305[1] = 50 A

Rated motor current 50 A for MDS1 in DDS1 --> 100 % corresponds to 200 % of the rated motor current

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

For infeed units, the rated line current, that is obtained from the rated power and parameterized rated line supply voltage (p2002 = r0206 / p0210 / 1.73) is pre-assigned as the reference quantity.

Example:

The actual value of a phase current (r0069[0]) is connected to a test socket (e.g. p0771[0]). The actual current value is cyclically converted into a percentage of the reference current (p2002) and output according to the parameterized scaling.

p2003 Reference force / Reference force

SERVO (Lin)

Can be changed: T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** 8_2 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.01 [N]	20000000.00 [N]	100.00 [N]

Description: Sets the reference quantity for forces.

All forces specified as relative value are referred to this reference quantity.

The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is at the factory setting.

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

Example:

The actual value of the total force (r0079[0]) is connected to a test socket (e.g. p0771[0]). The current force is cyclically converted into a percentage of the reference force (p2003) and output according to the parameterized scaling.

p2003 Reference torque / Reference torque

SERVO, TM41, VECTOR

Can be changed: T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** 7_2 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.01 [Nm]	20000000.00 [Nm]	1.00 [Nm]

Description: Sets the reference quantity for torques.

All torques specified as relative value are referred to this reference quantity.

The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

Example:

The actual value of the total torque (r0079]) is connected to a test socket (e.g. p0771[0]). The current torque is cyclically converted into a percentage of the reference torque (p2003) and output according to the parameterized scaling.

r2004 Reference power / Reference power

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** 14_10 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
- [kW]	- [kW]	- [kW]

Description: Displays the reference quantity for power ratings.

All power ratings specified as relative value are referred to this reference quantity.

The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.

Dependency: This value is calculated as follows:

Infeed: Calculated from voltage times current.

Closed-loop control: Calculated from torque times speed.

Refer to: p2000, p2001, p2002, p2003

Note: If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.
The reference power is calculated as follows:
Motor: 2 * Pi * reference speed / 60 * reference torque
Reference: reference voltage * reference current * root(3)

p2005 Reference angle / Reference angle

SERVO, TM41, VECTOR

Can be changed: T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
90.00 [°]	180.00 [°]	90.00 [°]

Description: Sets the reference quantity for angle.
All angles specified as relative value are referred to this reference quantity.
The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1. If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

p2007 Reference acceleration / Ref accel

SERVO (Lin)

Can be changed: T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** 22_1 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.01 [m/s²]	10000.00 [m/s²]	0.01 [m/s²]

Description: Sets the reference quantity for acceleration rates.
All acceleration rates specified as relative value are referred to this reference quantity.
The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1. If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.
The reference acceleration is calculated as follows:
Reference speed (p2000) converted from 1/min to 1/s divided by 1 s
--> p2007 = p2000 [rpm] / (60 [s/min] * 1 [s])

p2007 Reference acceleration / Ref accel

SERVO, TM41, VECTOR

Can be changed: T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -

p2037 PROFIdrive STW1.10 = 0 mode / PD STW1.10=0 mode

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: T
Calculated: -
Access level: 3
Data type: Integer16
Dynamic index: -
Func. diagram: -
P-Group: Communications
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0	2	0

Description: Sets the processing mode for PROFIdrive STW1.10 "master control by PLC".

Generally, control world 1 is received with the first receive word (PZD1) (this is in conformance to the PROFIdrive profile). The behavior of STW1.10 = 0 corresponds to that of the PROFIdrive profile. For other applications that deviate from this, the behavior can be adapted using this particular parameter.

Value:
0: Freeze setpoints and continue to process sign-of-life
1: Freeze setpoints and sign-of-life
2: Setpoints are not frozen

Recommend.: Do not change the setting p2037 = 0.

Note: If the STW1 is not transferred according to the PROFIdrive with PZD1 (with bit 10 "master control by PLC"), then p2037 should be set to 2.

p2038 PROFIdrive STW/ZSW interface mode / PD STW/ZSW IF mode

SERVO (EPOS, Pos ctrl), VECTOR (EPOS, Pos ctrl)

Can be changed: T
Calculated: -
Access level: 3
Data type: Integer16
Dynamic index: -
Func. diagram: -
P-Group: Communications
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0	0	0

Description: Displays the interface mode of the PROFIdrive control words and status words.

Value:
0: SINAMICS

Dependency: Refer to: p0922, p2079
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: For p0922 (p2079) = 7, 9, 110, 111, p2038 is automatically set to 0 and cannot be changed.

p2038 PROFIdrive STW/ZSW interface mode / PD STW/ZSW IF mode

SERVO, VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	2	0

Description: Sets the interface mode of the PROFIdrive control words and status words.
When selecting a telegram via p0922 (p2079), this parameter influences the device-specific assignment of the bits in the control and status words.

Value:
0: SINAMICS
1: SIMODRIVE 611 universal
2: VIK-NAMUR

Dependency: Refer to: p0922, p2079
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: For p0922 (p2079) = 100 ... 199, p2038 is automatically set to 1 and p2038 can no longer be changed. This means that for these telegrams, the "SIMODRIVE 611 universal" interface mode is set and cannot be changed.

P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	1

Description: The serial interface for the debug monitor is COM1 (X140) or COM2 (internal).
Value = 0: COM2 (internal)
Value = 1: COM1 (X140), PPI is de-activated
Note: A change only becomes effective after a POWER ON.

p2040 COMM INT monitoring time / C INT t_monit

CU_CX32, CU_I, CU_LINK

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [ms]	65535000 [ms]	20 [ms]

Description: Sets the monitoring time to monitor the process data received via COMM BOARD. If no process data is received within this time, an appropriate message is output.

Dependency: Refer to: F08501

Note: 0: The monitoring is de-activated.

p2042 PROFIBUS Ident Number / PB Ident No.

CU_S

Can be changed: C1(1) | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Sets the PROFIBUS Ident Number (PNO-ID).
SINAMICS can be operated with various identities on PROFIBUS. This allows the use of a PROFIBUS GSD that is independent of the device (e.g. PROFIdrive VIK-NAMUR with Ident Number 3AA0 hex).

Value:
0: SINAMICS S/G
1: VIK-NAMUR

Note: A new setting only becomes effective after POWER ON, reset or download.

r2043.0...1 BO: PROFIdrive PZD state / PD PZD state

CU_CX32, CU_I, CU_S

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** 2410
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the PROFIdrive PZD state.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Setpoint failure	Yes	No	-
01	Clock cycle synchronous operation active	Yes	No	-

Dependency: Refer to: p2044

Note: When using the "setpoint failure" signal, the bus can be monitored and an application-specific response triggered when the setpoint fails.

p2044 PROFIdrive fault delay / PD fault delay

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 2410
P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [s]	100 [s]	0 [s]

Description: Sets the delay time to initiate fault F01910 after a setpoint failure.
The time until the fault is initiated can be used by the application. This means that is is possible to respond to the failure while the drive is still operational (e.g. emergency retraction).

Dependency: Refer to: r2043
Refer to: F01910

p2045 CI: PROFIdrive clock-cyc. synchr. master sign-of-life, signal source / PD mast-SoL S_src

CU_CX32, CU_I, CU_S, SERVO, TM41, VECTOR (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Integer16	**Dynamic index:** -	**Func. diagram:** 2410
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Connector input for the sign-of-life of the clock synchronous PROFIBUS/PROFINET master.
The sign-of-life is expected at bits 12 to 15. Bits 0 to 11 are not evaluated.
The sign-of-life signal is normally received in PZD4 (control word 2) from the PROFIBUS/PROFINET master.
Dependency: Refer to: p0925, r2065
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p2047 PROFIBUS additional monitoring time / PB suppl t_monit

CU_S

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 2410
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	2000 [ms]	0 [ms]

Description: Sets the additional monitoring time to monitor the process data received via PROFIBUS.
The additional monitoring time enables compensation for short bus faults.
If no process data is received within this time, an appropriate message is output.
Recommend.: Do not set the additional monitoring time for clock-synchronous operation.
Dependency: Refer to: F01910

p2048 IF1 PROFIdrive PZD sampling time / IF1 PZD t_sample

CU_CX32, CU_I, CU_S

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
1.00 [ms]	16.00 [ms]	4.00 [ms]

Description: Sets the sampling time for the cyclic interface 1 (IF1).
Note: For clock cycle synchronous operation, the specified bus cycle time applies (Tdp).

r2054 PROFIBUS status / PB status

CU_S

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Integer16 **Dynamic index:** - **Func. diagram:** 2410
P-Group: Communications **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	4	-

Description: Status display for the PROFIBUS interface.

Value:
0: Off
1: No connection (search for baud rate)
2: Connection OK (baud rate found)
3: Cyclic connection with master (data exchange)
4: Cyclic data OK

Note:
Re r2054 = 3:
In state 3 (the LED flashes green), a cyclic connection has been established to the PROFIBUS master; however, one of the following prerequisites is missing for cyclic operation:
- No setpoints are being received as the PROFIBUS master is in the STOP condition.
Only for clock-cycle synchronous operation, the following applies:
- The drive is not in synchronism as the global control (GC) has an error.
Re r2054 = 4:
In the status 4 (LED green), the cyclic connection to the PROFIBUS master has been established and setpoints are being received. The clock cycle synchronization is OK, the global control (GC) is error-free.
This state does not provide any statement regarding the quality of the clock cycle synchronous sign-of-life characters on the drive objects.

r2054 COMM INT state / C INT state

CU_CX32, CU_I, CU_LINK

Can be changed: - **Calculated:** - **Access level:** 3

r2064[0...7] PROFIdrive diagnostics clock synchronous mode / PD diag clock sync

CU_CX32, CU_I, CU_S

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Integer32 **Dynamic index:** - **Func. diagram:** 2410
P-Group: Communications **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the last parameter received from the PROFIBUS/PROFINET master for clock synchronism.
The parameters for clock synchronism are created when configuring the bus and are transferred at the start of cyclic operation from the master to the slave.

Index:
[0] = Clock synchronous mode activated
[1] = Bus cycle time (Tdp) [µs]
[2] = Master cycle time (Tmapc) [µs]
[3] = Instant of actual value acquisition (Ti) [µs]
[4] = Instant of setpoint acquisition (To) [µs]
[5] = Data exchange interval (Tdx) [µs]
[6] = PLL window (Tpll-w) [1/12 µs]
[7] = PLL delay time (Tpll-d) [1/12 µs]

r2065 PROFIdrive master sign-of-life, diagnostics / PD mast-SoL diag

CU_CX32, CU_I, CU_S, SERVO, TM41, VECTOR (n/M)

Can be changed: -
Data type: Unsigned16
P-Group: Communications
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: 2410
Unit selection: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays how often the sign-of-life from the clock synchronous PROFIBUS/PROFINET master failed.
An appropriate fault is output when the tolerance, specified in p0925, is exceeded.

Dependency: Refer to: F01912

p2066 SYNC automatic warm restart / SYNC warm restart

CU_CX32, CU_I, CU_S

Can be changed: U, T
Data type: Unsigned16
P-Group: Communications
Not for motor type: -

Calculated: -
Dynamic index: -
Units group: -

Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
0	1	0

Description: Activates an automatic warm restart after changing the DP clock cycle has been changed.
p2066 = 0:
An attempt to change the DP clock cycle is rejected, and Alarm A01902 is output with alarm value = 9. In order that the DP clock cycle becomes effective, a warm restart or POWER ON must be carried out.
p2066 = 1:
When the DP clock cycle is changed, an automatic warm restart is initiated (p0009 = 30, p0976 = 3). After booting the modified DP clock cycle becomes effective. The automatic warm restart is only carried out if for all of the drives the pulses have been suppressed. Otherwise p0009 = 30 cannot be executed and an attempt to change the DP clock cycle is rejected as for p2066 = 0.

Dependency: Refer to: A01902

P-Group: Communications | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the connector-binector converter.
A PZD receive word can be selected as signal source. The signals are available to be serially passed-on (interconnection).

Dependency: Refer to: r2094, r2095

Note: From the signal source set via the connector input, the corresponding lower 16 bits are converted.
p2099[0...1] together with r2094.0...15 and r2095.0...15 forms two connector-binector converters:
Connector input p2099[0] to binector output in r2094.0...15
Connector input p2099[1] to binector output in r2095.0...15

p2100[0...19] Setting the fault number for fault response / F_no F response

		[13] 0
		[14] 0
		[15] 0
		[16] 0
		[17] 0
		[18] 0
		[19] 0

Description: Sets the fault response for the selected fault.

Value:
0: NONE
1: OFF1
2: OFF2
3: OFF3
4: STOP1 (being developed)
5: STOP2
6: IASC/DCBRAKE
7: ENCODER (p0491)

Dependency: The fault is selected and the required response is set under the same index.
Refer to: p2100

Notice: It is not possible to re-parameterize the response to a specific fault for faults that are already present (queued).

Note: OFF1:
Braking along the ramp-function generator down ramp followed by a pulse inhibit.
OFF2:
Internal/external pulse inhibit.
OFF3:
Braking along the OFF3 down ramp followed by a pulse inhibit.
STOP2:
n_set = 0
The fault response can only be changed for faults with the appropriate identification.
IASC / DC BRAKE:
a) For synchronous motors (p0300 = 2xx, 4xx), an internal armature short-circuit is executed.
b) For induction motors (p0300 = 1xx)
Example:
F12345 and fault response = NONE (OFF1, OFF2) --> The NONE fault response can be changed to either OFF1 or OFF2.

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** 1750, 8065
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	65535	0

Description: Number of alarms that have occurred after the last reset.
Dependency: When p2111 is set to 0, the following is initiated:
- all of the alarms of the alarm buffer that have gone [0...7] are transferred into the alarm history [8...63].
- the alarm buffer [0...7] is deleted.
Refer to: r2110, r2122, r2123, r2124, r2125
Note: The parameter is reset to 0 at POWER ON.

p2112 BI: External alarm 1 / External alarm 1

CU_CX32, CU_I, CU_LINK, CU_S, HUB, TB30, TM15, TM15DI_DO, TM17, TM31, TM54F_MA, TM54F_SL

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** -
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for external alarm 1.
Dependency: Refer to: A07850
Note: An external alarm is triggered with a 1/0 signal.

p2112[0...n] BI: External alarm 1 / External alarm 1

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** CDS, p0170 | **Func. diagram:** 2546
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for external alarm 1.
Dependency: Refer to: A07850
Note: An external alarm is triggered with a 1/0 signal.

r2114[0...1] System runtime / System runtime

CU_CX32, CU_I, CU_S

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the total system runtime for the drive unit.
The time comprises r2114[0] (milliseconds) and r2114[1] (days).
After r2114[0] has reached a value of 86.400.000 ms (24 hours) this value is reset and r2114[1] is incremented.
Index: [0] = Milliseconds
[1] = Days
Dependency: Refer to: r0948, r2109, r2123, r2125, r2130, r2136, r2145, r2146

Note: The time in r2114 is used to display the fault and alarm times.
When the electronics power supply is switched out, the counter value is saved.
After the drive unit is powered up, the counter continues to run with the value that was saved the last time that the drive unit was powered down.

p2116 BI: External alarm 2 / External alarm 2

CU_CX32, CU_I, CU_LINK, CU_S, HUB, TB30, TM15, TM15DI_DO, TM17, TM31, TM54F_MA, TM54F_SL

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** -
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for external alarm 2.
Dependency: Refer to: A07851
Note: An external alarm is triggered with a 1/0 signal.

p2116[0...n] BI: External alarm 2 / External alarm 2

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** CDS, p0170 | **Func. diagram:** 2546
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for external alarm 2.
Dependency: Refer to: A07851
Note: An external alarm is triggered with a 1/0 signal.

p2117 BI: External alarm 3 / External alarm 3

CU_CX32, CU_I, CU_LINK, CU_S, HUB, TB30, TM15, TM15DI_DO, TM17, TM31, TM54F_MA, TM54F_SL

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** -
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for external alarm 3.
Dependency: Refer to: A07852
Note: An external alarm is triggered with a 1/0 signal.

p2117[0...n] BI: External alarm 3 / External alarm 3

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** CDS, p0170 | **Func. diagram:** 2546
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for external alarm 3.
Dependency: Refer to: A07852
Note: An external alarm is triggered with a 1/0 signal.

p2118[0...19] Sets the message number for message type. / Msg_no Msg_type

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** 1750, 8075
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	65535	0

Description: Selects faults or alarms for which the message type should be changed.

Dependency: Selects the fault or alarm selection and sets the required type of message realized under the same index.
Refer to: p2119

Notice: It is not possible to re-parameterize the message type in the following cases:
- if there is no existing message number.
- if a message is present.

p2119[0...19] Setting the message type / Message type

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** 1750, 8075
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
1	3	1

Description: Sets the message type for the selected fault or alarm.

Value:
1: Fault (F)
2: Alarm (A)
3: No message (N)

Dependency: Selects the fault or alarm selection and sets the required type of message realized under the same index.
Refer to: p2118

Notice: It is not possible to re-parameterize the message type for the existing faults or alarms.

Note: The message type can only be changed for messages with the appropriate identification.
Example:
F12345(A) --> Fault F12345 can be changed to alarm A12345.
In this case, the message number that may be possibly entered in p2100[0...19] and p2126[0...19] is automatically removed.

r2120 CO: Sum of fault and alarm buffer changes / Sum buffer changed

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** 8065
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the sum of all of the fault and alarm buffer changes in the drive unit.

Dependency: Refer to: r0944, r2121

r2121 CO: Counter, alarm buffer changes / Alrm buff changed

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** 8065
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: This counter is incremented every time the alarm buffer changes.
Dependency: Refer to: r2110, r2122, r2123, r2124, r2125

r2122[0...63] Alarm code / Alarm code

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** 1750, 8065
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the number of alarms that have occurred.
Dependency: Refer to: r2110, r2123, r2124, r2125, r2134, r2145, r2146
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
Alarm buffer structure (general principle):
r2122[0], r2124[0], r2123[0], r2125[0] --> alarm 1 (the oldest)
. . .
r2122[7], r2124[7], r2123[7], r2125[7] --> Alarm 8 (the latest)
When the alarm buffer is full, the alarms that have gone are entered into the alarm history:
r2122[8], r2124[8], r2123[8], r2125[8] --> Alarm 1 (the latest)
. . .
r2122[63], r2124[63], r2123[63], r2125[63] --> alarm 56 (the oldest)

r2123[0...63] Alarm time received in milliseconds / t_alarm recv ms

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** 1750, 8065
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [ms]	- [ms]	- [ms]

Description: Displays the system runtime in milliseconds when the alarm occurred.
Dependency: Refer to: r2110, r2114, r2122, r2124, r2125, r2134, r2145, r2146
Notice: The time comprises r2145 (days) and r2123 (milliseconds).
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the alarm buffer and the assignment of the indices is shown in r2122.

r2124[0...63] Alarm value / Alarm value

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Integer32	**Dynamic index:** -	**Func. diagram:** 1750, 8065
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays additional information about the active alarm (as integer number).

Dependency: Refer to: r2110, r2122, r2123, r2125, r2134, r2145, r2146
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the alarm buffer and the assignment of the indices is shown in r2122.

r2125[0...63] Alarm time removed in milliseconds / t_alarm res ms

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** 1750, 8065
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
- [ms]	- [ms]	- [ms]

Description: Displays the system runtime in milliseconds when the alarm was cleared.
Dependency: Refer to: r2110, r2114, r2122, r2123, r2124, r2134, r2145, r2146
Notice: The time comprises r2146 (days) and r2125 (milliseconds).
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the alarm buffer and the assignment of the indices is shown in r2122.

p2126[0...19] Setting fault number for acknowledge mode / Fault_no ackn_mode

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** 1750, 8075
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	65535	0

Description: Selects the faults for which the acknowledge mode is to be changed
Dependency: Selects the faults and sets the required acknowledge mode realized under the same index
Refer to: p2127
Notice: It is not possible to re-parameterize the acknowledge mode of a fault in the following cases:
- if there is no existing fault number.
- the message type is not "fault" (F).
- when a fault is present.

p2127[0...19] Sets acknowledgement mode / Acknowledge mode

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** 1750, 8075
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
1	3	1

Description: Sets the acknowledge mode for selected fault.
Value:
1: Acknowledgement only using POWER ON
2: IMMEDIATE acknowledged after the fault cause has been removed
3: Acknowledgement only for PULSE INHIBIT
Dependency: Selects the faults and sets the required acknowledge mode realized under the same index
Refer to: p2126
Notice: It is not possible to re-parameterize the acknowledge mode of a fault in the following cases:
- if there is no existing fault number.
- the message type is not "fault" (F).
- when a fault is present.
Note: The acknowledge mode can only be changed for faults with the appropriate identification.

Example:
F12345 and acknowledge mode = POWER ON (IMMEDIATELY) --> The acknowledge mode can be changed from POWER ON to IMMEDIATELY.

p2128[0...15] Selecting fault/alarm code for trigger / Message trigger

All objects

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** 1750, 8070
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0	65535	0

Description: Selects faults or alarms which can be used as trigger.
Dependency: Refer to: r2129

r2129.0...15 CO/BO: Trigger word for faults and alarms / Trigger word

All objects

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** 1530, 8070
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Trigger signal for the selected faults and alarms

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Trigger signal p2128[0]	On	Off	-
01	Trigger signal p2128[1]	On	Off	-
02	Trigger signal p2128[2]	On	Off	-
03	Trigger signal p2128[3]	On	Off	-
04	Trigger signal p2128[4]	On	Off	-
05	Trigger signal p2128[5]	On	Off	-
06	Trigger signal p2128[6]	On	Off	-
07	Trigger signal p2128[7]	On	Off	-
08	Trigger signal p2128[8]	On	Off	-
09	Trigger signal p2128[9]	On	Off	-
10	Trigger signal p2128[10]	On	Off	-
11	Trigger signal p2128[11]	On	Off	-
12	Trigger signal p2128[12]	On	Off	-
13	Trigger signal p2128[13]	On	Off	-
14	Trigger signal p2128[14]	On	Off	-
15	Trigger signal p2128[15]	On	Off	-

Dependency: If one of the faults or alarms selected in p2128[n] occurs, then the particular bit of this binector output is set.
Refer to: p2128
Note: CO: r2129 = 0 --> None of the selected messages has occurred.
CO: r2129 > 0 --> At least one of the selected messages has occurred.

r2130[0...63] Fault time received in days / t_fault recv days

All objects

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** 8060
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the system runtime in days when the fault occurred.
Dependency: Refer to: r0945, r0947, r0948, r0949, r2109, r2114, r2133, r2136, r3115
Notice: The time comprises r2130 (days) and r0948 (milliseconds).

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

r2131 CO: Current fault code / Current fault code

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** 8060
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the code of the oldest active fault.
Note: 0: No fault present.

r2132 CO: Current alarm code / Current alarm code

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** 8065
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the code of the last alarm that occurred.
Note: 0: No alarm present.

r2133[0...63] Fault value for float values / Fault val float

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 8060
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays additional information about the fault that occurred for float values.
Dependency: Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2136, r3115
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

r2134[0...63] Alarm value for float values / Alarm value float

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 8065
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays additional information about the active alarm for float values.
Dependency: Refer to: r2110, r2122, r2123, r2124, r2125, r2145, r2146
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

r2135.0...15 CO/BO: Status word faults/alarms 2 / ZSW fault/alarm 2

A_INF, B_INF, CU_CX32, CU_I, CU_LINK, CU_S, HUB, S_INF, SERVO, TB30, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL

Can be changed: -
Calculated: -
Access level: 2
Data type: Unsigned16
Dynamic index: -
Func. diagram: 1530, 2548
P-Group: Displays, signals
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the second status word of faults and alarms.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Fault encoder 1	Yes	No	-
01	Fault encoder 2	Yes	No	-
02	Fault encoder 3	Yes	No	-
10	Fault transformer overtemperature	Yes	No	-
11	Alarm transformer overtemperature	Yes	No	-
12	Fault motor overtemperature	Yes	No	-
13	Fault thermal overload power unit	Yes	No	-
14	Alarm motor overtemperature	Yes	No	-
15	Alarm power unit thermal overload	Yes	No	-

r2135.0...15 CO/BO: Status word faults/alarms 2 / ZSW fault/alarm 2

VECTOR

Can be changed: -
Calculated: -
Access level: 2
Data type: Unsigned16
Dynamic index: -
Func. diagram: 1530, 2548
P-Group: Displays, signals
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the second status word of faults and alarms.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Fault encoder 1	Yes	No	-
01	Fault encoder 2	Yes	No	-
02	Fault encoder 3	Yes	No	-
12	Fault motor overtemperature	Yes	No	-
13	Fault thermal overload power unit	Yes	No	-
14	Alarm motor overtemperature	Yes	No	-
15	Alarm power unit thermal overload	Yes	No	-

r2136[0...63] Fault time removed in days / t_flt resolv. days

All objects

Can be changed: -
Calculated: -
Access level: 3
Data type: Unsigned16
Dynamic index: -
Func. diagram: 8060
P-Group: Messages
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the system runtime in days when the fault was removed.
Dependency: Refer to: r0945, r0947, r0948, r0949, r2109, r2114, r2130, r2133, r3115
Notice: The time comprises r2136 (days) and r2109 (milliseconds).
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

r2138.7...15 CO/BO: Control word faults/alarms / STW fault/alarm

All objects

Can be changed: -
Calculated: -
Access level: 2
Data type: Unsigned16
Dynamic index: -
Func. diagram: 1530, 2546
P-Group: Displays, signals
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the control word of the faults and alarms.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
07	Acknowledge fault	Yes	No	-
10	External alarm 1 (A07850) effective	Yes	No	-
11	External alarm 2 (A07851) effective	Yes	No	-
12	External alarm 3 (A07852) effective	Yes	No	-
13	External fault 1 (F07860) effective	Yes	No	-
14	External fault 2 (F07861) effective	Yes	No	-
15	External fault 3 (F07862) effective	Yes	No	-

Dependency: Refer to: p2103, p2104, p2105, p2106, p2107, p2108, p2112, p2116, p2117, p3110, p3111, p3112

r2139.0...12 CO/BO: Status word faults/alarms 1 / ZSW fault/alarm 1

All objects

Can be changed: -
Calculated: -
Access level: 2
Data type: Unsigned16
Dynamic index: -
Func. diagram: 1530, 2548
P-Group: Displays, signals
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the first status word of faults and alarms.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Being acknowledged	Yes	No	-
03	Fault present	Yes	No	-
05	Safety message present	Yes	No	-
06	Internal message 1 present	Yes	No	-
07	Alarm present	Yes	No	-
08	Internal message 2 present	Yes	No	-
11	Alarm class bit 0	High	Low	-
12	Alarm class bit 1	High	Low	-

Note: Re bit 03, 05, 07:

These bits are set if at least one fault/alarm occurs. Data is entered into the fault/alarm buffer with delay. This is the reason that the fault/alarm buffer should only be read if, after "fault present"/"alarm present" has occurred, a change in the buffer was also detected (r0944, r9744, r2121).

Re bit 06, 08:

These status bits are used for internal diagnostic purposes only.

Re bit 11, 12:

These status bits are used for the classification of internal alarm classes and are intended for diagnostic purposes only for automation systems with SINAMICS functionality (e.g. SINUMERIK).

Bits 12, 11 = 0, 0 --> Alarm class 0

Bits 12, 11 = 0, 1 --> Alarm class A

Bits 12, 11 = 1, 0 --> Alarm class B

Bits 12, 11 = 1, 1 --> Alarm class C

p2140[0...n] Hysteresis velocity 2 / v_hysteresis 2

SERVO (Lin)	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 8010
	P-Group: Messages	**Units group:** 4_1	**Unit selection:** p0505
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [m/min]	10.00 [m/min]	0.90 [m/min]

Description: Sets the hysteresis velocity (bandwidth) for the following signals:
"|n_act| < = speed threshold value 2" (BO: r2197.1)
"|n_act| > speed threshold value 2" (BO: r2197.2)

Dependency: Refer to: p2155, r2197

p2140[0...n] Hysteresis speed 2 / n_hysteresis 2

SERVO, VECTOR	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 8010
	P-Group: Messages	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [rev/min]	300.00 [rev/min]	90.00 [rev/min]

Description: Sets the hysteresis speed (bandwidth) for the following signals:
"|n_act| < = speed threshold value 2" (BO: r2197.1)
"|n_act| > speed threshold value 2" (BO: r2197.2)

Dependency: Refer to: p2155, r2197

p2141[0...n] Velocity threshold value 1 / v_thresh val 1

SERVO (Lin)	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 8010
	P-Group: Messages	**Units group:** 4_1	**Unit selection:** p0505
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [m/min]	1000.00 [m/min]	0.05 [m/min]

Description: Sets the velocity threshold value for the signal "f or n comparison value reached or exceeded" (BO: r2199.1).

Dependency: Refer to: p2142, r2199

p2141[0...n] Speed threshold 1 / n_thresh val 1

SERVO, VECTOR	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 8010
	P-Group: Messages	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [rev/min]	210000.00 [rev/min]	5.00 [rev/min]

Description: Sets the speed threshold value for the signal "f or n comparison value reached or exceeded" (BO: r2199.1).

Dependency: Refer to: p2142, r2199

p2142[0...n] Hysteresis velocity 1 / v_hysteresis 1

SERVO (Lin)	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 8010
	P-Group: Messages	**Units group:** 4_1	**Unit selection:** p0505
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [m/min]	10.00 [m/min]	0.02 [m/min]

Description: Sets the hysteresis velocity (bandwidth) for the signal "f or n / v comparison value reached or exceeded" (BO: r2199.1).

Dependency: Refer to: p2141, r2199

p2142[0...n] Hysteresis speed 1 / n_hysteresis 1

SERVO, VECTOR	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 8010
	P-Group: Messages	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [rev/min]	300.00 [rev/min]	2.00 [rev/min]

Description: Sets the hysteresis speed (bandwidth) for the signal "f or n / v comparison value reached or exceeded" (BO: r2199.1).

Dependency: Refer to: p2141, r2199

p2144[0...n] BI: Motor stall monitoring enable (negated) / Mot stall enab neg

SERVO, VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dynamic index:** CDS, p0170	**Func. diagram:** 8012
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source for the negated enable (0 = enable) of the motor stall monitoring.

Dependency: Refer to: p2163, p2164, p2166, r2197, r2198

Refer to: F07900

Note: If the enable signal is connected to r2197.7 then the stall signal is suppressed if there is no speed setpoint - actual value deviation.

r2145[0...63] Alarm time received in days / t_alarm recv days

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** 8065
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the system runtime in days when the alarm occurred.

Dependency: Refer to: r2110, r2114, r2122, r2123, r2124, r2125, r2134, r2146

Notice: The time comprises r2145 (days) and r2123 (milliseconds).

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

r2146[0...63] Alarm time removed in days / t_alarm res days

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** 8065
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the system runtime in days when the alarm was cleared.
Dependency: Refer to: r2110, r2114, r2122, r2123, r2124, r2125, r2134, r2145
Notice: The time comprises r2146 (days) and r2125 (milliseconds).
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

p2147 Delete fault buffer of all drive objects / Del fault buffer

CU_CX32, CU_I, CU_S	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: Integer16	**Dynamic index:** -	**Func. diagram:** 8060
	P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	0

Description: Setting to delete the fault buffer of all existing drive objects.
Value: 0: Inactive
1: Start to delete the fault buffer of all drive objects
Dependency: Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136
Note: p2147 is automatically set to 0 after execution.

p2148[0...n] BI: Ramp-function generator active / HLG active

SERVO, VECTOR	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dynamic index:** CDS, p0170	**Func. diagram:** 8010
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source for the signal "ramp-function generator active" for the following signals/messages:
"Speed setpoint - actual value deviation within tolerance t_on" (BO: r2199.4)
"Ramp-up/ramp-down completed" (BO: r2199.5)
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: The binector input is automatically pre-assigned to r1199.2.
The following applies for SERVO:
The pre-assignment is only made when the function module "setpoint channel" is activated (r0108.8 = 1).

p2149[0...n] Monitoring configuration / Monit config

SERVO, VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dynamic index:** DDS, p0180	**Func. diagram:** 8010
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0000 bin

Description: Configuration word for signals and monitoring functions.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Enable alarm A07903	Yes	No	8010
	01	Load monitoring only in the 1st quadrants	Yes	No	8010
	15	Automatic parameterization carried out (p0340 = 1, p3900 > 0)	Yes	No	-

Dependency: Refer to: r2197

Refer to: A07903

Note: Re bit 00:

Alarm A07903 is output when the bit is set with r2197.7 = 0 (n_set <> n_act).

Re bit 01:

When the bit is set, the load monitoring is only carried out in the 1st quadrant as a result of the positive characteristic parameters (p2182 ... p2190).

Re bit 15:

The bit indicates whether the automatic parameterization (p0340 = 1, p3900 > 0) for the parameters of the extended monitoring functions was carried out. If the bit is not set (e.g. when the configuration is activated (p0108.15)), parameterization is carried out automatically during booting even if r3925.0 is already 1.

p2150[0...n] Hysteresis velocity 3 / v_hysteresis 3

SERVO (Lin)

Can be changed: U, T | **Calculated:** CALC_MOD_LIM_REF | **Access level:** 3

Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 8010

P-Group: Messages | **Units group:** 4_1 | **Unit selection:** p0505

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [m/min]	3.00 [m/min]	0.02 [m/min]

Description: Sets the hysteresis velocity (bandwidth) for the following signals:

"|n_act| < speed threshold value 3" (BO: r2199.0)

"n_set >= 0" (BO: r2198.5)

"n_act >= 0" (BO: r2197.3)

Dependency: Refer to: p2161, r2197, r2199

p2150[0...n] Hysteresis speed 3 / n_hysteresis 3

SERVO, VECTOR

Can be changed: U, T | **Calculated:** CALC_MOD_LIM_REF | **Access level:** 3

Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 8010

P-Group: Messages | **Units group:** 3_1 | **Unit selection:** p0505

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [rev/min]	300.00 [rev/min]	2.00 [rev/min]

Description: Sets the hysteresis speed (bandwidth) for the following signals:

"|n_act| < speed threshold value 3" (BO: r2199.0)

"n_set >= 0" (BO: r2198.5)

"n_act >= 0" (BO: r2197.3)

Dependency: Refer to: p2161, r2197, r2199

p2151[0...n] CI: Velocity setpoint for messages/signals / v_set for msg

SERVO (Lin)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / FloatingPoint32 | **Dynamic index:** CDS, p0170 | **Func. diagram:** 8010
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	1438[0]

Description: Sets the signal source for the velocity setpoint for the following messages:
"Velocity setpoint - actual value deviation within tolerance t_off" (BO: r2197.7)
"Ramp-up/ramp-down completed" (BO: r2199.5)
"|v_set| < p2161" (BO: r2198.4)
"v_set > 0" (BO: r2198.5)

Dependency: Refer to: r2197, r2198, r2199

p2151[0...n] CI: Speed setpoint for messages/signals / n_set for msg

SERVO

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / FloatingPoint32 | **Dynamic index:** CDS, p0170 | **Func. diagram:** 8010
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	1438[0]

Description: Sets the signal source for the speed setpoint for the following messages:
"Speed setpoint - actual value deviation within tolerance t_off" (BO: r2197.7)
"Ramp-up/ramp-down completed" (BO: r2199.5)
"|n_set| < p2161" (BO: r2198.4)
"n_set > 0" (BO: r2198.5)

Dependency: Refer to: r2197, r2198, r2199

p2151[0...n] CI: Speed setpoint for messages/signals / n_set for msg

VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / FloatingPoint32 | **Dynamic index:** CDS, p0170 | **Func. diagram:** 8010
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	1170[0]

Description: Sets the signal source for the speed setpoint for the following messages:
"Speed setpoint - actual value deviation within tolerance t_off" (BO: r2197.7)
"Ramp-up/ramp-down completed" (BO: r2199.5)
"|n_set| < p2161" (BO: r2198.4)
"n_set > 0" (BO: r2198.5)

Dependency: Refer to: r2197, r2198, r2199

p2153[0...n] Velocity actual value filter time constant / v_act_filt T

SERVO (Lin)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 8010
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [ms]	1000000 [ms]	0 [ms]

Description: Sets the time constant of the PT1 element to smooth the speed / velocity actual value.
The smoothed actual speed/velocity is compared with the threshold values and is only used for messages and signals.

Dependency: Refer to: r2169

p2153[0...n] Speed actual value filter time constant / n_act_filt T

SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 8010
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [ms]	1000000 [ms]	0 [ms]

Description: Sets the time constant of the PT1 element to smooth the speed / velocity actual value.
The smoothed actual speed/velocity is compared with the threshold values and is only used for messages and signals.

Dependency: Refer to: r2169

p2154[0...n] CI: Velocity setpoint 2 / v_set 2

SERVO (Lin)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / FloatingPoint32 | **Dynamic index:** CDS, p0170 | **Func. diagram:** 8010
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the velocity setpoint 2.
The sum of CI: p2151 and CI: p2154 is used for the following messages/signals:
"Velocity setpoint - actual value deviation within tolerance t_off" (BO: r2197.7)
"Velocity setpoint - actual value deviation within tolerance t_on" (BO: r2199.4)
"Ramp-up/ramp-down completed" (BO: r2199.5)

Dependency: Refer to: p2151, r2197, r2199

p2154[0...n] CI: Speed setpoint 2 / n_set 2

SERVO, VECTOR

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / FloatingPoint32 | **Dynamic index:** CDS, p0170 | **Func. diagram:** 8010
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for speed setpoint 2.
The sum of CI: p2151 and CI: p2154 is used for the following messages/signals:
"Speed setpoint - actual value deviation within tolerance t_off" (BO: r2197.7)
"Speed setpoint - actual value deviation within tolerance t_on" (BO: r2199.4)
"Ramp-up/ramp-down completed" (BO: r2199.5)

Dependency: Refer to: p2151, r2197, r2199

p2155[0...n] Velocity threshold value 2 / v_thresh val 2

SERVO (Lin)

Can be changed: U, T | **Calculated:** CALC_MOD_LIM_REF | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 8010
P-Group: Messages | **Units group:** 4_1 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [m/min]	1000.00 [m/min]	9.00 [m/min]

Description: Sets the velocity threshold value for the following messages:
"|v_act| < = velocity threshold value 2" (BO: r2197.1)
"|v_act| > velocity threshold value 2" (BO: r2197.2)

Dependency: Refer to: p2140, r2197

p2155[0...n] Speed threshold 2 / n_thresh val 2

SERVO, VECTOR

Can be changed: U, T | **Calculated:** CALC_MOD_LIM_REF | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 8010
P-Group: Messages | **Units group:** 3_1 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [rev/min]	210000.00 [rev/min]	900.00 [rev/min]

Description: Sets the speed threshold value for the following messages:
"|n_act| < = speed threshold value 2" (BO: r2197.1)
"|n_act| > speed threshold value 2" (BO: r2197.2)

Dependency: Refer to: p2140, r2197

p2156[0...n] On delay, comparison value reached / t_on cmpr val rchd

SERVO, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 8010
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.0 [ms]	10000.0 [ms]	0.0 [ms]

Description: Sets the switch-in delay time for the signal "comparison value reached" (BO: r2199.1).

Dependency: Refer to: p2141, p2142, r2199

p2161[0...n] Velocity threshold value 3 / v_thresh val 3

SERVO (Lin)

Can be changed: U, T | **Calculated:** CALC_MOD_LIM_REF | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 8010
P-Group: Messages | **Units group:** 4_1 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [m/min]	1000.00 [m/min]	0.05 [m/min]

Description: Sets the velocity threshold value for the signal "|v_act| < velocity threshold value 3" (BO: r2199.0).

Dependency: Refer to: p2150, r2199

p2161[0...n] Speed threshold 3 / n_thresh val 3

SERVO, VECTOR	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 8010
	P-Group: Messages	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [rev/min]	210000.00 [rev/min]	5.00 [rev/min]

Description: Sets the speed threshold value for the signal "|n_act| < speed threshold value 3" (BO: r2199.0).

Dependency: Refer to: p2150, r2199

p2162[0...n] Hysteresis velocity v_act > v_max / Hyst v_act>v_max

SERVO (Lin)	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 8010
	P-Group: Messages	**Units group:** 4_1	**Unit selection:** p0505
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [m/min]	1000.00 [m/min]	6.00 [m/min]

Description: Sets the hysteresis velocity (bandwidth) for the signal "v_act > v_max" (BO: r2197.6).

Dependency: Refer to: r1084, r1087, r2197

Notice: For p0322 = 0, the following applies: p2162 <= 0.1 * p0311

For p0322 > 0, the following applies: p1082 + p2162 <= 1.02 * p0322

If one of the conditions is violated, p2162 is appropriately and automatically reduced when exiting the commissioning mode.

Note: For a negative velocity limit (r1087) the hysteresis is effective below the limit value and for a positive velocity limit (r1084) above the limit value.

p2162[0...n] Hysteresis speed n_act > n_max / Hyst n_act>n_max

SERVO, VECTOR	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 8010
	P-Group: Messages	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [rev/min]	60000.00 [rev/min]	0.00 [rev/min]

Description: Sets the hysteresis speed (bandwidth) for the signal "n_act > n_max" (BO: r2197.6).

Dependency: Refer to: r1084, r1087, r2197

Notice: For p0322 = 0, the following applies: p2162 <= 0.1 * p0311

For p0322 > 0, the following applies: p1082 + p2162 <= 1.02 * p0322

If one of the conditions is violated, p2162 is appropriately and automatically reduced when exiting the commissioning mode.

Note: For a negative speed limit (r1087) the hysteresis is effective below the limit value and for a positive speed limit (r1084) above the limit value.

p2163[0...n] Velocity threshold value 4 / v_thresh val 4

SERVO (Lin)

Can be changed: U, T | **Calculated:** CALC_MOD_LIM_REF | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 8010
P-Group: Messages | **Units group:** 4_1 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [m/min]	1000.00 [m/min]	0.90 [m/min]

Description: Sets the velocity threshold value for the "speed setpoint - actual value deviation in tolerance t_off" signal/message (BO: r2197.7).

Dependency: Refer to: p2164, p2166, r2197

p2163[0...n] Speed threshold 4 / n_thresh val 4

SERVO, VECTOR

Can be changed: U, T | **Calculated:** CALC_MOD_LIM_REF | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 8010
P-Group: Messages | **Units group:** 3_1 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [rev/min]	210000.00 [rev/min]	90.00 [rev/min]

Description: Sets the speed threshold value for the "speed setpoint - actual value deviation in tolerance t_off" signal/message (BO: r2197.7).

Dependency: Refer to: p2164, p2166, r2197

p2164[0...n] Hysteresis velocity 4 / v_hysteresis 4

SERVO (Lin)

Can be changed: U, T | **Calculated:** CALC_MOD_LIM_REF | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 8010
P-Group: Messages | **Units group:** 4_1 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [m/min]	10.00 [m/min]	0.02 [m/min]

Description: Sets the hysteresis velocity (bandwidth) for the "speed setpoint - actual value deviation in tolerance t_off" signal/message (BO: r2197.7).

Dependency: Refer to: p2163, p2166, r2197

p2164[0...n] Hysteresis speed 4 / n_hysteresis 4

SERVO, VECTOR

Can be changed: U, T | **Calculated:** CALC_MOD_LIM_REF | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 8010
P-Group: Messages | **Units group:** 3_1 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [rev/min]	200.00 [rev/min]	2.00 [rev/min]

Description: Sets the hysteresis speed (bandwidth) for the "speed setpoint - actual value deviation in tolerance t_off" signal/message (BO: r2197.7).

Dependency: Refer to: p2163, p2166, r2197

p2166[0...n] Switch-off delay v_act = v_set / t_del_off v_i=v_se

SERVO (Lin)

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 8010

Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0.00 [N]	20000000.00 [N]	1000.00 [N]

Description: Sets the force threshold value for the signal "Torque setpoint < torque threshold value 1" (BO: r2198.10).
Dependency: Refer to: p2195, r2198

p2174[0...n] Torque threshold value 1 / M_thresh val 1

SERVO, VECTOR

Can be changed: U, T
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: 8012
P-Group: Messages
Units group: 7_1
Unit selection: p0505
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0.00 [Nm]	20000000.00 [Nm]	5.13 [Nm]

Description: Sets the torque threshold value for the signal "Torque setpoint < torque threshold value 1" (BO: r2198.10).
Dependency: Refer to: p2195, r2198

p2175[0...n] Motor locked, velocity threshold / Mot lock v_thresh

SERVO (Lin)	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 8012
	P-Group: Messages	**Units group:** 4_1	**Unit selection:** p0505
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [m/min]	1000.00 [m/min]	1.20 [m/min]

Description: Sets the velocity threshold for the message "Motor locked" (BO: r2198.6).

Dependency: Refer to: p0500, p2177, r2198

p2175[0...n] Motor locked speed threshold / Mot lock n_thresh

SERVO, VECTOR	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 8012
	P-Group: Messages	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [rev/min]	210000.00 [rev/min]	120.00 [rev/min]

Description: Sets the speed threshold for the message "Motor locked" (BO: r2198.6).

Dependency: Refer to: p0500, p2177, r2198

p2177[0...n] Motor locked delay time / Mot lock t_del

SERVO, VECTOR	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 8012
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000 [s]	65.000 [s]	1.000 [s]

Description: Sets the delay time for the message "Motor locked" (BO: r2198.6).
If "Motor locked" is identified within this time, then ZSW2.6 is set and an appropriate fault is output.

Dependency: Refer to: p0500, p2175, r2198

p2178[0...n] Motor stalled delay time / Mot stall t_del

VECTOR	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 8012
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000 [s]	10.000 [s]	0.010 [s]

Description: Sets the delay time for the message "Motor stalled" (BO: r2198.7).
If "Motor stalled" is identified within this time, then ZSW2.7 is set and an appropriate fault is output.

Dependency: Refer to: r2198

p2181[0...n] Load monitoring response / Load monit resp

SERVO (Extended msg), VECTOR (Extended msg)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** DDS, p0180	**Func. diagram:** 8013
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	6	0

Description: Sets the response when evaluating the load monitoring.

Value:
0: Load monitoring disabled
1: A07920 for torque/speed too low
2: A07921 for torque/speed too high
3: A07922 for torque/speed out of tolerance
4: F07923 for torque/speed too low
5: F07924 for torque/speed too high
6: F07925 for torque/speed out of tolerance

Dependency: Refer to: p2182, p2183, p2184, p2185, p2186, p2187, p2188, p2189, p2190, r2198
Refer to: A07920, A07921, A07922, F07923, F07924, F07925

Note: The response to the faults F07923 ... F07925 can be set.

p2182[0...n] Load monitoring velocity threshold 1 / n_thresh 1

SERVO (Extended msg, Lin)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 8013
P-Group: Messages	**Units group:** 4_1	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.00 [m/min]	1000.00 [m/min]	0.05 [m/min]

Description: Sets the speed/torque envelop curve for the load monitoring.
The envelope curve (upper and lower envelope curve) is defined as follows based on 3 speed thresholds:
p2182 (n_threshold 1) --> p2185 (M_threshold 1, upper), p2186 (M_threshold 1, lower)
p2183 (n_threshold 2) --> p2187 (M_threshold 2, upper), p2188 (M_threshold 2, lower)
p2184 (n_threshold 3) --> p2189 (M_threshold 3, upper), p2190 (M_threshold 3, lower)

Dependency: The following applies: p2182 < p2183 < p2184
Refer to: p2183, p2184, p2185, p2186
Refer to: A07926

p2182[0...n] Load monitoring speed threshold value 1 / n_thresh 1

SERVO (Extended msg), VECTOR (Extended msg)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 8013
P-Group: Messages	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.00 [rev/min]	210000.00 [rev/min]	150.00 [rev/min]

Description: Sets the speed/torque envelop curve for the load monitoring.
The envelope curve (upper and lower envelope curve) is defined as follows based on 3 speed thresholds:
p2182 (n_threshold 1) --> p2185 (M_threshold 1, upper), p2186 (M_threshold 1, lower)
p2183 (n_threshold 2) --> p2187 (M_threshold 2, upper), p2188 (M_threshold 2, lower)
p2184 (n_threshold 3) --> p2189 (M_threshold 3, upper), p2190 (M_threshold 3, lower)

Dependency: The following applies: p2182 < p2183 < p2184
Refer to: p2183, p2184, p2185, p2186
Refer to: A07926

p2183[0...n] Load monitoring velocity threshold 2 / n_thresh 2

SERVO (Extended msg, Lin)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 8013
P-Group: Messages | **Units group:** 4_1 | **Unit selection:** p0505
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [m/min]	1000.00 [m/min]	0.05 [m/min]

Description: Sets the speed/torque envelop curve for the load monitoring.
The envelope curve (upper and lower envelope curve) is defined as follows based on 3 speed thresholds:
p2182 (n_threshold 1) --> p2185 (M_threshold 1, upper), p2186 (M_threshold 1, lower)
p2183 (n_threshold 2) --> p2187 (M_threshold 2, upper), p2188 (M_threshold 2, lower)
p2184 (n_threshold 3) --> p2189 (M_threshold 3, upper), p2190 (M_threshold 3, lower)

Dependency: The following applies: p2182 < p2183 < p2184
Refer to: p2182, p2184, p2187, p2188
Refer to: A07926

p2183[0...n] Load monitoring speed threshold value 2 / n_thresh 2

SERVO (Extended msg), VECTOR (Extended msg)

Can be changed: U, T | **Calculated:** - | **Access level:** 3

Min	Max	Factory setting
-	-	-

Description: Displays the number of the selected fixed setpoint of the technology controller.

Dependency: Refer to: r2224

p2230[0...n] Technology controller motorized potentiometer configuration / Tec_ctr mop config

SERVO (Tech_ctrl), VECTOR (Tech_ctrl)

Can be changed: U, T
Calculated: -
Access level: 3
Data type: Unsigned32
Dynamic index: DDS, p0180
Func. diagram: 7954
P-Group: Technology
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	0110 bin

Description: Sets the configuration for the motorized potentiometer of the technology controller.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Data save active	Yes	No	-
02	Initial rounding-off active	Yes	No	-
03	Non-volatile data save active for p2230.0 = 1	Yes	No	-

Dependency: Refer to: r2231, p2240

Note: Re bit 00:

0: The setpoint for the motorized potentiometer is not saved and after ON is entered using p2240.

1: The setpoint for the motorized potentiometer is saved and after ON is entered using r2231. In order to save in a non-volatile fashion, bit 03 should be set to 1.

Re bit 02:

0: Without initial rounding-off

1: With initial rounding-off. The selected ramp-up/down time is correspondingly exceeded. The initial rounding-off is a sensitive way of specifying small changes (progressive reaction when keys are pressed). The jerk for the initial rounding-off is independent of the ramp-up time and only depends on the selected maximum value (p2237). It is calculated as follows: r = 0.01 % * p2237 [%] / 0.13^2 [s^2]. The jerk acts up until the maximum acceleration is reached (a_max = p2237 [%] / p2247 [s]), and then the drive continues to run linearly with a constant rate of acceleration. The higher the maximum acceleration (the lower that p2247 is), the longer the ramp-up time increases with respect to the set ramp-up time.

Re bit 03:

0: Non-volatile data save de-activated.

1: The setpoint for the motorized potentiometer is saved in a non-volatile fashion (for p2230.0 = 1).

The following prerequisites must be fulfilled in order to be able to save the setpoint in a non-volatile fashion:

- Firmware with V2.3 or higher.
- Control Unit 320 (CU320) with hardware version C or higher (module with NVRAM).

r2231 Technology controller motorized potentiometer setpoint memory / Tec_ctrl mop mem

SERVO (Tech_ctrl), VECTOR (Tech_ctrl)

Min	Max	Factory setting
-	-	2292[0]

Description: Sets the signal source for the minimum limiting of the technology controller.

Dependency: Refer to: p2292

r2349.0...3 CO/BO: Technology controller status word / Tec_ctrl stat word

SERVO (Tech_ctrl), VECTOR (Tech_ctrl)

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 7958
P-Group: Technology | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the status word of the technology controller.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Technology controller de-activated	Yes	No	-
01	Technology controller limited	Yes	No	-
02	Technology controller, motorized potentiometer limited max.	Yes	No	-
03	Technology controller, motorized potentiometer limited min.	Yes	No	-

p2369 BI: Staging control word / Staging STW

VECTOR (Tech_ctrl)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to select the "staging" function.

If staging is selected, monitoring of the switch for the bypass function is deactivated. This enables the Motor Module to be connected to further moters via an external controller, without triggering the switch monitoring functions.

p2502[0...n] LR encoder assignment / Encoder assignment

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: C2(25) | **Calculated:** - | **Access level:** 1
Data type: Integer16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 4010
P-Group: Closed loop position control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	3	1

Description: Sets the assigned encoder.

The actual value preprocessing and the closed-loop position control are carried out using the assigned encoder.

Value:
0: No encoder
1: Encoder 1
2: Encoder 2
3: Encoder 3

Dependency: Refer to: p0187, p0188, p0189

Notice: For the setting p2502 = 0 (no encoder), closed-loop position control is not possible. This setting is only practical as supportive measure to implement encoderless closed-loop speed control (e.g. if the motor encoder is defective).

Note: The assigned encoder (p2502 = 1, 2, 3) must be allocated an encoder data set (p0187, p0188, p0189).

p2503[0...n] LR length unit LU per 10 mm / LU per 10 mm

SERVO (APC, Pos ctrl), VECTOR (Pos ctrl)

Can be changed: C2(25)	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dynamic index:** DDS, p0180	**Func. diagram:** 4010
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
1 [LU]	2147483647 [LU]	10000 [LU]

Description: Sets the neutral length units LU per 10 mm.

Therefore, for a linear scale, a reference is established between the physical arrangement and the neutral length units LU used in the drive.

Example:

Linear scale, 10 mm should be broken down to units of µm (i.e. 1 LU = 1 µm).

--> p2503 = 10000

Note: The assignment to the grid spacing can be achieved using this for a rotary axis with linear encoder.

p2504[0...n] LR motor/load motor path / Mot/load mot path

SERVO (APC, Lin, Pos ctrl)

Can be changed: C2(25)	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dynamic index:** DDS, p0180	**Func. diagram:** 4010, 4704, 4711
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
1	1048576	1

Description: Sets the motor path for the gearbox factor between the motor shaft and load shaft.

Gearbox factor = motor path (p2504) / load path (p2505)

Dependency: Refer to: p0432, p0433, p2505

Note: The gearbox factor between the encoder shaft and the motor shaft is set using p0432 and p0433.

p2504[0...n] LR motor/load motor revolutions / Mot/load motor rev

SERVO (APC, Pos ctrl), VECTOR (Pos ctrl)

Can be changed: C2(25)	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dynamic index:** DDS, p0180	**Func. diagram:** 4010, 4704, 4711
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
1	1048576	1

Description: Sets the motor revolutions for the gearbox factor between the motor shaft and load shaft.

Gearbox factor = motor revolutions (p2504) / load revolutions (p2505)

Dependency: Refer to: p0432, p0433, p2505

Note: The gearbox factor between the encoder shaft and the motor shaft is set using p0432 and p0433.

p2505[0...n] LR motor/load load path / Mot/load load path

SERVO (APC, Lin, Pos ctrl)

Can be changed: C2(25)	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dynamic index:** DDS, p0180	**Func. diagram:** 4010, 4704, 4711
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-1048576	1048576	1

Description: Sets the load path for the gearbox factor between the motor shaft and load shaft.

Gearbox factor = motor path (p2504) / load path (p2505)

Dependency: Refer to: p0432, p0433, p2504

Note: The gearbox factor between the encoder shaft and the motor shaft is set using p0432 and p0433.

p2505[0...n] LR motor/load load revolutions / Mot/load load rev

SERVO (APC, Pos ctrl), VECTOR (Pos ctrl)

Can be changed: C2(25)	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dynamic index:** DDS, p0180	**Func. diagram:** 4010, 4704, 4711
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-1048576	1048576	1

Description: Sets the load revolutions for the gearbox factor between the motor shaft and load shaft.

Gearbox factor = motor revolutions (p2504) / load revolutions (p2505)

Dependency: Refer to: p0432, p0433, p2504

Note: The gearbox factor between the encoder shaft and the motor shaft is set using p0432 and p0433.

p2506[0...n] LR length unit LU per load path / LU per load path

SERVO (APC, Lin, Pos ctrl)

Can be changed: C2(25)	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dynamic index:** DDS, p0180	**Func. diagram:** 4010
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
1 [LU]	2147483647 [LU]	10000 [LU]

Description: Sets the neutral length unit LU per load path.

Therefore, for a rotary encoder, a reference is established between the physical arrangement and the neutral length units LU used in the drive.

Example:

Rotary encoder, ballscrew with 10 mm/revolution, 10 mm should be broken down to units of µm (i.e. 1 LU = 1 µm).

--> One load path corresponds to 10000 LU

--> p2506 = 10000

Note: The position controller can only process position setpoints in the interpolator clock cycle (IPO clock cycle) in integer length units (LU, Length Unit). This is the reason that speed setpoints that are not a multiple integer of 1 LU per IPO clock cycle can only be realized as an average. The result speed setpoint steps are especially noticeable for a high loop gain or when the pre-control is active. Increasing p2506 counteracts this behavior.

p2506[0...n] LR length unit LU per load revolution / LU per load rev

SERVO (APC, Pos ctrl), VECTOR (Pos ctrl)

Can be changed: C2(25) | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 4010
P-Group: Closed loop position control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1 [LU]	2147483647 [LU]	10000 [LU]

Description: Sets the neutral length units LU per load revolution.

Therefore, for a rotary encoder, a reference is established between the physical arrangement and the neutral length units LU used in the drive.

Example:

Rotary encoder, ballscrew with 10 mm/revolution, 10 mm should be broken down to units of µm (i.e. 1 LU = 1 µm).

--> One load revolution corresponds to 10000 LU

--> p2506 = 10000

Note: The position controller can only process position setpoints in the interpolator clock cycle (IPO clock cycle) in integer length units (LU, Length Unit). This is the reason that speed setpoints that are not a multiple integer of 1 LU per IPO clock cycle can only be realized as an average. The result speed setpoint steps are especially noticeable for a high loop gain or when the pre-control is active. Increasing p2506 counteracts this behavior.

p2507[0...n] LR absolute encoder adjustment status / Abs_enc_adj stat

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Integer16 | **Dynamic index:** EDS | **Func. diagram:** 4010
P-Group: Closed loop position control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	3	1

Description: Activating the adjustment and display of the status of the adjustment for absolute encoders.

Value:
0: Error occurred while adjusting
1: Absolute encoder not adjusted
2: Absolute encoder not adjusted and encoder adjustment initiated
3: Absolute encoder adjusted

Dependency: Refer to: p2525, p2598, p2599

Caution:

For rotating absolute encoders, when adjusting, a range is set up symmetrically around zero with half of the encoder range, within which the position must be re-established after powering down/powering up. In this range, it is only permissible that the encoder overflows.

After the adjustment has been completed, it must be guaranteed that the range is not exited. The reason for this is that outside the range, there is no clear reference any longer between the encoder actual value and mechanical system.

If the reference point (CI: p2598) lies in this range, then the position actual value is set when adjusting to the reference point. Otherwise, adjustment is canceled with F07443.

There is no overflow for linear absolute encoders. This means that after the adjustment, the position can be re-established in the complete traversing range after powering down/powering up. When adjusting, the position actual value is set to the reference point.

Note: The encoder adjustment is initiated with p2507 = 2. The status is displayed using the other values.

In order to permanently save the determined position offset (p2525) it must be saved in a non-volatile fashion (p0971, p0977).

This adjustment can only be initiated for an absolute encoder.

p2508[0...3] BI: LR activate reference mark search / Ref_mark act

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 4010
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the function "activate reference mark search".

Index: [0] = Closed-loop position control
[1] = Encoder 1
[2] = Encoder 2
[3] = Encoder 3

Dependency: Refer to: p0490, p0495, p2502, p2509, r2684
Refer to: A07495

Notice: When activating the function "set position actual value" while the function "reference mark search" is activated, then the function "reference mark search" is automatically de-activated.

Note: When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established: BI: p2508[0] = r2684.0
The function can only be activated using a 0/1 signal if no reference function is active (r2526.2).
If "reference mark search" and "measuring probe evaluation" are simultaneously activated, then no function is activated and the actual function is interrupted.

p2509[0...3] BI: LR activating measuring probe evaluation / MT_eval act

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 4010
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the function "activating the measuring probe evaluation".
0/1 signal: The function "activate measuring probe evaluation" is started.

Index: [0] = Closed-loop position control
[1] = Encoder 1
[2] = Encoder 2
[3] = Encoder 3

Dependency: Refer to: p0488, p0489, p0490, p2502, p2508, p2510, p2511, p2517, p2518
Refer to: A07495

Notice: When the "set position actual value" is activated while the function "measuring probe evaluation" is activated, then the function "measuring probe evaluation" is automatically de-activated.

Note: When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established: BI: p2509[0] = r2684.1
The function can only be activated using a 0/1 signal if no reference function is active (r2526.2).
If "reference mark search" and "measuring probe evaluation" are simultaneously activated, then no function is activated and the actual function is interrupted.

p2510[0...3] BI: LR selecting measuring probe evaluation / MT_eval select

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3615, 4010
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to select the measuring probe.
1 signal = measuring probe 2 is activated for BI: p2509 = 0/1 edge.
0 signal = measuring probe 1 is activated for BI: p2509 = 0/1 edge.

Index: [0] = Closed-loop position control
[1] = Encoder 1
[2] = Encoder 2
[3] = Encoder 3

Dependency: Refer to: p2502, p2509, p2511

Note: When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established: BI: p2509[0] = r2684.1
The measuring probe is selected at the 0/1 signal transition at r2684.1 (flying referencing active).

p2511[0...3] BI: LR measuring probe evaluation edge / MT_eval edge

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3615, 4010
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the edge evaluation of the measuring probe.
1 signal = falling edge of the measuring probe (p2510) is activated for BI: p2509 = 0/1 edge.
0 signal = rising edge of the measuring probe (p2510) is activated for BI: p2509 = 0/1 edge.

Index: [0] = Closed-loop position control
[1] = Encoder 1
[2] = Encoder 2
[3] = Encoder 3

Dependency: Refer to: p2502, p2509, p2510

p2512[0...3] BI: LR pos. actual value preprocessing activate corr. value (edge) / ActVal_prepCorrAct

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 4010, 4015
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the function "activate position actual value preprocessing, corrective value (edge)".
0/1 signal: The corrective value available through CI: p2513 is activated.

Index: [0] = Closed-loop position control
[1] = Encoder 1
[2] = Encoder 2
[3] = Encoder 3

Dependency: Refer to: p2502, p2513, r2684

Note: When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established: BI: p2512[0] = r2684.7

p2513[0...3] CI: LR Position actual value preprocessing, corrective value / Act val_prep corr

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Integer32	**Dynamic index:** -	**Func. diagram:** 4010, 4015
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the corrective value for position actual value preprocessing.

Index: [0] = Closed-loop position control
[1] = Encoder 1
[2] = Encoder 2
[3] = Encoder 3

Dependency: Refer to: p2502, p2512, r2521, r2685

Note: When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established: CI: p2513[0] = r2685

For BI: p2512[0] = 0/1 signal, the position actual value (CO: r2521[0]) is corrected corresponding to the value via CI: p2513[0]. In so doing, the sign of the corrective value present is taken into account.

p2514[0...3] BI: LR activate position actual value setting / s_act setting act

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 4010
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to activate the function "set position actual value".

Index: [0] = Closed-loop position control
[1] = Encoder 1
[2] = Encoder 2
[3] = Encoder 3

Dependency: Refer to: p2502, p2515

Refer to: A07495, A07497

Warning: As long as the position actual value is set, encoder increments that are received are not evaluated. In this state, any position difference cannot be corrected!

Notice: When the function "set position actual value" is activated while the function "reference mark search" or "measuring probe evaluation" is activated, then the corresponding function is de-activated.

Note: BI: p2514 = 1 signal:

The position actual value is set to the setting value in CI: p2515. Alarm A07497 "position setting value activated" is output. Encoder increments that are received in the meantime, are not taken into account.

BI: p2514 = 1/0 signal:

The position actual value preprocessing is activated and is based on the setting value.

p2515[0...3] CI: LR position actual setting, setting value / s_act set setVal

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Integer32	**Dynamic index:** -	**Func. diagram:** 4010
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the setting value of the function "setting position actual value".

Index: [0] = Closed-loop position control
[1] = Encoder 1
[2] = Encoder 2
[3] = Encoder 3

Dependency: Refer to: p2502, p2514

p2516[0...3] CI: LR position offset / Position offset

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Integer32	**Dynamic index:** -	**Func. diagram:** 4010
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the position offset.

Index: [0] = Closed-loop position control
[1] = Encoder 1
[2] = Encoder 2
[3] = Encoder 3

Dependency: Refer to: p2502, r2667

Note: When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established: CI: p2516[0] = r2667

p2517[0...2] LR direct measuring probe 1 / Direct MT 1

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** 4010
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0	16	0

Description: Sets the input terminal for direct measuring probe 1.

The direct measuring probe can neither be parameterized as non-cyclic (value 1 ... 6) nor as cyclic (value 11 ... 16) measuring probe.

After it has been activated via BI: p2509 = 0/1 signal, the non-cyclic measuring probe measures once and can be used with EPOS.

After it has been activated via the p2509 = 1 signal, the cyclic measuring probe measures cyclically and cannot be used with EPOS.

In order to process signals faster, the direct measuring probe bypasses the handshake technique via the encoder control and status word.

Value:
0: No meas probe
1: DI/DO 9 (X122.8/X121.8)
2: DI/DO 10 (X122.10/X121.10)

4: DI/DO 13 (X132.8)
5: DI/DO 14 (X132.10)
6: DI/DO 15 (X132.11)
11: DI/DO 9 cyclic
12: DI/DO 10 cyclic
13: DI/DO 11 cyclic
14: DI/DO 13 cyclic
15: DI/DO 14 cyclic
16: DI/DO 15 cyclic

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: Refer to: p0490, p0728, p2509, p2510, p2511

Notice: To the terminal designation:
The first designation is valid for CU320, the second for CU310.
To select the values:
For CU310, CX32, NX10 and NX15, only DI/DO 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

Note: DI/DO: Bidirectional Digital Input/Output
The terminal must be set as input (p0728).
If parameter change is rejected, it should be checked whether the input terminal is not already being used in p0488, p0489, p0495, p0580 or p0680.
Direct measurement via p2517 has a higher priority than measurements via p0488.
For the direct measuring probe evaluation, the DP clock cycle must be integer multiple of the position controller clock cycle.

p2518[0...2] LR direct measuring probe 2 / Direct MT 2

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** 4010
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	16	0

Description: Sets the input terminal for direct measuring probe 2.
The direct measuring probe can neither be parameterized as non-cyclic (value 1 ... 6) nor as cyclic (value 11 ... 16) measuring probe.
After it has been activated via BI: p2509 = 0/1 signal, the non-cyclic measuring probe measures once and can be used with EPOS.
After it has been activated via the p2509 = 1 signal, the cyclic measuring probe measures cyclically and cannot be used with EPOS.
In order to process signals faster, the direct measuring probe bypasses the handshake technique via the encoder control and status word.

Value:
0: No meas probe
1: DI/DO 9 (X122.8/X121.8)
2: DI/DO 10 (X122.10/X121.10)
3: DI/DO 11 (X122.11/X121.11)
4: DI/DO 13 (X132.8)
5: DI/DO 14 (X132.10)
6: DI/DO 15 (X132.11)
11: DI/DO 9 cyclic
12: DI/DO 10 cyclic
13: DI/DO 11 cyclic
14: DI/DO 13 cyclic
15: DI/DO 14 cyclic
16: DI/DO 15 cyclic

Index:
[0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: Refer to: p0490, p0728, p2509, p2510, p2511

Notice: To the terminal designation:
The first designation is valid for CU320, the second for CU310.
To select the values:
For CU310, CX32, NX10 and NX15, only DI/DO 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

Note: DI/DO: Bidirectional Digital Input/Output
The terminal must be set as input (p0728).
If parameter change is rejected, it should be checked whether the input terminal is not already being used in p0488, p0489, p0495, p0580 or p0680.
Direct measurement via p2518 has a higher priority than measurements via p0489.

For the direct measuring probe evaluation, the DP clock cycle must be integer multiple of the position controller clock cycle.

p2519[0...n] LR position actual value preprocessing config. DDS changeover / s_act config DDS

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dynamic index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	5	1

Description: Sets the behavior of the position actual value preprocessing for the position controller for a DDS changeover.

Re p2519 = 1:

In the following cases, for a DDS changeover, the actual position actual value becomes invalid and the reference point is reset:

- the EDS effective for the closed-loop position control changes.
- the encoder assignment changes (p2502).
- the mechanical relationships change (p2503 ... p2506).
- the direction of rotation changes (p1821).

For absolute encoders, the status of the adjustment (p2507) is also reset if the same absolute encoder remains selected for the closed-loop position control, but the mechanical relationships or the direction of rotation have changed.

In the run state, in addition, a fault message (F07494) is generated.

Notice: The remaining setting values are intended for expanded functionality.

Note: The behavior for a DDS changeover is determined using the value of p2519 in the target data set.

r2520[0...2] CO: LR Position actual value preprocessing, encoder control word / ActVal_prep STW

SERVO (Pos ctrl), VECTOR (Pos ctrl)

p2533[0...n] LR position setpoint filter, time constant / s_set_filt T

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 4015
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [ms]	1000.00 [ms]	0.00 [ms]

Description: Sets the time constant for the position setpoint filter (PT1).

Note: The effective Kv factor (position loop gain) is reduced with the filter. This allows a softer control behavior with improved tolerance with respect to noise/disturbances.

Applications:

- reduces the pre-control dynamic response.
- jerk limiting.

p2534[0...n] LR velocity pre-control factor / v_prectrl fact

SERVO (Lin, Pos ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 4015, 4025
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.00 [%]	200.00 [%]	0.00 [%]

Description: Setting to activate and weight the velocity pre-control value.
Value = 0 % --> The pre-control is de-activated.

Dependency: Refer to: p2535, p2536, r2563

Note: When the axis control loop is optimally set as well as a precisely determined equivalent time constant of the velocity control loop, the pre-control factor is 100%.

p2534[0...n] LR speed pre-control factor / n_prectrl fact

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 4015, 4025
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.00 [%]	200.00 [%]	0.00 [%]

Description: Setting to activate and weight the speed pre-control value.
Value = 0 % --> The pre-control is de-activated.

Dependency: Refer to: p2535, p2536, r2563

Note: When the axis control loop is optimally set as well as a precisely determined equivalent time constant of the speed control loop, the pre-control factor is 100%.

p2535[0...n] LR velocity pre-control balancing filter dead time / v_prectrFlt t_dead

SERVO (Lin, Pos ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 4015
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.00	2.00	0.00

Description: Sets the "fractional" dead time to emulate the timing behavior of the velocity control loop.
The selected multiplier refers to the position controller clock cycle (deadtime= p2535 * p0115[4]).

Dependency: Refer to: p0115, p2536

Notice: When velocity pre-control is active (p2534 > 0 %), the following applies:
In addition to the set dead time (p2535), internally two position controller clock cycles are effective.
When velocity pre-control is inactive (p2534 = 0 %), the following applies:
No dead time is effective (p2535 and internal).

Note: Together with p2536, the timing behavior of the closed velocity control loop can be emulated.

p2535[0...n] LR speed pre-control balancing filter dead time / n_prectrFlt t_dead

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 4015
P-Group: Closed loop position control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00	2.00	0.00

Description: Sets the "fractional" dead time to emulate the timing behavior of the speed control loop.
The selected multiplier refers to the position controller clock cycle (deadtime= p2535 * p0115[4]).

Dependency: Refer to: p0115, p2536

Notice: When speed pre-control is active (p2534 > 0 %), the following applies:
In addition to the set dead time (p2535), internally two position controller clock cycles are effective.
When speed pre-control is inactive (p2534 = 0 %), the following applies:
No dead time is effective (p2535 and internal).

Note: Together with p2536, the timing behavior of the closed-loop control loop can be emulated.

p2536[0...n] LR velocity pre-control, symmetrizing filter PT1 / n_prectrl filt PT1

SERVO (Lin, Pos ctrl)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 4015
P-Group: Closed loop position control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	100.00 [ms]	0.00 [ms]

Description: Sets a PT1 filter to emulate the timing behavior of the closed velocity control loop.

Dependency: Refer to: p2535

Notice: When velocity pre-control is inactive (p2534 = 0 %), the following applies:
If a PT1 filter has been set, it is not effective.

Note: Together with p2535, the timing behavior of the closed velocity control loop can be emulated.

p2536[0...n] LR speed pre-control, symmetrizing filter PT1 / n_prectrl filt PT1

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 4015

P-Group: Closed loop position control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for the adaptation of the proportional gain of the position controller.

Dependency: Refer to: p2538

p2538[0...n] LR proportional gain / Kp

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: FloatingPoint32 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 4015
P-Group: Closed loop position control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0.000 [1000/min]	300.000 [1000/min]	1.000 [1000/min]

Description: Sets the proportional gain (P gain, position loop gain, Kv factor) of the position controller.
Dependency: Refer to: p2537, p2539, p2555, r2557, r2558
Note: The proportional gain is used define at which traversing velocity which following error is obtained (without pre-control)
Low proportional gain:
Slow response to a setpoint - actual value difference, the following error becomes large.
High proportional gain:
Fast response to the setpoint - actual value difference, the following error becomes small.

p2539[0...n] LR integral time / Tn

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T | **Calculated:** - | **Access level:** 1

Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 4015
P-Group: Closed loop position control | **Units group:** 4_1 | **Unit selection:** p0505
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0.000 [m/min]	1000.000 [m/min]	1000.000 [m/min]

Description: Sets the velocity limit of the position controller output.
Dependency: Refer to: p2541

p2540 CO: LR position controller output, speed limit / LR_outp limit

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 4015
P-Group: Closed loop position control | **Units group:** 3_1 | **Unit selection:** p0505
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0.000 [rev/min]	210000.000 [rev/min]	210000.000 [rev/min]

Description: Sets the speed limit of the position controller output.
Dependency: Refer to: p2541

p2541 CI: LR position controller output velocity limit signal source / LR_outp lim S_src

SERVO (Lin, Pos ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 4015
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	2540[0]

Description: Sets the signal source for the position controller output limit.

Dependency: Refer to: p2540

p2541 CI: LR position controller output, speed limit signal source / LR_outp lim S_src

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 4015
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	2540[0]

Description: Sets the signal source for the position controller output limit.

Dependency: Refer to: p2540

p2542 LR standstill window / Standstill window

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** 4020
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0 [LU]	2147483647 [LU]	200 [LU]

Description: Sets the standstill window for the standstill monitoring function.

After the standstill monitoring time expires, it is cyclically checked whether the difference between the setpoint and actual position is located within the standstill window and, if required, an appropriate fault is output.

Value = 0 --> The standstill monitoring is de-activated.

Dependency: Refer to: p2543, p2544

Refer to: F07450

Note: The following applies for the setting of the standstill and positioning window:

Standstill window (p2542) >= positioning window (p2544)

p2543 LR standstill monitoring time / t_standstill monit

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 4020
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	100000.00 [ms]	200.00 [ms]

Description: Sets the standstill monitoring time for the standstill monitoring function.

After the standstill monitoring time expires, it is cyclically checked whether the difference between the setpoint and actual position is located within the standstill window and, if required, an appropriate fault is output.

Dependency: Refer to: p2542, p2545

Refer to: F07450

Note: The following applies for the setting of the standstill and positioning monitoring time:

Standstill monitoring time (p2543) <= positioning monitoring time (p2545)

p2544 LR positioning window / Pos_window

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** 4020
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0 [LU]	2147483647 [LU]	40 [LU]

Description: Sets the positioning window for the positioning monitoring function.
After the positioning monitoring time expires, it is checked once as to whether the difference between the setpoint and actual position lies within the positioning window and if required an appropriate fault is output.
Value = 0 --> The positioning monitoring function is de-activated.

Dependency: Refer to: p2542, p2545, r2684
Refer to: F07451

Note: The following applies for the setting of the standstill and positioning window:
Standstill window (p2542) >= positioning window (p2544)

p2545 LR positioning monitoring time / t_pos_monit

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 4020
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	100000.00 [ms]	1000.00 [ms]

Description: Sets the positioning monitoring time for the positioning monitoring.
After the positioning monitoring time expires, it is checked once as to whether the difference between the setpoint and actual position lies within the positioning window and if required an appropriate fault is output.

Dependency: Refer to: p2543, p2544, r2684
Refer to: F07451

Note: The following applies for the setting of the standstill and positioning monitoring time:
Standstill monitoring time (p2543) <= positioning monitoring time (p2545)

p2546[0...n] LR dynamic following error monitoring tolerance / s_delta_monit tol

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dynamic index:** DDS, p0180	**Func. diagram:** 4025
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0 [LU]	2147483647 [LU]	1000 [LU]

Description: Sets the tolerance for the dynamic following error monitoring.
If the dynamic following error (r2563) exceeds the selected tolerance, then an appropriate fault is output.
Value = 0 --> The dynamic following error monitoring is de-activated.

Dependency: Refer to: r2563, r2684
Refer to: F07452

Note: The tolerance bandwidth is intended to prevent the dynamic following error monitoring incorrectly responding due to operational control sequences (e.g. during load surges).

p2547 LR cam switching position 1 / Cam position 1

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Integer32 | **Dynamic index:** - | **Func. diagram:** 4025
P-Group: Closed loop position control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-2147483648 [LU]	2147483647 [LU]	0 [LU]

Description: Sets the cam switching position 1.

Dependency: Refer to: p2548, r2683

Caution: Only after the axis has been referenced can it be guaranteed that the cam switching signals when output have a "true" position reference.

Note: Position actual value <= cam switching position 1 --> r2683.8 = 1 signal
Position actual value > cam switching position 1 --> r2683.8 = 0 signal

p2548 LR cam switching position 2 / Cam position 2

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Integer32 | **Dynamic index:** - | **Func. diagram:** 4025
P-Group: Closed loop position control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-2147483648 [LU]	2147483647 [LU]	0 [LU]

Description: Sets the cam switching position 2.

Dependency: Refer to: p2547, r2683

Caution: Only after the axis has been referenced can it be guaranteed that the cam switching signals when output have a "true" position reference.

Note: Position actual value <= cam switching position 2 --> r2683.9 = 1 signal
Position actual value > cam switching position 2 --> r2683.9 = 0 signal

p2549 BI: LR enable 1 / Enable 1

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: T | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** 4015
P-Group: Closed loop position control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	899.2

Description: Sets the signal source for the position controller enable 1.

Dependency: Refer to: r0899, p2550

Note: The position controller is enabled by ANDing BI: p2549 and BI: p2550.

p2550 BI: LR enable 2 / Enable 2

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: T | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** 4015
P-Group: Closed loop position control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the position controller enable 2.

Dependency: Refer to: p2549

Note: The position controller is enabled by ANDing BI: p2549 and BI: p2550.
When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established: BI: p2550 = 1

p2551 BI: LR setpoint signal present / Sig s_set pres

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 4020
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the "setpoint present" signal.
BI: p2551 = 1 signal:
The end of the positioning operation on the setpoint side is signaled and the positioning and standstill monitoring activated.
BI: p2551 = 0 signal:
The start of a positioning operation or tracking mode on the setpoint side is signaled and the positioning and standstill monitoring de-activated.

Dependency: Refer to: p2554, r2683

Note: When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established: BI: p2551 = r2683.2

p2552 BI: LR signal travel to fixed stop active / Signal TfS act

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 4025
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the signal "travel to fixed stop active".
BI: p2552 = 1 signal:
The activity associated with travel to fixed stop is signaled and the detection of the fixed stop is started via the maximum following error (p2634).

Dependency: Refer to: r2683

Note: When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established: BI: p2552 = r2683.14

p2553 BI: LR signal fixed stop reached / Signal fixed stop

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 4025
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the signal "fixed stop reached".
BI: p2553 = 1 signal:
When the fixed stop is reached, this is signaled and the fixed stop monitoring window is activated.

Dependency: Refer to: r2683

Note: When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established: BI: p2553 = r2683.12

p2554 BI: LR signal traversing command active / Sig trav_cmnd act

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 4020
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the signal "traversing command active".

BI: p2554 = 1 signal:

It is signaled that positioning is active and therefore the positioning monitoring is not activated with the signal "setpoint present" (p2551).

Dependency: Refer to: p2551, r2684

Note: When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established: BI: p2554 = r2684.15

p2555 CI: LR LU/revolution LU/mm / LU/rev LU/mm

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 4015
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	2524[0]

Description: Sets the signal source for the reference of the internal length units LU to motor revolution for rotary encoders and to mm for linear encoders.

Dependency: Refer to: p0404, r2524

Note: The signal value is used to convert the length unit to the speed or velocity setpoint.

r2556 CO: LR position setpoint after setpoint smoothing / s_set after interp

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dynamic index:** -	**Func. diagram:** 4015
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
- [LU]	- [LU]	- [LU]

Description: Displays the position setpoint after the setpoint smoothing.

r2557 CO: LR position controller input, system deviation / LR_inp sys dev

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dynamic index:** -	**Func. diagram:** 4015
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
- [LU]	- [LU]	- [LU]

Description: Displays the difference between the position setpoint and the position actual value at the position controller input.

r2558 CO: LR position controller output, P component / LR_outp P comp

SERVO (Lin, Pos ctrl)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 4015
P-Group: Closed loop position control **Units group:** 4_1 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [m/min]	- [m/min]	- [m/min]

Description: Displays the P component at the output of the position controller for the velocity setpoint.

r2558 CO: LR position controller output, P component / LR_outp P comp

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 4015
P-Group: Closed loop position control **Units group:** 3_1 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the P component at the output of the position controller for the speed setpoint.

r2559 CO: LR position controller output, I component / LR_outp I comp

SERVO (Lin, Pos ctrl)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 4015
P-Group: Closed loop position control **Units group:** 4_1 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [m/min]	- [m/min]	- [m/min]

Description: Displays the I component at the output of the position controller for the velocity setpoint.

r2559 CO: LR position controller output, I component / LR_outp I comp

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 4015
P-Group: Closed loop position control **Units group:** 3_1 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the I component at the output of the position controller for the speed setpoint.

r2560 CO: LR velocity setpoint / v_set

SERVO (Lin, Pos ctrl)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 4015
P-Group: Closed loop position control **Units group:** 4_1 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [m/min]	- [m/min]	- [m/min]

Description: Displays the velocity setpoint after limiting (CI: p2541).

r2560 CO: LR speed setpoint / n_set

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 4015
P-Group: Closed loop position control **Units group:** 3_1 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the speed setpoint after limiting (CI: p2541).

r2561 CO: LR velocity pre-control value / v_prectrl val

SERVO (Lin, Pos ctrl)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 4015
P-Group: Closed loop position control **Units group:** 4_1 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [m/min]	- [m/min]	- [m/min]

Description: Displays the velocity setpoint due to the pre-control.

r2561 CO: LR speed pre-control value / n_prectrl val

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 4015
P-Group: Closed loop position control **Units group:** 3_1 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the speed setpoint due to the pre-control.

r2562 CO: LR velocity setpoint, total / v_set total

SERVO (Lin, Pos ctrl)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 4015
P-Group: Closed loop position control **Units group:** 4_1 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [m/min]	- [m/min]	- [m/min]

Description: Displays the total velocity setpoint.
This value is obtained from the sum of the velocity pre-control and position controller output.
Dependency: Refer to: r2560, r2561

r2562 CO: LR total speed setpoint / n_set total

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 4015
P-Group: Closed loop position control **Units group:** 3_1 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the total speed setpoint
This value is obtained from the sum of the speed pre-control and position controller output.
Dependency: Refer to: r2560, r2561

r2563 CO: LR following error dynamic model / Follow error dyn

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dynamic index:** -	**Func. diagram:** 4025
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
- [LU]	- [LU]	- [LU]

Description: Displays the dynamic following error.
This value is the deviation, corrected by the velocity-dependent component, between the position setpoint and the position actual value.

Note: For p2534 >= 100 % (pre-control activated) the following applies:
The dynamic following error (r2563) corresponds to the system deviation (r2557) at the position controller input.
For 0 % < p2534 < 100 % (pre-control activated) or p2534 = 0 % (pre-control de-activated) the following applies:
The dynamic following error (r2563) is the deviation between the measured position actual value and a value that is calculated from the position setpoint via a PT1 model. This compensates the system-related velocity-dependent system deviation for a P controller.

r2564 CO: LR force pre-control value / F_prectrl val

SERVO (Lin, Pos ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 4015
P-Group: Closed loop position control	**Units group:** 8_1	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
- [N]	- [N]	- [N]

Description: Displays the force pre-control value.

Dependency: Refer to: p1511, p1512

Note: The force pre-control value is the derivation over time of the velocity pre-control value and is referred to a high inertia mass of 1000.0 kg. When using the pre-control, then this should be evaluated corresponding to the actual mass.

r2564 CO: LR torque pre-control value / M_prectrl val

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 4015
P-Group: Closed loop position control	**Units group:** 7_1	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
- [Nm]	- [Nm]	- [Nm]

Description: Displays the torque pre-control value.

Dependency: Refer to: p1511, p1512

Note: The torque pre-control value is the derivation over time of the speed pre-control value and is referred to a moment of inertia of 1 kgm^2/2 PI. When using the pre-control, then this should be evaluated corresponding to the actual moment of inertia.

r2565 CO: LR current following error / Following err act

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dynamic index:** -	**Func. diagram:** 4015
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
- [LU]	- [LU]	- [LU]

Description: Displays the current following error.
This value is the deviation between the position setpoint - after fine interpolation - and the position actual value.

Notice: When speed pre-control is active (p2534 > 0 %), the following applies:
To calculate this value, the position setpoint is delayed by two position controller clock cycles.
When speed pre-control is inactive (p2534 = 0 %), the following applies:
To calculate this value, the position setpoint is delayed by two position controller clock cycles.

r2566 LR velocity input pre-control / v inp prectrl

SERVO (Lin, Pos ctrl)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 4015
P-Group: Closed loop position control **Units group:** 4_1 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [m/min]	- [m/min]	- [m/min]

Description: Displays the velocity at the input of the pre-control channel.
Note: This display parameter is used for diagnostics even when the pre-control is inactive (p2534 = 0%).

r2566 LR speed input pre-control / n inp prectrl

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 4015
P-Group: Closed loop position control **Units group:** 3_1 **Unit selection:** p0505
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [rev/min]	- [rev/min]	- [rev/min]

Description: Displays the speed at the input of the pre-control channel.
Note: This display parameter is used for diagnostics even when the pre-control is inactive (p2534 = 0%).

p2567[0...n] LR force pre-control mass / F_prectrl mass

SERVO (Lin, Pos ctrl)

Can be changed: U, T **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** DDS, p0180 **Func. diagram:** 4015
P-Group: Closed loop position control **Units group:** 27_1 **Unit selection:** p0100
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0.000000 [kg]	10000.000000 [kg]	1.000000 [kg]

Description: Sets the mass for the force pre-control.
Dependency: Refer to: p2534, r2564
Note: When calculating the force pre-control value (r2654), the derivation over time of the speed pre-control value is multiplied by p2567.
For reasons associated with the compatibility to earlier firmware releases, the factory setting for p2567 = 1 kg. This means that CO: r2564 remains, as standard, the derivation over time of the velocity pre-control value and refers, as before, to a weight of 1 kg. For force pre-control, the mass can now be directly entered into p2567 (instead of subsequently evaluating the pre-control value.

p2567[0...n] LR torque pre-control moment of inertia / M_prectr M_inertia

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** DDS, p0180 **Func. diagram:** 4015
P-Group: Closed loop position control **Units group:** 25_1 **Unit selection:** p0100
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0.000000 [kgm²]	100000.000000 [kgm²]	0.159155 [kgm²]

Description: Sets the moment of inertia for the torque pre-control.
Dependency: Refer to: p2534, r2564
Note: When calculating the torque pre-control value (r2654), the time derivation of the speed pre-control value is multiplied by 2 PI * p2567.

For reasons associated with the compatibility to earlier firmware versions, the factory setting for p2567 = 1 kgm^2/2 PI. This means that CO: r2564 remains as standard the derivation over time of the speed pre-control value and is referred, as before, to a moment of inertia of 1 kgm^2/2 PI. For torque pre-control, the moment of inertia can now be directly entered into p2567 (instead of subsequently evaluating the pre-control value.

p2568 BI: EPOS STOP cam activation / STOP cam act

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3630
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to activate the function "STOP cam".

BI: p2568 = 1 signal

--> The evaluation of the STOP cam minus (BI: p2569) and STOP cam plus (BI: p2570) is active.

Dependency: Refer to: p2569, p2570

Note: The traversing range can also be limited using software limit switches.

p2569 BI: EPOS STOP cam minus / STOP cam minus

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3630
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for the STOP cam in the negative direction of travel.

Recommend.: Set the OFF3 ramp-down time (p1135), so that the axis, after reaching the STOP cam at the maximum velocity, does not move through a higher braking travel than is actually available.

Sets message 07491 as alarm (A07491):

Set the maximum deceleration (p2573), so that the axis, after reaching the STOP cam at the maximum velocity, does not move through a higher braking travel than is actually available.

Dependency: Refer to: p1135, p2568, p2570, p2573, r2684

Refer to: F07491

Caution: The STOP cams are low active.

Sets message 07491 as fault (F07491):

For a 0 signal, the axis is stopped with the OFF3 ramp-down time (p1135), status signal r2684.13 is set to 1, saved and the appropriate fault is output. After the fault has been acknowledged, only motion moving away from the STOP cam is permitted.

For a 0/1 signal and valid travel direction, when the stop cam is exited, this is detected and the status signal r2684.13 is set to 0.

Sets message 07491 as alarm (A07491):

For a 0 signal, the axis is stopped with the maximum deceleration (p2573), status signal r2684.13 is set to 1, saved and the appropriate alarm is output. Only motion away from the STOP cam is permitted.

For a 0/1 signal and valid travel direction, when the stop cam is exited, this is detected and the status signal r2684.13 is set to 0 and the alarm is deleted.

p2570 BI: EPOS STOP cam plus / STOP cam plus

SERVO (EPOS), VECTOR (EPOS)

P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for the STOP cam in the positive direction of travel.

Recommend.: Set the OFF3 ramp-down time (p1135), so that the axis, after reaching the STOP cam at the maximum velocity, does not move through a higher braking travel than is actually available.

Sets message 07492 as alarm (A07492):

Set the maximum deceleration (p2573), so that the axis, after reaching the STOP cam at the maximum velocity, does not move through a higher braking travel than is actually available.

Dependency: Refer to: p1135, p2568, p2569, p2573, r2684

Refer to: F07492

Caution: The STOP cams are low active.

Sets message 07492 as fault (F07492):

For a 0 signal, the axis is stopped with the OFF3 ramp-down time (p1135), status signal r2684.14 is set to 1, saved and the appropriate fault is output. After the fault has been acknowledged, only motion moving away from the STOP cam is permitted.

For a 0/1 signal and valid travel direction, when the stop cam is exited, this is detected and the status signal r2684.14 is set to 0.

Sets message 07492 as alarm (A07492):

For a 0 signal, the axis is stopped with the maximum deceleration (p2573), status signal r2684.14 is set to 1, saved and the appropriate alarm is output. Only motion away from the STOP cam is permitted.

For a 0/1 signal and valid travel direction, when the stop cam is exited, this is detected and the status signal r2684.14 is set to 0 and the alarm is deleted.

p2571 EPOS maximum velocity / v_max

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** 3630
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
1 [1000 LU/min]	40000000 [1000 LU/min]	30000 [1000 LU/min]

Description: Sets the maximum velocity for the function module "basic positioner" (r0108.4).

Dependency: Refer to: r1084, r1087, p2503, p2504, p2505, p2506

Note: The maximum velocity is active in all of the operating modes of the basic positioner.

The maximum velocity for the basic positioner should be aligned with the maximum speed/velocity of the speed/velocity controller:

Rotary encoders:

p2571[1000 LU/min] = min(|r1084|, |r1087|)[1/min] x p2505/p2504 x p2506/1000

Linear encoders:

p2571[1000 LU/min] = min(|r1084|, |r1087|)[m/min] x p2503/10[m]

p2572 EPOS maximum acceleration / a_max

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 3630
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
1 [1000 LU/s²]	2000000 [1000 LU/s²]	100 [1000 LU/s²]

Description: Sets the maximum acceleration for the function module "basic positioner" (r0108.4).

Dependency: Refer to: p2619, p2644

Note: The maximum acceleration appears to exhibit jumps (without jerk).
"Traversing blocks" operating mode:
The programmed acceleration override (p2619) acts on the maximum acceleration.
"Direct setpoint input/MDI" mode:
The acceleration override is effective (p2644, 4000 hex = 100 %).
"Jog" and "search for reference" modes
No acceleration override is active. The axis starts with the maximum acceleration.

p2573 EPOS maximum deceleration / -a_max

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 3630
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
1 [1000 LU/s²]	2000000 [1000 LU/s²]	100 [1000 LU/s²]

Description: Sets the maximum deceleration for the function module "basic positioner" (r0108.4).

Dependency: Refer to: p2620, p2645

Note: The maximum deceleration appears to exhibit jumps (without jerk).
"Traversing blocks" operating mode:
The programmed deceleration override (p2620) acts on the maximum deceleration.
"Direct setpoint input/MDI" mode:
The deceleration override is effective (p2645, 4000 hex = 100 %).
"Jog" and "search for reference" modes
No deceleration override is effective. The axis breaks with the maximum deceleration.

p2574 EPOS jerk limiting / Jerk lim

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 3635
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
1 [1000 LU/s³]	100000000 [1000 LU/s³]	10000 [1000 LU/s³]

Description: Sets the jerk limiting

Dependency: Refer to: p2572, p2573, p2575

Note: The jerk limiting is internally converted into a jerk time as follows:
Jerk time Tr = max(p2572, p2573) / p2574
The jerk time is internally limited to 1000 ms and is rounded-off to an integer multiple of the sampling time positioning (p0115[5]).
The jerk time is valid for the acceleration and deceleration phases also for unequal maximum acceleration (p2572) and maximum deceleration (p2573).
For unequal maximum acceleration and maximum deceleration, the motion is not optimal from a time perspective as the jerk limit cannot be used for the lower of the two values.

If, in the traversing profile, the acceleration time without jerk limiting is less than the jerk time Tr, then the motion with jerk limiting is not optimum from a time perspective.

For traversing motion with a direct transition between acceleration and deceleration (i.e. jerk time is greater than the constant velocity phase), jerk can increase up to twice the parameterized jerk.

CONTINUE_FLYING with direction reversal acts internally just like a CONTINUE_WITH_STOP without the "position reached" being set. Without jerk limiting, this behavior can hardly be noticed as, when reversing, the position setpoint is only kept at zero for one interpolator clock cycle.

For block change enable CONTINUE_WITH_STOP, jerk limiting results in a longer delay time.

p2575 BI: EPOS jerk limiting activation / Jerk limit act

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3635
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to activate the jerk limiting.

Activating/de-activating:

- using BI: p2575 = 1 signal or 0 signal.
- using the command JERK in the traversing block (only for BI: p2575 = 0 signal).

Dependency: Refer to: p2574

Note: A change of the signal state at the binector input is only accepted at zero speed.

p2576 EPOS modulo correction, modulo range / Modulo corr range

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** 3635

Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
1 [LU]	2147482647 [LU]	360000 [LU]

Description: Sets the modulo range for axes with modulo correction.

Dependency: Refer to: p2577

p2577 BI: EPOS modulo correction activation / Modulo corr act

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3630, 3635
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to activate modulo correction.

Dependency: Refer to: p2576

Note: When the signal state changes at the binector input, this only becomes effective in the "ready for switching on" state.

Selecting modulo correction:

The current position setpoint in the modulo range is corrected. The position actual value differs from the position setpoint by the following error and can also leave the modulo range.

De-selecting modulo correction:

It is based on the current position actual value.

p2578 CI: EPOS software limit switch minus signal source / SW limSw Min S_src

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1

Min	**Max**	**Factory setting**
-2147482648 [LU]	2147482647 [LU]	2147482647 [LU]

Description: Sets the software limit switch in the positive direction of travel.

Dependency: Refer to: p2578, p2579, p2580, p2582

p2582 BI: EPOS software limit switch activation / SW lim sw act

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3630
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to activate the "software limit switch".

Dependency: Refer to: p2578, p2579, p2580, p2581

Caution:

Software limit switch effective:

- axis is referenced (r2684.11 = 1) and BI: p2582 = 1 signal.

Software limit switch ineffective:

- modulo correction active (BI: p2577 = 1 signal).
- search for reference is executed.

Notice: Target position for relative positioning outside software limit switch:

The traversing block is started and the axis comes to a standstill at the software limit switch. An appropriate alarm is output and the traversing block is interrupted. Traversing blocks with valid position can be activated.

Target position for absolute positioning outside software limit switch:

In the "traversing blocks" mode, the traversing block is not started and an appropriate fault is output.

Axis outside the valid traversing range:

If the axis is already outside the valid traversing range, then an appropriate fault is output. The fault can be acknowledged at standstill. Traversing blocks with valid position can be activated.

Note: The traversing range can also be limited using STOP cams.

p2583 EPOS backlash compensation / Backlash comp

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dynamic index:** -	**Func. diagram:** 3635
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-200000 [LU]	200000 [LU]	0 [LU]

Description: Sets the amount of play (backlash) for positive or negative play.

0: The backlash compensation is de-activated.

>0: Positive backlash (normal case)

When the direction is reversed, the encoder actual value leads the actual value.

<0: Negative backlash

When the direction is reversed, the actual value leads the encoder actual value.

Dependency: If a stationary axis is referenced by setting the reference point, or an adjusted with absolute encoder is powered up, then the setting of p2604 is relevant for entering the compensation value.

p2604 = 1:

Traveling in the positive direction -> A compensation value is immediately entered.

Traveling in the negative direction -> A compensation value is not entered

p2604 = 0:

Traveling in the positive direction -> A compensation value is not entered

Traveling in the negative direction -> A compensation value is immediately entered.

When again setting the reference point (a referenced axis) or for "flying referencing", p2604 is not relevant but instead the history of the axis.

P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to start the "search for reference" or "flying referencing".
BI: p2595 = 0/1 signal
Referencing is started.
BI: p2595 = 1/0 signal
Referencing is interrupted.

Dependency: Refer to: p2597, p2598, p2599, r2684

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: Search for reference (BI: p2597 = 0 signal):
The reference point approach can only be activated (0/1 edge) after traversing motion that is being processed has been completed.
With the start, where relevant, the state signal "reference point set" (r2684.11) is reset.
Flying referencing (BI: p2597 = 1 signal):
With the start, the state signal "reference point set" (r2684.11) is not reset.

p2596 BI: EPOS set reference point / Set ref_pt

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3612
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the "set reference point".

Dependency: Refer to: p2598, p2599, r2684

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: Reference point setting is effective in the following operating states:
- in the basic state.
- for FIXED STOP with progress condition END (corresponds to the initial state).
- for traversing block interrupted via BI: p2640 = 0 signal (intermediate stop).
- for EPOS not enabled (BI: p2656 = 0 signal) and position actual value valid (BI: p2658 = 1 signal).

p2597 BI: EPOS referencing type selection / Ref_typ select

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3612, 3614, 3625
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to select referencing type.
1 signal: Flying referencing
0 signal: Search for reference

Dependency: Refer to: p2595

Note: Referencing is activated as follows:
- Select the referencing type (BI: p2597)
- Start referencing (BI: p2595 = 0/1 signal)

p2598[0...3] CI: EPOS reference point coordinate, signal source / Ref_pt coord S_src

SERVO (EPOS, Pos ctrl), VECTOR (EPOS, Pos ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Integer32	**Dynamic index:** -	**Func. diagram:** 3612, 3614
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	[0] 2599[0] [1] 0 [2] 0 [3] 0

Description: Sets the signal source for the reference point coordinate.
This value is used as reference for the following referencing operations:
- search for reference
- set reference point
- flying referencing
- absolute value adjustment

Index: [0] = Closed-loop position control
[1] = Encoder 1
[2] = Encoder 2

[3] = Encoder 3

Dependency: Refer to: p2502, p2507, p2595, p2596, p2597, p2599

Note: When the function module "basic positioner" (r0108.4 = 1) is activated, the following applies:

Incremental measuring system:

After the reference point is reached, the drive accepts the current axis position from the position received via the connector input CI: p2598[0].

Absolute encoder:

When adjusting the encoder, the position received via the connector input is set as the current axis position. The position offset to the actual encoder value is displayed in p2525.

p2599 CO: EPOS reference point coordinate value / Ref_pt coord val

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T | **Calculated:** - | **Access level:** 1

Data type: Integer32 | **Dynamic index:** - | **Func. diagram:** 3612

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-2147482648 [LU]	2147482647 [LU]	0 [LU]

Description: Sets the reference point offset for search for reference.

Dependency: Refer to: p2598

p2601 EPOS flying referencing, inner window / Inner window

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T | **Calculated:** - | **Access level:** 1

Data type: Integer32 | **Dynamic index:** - | **Func. diagram:** 3614

P-Group: Basic positioner | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [LU]	2147482647 [LU]	0 [LU]

Description: Sets the inner window for flying referencing.

Value = 0:

The evaluation of the inner window is de-activated.

Dependency: Refer to: p2597, p2602, r2684

Notice: The inner window must be set so that it is smaller than the outer window.

Note: If the difference between the reference point coordinate and detected actual position is less than the inner window, then no correction is executed for a referenced axis.

If the difference between the reference point coordinate and detected actual position is greater than the inner window and less than the outer window (p2602), then a correction is executed for a referenced axis.

p2602 EPOS flying referencing, outer window / Outer window

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Integer32 | **Dynamic index:** - | **Func. diagram:** 3614
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [LU]	2147482647 [LU]	0 [LU]

Description: Sets the outer window for flying referencing.
Value = 0:
The evaluation of the outer window is de-activated.

Dependency: Refer to: p2597, r2684
Refer to: A07489

Notice: The inner window must be set so that it is smaller than the outer window.

Note: If the difference between the reference point coordinate and detected actual position is greater than the outer window, then no correction is executed for the referenced axis. Further, an appropriate message is output and r2684.3 is set to 1.

p2603 EPOS flying referencing, positioning mode, relative / Pos_mode relative

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Integer32 | **Dynamic index:** - | **Func. diagram:** 3635
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	1

Description: Sets the relative positioning mode for flying referencing.
Value = 1:
The corrected setpoint is not calculated into the traversing distance.
Value = 0:
The corrected setpoint is calculated into the traversing distance.

Dependency: Refer to: p2597, p2623, p2648

Caution: For p2603 = 0 the direction can change.

p2604 BI: EPOS search for reference, start direction / Srch for ref dir

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** 3612
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal sources for the start direction of the search for reference.
1 signal: Start in the negative direction.
0 signal: Start in the positive direction.

Dependency: Refer to: p2583, p2595, p2597

p2605 EPOS search for reference, approach velocity, reference cam / v_appr ref_cam

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 3612
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1 [1000 LU/min]	40000000 [1000 LU/min]	5000 [1000 LU/min]

Description: Sets the approach velocity to the reference cam for the search for reference.

Dependency: The search for reference only starts with the approach velocity to the reference cam when there is a reference cam (p2607 = 1).
Refer to: p2595, p2597, p2604, p2606, p2607

Note: When traversing to the reference cam, the velocity override is effective.
If, at the start of the search for reference, the axis is already at the reference cam, then the axis immediately starts to traverse to the zero mark.

p2606 EPOS search for reference, reference cam, maximum distance / Ref_cam max s

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 3612
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [LU]	2147482647 [LU]	2147482647 [LU]

Description: Sets the maximum distance after the start of the search for reference when traversing to the reference cam.

Dependency: Refer to: p2595, p2597, p2604, p2605, p2607
Refer to: F07458

Note: When using a reversing cam, the maximum distance must be set appropriately long.

p2607 EPOS search for reference, reference cam present / Ref_cam pres

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Unsigned8 | **Dynamic index:** - | **Func. diagram:** 3612
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	1

Description: Sets whether or not a reference cam is present for the search for reference.
Value = 1: Reference cam present.
Value = 0: No reference cam present.

Dependency: Refer to: p2595, p2597, p2604, p2605, p2606

p2608 EPOS search for reference, approach velocity, zero mark / v_appr ref_ZM

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 3612
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1 [1000 LU/min]	40000000 [1000 LU/min]	300 [1000 LU/min]

Description: Sets the approach velocity after detecting the reference cam to search for the zero mark for the the search for reference.

Dependency: If there is no reference cam (p2607 = 0), the search for reference immediately starts with the axis traversing to the zero mark.
Refer to: p2595, p2597, p2604, p2607, p2609, p2610

Caution: If the reference cam is not adjusted so that at each search for reference the same zero mark for synchronization is detected, then an "incorrect" axis reference point is obtained.

After the reference cam has been left, the search for the zero mark is activated with a time delay due to internal factors. This is the reason that the reference cam should be adjusted in this center between two zero marks and the approach velocity should be adapted to the distance between two zero marks.

Note: The velocity override is not effective when traversing to the zero mark.

p2609 EPOS search for reference, max. distance ref. cam and zero mark / Max s ref_cam ZM

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 3612
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0 [LU]	2147482647 [LU]	20000 [LU]

Description: Sets the maximum distance after leaving the reference cam when traversing to the zero mark.

Dependency: Refer to: p2595, p2597, p2604, p2607, p2608, p2610
Refer to: F07459

p2610 EPOS search for ref., tol. bandwidth for distance to zero mark / Tol_band to ZM

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 3612
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0 [LU]	2147482647 [LU]	2147482647 [LU]

Description: Sets the tolerance bandwidth for the distance to the zero mark
The zero mark is evaluated within the maximum distance between the reference cam and zero mark (p2609) minus the tolerance bandwidth for the distance to the zero mark (p2610).

Dependency: Refer to: p2609

p2611 EPOS search for reference, approach velocity, reference point / v_appr ref_pt

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 3612
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
1 [1000 LU/min]	40000000 [1000 LU/min]	300 [1000 LU/min]

Description: Sets the approach velocity after detecting the zero mark to approach the reference point.

Dependency: Refer to: p2595, p2597, p2604, p2607, p2609, p2610

Note: When traversing to the reference point, the velocity override is not effective.

p2612 BI: EPOS search for reference, reference cam / Ref_cam

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** 3612
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the reference cam.

Dependency: Refer to: p2607

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p2613 BI: EPOS search for reference reversing cam minus / Rev minus

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3612
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for the reversing cam in the negative direction of travel.
1 signal: Reversing cam not reached.
0 signal: Reversing cam reached.

Dependency: Refer to: p2614

Note: If, during the search for reference from the reversing cam minus and plus, a 0 signal is detected, then the axis remains stationary (at standstill).

p2614 BI: EPOS search for reference reversing cam plus / Rev plus

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3612
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for the reversing cam in the negative direction of travel.
1 signal: Reversing cam not reached.
0 signal: Reversing cam reached.

Dependency: Refer to: p2613

Note: If, during the search for reference from the reversing cam minus and plus, a 0 signal is detected, then the axis remains stationary (at standstill).

p2615 EPOS maximum number of traversing blocks / Trav_block qty max

SERVO (EPOS), VECTOR (EPOS)

Can be changed: C2(17)	**Calculated:** -	**Access level:** 1
Data type: Unsigned8	**Dynamic index:** -	**Func. diagram:** 3616
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
1	64	64

Description: Sets the maximum number of traversing blocks that are available.

Dependency: Refer to: p2616, p2617, p2618, p2619, p2620, p2621, p2622, p2623, p2624

p2616[0...n] EPOS traversing block, block number / Trav_blk, blkNo.

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dynamic index:** p2615	**Func. diagram:** 3616
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-1	63	-1

Description: Sets a block number.
-1: Invalid block number. These blocks are not taken into account.
0 ... 63: Valid block number.

Dependency: The number of indices depends on p2615.
Refer to: p2615, p2617, p2618, p2619, p2620, p2621, p2622, p2623, p2624

p2617[0...n] EPOS traversing block position / Trav_block pos

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Integer32 | **Dynamic index:** p2615 | **Func. diagram:** 3616
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-2147482648 [LU]	2147482647 [LU]	0 [LU]

Description: Sets the target position for the traversing block.

Dependency: The number of indices depends on p2615.
Refer to: p2615, p2616, p2618, p2619, p2620, p2621, p2622, p2623, p2624

Note: The target position is approached in either relative or absolute terms depending on p2623.

p2618[0...n] EPOS traversing block velocity / Trav_block v

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Integer32 | **Dynamic index:** p2615 | **Func. diagram:** 3616
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1 [1000 LU/min]	40000000 [1000 LU/min]	600 [1000 LU/min]

Description: Sets the velocity for the traversing block.

Dependency: The number of indices depends on p2615.
Refer to: p2615, p2616, p2617, p2619, p2620, p2621, p2622, p2623, p2624, p2646

Note: The velocity can be influenced using the velocity override (p2646).

p2619[0...n] EPOS traversing block acceleration override / Trav_block a_over

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: FloatingPoint32 | **Dynamic index:** p2615 | **Func. diagram:** 3616
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1.0 [%]	100.0 [%]	100.0 [%]

Description: Sets the acceleration override for the traversing block.
The override refers to the maximum acceleration (p2572).

Dependency: The number of indices depends on p2615.
Refer to: p2572, p2615, p2616, p2617, p2618, p2620, p2621, p2622, p2623, p2624

p2620[0...n] EPOS traversing deceleration override / Trav_block -a_over

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: FloatingPoint32 | **Dynamic index:** p2615 | **Func. diagram:** 3616
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1.0 [%]	100.0 [%]	100.0 [%]

Description: Sets the deceleration override for the traversing block.
The override refers to the maximum deceleration (p2573).

Dependency: The number of indices depends on p2615.
Refer to: p2573, p2615, p2616, p2617, p2618, p2619, p2621, p2622, p2623, p2624

Notice: If, when calculating the traversing profile, it is identified that the target position of the next block with the programmed deceleration override will not be reached without direction reversal (flying block change), then the old (current) deceleration override remains effective.

p2621[0...n] EPOS traversing block task / Trav_block task

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Integer16 | **Dynamic index:** p2615 | **Func. diagram:** 3616
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1	9	1

Description: Sets the required task for the traversing block.

Value:
1: POSITIONING
2: FIXED STOP
3: ENDLESS_POS
4: ENDLESS_NEG
5: WAITING
6: GOTO
7: SET_O
8: RESET_O
9: JERK

Dependency: The number of indices depends on p2615.
Refer to: p2615, p2616, p2617, p2618, p2619, p2620, p2622, p2623, p2624

p2622[0...n] EPOS traversing block task parameter / Trav_blck task_par

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Integer32 | **Dynamic index:** p2615 | **Func. diagram:** 3616
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-2147483648	2147483647	0

Description: Sets additional information/data of the appropriate task for the traversing block.

Dependency: The number of indices depends on p2615.
Refer to: p2615, p2616, p2617, p2618, p2619, p2620, p2621, p2623, p2624

Note: The following should be set depending on the task:
FIXED STOP: Clamping torque and clamping force (rotary 0...65536 [0.01 Nm], linear 0...65536 [N])
WAIT: Delay time [ms]
GOTO: Block number
SET_O: 1, 2 or 3 - set direct output 1, 2 or 3 (both)
RESET_O: 1, 2 or 3 - set direct output 1, 2 or 3 (both)
JERK: 0 - de-activate, 1 - activate

p2623[0...n] EPOS traversing block, task mode / Trav_block mode

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T | **Calculated:** - | **Access level:** 1
Data type: Unsigned16 | **Dynamic index:** p2615 | **Func. diagram:** 3515, 3616
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	65535	0

Description: Sets the influence of the task for the traversing block.
Value = 0000 cccc bbbb aaaa
cccc: Positioning mode
cccc = 0000 --> ABSOLUTE
cccc = 0001 --> RELATIVE
cccc = 0010 --> ABS_POS (only for a rotary axis with modulo correction)
cccc = 0011 --> ABS_NEG (only for a rotary axis with modulo correction)

bbbb: Progression condition
bbbb = 0000 --> END
bbbb = 0001 --> CONTINUE WITH STOP
bbbb = 0010 --> CONTINUE FLYING
bbbb = 0011 --> CONTINUE EXTERNAL
bbbb = 0100 --> CONTINUE EXTERNAL WAIT
bbbb = 0101 --> CONTINUE EXTERNAL ALARM
aaaa: IDs
aaaa = 0001 --> Skip block

Dependency: The number of indices depends on p2615.
Refer to: p2615, p2616, p2617, p2618, p2619, p2620, p2621, p2622, p2624

p2624 EPOS traversing block, sorting / Trav_block sort

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dynamic index:** -	**Func. diagram:** 3616
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Sets the traversing blocks for sorting corresponding to their block number.
p2624 = 0 --> 1:
The sorting is started and the parameters are automatically reset to 0 after the sorting operation has been completed.

Dependency: Refer to: p2615, p2616, p2617, p2618, p2619, p2620, p2621, p2622, p2623

Note: After sorting, the traversing blocks are written at the beginning of the memory in increasing sequence without any gaps.

p2625 BI: EPOS traversing block selection, bit 0 / Trav_blk sel bit 0

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3616, 3640
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to select the traversing block, bit 0.

Dependency: Binector inputs p2625, p2626, p2627, p2628, p2629 and p2630 are used to select one of the maximum of 64 traversing blocks.
Refer to: p2626, p2627, p2628, p2629, p2630

p2626 BI: EPOS traversing block selection, bit 1 / Trav_blk sel bit 1

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3616, 3640
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to select the traversing block, bit 1.

Dependency: Binector inputs p2625, p2626, p2627, p2628, p2629 and p2630 are used to select one of the maximum of 64 traversing blocks.
Refer to: p2625, p2627, p2628, p2629, p2630

p2627 BI: EPOS traversing block selection, bit 2 / Trav_blk sel bit 2

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** 3616, 3640
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to select the traversing block, bit 2.

Dependency: Binector inputs p2625, p2626, p2627, p2628, p2629 and p2630 are used to select one of the maximum of 64 traversing blocks.
Refer to: p2625, p2626, p2628, p2629, p2630

p2628 BI: EPOS traversing block selection, bit 3 / Trav_blk sel bit 3

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** 3616, 3640
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to select the traversing block, bit 3.

Dependency: Binector inputs p2625, p2626, p2627, p2628, p2629 and p2630 are used to select one of the maximum of 64 traversing blocks.
Refer to: p2625, p2626, p2627, p2629, p2630

p2629 BI: EPOS traversing block selection, bit 4 / Trav_blk sel bit 4

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** 3616, 3640
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to select the traversing block, bit 4.

Dependency: Binector inputs p2625, p2626, p2627, p2628, p2629 and p2630 are used to select one of the maximum of 64 traversing blocks.
Refer to: p2625, p2626, p2627, p2628, p2630

p2630 BI: EPOS traversing block selection, bit 5 / Trav_blk sel bit 5

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** 3616, 3640
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to select the traversing block, bit 5.

Dependency: Binector inputs p2625, p2626, p2627, p2628, p2629 and p2630 are used to select one of the maximum of 64 traversing blocks.
Refer to: p2625, p2626, p2627, p2628, p2629

p2631 BI: EPOS activate traversing task (0 -> 1) / Trav_task act

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3616, 3625
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for "activating traversing task".
BI: p2631 = 0/1 signal
The traversing task, selected using BI: p2625 ... p2630, is started.

Dependency: Refer to: p2625, p2626, p2627, p2628, p2629, p2630, p2640, p2641

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: To start a traversing block, the axis must be referenced (r2684.11 = 1).
The status signal r2684.12 = 0/1 signal is used for acknowledgement.
A traversing task can be influenced using the following signals:
- intermediate stop via BI: p2640.
- reject traversing task via BI: p2641.

p2632 EPOS external block change evaluation / Ext BlckChg eval

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** 3615, 3616
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Sets the mode to evaluate "external block change".

Value:
0: External block change via the measuring probe
1: External block change via BI: p2633

Dependency: Refer to: p2623, p2633, r2677, r2678

Note: In the mode "external block change via measuring probe (p2632 = 0), the following applies:
When starting a traversing block with the block change enable CONTINUE_EXTERNAL, CONTINUE_EXTERNAL_WAIT and CONTINUE_EXTERNAL_ALARM an activated "flying referencing" is interrupted. After ending the block, "flying referencing" must be re-activated via BI: p2595 = 0/1 signal.

p2633 BI: EPOS external block change (0 -> 1) / Ext BlckChg (0->1)

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3615
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for "external block change".
BI: p2633 = 0/1 signal

Dependency: The evaluation of the signal is only active p2632 = 1.
Refer to: p2623, p2632, p2640, p2641, r2677, r2678

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: A 0/1 edge initiates a flying block change in the subsequent traversing block.
When the external block change is identified, the actual position is saved in r2678.
A traversing task can be influenced using the following signals:
- intermediate stop via BI: p2640.
- reject traversing task via BI: p2641.

p2634[0...n] EPOS fixed stop maximum following error / Following err max

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dynamic index:** DDS, p0180	**Func. diagram:** 3617, 4025
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0 [LU]	2147482647 [LU]	1000 [LU]

Description: Sets the following error to detect the "fixed stop reached" state (r2526.4).

Dependency: Refer to: r2526, p2621, r2675

Note: The state "fixed stop reached" is detected if the following error exceeds the theoretically calculated following error value by p2634.

p2635 EPOS fixed stop monitoring window / Fixed stop monit

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** 3617, 4025
P-Group: Closed loop position control	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0 [LU]	2147482647 [LU]	100 [LU]

Description: Sets the monitoring window of the actual position after the fixed stop is reached.

Dependency: Refer to: r2526, r2683

Refer to: F07484

Note: If, after the fixed stop is reached, the end stop shifts in either the positive or negative direction by more than the value set here, then BO: r2526.5 is set to 1 and an appropriate message is output.

p2637 BI: EPOS fixed stop reached / Fixed stop reached

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3616, 3617
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	2526.4

Description: Sets the signal source for the feedback signal "fixed stop reached".

BI: p2637 = 1 signal

Fixed stop is reached.

BI: p2637 = 0 signal

Fixed stop is not reached.

Dependency: Refer to: r2526, p2634

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: The identification of "fixed stop reached" is, for the factory setting, dependent on the signal BO: r2526.4 (fixed stop reached). This signal is influenced via p2634 (EPOS fixed stop, maximum following error).

p2638 BI: EPOS fixed stop outside the monitoring window / Fixed stop outside

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3616, 3617
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	2526.5

Description: Sets the signal source for the feedback signal "fixed stop outside the monitoring window".

BI: p2638 = 1 signal
Fixed stop is located outside the monitoring window.
BI: p2638 = 0 signal
Fixed stop is inside the monitoring window.

Dependency: Refer to: r2526, p2635

Note: The identification of "fixed stop outside the monitoring window" is, for the factory setting, dependent on signal BO: r2526.5 (fixed stop outside window). This signal is influenced via p2635 (EPOS fixed stop monitoring window).

p2639 BI: EPOS force limit reached / F_limit reached

SERVO (EPOS, Lin)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3616
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	1407.7

Description: Sets the signal source for the feedback signal "force limit reached" when traversing to fixed stop.
BI: p2639 = 1 signal
Force limit is reached.
BI: p2639 = 0 signal
Force limit has not been reached.

Dependency: Refer to: r1407

Note: The feedback signal from "force limit reached" is, for the factory setting, dependent on the signal BO: r1407.7 (force limit reached).

p2639 BI: EPOS torque limit reached / M_limit reached

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3616
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	1407.7

Description: Sets the signal source for the feedback signal "torque limit reached" when traversing to fixed stop.
BI: p2639 = 1 signal
Torque limit is reached.
BI: p2639 = 0 signal
Torque limit is not reached.

Dependency: Refer to: r1407

Note: The feedback signal from "torque limit reached" is, for the factory setting, dependent on the signal BO: r1407.7 (torque limit reached).

p2640 BI: EPOS intermediate stop (0 signal) / Intermediate stop

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3616, 3620, 3625
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the "no intermediate stop/intermediate stop".

BI: p2640 = 1 signal
No intermediate stop.
BI: p2640 = 0 signal
Intermediate stop.

Dependency: Refer to: p2631, p2641, p2647, p2649

Caution: For BI: p2649 = 1 signal, the following applies:
Motion starts without any explicit control signal.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: This signal is only effective in the modes "traversing blocks" and "direct setpoint input/MDI".
When activating the intermediate stop, the axis brakes with the parameterized deceleration (p2620 or p2645).

p2641 BI: EPOS reject traversing task (0 signal) / Trav_task reject

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3616, 3620, 3625
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for "do not reject traversing task/reject traversing task".
BI: p2641 = 1 signal
Do not reject traversing task.
BI: p2641 = 0 signal
Reject traversing task.

Dependency: Refer to: p2631, p2640, p2647, p2649

Caution: For BI: p2649 = 1 signal, the following applies:
Motion starts without any explicit control signal.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: This signal is only effective in the modes "traversing blocks" and "direct setpoint input/MDI".
When activating reject traversing tasks, then the axis brakes with the maximum deceleration (p2573).

p2642 CI: EPOS direct setpoint input/MDI position setpoint / MDI s_set

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Integer32	**Dynamic index:** -	**Func. diagram:** 3618
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2690[0]

Description: Sets the signal source for the position setpoint in the mode "direct setpoint input/MDI".

Dependency: Refer to: p2648, p2649, p2650, p2690

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: Depending on p2649, the position setpoint is either transferred continuously or edge-triggered.
The position setpoint input is interpreted as length unit [LU].

p2643 CI: EPOS direct setpoint input/MDI velocity setpoint / MDI v_set

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Integer32	**Dynamic index:** -	**Func. diagram:** 3618
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2691[0]

Description: Sets the signal source for the velocity setpoint in the "direct setpoint input/MDI mode".

Dependency: Refer to: p2649, p2650, p2691
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: Depending on p2649, the velocity setpoint is either transferred continuously or edge-triggered.
The velocity setpoint input is interpreted as [1000 LU/min].

p2644 CI: EPOS direct setpoint input/MDI acceleration override / MDI a_over

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 3618
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	2692[0]

Description: Sets the signal source for the acceleration override in the operating mode "direct setpoint input/MDI".
Dependency: Refer to: p2649, p2650, p2692
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: Depending on p2649, the acceleration override is either transferred continuously or edge-triggered.
The signal value 4000 hex (16384 dec) corresponds to 100 %.

p2645 CI: EPOS direct setpoint input/MDI deceleration override / MDI -a_over

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 3618
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	2693[0]

Description: Sets the signal source for the deceleration override in the operating mode "direct setpoint input/MDI".
Dependency: Refer to: p2649, p2650, p2693
Notice: If, when calculating the traversing profile, it is identified that the target position with the programmed deceleration override cannot be reached without reversing the direction, then when accepting the dynamic values, the larger deceleration override is accepted and becomes effective.
The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: Depending on p2649, the deceleration override is either transferred continuously or edge-triggered.
The signal value 4000 hex (16384 dec) corresponds to 100 %.

p2646 CI: EPOS velocity override / v_over

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 3630
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for the velocity override.
This velocity override is effective in the following operating modes "direct setpoint input/MDI", "traversing blocks", "jogging" and "search for reference" (when approaching the reference cam).
Dependency: Refer to: p2571, p2585, p2586, p2605, p2618, p2643, r2681
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: The effective override (r2681) can differ from the specified override due to limits (e.g. maximum velocity).

p2647 BI: EPOS direct setpoint input/MDI selection / MDI selection

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3620, 3625, 3640
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for selecting the operating mode "direct setpoint input/MDI".

Dependency: Refer to: p2640, p2641, p2642, p2643, p2644, p2645, p2646, p2648, p2649, p2650, p2651, p2652, p2653

Note: In this mode, using BI: p2653 it is possible to make a flying changeover between setting-up and positioning.
In this mode, even if the axis is not referenced (r2684.11 = 0) relative positioning is possible.

p2648 BI: EPOS direct setpoint input/MDI positioning type / MDI pos_type

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3620
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the positioning type in the mode "direct setpoint input/MDI".
BI: p2648 = 1 signal
Absolute positioning is selected.
BI: p2648 = 0 signal
Relative positioning is selected.

Dependency: Refer to: p2649, p2650, p2654
Refer to: A07461, F07488

Notice: Absolute positioning:
To traverse, the reference point must be set (r2684.11 = 1).
Relative positioning:
To traverse, it is not necessary that the reference point is set.

Note: Depending on p2649, the positioning type is either transferred continuously or edge-triggered.

p2649 BI: EPOS direct setpoint input/MDI transfer type selection / MDI trans_type sel

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3620
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to define how values are transferred in the operating mode "direct setpoint input/MDI".
BI: p2649 = 1 signal
Values are continually transferred (refer to parameter under dependency).
BI: p2649 = 0 signal
The values are transferred for BI: p2650 = 0/1 signal.

Dependency: Refer to: p2642, p2643, p2644, p2645, p2648, p2650, p2651, p2652

Caution: For BI: p2649 = 1 signal, the following applies:
Motion starts without any explicit control signal.

Note: Parameter p2649 can only be changed for p0922 (p2079) = 999.

p2650 BI: EPOS direct setpoint input/MDI setpoint acceptance edge / MDI setp_accept

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3620
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to accept the values for edge-triggered selection (BI: p2649 = 0 signal) in the operating mode "direct setpoint input/MDI".
BI: p2650 = 0/1 signal and BI: p2649 = 0 signal
Values are accepted, edge-triggered (refer to parameter under dependency).

Dependency: Refer to: p2640, p2641, p2642, p2643, p2644, p2645, p2648, p2649, p2651, p2652, r2684

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: The status signal r2684.12 = 0/1 signal is used for acknowledgement.
The operating mode "direct setpoint input/MDI" can be influenced via the following signals:
- intermediate stop via BI: p2640.
- reject traversing task via BI: p2641.

p2651 BI: EPOS direct setpoint input/MDI direction selection, positive / MDI dir_sel pos

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3620
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the positive direction selection in the operating mode "direct setpoint input/MDI".

Dependency: Refer to: p2576, p2648, p2649, p2650, p2652, p2653, p2654

Note: The following applies for "setting-up":
- the traversing direction can be entered using this binector input.
- if both directions (p2651, p2652) are selected, then the axis remains stationary (zero speed).
- if both directions (p2651, p2652) are de-selected, then the axis remains stationary (zero speed).
The following applies for "positioning":
Using binector inputs p2651 and p2652, when the modulo correction (BI: p2577 = 1 signal) is activated and for absolute positioning (BI: p2648 = 1 signal), the traversing direction is specified as follows:
BI: p2651 / BI: p2652
0 signal / 0 signal: Absolute positioning through the shortest distance.
1 signal / 0 signal: Absolute positioning in the positive direction.
0 signal / 1 signal: Absolute positioning in the negative direction.
1 signal / 1 signal: Absolute positioning through the shortest distance.

p2652 BI: EPOS direct setpoint input/MDI direction selection, negative / MDI dir_sel neg

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3620
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the negative direction selection in the operating mode "direct setpoint input/MDI".

Dependency: Refer to: p2576, p2648, p2649, p2650, p2651, p2653, p2654

Note: The following applies for "setting-up":
- the traversing direction can be entered using this binector input.
- if both directions (p2651, p2652) are selected, then the axis remains stationary (zero speed).
- if both directions (p2651, p2652) are de-selected, then the axis remains stationary (zero speed).

The following applies for "positioning":
Using binector inputs p2651 and p2652, when the modulo correction (BI: p2577 = 1 signal) is activated and for absolute positioning (BI: p2648 = 1 signal), the traversing direction is specified as follows:
BI: p2651 / BI: p2652
0 signal / 0 signal: Absolute positioning through the shortest distance.
1 signal / 0 signal: Absolute positioning in the positive direction.
0 signal / 1 signal: Absolute positioning in the negative direction.
1 signal / 1 signal: Absolute positioning through the shortest distance.

p2653 BI: EPOS direct setpoint input/MDI setting-up selection / MDI setting-up sel

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3620
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for setting-up in the operating mode "direct setpoint input/MDI".
BI: p2653 = 1 signal
Setting-up selected.
BI: p2653 = 0 signal
Positioning selected.

Dependency: Refer to: p2651, p2652

Note: In the operating mode "direct setpoint input/MDI", it is possible to make a flying changeover between setting-up and positioning.
For "setup" (BI: p2653 = 1 signal), the following applies:
A traversing direction must be selected via binector inputs p2651 and p2652.

p2654 CI: EPOS direct setpoint input/MDI mode adaptation / MDI mode adapt

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Integer16	**Dynamic index:** -	**Func. diagram:** 3620
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to interconnect the MDI mode to the operating mode "direct setpoint input MDI" via PROFIBUS telegram 110.
CI: p2654 = 0
The binector inputs listed below are evaluated.
CI: p2654 > 0
The following binector inputs are not evaluated:
- BI: p2648 (positioning type)
- BI: p2651 (direction selection, positive)
- BI: p2652 (direction selection, negative)

In this case, the following definitions apply:
Signal via CI: p2654 = xx0x hex -> absolute
Signal via CI: p2654 = xx1x hex -> relative
Signal via CI: p2654 = xx2x hex -> abs_pos (only for modulo correction)
Signal via CI: p2654 = xx3x hex -> abs_neg (only for modulo correction)

Dependency: Refer to: p2648, p2651, p2652

p2655[0...1] BI: EPOS select tracking mode / Sel tracking mode

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3635
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	[0] 1 [1] 2526.7

Description: Sets the signal source to select tracking mode.
BI: p2655[0] or BI: p2655[1] = 1 signal
Tracking mode after withdrawing the enable signal from EPOS (BI: p2656 = 0 signal).
BI: p2655[0] and BI: p2655[1] = 0 signal
No tracking mode after withdrawing the enable signal from EPOS (BI: p2656 = 0 signal).

Dependency: Refer to: p2656

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: For the following events, independent of the signal that is present, tracking mode is selected:
- after booting.
- after a 0/1 signal at BI: p2658 (EPOS position actual value, valid feedback signal).
- while a fault is present.

p2656 BI: EPOS enable basic positioner / EPOS enable

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3635
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	2526.3

Description: Sets the signal source to enable the basic positioner.
BI: p2656 = 1 signal
The basic positioner is enabled.
BI: p2656 = 0 signal
The basic positioner is not enabled.

Dependency: Refer to: r2526, p2655

p2657 CI: EPOS position actual value/position setting value / Pos act/set value

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Integer32	**Dynamic index:** -	**Func. diagram:** 3610, 3616, 3620, 3635
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	2521[0]

Description: Sets the signal source for the position actual value/position setting value.

Dependency: Refer to: r2521, p2658

Note: In the tracking mode, the position setpoint is taken from this connector input.

p2658 BI: EPOS pos. actual value valid, feedback signal / Pos valid feedback

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** 3635
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	2526.0

Description: Sets the signal source for the feedback signal "position actual value is valid".
BI: p2658 = 1 signal
The position actual value received via CI: p2657 is valid.
BI: p2658 = 0 signal
The position actual value received via CI: p2657 is invalid.

Dependency: Refer to: r2526, p2657

Note: While a 0 signal is present, the position setpoint (p2665) is held at the value of 0.

p2659 BI: EPOS referencing active feedback signal / Ref act fdbk

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** 3612
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	2526.1

Description: Sets the signal source for the feedback signal "referencing active".
BI: p2659 = 1 signal
Referencing is active.
BI: p2659 = 0 signal
Referencing is not active.

Dependency: Refer to: r2526

p2660 CI: EPOS measured value referencing / Meas val ref

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Integer32 | **Dynamic index:** - | **Func. diagram:** 3612, 3614
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	2523[0]

Description: Sets the signal source for the measured value for the function "referencing".

Dependency: Refer to: r2523

p2661 BI: EPOS measured value valid, feedback signal / MeasVal valid fdbk

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** 3612, 3614, 3615
P-Group: Basic positioner | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	2526.2

Description: Sets the signal source for the feedback signal "measured value valid".

BI: p2661 = 1 signal
The measured value received via CI: p2660 is valid.
BI: p2661 = 0 signal
The measured value received via CI: p2660 is invalid.

Dependency: Refer to: r2526, p2660

p2662 BI: EPOS adjustment value valid feedback signal / Adj val valid FS

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** -
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2526.9

Description: Sets the signal source for the feedback signal "adjustment value valid".
BI: p2662 = 1 signal
The adjustment value received via CI: p2660 is valid.
BI: p2662 = 0 signal
The adjustment value received via CI: p2660 is not valid.

Dependency: Refer to: r2526, p2660

p2663 BI: EPOS clamping active feedback signal / Clamping active FS

SERVO (EPOS), VECTOR (EPOS)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** 3616
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2526.8

Description: Sets the signal source for the feedback signal "clamping active for travel to fixed stop".
BI: p2663 = 1 signal
Clamping is active
BI: p2663 = 0 signal
Clamping is not active.

Dependency: Refer to: r2526

Note: The feedback signal from "terminals active" is, for the factory setting, dependent on the signal BO: r2526.8 (terminals active when moving to a fixed stop).

r2665 CO: EPOS position setpoint / s_set

SERVO (EPOS), VECTOR (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dynamic index:** -	**Func. diagram:** 3635
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
- [LU]	- [LU]	- [LU]

Description: Displays the current absolute position setpoint.

Dependency: Refer to: p2530

Note: As standard, the following BICO interconnection is established: CI: p2530 = r2665

r2666 CO: EPOS velocity setpoint / v_set

SERVO (EPOS), VECTOR (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dynamic index:** -	**Func. diagram:** 3635
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min - [1000 LU/min]	**Max** - [1000 LU/min]	**Factory setting** - [1000 LU/min]

Description: Displays the current velocity setpoint.

Dependency: Refer to: p2531

Note: As standard, the following BICO interconnection is established: CI: p2531 = r2666

r2667 CO: EPOS backlash compensation value / Backlash value

SERVO (EPOS), VECTOR (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dynamic index:** -	**Func. diagram:** 3635
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min - [LU]	**Max** - [LU]	**Factory setting** - [LU]

Description: Displays the currently effective value for backlash compensation.

Dependency: Refer to: p2516

Note: As standard, the following BICO interconnection is established: CI: p2516 = r2667

r2669 CO: EPOS current operating mode / Op mode act

SERVO (EPOS), VECTOR (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dynamic index:** -	**Func. diagram:** 3625, 3630
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min -	**Max** -	**Factory setting** -

Description: Displays the current active operating mode.
Value = 00 hex -> no operating mode active
Value = 01 hex -> jogging active
Value = 02 hex -> search for reference active
Value = 04 hex -> traversing blocks active
Value = 08 hex -> Positioning for direct setpoint input/MDI active
Value = 10 hex -> Setting-up for direct setpoint input/MDI active
Value = 20 hex -> flying referencing active

Dependency: Refer to: p2589, p2590, p2595, p2631, p2647, p2653

r2670.0...15 CO/BO: EPOS status word, active traversing block / ZSW act trav_block

SERVO (EPOS), VECTOR (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dynamic index:** -	**Func. diagram:** 3615, 3625, 3650
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min -	**Max** -	**Factory setting** -

Description: Displays the status word for the active traversing block.
r2670.0: Active traversing block, bit 0
...

r2670.5: Active traversing block, bit 5
r2670.15: MDI active

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Active traversing block, bit 0	Active	Not active	-
01	Active traversing block, bit 1	Active	Not active	-
02	Active traversing block, bit 2	Active	Not active	-
03	Active traversing block, bit 3	Active	Not active	-
04	Active traversing block, bit 4	Active	Not active	-
05	Active traversing block, bit 5	Active	Not active	-
15	MDI active	Active	Not active	-

Dependency: Refer to: p2631, p2647

Note: Re bit 00 ... 05:
Displays the active traversing block in the traversing blocks operating mode.
Re bit 15:
For a 1 signal, the operating mode - direct setpoint input/MDI - is active

r2671 CO: EPOS current position setpoint / s_set act

SERVO (EPOS), VECTOR (EPOS)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Integer32 **Dynamic index:** - **Func. diagram:** 3610, 3616, 3620
P-Group: Basic positioner **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [LU]	- [LU]	- [LU]

Description: Displays the position setpoint presently being processed.

Note: A position of zero is displayed for non position-related tasks (e.g. ENDLESS_POS, ENDLESS_NEG).

r2672 CO: EPOS current velocity setpoint / v_set act

SERVO (EPOS), VECTOR (EPOS)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Integer32 **Dynamic index:** - **Func. diagram:** 3610, 3612, 3616, 3620
P-Group: Basic positioner **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [1000 LU/min]	- [1000 LU/min]	- [1000 LU/min]

Description: Displays the velocity setpoint presently being processed.

r2673 CO: EPOS current acceleration override / a_over act

SERVO (EPOS), VECTOR (EPOS)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 3610, 3612, 3616, 3620
P-Group: Basic positioner **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Displays the acceleration override presently being processed.

Note: An override of 100% is effective in the "jogging" and "search for reference" operating modes.

r2674 CO: EPOS current deceleration override / -a_over act

SERVO (EPOS), VECTOR (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 3610, 3612, 3616, 3620
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Displays the deceleration override presently being processed.

Note: An override of 100% is effective in the "jogging" and "search for reference" operating modes.

r2675 CO: EPOS current task / Task cur

SERVO (EPOS), VECTOR (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dynamic index:** -	**Func. diagram:** 3616
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
0	9	-

Description: Displays the task that is presently being processed.

Value:
0: Inactive
1: POSITIONING
2: FIXED STOP
3: ENDLESS_POS
4: ENDLESS_NEG
5: WAITING
6: GOTO
7: SET_O
8: RESET_O
9: JERK

Dependency: Refer to: p2621

r2676 CO: EPOS current task parameter / Task para cur

SERVO (EPOS), VECTOR (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dynamic index:** -	**Func. diagram:** 3616
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the task parameter presently being processed in the "traversing blocks" operating mode.

Dependency: Refer to: p2622

Note: The following is displayed depending on the task:
FIXED STOP: Clamping torque (0 ... 65536 [0.01 Nm]) or clamping force (0 ... 65536 [N])
WAIT: Delay time [ms]
GOTO: Block number
SET_O: 1, 2, 3 --> direct output 1, 2 or 3 (both) is set
RESET_O: 1, 2, 3 --> direct output 1, 2 or 3 (both) is set
JERK: 0 --> deactivate, 1 --> activate

r2677 CO: EPOS current task mode / Task mode cur

SERVO (EPOS), VECTOR (EPOS)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** 3616
P-Group: Basic positioner **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the task mode presently being processed.
Dependency: Refer to: p2623

r2678 CO: EPOS external block change / Ext BlckChg s_act

SERVO (EPOS), VECTOR (EPOS)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Integer32 **Dynamic index:** - **Func. diagram:** 3615, 3616, 3620
P-Group: Basic positioner **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [LU]	- [LU]	- [LU]

Description: Displays the actual position for the following events:
- external block change via measuring probe (p2632 = 0, BI: p2661 = 0/1 signal).
- external block change via BI: p2633 (p2632 = 1, BI: p2633 = 0/1 signal).
- activate traversing task (BI: p2631 = 0/1 signal).

Dependency: Refer to: p2631, p2632, p2633, p2661

r2680 CO: EPOS clearance, reference cam and zero mark / Clearance cam/ZM

SERVO (EPOS), VECTOR (EPOS)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Integer32 **Dynamic index:** - **Func. diagram:** 3612
P-Group: Basic positioner **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [LU]	- [LU]	- [LU]

Description: Displays the clearance determined between the reference cam and zero mark in the search for reference.

r2681 CO: EPOS velocity override effective / v_over effective

SERVO (EPOS), VECTOR (EPOS)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 3630
P-Group: Basic positioner **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Displays the currently effective velocity override.
Dependency: Refer to: p2571, p2646
Note: The effective override can differ from the specified override due to limits (e.g. p2571, maximum velocity).

r2682 CO: EPOS residual distance to go / Residual distance

SERVO (EPOS), VECTOR (EPOS)

Can be changed: -
Calculated: -
Access level: 1
Data type: Integer32
Dynamic index: -
Func. diagram: 3635
P-Group: Basic positioner
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [LU]	- [LU]	- [LU]

Description: Displays the current residual distance.
The remaining distance is the distance to still to be moved through up to the end of the current positioning task.

Dependency: Refer to: r2665, r2671, r2678

r2683.0...14 CO/BO: EPOS status word 1 / POS_ZSW1

SERVO (Lin, Pos ctrl)

Can be changed: -
Calculated: -
Access level: 1
Data type: Unsigned16
Dynamic index: -
Func. diagram: 3645
P-Group: Closed loop position control
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays status word 1 for the basic positioner (EPOS).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Tracking mode active	Yes	No	3635, 4020
01	Velocity limiting active	Yes	No	3630
02	Setpoint available	Yes	No	3635
03	Target position reached	Yes	No	3635
04	Axis moves forwards	Yes	No	3635
05	Axis moves backwards	Yes	No	3635
06	Software limit switch minus reached	Yes	No	3635
07	Software limit switch plus reached	Yes	No	3635
08	Position actual value <= cam switching position 1	Yes	No	4025
09	Position actual value <= cam switching position 2	Yes	No	4025
10	Direct output 1 via traversing block	Yes	No	3616
11	Direct output 2 via traversing block	Yes	No	3616
12	Fixed stop reached	Yes	No	3616, 3617
13	Fixed stop clamping force reached	Yes	No	3616, 3617
14	Travel to fixed stop active	Yes	No	3616, 3617

Dependency: Refer to: r2684

Note: Re bit 02, 04, 05, 06, 07:
This signals designate the state after jerk limiting.
Re bit 08, 09:
These signals are generated in the "closed-loop position control" function module.

r2683.0...14 CO/BO: EPOS status word 1 / POS_ZSW1

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** 3645
P-Group: Closed loop position control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays status word 1 for the basic positioner (EPOS).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Tracking mode active	Yes	No	3635, 4020
01	Velocity limiting active	Yes	No	3630
02	Setpoint available	Yes	No	3635

04	Axis moves forwards	Yes	No	3635
05	Axis moves backwards	Yes	No	3635
06	Software limit switch minus reached	Yes	No	3635
07	Software limit switch plus reached	Yes	No	3635
08	Position actual value <= cam switching position 1	Yes	No	4025
09	Position actual value <= cam switching position 2	Yes	No	4025
10	Direct output 1 via traversing block	Yes	No	3616
11	Direct output 2 via traversing block	Yes	No	3616
12	Fixed stop reached	Yes	No	3616, 3617
13	Fixed stop clamping torque reached	Yes	No	3616, 3617
14	Travel to fixed stop active	Yes	No	3616, 3617

Dependency: Refer to: r2684

Note: Re bit 02, 04, 05, 06, 07:
This signals designate the state after jerk limiting.
Re bit 08, 09:
These signals are generated in the "closed-loop position control" function module.

r2684.0...15 CO/BO: EPOS status word 2 / POS_ZSW2

SERVO (Pos ctrl), VECTOR (Pos ctrl)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** 3646
P-Group: Closed loop position control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays status word 2 for the basic positioner (EPOS).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Search for reference active	Active	Not active	3612
01	Flying referencing active	Active	Not active	3614
02	Referencing active	Active	Not active	-
03	Printing mark outside outer window	Yes	No	3614
04	Axis accelerating	Yes	No	3635
05	Axis decelerating	Yes	No	3635
06	Jerk limiting active	Yes	No	3635
07	Activate correction	Yes	No	3635
08	Following error in tolerance	Yes	No	4025
09	Modulo correction active	Yes	No	-
10	Target position reached	Yes	No	4020

11	Reference point set	Yes	No	3612, 3614, 3630
12	Acknowledgement, traversing block activated	Yes	No	3616, 3620
13	STOP cam minus active	Yes	No	3630
14	STOP cam plus active	Yes	No	3630
15	Traversing command active	Yes	No	3635

Note: Re bit 02:
The "referencing active" signal is an OR logic operation of "search for reference active" and "flying referencing active".
Re bit 00 ... 07 and 11 ... 14:
These signals are generated in the function module "basic positioner".
Re bit 08:
The signal is generated in the "closed-loop position control" function module.

r2685 CO: EPOS corrective value / Corrective value

SERVO (EPOS), VECTOR (EPOS)

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Integer32 **Dynamic index:** - **Func. diagram:** 3635
P-Group: Basic positioner **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [LU]	- [LU]	- [LU]

Description: Displays the corrective value for the position actual value.
Dependency: Refer to: r2684
Note: As standard, the following BICO interconnection is established: CI: p2513 = r2685
Using this value, e.g. modulo corrections are carried out.

r2686[0...1] CO: EPOS force limiting effective / F_limit eff

SERVO (EPOS, Lin)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** 3616, 3617
P-Group: Basic positioner **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Displays the effective force limiting.
r2686[0]: Displays the effective upper force limiting when traversing to fixed stop (referred to CI: p1522, CI: p1523).
r2686[1]: Displays the effective lower force limiting when traversing to fixed stop (referred to CI: p1522, CI: p1523).
Dependency: Refer to: p1520, p1521, p1522, p1523, r2676
Note: As standard, the following BICO interconnections are established:
CI: p1528 = r2686[0]
CI: p1529 = r2686[1]

r2686[0...1] CO: EPOS torque limiting effective / M_limit eff

SERVO (EPOS), VECTOR (EPOS)

Can be changed: - **Calculated:** - **Access level:** 3

Min	Max	Factory setting
1 [1000 LU/min]	40000000 [1000 LU/min]	600 [1000 LU/min]

Description: Sets a fixed setpoint for the velocity.

Dependency: Refer to: p2643

Note: As standard, the following BICO interconnection is established: CI: p2643 = r2691

p2692 CO: EPOS acceleration override, fixed setpoint / a_over fixed val

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 3618
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0.100 [%]	100.000 [%]	100.000 [%]

Description: Sets a fixed setpoint for the acceleration override.

Dependency: Refer to: p2572, p2644

Note: As standard, the following BICO interconnection is established: CI: p2644 = r2692

The percentage value refers to the maximum acceleration (p2572).

p2693 CO: EPOS deceleration override, fixed setpoint / -a_over fixed val

SERVO (EPOS), VECTOR (EPOS)

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 3618
P-Group: Basic positioner	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
0.100 [%]	100.000 [%]	100.000 [%]

Description: Sets a fixed setpoint for the deceleration override.

Dependency: Refer to: p2573, p2645

Note: As standard, the following BICO interconnection is established: CI: p2645 = r2693

The percentage value refers to the maximum deceleration (p2573).

r2700 CO: Reference frequency / Ref_f

A_INF, B_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Connector output of the current reference quantity for the frequency p2000.

All frequencies specified as relative value are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.

This parameter has the unit Hz.

Dependency: Refer to: p2000

Note: This parameter provides the numerical value of the reference quantity p2000 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

r2700 CO: Reference velocity/reference frequency current / Ref_v/Ref_f cur

SERVO (Lin)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Sets the actual reference quantity for velocity and frequency.

All velocities or frequencies specified as relative value are referred to this reference quantity.

The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.

The following applies: Reference frequency (in Hz) = reference velocity (in (m/min) / 60)

Dependency: Refer to: p2000

Note: This parameter represents the numerical value of the reference quantity in the currently selected units and is only available for interconnection with Drive Control Chart (DCC).

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

Example 1:

The signal of an analog input (e.g. r4055[0]) is connected to a velocity setpoint (e.g. p1070[0]). The current percentage input value is cyclically converted into the absolute velocity setpoint using the reference velocity (p2000).

Example 2:

The setpoint from PROFIBUS (r2050[1]) is connected to a velocity setpoint (e.g. p1070[0]). The current input value is cyclically converted into a percentage value via the pre-specified normalization 4000 hex. This percentage value is converted to the absolute velocity setpoint via reference velocity (p2000).

r2700 CO: Reference speed/reference frequency / Ref_n/Ref_f

SERVO, TM41, VECTOR

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Connector output for the reference quantity for speed and frequency p2000.

All speeds or frequencies specified as relative value are referred to this reference quantity.

The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.

The following applies: Reference frequency (in Hz) = reference speed (in (RPM) / 60)

This parameter has the unit rpm.

Dependency: Refer to: p2000

Note: This parameter provides the numerical value of the reference quantity p2000 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

r2700 CO: Reference frequency, current / Ref_f cur

S_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Connector output of the current reference quantity for the frequency p2000.

All frequencies specified as relative value are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.

This parameter has the unit Hz.

Dependency: Refer to: p2000

Note: This parameter provides the numerical value of the reference quantity p2000 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

r2701 CO: Reference voltage / Reference voltage

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Connector output of the reference quantity for voltages p2001.

All voltages specified as relative value are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.

This parameter has the unit Vrms.

Dependency: Refer to: p2001

Note: This parameter provides the numerical value of the reference quantity p2001 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

r2702 CO: Reference current / Reference current

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Connector output of the reference quantity for currents p2002.

All currents specified as relative value are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.

This parameter has the unit Arms.

Dependency: Refer to: p2002

Note: This parameter provides the numerical value of the reference quantity p2002 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

r2703 CO: Reference force current / Ref force cur

SERVO (Lin)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -
P-Group: - **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the current reference quantity for forces.

All forces specified as relative value are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.

Dependency: p0505, r0108.12

Refer to: p2003

Note: This parameter represents the numerical value of the reference quantity in the currently selected units and is only available for interconnection with Drive Control Chart (DCC).

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

Example:

The actual value of the total force (r0079[0]) is connected to a test socket (e.g. p0771[0]). The current force is cyclically converted into a percentage of the reference force (p2003) and output according to the parameterized scaling.

r2703 CO: Reference torque / Reference torque

SERVO, TM41, VECTOR

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Connector output of the reference quantity p2003 for torque (r0108.12 = 0) or force (r0108.12 = 1).
All torques specified as relative values (r0108.12 = 0) or forces (r0108.12 = 1) are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.
The unit of this parameter is the same as the unit selected for p2003.

Dependency: p0505, r0108.12
Refer to: p2003

Note: This parameter provides the numerical value of the reference quantity p2003 in the currently selected unit as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

r2704 CO: Reference power / Reference power

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Connector output of the reference quantity for powers p2004.
All power ratings specified as relative value are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.
The unit of this parameter is the same as the unit selected for p2004.

Dependency: This value is calculated as voltage x current for the infeed and as torque x speed for closed-loop controls.
Refer to: r2004

Note: This parameter provides the numerical value of the reference quantity p2004 in the currently selected unit as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.
The reference power is calculated as follows:
Motor: 2 * Pi * reference speed / 60 * reference torque
Reference: reference voltage * reference current * root(3)

r2705 CO: Reference angle / Reference angle

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Connector output of the reference quantity for angles p2005.
All angles specified as relative value are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.
This parameter has the unit degree.

Dependency: Refer to: p2005

Note: This parameter provides the numerical value of the reference quantity p2005 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

r2706 CO: Reference temperature / Reference temp

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: -
Data type: FloatingPoint32
P-Group: -
Not for motor type: -
Calculated: -
Dynamic index: -
Units group: -
Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Connector output of the reference quantity for temperatures.

All temperatures specified as relative value are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.

This parameter has the unit degree Celsius.

Note: This parameter provides the numerical value of the reference quantity for the temperature as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

r2707 CO: Reference acceleration / Reference acceler

SERVO (Lin), SERVO, TM41, VECTOR

Can be changed: -
Data type: FloatingPoint32
P-Group: -
Not for motor type: -
Calculated: -
Dynamic index: -
Units group: -
Access level: 3
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Connector output of the reference quantity for accelerations p2007.

All acceleration rates specified as relative value are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.

The unit of this parameter is the same as the unit selected for p2007.

Dependency: r0108.12, p0505

Refer to: p2007

Note: This parameter provides the numerical value of the reference quantity p2007 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value in the currently selected unit can be adopted unchanged from this connector output in DCC.

p2720[0...n] Load gear configuration / Load gear config

SERVO, VECTOR

Can be changed: C2(1, 4)
Data type: Unsigned32
P-Group: Encoder
Not for motor type: -
Calculated: -
Dynamic index: DDS, p0180
Units group: -
Access level: 1
Func. diagram: -
Unit selection: -
Expert list: 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the configuration for position tracking of a load gear.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Load gear, activate position tracking	Yes	No	-
01	Axis type	Linear axis	Rotary axis	-
02	Load gear, reset position	Yes	No	-

Note: For the following events, the non-volatile, saved position values are automatically reset:

- when an encoder replacement has been identified.
- when changing the configuration of the Encoder Data Set (EDS).
- when adjusting the absolute encoder again

p2721[0...n] Load gear, rotary absolute gearbox, revolutions, virtual / Abs rot rev

SERVO, VECTOR	**Can be changed:** C2(1, 4)	**Calculated:** -	**Access level:** 1
	Data type: Unsigned32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	4194303	0

Description: Sets the number of rotations that can be resolved for a rotary absolute encoder with activated position tracking of the load gear.

Dependency: This parameter is only of significance for an absolute encoder (p0404.1 = 1) with activated position tracking of the load gear (p2720.0 = 1).

Note: The resolution that is set must be able to be represented using r2723.

For rotary axes/modulo axes, the following applies:

This parameter is preset with p0421 and can be changed.

For linear axes, the following applies:

This parameter is pre-assigned with p0421, expanded by 6 bits for multiturn information (maximum number of overflows) and cannot be changed.

p2722[0...n] Load gear, position tracking tolerance window / Pos track tol

SERVO, VECTOR	**Can be changed:** C2(1, 4)	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00	4294967300.00	0.00

Description: Sets a tolerance window for position tracking.

After the system is powered up, the difference between the saved position and the current position is determined, and depending on this, the following is initiated:

Difference within the tolerance window --> The position is reproduced as a result of the encoder actual value.

Difference outside the tolerance window --> An appropriate message is output.

Dependency: Refer to: F07449

Caution: Rotation, e.g. through a complete encoder range is not detected.

Note: The value is entered in integer (complete) encoder pulses.

For p2720.0 = 1, the value is automatically pre-assigned quarter of the encoder range.

Example:

Quarter of the encoder range = (p0408 * p0421) / 4

It is possible that the tolerance window may not be able to be precisely set due to the data type (floating point number with 23 bit mantissa).

r2723[0...n] CO: Load gear absolute value / Load gear abs_val

SERVO, VECTOR	**Can be changed:** -	**Calculated:** -	**Access level:** 1
	Data type: Unsigned32	**Dynamic index:** DDS, p0180	**Func. diagram:** 4010, 4704
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the absolute value after the load gear.

Notice: The encoder position actual value must be requested using the encoder control word Gn_STW.13.

Note: The increments are displayed in the format the same as r0483.

r2724[0...n] CO: Load gear position difference / Load gear pos diff

SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 1
Data type: Integer32
Dynamic index: DDS, p0180
Func. diagram: -
P-Group: Encoder
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the position difference before the load gear between powering down and powering up.

Note: The increments are displayed in the same format as for r0483/r2723.
If the measuring gear of the motor encoder is not activated, the position difference should be read in encoder increments.
If the measuring gear of the motor encoder is activated, the position difference is converted using the measuring gear factor.

p2810[0...1] BI: AND logic operation inputs / AND inputs

SERVO, VECTOR

Can be changed: T

Description: Sets the signal sources for the inputs of the OR logic operation.

Dependency: Refer to: r2817

Note: [0]: OR logic operation, input 1 --> the result is displayed in r2817.0.
[1]: OR logic operation, input 2 --> the result is displayed in r2817.0.

r2817.0 CO/BO: OR logic operation result / OR result

SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 2
Data type: Unsigned32
Dynamic index: -
Func. diagram: 2634
P-Group: Functions
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: Displays the result of the OR logic operation.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	OR logic operation result	True	False	-

Dependency: Refer to: p2816

p2900[0...n] CO: Fixed value 1 [%] / Fixed value 1 [%]

SERVO, VECTOR

Can be changed: U, T
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: 1021
P-Group: Free function blocks
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-10000.00 [%]	10000.00 [%]	0.00 [%]

Description: Sets a fixed percentage.
Dependency: Refer to: p2901, p2930
Notice: A BICO interconnection to a parameter that belongs to a drive object always acts on the effective data set.
Note: The value can be used to interconnect a scaling function (e.g. scaling of the main setpoint)

p2901[0...n] CO: Fixed value 2 [%] / Fixed value 2 [%]

SERVO, VECTOR

Can be changed: U, T
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: DDS, p0180
Func. diagram: 1021
P-Group: Free function blocks
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-10000.00 [%]	10000.00 [%]	0.00 [%]

Description: Sets a fixed percentage.
Dependency: Refer to: p2900, p2930
Notice: A BICO interconnection to a parameter that belongs to a drive object always acts on the effective data set.
Note: The value can be used to interconnect a scaling function (e.g. scaling of the supplementary setpoint)

r2902[0...14] CO: Fixed values [%] / Fixed values [%]

SERVO, VECTOR

Can be changed: -
Calculated: -
Access level: 1
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: 1021
P-Group: Free function blocks
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [%]	- [%]	- [%]

Description: Signal sources for frequently used percentage values.
Index:
[0] = Fixed value +0 %
[1] = Fixed value +5 %
[2] = Fixed value +10 %
[3] = Fixed value +20 %
[4] = Fixed value +50 %
[5] = Fixed value +100 %
[6] = Fixed value +150 %

[7] = Fixed value +200 %
[8] = Fixed value -5 %
[9] = Fixed value -10 %
[10] = Fixed value -20 %
[11] = Fixed value -50 %
[12] = Fixed value -100 %
[13] = Fixed value -150 %
[14] = Fixed value -200 %

Dependency: Refer to: p2900, p2901, p2930

Note: The signal sources can, for example, be used to interconnect scalings.

p2930[0...n] CO: Fixed value F [N] / Fixed value F [N]

SERVO (Lin)

Not for motor type: PEM, REL | **Expert list:** 1

Min	Max	Factory setting
0.00000 [Ohm]	300.00000 [Ohm]	0.00000 [Ohm]

Description: Rotor resistance for an induction motor determined by the motor data identification.
This stator resistance can be changed after the identification and accepted in p0354 with p1910/p1960 = -3.

Dependency: Refer to: p0354, p0625, p1910, r1927, p1960

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

p3056[0...n] MotId stator leakage inductance identified / L_stator leak

SERVO

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** MDS, p0130 | **Func. diagram:** -

Min	Max	Factory setting
0.00000 [rev/min]	210000.00000 [rev/min]	0.00000 [rev/min]

Description: Changeover speed for the motor model with encoder determined by the motor data identification.
This changeover speed can be changed after the identification and accepted in p1752 with p1910/p1960 = -3.

Dependency: Refer to: p1752, p1910

p3100 RTC time stamp mode / RTC t_stamp mode

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Sets the mode for the time stamp
p3100 = 0: Time stamp, operating hours
p3100 = 1: Time stamp, UTC format

Note: RTC: Real Time Clock
UTC: Universal Time Coordinates
The UTC time started, according to the definition on 01.01.1970 at 00:00:00 and is output in days and milliseconds.

p3101[0...1] RTC set UTC time / RTC set UTC

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 0

Min	Max	Factory setting
0	4294967295	0

Description: Setting the UTC time.
This means that the drive system is synchronized to the time specified by the time master. To start p3101[1] must be written to followed by p3101[0]. After writing to p3101[0], the UTC time is accepted.
p3101[0]: Milliseconds
p3101[1]: Days

r3102[0...1] RTC read UTC time / RTC read UTC

CU_CX32, CU_I, CU_S

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the current UTC time in the drive system.
p3102[0]: Milliseconds
p3102[1]: Days

p3103 RTC synchronization source / RTC sync_source

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	3	0

Description: Sets the synchronization source/technique.

Value:
0: PROFIBUS
1: PROFINET
2: PPI
3: PROFINET PTP

p3104 BI: RTC real time synchronization PING / RTC PING

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the PING event to set the UTC time.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

r3108[0...1] RTC last synchronization deviation / RTC sync_dev

CU_CX32, CU_I, CU_S

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the last synchronization deviation that was determined.
r3108[0]: Milliseconds
r3108[1]: Days

p3109 RTC real time synchronization, tolerance window / RTC sync tol

CU_CX32, CU_I, CU_S

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [ms]	1000 [ms]	100 [ms]

Description: Sets the tolerance window for time synchronization.
When this tolerance window is exceeded, an appropriate alarm is output.

Dependency: Refer to: A01099

p3110 External fault 3, power-up delay / Ext fault 3 t_on

All objects

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** 2546
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0 [ms]	1000 [ms]	0 [ms]

Description: Sets the delay time for external fault 3.
Dependency: Refer to: p2108, p3111, p3112
Refer to: F07862

p3111 BI: External fault 3, enable / Ext fault 3 enab

CU_CX32, CU_I, CU_LINK, CU_S, HUB, TB30, TM15, TM15DI_DO, TM17, TM31, TM54F_MA, TM54F_SL

Can be changed: U, T | **Calculated:** - | **Access level:** 3

P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	1

Description: Sets the signal source for the enable signal of external fault 3.
External fault 3 is initiated by the following AND logic operation:
- BI: p2108 negated
- BI: p3111
- BI: p3112 negated

Dependency: Refer to: p2108, p3110, p3112
Refer to: F07862

p3112 BI: External fault 3 enable negated / Ext flt 3 enab neg

CU_CX32, CU_I, CU_LINK, CU_S, HUB, TB30, TM15, TM15DI_DO, TM17, TM31, TM54F_MA, TM54F_SL

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** 2546
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the negated enable signal of external fault 3.
External fault 3 is initiated by the following AND logic operation:
- BI: p2108 negated
- BI: p3111
- BI: p3112 negated

Dependency: Refer to: p2108, p3110, p3111
Refer to: F07862

p3112[0...n] BI: External fault 3 enable negated / Ext flt 3 enab neg

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** CDS, p0170 | **Func. diagram:** -
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the negated enable signal of external fault 3.
External fault 3 is initiated by the following AND logic operation:
- BI: p2108 negated
- BI: p3111
- BI: p3112 negated

Dependency: Refer to: p2108, p3110, p3111
Refer to: F07862

r3113.0...15 CO/BO: NAMUR message bit bar / NAMUR bit bar

All objects

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Messages | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the status of NAMUR signal bit bar.
The faults or alarms are assigned to the appropriate signaling/message classes and influence a specific message bit.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Fault drive converter data electronics / software error	Yes	No	-
01	Line supply fault	Yes	No	-
02	DC link overvoltage	Yes	No	-
03	Fault drive converter power electronics	Yes	No	-
04	Drive converter overtemperature	Yes	No	-
05	Ground fault	Yes	No	-
06	Motor overload	Yes	No	-
07	Bus error	Yes	No	-
08	External safety-relevant shutdown	Yes	No	-

09	Mot encoder fault	Yes	No	-
10	Error internal communications	Yes	No	-
11	Infeed fault	Yes	No	-
15	Other faults	Yes	No	-

r3114.9...11 CO/BO: Messages status word global / Msg ZSW global

CU_CX32, CU_I, CU_S

Can be changed: - **Calculated:** - **Access level:** 2
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** -
P-Group: Displays, signals **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the global status word for messages.
The appropriate bit is set if at least one message is present at the drive objects.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
09	Alarm present	Yes	No	8065
10	Fault present	Yes	No	8060
11	Safety message present	Yes	No	-

Note: The status bits are displayed with delay.

r3115[0...63] Fault drive object initiating / F DO initiating

All objects

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Integer32 **Dynamic index:** - **Func. diagram:** 1750, 8060
P-Group: Messages **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the drive object number of the initiating drive object for this fault as integer number.
Value = 63:
The fault was initiated by the drive object itself.

Dependency: Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the fault buffer and the assignment of the indices is shown in r0945.

p3116 BI: Acknowledgement automatically suppressed / Ackn suppress

CU_CX32, CU_I, CU_S

Can be changed: U, T **Calculated:** - **Access level:** 3
Data type: Unsigned32 / Binary **Dynamic index:** - **Func. diagram:** 8060
P-Group: Messages **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the automatic acknowledgement on the device drive object.
BI: p3116 = 1 signal
Faults present are not automatically acknowledged on the device drive object.
BI: p3116 = 0 signal
Faults present are automatically acknowledged on the device drive object.

Dependency: Refer to: p2102, p2103, p2104, p2105, p3981

Note: When selecting a standard telegram, the BICO interconnection for control signal STW1.10 (master control by PLC) is automatically established.

p3201[0...n] Excitation current outside the tolerance threshold value / I_exc n Tol thresh

VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.1 [%]	100.0 [%]	10.0 [%]

Description: Sets the threshold value for the "excitation current outside tolerance" message for the excitation current monitoring.
If the absolute value of the difference between the excitation current setpoint and actual value (r1641 - r1626) exceeds the threshold value and the hysteresis is longer than the selected delay time, then fault F07913 is output.
This fault is withdrawn when the threshold voltage is undershot.

Dependency: Refer to: r1626, r1641, p3202, p3203
Refer to: F07913

Note: The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).

p3202[0...n] Excitation current outside the tolerance hysteresis / I_exc n Tol hyst

VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.1 [%]	100.0 [%]	10.0 [%]

Description: Sets the hysteresis for the "excitation current outside tolerance" message for the excitation current monitoring.

Dependency: Refer to: p3201, p3203
Refer to: F07913

Note: The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).

p3203[0...n] Excitation current outside the tolerance delay time / I_exc n Tol t_del

VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [s]	10.0 [s]	1.0 [s]

Description: Sets the delay time for the "excitation current outside tolerance" message for the excitation current monitoring.

Dependency: Refer to: p3201, p3202
Refer to: F07913

Note: The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).

p3204[0...n] Flux outside the tolerance threshold value / Flux n tol thresh

VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.1 [%]	100.0 [%]	10.0 [%]

Description: Sets the threshold value for the "flux outside the tolerance" message for the flux monitoring.
If the absolute value of the difference between the flux setpoint and actual value (r0083 - r0084) falls below the threshold value with hysteresis longer than the selected delay time, then fault F07914 is output.
This fault is withdrawn when the threshold voltage is undershot.

Dependency: Refer to: r0083, r0084, p3205, p3206
Refer to: F07914
Note: The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).
The flux monitoring is only active after magnetizing (r0056.4 = 1).

p3205[0...n] Flux outside the tolerance hysteresis / Flux n tol hyst

VECTOR

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL		**Expert list:** 1

Min	Max	Factory setting
0.1 [%]	50.0 [%]	10.0 [%]

Description: Sets the hysteresis for the "flux outside tolerance" message for the flux monitoring.
Dependency: Refer to: p3204, p3206
Refer to: F07914
Note: The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).
The flux monitoring is only active after magnetizing (r0056.4 = 1).

p3206[0...n] Flux outside tolerance delay time / Flux n tol t_del

VECTOR

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL		**Expert list:** 1

Min	Max	Factory setting
0.0 [s]	10.0 [s]	5.0 [s]

Description: Sets the delay time for the "flux outside tolerance" message for the flux monitoring.
Dependency: Refer to: p3204, p3205
Refer to: F07914
Note: The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).
The flux monitoring is only active after magnetizing (r0056.4 = 1).

p3207[0...n] Zero current signal threshold value / I_0_sig thresh

VECTOR

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
P-Group: Messages	**Units group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PEM, REL		**Expert list:** 1

Min	Max	Factory setting
0.01 [Arms]	10000.00 [Arms]	1.00 [Arms]

Description: Sets the threshold value for the zero current signal for the zero current monitoring.
If the absolute current falls below the threshold value then r2199.6 is set to 1 after the delay time has expired. The bit is reset if the threshold value and the hysteresis are exceeded again.
Dependency: Refer to: r2199, p3208, p3209
Note: The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).
The monitoring is only carried out for speeds less than the speed threshold value in p2161 (r2199.0 = 1).

p3208[0...n] Zero current signal hysteresis / I_0_sig hyst

VECTOR	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Messages	**Units group:** 6_2	**Unit selection:** p0505
	Not for motor type: ASM, PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.01 [Arms]	10000.00 [Arms]	1.00 [Arms]

Description: Sets the hysteresis for the zero current signal for the zero current monitoring.

Dependency: Refer to: p3207, p3209

Note: The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).
The monitoring is only carried out for speeds less than the speed threshold value in p2161 (r2199.0 = 1).

p3209[0...n] Zero current signal delay time / I_0_sig t_del

VECTOR	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** -
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, PEM, REL		**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [s]	10.00 [s]	0.02 [s]

Description: Sets the delay time for the zero current signal for the zero current monitoring.

Dependency: Refer to: p3207, p3208

Note: The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).
The monitoring is only carried out for speeds less than the speed threshold in p2161 (r2199.0 = 1).

p3290 Variable signaling function start / Var sig start

SERVO	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned8	**Dynamic index:** -	**Func. diagram:** 5301
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0010 bin

Description: Settings for start/stop and the comparison type for the variable signaling function.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Activate function	Active	Not active	-
01	Comparison with sign	With sign	Without sign	-

p3291 CI: Variable signaling function signal source / Var sig S_src

SERVO	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Integer16	**Dynamic index:** -	**Func. diagram:** 5301
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -		**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source for the variable signaling function.

Dependency: Refer to: p3292, p3293

Note: Re p3291 = 1:
In this case, the signal source is defined using p3292 and p3293.

p3292 Variable signaling function signal source address / Var sig S_src addr

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: Unsigned32 | **Dynamic index:** - | **Func. diagram:** 5301
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0000 hex	FFFF FFFF hex	0000 hex

Description: Sets the address of the signal source for the variable signaling function.
Dependency: Refer to: p3291
Caution: If an incorrect address and data type are set, then this can cause the software to crash.

Note: This parameter should only be set for p3291 = 1.

p3293 Variable signaling function signal source data type / Var sig S_src type

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** 5301
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	7	0

Description: Sets the data type of the signal source for the variable signaling function.
Value:
0: Unknown
1: U8, Unsigned8
2: I8, Signed8
3: U16, Unsigned16
4: I16, Signed16
5: U32, Unsigned32
6: I32, Signed32
7: Float, FloatingPoint32

Dependency: Refer to: p3291
Caution: If an incorrect address and data type are set, then this can cause the software to crash.

Note: This parameter should only be set for p3291 = 1.

r3294 BO: Variable signaling function output signal / Var sig outp_sig

SERVO

P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the output signal for the variable signaling function.
Dependency: Refer to: p3290, p3291, p3295, p3296, p3297, p3298

p3295 Variable signaling function threshold value / Var sig thresh_val

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 5301
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-340.28235E36	340.28235E36	0.000

Description: Sets the threshold value for the variable signaling function.

p3296 Variable signaling function hysteresis / Var sig hyst

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 5301
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.000	340.28235E36	0.000

Description: Sets the hysteresis for the variable signaling function.

p3297 Variable signaling function pickup delay / Var sig t_pickup

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** 5301
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [ms]	10000 [ms]	0 [ms]

Description: Sets the pickup delay for the variable signaling function.
Note: The output signal is set if the condition for the 1 signal is fulfilled for longer than the selected time.

p3298 Variable signaling function dropout delay / Var sig t_dropout

SERVO

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** 5301
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [ms]	10000 [ms]	0 [ms]

Description: Sets the dropout delay for the variable signaling function.
Note: The output signal is reset if the condition for the 0 signal is fulfilled for longer than the selected time.

p3400 Infeed configuration word / INF config_word

A_INF, S_INF

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** 8940
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	1010 bin

Description: Sets the configuration word of the infeed.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Smart Mode	On	Off	-
01	Flat-top mode	On	Off	-

03	Vdc controller	On	Off	-
05	Line supply voltage sensing with VSM	On	Off	-

Dependency: Refer to: p0210

Note: Re bit 00:

In the smart mode, the DC link voltage is not controlled - however, infeed can still regenerate. The magnitude of the DC link voltage depends on the current line supply voltage and the DC link load.

For drive units belonging to the 400 V voltage class, for a drive unit supply voltage (p0210) greater than 415 V, the infeed is always operated in the smart mode. This means that the 660 V limit can be maintained for the steady-state DC link voltage (p0280) up to a line supply voltage of 480 V.

Re bit 01:

If the flat top mode is de-activated, switching losses are higher. This means that the full power is no longer continuously available.

For p3400.0 = 1, this bit is not effective.

Re bit 03:

If the Vdc controller is switched out, overvoltage or undervoltage conditions occur in the DC link if no other voltage-regulating component is located in the DC link.

For p3400.0 = 1, this bit is not effective.

Re bit 05:

If a VSM is detected when commissioning the system, this bit is automatically set.

When the bit is set, the line supply voltage input of the VSM must be connected (connected at the line side of the commutating reactor).

VSM: Voltage Sensing Module

r3402 Infeed internal status / INF status int

A_INF, S_INF

Can be changed: - **Calculated:** - **Access level:** 2

Data type: Integer16 **Dynamic index:** - **Func. diagram:** 8832, 8932

P-Group: Closed-loop control **Units group:** - **Unit selection:** -

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	11	-

Description: Displays the internal status of the infeed module.

Value:

0: Initialization
1: Fault
2: No ON command
3: Offset measurement running
4: ON delay active
5: Precharg. running
6: Pulse enable missing
7: Synchronization running
8: Voltage ramp-up active
9: Operation
10: Shutdown running
11: Identification running

r3402 Infeed status internal BIC / INF status int

B_INF

Can be changed: - **Calculated:** - **Access level:** 2

Data type: Integer16 **Dynamic index:** - **Func. diagram:** 8932

P-Group: Closed-loop control **Units group:** - **Unit selection:** -

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
0	6	-

Description: Displays the internal status of the infeed module.

Value:

0: Initialization
1: Fault
2: No ON command
3: Offset measurement running

4: ON delay active
5: Precharg. running
6: Operation

r3405.0...7 CO/BO: Status word infeed / INF ZSW

A_INF, S_INF

Can be changed: - **Calculated:** - **Access level:** 2
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** 8828, 8928
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the status word of the infeed.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Smart mode active	Yes	No	-
01	Vdc-ctrl active	Yes	No	-
02	Phase failure detected	Yes	No	-
03	Current limit reached	Yes	No	-
04	Infeed operates regenerating/motoring	Regenerative mode	Motor mode	-
05	Motor operation inhibited	Yes	No	-
06	Regenerative operation inhibited	Yes	No	-
07	DC link undervoltage alarm threshold undershot	Yes	No	-

Note:

Re bit 00:

Smart Mode is activated with p3400.0.

Re bit 01:

The DC link voltage closed-loop control is activated with parameters p3400.3 and p3513.

Re bit 02:

When phase failure is detected the bit is set and alarm A06205 is output.

The bit is reset for the following events:

- the infeed had reached the normal operating state again after a phase failure has been bypassed/buffered (p3402 = 9).

- the pulse enable is withdrawn due to a fault or powering down with OFF1/OFF2.

Re bit 03:

The present current limit is displayed in r0067.

Re bit 04:

An active current setting r0078 >= 0 means infeed operation in motor mode; an active current setting r0078 < 0 means regenerative operation in generator mode.

Re bit 05:

The motor operation inhibit is activated with p3532.

Re bit 06:

The generator operation inhibit is activated with p3533.

Re bit 07:

The alarm threshold is dependent on r0296 and the setting in p0279.

r3405.7 CO/BO: Status word infeed / INF ZSW

B_INF

Can be changed: - **Calculated:** - **Access level:** 2
Data type: Unsigned16 **Dynamic index:** - **Func. diagram:** -
P-Group: Closed-loop control **Units group:** - **Unit selection:** -
Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the status word of the infeed.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	07	DC link undervoltage alarm threshold undershot	Yes	No	-

p3409 Infeed line frequency setting / INF f_line_mode

A_INF, S_INF

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	1	1

Description: Sets the mode to detect the line supply frequency.

Value:
0: Line supply frequency setting 50/60 Hz off
1: Line supply frequency setting 50/60 Hz on

Dependency: Refer to: p0211, p0284, p0285
Refer to: A06350, A06351, F06500

Note: For p3409 = 1, the following applies:
After operation has been enabled, the rated line supply frequency (p0211) is automatically set to a value of 50 Hz or 60 Hz corresponding to the currently measured frequency. This means that the parameter value of p0211 is, under certain circumstances, changed.
For p3409 = 0, the following applies:
The system does not change parameter p0211.

p3410 Infeed identification method / INF Ident_type

A_INF, S_INF

Can be changed: C2(1), T | **Calculated:** - | **Access level:** 1
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0	5	5

Description: Sets the line and DC link parameter identification routine for the infeed module.

Value:
0: Identification (Id) off
1: Activate identification (Id)
2: Set controller settings
3: Save identification and controller settings
4: Save identification and controller settings with L adaptation
5: Reset, save Id and controller setting with L adaptation

Dependency: Refer to: r3411, r3412, r3414, p3415, p3416, p3417, p3421, p3422, p3424, p3555, p3560, p3614
Refer to: A06400

Notice: For p3410 = 1, 3, 4, 5, alarm A06400 is output and designates that the selected identification will take place the next time that the pulses are enabled.

Note: When p3410 = 1 an identification run for the total inductance and DC link capacitance is initiated when the pulses are next enabled. The results are displayed in r3411 and r3412. If a Voltage Sensing Module (VSM) is connected, then the line inductance (r3414) is also measured. The infeed then goes into the ready for switching on state.
For p3410 = 2, the data (r3411, r3412 und r3414) determined during the identification run (p3410 = 1) are transferred into p3421, p3422 and p3424. The control loop parameters are suitable scaled to achieve a rugged controller setting (p3425); the fast controller response (p3555[2]) and the current actual value smoothing (p3614) are pre-set. Calculations for the controller are then repeated. The user must save the new parameters in a non-volatile fashion in order to permanently select the new controller setting.
When p3410 = 3 an identification run for the inductance and DC link capacitance is initiated when the pulses are next enabled. Data determined during the identification (r3411, r3412, r3414) are used, as described under p3410 = 2 for the setting of p3421, p3422, p3424, p3425, p3555 as well as p3614, and the controller is re-calculated. All of the parameters for the infeed module are then automatically stored in a non-volatile memory. The infeed continues to operate without any interruption with the new controller parameters.

When p3410 = 4 an identification run for the inductance and DC link capacitance is initiated when the pulses are next enabled. Data determined during the identification (r3411, r3412, r3414) are used, as described under p3410 = 2 for the setting of p3421, p3422, p3424, p3425, p3555 as well as p3614, and the controller is re-calculated. The line inductance identification is then repeated, if p3415[1] > p3514[0]. If the inductance measured the second time is lower, the parameters are written to the current controller adaptation (p3620, p3622).. All of the parameters for the infeed module are then automatically stored in a non-volatile memory. The infeed continues to operate without any interruption with the new controller parameters.

For p3410 = 5, the same measurements and write operations are always carried out as for p3410 = 4. However, for the first identification run, initially the controller setting is reset by setting p3421 = p0223 + p0225, p3424 = p0225, p3422 = p0227 and p3425[.] = 100 %. Further, before the measurements are carried out, a brief identification run is executed to coarsely set the controller.

p3410 is automatically set to 0 after an identification run has been completed.

r3411[0...1] Infeed identified inductance / INF L ident

A_INF, S_INF

Can be changed: - **Calculated:** - **Access level:** 2

Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -

P-Group: Closed-loop control **Units group:** - **Unit selection:** -

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [mH]	- [mH]	- [mH]

Description: Displays the identified total inductance. The value corresponds to the total inductance between the rigid line supply and the infeed input terminals.

Index: [0] = Run 1
[1] = Run 2

Dependency: Refer to: p3410

Note: The value measured in the first identification run is displayed in r3411[0] (for p3410 = 1, 3, 4, 5). This value is transferred to p3421.

The value measured in the second identification run (for p3410 = 4, 5) is displayed in r3411[1] - this value is used to set the current controller adaptation (p3622).

For the inductance value of the commutating reactor, r3411 - r3414 applies.

r3412[0...1] Infeed DC link capacitance identified / INF C_DClink ident

A_INF, S_INF

Can be changed: - **Calculated:** - **Access level:** 2

Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -

P-Group: Closed-loop control **Units group:** - **Unit selection:** -

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [mF]	- [mF]	- [mF]

Description: Displays the identified total DC link capacitance.

Index: [0] = Run 1
[1] = Run 2

Dependency: Refer to: p3410

Note: The value measured in the first identification run (for p3410 = 1, 3, 4, 5) is displayed in r3412[0]. For p3410 = 1, 3, this value is transferred to p3422.

The DC link capacitance is not measured at the second identification run.

The total DC link capacitance of a DC link group comprises the sum of the sub-capacitances of all motor/infeed modules and the additional DC link capacitors.

r3414[0...1] Infeed, line supply inductance identified / INF t_line ident

A_INF, S_INF

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [mH]	- [mH]	- [mH]

Description: Displays the identified line supply inductance.

The value corresponds to the total inductance between the stiff line supply and the connection point of the Voltage Sensing Module (VSM).

Index: [0] = Run 1
[1] = Run 2

Dependency: Refer to: p3410

Notice: The value is only automatically determined for the line supply identification (p3410 > 0), if operation with a Voltage Sensing Module is selected (p3400.5 = 1). Otherwise, r3414 = 0 is displayed.

Note: The value measured in the first identification run is displayed in r3414[0] (for p3410 = 1, 3, 4, 5). This value is transferred to p3421.

The value measured in the second identification run is displayed in r3414[1] (for p3410 = 4, 5).

For the inductance value of the commutating reactor, r3411 - r3414 applies.

p3415[0...1] Infeed excitation current L identification / INF I_exc L_Ident

A_INF, S_INF

Can be changed: T
Calculated: -
Access level: 4
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
1.00 [%]	75.00 [%]	20.00 [%]

Description: Sets the magnitude of the excitation frequency for the L identification.

The setting is made as a percentage of the maximum power unit current (r0209).

Index: [0] = Run 1
[1] = Run 2

Dependency: Refer to: p3410, r3411, p3421, p3620, p3622

Notice: To correctly identify the current level (p3410 = 4, 5) depending on the reactor inductance, the following must apply:

p3415[0] < p3415[1]

For A_INF booksize units, the following applies:

The interrelationship between the reactor inductance and the current magnitude should be measured. Generally, the factory setting of p3415[0] and p3415[1] should be kept.

For chassis units and S_INF booksize units, the following applies:

Generally, there is only a very low inter-relationship between the reactor inductance and the current magnitude. This means that for the factory setting p3415[0] = p3415[1] = 20 %, i.e. run 2 is not executed.

Note: The reactive current for identification run 1 is set in p3415[0] (basic controller setting).

The reactive current for identification run 2 is set in p3415[1] (adaptation of the current controller when reducing the reactor inductance with increasing current magnitude).

p3416 Infeed excitation amplitude C identification / INF exc_amp C_Id

A_INF, S_INF

Can be changed: T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.10 [%]	20.00 [%]	2.00 [%]

Description: Sets the level of the excitation frequency for identification of the total DC link capacitance. The amplitude is indicated as a percentage of the DC voltage setpoint (Vdc = p0210 * p3510).

Dependency: Refer to: p3410, r3412, p3422

p3417 Infeed excitation frequency C identification / INF f_exc C_ID

A_INF, S_INF

Can be changed: T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
10.00 [Hz]	200.00 [Hz]	50.00 [Hz]

Description: Sets the level of the excitation frequency for identification of the total DC link capacitance.

Dependency: Refer to: p3410, r3412, p3422

p3421 Infeed inductance / INF Inductance

A_INF, S_INF

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.001 [mH]	2000.000 [mH]	1.000 [mH]

Description: Sets the total effective inductance for the closed-loop current control from the sum of the line supply inductance and inductance of the commutating reactor.
This parameter is preset to the sum of p0223 and p0225.

Dependency: Refer to: p0223, p0225, p3410, p3425, p3614, p3622

Note: The controller setting is derived from this value and p3425.
The value can be automatically determined using the identification run (p3410).
For a parallel circuit, the value corresponds to the inductance of a power unit.
For the inductance value of the commutating reactor, p3421 - p3424 applies.

p3422 Infeed DC link capacitance / INF C_DCL

A_INF, S_INF

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.20 [mF]	2000.00 [mF]	2.00 [mF]

Description: Sets the DC link capacitance for the closed-loop voltage control.
This value is preset to p0227.

Dependency: Refer to: p0227, p3410, p3425

Note: The controller setting is derived from this value and p3425. A suitable value can be automatically determined using the identification run (p3410).

p3424 Infeed, line supply inductance / INF L_line

A_INF, S_INF

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0.001 [mH]	1000.000 [mH]	0.001 [mH]

Description: Sets the line supply inductance.
This parameter is preset with p0225.

Dependency: Refer to: p0223, p0225, p3410, p3425, p3622

Note: The controller setting is derived from this value and p3425.
The value can be automatically determined using the identification (p3410) if operation with a Voltage Sensing Module is selected. Otherwise, p3424 is set to p3421 - p0223.

p3425[0...1] Infeed control loop parameter scaling / INF par scaling

A_INF, S_INF

Can be changed: T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
1.00 [%]	1000.00 [%]	100.00 [%]

Description: Sets the scaling factors for controller parameters p3421, p3422 and p3424.

Index: [0] = Scaling, inductance
[1] = Scaling, capacitance

Dependency: Refer to: p3410, p3421, p3422, p3424, p3614

Note: p3425 is automatically set to the optimum value when setting the control parameters using the line supply data identification p3410 >= 2. As the line supply inductance (p3424) increases in comparison to the total inductance (p3421), lower values must be selected for p3425. This means that the control is adapted to weak line supplies with high relative short-circuit voltage uk or high line supply inductance (also refer to p3614).
The scaled control loop parameters become effective for the closed-loop control, i.e. the products p3421 * p3425[0] and p3422 * p3425[1] represent the controller setting.

p3440 Smart mode configuration / SLM configuration

A_INF, S_INF

Can be changed: T | **Calculated:** - | **Access level:** 4
Data type: Unsigned16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-	-	0001 bin

Description: Sets the configuration of the smart mode.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Soft pulse mode	On	Off	-

Note: Re bit 00:
When the pulsed mode for the smart mode is de-activated, when regenerating, higher phase current gradients occur.

r3452 Infeed PLL status / INF PLL status

A_INF, S_INF

Can be changed: -
Calculated: -
Access level: 4
Data type: Integer16
Dynamic index: -
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0000 bin	0111 bin	-

Description: Displays the status of the line supply PLL.

Value:
0: Initialization running
1: Error when synchronizing
2: Line analysis
3: Calculation line data
4: Pulse enable missing
5: PLL calculation
6: Final status controlled / smart mode
7: Reserved

p3458[0...1] Infeed PLL smoothing time / INF PLL t_smooth

A_INF, S_INF

Can be changed: U, T
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
1.0 [ms]	1000.0 [ms]	[0] 23.1 [ms] [1] 9.1 [ms]

Description: Sets the smoothing time for the line supply PLL.

Index: [0] = Encoderless operation line supply frequency smoothing time
[1] = VSM operation line supply frequency smoothing time

Note: It may be necessary to reduce the smoothing time for weak line supplies with high frequency fluctuations. There is otherwise a risk of brief orientation errors and the infeed could fail.

r3460 Infeed PLL system deviation / INF PLL ctrl_dev

A_INF, S_INF

Can be changed: -
Calculated: -
Access level: 4
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [°]	- [°]	- [°]

Description: Displays the PLL system deviation.

r3461 Infeed PLL system deviation after filtering / INF PLL ctrl_devSm

A_INF, S_INF

Can be changed: -
Calculated: -
Access level: 4
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
- [°]	- [°]	- [°]

Description: Displays the PLL system deviation after filtering.

Dependency: Refer to: p3458

p3463 Infeed, line angle change, phase failure detection / INF Phi phase fail

A_INF, S_INF

Can be changed: T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-180.0 [°]	180.0 [°]	15.0 [°]

Description: If the line supply angle (angle between the line supply phases) suddenly changes by this value, then a phase failure is assumed. The pulses are then inhibited for 10 ms.

Dependency: Refer to: A06205

r3468[0...1] Infeed voltage alpha/beta line filter / INF V a/b filter

A_INF, S_INF

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
- [V]	- [V]	- [V]

Description: Displays the line supply voltage at the input terminals of the line filter in alpha/beta components.

Index: [0] = Alpha component
[1] = Beta component

Note: The input terminals of the line filter form, for infeeds, the connection point of the Voltage Sensing Module (VSM) to measure the line supply voltage.

For operation with VSM (p3400.5 = 1), the following applies:

The voltage measured values r3661 and r3662, transformed into the alpha/beta system are displayed in r3468.

For encoderless operation without VSM (p3400.5 = 0), the following applies:

The estimated values of the voltages from the line supply model of the PLL transformed into the alpha/beta system are displayed in r3468.

p3469[0...n] Latch delay time correction, zero crossover detection / t_latch corr PLL

A_INF, S_INF

Can be changed: T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** PDS, p0120 | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
-10000.0 [µs]	10000.0 [µs]	0.0 [µs]

Description: Calibration value for the RC filter of the zero crossover detection of the line supply voltage in the power unit.

When p3469 = 0, a new calibration is performed the next time identification is carried out with p3410 = 4 or 5.

Note: The calibration value is stored in the EEPROM of the power unit because it is a characteristic of the power unit.

r3470 Infeed active current filter / INF I_act filter

A_INF

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** 6_2 | **Unit selection:** p0505
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the active current requirement due to the line filter.

Dependency: Refer to: r0038, p0221, p0222

Note: With respect to the line supply, the sum of the active currents of the power unit (p0078) and line filter (p3470) are effective.

The active current demand of the line filter is taken into account when calculating the power factor (r0038).

The magnitude of the line filter active current depends on the capacitance (p0221) and the resistance (p0222) of the line filter.

r3471 Infeed reactive current filter / INF I_reactiveFilt

A_INF

Can be changed: - **Calculated:** - **Access level:** 3

Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -

P-Group: Closed-loop control **Units group:** 6_2 **Unit selection:** p0505

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
- [Arms]	- [Arms]	- [Arms]

Description: Displays the reactive current requirement as a result of the line filter.

The reactive current requirement of a line filter is covered by the controlled infeed/regenerative feedback so that the converter always operates with a power factor of 1 compared to the line.

Dependency: Refer to: r0038, r0075, r0076, p0221

Note: With respect to the line supply, the sum of the reactive currents of the power unit (p0076) and line filter (p3471) are effective.

The reactive current requirement of the line filter is taken into account when calculating the power factor (r0038).

The amount of the reactive current depends on the capacitance (p0221) of the line filter that is automatically parameterized when a line filter is selected (p0220).

If the line phases are reversed and the line voltage therefore has a negative orientation (r0066 < 0), it should be noted that the sign of the reactive current is reversed.

p3472[0...4] Line supply PLL line supply voltage smoothing time / Line PLL V_l t_sm

A_INF, S_INF

Can be changed: U, T **Calculated:** - **Access level:** 4

Data type: FloatingPoint32 **Dynamic index:** - **Func. diagram:** -

P-Group: Closed-loop control **Units group:** - **Unit selection:** -

Not for motor type: - **Expert list:** 1

Min	Max	Factory setting
1.0 [ms]	30000.0 [ms]	[0] 200.0 [ms] [1] 100.0 [ms] [2] 5000.0 [ms] [3] 8.0 [ms] [4] 8.0 [ms]

Description: Sets the smoothing time of the line supply voltage for the line supply PLL.

Index: [0] = Encoderless operation line supply voltage smoothing time
[1] = VSM operation line supply voltage smoothing time
[2] = Detection line supply undervoltage smoothing time
[3] = Detection line supply overvoltage smoothing time
[4] = Detection line supply voltage step smoothing time

Dependency: Refer to: p3400

Note: For the pre-control of the line supply voltage, a smoothed value of the line supply voltage is used in the closed-loop control.

p3472[0]: Sets the PT1 time constant to smooth the line supply voltage for operation without VSM (p3400.5 = 0).

p3472[1]: Sets the PT1 time constant to smooth the line supply voltage for operation with VSM (p3400.5 = 1).

p3472[2]: Sets the smoothing time constant to slowly detect a line supply undervoltage (F6100).

p3472[3]: Sets the smoothing time constant to quickly detect line supply undervoltages for phase failure (A6205).

p3472[4]: Sets the smoothing time constant to quickly adapt the line supply pre-control for line supply voltage steps (p0286).

p3480 Infeed modulation depth limit / INF mod_depth lim

A_INF

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 8940
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
50.0 [%]	110.0 [%]	97.0 [%]

Description: Sets the maximum steady-state modulation depth. When this limit is reached, the DC link voltage is boosted to maintain the control margin. This means that the control reserve is maintained.

Dependency: Refer to: p3481, r3485

p3481 Infeed standby controller dynamic response / INF res_ctrl dyn

A_INF

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 8940
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0.0 [ms]	1000.0 [ms]	7.5 [ms]

Description: Sets the dynamic response of the reserve controller for the modulation depth. As the smoothing time increases, the response of the DC link voltage tracking becomes slower.

Dependency: Refer to: p3480, r3485

r3485 Infeed standby controller output / INF res_ctrl outp

A_INF

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 8940
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
- [V]	- [V]	- [V]

Description: Displays the reserve controller output for the modulation depth.
The DC link voltage is increased by this voltage value - the summed setpoint for the DC link voltage is output in r0088.
The summed setpoint is limited to the maximum steady-stage DC link voltage (p0280).

Dependency: Refer to: p3480, p3481

p3490 Infeed OFF command delay time / INF t_del OFF

A_INF, B_INF, S_INF

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 8732, 8832, 8932
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
0.0 [ms]	1000000.0 [ms]	0.0 [ms]

Description: Sets the delay time for the ON/OFF1 command of the infeed. After ON/OFF1 = 0 the infeed remains in operation for the specified time

Dependency: Refer to: p0840

Notice: The ON/OFF1 command of the infeed can be interrupted.

Note: This parameter is only relevant if a Motor Module and the infeed are controlled by the same OFF command. In this case, the delay time and the stop ramp time of the motor can be coordinated with one another.

p3491 Infeed I-offset measurement monitoring time / INF I_offs t_monit

A_INF, S_INF

Can be changed: T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 8832, 8932
P-Group: Commands | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [ms]	65000 [ms]	2000 [ms]

Description: Sets the monitoring time for the current-offset measurement of the power unit.

The time is started with the normal end of the measurement. If the measurement is invalid and if no valid measurement can be taken within the monitoring period (phase currents too high), an appropriate message is generated.

Note: Set this parameter to 0 to allow variations in the delay when running-up.

p3492 Infeed, line supply undervoltage delay time / INF V_line t_del

A_INF, S_INF

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Commands | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0 [s]	300 [s]	0 [s]

Description: Sets the delay time for shutdown due to a line supply undervoltage condition (A06100).

After the fault occurs, the power unit is only tripped (shut down) after this delay has expired. If the fault is removed during this design time, then the power unit is not tripped (shut down).

Dependency: Refer to: p0283

Refer to: F06100

Note: The degree of ruggedness of the infeed with respect to fluctuations in the line supply voltage can be increased by parameterizing this delay value.

However, the following should be noted:

- the infeed power decreases proportionally (linearly) with the line supply voltage.

- when other components are connected, for low line supply voltage, operating faults or damage can occur. In this case, the specifications of the connected electrical components should always be carefully observed.

p3508 Infeed step-up factor maximum / Step-up factor max

A_INF

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Converter | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
1.60	3.00	1.60

Description: Sets the maximum permissible step-up factor for the power unit used in conjunction with the line filter parameterized in p0220[0].

Dependency: Refer to: p0210, p0220, p3510

Note: The maximum step-up factor determines the maximum ratio between the DC link voltage setpoint (p3510) and the unit supply voltage (p0210).

The input of the DC link voltage setpoint (p3510) is limited corresponding to the permissible step-up factor (p3508): p3510 <= p0210 * p3508.

Pre-setting values:

380 ... 480 V booksize units without Active Interface Module: 1.6

380 ... 480 V booksize units with Active Interface Module (p0220 = 41 ... 45): 2

380 ... 480 V chassis units: 2

500 ... 690 V chassis units: 2

Maximum values:

380 ... 480 V booksize units without Active Interface Module: 1.6

380 ... 480 V booksize units with Active Interface Module (p0220 = 41 ... 45): 2

380 ... 480 V chassis units: 3

500 ... 690 V chassis units: 3

When the filter setting (p0220) is changed, then the setting of the maximum step-up factor (p3508) is also automatically adapted.

p3510 Infeed DC link voltage setpoint / INF Vdc setp

A_INF

Can be changed: U, T | **Calculated:** - | **Access level:** 2

Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 1774, 8940

P-Group: Closed-loop control | **Units group:** 5_2 | **Unit selection:** p0505

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
100.00 [V]	1600.00 [V]	600.00 [V]

Description: Sets the setpoint for the DC link voltage.

Dependency: Refer to: p0210, p0280, p3400, p3508, p3511

Warning:

Before increasing the voltage limit for pulsed operation of a controlled booksize infeed with line supply voltages p0210 > 415 V it should be checked whether the motors connected to the DC link are specified for the higher motor voltages.

The warning information associated with p0210 must be carefully observed.

Note: When the Smart Mode is activated (p3400.0 = 1) the DC link voltage is not regulated, i.e. the value entered here is in this case not effective.

The permissible range of the DC link voltage depends on the parameterized unit supply voltage (p0210) and the permissible, maximum continuous DC link voltage (p0280).

In voltage-controlled operation (p3400.0 = 0) the following applies:

p3510 >= 1.42 * p0210 and

p3510 <= p3508 * p0210 and

p3510 <= p0280.

In the Smart Mode (p3400.0 = 1) the following applies:

The setpoint p3510 for the DC link voltage control is inactive. In order to permit an adapted display, deviating from voltage-controlled operation, the lower limit p3510 is >= 1.2 * p0210.

p3511 CI: Infeed DC link voltage supplementary setpoint / INF Vdc Z_set

A_INF

Can be changed: T | **Calculated:** - | **Access level:** 3

Data type: Unsigned32 / FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** 8940

P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the supplementary setpoint for the DC link voltage.

Dependency: Refer to: p3510

p3513 BI: Inhibit voltage-controlled operation / Inhib V_ctrl mode

A_INF

Can be changed: U, T | **Calculated:** - | **Access level:** 3

Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** -

P-Group: - | **Units group:** - | **Unit selection:** -

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for inhibiting the voltage-controlled mode of the infeed.

Dependency: Refer to: p3400, r3405

Notice: The DC link voltage must be controlled by a different component at the DC link; otherwise this results in an overvoltage or undervoltage condition.

Note: The current controller remains active and can be controlled by means of its setpoint inputs (p3515, p3610).
This binector input is used to change over between master (0 signal) and slave (1 signal) operation and vice versa.

p3514 Infeed supplementary active current steady-state / INF I_sup_eff stat

A_INF

Data type: FloatingPoint32	**Dynamic index:** -	**Func. diagram:** 8940
P-Group: Closed-loop control	**Units group:** 6_2	**Unit selection:** p0505
Not for motor type: -		**Expert list:** 1
Min	**Max**	**Factory setting**
1.00 [Arms]	100000.00 [Arms]	10000.00 [Arms]

Description: Sets the motoring limit for the active line current.

The currently effective current limit is displayed in r0067[0].

Dependency: Refer to: r0067, p3532

Caution: If this limit is selected lower than the maximum current permissible for the power unit (r0067), the infeed can no longer provide its full controlled power.

Operating faults of the infeed can occur due to the resulting DC link undervoltage.

Notice: For self-commutated infeeds, the DC link voltage decreases if more power is drawn from the DC link by the connected load than can be supplied by the line because of the power unit maximum current or a limit in p3530.

If the DC link voltage decreases down to the rectified value, then the complete current - necessary to cover the required active power - flows, uncontrolled into the rectifier circuit via the diodes.

This is the reason that, for physical reasons, the value in p3530 cannot act as current limit that is always maintained.

The value forms a current threshold from which point onwards the DC link energy is used as buffer for brief power fluctuations.

p3531 Infeed current limit regenerating / INF I_limit regen

Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-100000.00 [Arms]	-1.00 [Arms]	-10000.00 [Arms]

Description: Sets the limit for the active line supply current when regenerating.

The currently effective current limit is displayed in r0067[1].

Dependency: Refer to: r0067, p3533

Caution: If this limit is selected lower than the maximum current permissible for the power unit (r0067), the infeed can no longer provide its full controlled power.

This can result in an overvoltage condition in the DC link.

Notice: For self-commutated infeeds, the DC link voltage increases if more power is input to the DC link through the connected source than can be fed to the line because of the maximum power unit current or a limit in p3531

If the DC link voltage exceeds the permissible threshold (p0297), defined by the hardware, then the unit is tripped due to overvoltage.

The value in p3531 represents a current limit that is always maintained - however, this can result in overvoltage conditions in the DC link.

The value in p3531 represents a current limit from which point onwards the capacitance of the DC link can be used as buffer for brief power fluctuations.

p3532 BI: Infeed, inhibit motoring / INF mot op inhibit

A_INF

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** 8920
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for inhibiting the motoring mode of the infeed.

Dependency: Refer to: r3405, p3530

Notice: If the motor mode is inhibited although power is withdrawn from the DC link, then the DC link voltage drops to the rectified value.

In this state, the DC link is post-charged through the diodes and motoring power is fed to the power unit in spite of the motoring inhibit.

The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: The inhibit only becomes active after operation has been enabled and the Vdc has been ramped-up (r0863.0 = 1).

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to inhibit the regenerating mode of the infeed.

Dependency: Refer to: r3405, p3531

Notice: The DC link voltage will increase if regenerative operation is inhibited even though power is being regenerated into the DC link.

The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: The inhibit only becomes active after operation has been enabled and the Vdc has been ramped-up (r0863.0 = 1).

p3555[0...5] Infeed Vdc controller integral component fast intervention / Vdc_ctr I-compFast

A_INF, S_INF

Can be changed: T
Calculated: -
Access level: 4
Data type: FloatingPoint32
Dynamic index: -
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
0.00 [%]	200.00 [%]	[0] 2.00 [%] [1] 102.00 [%] [2] 0.00 [%] [3] 5.00 [%] [4] 100.00 [%] [5] 0.00 [%]

Description: Sets the fast Vdc controller intervention for a step-like decrease of the DC link voltage due to a high motor load of the infeed.
The Vdc controller fast intervention is de-activated for p3555[5] = 0 % or p3560 < 100% or p0225 > 0.5 * p0223.
For a line supply and DC link identification (p3410 >= 2) the level of the fast controller intervention (p3555[2]) is automatically adapted to the line supply inductance.

Recommend.: Precise system knowhow is required when correctly changing this parameter!
- generally, the fast controller intervention is used to improve the control behavior for high-speed load changes. The function can therefore always be de-activated with p3555[5] = 0 % if no peak load duty cycles are required in the application.
- using p3555[0], the calculation of the modulation depth is determined in the case of high system deviations also when the controller intervention is de-activated. This is the reason that p3555[0] should generally not be changed.

Index: [0] = Intervention threshold 1: Vdc deviation from the setpoint
[1] = Intervention threshold 2: Vdc difference to the rectified value
[2] = Fast intervention automatic scaling
[3] = Fast intervention pre-control
[4] = Fast intervention timeout
[5] = Fast intervention manual scaling

Note: p3555[0]:
Vdc system deviation as a percentage of the setpoint of the DC link voltage (first condition to initiate fast controller intervention). The threshold is also used to internally change over the modulation depth calculation for high system deviations and should therefore generally not be changed!
p3555[1]:
Vdc threshold as a percentage of the rectified value of the current line supply voltage (second condition to initiate the fast controller intervention). Both threshold conditions must be fulfilled to initiate the controller intervention.
p3555[2]:
Percentage overall level of the fast intervention (scaling factor). For a line supply identification with p3410 >= 2, the factor is automatically adapted or, for weak line supplies with a high inductance, set to 0.
p3555[3]:
Percentage correction of the pre-control for a fast voltage dip (dead time compensation).
p3555[4]:
Percentage minimum time between controller interventions (100% corresponds to 100 ms). If high load change frequencies occur with the application, the minimum time between two controller intervention can be reduced using p3555[4].
p3555[5]:
Percentage overall level of the fast intervention (scaling factor). With p3555[5] = 0, the fast controller intervention is inhibited. For weak line supplies with a high inductance, it makes sense to de-activate the fast intervention.

P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
40 [ms]	1000 [ms]	100 [ms]

Description: Sets the ramp time for the DC link voltage (Vdc) when powering up and powering down.

Powering up (pulses enabled, r0898.3 = 1):

During this time, the DC link voltage is increased from the rectifier value after pre-charging to the voltage setpoint (p3510, p3511). The voltage setpoint is increased, when necessary, so that the modulation depth reserve (p3481) is maintained. The reactive current is set to the value 0 while ramping.

Powering down (inhibit pulses, r0898.3 = 0):

During this time, the DC link voltage is reduced to the rectified value (sqrt(2) * line supply voltage). The reactive current value is set to the value 0 when the ramp starts.

0.00 [%]	100.00 [%]	40.00 [%]

Description: Sets the switch-in threshold for the current controller adaptation.

The value refers to the maximum power modular current (r0209). From the starting threshold onwards, the inductance value (p3421) used for current control is reduced linearly as a function of the current value. The inductance value for the maximum power unit current is therefore p3421 * p3622.

Dependency: Refer to: p3410, p3415, p3622

Note: The parameter can be set automatically set using the line supply identification (p3410 = 4, 5) (also refer to p3622). Prerequisite for a reliable measurement of p3622 is that the current magnitude for run 2 (p3415[1]) is at least 10 % higher than the current magnitude for run 1 of the line supply identification. Otherwise, the measurement result is rejected.

In the case of a correct measurement, p3620 is set to 80% of the current magnitude for run 1 (p3415[0]).

For chassis power units, it is generally not necessary to adapt p3620 and p3622 to the characteristics of the line supply. However, when required, the current controller adaptation can be optimized by selecting suitable current magnitudes for p3415.

For booksize power units, p3620 and p3622 are automatically adapted with the then valid default setting of the line identification p3415.

p3622 Infeed current controller adaptation reduction factor / INF I_adapt factor

Min	Max	Factory setting
0.01 [%]	100.00 [%]	85.00 [%]

Description: Sets the inductance of the commutating reactor at the maximum power unit current (r0209) as a percentage of the inductance (p3421) at the application threshold (p3620).

Dependency: Refer to: p3410, p3415, p3620

Note: The parameter for a line supply identification (p3410 = 4, 5) automatically optimized, if the following applies:

p3415[1] - p3415[0] > 10%. Otherwise, the measurement result is rejected.

For chassis power units, it is generally not necessary to adapt p3620 and p3622 to the characteristics of the line supply. However, when required, the current controller adaptation can be optimized by selecting suitable current magnitudes for p3415.

For booksize power units, p3620 and p3622 are automatically adapted with the then valid default setting of the line identification p3415.

p3624[0...1] Infeed harmonics controller order / INF harm_ctr order

A_INF

P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | | **Expert list:** 1

Min	Max	Factory setting
5	13	[0] 5 [1] 7

Description: Sets the Order of the line harmonics for the current harmonics controller.

p3624[0]: Order of the line harmonics for the first harmonics controller.

p3624[1]: Order of the line harmonics for the second harmonics controller.

Dependency: Refer to: p3625, r3626

Note: Harmonics in the line supply voltage can cause harmonics in the converter current. These types of current harmonics can be reduced by activating additional controller modules.

Example:

For a 50 Hz line supply harmonics at 250 Hz in the phase currents can be reduced by activating a harmonic controller with Order 5 (p3624[0] = 5).

p3625[0...1] Infeed harmonics controller scaling / INF harm_ctrl scal

Description: Displays the actual value of the voltage measured at the 10 V input 2 of the Voltage Sensing Modules (VSM).
Dependency: Refer to: p3670
Note: 10 V input 2: Terminals X520.3 and X520.4

p3676 VSM line filter capacitance alarm threshold / VSMfilt C A_thresh

A_INF, S_INF

Can be changed: T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
0.00 [%]	100.00 [%]	0.00 [%]

Description: Sets the alarm threshold for the change of the capacitance of the line filter.
The monitoring of the filter capacitance is de-activated with p3676 = 0.00 %.

Dependency: Refer to: p3670
Refer to: A06250

Note: Prerequisites for monitoring the filter capacitance:
The phase currents must be measured at two capacitors of the line filter. To do this, CTs should be connected at the 10 V inputs of the VSM.

r3677[0...2] CO: VSM line filter capacitance / VSM filt C

A_INF, S_INF

Can be changed: - | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
- [µF]	- [µF]	- [µF]

Description: Displays the capacitance of the line filter (for a star circuit configuration).

Index: [0] = Phase U
[1] = Phase V
[2] = Phase W

Dependency: Refer to: p3676

Note: Prerequisite:
The monitoring of the filter capacitance is activated.

p3680 BI: Braking Module internal inhibit / BM int inhib

B_INF

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dynamic index:** - | **Func. diagram:** -
P-Group: - | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to inhibit the internal Braking Module.
1 signal: The Braking Module is inhibited.
0 signal: The Braking Module is enabled.

Dependency: Refer to: A06904

Caution: When the Braking Module is inhibited, no energy can be dissipated in the braking resistor.

p3681 BI: Activating Braking Module internal DC link fast discharge / BM intDCdischg act

B_INF

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dynamic index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -		**Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source to activate the DC link fast discharge for an internal braking module.
The DC link fast discharge is started later with delay time (p3682) when the following conditions apply:
- BI: p3681 = 1 signal.
- an external line contactor is opened via r0863.1 "energize contactor".
The DC link fast discharge is interrupted when the following conditions apply:
- BI: p3681 = 0 signal.
- ON command for the infeed.

Recommend.: The DC link fast discharge should be activated if there is an external line contactor and is correctly interconnected (r0863.1, p0860). If the DC link fast discharge is not activated together with an external line contactor, then faults could occur when pre-charging (e.g. F300027).

Dependency: Refer to: p3682
Refer to: F30027

p3682 Braking Module internal DC link fast discharge delay time / BM int DC dischg t

B_INF

Can be changed: C1(3), T	**Calculated:** -	**Access level:** 3

Data type: Unsigned32
Dynamic index: -
Func. diagram: -
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: The binector output uses a 1 signal to indicate that the highest permissible overtemperature at the connected temperature sensor has been reached and has caused a trip (shutdown).

Dependency: Refer to: F06908

r3689 BO: Digital Braking Module Vce fault / Dig BM Uce fault

B_INF

Can be changed: -
Calculated: -
Access level: 3
Data type: Unsigned32
Dynamic index: -
Func. diagram: -
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Expert list: 1

Min	Max	Factory setting
-	-	-

Description: The binector output uses a 1 signal to indicate that there is a Vce fault in the Digital Braking Module.

Dependency: Refer to: F06909

p3700 APC configuration / APC config

SERVO (APC)

Can be changed: U, T
Calculated: -
Access level: 2
Data type: Unsigned16
Dynamic index: -
Func. diagram: -
P-Group: Closed-loop control
Units group: -
Unit selection: -
Not for motor type: REL
Expert list: 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the configuration for APC (Advanced Positioning Control).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Activating APC	Yes	No	7012
01	APC acceleration sensor	Yes	No	7012
08	Activating pulse de-coupling	Yes	No	5040, 5042, 5210

Note: Re bit 00:

For a 1 signal, the acceleration filter output is added to the speed setpoint.

For a 0 signal, the value 0 is added. This must be used to evaluate the filter frequency characteristics.

Re bit 08:

For bit 0 = 1 and activated pulse de-coupling (bit 8 = 1), the speed of the direct measuring system (p3701) selected for APC is used as the actual value for the closed-loop speed control.

p3701 APC enc sel / APC enc sel

SERVO (APC)

Can be changed: C1(4), U | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dynamic index:** - | **Func. diagram:** -
P-Group: Data sets | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Expert list:** 1

Min	Max	Factory setting
2	3	2

Description: Sets the number of the encoder used for for APC (Advanced Positioning Control).

Value:
2: Encoder 2
3: Encoder 3

Note: Encoder 1 is the motor encoder and cannot be used for APC as APC requires a load measuring system.
An encoder used for APC is, regarding its fault messages, treated just like a motor encoder - this means that its fault messages are assigned to the drive.

p3704[0...n] APC filter activation / APC filter act

SERVO (APC)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 7012
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Setting to activate the filter for APC (Advanced Positioning Control).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Activate filter 1.1	Yes	No	-
04	Activate filter 2.1	Yes	No	-
05	Activate filter 2.2	Yes	No	-
08	Activate filter 3.1	Yes	No	-
09	Activate filter 3.2	Yes	No	-

p3705[0...n] APC filter type / APC filter type

SERVO (APC)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 7012
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
-	-	0000 bin

Description: Sets the filter type for the filter for APC (Advanced Positioning Control).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Filter 1.1 type	A. Filter 2nd ord.	Low pass (PT2)	-
04	Filter 2.1 type	A. Filter 2nd ord.	Low pass (PT2)	-
05	Filter 2.2 type	A. Filter 2nd ord.	Low pass (PT2)	-
08	Filter 3.1 type	A. Filter 2nd ord.	Low pass (PT2)	-
09	Filter 3.2 type	A. Filter 2nd ord.	Low pass (PT2)	-

p3706[0...n] APC sub-sampling, filter 2.x / APC sub-samp. 2.x

SERVO (APC)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dynamic index:** DDS, p0180 | **Func. diagram:** 7012
P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -
Not for motor type: REL | **Expert list:** 1

Min	Max	Factory setting
1	64	1

Description: Sets the factor for the sub-sampling in the branch of filter 2.1 and 2.2 for APC (Advanced Positioning Control).

Note: The values are integer multiples of the speed controller clock cycle (p0115[1]).

p3707[0...n] APC sub-sampling, filter 3.x / APC sub-samp. 3.x

SERVO (APC)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dynamic index:** DDS, p0180	**Func. diagram:** 7012
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL		**Expert list:** 1

Min	Max	Factory setting
1	64	1

Description: Sets the factor for the sub-sampling in the branch of filter 3.1 and 3.2 for APC (Advanced Positioning Control).

Note: The values are integer multiples of the speed controller clock cycle (p0115[1]).

p3708[0...n] APC velocity actual value smoothing time encoder 2 / APC v_act t_sm 2

SERVO (APC, Lin)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dynamic index:** DDS, p0180	**Func. diagram:** 4711
